#### 6.8.1 Detailed Description

The Ember ZigBee Radio Frequency for Consumer Electronics (RF4CE) Application Framework provides customers with robust implementations of RF4CE standards. Furthermore, it enables users to build custom applications on top of these implementations using application framework entities such as, but not limited to, callbacks (see [Application Framework Callback Interface](#)), a command line interface, sample applications, and architecture-agnostic plugins.

- `EmberStatus emberAfRf4ceGdpClientNotification` (`uint8_t pairingIndex, uint8_t profileId, uint16_t vendorId, uint8_t subtype, const uint8_t *payload, uint8_t payloadLength`)
- `EmberStatus emberAfRf4ceGdpSubscribeToHeartbeat` (`EmberAfRf4ceGdpHeartbeatCallback callback`)

### 6.9.1 Detailed Description

The Generic Device Profile (GDP) plugin provides APIs to service the different RF4CE profiles.

The plugin offers APIs to add in application level customization to the RF4CE GDP commissioning mechanism. One can initiate this commissioning process with `emberAfRf4ceGdpBind` or `emberAfRf4ceGdpProxyBind`. The application can use `emberAfRf4ceGdpConfigurationComplete` to learn the result of this binding operation.

One can configure basic security operations of an RF4CE network using this plugin. The plugin offers options Enhanced security, Standard shared secret, and Vendor-specific shared secrets, so that the user can dictate the level of security at which they would like this plugin to operate. During the commissioning process, or any time after, the application can use `emberAfRf4ceGdpInitiateKeyExchange` to force a key exchange to take place.

This plugin also gives the application the ability to interact with RF4CE attributes. There are APIs provided to perform the necessary GDP attribute operations over the air.

### 6.9.2 Macro Definition Documentation

#### 6.9.2.1 #define EMBER\_AF\_PLUGIN\_RF4CE\_GDP\_IS\_ORIGINATOR

Set if the RF4CE Profile plugin was configured as a controller or target.

Definition at line 40 of file `rf4ce-gdp.h`.

#### 6.9.2.2 #define POLL\_CLIENT

Definition at line 46 of file `rf4ce-gdp.h`.

#### 6.9.2.3 #define POLL\_SERVER

Definition at line 47 of file `rf4ce-gdp.h`.

#### 6.9.2.4 #define IDENTIFICATION\_CLIENT

Definition at line 57 of file `rf4ce-gdp.h`.

### 6.9.2.5 #define IDENTIFICATION\_SERVER

Definition at line 58 of file [rf4ce-gdp.h](#).

## 6.9.3 Function Documentation

### 6.9.3.1 uint8\_t\* emberAfRf4ceGdpRandContents ( EmberAfRf4ceGdpRand \* rand )

Accesses the actual random byte string of the [EmberAfRf4ceGdpRand](#) structure.

#### Parameters

<i>rand</i>	A pointer to an <a href="#">EmberAfRf4ceGdpRand</a> structure.
-------------	--

#### Returns

uint8\_t\* Returns a pointer to the first byte of the random byte string.

### 6.9.3.2 uint8\_t\* emberAfRf4ceGdpTagContents ( EmberAfRf4ceGdpTag \* tag )

Accesses the actual tag value of the [EmberAfRf4ceGdpTag](#) structure.

#### Parameters

<i>tag</i>	A pointer to an <a href="#">EmberAfRf4ceGdpTag</a> structure.
------------	---

#### Returns

uint8\_t\* Returns a pointer to the first byte of the tag value.

### 6.9.3.3 EmberStatus emberAfRf4ceGdpBind ( uint8\_t \* profileIdList, uint8\_t profileIdListLength, uint8\_t searchDevType )

Initiates the binding process.

#### Parameters

<i>profileIdList</i>	The list of profile IDs supported by the node.
<i>profileIdListLength</i>	The size of the profile ID list.
<i>searchDevType</i>	The device type the node will be matching against during the preliminary discovery process.

#### Returns

An [EmberStatus](#) value indicating whether the binding process was successfully initiated or the reason of failure.

**6.9.3.4 EmberStatus emberAfRf4ceGdpProxyBind ( EmberPanId *panId*, EmberEUI64 *ieeeAddr*, uint8\_t \* *profileIdList*, uint8\_t *profileIdListLength* )**

Initiates the proxy binding process.

**Parameters**

<i>panId</i>	The pan ID of the recipient.
<i>ieeeAddr</i>	The IEEE address of the recipient.
<i>profileIdList</i>	The list of profile IDs supported by the node.
<i>profileIdListLength</i>	The size of the profile ID list.

**Returns**

An [EmberStatus](#) value indicating whether the proxy binding process was successfully initiated or the reason of failure.

**6.9.3.5 void emberAfRf4ceGdpConfigurationProcedureComplete ( bool *success* )**

It notifies the GDP profile that a profile-specific configuration procedure has completed.

**Parameters**

<i>success</i>	Indicates whether the profile-specific configuration procedure completed successfully or not.
----------------	---

**6.9.3.6 void emberAfRf4ceGdpPushButton ( bool *setPending* )**

It sets or clears the push button stimulus pending flag at the GDP recipient.

**Parameters**

<i>The</i>	push button stimulus pending flag.
------------	------------------------------------

**6.9.3.7 void emberAfRf4ceGdpSetValidationStatus ( EmberAfRf4ceGdpCheckValidationStatus *status* )**

It sets the validation status at the GDP recipient.

**Parameters**

<i>status</i>	The validation status.
---------------	------------------------

**6.9.3.8 EmberStatus emberAfRf4ceGdpInitiateKeyExchange ( uint8\_t *pairingIndex* )**

It kicks off the extended key exchange procedure at the GDP originator or recipient.

**Parameters**

<i>The</i>	pairing index for which the key exchange procedure should be executed.
------------	--

**6.9.3.9 EmberStatus emberAfRf4ceGdpPoll ( uint8\_t *pairingIndex*, uint16\_t *vendorId*, EmberAfRf4ceGdpHeartbeatTrigger *trigger* )**

It polls the poll server by sending out a GDP heartbeat command to the poll server.

**Parameters**

<i>pairingIndex</i>	The pairing index of the poll server.
<i>vendorId</i>	The vendor ID to be included in the heartbeat command.
<i>trigger</i>	The heartbeat trigger to be included in the heartbeat command.

**Returns**

Indicates whether the heartbeat command was successfully sent out or the reason of failure.

**6.9.3.10 bool emberAfRf4ceGdpMessageSent ( uint8\_t *pairingIndex*, uint8\_t *profileId*, uint16\_t *vendorId*, const uint8\_t \* *message*, uint8\_t *messageLength*, EmberStatus *status* )**

Submit a message sent indication to the GDP plugin for any applicable GDP-specific processing.

The application should submit all message sent indications for profiles that use GDP to this plugin before performing any profile-specific processing. Profile-specific processing should only occur if this API returns false.

**Returns**

true if the message sent indication was for a GDP command and has been handled by the GDP plugin and should therefore not be processed further by the application or false if the message sent indication was not for a GDP command and the application should perform profile-specific processing.

**6.9.3.11 bool emberAfRf4ceGdpIncomingMessage ( uint8\_t *pairingIndex*, uint8\_t *profileId*, uint16\_t *vendorId*, EmberRf4ceTxOption *secured*, const uint8\_t \* *message*, uint8\_t *messageLength* )**

Submit an incoming message to the GDP plugin for any applicable GDP- specific processing.

The application should submit all incoming messages for profiles that use GDP to this plugin before performing any profile-specific processing. Profile-specific processing should only occur if this API returns false.

**Returns**

true if the incoming message was a GDP command and has been handled by the GDP plugin and should therefore not be processed further by the application or false if the incoming message was not a GDP command and the application should perform profile-specific processing.

### 6.9.3.12 EmberStatus emberAfRf4ceGdpGetCommandTxOptions ( EmberAfRf4ceGdpCommandCode *commandCode*, uint8\_t *pairingIndex*, uint16\_t *vendorId*, EmberRf4ceTxOption \* *txOptions* )

Allows the application to retrieve the RF4CE TX options used by GDP for a specific command, pairing index and vendor ID.

#### Returns

An [EmberStatus](#) indicating success or the reason of failure.

### 6.9.3.13 EmberStatus emberAfRf4ceGdpGenericResponse ( uint8\_t *pairingIndex*, uint8\_t *profileId*, uint16\_t *vendorId*, EmberAfRf4ceGdpResponseCode *responseCode* )

It sends out a GDP generic response command.

#### Parameters

<i>paringIndex</i>	The pairing index the generic response command should be sent to.
<i>profileId</i>	The profile ID to be included in the generic response command.
<i>vendorId</i>	The vendor ID to be included in the generic response command.
<i>responseCode</i>	The response code to be included in the generic response command.

#### Returns

An [EmberStatus](#) value indicating whether the generic response command was successfully sent out or the reason of failure.

### 6.9.3.14 EmberStatus emberAfRf4ceGdpConfigurationComplete ( uint8\_t *pairingIndex*, uint8\_t *profileId*, uint16\_t *vendorId*, EmberAfRf4ceGdpStatus *status* )

It sends out a GDP configuration complete command.

#### Parameters

<i>paringIndex</i>	The pairing index the configuration complete command should be sent to.
<i>profileId</i>	The profile ID to be included in the configuration complete command.
<i>vendorId</i>	The vendor ID to be included in the configuration complete command.
<i>status</i>	The status code to be included in the configuration complete command.

#### Returns

An [EmberStatus](#) value indicating whether the configuration complete command was successfully sent out or the reason of failure.

### 6.9.3.15 EmberStatus emberAfRf4ceGdpHeartbeat ( uint8\_t *pairingIndex*, uint16\_t *vendorId*, EmberAfRf4ceGdpHeartbeatTrigger *trigger* )

It sends out a GDP hearbeat command.

**Parameters**

<i>paringIndex</i>	The pairing index the heartbeat command should be sent to.
<i>vendorId</i>	The vendor ID to be included in the heartbeat command.
<i>trigger</i>	The trigger code to be included in the heartbeat command.

**Returns**

An [EmberStatus](#) value indicating whether the heartbeat command was successfully sent out or the reason of failure.

#### 6.9.3.16 EmberStatus emberAfRf4ceGdpGetAttributes ( uint8\_t *pairingIndex*, uint8\_t *profileId*, uint16\_t *vendorId*, const EmberAfRf4ceGdpAttributeIdentificationRecord \* *records*, uint8\_t *recordsLength* )

It sends out a GDP get attributes command.

**Parameters**

<i>paringIndex</i>	The pairing index the get attributes command should be sent to.
<i>profileId</i>	The profile ID to be included in the get attributes command.
<i>vendorId</i>	The vendor ID to be included in the get attributes command.
<i>records</i>	A list of <a href="#">EmberAfRf4ceGdpAttributeIdentificationRecord</a> to be included in the get attributes command.
<i>recordsLength</i>	The size of the attribute identification records list.

**Returns**

An [EmberStatus](#) value indicating whether the get attributes command was successfully sent out or the reason of failure.

#### 6.9.3.17 EmberStatus emberAfRf4ceGdpGetAttributesResponse ( uint8\_t *pairingIndex*, uint8\_t *profileId*, uint16\_t *vendorId*, const EmberAfRf4ceGdpAttributeStatusRecord \* *records*, uint8\_t *recordsLength* )

It sends out a GDP get attributes response command.

**Parameters**

<i>paringIndex</i>	The pairing index the get attributes response command should be sent to.
<i>profileId</i>	The profile ID to be included in the get attributes response command.
<i>vendorId</i>	The vendor ID to be included in the get attributes response command.
<i>records</i>	A list of <a href="#">EmberAfRf4ceGdpAttributeStatusRecord</a> to be included in the get attributes response command.
<i>recordsLength</i>	The size of the attribute status records list.

**Returns**

An [EmberStatus](#) value indicating whether the get attributes response command was successfully sent out or the reason of failure.

### 6.9.3.18 EmberStatus emberAfRf4ceGdpPushAttributes ( *uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, const EmberAfRf4ceGdpAttributeRecord \* records, uint8\_t recordsLength* )

It sends out a GDP push attributes command.

#### Parameters

<i>paringIndex</i>	The pairing index the push attributes command should be sent to.
<i>profileId</i>	The profile ID to be included in the push attributes command.
<i>vendorId</i>	The vendor ID to be included in the push attributes command.
<i>records</i>	A list of <a href="#">EmberAfRf4ceGdpAttributeRecord</a> to be included in the push attributes command.
<i>recordsLength</i>	The size of the attribute records list.

#### Returns

An [EmberStatus](#) value indicating whether the push attributes command was successfully sent out or the reason of failure.

### 6.9.3.19 EmberStatus emberAfRf4ceGdpSetAttributes ( *uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, const EmberAfRf4ceGdpAttributeRecord \* records, uint8\_t recordsLength* )

It sends out a GDP set attributes command.

#### Parameters

<i>paringIndex</i>	The pairing index the set attributes command should be sent to.
<i>profileId</i>	The profile ID to be included in the set attributes command.
<i>vendorId</i>	The vendor ID to be included in the set attributes command.
<i>records</i>	A list of <a href="#">EmberAfRf4ceGdpAttributeRecord</a> to be included in the set attributes command.
<i>recordsLength</i>	The size of the attribute records list.

#### Returns

An [EmberStatus](#) value indicating whether the set attributes command was successfully sent out or the reason of failure.

### 6.9.3.20 EmberStatus emberAfRf4ceGdpPullAttributes ( *uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, const EmberAfRf4ceGdpAttributeIdentificationRecord \* records, uint8\_t recordsLength* )

It sends out a GDP pull attributes command.

#### Parameters

<i>paringIndex</i>	The pairing index the pull attributes command should be sent to.
<i>profileId</i>	The profile ID to be included in the pull attributes command.
<i>vendorId</i>	The vendor ID to be included in the pull attributes command.
<i>records</i>	A list of <a href="#">EmberAfRf4ceGdpAttributeIdentificationRecord</a> to be included in the pull attributes command.
<i>recordsLength</i>	The size of the attribute identification records list.

## Returns

An [EmberStatus](#) value indicating whether the pull attributes command was successfully sent out or the reason of failure.

**6.9.3.21** `EmberStatus emberAfRf4ceGdpPullAttributesResponse ( uint8_t pairingIndex, uint8_t profileId, uint16_t vendorId, const EmberAfRf4ceGdpAttributeStatusRecord * records, uint8_t recordsLength )`

It sends out a GDP pull attributes response command.

## Parameters

<i>paringIndex</i>	The pairing index the pull attributes response command should be sent to.
<i>profileId</i>	The profile ID to be included in the pull attributes response command.
<i>vendorId</i>	The vendor ID to be included in the pull attributes response command.
<i>records</i>	A list of <a href="#">EmberAfRf4ceGdpAttributeStatusRecord</a> to be included in the pull attributes response command.
<i>recordsLength</i>	The size of the attribute status records list.

## Returns

An [EmberStatus](#) value indicating whether the pull attributes response command was successfully sent out or the reason of failure.

**6.9.3.22** `EmberStatus emberAfRf4ceGdpCheckValidationRequest ( uint8_t pairingIndex, uint16_t vendorId, uint8_t control )`

It sends out a GDP check validation request command.

## Parameters

<i>paringIndex</i>	The pairing index the check validation request command should be sent to.
<i>vendorId</i>	The vendor ID to be included in the check validation request command.
<i>control</i>	The control field to be included in the check validation request command.

## Returns

An [EmberStatus](#) value indicating whether the check validation request command was successfully sent out or the reason of failure.

**6.9.3.23** `EmberStatus emberAfRf4ceGdpCheckValidationResponse ( uint8_t pairingIndex, uint16_t vendorId, EmberAfRf4ceGdpCheckValidationStatus status )`

It sends out a GDP check validation response command.

## Parameters

<i>paringIndex</i>	The pairing index the check validation response command should be sent to.
<i>vendorId</i>	The vendor ID to be included in the check validation response command.
<i>status</i>	The status code to be included in the check validation response command.

## Returns

An [EmberStatus](#) value indicating whether the check validation response command was successfully sent out or the reason of failure.

### 6.9.3.24 EmberStatus emberAfRf4ceGdpClientNotificationIdentify ( *uint8\_t pairingIndex, uint16\_t vendorId, EmberAfRf4ceGdpClientNotificationIdentifyFlags flags, uint16\_t timeS* )

It sends out a GDP client notification identify command.

## Parameters

<i>paringIndex</i>	The pairing index the client notification identify command should be sent to.
<i>vendorId</i>	The vendor ID to be included in the client notification identify command.
<i>flags</i>	The flags field to be included in the client notification identify command.
<i>timeS</i>	The time field in seconds to be included in the client notification identify command.

## Returns

An [EmberStatus](#) value indicating whether the client notification identify command was successfully sent out or the reason of failure.

### 6.9.3.25 EmberStatus emberAfRf4ceGdpClientNotificationRequestPollNegotiation ( *uint8\_t pairingIndex, uint16\_t vendorId* )

It sends out a GDP client notification request poll negotiation command.

## Parameters

<i>paringIndex</i>	The pairing index the client notification request poll negotiation command should be sent to.
<i>vendorId</i>	The vendor ID to be included in the client notification request poll negotiation command.

## Returns

An [EmberStatus](#) value indicating whether the client notification request poll negotiation command was successfully sent out or the reason of failure.

### 6.9.3.26 EmberStatus emberAfRf4ceGdpClientNotification ( *uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, uint8\_t subtype, const uint8\_t \* payload, uint8\_t payloadLength* )

It sends out a generic GDP client notification command.

## Parameters

<i>paringIndex</i>	The pairing index the client notification command should be sent to.
<i>vendorId</i>	The vendor ID to be included in the client notification command.
<i>subType</i>	The sub-type field of the client notification command.
<i>payload</i>	The payload to be included in the client notification command.
<i>payloadLength</i>	The length in bytes of the payload.

**Returns**

An [EmberStatus](#) value indicating whether the client notification command was successfully sent out or the reason of failure.

**6.9.3.27 EmberStatus emberAfRf4ceGdpSubscribeToHeartbeat ( EmberAfRf4ceGdpHeartbeat-Callback *callback* )**

It allows a software module to subscribe to incoming heartbeat commands.

**Parameters**

<i>callback</i>	The callback to be called by the poll server upon receiving a heartbeat command.
-----------------	--

**Returns**

An [EmberStatus](#) value of [EMBER\\_SUCCESS](#) if the subscription process succeeded. An [EmberStatus](#) value of [EMBER\\_TABLE\\_FULL](#) if there is no room in the subscription table. An [EmberStatus](#) of [EMBER\\_INVALID\\_CALL](#) if the node is not a poll server.

## 6.10 Generic Device Profile Identification Client

### Functions

- void [emberAfRf4ceGdpIdentificationClientDetectedUserInteraction](#) (void)

#### 6.10.1 Detailed Description

This plugin provides an implementation of the Generic Device Profile (GDP) Identification Client. It offers an excellent example of the role of an identification client under GDP using the Silicon Labs development kit. However, if a customer moves their application to different hardware, they will need to create their own implementation that makes use of the new hardware. See UG10310 for more information regarding the role of the GDP Identification Client.

In this Ember implementation of the GDP Identification Client, indicators on the Silicon Labs development board will react to identification commands from the server, notifying the user that it is in identifying mode. These notifications come in the form of flashing LEDs, a buzzer sounding, or printing status messages.

The application can notify the plugin that a user interaction has been detected using the API [emberAfRf4ce-GdpIdentificationClientDetectedUserInteraction](#). This will trigger the plugin to perform the necessary actions in accordance with the GDP standard. A user can also incite call upon this event by issuing the following command over the command line interface: *plugin rf4ce-gdp-identification-client user-interaction*.

Please see [Generic Device Profile Identification Server](#) for an implementation of the RF4CE GDP Identification Server.

#### 6.10.2 Function Documentation

##### 6.10.2.1 void [emberAfRf4ceGdpIdentificationClientDetectedUserInteraction](#) ( void )

Notify the plugin that a user interaction has been detected. Note that this command can also be called from the command line interface using the command *plugin rf4ce-gdp-identification-client user-interaction*.

## 6.11 Generic Device Profile Identification Server

### Functions

- [EmberStatus emberAfRf4ceGdpIdentificationServerIdentify](#) (uint8\_t pairingIndex, [EmberAfRf4ceGdpClientNotificationIdentifyFlags](#) flags, uint16\_t timeS)

#### 6.11.1 Detailed Description

This plugin provides an implementation of the RF4CE Generic Device Profile (GDP) Identification Server. It gives the user the opportunity to manage the GDP identification process from the server side.

The application can command the server to send an identify command to a client using the API [emberAfRf4ceGdpIdentificationServerIdentify](#). One can also begin the process over the command line interface by using the command *plugin rf4ce-gdp-identification-server identify* and supplying the desired arguments.

Please see [rf4ce-gdp-identification-Client](#) for an implementation of the RF4CE GDP Identification Client. Unlike the RF4CE GDP Identification Client plugin, this plugin is able to be used across hardware platforms.

#### 6.11.2 Function Documentation

##### 6.11.2.1 [EmberStatus emberAfRf4ceGdpIdentificationServerIdentify](#) ( uint8\_t pairingIndex, EmberAfRf4ceGdpClientNotificationIdentifyFlags flags, uint16\_t timeS )

Queue up an identify command to be sent to an identification client in the pairing table. Note that one can issue the command *plugin rf4ce-gdp-identification-server identify* over the command line interface in order to perform the same action.

#### Parameters

<i>pairingIndex</i>	The index in the pairing table to which to send the identification command.
<i>flags</i>	The flags to send in this command. See data type <a href="#">EmberAfRf4ceGdpClientNotificationIdentifyFlags</a> for more information on this parameter.
<i>timeS</i>	The time in seconds for which the client should identify.

#### Returns

An [EmberStatus](#) value indicating the success of the attempt to queue up the identify command.

## 6.12 RF4CE Multiple System Operators Profile

### Macros

- #define EMBER\_AF\_PLUGIN\_RF4CE\_MSO\_IS\_RECIPIENT

### Functions

- EmberStatus emberAfRf4ceMsoBind (void)
- EmberStatus emberAfRf4ceMsoWatchdogKick (uint16\_t validationWatchdogTimeMs)
- EmberStatus emberAfRf4ceMsoValidate (void)
- EmberStatus emberAfRf4ceMsoTerminateValidation (void)
- EmberStatus emberAfRf4ceMsoAbortValidation (bool fullAbort)
- EmberStatus emberAfRf4ceMsoUserControlPress (uint8\_t pairingIndex, EmberAfRf4ceMsoKeyCode rcCommandCode, const uint8\_t \*rcCommandPayload, uint8\_t rcCommandPayloadLength, bool atomic)
- EmberStatus emberAfRf4ceMsoUserControlRelease (uint8\_t pairingIndex, EmberAfRf4ceMsoKeyCode rcCommandCode)
- EmberStatus emberAfRf4ceMsoSetAttributeRequest (uint8\_t pairingIndex, EmberAfRf4ceMsoAttributeId attributeId, uint8\_t index, uint8\_t valueLen, const uint8\_t \*value)
- EmberStatus emberAfRf4ceMsoGetAttributeRequest (uint8\_t pairingIndex, EmberAfRf4ceMsoAttributeId attributeId, uint8\_t index, uint8\_t valueLen)
- bool emberAfRf4ceMsoIrRfDatabaseEntryUseDefault (const EmberAfRf4ceMsoIrRfDatabaseEntry \*entry)
- bool emberAfRf4ceMsoIrRfDatabaseEntryHasRfPressedDescriptor (const EmberAfRf4ceMsoIrRfDatabaseEntry \*entry)
- bool emberAfRf4ceMsoIrRfDatabaseEntryHasRfRepeatedDescriptor (const EmberAfRf4ceMsoIrRfDatabaseEntry \*entry)
- bool emberAfRf4ceMsoIrRfDatabaseEntryHasRfReleasedDescriptor (const EmberAfRf4ceMsoIrRfDatabaseEntry \*entry)
- uint8\_t emberAfRf4ceMsoIrRfDatabaseEntryGetMinimumNumberOfTransmissions (const EmberAfRf4ceMsoIrRfDescriptor \*rfDescriptor)
- bool emberAfRf4ceMsoIrRfDatabaseEntryShouldTransmitUntilRelease (const EmberAfRf4ceMsoIrRfDescriptor \*rfDescriptor)
- bool emberAfRf4ceMsoIrRfDatabaseEntryHasIrDescriptor (const EmberAfRf4ceMsoIrRfDatabaseEntry \*entry)

### 6.12.1 Detailed Description

The RF4CE Multiple System Operators (MSO) plugin implements the MSO profile. The profile uses the simple user control procedure from the ZigBee Remote Control (ZRC) profile with a more robust discovery, pairing, and validating procedure for binding devices. The plugin manages these procedures for both originators and recipients.

This plugin supports originators and recipients. Originators send action messages to recipients after binding with them. Unlike ZRC, originators must be controllers. Recipients must be targets, as in ZRC. Both controllers and targets must start general network operations before beginning MSO-specific operations. Network operations should be started by calling `emberAfRf4ceStart` in the `RF4CE Profile Support` plugin.

Once network operations have started, controllers can initiate the binding procedure by calling [emberAfRf4ceMsoBind](#). The plugin will perform discovery for matching targets in range. Potential targets are ranked according to an algorithm described in the MSO specification. If one or more potential targets are identified, the plugin will attempt to pair with the highest-ranked target. Once the temporary pairing is established, the validation procedure begins. Validation is implementation-specific, but may be as simple as a button press on the target or a more involved challenge-response mechanism between target and originator. Only if validation is successful are the controller and target considered bound. If any step fails, the plugin will restart the binding procedure using the target that has the next-highest rank. At the conclusion of the binding procedure, the plugin will call [emberAfPluginRf4ceMsoBindingCompleteCallback](#) to indicate whether binding completed successfully with a target and, if so, which pairing index has been assigned to that target.

The plugin manages discovery and pairing for targets on behalf of the device. If pairing completes successfully, the plugin will call [emberAfPluginRf4ceMsoStartValidationCallback](#) so that the device can begin the implementation-specific validation procedure. During validation, the application must periodically call [emberAfRf4ceMsoWatchdogKick](#) to prevent a validation timeout. Once the application determines the controller has validated successfully, it should call [emberAfRf4ceMsoValidate](#). If the controller fails validation, the application may instead call [emberAfRf4ceMsoTerminateValidation](#) or [emberAfRf4ceMsoAbortValidation](#). Once binding completes, the plugin will call [emberAfPluginRf4ceMsoBindingCompleteCallback](#) to indicate whether binding completed successfully with a controller and, if so, which pairing index has been assigned to that controller.

Following a successful discovery and pairing, controllers may send user control messages to targets by calling [emberAfRf4ceMsoUserControlPress](#). In response, the plugin will transmit a user control press message to the indicated target with the HDMI-CEC command code and payload. If the press is atomic, the plugin performs no additional processing. Otherwise, the plugin will repeatedly transmit user control repeat messages at fixed intervals until [emberAfRf4ceMsoUserControlRelease](#) is called. The interval at which user control repeat messages are transmitted is configurable in the plugin options.

For targets, the plugin will keep track of incoming user control messages. Each time a user control press command is received, the plugin will call [emberAfPluginRf4ceMsoUserControlCallback](#) with its HDMI-CEC command code and payload. The plugin will then wait for a fixed duration for a corresponding user control repeat or release messages. If a user control repeat message is received within the timeout, the plugin will reset its timer and wait for the next message. If a user control repeat message is not received within the timeout or if a user control release is received, the plugin will call [emberAfPluginRf4ceMsoUserControlCallback](#) with an indication that the user control has stopped. The timeout for receiving repeat messages is configurable in the plugin options. Note that the plugin will not call [emberAfPluginRf4ceMsoUserControlCallback](#) for repeat messages that follow a press message.

The plugin is capable of keeping track of a fixed number of simultaneous incoming and outgoing user control messages. The limits are configurable in the plugin options.

This plugin manages the state of the receiver by calling [emberAfRf4ceRxEnable](#) using [EMBER\\_AF\\_RF4CE\\_PROFILE\\_MSO](#) as the profile id. If the application also wishes to manage the receiver, it should do so using [EMBER\\_AF\\_RF4CE\\_PROFILE\\_WILDCARD](#) as the profile id or by calling [emberAfRf4ceSetPowerSavingParameters](#).

This plugin utilizes the discovery, pairing, sending and receiving, and power-saving functionality provided by the [RF4CE Profile Support](#) plugin. Support for the optional IR-RF database feature is provided by the [RF4CE Multiple System Operators IR-RF Database Originator](#) and [RF4CE Multiple System Operators IR-RF Database Recipient](#) plugins.

## 6.12.2 Macro Definition Documentation

#### 6.12.2.1 `#define EMBER_AF_PLUGIN_RF4CE_MSO_IS_RECIPIENT`

Set if the RF4CE Profile plugin was configured as a target.

Definition at line 103 of file [rf4ce-mso.h](#).

### 6.12.3 Function Documentation

#### 6.12.3.1 `EmberStatus emberAfRf4ceMsoBind( void )`

Initiate the binding procedure.

The plugin begins the binding procedure by searching for and ranking potential targets with which to pair. If one or more targets is identified, the plugin will create a temporary pairing with the highest-ranked target. Once the temporary pairing completes, the application should perform the required validation procedure. During this time, the plugin will periodically query the target for the validation status. If validation completes successfully, the plugin will notify the application by calling [emberAfPluginRf4ceMsoBindingCompleteCallback](#). If the temporary pairing fails or if validation fails, the plugin will attempt to bind to the target with the next-highest rank. If the plugin fails to bind with any target, it will call [emberAfPluginRf4ceMsoBindingCompleteCallback](#) with an error.

This function is only applicable to target devices.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

#### 6.12.3.2 `EmberStatus emberAfRf4ceMsoWatchdogKick( uint16_t validationWatchdogTimeMs )`

Kick the watchdog.

If the plugin was configured with a non-zero initial watchdog time, this function must be called during validation to prevent the watchdog timer from expiring and triggering a TIMEOUT failure. The first call should occur within the initial watchdog time of the call to [emberAfPluginRf4ceMsoStartValidationCallback](#). To avoid further TIMEOUTs, each call to this function must either be followed either by a subsequent call within the provided timeout or by a call to [emberAfRf4ceMsoValidate](#), [emberAfRf4ceMsoTerminateValidation](#), or [emberAfRf4ceMsoAbortValidation](#).

This function is only applicable to target devices.

#### Parameters

<code>validation-WatchdogTime-Ms</code>	The time in milliseconds to reset the watchdog timer or zero to disable the watchdog timer.
---	---

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

#### 6.12.3.3 `EmberStatus emberAfRf4ceMsoValidate( void )`

Validate a controller.

This function can be called to indicate the validation procedure completed successfully. It should be called if the controller has performed the required validation procedure satisfactorily.

This function is only applicable to target devices.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.12.3.4 EmberStatus emberAfRf4ceMsoTerminateValidation ( void )

Terminate the validation procedure.

This function can be called to terminate the validation procedure. It should be called if the controller fails validation.

This function is only applicable to target devices.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.12.3.5 EmberStatus emberAfRf4ceMsoAbortValidation ( bool fullAbort )

Abort the validation procedure.

This function can be called to abort the validation procedure. It should be called in response to a controller sending the Abort or FullAbort keys during validation.

#### Parameters

<i>fullAbort</i>	true if the controller should not attempt to validate with other controllers or false if the controller should attempt to validate with other controller.
------------------	---

This function is only applicable to target devices.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.12.3.6 EmberStatus emberAfRf4ceMsoUserControlPress ( uint8\_t pairingIndex, EmberAfRf4ceMsoKeyCode rcCommandCode, const uint8\_t \* rcCommandPayload, uint8\_t rcCommandPayloadLength, bool atomic )

Send indications of user control presses and repeats to a pairing index.

This function can be called when a user control has been pressed and an indication of this should be sent to a remote node. If the user control should be repeated, the plugin will automatically send user control repeat messages at fixed intervals according to the plugin configuration. Every call to this function for a repeatable user control should be followed by a call to [emberAfRf4ceMsoUserControlRelease](#).

**Parameters**

<i>pairingIndex</i>	The pairing index to which to send user control messages.
<i>rcCommand-Code</i>	The RC command code of the user control.
<i>rcCommand-Payload</i>	The optional RC command payload of the user control.
<i>rcCommand-PayloadLength</i>	The length of the optional RC command payload of the user control.
<i>atomic</i>	true if the user control is atomic or false if it should repeat.

This function is only applicable to controller devices.

**Returns**

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.12.3.7 EmberStatus emberAfRf4ceMsoUserControlRelease ( *uint8\_t pairingIndex, EmberAfRf4ceMsoKeyCode rcCommandCode* )

Send indications of user control release to a pairing index.

This function can be called when a user control has been released and an indication of this should be sent to a remote node.

**Parameters**

<i>pairingIndex</i>	The pairing index to which to send user control messages.
<i>rcCommand-Code</i>	The RC command code of the user control.

This function is only applicable to controller devices.

**Returns**

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.12.3.8 EmberStatus emberAfRf4ceMsoSetAttributeRequest ( *uint8\_t pairingIndex, EmberAfRf4ceMsoAttributeId attributeId, uint8\_t index, uint8\_t valueLen, const uint8\_t \* value* )

Set an attribute on a remote node.

This function can be called to set an attribute on a remote node. After sending the request, the plugin will automatically idle for a fixed duration as required by the MSO specification and then wait a configurable duration for the response from the target. The plugin will call ::emberAfPluginRf4ceMsoSetAttribute-ResponseCallback when the response is received or if a timeout occurs.

**Parameters**

<i>pairingIndex</i>	The pairing index on which to set the attribute.
<i>attributeId</i>	The attribute id to set..
<i>index</i>	The index of the element for vector attributes.
<i>valueLen</i>	The length of the value to set.
<i>value</i>	The value to set.

This function is only applicable to controller devices.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### **6.12.3.9 EmberStatus emberAfRf4ceMsoGetAttributeRequest ( *uint8\_t pairingIndex, EmberAfRf4ceMsoAttributeId attributeId, uint8\_t index, uint8\_t valueLen* )**

Get an attribute on a remote node.

This function can be called to get an attribute on a remote node. After sending the request, the plugin will automatically idle for a fixed duration as required by the MSO specification and then wait a configurable duration for the response from the target. The plugin will call ::emberAfPluginRf4ceMsoGetAttributeResponseCallback when the response is received or if a timeout occurs.

#### Parameters

<i>pairingIndex</i>	The pairing index on which to get the attribute.
<i>attributeId</i>	The attribute id to get.
<i>index</i>	The index of the element for vector attributes.
<i>valueLen</i>	The length of the value to get.

This function is only applicable to controller devices.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### **6.12.3.10 bool emberAfRf4ceMsolrRfDatabaseEntryUseDefault ( *const EmberAfRf4ceMsoIrRfDatabaseEntry \* entry* )**

Determine if the IR-RF database entry is the default.

Implemented as a macro for efficiency.

#### Returns

true if the IR-RF database table entry is the default or false otherwise.

### **6.12.3.11 bool emberAfRf4ceMsolrRfDatabaseEntryHasRfPressedDescriptor ( *const EmberAfRf4ceMsoIrRfDatabaseEntry \* entry* )**

Determine if the IR-RF database entry has an RF pressed descriptor.

Implemented as a macro for efficiency.

#### Returns

true if the IR-RF database table entry has an RF pressed descriptor or false otherwise.

**6.12.3.12 bool emberAfRf4ceMsoIrRfDatabaseEntryHasRfRepeatedDescriptor ( const EmberAfRf4ceMsoIrRfDatabaseEntry \* entry )**

Determine if the IR-RF database entry has an RF repeated descriptor.

Implemented as a macro for efficiency.

**Returns**

true if the IR-RF database table entry has an RF repeated descriptor or false otherwise.

**6.12.3.13 bool emberAfRf4ceMsoIrRfDatabaseEntryHasRfReleasedDescriptor ( const EmberAfRf4ceMsoIrRfDatabaseEntry \* entry )**

Determine if the IR-RF database entry has an RF released descriptor.

Implemented as a macro for efficiency.

**Returns**

true if the IR-RF database table entry has an RF released descriptor or false otherwise.

**6.12.3.14 uint8\_t emberAfRf4ceMsoIrRfDatabaseEntryGetMinimumNumberOfTransmissions ( const EmberAfRf4ceMsoIrRfDatabaseRfDescriptor \* rfDescriptor )**

Get the minimum number of transmissions for a key code from its RF RF descriptor.

Implemented as a macro for efficiency.

**Returns**

The minimum number of transmissions.

**6.12.3.15 bool emberAfRf4ceMsoIrRfDatabaseEntryShouldTransmitUntilRelease ( const EmberAfRf4ceMsoIrRfDatabaseRfDescriptor \* rfDescriptor )**

Determine if a key code should continue being transmitted after the minimum number of transmissions have taken place when the key is kept pressed.

Implemented as a macro for efficiency.

**Returns**

true if the key code should continue being transmitted after the minimum number of transmissions have taken place or false otherwise.

**6.12.3.16 bool emberAfRf4ceMsoIrRfDatabaseEntryHasIrDescriptor ( const EmberAfRf4ceMsoIrRfDatabaseEntry \* entry )**

Determine if the IR-RF database entry has an IR descriptor.

Implemented as a macro for efficiency.

**Returns**

true if the IR-RF database table entry has an IR descriptor or false otherwise.

## 6.13 RF4CE Multiple System Operators IR-RF Database Originator

### Functions

- `EmberStatus emberAfRf4ceMsoIrRfDatabaseOriginatorGet (EmberAfRf4ceMsoKeyCode keyCode, EmberAfRf4ceMsoIrRfDatabaseEntry *entry)`
- `EmberStatus emberAfRf4ceMsoIrRfDatabaseOriginatorSet (EmberAfRf4ceMsoKeyCode keyCode, const EmberAfRf4ceMsoIrRfDatabaseEntry *entry)`
- `EmberStatus emberAfRf4ceMsoIrRfDatabaseOriginatorClear (EmberAfRf4ceMsoKeyCode keyCode)`
- void `emberAfRf4ceMsoIrRfDatabaseOriginatorClearAll (void)`

#### 6.13.1 Detailed Description

The RF4CE Multiple System Operators (MSO) IR-RF Database Originator plugin implements the optional IR-RF database feature of the MSO profile for controllers. The IR-RF database provides a standard mechanism for remapping keys on a remote to control legacy IR devices or to perform simultaneous IR and RF functions. This plugin manages the storage and retrieval of these mappings for controllers.

When the application queries the target for IR-RF information via the [RF4CE Multiple System Operators Profile](#) plugin, the data from the target are passed to this plugin via `emberAfPluginRf4ceMsoIncomingIrRfDatabaseAttributeCallback`. This plugin, in turn, will store the data in RAM. The keys that may be remapped are configuration in AppBuilder and the amount of storage space dedicated to storing IR-RF database entries is configurable via the plugin options.

When `emberAfRf4ceMsoUserControlPress` and `emberAfRf4ceMsoUserControlRelease` are called, the [RF4CE Multiple System Operators Profile](#) plugin will ask this plugin to retrieve RF mappings for the key via `emberAfPluginRf4ceMsoGetIrRfDatabaseEntryCallback`. If a database entry exists for the key, it will be used in lieu of the original key. The same callback may be used by the application to retrieve IR mappings for keys.

Support for the optional IR-RF database feature for targets is provided by the [RF4CE Multiple System Operators IR-RF Database Recipient](#) plugin.

#### 6.13.2 Function Documentation

##### 6.13.2.1 EmberStatus `emberAfRf4ceMsoIrRfDatabaseOriginatorGet ( EmberAfRf4ceMsoKeyCode keyCode, EmberAfRf4ceMsoIrRfDatabaseEntry * entry )`

Get the IR-RF entry from the database for a key code.

#### Parameters

<code>keyCode</code>	The key code.
<code>entry</code>	A pointer to the <code>EmberAfRf4ceMsoIrRfDatabaseEntry</code> to be populated.

**Returns**

An [EmberStatus](#) value that indicates the success or failure of the command.

#### **6.13.2.2 EmberStatus emberAfRf4ceMsolrRfDatabaseOriginatorSet ( EmberAfRf4ceMsoKeyCode keyCode, const EmberAfRf4ceMsoIrRfDatabaseEntry \* entry )**

Set the IR-RF entry in the database for a key code.

**Parameters**

<i>keyCode</i>	The key code.
<i>entry</i>	A pointer to the <a href="#">EmberAfRf4ceMsoIrRfDatabaseEntry</a> .

**Returns**

An [EmberStatus](#) value that indicates the success or failure of the command.

#### **6.13.2.3 EmberStatus emberAfRf4ceMsolrRfDatabaseOriginatorClear ( EmberAfRf4ceMsoKeyCode keyCode )**

Clear the IR-RF entry from the database for a key code.

**Parameters**

<i>keyCode</i>	The key code.
----------------	---------------

**Returns**

An [EmberStatus](#) value that indicates the success or failure of the command.

#### **6.13.2.4 void emberAfRf4ceMsolrRfDatabaseOriginatorClearAll ( void )**

Clear all of the IR-RF entries from the database.

## 6.14 RF4CE Multiple System Operators IR-RF Database Recipient

### Functions

- `EmberStatus emberAfRf4ceMsoIrRfDatabaseRecipientAdd (EmberAfRf4ceMsoKeyCode keyCode, EmberAfRf4ceMsoIrRfDatabaseEntry *entry)`
- `EmberStatus emberAfRf4ceMsoIrRfDatabaseRecipientRemove (EmberAfRf4ceMsoKeyCode keyCode)`
- `void emberAfRf4ceMsoIrRfDatabaseRecipientRemoveAll (void)`

#### 6.14.1 Detailed Description

The RF4CE Multiple System Operators (MSO) IR-RF Database Recipient plugin implements the optional IR-RF database feature of the MSO profile for targets. The IR-RF database provides a standard mechanism for remapping keys on a remote to control legacy IR devices or to perform simultaneous IR and RF functions. This plugin manages the storage and retrieval of these mappings for targets.

When a controller queries this device for IR-RF information, the [RF4CE Multiple System Operators Profile](#) plugin will pass the request to this plugin via `emberAfPluginRf4ceMsoHaveIrRfDatabaseAttributeCallback` and `emberAfPluginRf4ceMsoGetIrRfDatabaseAttributeCallback`. This plugin, in turn, will provide the IR-RF information so that it may be sent back to the controller.

This plugin only stores IR-RF database entries on behalf of the application. The actual IR and RF descriptors themselves must be provided by the application. Entries can be added to the database by calling `emberAfRf4ceMsoIrRfDatabaseRecipientAdd` with the key code to be remapped. `emberAfRf4ceMsoIrRfDatabaseRecipientRemove` can be used to clear a specific entry or `emberAfRf4ceMsoIrRfDatabaseRecipientRemoveAll` may be used to clear all entries in the database. Note that database entries are stored in RAM. The amount of storage space dedicated to storing IR-RF database entries is configurable via the plugin options.

Support for the optional IR-RF database feature for controllers is provided by the [RF4CE Multiple System Operators IR-RF Database Originator](#) plugin.

#### 6.14.2 Function Documentation

##### 6.14.2.1 `EmberStatus emberAfRf4ceMsoIrRfDatabaseRecipientAdd ( EmberAfRf4ceMsoKeyCode keyCode, EmberAfRf4ceMsoIrRfDatabaseEntry * entry )`

Add an IR-RF entry to the database for a key code.

#### Parameters

<code>keyCode</code>	The key code.
<code>entry</code>	A pointer to the <a href="#">EmberAfRf4ceMsoIrRfDatabaseEntry</a> .

**Returns**

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.14.2.2 EmberStatus emberAfRf4ceMsoIrRfDatabaseRecipientRemove ( EmberAfRf4ceMsoKeyCode keyCode )**

Remove an IR-RF entry from the database.

**Parameters**

<i>keyCode</i>	The key code which entry is to be removed.
----------------	--

**Returns**

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.14.2.3 void emberAfRf4ceMsoIrRfDatabaseRecipientRemoveAll ( void )**

Clear all of the IR-RF entries from the database.

- bool `emberAfRf4cePairingTableEntryHasChannelNormalization` (const `EmberRf4cePairingTableEntry` \*pairingTableEntry)

### 6.15.1 Detailed Description

The RF4CE Profile Support plugin provides the necessary foundation of APIs to interface with an RF4CE-capable device.

The functionality contained in this plugin provides basic RF4CE networking features like discovery, pairing, security, profile and device support, and transmission. In order to commence operations in an RF4CE network, one must call `emberAfRf4ceStart`. This is the starting point for beginning any RF4CE activity, over any profile. In the same sense, RF4CE network operations can be stopped with a call to `emberAfRf4ceStop`.

After network operations have been brought up as discussed above, one can easily configure their device using APIs in this plugin, regardless of what profile they are operating on. See `emberAfRf4ceSetPowerSavingParameters`, `emberAfRf4ceRxEnable`, `emberAfRf4ceSetDiscoveryLqiThreshold`, and `emberAfRf4ceSetApplicationInfo` for examples of ways to do this.

Once an RF4CE network has been started as described above, one can use the `::emberAfDiscovery` and `emberAfRf4cePair` APIs to initiate discovery and pairing processes, respectively. This functionality is complemented by various other discovery and pairing helper functions that aid in configuring the mechanisms. For example, a device can call `emberAfRf4ceEnableAutoDiscoveryResponse` to have the plugin handle discovery request messages. There are also convenience macros to read different information regarding the pairing table entries.

Note that in this plugin, these functions are purposely very generic. Please see [Generic Device Profile](#), [ZigBee Remote Control 1.1 Profile](#), [ZigBee Remote Control 2.0 Profile](#), and [RF4CE Multiple System Operators Profile](#) for specific implementations of RF4CE profiles.

### 6.15.2 Macro Definition Documentation

#### 6.15.2.1 #define EMBER\_AF\_RF4CE\_MAXIMUM\_RF4CE\_PAYLOAD\_LENGTH

Definition at line 720 of file `rf4ce-profile.h`.

### 6.15.2.2 #define EMBER\_AF\_RF4CE\_MESSAGE\_TAG\_MASK

The mask applied by [emberAfRf4ceSend](#), [emberAfRf4ceSendVendorSpecific](#), and [emberAfRf4ceSendExtended](#) when allocating a new message tag to an outgoing message. Customers who call ::emberRf4ceSend or ::ezspRf4ceSend directly must use message tags outside this mask.

Definition at line 728 of file [rf4ce-profile.h](#).

## 6.15.3 Function Documentation

### 6.15.3.1 bool emberAfRf4celsCurrentNetwork ( void )

Determine if the current network is the RF4CE network.

#### Returns

true if the current network is the RF4CE network or false otherwise.

### 6.15.3.2 EmberStatus emberAfRf4cePushNetworkIndex ( void )

Set the current network to the RF4CE network.

This function is a convenience wrapper for [emberAfPushNetworkIndex](#). Like the other push APIs, every call to this API must be paired with a subsequent call to [emberAfPopNetworkIndex](#). Note that is it not necessary to call function before any of the emberAfRf4ce functions or in any emberAfPluginRf4ce callbacks. This function is intended primarily for internal use, but is made available to the application in case it is useful for application-specific behavior not generally supported by the plugin.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.15.3.3 EmberStatus emberAfRf4ceStart ( void )

Start the RF4CE network operations.

The function is a convenience wrapper for ::emberRf4ceStart and ::ezspRf4ceStart. It will start the network operations according to the plugin configuration.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.15.3.4 EmberStatus emberAfRf4ceSetPowerSavingParameters ( uint32\_t *dutyCycleMs*, uint32\_t *activePeriodMs* )

Set the power-saving parameters.

Setting the duty cycle to zero disables power saving and will force the receiver to be kept on. It is equivalent to using `emberAfRf4ceRxEnable` to set the wildcard profile to enabled. Setting the duty cycle to non-zero and the active period to zero will allow the receiver to be disabled when all of the profiles are inactive. It is equivalent to setting the wildcard profile to disabled. Otherwise, when all profiles are inactive, the receiver will duty cycle, will the receiver turned on for `activePeriodMs` within each `dutyCycleMs` period.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An `EmberStatus` value that indicates the success or failure of the command.

### **6.15.3.5 EmberStatus `emberAfRf4ceRxEnable` ( `EmberAfRf4ceProfileId profileId, bool enable` )**

Enable or disable the receiver for the given profile.

Each profile can individually indicate whether it needs the receiver on or if the receiver can be disabled to conserve power. If at least one profile requires the receiver to be on (e.g., when it expects to receive a message), the plugin will enable the receiver. Otherwise, the device will revert back to the previously specified power-saving parameters.

The profile `EMBER_AF_RF4CE_PROFILE_WILDCARD` may be used to set the default state for the application. Enabling the receiver for the wildcard profile will force the receiver to be kept on. Disabling the receiver for the wildcard profile will permit the receiver to be turned off when all of the other profiles are inactive.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An `EmberStatus` value that indicates the success or failure of the command.

### **6.15.3.6 EmberStatus `emberAfRf4ceSetFrequencyAgilityParameters` ( `uint8_t rssiWindowSize, uint8_t channelChangeReads, int8_t rssiThreshold, uint16_t readIntervalS, uint8_t readDuration` )**

Set the frequency agility parameters.

The function is a convenience wrapper for `::emberRf4ceSetFrequencyAgilityParameters` and `::ezspRf4ceSetFrequencyAgilityParameters`.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An `EmberStatus` value that indicates the success or failure of the command.

### 6.15.3.7 EmberStatus emberAfRf4ceSetDiscoveryLqiThreshold ( *uint8\_t threshold* )

Set the discovery LQI threshold.

The function is a convenience wrapper for ::emberRf4ceSetDiscoveryLqiThreshold and ::ezspSetValue(EZSP\_VALUE\_RF4CE\_DISCOVERY\_LQI\_THRESHOLD, ...).

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.15.3.8 uint8\_t emberAfRf4ceGetBaseChannel ( *void* )

Get the device RF4CE base channel.

The function is a convenience wrapper for ::emberRf4ceGetBaseChannel and ::ezspGetValue(EZSP\_VALUE\_RF4CE\_BASE\_CHANNEL, ...).

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

The device RF4CE base channel.

### 6.15.3.9 EmberStatus emberAfRf4ceDiscovery ( *EmberPanId panId*, *EmberNodeId nodeId*, *uint8\_t searchDevType*, *uint16\_t discDurationMs*, *uint8\_t maxDiscRepetitions*, *uint8\_t discProfileIdListLength*, *uint8\_t \* discProfileIdList* )

Start the discovery procedure.

The function is a convenience wrapper for ::emberRf4ceDiscovery and ::ezspRf4ceDiscovery. The plugin will call the DiscoveryResponse callback for any profile id that was requested if a response is received from a node supporting that profile. For any given response, discovery will continue if at least one matching profile requests it. Otherwise, the plugin instructs the stack to end discovery at the conclusion of the current triad. When discovery completes, the plugin will call the DiscoveryComplete callback for each profile id that was requested.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.15.3.10 EmberStatus emberAfRf4ceEnableAutoDiscoveryResponse ( *uint16\_t durationMs*, *uint8\_t discProfileIdListLength*, *uint8\_t \* discProfileIdList* )

Enable auto discovery mode.

The function is a convenience wrapper for ::emberRf4ceEnableAutoDiscoveryResponse and ::ezspRf4ceEnableAutoDiscoveryResponse. When auto discovery completes, the plugin will call the AutoDiscoveryResponseComplete callback for each profile id that was requested.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.15.3.11 EmberStatus emberAfRf4cePair ( uint8\_t channel, EmberPanId panId, EmberEUI64 ieeeAddr, uint8\_t keyExchangeTransferCount, EmberAfRf4cePairCompleteCallback pairCompleteCallback )**

Start the pairing procedure.

The function is a convenience wrapper for ::emberRf4cePair and ::ezspRf4cePair. When pairing completes, if a callback was specified in the API call (that is, callback was a non-NULL function pointer), the passed callback shall be called, otherwise the plugin will call the PairComplete callback for each profile id.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.15.3.12 uint8\_t emberAfRf4ceGetPairingIndex ( void )**

Get the pairing index of the incoming or sent message.

The function returns the pairing index of the sender of the current incoming message or the destination of the current outgoing message. This function can only be called in the context of ::emberRf4ceIncomingMessageHandler, ::ezspRf4ceIncomingMessageHandler, ::emberRf4ceMessageSentHandler, or ::ezspRf4ceMessageSentHandler.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

### Returns

The pairing index of the incoming or outgoing message or 0xFF if called from outside the context of ::emberRf4ceIncomingMessageHandler, ::ezspRf4ceIncomingMessageHandler, ::emberRf4ceMessageSentHandler, or ::ezspRf4ceMessageSentHandler.

**6.15.3.13 EmberStatus emberAfRf4ceSetPairingTableEntry ( uint8\_t pairingIndex, EmberRf4cePairingTableEntry \* entry )**

Set the pairing table entry at a particular index.

The function is a convenience wrapper for ::emberRf4ceSetPairingTableEntry and ::ezspRf4ceSetPairingTableEntry.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### **6.15.3.14 EmberStatus emberAfRf4ceGetPairingTableEntry ( uint8\_t *pairingIndex*, EmberRf4cePairingTableEntry \* *entry* )**

Get the pairing table entry at a particular index.

The function is a convenience wrapper for ::emberRf4ceGetPairingTableEntry and ::ezspRf4ceGetPairingTableEntry.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### **6.15.3.15 EmberStatus emberAfRf4ceSetApplicationInfo ( EmberRf4ceApplicationInfo \* *appInfo* )**

Set the node application information.

The function is a convenience wrapper for ::emberRf4ceSetApplicationInfo and ::ezspRf4ceSetApplicationInfo.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### **6.15.3.16 EmberStatus emberAfRf4ceGetApplicationInfo ( EmberRf4ceApplicationInfo \* *appInfo* )**

Get the node application information.

The function is a convenience wrapper for ::emberRf4ceGetApplicationInfo and ::ezspRf4ceGetApplicationInfo.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.15.3.17 EmberStatus emberAfRf4ceKeyUpdate ( *uint8\_t pairingIndex*, *EmberKeyData \* key* )

Update the link key of a pairing table entry.

The function is a convenience wrapper for ::emberRf4ceKeyUpdate and ::ezspRf4ceKeyUpdate.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.15.3.18 EmberStatus emberAfRf4ceSend ( *uint8\_t pairingIndex*, *uint8\_t profileId*, *uint8\_t \* message*, *uint8\_t messageLength*, *uint8\_t \* messageTag* )

Send a message to a pairing index.

The function is a convenience wrapper for ::emberRf4ceSend and ::ezspRf4ceSend. If the pairing index is ::EMBER\_RF4CE\_PAIRING\_TABLE\_BROADCAST\_INDEX, the plugin will broadcast the message. Otherwise, the plugin will send a unicast. For unicasts, the plugin automatically enables security if the remote node is security capable and if a link key exists to the node. If the local node is a target and the remote node supports channel normalization, the plugin will automatically set the channel designator option in the outgoing message. The plugin always requests acknowledgements for unicast messages.

The plugin will allocate a new message tag for the message and, if messageTag is not NULL, store it in the address pointed to by messageTag. See [EMBER\\_AF\\_RF4CE\\_MESSAGE\\_TAG\\_MASK](#) for more information about the message tags allocated by the plugin.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.15.3.19 EmberStatus emberAfRf4ceSendVendorSpecific ( *uint8\_t pairingIndex*, *uint8\_t profileId*, *uint16\_t vendorId*, *uint8\_t \* message*, *uint8\_t messageLength*, *uint8\_t \* messageTag* )

Send a vendor-specific message to a pairing index.

The function is a convenience wrapper for ::emberRf4ceSend and ::ezspRf4ceSend. If the pairing index is ::EMBER\_RF4CE\_PAIRING\_TABLE\_BROADCAST\_INDEX, the plugin will broadcast the message. Otherwise, the plugin will send a unicast. For unicasts, the plugin automatically enables security if the remote node is security capable and if a link key exists to the node. If the local node is a target and the remote node supports channel normalization, the plugin will automatically set the channel designator option in the outgoing message. The plugin always requests acknowledgements for unicast messages.

The plugin will allocate a new message tag for the message and, if messageTag is not NULL, store it in the address pointed to by messageTag. See [EMBER\\_AF\\_RF4CE\\_MESSAGE\\_TAG\\_MASK](#) for more information about the message tags allocated by the plugin.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

## Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.15.3.20 EmberStatus emberAfRf4ceSendExtended ( *uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, EmberRf4ceTxOption txOptions, uint8\_t \* message, uint8\_t messageLength, uint8\_t \* messageTag* )**

Send a message to a pairing index specifying the transmission options as described in the RF4CE specifications.

The function is a convenience wrapper for ::emberRf4ceSend and ::ezspRf4ceSend. If the pairing index is ::EMBER\_RF4CE\_PAIRING\_TABLE\_BROADCAST\_INDEX, the plugin will broadcast the message. Otherwise, the plugin will send a unicast.

The plugin will allocate a new message tag for the message and, if messageTag is not NULL, store it in the address pointed to by messageTag. See [EMBER\\_AF\\_RF4CE\\_MESSAGE\\_TAG\\_MASK](#) for more information about the message tags allocated by the plugin.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

## Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.15.3.21 EmberStatus emberAfRf4ceGetDefaultTxOptions ( *uint8\_t pairingIndex, EmberRf4ceTxOption \* txOptions* )**

Get the default TX options for the pairing index.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

## Parameters

<i>pairingIndex</i>	The pairing index to check.
<i>txOptions</i>	A pointer to the ::EmberRf4ceTxOption to be populated.

## Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.15.3.22 EmberStatus emberAfRf4ceUnpair ( *uint8\_t pairingIndex* )**

Remove a pairing.

The function is a convenience wrapper for ::emberRf4ceUnpair and ::ezspRf4ceUnpair. When unpairing completes, the plugin will call UnpairComplete callback for each profile id.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

#### **6.15.3.23 EmberStatus emberAfRf4ceStop ( void )**

Stop the RF4CE network operations.

The function is a convenience wrapper for ::emberRf4ceStop and ::ezspRf4ceStop.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

#### **6.15.3.24 uint8\_t emberAfRf4ceGetMaxPayload ( uint8\_t pairingIndex, EmberRf4ceTxOption txOptions )**

Returns the maximum RF4CE network layer payload.

The function is a convenience wrapper for ::emberRf4ceGetMaxPayload and ::ezspRf4ceGetMaxPayload.

Note that this function automatically switches to the RF4CE network index before calling any stack APIs and switches back to the previous network index when it is finished. Therefore, it is not necessary to push and pop the RF4CE network index before and after calling this function.

#### Returns

The maximum allowed length in bytes of the RF4CE network layer payload according to the passed pairing index and TX options.

#### **6.15.3.25 uint8\_t emberAfRf4ceDeviceTypeListLength ( EmberRf4ceApplicationCapabilities capabilities )**

Get the length of the device type list from the application capabilities bitmask.

Implemented as a macro for efficiency.

#### Returns

The length of the device type list.

#### **6.15.3.26 uint8\_t emberAfRf4ceProfileIdListLength ( EmberRf4ceApplicationCapabilities capabilities )**

Get the length of the profile id list from the application capabilities bitmask.

Implemented as a macro for efficiency.

**Returns**

The length of the profile id list.

**6.15.3.27 uint16\_t emberAfRf4ceVendorId ( void )**

Get the vendor id of the local application.

Implemented as a macro for efficiency.

**Returns**

The vendor id.

**6.15.3.28 bool emberAfRf4ceIsDeviceTypeSupported ( const EmberRf4ceApplicationInfo \* appInfo, EmberAfRf4ceDeviceType deviceType )**

Determine if the application implements a particular device type.

If the device type is [EMBER\\_AF\\_RF4CE\\_DEVICE\\_TYPE\\_WILDCARD](#), this function always returns true.

**Returns**

true if the application implements the device type or false otherwise.

**6.15.3.29 bool emberAfRf4ceIsDeviceTypeSupportedLocally ( EmberAfRf4ceDeviceType deviceType )**

Determine if the local application implements a particular device type.

If the device type is [EMBER\\_AF\\_RF4CE\\_DEVICE\\_TYPE\\_WILDCARD](#), this function always returns true.

Implemented as a macro for efficiency.

**Returns**

true if the application implements the device type or false otherwise.

**6.15.3.30 bool emberAfRf4ceIsProfileSupported ( const EmberRf4ceApplicationInfo \* appInfo, EmberAfRf4ceProfileId profileId )**

Determine if the application implements a particular profile.

**Returns**

true if the application implements the profile or false otherwise.

### **6.15.3.31 bool emberAfRf4celsProfileSupportedLocally ( EmberAfRf4ceProfileId *profileId* )**

Determine if the local application implements a particular profile.

Implemented as a macro for efficiency.

#### **Returns**

true if the application implements the profile or false otherwise.

### **6.15.3.32 bool emberAfRf4cePairingTableEntryIsUnused ( const EmberRf4cePairingTableEntry \* *pairingTableEntry* )**

Determine if the pairing table entry is unused.

Implemented as a macro for efficiency.

#### **Returns**

true if the pairing table entry is unused or false otherwise.

### **6.15.3.33 bool emberAfRf4cePairingTableEntryIsProvisional ( const EmberRf4cePairingTableEntry \* *pairingTableEntry* )**

Determine if the pairing table entry is provisional.

Implemented as a macro for efficiency.

#### **Returns**

true if the pairing table entry is provisional or false otherwise.

### **6.15.3.34 bool emberAfRf4cePairingTableEntryIsActive ( const EmberRf4cePairingTableEntry \* *pairingTableEntry* )**

Determine if the pairing table entry is active.

Implemented as a macro for efficiency.

#### **Returns**

true if the pairing table entry is active or false otherwise.

### **6.15.3.35 bool emberAfRf4cePairingTableEntryHasLinkKey ( const EmberRf4cePairingTableEntry \* *pairingTableEntry* )**

Determine if the pairing table entry has a link key.

Implemented as a macro for efficiency.

#### **Returns**

true if the pairing table entry has a link key or false otherwise.

**6.15.3.36 bool emberAfRf4cePairingTableEntryIsPairingInitiator ( const EmberRf4cePairingTableEntry \* *pairingTableEntry* )**

Determine if the local node was the pairing initiator for the pairing table entry.

Implemented as a macro for efficiency.

**Returns**

true if the local node was the pairing initiator for the pairing table entry or false otherwise.

**6.15.3.37 bool emberAfRf4cePairingTableEntryHasSecurity ( const EmberRf4cePairingTableEntry \* *pairingTableEntry* )**

Determine if the pairing table entry is security capable.

Implemented as a macro for efficiency.

**Returns**

true if the pairing table entry is security capable or false otherwise.

**6.15.3.38 bool emberAfRf4cePairingTableEntryHasChannelNormalization ( const EmberRf4cePairingTableEntry \* *pairingTableEntry* )**

Determine if the pairing table entry supports channel normalization.

Implemented as a macro for efficiency.

**Returns**

true if the pairing table entry supports channel normalization or false otherwise.

## 6.16 ZigBee Remote Control 1.1 Profile

### Functions

- `EmberStatus emberAfRf4ceZrc11Discovery (EmberPanId panId, EmberNodeId nodeId, EmberAfRf4ceDeviceType searchDevType)`
- `EmberStatus emberAfRf4ceZrc11EnableAutoDiscoveryResponse (void)`
- `EmberStatus emberAfRf4ceZrc11UserControlPress (uint8_t pairingIndex, EmberAfRf4ceUserControlCode rcCommandCode, const uint8_t *rcCommandPayload, uint8_t rcCommandPayloadLength, bool atomic)`
- `EmberStatus emberAfRf4ceZrc11UserControlRelease (uint8_t pairingIndex, EmberAfRf4ceUserControlCode rcCommandCode)`
- `EmberStatus emberAfRf4ceZrc11CommandDiscoveryRequest (uint8_t pairingIndex)`
- `uint8_t *emberAfRf4ceZrcCommandsSupportedContents (EmberAfRf4ceZrcCommandsSupported *commandsSupported)`

### 6.16.1 Detailed Description

The ZigBee Remote Control 1.1 (ZRC1.1) plugin implements the ZRC1.1 profile. The profile describes a simple discovery and pairing procedure for joining devices and a simple user control procedure for controlling devices via HDMI-CEC UI commands. The plugin manages these procedures for both originators and recipients. Note that this plugin implements version 1.1 of the ZRC profile. Version 1.1 devices are fully interoperable with version 1.0 devices. (ZRC1.0 was also known as the Consumer Electronics Remote Control (CERC) profile.) As required by the specification, this plugin sends ZRC1.1-formatted messages and receives both ZRC1.0- and ZRC1.1- formatted messages.

This plugin supports originators and recipients. Originators send user control messages to recipients after pairing with them. Originators are most typically controllers but may also be targets. Recipients must be targets. Both originators and recipients must start general network operations before beginning ZRC-specific operations. Network operations should be started by calling `emberAfRf4ceStart` in the [RF4CE Profile Support](#) plugin.

Once network operations have started, ZRC1.1 originators can initiate the discovery and pairing procedure by calling `emberAfRf4ceZrc11Discovery` with the appropriate discovery parameters. The plugin will first perform discovery for matching targets in range. If exactly one target is identified, the plugin will then continue to the pairing procedure. At the conclusion of the discovery and pairing procedure, the plugin will call `emberAfPluginRf4ceZrc11PairingCompleteCallback` to indicate whether pairing completed successfully with a target and, if so, which pairing index has been assigned to that target.

Recipients can initiate the discovery and pairing procedure by calling `emberAfRf4ceZrc11EnableAutoDiscoveryResponse`. This will put the node into auto discovery mode for a fixed duration of time. During this time, the stack will automatically respond to discovery requests from originators that match the configuration of this device. If an originator discovers this device, the plugin will then wait for a pair request from the same originator. When the process completes, the plugin will call `emberAfPluginRf4ceZrc11PairingCompleteCallback` to indicate whether pairing completed successfully with an originator and, if so, which pairing index has been assigned to that originator.

Following a successful discovery and pairing, originators may send user control messages to targets by calling `emberAfRf4ceZrc11UserControlPress`. In response, the plugin will transmit a user control press message to the indicated target with the HDMI-CEC command code and payload. If the press is atomic, the plugin performs no additional processing. Otherwise, the plugin will repeatedly transmit user control repeat messages at fixed intervals until `emberAfRf4ceZrc11UserControlRelease` is called. The interval at which user control repeat messages are transmitted is configurable in the plugin options.

For targets, the plugin will keep track of incoming user control messages. Each time a user control press command is received, the plugin will call `emberAfPluginRf4ceZrc11UserControlCallback` with its HDMI-CEC command code and payload. The plugin will then wait for a fixed duration for a corresponding user control repeat or release messages. If a user control repeat message is received within the timeout, the plugin will reset its timer and wait for the next message. If a user control repeat message is not received within the timeout or if a user control release is received, the plugin will call `emberAfPluginRf4ceZrc11UserControlCallback` with an indication that the user control has stopped. The timeout for receiving repeat messages is configurable in the plugin options. Note that the plugin will not call `emberAfPluginRf4ceZrc11UserControlCallback` for repeat messages that follow a press message.

The plugin is capable of keeping track of a fixed number of simultaneous incoming and outgoing user control messages. The limits are configurable in the plugin options.

Originators and recipients may each perform command discovery to determine which user control codes are supported by the paired node. This is done by calling `emberAfRf4ceZrc11CommandDiscoveryRequest`. Once command discovery completes, the plugin calls `emberAfPluginRf4ceZrc11CommandDiscoveryResponseCallback` with the results. If this node receives a command discovery request, it will automatically respond with the list of HDMI-CEC command codes that the device supports. The supported command codes are configurable in AppBuilder.

This plugin manages the state of the receiver by calling `emberAfRf4ceRxEnable` using `EMBER_AF_RF4CE_PROFILE_REMOTE_CONTROL_1_1` as the profile id. If the application also wishes to manage the receiver, it should do so using `EMBER_AF_RF4CE_PROFILE_WILDCARD` as the profile id or by calling `emberAfRf4ceSetPowerSavingParameters`.

This plugin utilizes the discovery, pairing, sending and receiving, and power-saving functionality provided by the [RF4CE Profile Support](#) plugin.

## 6.16.2 Function Documentation

### 6.16.2.1 EmberStatus emberAfRf4ceZrc11Discovery ( EmberPanId *panId*, EmberNodeId *nodeId*, EmberAfRf4ceDeviceType *searchDevType* )

Initiate the pairing procedure for an originator.

The plugin begins the pairing procedure by searching for a potential target with which to pair. If exactly one target is found, the plugin will attempt to pair with it. If no targets or more than one target is found, the pairing will fail, as required by the ZRC1.x specification. The plugin will call `emberAfPluginRf4ceZrc11PairingCompleteCallback` with the results of the pairing procedure.

#### Parameters

<i>panId</i>	The pan id to search or <code>::EMBER_RF4CE_BROADCAST_PAN_ID</code> .
<i>nodeId</i>	The node id for which to search or <code>::EMBER_RF4CE_BROADCAST_ADDRESS</code> .
<i>searchDevType</i>	The device type for which to search or <code>EMBER_AF_RF4CE_DEVICE_TYPE_WILDCARD</code> .

#### Returns

An `EmberStatus` value that indicates the success or failure of the command.

### 6.16.2.2 EmberStatus emberAfRf4ceZrc11EnableAutoDiscoveryResponse ( void )

Initiate the pairing procedure for a recipient.

The plugin performs the binding procedure by enabling auto discovery mode. The plugin will call [emberAfPluginRf4ceZrc11PairingCompleteCallback](#) with the results of the pairing. This function may only be called on a target device.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.16.2.3 EmberStatus emberAfRf4ceZrc11UserControlPress ( *uint8\_t pairingIndex, EmberAfRf4ceUserControlCode rcCommandCode, const uint8\_t \* rcCommandPayload, uint8\_t rcCommandPayloadLength, bool atomic* )**

Send indications of user control presses and repeats to a pairing index.

This function can be called when a user control has been pressed and an indication of this should be sent to a target. If the user control should be repeated, the plugin will automatically send user control repeat messages at fixed intervals according to the plugin configuration. Every call to this function for a repeatable user control should be followed by a call to [emberAfRf4ceZrc11UserControlRelease](#).

#### Parameters

<i>pairingIndex</i>	The pairing index to which to send user control messages.
<i>rcCommand-Code</i>	The RC command code of the user control.
<i>rcCommand-Payload</i>	The optional RC command payload of the user control.
<i>rcCommand-PayloadLength</i>	The length of the optional RC command payload of the user control.
<i>atomic</i>	true if the user control is atomic or false if it should repeat.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

**6.16.2.4 EmberStatus emberAfRf4ceZrc11UserControlRelease ( *uint8\_t pairingIndex, EmberAfRf4ceUserControlCode rcCommandCode* )**

Send indications of user control release to a pairing index.

This function can be called when a user control has been released and an indication of this should be sent to a remote node.

#### Parameters

<i>pairingIndex</i>	The pairing index to which to send user control messages.
<i>rcCommand-Code</i>	The RC command code of the user control.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of the command.

### 6.16.2.5 EmberStatus emberAfRf4ceZrc11CommandDiscoveryRequest ( `uint8_t pairingIndex` )

Send a command discovery request to a pairing index.

This function can be called to discover which commands are supported by a remote node. The plugin will call `emberAfPluginRf4ceZrc11CommandDiscoveryResponseCallback` when the response is received.

#### Parameters

<code>pairingIndex</code>	The pairing index to which to the request.
---------------------------	--

#### Returns

An `EmberStatus` value that indicates the success or failure of the command.

### 6.16.2.6 `uint8_t* emberAfRf4ceZrcCommandsSupportedContents ( EmberAfRf4ceZrcCommands-Supported * commandsSupported )`

Accesses the actual command discovery data of the `EmberAfRf4ceZrcCommandsSupported` structure.

#### Parameters

<code>tag</code>	A pointer to an <code>EmberAfRf4ceZrcCommandsSupported</code> structure.
------------------	--

#### Returns

Returns a pointer to the first byte of the command discovery value.

#### 6.17.1 Detailed Description

The ZigBee Remote Control 2.0 (ZRC2.0) plugin implements the ZRC2.0 profile. Compared to versions 1.0 and 1.1 of the profile, ZRC2.0 describes a more complex discovery, pairing, configuration, and validation procedure for binding devices and a more robust mechanism for controlling devices via action commands. The ZRC2.0 profile is based on the Generic Device Profile (GDP). In conjunction with the [Generic Device Profile](#) plugin, this plugin manages these procedures for both originators and recipients. Note that this plugin implements version 2.0 of the ZRC profile. Version 2.0 devices are fully interoperable with version 1.0 and 1.1 devices. (ZRC1.0 was also known as the Consumer Electronics Remote Control (CERC) profile.) As required by the specification, this plugin sends ZRC1.1-formatted messages to ZRC1.x devices and ZRC2.0-formatted messages to ZRC2.0 devices. It receives ZRC1.0-, ZRC1.1-, and ZRC2.0-formatted messages.

This plugin supports originators and recipients. Originators send action messages to recipients after binding with them. Originators are most typically controllers but may also be targets. Recipients must be targets. Both originators and recipients must start general network operations before beginning ZRC-specific operations. Network operations should be started by calling [emberAfRf4ceStart](#) in the [RF4CE Profile Support](#) plugin.

Once network operations have started, ZRC2.0 originators can initiate the binding procedure by calling [emberAfRf4ceZrc20Bind](#) with the requested search device type. This causes the GDP plugin to perform discovery for matching targets in range. Potential targets are ranked according to an algorithm described in the GDP specification. If one or more potential targets are identified, the GDP plugin will attempt to pair with the highest-ranked target. Once the temporary pairing is established, both the GDP and ZRC profiles will perform their respective configuration procedures. Finally, the validation procedure begins. Validation is implementation specific, but may be as simple as a button press on the target or a more involved challenge-response mechanism between target and originator. Only if validation is successful are the originator and recipient considered bound. If any step fails, the GDP plugin will restart the binding procedure using the target that has the next-highest rank. At the conclusion of the binding procedure, the GDP plugin will call [emberAfPluginRf4ceGdpBindingCompleteCallback](#) to indicate whether binding completed successfully with a target and, if so, which pairing index has been assigned to that target.

The GDP plugin and this plugin will manage discovery, pairing, and configuration for recipients on behalf of the device. If configuration completes successfully, the GDP plugin will call [emberAfPluginRf4ceGdpStartValidationCallback](#) so that the device can begin the implementation-specific validation procedure. Once the application determines the validation status of the originator, it should call [emberAfRf4ceGdpSetValidationStatus](#). Alternatively, the recipient may call [emberAfRf4ceGdpPushButton](#) to set the push-button stimulus flag. Once set, the GDP plugin will automatically validate binding attempts. Push-button mode lasts for a fixed duration as described in the GDP specification and may be initiated at any time before or during binding, including during the validation procedure.

Following a successful binding, action originators may send action messages to action recipients by calling [emberAfRf4ceZrc20ActionStart](#). In response, the plugin will transmit a start or atomic message to the indicated target with specific action parameters. If the action is atomic, the plugin performs no additional processing. Otherwise, the plugin will repeatedly transmit repeat messages at fixed intervals until [emberAfRf4ceZrc20ActionStop](#) is called. The interval at which repeat messages are transmitted is configurable in the plugin options.

For action recipients, the plugin will keep track of incoming action messages. Each time a start or atomic command is received, the plugin will call [emberAfPluginRf4ceZrc20ActionCallback](#) with its information. For non-atomic actions, the plugin will then wait for a fixed duration for a corresponding repeat action. If a repeat action is received within the timeout, the plugin will reset its timer and wait for the next message. If a repeat message is not received within the timeout, the plugin will call [emberAfPluginRf4ceZrc20ActionCallback](#) with an indication that the action has stopped. The timeout for receiving repeat messages is configurable in the plugin options. Note that the plugin will not call [emberAfPluginRf4ceZrc20ActionCallback](#) for repeat messages that follow a start message.

The plugin is capable of keeping track of a fixed number of simultaneous incoming and outgoing actions. The limits are configurable in the plugin options.

This plugin manages the state of the receiver by calling [emberAfRf4ceRxEnable](#) using [EMBER\\_AF\\_RF4CE\\_PROFILE\\_REMOTE\\_CONTROL\\_2\\_0](#) as the profile id. If the application also wishes to manage the receiver, it should do so using [EMBER\\_AF\\_RF4CE\\_PROFILE\\_WILDCARD](#) as the profile id or by calling [emberAfRf4ceSetPowerSavingParameters](#).

This plugin utilizes the discovery, pairing, sending and receiving, and power-saving functionality provided by the [RF4CE Profile Support](#) plugin. It also utilizes the binding functionality provided by the [Generic Device Profile](#) plugin. Support for the optional Action Mapping feature in ZRC2.0 is provided by the [ZigBee Remote Control 2.0 Action Mapping Client](#) and [ZigBee Remote Control 2.0 Action Mapping Server](#) plugins. Support for the optional Home Automation (HA) interoperability feature is provided by the [ZigBee Remote Control 2.0 Home Automation Client](#) and [ZigBee Remote Control 2.0 Home Automation Server](#) plugins.

## 6.17.3 Function Documentation

6.17.3.1 EmberStatus `emberAfRf4ceZrc20Bind ( EmberAfRf4ceDeviceType searchDevType )`

6.17.3.2 EmberStatus `emberAfRf4ceZrc20ProxyBind ( EmberPanId panId, EmberEUI64 ieeeAddr )`

6.17.3.3 EmberStatus `emberAfRf4ceZrc20ActionStart ( uint8_t pairingIndex, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode, EmberAfRf4ceZrcModifierBit actionModifier, uint16_t actionVendorId, const uint8_t * actionData, uint8_t actionDataLength, bool atomic )`

Adds the passed action record to the internal list of outstanding action records. If the passed action record is already in the internal record list, the action type for the matching record is set back to 'start' and a new actions command is sent out right away. This API ensures that the passed record fits in the next outgoing actions command.

### Parameters

<code>pairingIndex</code>	The index of the pairing the passed action record is destined to.
<code>actionBank</code>	The action bank field of the action record.
<code>actionCode</code>	The action code field of the action record.
<code>actionModifier</code>	The modifier bits of the action record.
<code>actionVendorId</code>	The vendor ID to be included in the action record. A value of ::EMBER_RF4CE_NUL_Vendor_ID won't be included in the over-the-air action record.
<code>actionData</code>	A pointer to the actionData field of the action record. Notice that this memory area is not copied, therefore it should refer some global memory area. A NULL pointer causes this field to not be included in the over-the-air action record.
<code>actionDataLength</code>	The length in bytes of the actionData field.

### Returns

An [EmberStatus](#) value of [EMBER\\_SUCCESS](#) if there is a free entry in the table of outstanding action records and the passed action record fits in the next outgoing actions command for the passed pairing index. Otherwise it returns an [EmberStatus](#) value of [EMBER\\_INVALID\\_CALL](#).

#### 6.17.3.4 EmberStatus emberAfRf4ceZrc20ActionStop ( *uint8\_t pairingIndex*, *EmberAfRf4ceZrcActionBank actionBank*, *EmberAfRf4ceZrcActionCode actionCode*, *EmberAfRf4ceZrcModifierBit actionModifier*, *uint16\_t actionVendorId* )

Removes the passed action record from the internal list of outstanding action records.

##### Parameters

<i>pairingIndex</i>	The index of the pairing the passed action record is destined to.
<i>actionBank</i>	The action bank field of the action record to be removed.
<i>actionCode</i>	The action code field of the action record to be removed.
<i>actionModifier</i>	The modifier bits of the action record to be removed.

##### Returns

An [EmberStatus](#) value of [EMBER\\_SUCCESS](#) if the passed action record was successfully found and removed from the table of outstanding action records. Otherwise it returns an [EmberStatus](#) value of [EMBER\\_INVALID\\_CALL](#).

#### 6.17.3.5 EmberStatus emberAfRf4ceZrc20LegacyCommandDiscovery ( *uint8\_t pairingIndex* )

Initiates the legacy ZRC 1.1 command discovery process. If this API returns a successful status, the corresponding `emberAfRf4ceZrc20LegacyCommandDiscoveryComplete()` callback will be called upon receiving the discovery response command from the peer node or upon timeout.

##### Parameters

<i>pairingIndex</i>	The index of the destination pairing.
---------------------	---------------------------------------

##### Returns

An [EmberStatus](#) value of [EMBER\\_SUCCESS](#) if a ZRC 1.1 Discovery Request command was sent to the pairing corresponding to the passed pairing index. An [EmberStatus](#) value of [EMBER\\_INVALID\\_CALL](#) if the destination pairing supports ZRC 2.0 or does not support ZRC 1.1. Otherwise it returns an [EmberStatus](#) value indicating the TX failure reason.

#### 6.17.3.6 EmberStatus emberAfRf4ceZrc20StartActionMappingsNegotiation ( *uint8\_t pairingIndex* )

Initiates the action mapping negotiation procedure at the action mapping client with the action mapping server.

##### Parameters

<i>pairingIndex</i>	The index of the action mapping server pairing.
---------------------	---

##### Returns

An [EmberStatus](#) value of [EMBER\\_SUCCESS](#) if the action mapping negotiation procedure is successfully initiated. Otherwise it returns an [EmberStatus](#) value of [EMBER\\_INVALID\\_CALL](#).

### 6.17.3.7 EmberStatus emberAfRf4ceZrc20StartHomeAutomationSupportedAnnouncement ( uint8\_t pairingIndex )

Initiates the Home Automation supported announcement procedure at the Home Automation originator with the Home Automation recipient.

#### Parameters

<i>pairingIndex</i>	The index of the Home Automation recipient pairing.
---------------------	---

#### Returns

An [EmberStatus](#) value of [EMBER\\_SUCCESS](#) if the Home Automation supported announcement procedure is successfully initiated. Otherwise it returns an [EmberStatus](#) value of [EMBER\\_INVALID\\_COMMAND\\_CODE](#).

### 6.17.3.8 EmberStatus emberAfRf4ceZrc20PullHomeAutomationAttribute ( uint8\_t pairingIndex, uint16\_t vendorId, uint8\_t haInstanceId, uint8\_t haAttributelId )

Pulls a Home Automation attribute from the Home Automation recipient.

#### Parameters

<i>pairingIndex</i>	The index of the Home Automation recipient pairing.
<i>vendorId</i>	The vendor ID to be included in the Pull command. If a value of ::EMBER_RF4CE_NULL_VENDOR_ID is passed, no vendor ID will be included in the Pull command.
<i>haInstanceId</i>	The Home Automation instance ID.
<i>haAttributelId</i>	The Home Automation attribute ID.

#### Returns

An [EmberStatus](#) value of [EMBER\\_SUCCESS](#) if the Home Automation Pull command was successfully sent. If this is the case, the corresponding callback [::emberAfPluginRf4ceZrc20PullHomeAutomationAttributeCompleteCallback\(\)](#) will fire. Otherwise it returns an [EmberStatus](#) indicating the reason of failure.

### 6.17.3.9 uint8\_t\* emberAfRf4ceZrcCommandsSupportedContents ( EmberAfRf4ceZrcCommandsSupported \* commandsSupported )

Accesses the actual command discovery data of the [EmberAfRf4ceZrcCommandsSupported](#) structure.

#### Parameters

<i>tag</i>	A pointer to an <a href="#">EmberAfRf4ceZrcCommandsSupported</a> structure.
------------	---

#### Returns

uint8\_t\* Returns a pointer to the first byte of the command discovery value.

**6.17.3.10 bool emberAfRf4ceZrc20ActionMappingEntryHasRfDescriptor ( const EmberAfRf4ceZrcActionMapping \* entry )**

Determine if the action mapping entry has an RF descriptor.

Implemented as a macro for efficiency.

**Returns**

true if the action mapping table entry has an RF descriptor or false otherwise.

**6.17.3.11 bool emberAfRf4ceZrc20ActionMappingEntryHasIrDescriptor ( const EmberAfRf4ceZrcActionMapping \* entry )**

Determine if the action mapping entry has an IR descriptor.

Implemented as a macro for efficiency.

**Returns**

true if the action mapping table entry has an IR descriptor or false otherwise.

**6.17.3.12 bool emberAfRf4ceZrc20ActionMappingEntryHasIrVendorId ( const EmberAfRf4ceZrcActionMapping \* entry )**

Determine if the action mapping entry has an IR vendor ID.

Implemented as a macro for efficiency.

**Returns**

true if the action mapping table entry has an IR vendor ID or false otherwise.

## 6.18 ZigBee Remote Control 2.0 Action Mapping Client

### Functions

- void [emberAfRf4ceZrc20ActionMappingClientClearAllActionMappings](#) (void)
- EmberStatus [emberAfRf4ceZrc20ActionMappingClientClearActionMappingsPerPairing](#) (uint8\_t pairingIndex)
- EmberStatus [emberAfRf4ceZrc20ActionMappingClientClearActionMapping](#) (uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode)
- EmberStatus [emberAfRf4ceZrc20ActionMappingClientGetActionMapping](#) (uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode, EmberAfRf4ceZrcActionMapping \*actionMapping)
- EmberStatus [emberAfRf4ceZrc20ActionMappingClientLookUpActionMapping](#) (uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode, EmberAfRf4ceZrcActionMapping \*actionMapping)
- EmberStatus [emberAfRf4ceZrc20ActionMappingClientSetActionMapping](#) (uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode, EmberAfRf4ceZrcActionMapping \*actionMapping)

#### 6.18.1 Detailed Description

The ZigBee Remote Control 2.0 (ZRC2.0) Action Mapping Client plugin implements the optional action mapping feature of the ZRC2.0 profile for clients. Action mapping provides a standard mechanism for remapping actions and is generally used to allow a remote to control legacy IR devices or to perform simultaneous IR and RF functions. This plugin manages the storage and retrieval of these mappings for action originators.

This plugin provides information to the [ZigBee Remote Control 2.0 Profile](#) plugin about which mappable actions this device supports. A mappable action is simply an action on the local device that may be remapped by the server to an IR code, some other RF action, or to some IR-RF combination. During binding, the mappable actions supported by this device are exchanged with the server. The server uses this information to set up the appropriate remappings. The mappable actions are configurable in AppBuilder.

When the server provides action mappings, either during the binding procedure or when the application manually queries the server for them, the [ZigBee Remote Control 2.0 Profile](#) plugin receives the mappings and passes them to this plugin via [emberAfPluginRf4ceZrc20IncomingActionMappingCallback](#). This plugin, in turn, will store the data in RAM. The amount of storage space dedicated to storing the mappings is configurable via the plugin options.

Prior to starting an action, the application should call [emberAfRf4ceZrc20ActionMappingClientGetActionMapping](#) to determine if the action has been remapped. If the action has been remapped and an IR code has been specified, the application should transmit it using application-specific means. If an RF mapping has been specified, the application should pass it to [emberAfRf4ceZrc20ActionStart](#) instead of the original action.

Action mappings are generally managed by the server, but the application is provided some control as well. Specific mappings can be manipulated by calling [emberAfRf4ceZrc20ActionMappingClientSetActionMapping](#). An action may be set to the default behavior by calling [emberAfRf4ceZrc20ActionMappingClientClearActionMapping](#). Resetting all actions to the defaults can be accomplished on a per-pairing basis by calling [emberAfRf4ceZrc20ActionMappingClientClearActionMappingsPerPairing](#) or for all pairings by calling [emberAfRf4ceZrc20ActionMappingClientClearAllActionMappings](#). It may be desirable to reset action mappings when the device unpairs from a specific server or is reset to factory new.

Support for the optional action mapping feature for servers is provided by the [ZigBee Remote Control 2.0 Action Mapping Server](#) plugin.

## 6.18.2 Function Documentation

### 6.18.2.1 void emberAfRf4ceZrc20ActionMappingClientClearAllActionMappings ( void )

Clear all action mappings on the client.

### 6.18.2.2 EmberStatus emberAfRf4ceZrc20ActionMappingClientClearActionMappingsPerPairing ( uint8\_t pairingIndex )

Clear action mappings per pairing on the client.

#### Parameters

<i>pairingIndex</i>	The pairing index the clear action mapping command should be sent to.
---------------------	---

#### Returns

An [EmberStatus](#) value indicating whether the clear action mappings per pairing command was successfully sent out or the reason of failure.

### 6.18.2.3 EmberStatus emberAfRf4ceZrc20ActionMappingClientClearActionMapping ( uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode )

Clear action mapping that belongs to a mappable action.

#### Parameters

<i>pairingIndex</i>	The pairing index the clear action mapping command should be sent to.
<i>actionDeviceType</i>	The action device type of the mappable action.
<i>actionBank</i>	The action bank of the mappable action.
<i>actionCode</i>	The action code of the mappable action.

#### Returns

An [EmberStatus](#) value indicating whether the clear action mapping command was successfully sent out or the reason of failure.

### 6.18.2.4 EmberStatus emberAfRf4ceZrc20ActionMappingClientGetActionMapping ( uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode, EmberAfRf4ceZrcActionMapping \* actionMapping )

Get action mapping corresponding to a mappable action.

**Parameters**

<i>pairingIndex</i>	The pairing index the get action mapping command should be sent to.
<i>actionDevice-Type</i>	The action device type of the mappable action.
<i>actionBank</i>	The action bank of the mappable action.
<i>actionCode</i>	The action code of the mappable action.
<i>actionMapping</i>	The action mapping structure describing the action mapping.

**Returns**

An [EmberStatus](#) value indicating whether the get action mapping command was successfully sent out or the reason of failure.

**6.18.2.5 EmberStatus emberAfRf4ceZrc20ActionMappingClientLookUpActionMapping ( *uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode, EmberAfRf4ceZrcActionMapping \* actionMapping* )**

Look up action mapping that belongs to a mappable action.

**Parameters**

<i>pairingIndex</i>	The pairing index the look up action mapping command should be sent to.
<i>actionDevice-Type</i>	The action device type of the mappable action.
<i>actionBank</i>	The action bank of the mappable action.
<i>actionCode</i>	The action code of the mappable action.
<i>actionMapping</i>	The action mapping structure describing the action mapping.

**Returns**

An [EmberStatus](#) value indicating whether the look up action mapping command was successfully sent out or the reason of failure.

**Deprecated** This function is deprecated and will be removed in a future release. Customers should use [emberAfRf4ceZrc20ActionMappingClientGetActionMapping](#) instead.

**6.18.2.6 EmberStatus emberAfRf4ceZrc20ActionMappingClientSetActionMapping ( *uint8\_t pairingIndex, EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank, EmberAfRf4ceZrcActionCode actionCode, EmberAfRf4ceZrcActionMapping \* actionMapping* )**

Set action mapping corresponding to a mappable action.

**Parameters**

<i>pairingIndex</i>	The pairing index the set action mapping command should be sent to.
<i>actionDevice-Type</i>	The action device type of the mappable action.
<i>actionBank</i>	The action bank of the mappable action.
<i>actionCode</i>	The action code of the mappable action.
<i>actionMapping</i>	The action mapping structure describing the action mapping.

**Returns**

An [EmberStatus](#) value indicating whether the set action mapping command was successfully sent out or the reason of failure.

## 6.19 ZigBee Remote Control 2.0 Action Mapping Server

### Functions

- `EmberStatus emberAfRf4ceZrc20ActionMappingServerRemapAction (EmberAfRf4ceZrcMappableAction *mappableAction, EmberAfRf4ceZrcActionMapping *actionMapping)`
- `EmberStatus emberAfRf4ceZrc20ActionMappingServerRestoreDefaultAction (EmberAfRf4ceZrcMappableAction *mappableAction)`
- `void emberAfRf4ceZrc20ActionMappingServerRestoreDefaultAllActions (void)`
- `uint16_t emberAfRf4ceZrc20ActionMappingServerGetMappableActionCount (void)`

#### 6.19.1 Detailed Description

The ZigBee Remote Control 2.0 (ZRC2.0) Action Mapping Server plugin implements the optional action mapping feature of the ZRC2.0 profile for servers. Action mapping provides a standard mechanism for remapping actions and is generally used to allow a remote to control legacy IR devices or to perform simultaneous IR and RF functions. This plugin manages the storage and retrieval of these mappings for action recipients.

This plugin provides information to the [ZigBee Remote Control 2.0 Profile](#) plugin about action mappings for clients. An action mapping remaps an action on the client to an IR code, some other RF action, or to some IR-RF combination. During binding, the mappable actions supported by the client are exchanged with this device. The [ZigBee Remote Control 2.0 Profile](#) plugin receives the actions and passes them to this plugin via [emberAfPluginRf4ceZrc20IncomingMappableActionCallback](#). This plugin, in turn, will store the data in RAM. The amount of storage space dedicated to storing mappable actions and action mappings is configurable via the plugin options.

To create a mapping, the application should call [emberAfRf4ceZrc20ActionMappingServerRemapAction](#) with the action to remap and the new mapping. Once created, the mapping will apply to all clients for that particular action. Clients will be notified of action mappings during the binding procedure or if they manually query the server for them after binding. How the remappings are determined is application specific, but may involve an interactive menu that a user must navigate to identify the appropriate mappings. If a mapping no longer applies, perhaps because a connected peripheral such as a television has changed, the mapping may be removed and the action restored to its default by calling [emberAfRf4ceZrc20ActionMappingServerRestoreDefaultAction](#). To reset all actions to the default, for example due to a reset to factory new, [emberAfRf4ceZrc20ActionMappingServerRestoreDefaultAllActions](#) may be called.

Support for the optional action mapping feature for clients is provided by the [ZigBee Remote Control 2.0 Action Mapping Client](#) plugin.

#### 6.19.2 Function Documentation

##### 6.19.2.1 `EmberStatus emberAfRf4ceZrc20ActionMappingServerRemapAction (EmberAfRf4ceZrcMappableAction * mappableAction, EmberAfRf4ceZrcActionMapping * actionMapping )`

Remap mappable action on the server.

#### Parameters

<i>mappableAction</i>	The mappable action structure describing the mappable action to remap.
<i>actionMapping</i>	The action mapping structure describing the action mapping to be written into the action mapping table.

### Returns

An [EmberStatus](#) value indicating whether the remap action mapping command was successfully sent out or the reason of failure.

#### **6.19.2.2 EmberStatus emberAfRf4ceZrc20ActionMappingServerRestoreDefaultAction ( EmberAfRf4ceZrcMappableAction \* *mappableAction* )**

Restore default action of the mappable action on the server.

#### Parameters

<i>mappableAction</i>	The mappable action structure describing the mappable action which action is restored to default.
-----------------------	---

### Returns

An [EmberStatus](#) value indicating whether the restore default action command was successfully sent out or the reason of failure.

#### **6.19.2.3 void emberAfRf4ceZrc20ActionMappingServerRestoreDefaultAllActions ( void )**

Restore all actions to default on the server.

#### **6.19.2.4 uint16\_t emberAfRf4ceZrc20ActionMappingServerGetMappableActionCount ( void )**

Get the number of mappable actions on the server.

### Returns

Mappable Action count

## 6.20 ZigBee Remote Control 2.0 Home Automation Client

### Macros

- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene`(scene)
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene`(scene)
- #define `emberAfRf4ceZrcHaFillCommandPreviousDestinationGroup()`
- #define `emberAfRf4ceZrcHaFillCommandNextDestinationGroup()`

### Enumerations

- enum `EmberAfThermostatSetpointRaiseLowerMode` { EMBER\_ZCL\_THERMOSTAT\_SETPOINT\_RAISE\_LOWER\_MODE\_HEAT, EMBER\_ZCL\_THERMOSTAT\_SETPOINT\_RAISE\_LOWER\_MODE\_COOL, EMBER\_ZCL\_THERMOSTAT\_SETPOINT\_RAISE\_LOWER\_MODE\_BOOTH }

### Functions

- uint16\_t `emAfPluginRf4ceZrc20HaFillExternalBuffer` (PGM\_P format,...)
- `EmberStatus emberAfRf4ceZrcHaSend` (uint8\_t pairingIndex, uint8\_t haInstanceId)

### Scenes Commands

- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene0()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene1()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene2()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene3()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene4()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene5()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene6()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene7()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene8()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene9()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene10()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene11()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene12()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene13()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene14()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene15()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene0()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene1()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene2()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene3()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene4()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene5()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene6()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene7()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene8()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene9()`

- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene10()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene11()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene12()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene13()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene14()`
- #define `emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene15()`

## On/off Commands

- #define `emberAfRf4ceZrcHaFillCommandOnOffClusterOff()`
- #define `emberAfRf4ceZrcHaFillCommandOnOffClusterOn()`
- #define `emberAfRf4ceZrcHaFillCommandOnOffClusterToggle()`

## Level Control Commands

- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterMoveToLevel(level,transitionTime)`
- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterMove(moveMode,rate)`
- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterStep(stepMode,stepSize,transitionTime)`
- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterStop()`
- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterMoveToLevelWithOnOff(level,transitionTime)`
- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterMoveWithOnOff(moveMode, rate)`
- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterStepWithOnOff(stepMode,stepSize,transitionTime)`
- #define `emberAfRf4ceZrcHaFillCommandLevelControlClusterStopWithOnOff()`

## Door Lock Commands

- #define `emberAfRf4ceZrcHaFillCommandDoorLockClusterLockDoor(pinRfidCode)`
- #define `emberAfRf4ceZrcHaFillCommandDoorLockClusterUnlockDoor(pinRfidCode)`
- #define `emberAfRf4ceZrcHaFillCommandDoorLockClusterToggle(pinRfidCode)`
- #define `emberAfRf4ceZrcHaFillCommandDoorLockClusterUnlockWithTimeout(timeoutInSeconds,pinRfidCode)`

## Window Covering Commands

- #define `emberAfRf4ceZrcHaFillCommandWindowCoveringClusterUpOpen()`
- #define `emberAfRf4ceZrcHaFillCommandWindowCoveringClusterDownClose()`
- #define `emberAfRf4ceZrcHaFillCommandWindowCoveringClusterStop()`
- #define `emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToLiftValue(liftValue)`
- #define `emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToLiftPercentage(percentageLiftValue)`
- #define `emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToTiltValue(tiltValue)`
- #define `emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToTiltPercentage(percentageTiltValue)`

## Thermostat Commands

- #define `emberAfRf4ceZrcHaFillCommandThermostatClusterSetpointRaiseLower(mode,amount)`

## Color Control Commands

- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToHue`(hue,direction,transition-Time)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveHue`(moveMode,rate)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterStepHue`(stepMode,stepSize,transition-Time)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToSaturation`(saturation,transition-Time)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveSaturation`(moveMode, rate)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterStepSaturation`(stepMode,stepSize,transition-Time)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToHueAndSaturation`(hue,saturation,transition-Time)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToColor`(colorX,colorY,transition-Time)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveColor`(rateX,rateY)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterStepColor`(stepX,stepY,transitionTime)
- #define `emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToColorTemperature`(colorTemperature, transitionTime)

## IAS ACE Commands

- #define `emberAfRf4ceZrcHaFillCommandIASACEClusterArm`(armMode)
- #define `emberAfRf4ceZrcHaFillCommandIASACEClusterBypass`(numberOfZones,zoneIds,zoneIds-Len)
- #define `emberAfRf4ceZrcHaFillCommandIASACEClusterEmergency`()
- #define `emberAfRf4ceZrcHaFillCommandIASACEClusterFire`()
- #define `emberAfRf4ceZrcHaFillCommandIASACEClusterPanic`()

### 6.20.1 Detailed Description

The ZigBee Remote Control 2.0 (ZRC2.0) Home Automation (HA) Client plugin implements the optional HA interoperability feature of the ZRC2.0 profile for HA action originators. HA interoperability allows RF4CE devices to control HA devices operating on a ZigBee PRO network within the same premises.

HA action originators are most typically controllers but may also be targets. HA action recipients must be targets. HA originators transmit HA commands to an HA recipient over the RF4CE network as ZR-C2.0 actions. The recipient then translates these actions to ZigBee Cluster Library (ZCL) messages and retransmits them to the appropriate HA device on the PRO network. The originator directs all actions to abstract HA instances. Each HA action recipient is responsible for mapping HA instances to actual physical devices.

After binding with an HA action recipient, the originator can construct an HA command by calling one of the `emberAfZrcHaFill` APIs. The message can then be sent to the recipient by calling `emberAfRf4ce-ZrcHaSend`. For example, the application can toggle the light bulb identified as HA instance 0 on its first pairing by calling `emberAfRf4ceZrcHaFillCommandOnOffClusterToggle` followed by `::emberAfRf4ce-ZrcHaSend(0, EMBER_AF_RF4CE_ZRC_ACTION_BANK_HOME_AUTOMATION_INSTANCE_0)`.

This plugin also provides information to the [ZigBee Remote Control 2.0 Profile](#) plugin about which HA attributes this device is interested in. During binding, this information is exchanged with the HA action recipient. The recipient will use this information to send notifications when those attributes change on the HA network. The supported attributes are configurable in AppBuilder.

This plugin utilizes the action functionality provided by the [ZigBee Remote Control 2.0 Profile](#) plugin. Support for the optional HA action recipient feature is provided by the [ZigBee Remote Control 2.0 Home Automation Server](#) plugin.

## 6.20.2 Macro Definition Documentation

### 6.20.2.1 `#define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene( scene )`

Definition at line [53](#) of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.2 `#define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene( scene )`

Definition at line [57](#) of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.3 `#define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene0( )`

Store local scene 0.

Cluster: Scenes, Provides an interface for storing local scene 0. Command: StoreLocalScene0

Definition at line [87](#) of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.4 `#define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene1( )`

Store local scene 1.

Cluster: Scenes, Provides an interface for storing local scene 1. Command: StoreLocalScene1

Definition at line [96](#) of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.5 `#define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene2( )`

Store local scene 2.

Cluster: Scenes, Provides an interface for storing local scene 2. Command: StoreLocalScene2

Definition at line [105](#) of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.6 `#define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene3( )`

Store local scene 3.

Cluster: Scenes, Provides an interface for storing local scene 3. Command: StoreLocalScene3

Definition at line [114](#) of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.7 `#define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene4( )`

Store local scene 4.

Cluster: Scenes, Provides an interface for storing local scene 4. Command: StoreLocalScene4

Definition at line [123](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.8 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene5( )**

Store local scene 5.

Cluster: Scenes, Provides an interface for storing local scene 5. Command: StoreLocalScene5

Definition at line 132 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.9 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene6( )**

Store local scene 6.

Cluster: Scenes, Provides an interface for storing local scene 6. Command: StoreLocalScene6

Definition at line 141 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.10 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene7( )**

Store local scene 7.

Cluster: Scenes, Provides an interface for storing local scene 7. Command: StoreLocalScene7

Definition at line 150 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.11 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene8( )**

Store local scene 8.

Cluster: Scenes, Provides an interface for storing local scene 8. Command: StoreLocalScene8

Definition at line 159 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.12 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene9( )**

Store local scene 9.

Cluster: Scenes, Provides an interface for storing local scene 9. Command: StoreLocalScene9

Definition at line 168 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.13 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene10( )**

Store local scene 10.

Cluster: Scenes, Provides an interface for storing local scene 10. Command: StoreLocalScene10

Definition at line 177 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.14 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene11( )**

Store local scene 11.

Cluster: Scenes, Provides an interface for storing local scene 11. Command: StoreLocalScene11

Definition at line 186 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.15 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene12( )**

Store local scene 12.

Cluster: Scenes, Provides an interface for storing local scene 12. Command: StoreLocalScene12  
Definition at line 195 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.16 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene13( )**

Store local scene 13.

Cluster: Scenes, Provides an interface for storing local scene 13. Command: StoreLocalScene13  
Definition at line 204 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.17 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene14( )**

Store local scene 14.

Cluster: Scenes, Provides an interface for storing local scene 14. Command: StoreLocalScene14  
Definition at line 213 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.18 #define emberAfRf4ceZrcHaFillCommandScenesClusterStoreLocalScene15( )**

Store local scene 15.

Cluster: Scenes, Provides an interface for storing local scene 15. Command: StoreLocalScene15  
Definition at line 222 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.19 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene0( )**

Recall local scene 0.

Cluster: Scenes, Provides an interface for recalling local scene 0. Command: RecallLocalScene0  
Definition at line 231 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.20 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene1( )**

Recall local scene 1.

Cluster: Scenes, Provides an interface for recalling local scene 1. Command: RecallLocalScene1  
Definition at line 240 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.21 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene2( )**

Recall local scene 2.

Cluster: Scenes, Provides an interface for recalling local scene 2. Command: RecallLocalScene2  
Definition at line 249 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.22 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene3( )**

Recall local scene 3.

Cluster: Scenes, Provides an interface for recalling local scene 3. Command: RecallLocalScene3

Definition at line [258](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.23 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene4( )**

Recall local scene 4.

Cluster: Scenes, Provides an interface for recalling local scene 4. Command: RecallLocalScene4

Definition at line [267](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.24 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene5( )**

Recall local scene 5.

Cluster: Scenes, Provides an interface for recalling local scene 5. Command: RecallLocalScene5

Definition at line [276](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.25 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene6( )**

Recall local scene 6.

Cluster: Scenes, Provides an interface for recalling local scene 6. Command: RecallLocalScene6

Definition at line [285](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.26 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene7( )**

Recall local scene 7.

Cluster: Scenes, Provides an interface for recalling local scene 7. Command: RecallLocalScene7

Definition at line [294](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.27 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene8( )**

Recall local scene 8.

Cluster: Scenes, Provides an interface for recalling local scene 8. Command: RecallLocalScene8

Definition at line [303](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.28 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene9( )**

Recall local scene 9.

Cluster: Scenes, Provides an interface for recalling local scene 9. Command: RecallLocalScene9

Definition at line [312](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.29 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene10( )**

Recall local scene 10.

Cluster: Scenes, Provides an interface for recalling local scene 10. Command: RecallLocalScene10

Definition at line [321](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.30 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene11( )**

Recall local scene 11.

Cluster: Scenes, Provides an interface for recalling local scene 11. Command: RecallLocalScene11

Definition at line [330](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.31 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene12( )**

Recall local scene 12.

Cluster: Scenes, Provides an interface for recalling local scene 12. Command: RecallLocalScene12

Definition at line [339](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.32 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene13( )**

Recall local scene 13.

Cluster: Scenes, Provides an interface for recalling local scene 13. Command: RecallLocalScene13

Definition at line [348](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.33 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene14( )**

Recall local scene 14.

Cluster: Scenes, Provides an interface for recalling local scene 14. Command: RecallLocalScene14

Definition at line [357](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.34 #define emberAfRf4ceZrcHaFillCommandScenesClusterRecallLocalScene15( )**

Recall local scene 15.

Cluster: Scenes, Provides an interface for recalling local scene 15. Command: RecallLocalScene15

Definition at line [366](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.35 #define emberAfRf4ceZrcHaFillCommandOnOffClusterOff( )**

Command description for Off.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: Off

Definition at line [378](#) of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.36 #define emberAfRf4ceZrcHaFillCommandOnOffClusterOn( )

Command description for On.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: On

Definition at line 388 of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.37 #define emberAfRf4ceZrcHaFillCommandOnOffClusterToggle( )

Command description for Toggle.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: Toggle

Definition at line 398 of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.38 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterMoveToLevel( *level*, *transitionTime* )

Command description for Move To Level.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: MoveToLevel

#### Parameters

<i>level</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 413 of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.39 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterMove( *moveMode*, *rate* )

Command description for Move.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Move

#### Parameters

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line 428 of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.40 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterStep( *stepMode*, *stepSize*, *transitionTime* )

Command description for Step.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Step

**Parameters**

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 444 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.41 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterStop( )**

Command description for Stop.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Stop

Definition at line 459 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.42 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterMoveToLevelWithOnOff( *level*, *transitionTime* )**

Command description for Move To Level With On/Off.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Move To Level With On/Off

**Parameters**

<i>level</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 471 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.43 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterMoveWithOnOff( *moveMode*, *rate* )**

Command description for Move With On/Off.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Move With On/Off

**Parameters**

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line 486 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.44 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterStepWithOnOff( *stepMode*, *stepSize*, *transitionTime* )**

Command description for Step With On/Off.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Step With On/Off

**Parameters**

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 502 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.45 #define emberAfRf4ceZrcHaFillCommandLevelControlClusterStopWithOnOff( )**

Command description for Stop With On/Off.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Stop With On/Off

Definition at line 517 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.46 #define emberAfRf4ceZrcHaFillCommandDoorLockClusterLockDoor( pinRfidCode )**

Locks the door.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: LockDoor

**Parameters**

<i>pinRfidCode</i>	uint8_t*
--------------------	----------

Definition at line 531 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.47 #define emberAfRf4ceZrcHaFillCommandDoorLockClusterUnlockDoor( pinRfidCode )**

Unlocks the door.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: UnlockDoor

**Parameters**

<i>pinRfidCode</i>	uint8_t*
--------------------	----------

Definition at line 543 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.48 #define emberAfRf4ceZrcHaFillCommandDoorLockClusterToggle( pinRfidCode )**

Toggles the door lock from its current state to the opposite state locked or unlocked.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: Toggle

**Parameters**

<i>pinRfidCode</i>	uint8_t*
--------------------	----------

Definition at line 555 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.49 #define emberAfRf4ceZrcHaFillCommandDoorLockClusterUnlockWithTimeout( timeoutInSeconds, pinRfidCode )**

Unlock the door with a timeout. When the timeout expires, the door will automatically re-lock.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: UnlockWithTimeout

#### Parameters

<i>timeoutIn-Seconds</i>	uint16_t
<i>pinRfidCode</i>	uint8_t*

Definition at line [568](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.50 #define emberAfRf4ceZrcHaFillCommandWindowCoveringClusterUpOpen( )**

Moves window covering to InstalledOpenLimit - Lift and InstalledOpenLimit - Tilt.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringUpOpen

Definition at line [584](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.51 #define emberAfRf4ceZrcHaFillCommandWindowCoveringClusterDownClose( )**

Moves window covering to InstalledClosedLimit - Lift and InstalledCloseLimit - Tilt.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringDownClose

Definition at line [594](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.52 #define emberAfRf4ceZrcHaFillCommandWindowCoveringClusterStop( )**

Stop any adjusting of window covering.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringStop

Definition at line [604](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.53 #define emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToLiftValue( liftValue )**

Goto lift value specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToLiftValue

#### Parameters

<i>liftValue</i>	uint16_t
------------------	----------

Definition at line [615](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.54 #define emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToLiftPercentage( percentageLiftValue )**

Goto lift percentage specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToLiftPercentage

**Parameters**

<i>percentageLift-Value</i>	uint8_t
-----------------------------	---------

Definition at line [627](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.55 #define emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToTiltValue( tiltValue )**

Goto tilt value specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToTiltValue

**Parameters**

<i>tiltValue</i>	uint16_t
------------------	----------

Definition at line [639](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.56 #define emberAfRf4ceZrcHaFillCommandWindowCoveringClusterGoToTiltPercentage( percentageTiltValue )**

Goto tilt percentage specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToTiltPercentage

**Parameters**

<i>percentageTilt-Value</i>	uint8_t
-----------------------------	---------

Definition at line [651](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.57 #define emberAfRf4ceZrcHaFillCommandThermostatClusterSetpointRaiseLower( mode, amount )**

Command description for SetpointRaiseLower.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: SetpointRaiseLower

**Parameters**

<i>mode</i>	uint8_t
<i>amount</i>	int8_t

Definition at line 667 of file [rf4ce-zrc20-ha-client.h](#).

#### 6.20.2.58 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToHue( *hue*, *direction*, *transitionTime* )

Move to specified hue.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToHue

##### Parameters

<i>hue</i>	uint8_t
<i>direction</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 686 of file [rf4ce-zrc20-ha-client.h](#).

#### 6.20.2.59 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveHue( *moveMode*, *rate* )

Move hue up or down at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveHue

##### Parameters

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line 703 of file [rf4ce-zrc20-ha-client.h](#).

#### 6.20.2.60 #define emberAfRf4ceZrcHaFillCommandColorControlClusterStepHue( *stepMode*, *stepSize*, *transitionTime* )

Step hue up or down by specified size at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StepHue

##### Parameters

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint8_t

Definition at line 719 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.61 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToSaturation( *saturation*, *transitionTime* )**

Move to specified saturation.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToSaturation

#### Parameters

<i>saturation</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line [736](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.62 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveSaturation( *moveMode*, *rate* )**

Move saturation up or down at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveSaturation

#### Parameters

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line [751](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.63 #define emberAfRf4ceZrcHaFillCommandColorControlClusterStepSaturation( *stepMode*, *stepSize*, *transitionTime* )**

Step saturation up or down by specified size at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StepSaturation

#### Parameters

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint8_t

Definition at line [767](#) of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.64 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToHueAndSaturation( *hue*, *saturation*, *transitionTime* )**

Move to hue and saturation.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToHueAndSaturation

**Parameters**

<i>hue</i>	uint8_t
<i>saturation</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 785 of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.65 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToColor( *colorX*, *colorY*, *transitionTime* )

Move to specified color.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToColor

**Parameters**

<i>colorX</i>	uint16_t
<i>colorY</i>	uint16_t
<i>transitionTime</i>	uint16_t

Definition at line 803 of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.66 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveColor( *rateX*, *rateY* )

Moves the color.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveColor

**Parameters**

<i>rateX</i>	int16_t
<i>rateY</i>	int16_t

Definition at line 820 of file [rf4ce-zrc20-ha-client.h](#).

### 6.20.2.67 #define emberAfRf4ceZrcHaFillCommandColorControlClusterStepColor( *stepX*, *stepY*, *transitionTime* )

Steps the lighting to a specific color.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StepColor

**Parameters**

<i>stepX</i>	int16_t
<i>stepY</i>	int16_t
<i>transitionTime</i>	uint16_t

Definition at line 836 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.68 #define emberAfRf4ceZrcHaFillCommandColorControlClusterMoveToColorTemperature( colorTemperature, transitionTime )**

Moves the lighting to a specific color temperature.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToColorTemperature

#### Parameters

<i>colorTemperature</i>	uint16_t
<i>transitionTime</i>	uint16_t

Definition at line 853 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.69 #define emberAfRf4ceZrcHaFillCommandIASACEClusterArm( armMode )**

Command description for Arm.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Arm

#### Parameters

<i>armMode</i>	uint8_t
----------------	---------

Definition at line 870 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.70 #define emberAfRf4ceZrcHaFillCommandIASACEClusterBypass( numberOfZones, zoneIds, zoneIdsLen )**

Command description for Bypass.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Bypass

#### Parameters

<i>numberOfZones</i>	uint8_t
<i>zoneIds</i>	uint8_t*
<i>zoneIdsLen</i>	uint16_t

Definition at line 884 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.71 #define emberAfRf4ceZrcHaFillCommandIASACEClusterEmergency( )**

Command description for Emergency.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Emergency

Definition at line 899 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.72 #define emberAfRf4ceZrcHaFillCommandIASACEClusterFire( )**

Command description for Fire.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Fire  
Definition at line 909 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.73 #define emberAfRf4ceZrcHaFillCommandIASACEClusterPanic( )**

Command description for Panic.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Panic  
Definition at line 919 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.74 #define emberAfRf4ceZrcHaFillCommandPreviousDestinationGroup( )**

Previous destination group.

Command: PreviousDestinationGroup

Definition at line 929 of file [rf4ce-zrc20-ha-client.h](#).

**6.20.2.75 #define emberAfRf4ceZrcHaFillCommandNextDestinationGroup( )**

Next destination group.

Command: NextDestinationGroup

Definition at line 938 of file [rf4ce-zrc20-ha-client.h](#).

## 6.20.3 Enumeration Type Documentation

**6.20.3.1 enum EmberAfThermostatSetpointRaiseLowerMode**

Enumerator:

*EMBER\_ZCL\_THERMOSTAT\_SETPOINT\_RAISE\_LOWER\_MODE\_HEAT*  
*EMBER\_ZCL\_THERMOSTAT\_SETPOINT\_RAISE\_LOWER\_MODE\_COOL*  
*EMBER\_ZCL\_THERMOSTAT\_SETPOINT\_RAISE\_LOWER\_MODE\_BOTH*

Definition at line 44 of file [rf4ce-zrc20-ha-client.h](#).

## 6.20.4 Function Documentation

**6.20.4.1 uint16\_t emAfPluginRf4ceZrc20HaFillExternalBuffer ( PGM\_P *format*, ... )****6.20.4.2 EmberStatus emberAfRf4ceZrcHaSend ( uint8\_t *pairingIndex*, uint8\_t *halInstanceld* )**

Send HA command to the server.

**Parameters**

<i>pairingIndex</i>	The pairing index the send HA command should be sent to.
<i>haInstanceId</i>	The HA instance ID the send HA command should be sent to.

**Returns**

An [EmberStatus](#) value indicating whether the send HA command was successfully sent out or the reason of failure.

### 6.21.1 Detailed Description

The ZigBee Remote Control 2.0 (ZRC2.0) Home Automation (HA) Server plugin implements the optional HA interoperability feature of the ZRC2.0 profile for HA action recipients. HA interoperability allows RF4CE devices to control HA devices operating on a ZigBee PRO network within the same premises.

HA action originators are most typically controllers but may also be targets. HA action recipients must be targets. HA originators transmit HA commands to an HA recipient over the RF4CE network as ZRC2.0 actions. The recipient then translates these actions to ZigBee Cluster Library (ZCL) messages and retransmits them to the appropriate HA device on the PRO network. The originator directs all actions to abstract HA instances. Each HA action recipient is responsible for mapping HA instances to actual physical devices.

Users will want to take note of the callback `emberAfPluginZrc20HaServerHaActionSentCallback` (see [Application Framework Callback Interface](#) for more information regarding callbacks). This callback conveys to the application that the HA server has sent an HA action to a ZCL network.

Furthermore, customers can use this plugin to manage an application's store of HA Attributes and Logical Device information. There are functions to interface with the database of these items, as well as definitions of constants for an application to use.

This plugin utilizes the action functionality provided by the [ZigBee Remote Control 2.0 Profile](#) plugin. Support for the optional HA action originator feature is provided by the [ZigBee Remote Control 2.0 Home Automation Client](#) plugin.

### 6.21.3 Function Documentation

**6.21.3.1 void emberAfPluginRf4ceZrc20HaServerClearAllHaAttributes ( void )**

Clear all HA attributes on the server.

**6.21.3.2 EmberAfRf4ceGdpAttributeStatus emberAfPluginRf4ceZrc20HaServerGetHaAttribute ( uint8\_t pairingIndex, uint8\_t haInstanceId, uint8\_t haAttributId, EmberAfRf4ceZrcHomeAutomationAttribute \* haAttribute )**

Get selected HA attribute on the server.

#### Parameters

<i>pairingIndex</i>	The pairing index the get HA attribute command should be sent to.
<i>haInstanceId</i>	The instance ID of the HA attribute to get.
<i>haAttributId</i>	The attribute ID of the HA attribute to get.
<i>haAttribute</i>	The HA attribute structure describing the HA attribute.

#### Returns

An [EmberAfRf4ceGdpAttributeStatus](#) value indicating whether the get HA attribute command was successfully sent out or the reason of failure.

**6.21.3.3 EmberAfRf4ceGdpAttributeStatus emberAfPluginRf4ceZrc20HaServerSetHaAttribute ( uint8\_t pairingIndex, uint8\_t haInstanceId, uint8\_t haAttributId, EmberAfRf4ceZrcHomeAutomationAttribute \* haAttribute )**

Set selected HA attribute on the server.

#### Parameters

<i>pairingIndex</i>	The pairing index the set HA attribute command should be sent to.
<i>haInstanceId</i>	The instance ID of the HA attribute to set.
<i>haAttributId</i>	The attribute ID of the HA attribute to set.
<i>haAttribute</i>	The HA attribute structure describing the HA attribute.

### Returns

An [EmberAfRf4ceGdpAttributeStatus](#) value indicating whether the set HA attribute command was successfully sent out or the reason of failure.

#### 6.21.3.4 EmberStatus emberAfPluginRf4ceZrc20HaMappingToLogicalDeviceAdd ( uint8\_t pairingIndex, uint8\_t haInstanceId, uint8\_t destIndex )

Add mapping to HA logical device on the server.

### Parameters

<i>pairingIndex</i>	The pairing index to which the HA logical device is mapped.
<i>haInstanceId</i>	The instance ID to which the HA logical device is mapped.
<i>destIndex</i>	The index of the HA logical device in the logical devices table.

### Returns

An [EmberStatus](#) value indicating whether adding mapping to the HA logical device was successfully sent out or the reason of failure.

#### 6.21.3.5 EmberStatus emberAfPluginRf4ceZrc20HaMappingToLogicalDeviceRemove ( uint8\_t destIndex )

Remove mapping to HA logical device on the server.

### Parameters

<i>destIndex</i>	The index of the HA logical device in the logical devices table.
------------------	--

### Returns

An [EmberStatus](#) value indicating whether removing mapping to the HA logical device was successfully sent out or the reason of failure.

#### 6.21.3.6 EmberStatus emberAfPluginRf4ceZrc20HaMappingToLogicalDeviceGet ( uint8\_t pairingIndex, uint8\_t haInstanceId, uint8\_t \* destIndex )

Get mapping to HA logical device on the server.

### Parameters

<i>pairingIndex</i>	The pairing index to which the HA logical device is mapped.
<i>haInstanceId</i>	The instance ID to which the HA logical device is mapped.
<i>destIndex</i>	The index of the HA logical device in the logical devices table.

### Returns

An [EmberStatus](#) value indicating whether getting mapping to the HA logical device was successfully sent out or the reason of failure.

### 6.21.3.7 EmberStatus emberAfPluginRf4ceZrc20HaLogicalDeviceDestinationAdd ( DestStruct \* *dest*, uint8\_t \* *index* )

Add HA logical device to the logical devices table on the server.

#### Parameters

<i>dest</i>	The destination structure describing the logical device to add.
<i>index</i>	The index of the logical device table to which the HA logical device was added.

#### Returns

An [EmberStatus](#) value indicating whether adding logical device was successfully sent out or the reason of failure.

### 6.21.3.8 EmberStatus emberAfPluginRf4ceZrc20HaLogicalDeviceDestinationRemove ( DestStruct \* *dest*, uint8\_t \* *index* )

Remove HA logical device from the logical devices table on the server.

#### Parameters

<i>dest</i>	The destination structure describing the logical device to remove.
<i>index</i>	The index of the logical device table from which the HA logical device was removed.

#### Returns

An [EmberStatus](#) value indicating whether removing logical device was successfully sent out or the reason of failure.

### 6.21.3.9 uint8\_t emberAfPluginRf4ceZrc20HaLogicalDeviceDestinationTableSize ( void )

Get the size of the HA logical devices table on the server.

#### Returns

Size of the HA logical devices table.

### 6.21.3.10 EmberStatus emberAfPluginRf4ceZrc20HaLogicalDeviceDestinationGet ( uint8\_t *pairingIndex*, uint8\_t *haInstanceId*, DestStruct \* *dest* )

Get the destination of the HA logical device on the server.

#### Parameters

<i>pairingIndex</i>	The pairing index to which the HA logical device is mapped.
<i>haInstanceId</i>	The instance ID to which the HA logical device is mapped.
<i>dest</i>	The destination structure describing the HA logical device to get.

### Returns

An [EmberStatus](#) value indicating whether getting HA logical device destination was successfully sent out or the reason of failure.

#### 6.21.3.11 EmberStatus emberAfPluginRf4ceZrc20HaLogicalDeviceIndexLookUp ( DestStruct \* *dest*, uint8\_t \* *index* )

Look up the index of the HA logical device on the server.

### Parameters

<i>dest</i>	The destination structure describing the HA logical device to look up.
<i>index</i>	The index of the HA logical device in the logical devices table.

### Returns

An [EmberStatus](#) value indicating whether looking up HA logical device destination was successfully sent out or the reason of failure.

#### 6.21.3.12 void emberAfPluginRf4ceZrc20HaLogicalDeviceAndInstanceIdToLogicalDeviceMappingClear ( void )

Clear all HA logical devices and mappings to logical devices.

#### 6.21.3.13 EmberStatus emberAfPluginRf4ceZrc20HaLogicalDeviceAndInstanceIdToLogicalDeviceMappingAdd ( uint8\_t *pairingIndex*, uint8\_t *haInstanceId*, DestStruct \* *dest* )

Add HA logical device and map it to pairing index and HA instance ID.

### Parameters

<i>pairingIndex</i>	The pairing index to which the HA logical device will be mapped.
<i>haInstanceId</i>	The instance ID to which the HA logical device will be mapped.
<i>dest</i>	The destination structure describing the HA logical device to map.

### Returns

An [EmberStatus](#) value indicating whether mapping the HA logical device was successfully sent out or the reason of failure.

#### 6.21.3.14 EmberStatus emberAfPluginRf4ceZrc20HaLogicalDeviceAndInstanceIdToLogicalDeviceMappingRemove ( DestStruct \* *dest* )

Remove HA logical device and its mappings.

### Parameters

<i>dest</i>	The destination structure describing the HA logical device to remove.
-------------	---

## Returns

An `EmberStatus` value indicating whether removing the HA logical device was successfully sent out or the reason of failure.

- 6.21.3.15 `EmberStatus emAfRf4ceZrc20ParseHaActionAndForwardToZclNetwork ( const EmberAfRf4ceZrcActionRecord * record )`
- 6.21.3.16 `void emAfRf4ceZrc20ClearLogicalDevicesTable ( void )`
- 6.21.3.17 `void emAfRf4ceZrc20ClearInstanceToLogicalDeviceTable ( void )`
- 6.21.3.18 `EmberStatus emAfRf4ceZrc20AddLogicalDeviceDestination ( DestStruct * dest, uint8_t * index )`
- 6.21.3.19 `EmberStatus emAfRf4ceZrc20RemoveLogicalDeviceDestination ( uint8_t destIndex )`
- 6.21.3.20 `uint8_t GetLogicalDeviceDestination ( uint8_t i, DestStruct * dest )`
- 6.21.3.21 `void DestLookup ( uint8_t pairingIndex, uint8_t haInstanceId, DestStruct * dest )`

## 6.22 Ember NCP API Reference

### Modules

- Extensible Network Co-processor (xNCP)

#### 6.22.1 Detailed Description

The Ember Network Co-processor (NCP) application framework allows customers to build custom applications for a device acting as a network co-processor while communicating with a HOST over a serial interface. Currently, this application framework contains simple functionality so that users can build applications that send and receive custom Ember ZigBee Serial Protocol (EZSP) messages. The main functionality currently provided can be viewed here [Extensible Network Co-processor \(xNCP\)](#).

## 6.23 Extensible Network Co-processor (xNCP)

### Functions

- [EmberStatus emberAfPluginXncpSendCustomEzspMessage](#) (uint8\_t length, uint8\_t \*payload)

#### 6.23.1 Detailed Description

The XNCP functionality provides a way for an NCP application to send and receive custom EZSP frames to and from a HOST. This gives users the ability to develop their own serial protocols between a HOST and the NCP.

An NCP application can use the API [emberAfPluginXncpSendCustomEzspMessage](#) to send custom EZSP messages to the HOST. The message will be sent to the HOST in an asynchronous manner, but the application can use the [EmberStatus](#) return byte from the API to tell if their message was successfully scheduled.

An NCP application wishing to receive and handle custom EZSP frames from a HOST should make use of the callbacks provided by this module. The two most important callbacks to an NCP application will most likely be [emberAfPluginXncpGetXncpInformation](#) and [emberAfPluginXncpIncomingCustomFrameCallback](#). Users will want to implement the former of these two callbacks to declare the manufacturer ID and version of their NCP application. The second callback will need to be implemented in order for the NCP application to process custom EZSP frames coming from the HOST. Using this callback, the message can be processed and the response can be written. Upon return of this function, the custom response will be sent back to the HOST.

#### 6.23.2 Function Documentation

##### 6.23.2.1 EmberStatus emberAfPluginXncpSendCustomEzspMessage ( uint8\_t *length*, uint8\_t \* *payload* )

Send Custom EZSP Message.

This function will send a custom EZSP message payload of length to the HOST.

#### Parameters

<i>length</i>	The length of the custom EZSP message. Ver.: always
<i>payload</i>	The custom EZSP message itself. Ver.: always

#### Returns

An [EmberStatus](#) value describing the result of sending the custom EZSP frame to the HOST.

## 6.24 Status Codes

### Generic Messages

These messages are system wide.

- #define EMBER\_SUCCESS(x00)
- #define EMBER\_ERR\_FATAL(x01)
- #define EMBER\_BAD\_ARGUMENT(x02)

- #define EMBER\_APPLICATION\_ERROR\_15(xFF)

### 6.24.1 Detailed Description

Many EmberZNet API functions return an [EmberStatus](#) value to indicate the success or failure of the call. Return codes are one byte long. This page documents the possible status codes and their meanings.

See [error-def.h](#) for source code.

See also [error.h](#) for information on how the values for the return codes are built up from these definitions. The file [error-def.h](#) is separated from [error.h](#) because utilities will use this file to parse the return codes.

#### Note

Do not include [error-def.h](#) directly. It is included by [error.h](#) inside an enum typedef, which is in turn included by [ember.h](#).

### 6.24.2 Macro Definition Documentation

#### 6.24.2.1 #define EMBER\_SUCCESS( x00 )

The generic "no error" message.

Definition at line [43](#) of file [error-def.h](#).

#### 6.24.2.2 #define EMBER\_ERR\_FATAL( x01 )

The generic "fatal error" message.

Definition at line [53](#) of file [error-def.h](#).

#### 6.24.2.3 #define EMBER\_BAD\_ARGUMENT( x02 )

An invalid value was passed as an argument to a function.

Definition at line [63](#) of file [error-def.h](#).

#### 6.24.2.4 #define EMBER\_NOT\_FOUND( x03 )

The requested information was not found.

Definition at line [73](#) of file [error-def.h](#).

#### 6.24.2.5 #define EMBER\_EEPROM\_MFG\_STACK\_VERSION\_MISMATCH( x04 )

The manufacturing and stack token format in non-volatile memory is different than what the stack expects (returned at initialization).

Definition at line [84](#) of file [error-def.h](#).

#### 6.24.2.6 #define EMBER\_INCOMPATIBLE\_STATIC\_MEMORY\_DEFINITIONS( x05 )

The static memory definitions in [ember-static-memory.h](#) are incompatible with this stack version.

Definition at line [95](#) of file [error-def.h](#).

**6.24.2.7 #define EMBER\_EEPROM\_MFG\_VERSION\_MISMATCH( x06 )**

The manufacturing token format in non-volatile memory is different than what the stack expects (returned at initialization).

Definition at line 106 of file [error-def.h](#).

**6.24.2.8 #define EMBER\_EEPROM\_STACK\_VERSION\_MISMATCH( x07 )**

The stack token format in non-volatile memory is different than what the stack expects (returned at initialization).

Definition at line 117 of file [error-def.h](#).

**6.24.2.9 #define EMBER\_NO\_BUFFERS( x18 )**

There are no more buffers.

Definition at line 134 of file [error-def.h](#).

**6.24.2.10 #define EMBER\_SERIAL\_INVALID\_BAUD\_RATE( x20 )**

Specified an invalid baud rate.

Definition at line 150 of file [error-def.h](#).

**6.24.2.11 #define EMBER\_SERIAL\_INVALID\_PORT( x21 )**

Specified an invalid serial port.

Definition at line 160 of file [error-def.h](#).

**6.24.2.12 #define EMBER\_SERIAL\_TX\_OVERFLOW( x22 )**

Tried to send too much data.

Definition at line 170 of file [error-def.h](#).

**6.24.2.13 #define EMBER\_SERIAL\_RX\_OVERFLOW( x23 )**

There was not enough space to store a received character and the character was dropped.

Definition at line 181 of file [error-def.h](#).

**6.24.2.14 #define EMBER\_SERIAL\_RX\_FRAME\_ERROR( x24 )**

Detected a UART framing error.

Definition at line 191 of file [error-def.h](#).

**6.24.2.15 #define EMBER\_SERIAL\_RX\_PARITY\_ERROR( x25 )**

Detected a UART parity error.

Definition at line [201](#) of file [error-def.h](#).

**6.24.2.16 #define EMBER\_SERIAL\_RX\_EMPTY( x26 )**

There is no received data to process.

Definition at line [211](#) of file [error-def.h](#).

**6.24.2.17 #define EMBER\_SERIAL\_RX\_OVERRUN\_ERROR( x27 )**

The receive interrupt was not handled in time, and a character was dropped.

Definition at line [222](#) of file [error-def.h](#).

**6.24.2.18 #define EMBER\_MAC\_TRANSMIT\_QUEUE\_FULL( x39 )**

The MAC transmit queue is full.

Definition at line [238](#) of file [error-def.h](#).

**6.24.2.19 #define EMBER\_MAC\_UNKNOWN\_HEADER\_TYPE( x3A )**

MAC header FCF error on receive.

Definition at line [249](#) of file [error-def.h](#).

**6.24.2.20 #define EMBER\_MAC\_ACK\_HEADER\_TYPE( x3B )**

MAC ACK header received.

Definition at line [258](#) of file [error-def.h](#).

**6.24.2.21 #define EMBER\_MAC\_SCANNING( x3D )**

The MAC can't complete this task because it is scanning.

Definition at line [269](#) of file [error-def.h](#).

**6.24.2.22 #define EMBER\_MAC\_NO\_DATA( x31 )**

No pending data exists for device doing a data poll.

Definition at line [279](#) of file [error-def.h](#).

**6.24.2.23 #define EMBER\_MAC\_JOINED\_NETWORK( x32 )**

Attempt to scan when we are joined to a network.

Definition at line [289](#) of file [error-def.h](#).

**6.24.2.24 #define EMBER\_MAC\_BAD\_SCAN\_DURATION( x33 )**

Scan duration must be 0 to 14 inclusive. Attempt was made to scan with an incorrect duration value.

Definition at line 300 of file [error-def.h](#).

**6.24.2.25 #define EMBER\_MAC\_INCORRECT\_SCAN\_TYPE( x34 )**

emberStartScan was called with an incorrect scan type.

Definition at line 310 of file [error-def.h](#).

**6.24.2.26 #define EMBER\_MAC\_INVALID\_CHANNEL\_MASK( x35 )**

emberStartScan was called with an invalid channel mask.

Definition at line 320 of file [error-def.h](#).

**6.24.2.27 #define EMBER\_MAC\_COMMAND\_TRANSMIT\_FAILURE( x36 )**

Failed to scan current channel because we were unable to transmit the relevant MAC command.

Definition at line 331 of file [error-def.h](#).

**6.24.2.28 #define EMBER\_MAC\_NO\_ACK RECEIVED( x40 )**

We expected to receive an ACK following the transmission, but the MAC level ACK was never received.

Definition at line 342 of file [error-def.h](#).

**6.24.2.29 #define EMBER\_MAC\_RADIO\_NETWORK\_SWITCH\_FAILED( x41 )**

MAC failed to transmit a message because could not successfully perform a radio network switch.

Definition at line 353 of file [error-def.h](#).

**6.24.2.30 #define EMBER\_MAC INDIRECT\_TIMEOUT( x42 )**

Indirect data message timed out before polled.

Definition at line 363 of file [error-def.h](#).

**6.24.2.31 #define EMBER\_SIM EEPROM\_ERASE\_PAGE\_GREEN( x43 )**

The Simulated EEPROM is telling the application that there is at least one flash page to be erased. The GREEN status means the current page has not filled above the ::ERASE\_CRITICAL\_THRESHOLD.

The application should call the function ::halSimEepromErasePage() when it can to erase a page.

Definition at line 386 of file [error-def.h](#).

Referenced by [halSimEepromCallback\(\)](#).

**6.24.2.32 #define EMBER\_SIM\_EEPROM\_ERASE\_PAGE\_RED( x44 )**

The Simulated EEPROM is telling the application that there is at least one flash page to be erased. The RED status means the current page has filled above the ::ERASE\_CRITICAL\_THRESHOLD.

Due to the shrinking availability of write space, there is a danger of data loss. The application must call the function ::halSimEepromErasePage() as soon as possible to erase a page.

Definition at line 402 of file [error-def.h](#).

Referenced by [halSimEepromCallback\(\)](#).

**6.24.2.33 #define EMBER\_SIM\_EEPROM\_FULL( x45 )**

The Simulated EEPROM has run out of room to write any new data and the data trying to be set has been lost. This error code is the result of ignoring the ::SIM\_EEPROM\_ERASE\_PAGE\_RED error code.

The application must call the function ::halSimEepromErasePage() to make room for any further calls to set a token.

Definition at line 417 of file [error-def.h](#).

Referenced by [halSimEepromCallback\(\)](#).

**6.24.2.34 #define EMBER\_SIM\_EEPROM\_INIT\_1\_FAILED( x48 )**

Attempt 1 to initialize the Simulated EEPROM has failed.

This failure means the information already stored in Flash (or a lack thereof), is fatally incompatible with the token information compiled into the code image being run.

Definition at line 435 of file [error-def.h](#).

**6.24.2.35 #define EMBER\_SIM\_EEPROM\_INIT\_2\_FAILED( x49 )**

Attempt 2 to initialize the Simulated EEPROM has failed.

This failure means Attempt 1 failed, and the token system failed to properly reload default tokens and reset the Simulated EEPROM.

Definition at line 448 of file [error-def.h](#).

**6.24.2.36 #define EMBER\_SIM\_EEPROM\_INIT\_3\_FAILED( x4A )**

Attempt 3 to initialize the Simulated EEPROM has failed.

This failure means one or both of the tokens ::TOKEN\_MFG\_NVDATA\_VERSION or ::TOKEN\_STACK\_NVDATA\_VERSION were incorrect and the token system failed to properly reload default tokens and reset the Simulated EEPROM.

Definition at line 462 of file [error-def.h](#).

**6.24.2.37 #define EMBER\_SIM\_EEPROM\_REPAIRING( x4D )**

The Simulated EEPROM is repairing itself.

While there's nothing for an app to do when the SimEE is going to repair itself (SimEE has to be fully functional for the rest of the system to work), alert the application to the fact that repairing is occurring. There are debugging scenarios where an app might want to know that repairing is happening; such as monitoring frequency.

#### **Note**

Common situations will trigger an expected repair, such as using an erased chip or changing token definitions.

Definition at line [480](#) of file [error-def.h](#).

Referenced by [halSimEepromCallback\(\)](#).

#### **6.24.2.38 #define EMBER\_ERR\_FLASH\_WRITE\_INHIBITED( x46 )**

A fatal error has occurred while trying to write data to the Flash. The target memory attempting to be programmed is already programmed. The flash write routines were asked to flip a bit from a 0 to 1, which is physically impossible and the write was therefore inhibited. The data in the flash cannot be trusted after this error.

Definition at line [501](#) of file [error-def.h](#).

Referenced by [halSimEepromCallback\(\)](#).

#### **6.24.2.39 #define EMBER\_ERR\_FLASH\_VERIFY\_FAILED( x47 )**

A fatal error has occurred while trying to write data to the Flash and the write verification has failed. The data in the flash cannot be trusted after this error, and it is possible this error is the result of exceeding the life cycles of the flash.

Definition at line [514](#) of file [error-def.h](#).

Referenced by [halSimEepromCallback\(\)](#).

#### **6.24.2.40 #define EMBER\_ERR\_FLASH\_PROG\_FAIL( x4B )**

##### **Description:**

A fatal error has occurred while trying to write data to the flash, possibly due to write protection or an invalid address. The data in the flash cannot be trusted after this error, and it is possible this error is the result of exceeding the life cycles of the flash.

Definition at line [527](#) of file [error-def.h](#).

#### **6.24.2.41 #define EMBER\_ERR\_FLASH\_ERASE\_FAIL( x4C )**

##### **Description:**

A fatal error has occurred while trying to erase flash, possibly due to write protection. The data in the flash cannot be trusted after this error, and it is possible this error is the result of exceeding the life cycles of the flash.

Definition at line [540](#) of file [error-def.h](#).

**6.24.2.42 #define EMBER\_ERR\_BOOTLOADER\_TRAP\_TABLE\_BAD( x58 )**

The bootloader received an invalid message (failed attempt to go into bootloader).

Definition at line [559](#) of file [error-def.h](#).

**6.24.2.43 #define EMBER\_ERR\_BOOTLOADER\_TRAP\_UNKNOWN( x59 )**

Bootloader received an invalid message (failed attempt to go into bootloader).

Definition at line [570](#) of file [error-def.h](#).

**6.24.2.44 #define EMBER\_ERR\_BOOTLOADER\_NO\_IMAGE( x05A )**

The bootloader cannot complete the bootload operation because either an image was not found or the image exceeded memory bounds.

Definition at line [581](#) of file [error-def.h](#).

**6.24.2.45 #define EMBER\_DELIVERY\_FAILED( x66 )**

The APS layer attempted to send or deliver a message, but it failed.

Definition at line [599](#) of file [error-def.h](#).

**6.24.2.46 #define EMBER\_BINDING\_INDEX\_OUT\_OF\_RANGE( x69 )**

This binding index is out of range for the current binding table.

Definition at line [609](#) of file [error-def.h](#).

**6.24.2.47 #define EMBER\_ADDRESS\_TABLE\_INDEX\_OUT\_OF\_RANGE( x6A )**

This address table index is out of range for the current address table.

Definition at line [620](#) of file [error-def.h](#).

**6.24.2.48 #define EMBER\_INVALID\_BINDING\_INDEX( x6C )**

An invalid binding table index was given to a function.

Definition at line [630](#) of file [error-def.h](#).

**6.24.2.49 #define EMBER\_INVALID\_CALL( x70 )**

The API call is not allowed given the current state of the stack.

Definition at line [641](#) of file [error-def.h](#).

Referenced by [emberAfPluginEzspZigbeeProSetConcentratorCommandCallback\(\)](#), and [emberSetOrGetEzspTokenCommandHandler\(\)](#).

**6.24.2.50 #define EMBER\_COST\_NOT\_KNOWN( x71 )**

The link cost to a node is not known.

Definition at line [651](#) of file `error-def.h`.

**6.24.2.51 #define EMBER\_MAX\_MESSAGE\_LIMIT\_REACHED( x72 )**

The maximum number of in-flight messages (i.e. ::EMBER\_APS\_UNICAST\_MESSAGE\_COUNT) has been reached.

Definition at line [662](#) of file `error-def.h`.

**6.24.2.52 #define EMBER\_MESSAGE\_TOO\_LONG( x74 )**

The message to be transmitted is too big to fit into a single over-the-air packet.

Definition at line [672](#) of file `error-def.h`.

**6.24.2.53 #define EMBER\_BINDING\_IS\_ACTIVE( x75 )**

The application is trying to delete or overwrite a binding that is in use.

Definition at line [683](#) of file `error-def.h`.

**6.24.2.54 #define EMBER\_ADDRESS\_TABLE\_ENTRY\_IS\_ACTIVE( x76 )**

The application is trying to overwrite an address table entry that is in use.

Definition at line [693](#) of file `error-def.h`.

**6.24.2.55 #define EMBER\_MATCH( x78 )**

security match

Definition at line [710](#) of file `error-def.h`.

**6.24.2.56 #define EMBER\_DROP\_FRAME( x79 )**

drop frame

Definition at line [718](#) of file `error-def.h`.

**6.24.2.57 #define EMBER\_PASS\_UNPROCESSED( x7A )**

security match

Definition at line [726](#) of file `error-def.h`.

**6.24.2.58 #define EMBER\_TX\_THEN\_DROP( x7B )**

security match

Definition at line 734 of file [error-def.h](#).

**6.24.2.59 #define EMBER\_NO\_SECURITY( x7C )**

security match

Definition at line 742 of file [error-def.h](#).

**6.24.2.60 #define EMBER\_COUNTER\_FAILURE( x7D )**

security match

Definition at line 750 of file [error-def.h](#).

**6.24.2.61 #define EMBER\_AUTH\_FAILURE( x7E )**

security match

Definition at line 758 of file [error-def.h](#).

**6.24.2.62 #define EMBER\_UNPROCESSED( x7F )**

security match

Definition at line 766 of file [error-def.h](#).

**6.24.2.63 #define EMBER\_ADC\_CONVERSION\_DONE( x80 )**

Conversion is complete.

Definition at line 784 of file [error-def.h](#).

**6.24.2.64 #define EMBER\_ADC\_CONVERSION\_BUSY( x81 )**

Conversion cannot be done because a request is being processed.

Definition at line 795 of file [error-def.h](#).

**6.24.2.65 #define EMBER\_ADC\_CONVERSION\_DEFERRED( x82 )**

Conversion is deferred until the current request has been processed.

Definition at line 806 of file [error-def.h](#).

**6.24.2.66 #define EMBER\_ADC\_NO\_CONVERSION\_PENDING( x84 )**

No results are pending.

Definition at line 816 of file [error-def.h](#).

**6.24.2.67 #define EMBER\_SLEEP\_INTERRUPTED( x85 )**

Sleeping (for a duration) has been abnormally interrupted and exited prematurely.

Definition at line [827](#) of file [error-def.h](#).

**6.24.2.68 #define EMBER\_PHY\_TX\_UNDERFLOW( x88 )**

The transmit hardware buffer underflowed.

Definition at line [844](#) of file [error-def.h](#).

**6.24.2.69 #define EMBER\_PHY\_TX\_INCOMPLETE( x89 )**

The transmit hardware did not finish transmitting a packet.

Definition at line [854](#) of file [error-def.h](#).

**6.24.2.70 #define EMBER\_PHY\_INVALID\_CHANNEL( x8A )**

An unsupported channel setting was specified.

Definition at line [864](#) of file [error-def.h](#).

**6.24.2.71 #define EMBER\_PHY\_INVALID\_POWER( x8B )**

An unsupported power setting was specified.

Definition at line [874](#) of file [error-def.h](#).

**6.24.2.72 #define EMBER\_PHY\_TX\_BUSY( x8C )**

The requested operation cannot be completed because the radio is currently busy, either transmitting a packet or performing calibration.

Definition at line [885](#) of file [error-def.h](#).

**6.24.2.73 #define EMBER\_PHY\_TX\_CCA\_FAIL( x8D )**

The transmit attempt failed because all CCA attempts indicated that the channel was busy.

Definition at line [896](#) of file [error-def.h](#).

**6.24.2.74 #define EMBER\_PHY\_OSCILLATOR\_CHECK\_FAILED( x8E )**

The software installed on the hardware doesn't recognize the hardware radio type.

Definition at line [907](#) of file [error-def.h](#).

**6.24.2.75 #define EMBER\_PHY\_ACK RECEIVED( x8F )**

The expected ACK was received after the last transmission.

Definition at line 917 of file [error-def.h](#).

#### **6.24.2.76 #define EMBER\_NETWORK\_UP( x90 )**

The stack software has completed initialization and is ready to send and receive packets over the air.

Definition at line 936 of file [error-def.h](#).

#### **6.24.2.77 #define EMBER\_NETWORK\_DOWN( x91 )**

The network is not operating.

Definition at line 946 of file [error-def.h](#).

#### **6.24.2.78 #define EMBER\_JOIN\_FAILED( x94 )**

An attempt to join a network failed.

Definition at line 956 of file [error-def.h](#).

#### **6.24.2.79 #define EMBER\_MOVE\_FAILED( x96 )**

After moving, a mobile node's attempt to re-establish contact with the network failed.

Definition at line 967 of file [error-def.h](#).

#### **6.24.2.80 #define EMBER\_CANNOT\_JOIN\_AS\_ROUTER( x98 )**

An attempt to join as a router failed due to a ZigBee versus ZigBee Pro incompatibility. ZigBee devices joining ZigBee Pro networks (or vice versa) must join as End Devices, not Routers.

Definition at line 979 of file [error-def.h](#).

#### **6.24.2.81 #define EMBER\_NODE\_ID\_CHANGED( x99 )**

The local node ID has changed. The application can obtain the new node ID by calling ::emberGetNodeId().

Definition at line 989 of file [error-def.h](#).

#### **6.24.2.82 #define EMBER\_PAN\_ID\_CHANGED( x9A )**

The local PAN ID has changed. The application can obtain the new PAN ID by calling ::emberGetPanId().

Definition at line 999 of file [error-def.h](#).

#### **6.24.2.83 #define EMBER\_CHANNEL\_CHANGED( x9B )**

The channel has changed.

Definition at line 1007 of file [error-def.h](#).

**6.24.2.84 #define EMBER\_NO\_BEACONS( xAB )**

An attempt to join or rejoin the network failed because no router beacons could be heard by the joining node.

Definition at line 1016 of file [error-def.h](#).

**6.24.2.85 #define EMBER RECEIVED KEY IN THE CLEAR( xAC )**

An attempt was made to join a Secured Network using a pre-configured key, but the Trust Center sent back a Network Key in-the-clear when an encrypted Network Key was required. ([EMBER\\_REQUIRE\\_ENCRYPTED\\_KEY](#)).

Definition at line 1027 of file [error-def.h](#).

**6.24.2.86 #define EMBER NO NETWORK KEY RECEIVED( xAD )**

An attempt was made to join a Secured Network, but the device did not receive a Network Key.

Definition at line 1037 of file [error-def.h](#).

**6.24.2.87 #define EMBER NO LINK KEY RECEIVED( xAE )**

After a device joined a Secured Network, a Link Key was requested ([EMBER\\_GET\\_LINK\\_KEY\\_WHEN\\_JOINING](#)) but no response was ever received.

Definition at line 1047 of file [error-def.h](#).

**6.24.2.88 #define EMBER PRECONFIGURED KEY REQUIRED( xAF )**

An attempt was made to join a Secured Network without a pre-configured key, but the Trust Center sent encrypted data using a pre-configured key.

Definition at line 1058 of file [error-def.h](#).

**6.24.2.89 #define EMBER KEY INVALID( xB2 )**

The passed key data is not valid. A key of all zeros or all F's are reserved values and cannot be used.

Definition at line 1074 of file [error-def.h](#).

**6.24.2.90 #define EMBER INVALID SECURITY LEVEL( x95 )**

The chosen security level (the value of ::EMBER\_SECURITY\_LEVEL) is not supported by the stack.

Definition at line 1084 of file [error-def.h](#).

**6.24.2.91 #define EMBER APS ENCRYPTION ERROR( xA6 )**

There was an error in trying to encrypt at the APS Level.

This could result from either an inability to determine the long address of the recipient from the short address (no entry in the binding table) or there is no link key entry in the table associated with the destination, or there was a failure to load the correct key into the encryption core.

Definition at line [1098](#) of file `error-def.h`.

#### **6.24.2.92 #define EMBER\_TRUST\_CENTER\_MASTER\_KEY\_NOT\_SET( xA7 )**

There was an attempt to form a network using High security without setting the Trust Center master key first.

Definition at line [1107](#) of file `error-def.h`.

#### **6.24.2.93 #define EMBER\_SECURITY\_STATE\_NOT\_SET( xA8 )**

There was an attempt to form or join a network with security without calling `::emberSetInitialSecurityState()` first.

Definition at line [1116](#) of file `error-def.h`.

#### **6.24.2.94 #define EMBER\_KEY\_TABLE\_INVALID\_ADDRESS( xB3 )**

There was an attempt to set an entry in the key table using an invalid long address. An entry cannot be set using either the local device's or Trust Center's IEEE address. Or an entry already exists in the table with the same IEEE address. An Address of all zeros or all F's are not valid addresses in 802.15.4.

Definition at line [1129](#) of file `error-def.h`.

#### **6.24.2.95 #define EMBER\_SECURITY\_CONFIGURATION\_INVALID( xB7 )**

There was an attempt to set a security configuration that is not valid given the other security settings.

Definition at line [1138](#) of file `error-def.h`.

#### **6.24.2.96 #define EMBER\_TOO\_SOON\_FOR\_SWITCH\_KEY( xB8 )**

There was an attempt to broadcast a key switch too quickly after broadcasting the next network key. The Trust Center must wait at least a period equal to the broadcast timeout so that all routers have a chance to receive the broadcast of the new network key.

Definition at line [1149](#) of file `error-def.h`.

#### **6.24.2.97 #define EMBER\_SIGNATURE\_VERIFY\_FAILURE( xB9 )**

The received signature corresponding to the message that was passed to the CBKE Library failed verification, it is not valid.

Definition at line [1158](#) of file `error-def.h`.

**6.24.2.98 #define EMBER\_KEY\_NOT\_AUTHORIZED( *xBB* )**

The message could not be sent because the link key corresponding to the destination is not authorized for use in APS data messages. APS Commands (sent by the stack) are allowed. To use it for encryption of APS data messages it must be authorized using a key agreement protocol (such as CBKE).

Definition at line [1170](#) of file [error-def.h](#).

**6.24.2.99 #define EMBER\_SECURITY\_DATA\_INVALID( *xBD* )**

The security data provided was not valid, or an integrity check failed.

Definition at line [1180](#) of file [error-def.h](#).

**6.24.2.100 #define EMBER\_NOT\_JOINED( *x93* )**

The node has not joined a network.

Definition at line [1198](#) of file [error-def.h](#).

**6.24.2.101 #define EMBER\_NETWORK\_BUSY( *xA1* )**

A message cannot be sent because the network is currently overloaded.

Definition at line [1208](#) of file [error-def.h](#).

**6.24.2.102 #define EMBER\_INVALID\_ENDPOINT( *xA3* )**

The application tried to send a message using an endpoint that it has not defined.

Definition at line [1219](#) of file [error-def.h](#).

**6.24.2.103 #define EMBER\_BINDING\_HAS\_CHANGED( *xA4* )**

The application tried to use a binding that has been remotely modified and the change has not yet been reported to the application.

Definition at line [1230](#) of file [error-def.h](#).

**6.24.2.104 #define EMBER\_INSUFFICIENT\_RANDOM\_DATA( *xA5* )**

An attempt to generate random bytes failed because of insufficient random data from the radio.

Definition at line [1240](#) of file [error-def.h](#).

**6.24.2.105 #define EMBER\_SOURCE\_ROUTE\_FAILURE( *xA9* )**

A ZigBee route error command frame was received indicating that a source routed message from this node failed en route.

Definition at line [1250](#) of file [error-def.h](#).

**6.24.2.106 #define EMBER\_MANY\_TO\_ONE\_ROUTE\_FAILURE( xAA )**

A ZigBee route error command frame was received indicating that a message sent to this node along a many-to-one route failed en route. The route error frame was delivered by an ad-hoc search for a functioning route.

Definition at line [1261](#) of file [error-def.h](#).

**6.24.2.107 #define EMBER\_STACK\_AND\_HARDWARE\_MISMATCH( xB0 )**

A critical and fatal error indicating that the version of the stack trying to run does not match with the chip it is running on. The software (stack) on the chip must be replaced with software that is compatible with the chip.

Definition at line [1282](#) of file [error-def.h](#).

**6.24.2.108 #define EMBER\_INDEX\_OUT\_OF\_RANGE( xB1 )**

An index was passed into the function that was larger than the valid range.

Definition at line [1293](#) of file [error-def.h](#).

**6.24.2.109 #define EMBER\_TABLE\_FULL( xB4 )**

There are no empty entries left in the table.

Definition at line [1302](#) of file [error-def.h](#).

**6.24.2.110 #define EMBER\_TABLE\_ENTRY\_ERASED( xB6 )**

The requested table entry has been erased and contains no valid data.

Definition at line [1312](#) of file [error-def.h](#).

**6.24.2.111 #define EMBER\_LIBRARY\_NOT\_PRESENT( xB5 )**

The requested function cannot be executed because the library that contains the necessary functionality is not present.

Definition at line [1322](#) of file [error-def.h](#).

Referenced by [emberAfPluginXncpIncomingCustomFrameCallback\(\)](#).

**6.24.2.112 #define EMBER\_OPERATION\_IN\_PROGRESS( xB4 )**

The stack accepted the command and is currently processing the request. The results will be returned via an appropriate handler.

Definition at line [1332](#) of file [error-def.h](#).

**6.24.2.113 #define EMBER\_TRUST\_CENTER\_EUI\_HAS\_CHANGED( *xC*<sub>BC</sub> )**

The EUI of the Trust center has changed due to a successful rejoin. The device may need to perform other authentication to verify the new TC is authorized to take over.

Definition at line [1343](#) of file [error-def.h](#).

**6.24.2.114 #define EMBER\_NO\_RESPONSE( *xC*<sub>0</sub> )**

The ZigBee RF4CE stack has not received the response it was waiting for.

Definition at line [1360](#) of file [error-def.h](#).

**6.24.2.115 #define EMBER\_DUPLICATE\_ENTRY( *xC*<sub>1</sub> )**

The ZigBee RF4CE stack has detected a duplicate entry in the pairing table.

Definition at line [1370](#) of file [error-def.h](#).

**6.24.2.116 #define EMBER\_NOT\_PERMITTED( *xC*<sub>2</sub> )**

A pairing request was denied by the recipient node or an attempt to update a security link key was not possible due to one or more nodes not supporting security.

Definition at line [1381](#) of file [error-def.h](#).

**6.24.2.117 #define EMBER\_DISCOVERY\_TIMEOUT( *xC*<sub>3</sub> )**

The node has timed out during auto discovery response mode.

Definition at line [1390](#) of file [error-def.h](#).

**6.24.2.118 #define EMBER\_DISCOVERY\_ERROR( *xC*<sub>4</sub> )**

The node has received two matching discovery request command frames from two different nodes while in auto discovery response mode.

Definition at line [1401](#) of file [error-def.h](#).

**6.24.2.119 #define EMBER\_SECURITY\_TIMEOUT( *xC*<sub>5</sub> )**

The node has timed while transferring the (n+1) key seed messages to the pairing originator.

Definition at line [1412](#) of file [error-def.h](#).

**6.24.2.120 #define EMBER\_SECURITY\_FAILURE( *xC*<sub>6</sub> )**

Generic error code indicating a security failure.

Definition at line [1422](#) of file [error-def.h](#).

**6.24.2.121 #define EMBER\_APPLICATION\_ERROR\_0( xF0 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1440](#) of file [error-def.h](#).

**6.24.2.122 #define EMBER\_APPLICATION\_ERROR\_1( xF1 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1441](#) of file [error-def.h](#).

**6.24.2.123 #define EMBER\_APPLICATION\_ERROR\_2( xF2 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1442](#) of file [error-def.h](#).

**6.24.2.124 #define EMBER\_APPLICATION\_ERROR\_3( xF3 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1443](#) of file [error-def.h](#).

**6.24.2.125 #define EMBER\_APPLICATION\_ERROR\_4( xF4 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1444](#) of file [error-def.h](#).

**6.24.2.126 #define EMBER\_APPLICATION\_ERROR\_5( xF5 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1445](#) of file [error-def.h](#).

**6.24.2.127 #define EMBER\_APPLICATION\_ERROR\_6( xF6 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1446](#) of file [error-def.h](#).

**6.24.2.128 #define EMBER\_APPLICATION\_ERROR\_7( xF7 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1447](#) of file `error-def.h`.

#### **6.24.2.129 #define EMBER\_APPLICATION\_ERROR\_8( xF8 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1448](#) of file `error-def.h`.

#### **6.24.2.130 #define EMBER\_APPLICATION\_ERROR\_9( xF9 )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1449](#) of file `error-def.h`.

#### **6.24.2.131 #define EMBER\_APPLICATION\_ERROR\_10( xFA )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1450](#) of file `error-def.h`.

#### **6.24.2.132 #define EMBER\_APPLICATION\_ERROR\_11( xFB )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1451](#) of file `error-def.h`.

#### **6.24.2.133 #define EMBER\_APPLICATION\_ERROR\_12( xFC )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1452](#) of file `error-def.h`.

#### **6.24.2.134 #define EMBER\_APPLICATION\_ERROR\_13( xFD )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1453](#) of file `error-def.h`.

#### **6.24.2.135 #define EMBER\_APPLICATION\_ERROR\_14( xFE )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1454](#) of file `error-def.h`.

**6.24.2.136 #define EMBER\_APPLICATION\_ERROR\_15( *xFF* )**

This error is reserved for customer application use. This will never be returned from any portion of the network stack or HAL.

Definition at line [1455](#) of file [error-def.h](#).

## 6.25 Ember Common Data Types

### Data Structures

- struct [EmberReleaseTypeStruct](#)  
*A structure relating version types to human readable strings.*
- struct [EmberVersion](#)  
*Version struct containing all version information.*
- struct [EmberZigbeeNetwork](#)  
*Defines a ZigBee network and the associated parameters.*
- struct [EmberNetworkInitStruct](#)  
*Defines the network initialization configuration that should be used when ::emberNetworkInitExtended() is called by the application.*
- struct [EmberNetworkParameters](#)  
*Holds network parameters.*
- struct [EmberApsFrame](#)  
*An in-memory representation of a ZigBee APS frame of an incoming or outgoing message.*
- struct [EmberBindingTableEntry](#)  
*Defines an entry in the binding table.*
- struct [EmberNeighborTableEntry](#)  
*Defines an entry in the neighbor table.*
- struct [EmberRouteTableEntry](#)  
*Defines an entry in the route table.*
- struct [EmberMulticastTableEntry](#)  
*Defines an entry in the multicast table.*
- struct [EmberEventControl](#)  
*Control structure for events.*
- struct [EmberEventData\\_S](#)  
*Complete events with a control and a handler procedure.*
- struct [EmberTaskControl](#)  
*Control structure for tasks.*
- struct [EmberKeyData](#)  
*This data structure contains the key data that is passed into various other functions.*
- struct [EmberCertificateData](#)  
*This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE).*
- struct [EmberPublicKeyData](#)  
*This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE).*
- struct [EmberPrivateKeyData](#)  
*This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE).*
- struct [EmberSmacData](#)  
*This data structure contains the Shared Message Authentication Code (SMAC) data that is used for Certificate Based Key Exchange (CBKE).*
- struct [EmberSignatureData](#)  
*This data structure contains a DSA signature. It is the bit concatenation of the 'r' and 's' components of the signature.*
- struct [EmberMessageDigest](#)  
*This data structure contains an AES-MMO Hash (the message digest).*

- struct [EmberAesMmoHashContext](#)  
*This data structure contains the context data when calculating an AES MMO hash (message digest).*
- struct [EmberCertificate283k1Data](#)  
*This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.*
- struct [EmberPublicKey283k1Data](#)  
*This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.*
- struct [EmberPrivateKey283k1Data](#)  
*This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.*
- struct [EmberSignature283k1Data](#)  
*This data structure contains a DSA signature used in SECT283k1 Elliptical Cryptography. It is the bit concatenation of the 'r' and 's' components of the signature.*
- struct [EmberInitialSecurityState](#)  
*This describes the Initial Security features and requirements that will be used when forming or joining the network.*
- struct [EmberCurrentSecurityState](#)  
*This describes the security features used by the stack for a joined device.*
- struct [EmberKeyStruct](#)  
*This describes a one of several different types of keys and its associated data.*
- struct [EmberMfgSecurityStruct](#)  
*This structure is used to get/set the security config that is stored in manufacturing tokens.*
- struct [EmberMacFilterMatchStruct](#)  
*This structure indicates a matching raw MAC message has been received by the application configured MAC filters.*

## Macros

## ZigBee Broadcast Addresses

ZigBee specifies three different broadcast addresses that reach different collections of nodes. Broadcasts are normally sent only to routers. Broadcasts can also be forwarded to end devices, either all of them or only those that do not sleep. Broadcasting to end devices is both significantly more resource-intensive and significantly less reliable than broadcasting to routers.

- #define EMBER\_BROADCAST\_ADDRESS
- #define EMBER\_RX\_ON\_WHEN\_IDLE\_BROADCAST\_ADDRESS
- #define EMBER\_SLEEPY\_BROADCAST\_ADDRESS

## Ember Concentrator Types

- #define EMBER\_LOW\_RAM\_CONCENTRATOR
- #define EMBER\_HIGH\_RAM\_CONCENTRATOR

## txPowerModes for emberSetTxPowerMode and mfplibSetPower

- #define EMBER\_TX\_POWER\_MODE\_DEFAULT
- #define EMBER\_TX\_POWER\_MODE\_BOOST
- #define EMBER\_TX\_POWER\_MODE\_ALTERNATE
- #define EMBER\_TX\_POWER\_MODE\_BOOST\_AND\_ALTERNATE

## Alarm Message and Counters Request Definitions

- #define EMBER\_OTA\_CERTIFICATE\_UPGRADE\_CLUSTER

## ZDO response status.

Most responses to ZDO commands contain a status byte. The meaning of this byte is defined by the ZigBee Device Profile.

- enum EmberZdoStatus {
 EMBER\_ZDP\_SUCCESS, EMBER\_ZDP\_INVALID\_REQUEST\_TYPE, EMBER\_ZDP\_DEVICE\_NOT\_FOUND, EMBER\_ZDP\_INVALID\_ENDPOINT,
 EMBER\_ZDP\_NOT\_ACTIVE, EMBER\_ZDP\_NOT\_SUPPORTED, EMBER\_ZDP\_TIMEOUT, EMBER\_ZDP\_NO\_MATCH,
 EMBER\_ZDP\_NO\_ENTRY, EMBER\_ZDP\_NO\_DESCRIPTOR, EMBER\_ZDP\_INSUFFICIENT\_SPACE, EMBER\_ZDP\_NOT\_PERMITTED,
 EMBER\_ZDP\_TABLE\_FULL, EMBER\_ZDP\_NOT\_AUTHORIZED, EMBER\_NWK\_ALREADY\_PRESENT, EMBER\_NWK\_TABLE\_FULL,
 EMBER\_NWK\_UNKNOWN\_DEVICE }

## Network and IEEE Address Request/Response

Defines for ZigBee device profile cluster IDs follow. These include descriptions of the formats of the messages.

Note that each message starts with a 1-byte transaction sequence number. This sequence number is used to match a response command frame to the request frame that it is replying to. The application shall maintain a 1-byte counter that is copied into this field and incremented by one for each command sent. When a value of 0xff is reached, the next command shall re-start the counter with a value of 0x00

```
Network request: <transaction sequence number: 1>
                  <EUI64:8>  <type:1> <start index:1>
IEEE request:    <transaction sequence number: 1>
                  <node ID:2> <type:1> <start index:1>
                  <type> = 0x00 single address response, ignore the start index
                  = 0x01 extended response -> sends kid's IDs as well
Response: <transaction sequence number: 1>
          <status:1> <EUI64:8> <node ID:2>
          <ID count:1> <start index:1> <child ID:2>*
```

- #define NETWORK\_ADDRESS\_REQUEST
- #define NETWORK\_ADDRESS\_RESPONSE
- #define IEEE\_ADDRESS\_REQUEST
- #define IEEE\_ADDRESS\_RESPONSE

## Node Descriptor Request/Response

<br>

```
@code
Request: <transaction sequence number: 1> <node ID:2>
Response: <transaction sequence number: 1> <status:1> <node ID:2>
```

```
// <node descriptor: 13> // // Node Descriptor field is divided into subfields of bitmasks as follows: //
(Note: All lengths below are given in bits rather than bytes.) // Logical Type: 3 // Complex Descriptor Available: 1 // User Descriptor Available: 1 // (reserved/unused): 3 // APS Flags: 3 // Frequency Band: 5 // MAC capability flags: 8 // Manufacturer Code: 16 // Maximum buffer size: 8 // Maximum incoming transfer size: 16 // Server mask: 16 // Maximum outgoing transfer size: 16 // Descriptor Capability Flags: 8 // See ZigBee document 053474, Section 2.3.2.3 for more details.
```

- #define NODE\_DESCRIPTOR\_REQUEST
- #define NODE\_DESCRIPTOR\_RESPONSE

## Power Descriptor Request / Response

```
<br>
@code
Request: <transaction sequence number: 1> <node ID:2>
Response: <transaction sequence number: 1> <status:1> <node ID:2>
           <current power mode, available power sources:1>
           <current power source, current power source level:1>
```

// See ZigBee document 053474, Section 2.3.2.4 for more details.

- #define **POWER\_DESCRIPTOR\_REQUEST**
- #define **POWER\_DESCRIPTOR\_RESPONSE**

## Simple Descriptor Request / Response

```
Request: <transaction sequence number: 1>
          <node ID:2> <endpoint:1>
Response: <transaction sequence number: 1>
          <status:1> <node ID:2> <length:1> <endpoint:1>
          <app profile ID:2> <app device ID:2>
          <app device version, app flags:1>
          <input cluster count:1> <input cluster:2>*
          <output cluster count:1> <output cluster:2>*
```

- #define **SIMPLE\_DESCRIPTOR\_REQUEST**
- #define **SIMPLE\_DESCRIPTOR\_RESPONSE**

## Active Endpoints Request / Response

```
Request: <transaction sequence number: 1> <node ID:2>
Response: <transaction sequence number: 1>
          <status:1> <node ID:2> <endpoint count:1> <endpoint:1>*
```

- #define **ACTIVE\_ENDPOINTS\_REQUEST**
- #define **ACTIVE\_ENDPOINTS\_RESPONSE**

## Match Descriptors Request / Response

```
Request: <transaction sequence number: 1>
          <node ID:2> <app profile ID:2>
          <input cluster count:1> <input cluster:2>*
          <output cluster count:1> <output cluster:2>*
Response: <transaction sequence number: 1>
          <status:1> <node ID:2> <endpoint count:1> <endpoint:1>*
```

- #define **MATCH\_DESCRIPTOR\_REQUEST**
- #define **MATCH\_DESCRIPTOR\_RESPONSE**

## Discovery Cache Request / Response

```
Request: <transaction sequence number: 1>
          <source node ID:2> <source EUI64:8>
Response: <transaction sequence number: 1>
          <status (== EMBER_ZDP_SUCCESS):1>
```

- #define **DISCOVERY\_CACHE\_REQUEST**
- #define **DISCOVERY\_CACHE\_RESPONSE**

## End Device Announce and End Device Announce Response

```
Request: <transaction sequence number: 1>
         <node ID:2> <EUI64:8> <capabilities:1>
No response is sent.
```

- #define END\_DEVICE\_ANNOUNCE
- #define END\_DEVICE\_ANNOUNCE\_RESPONSE

## System Server Discovery Request / Response

This is broadcast and only servers which have matching services respond. The response contains the request services that the recipient provides.

```
Request: <transaction sequence number: 1> <server mask:2>
Response: <transaction sequence number: 1>
          <status (== EMBER_ZDP_SUCCESS):1> <server mask:2>
```

- #define SYSTEM\_SERVER\_DISCOVERY\_REQUEST
- #define SYSTEM\_SERVER\_DISCOVERY\_RESPONSE

## Parent Announce and Parent Announce Response

This is broadcast and only servers which have matching children respond. The response contains the list of children that the recipient now holds.

```
Request: <transaction sequence number: 1>
         <number of children:1> <child EUI64:8> <child Age:4>*
Response: <transaction sequence number: 1>
          <number of children:1> <child EUI64:8> <child Age:4>*
```

- #define PARENT\_ANNOUNCE
- #define PARENT\_ANNOUNCE\_RESPONSE

## ZDO server mask bits

These are used in server discovery requests and responses.

- enum EmberZdoServerMask {
 EMBER\_ZDP\_PRIMARY\_TRUST\_CENTER, EMBER\_ZDP\_SECONDARY\_TRUST\_CENTER,
 EMBER\_ZDP\_PRIMARY\_BINDING\_TABLE\_CACHE, EMBER\_ZDP\_SECONDARY\_BINDING\_TABLE\_CACHE,
 EMBER\_ZDP\_PRIMARY\_DISCOVERY\_CACHE, EMBER\_ZDP\_SECONDARY\_DISCOVERY\_CACHE,
 EMBER\_ZDP\_NETWORK\_MANAGER }

## Find Node Cache Request / Response

This is broadcast and only discovery servers which have the information for the device of interest, or the device of interest itself, respond. The requesting device can then direct any service discovery requests to the responder.

```

Request: <transaction sequence number: 1>
<device of interest ID:2> <d-of-i EUI64:8>
Response: <transaction sequence number: 1>
<responder ID:2> <device of interest ID:2> <d-of-i EUI64:8>

```

- #define FIND\_NODE\_CACHE\_REQUEST
- #define FIND\_NODE\_CACHE\_RESPONSE

## End Device Bind Request / Response

```

Request: <transaction sequence number: 1>
<node ID:2> <EUI64:8> <endpoint:1> <app profile ID:2>
<input cluster count:1> <input cluster:2>*
<output cluster count:1> <output cluster:2>*
Response: <transaction sequence number: 1> <status:1>

```

- #define END\_DEVICE\_BIND\_REQUEST
- #define END\_DEVICE\_BIND\_RESPONSE

## Binding types and Request / Response

Bind and unbind have the same formats. There are two possible formats, depending on whether the destination is a group address or a device address. Device addresses include an endpoint, groups don't.

```

Request: <transaction sequence number: 1>
<source EUI64:8> <source endpoint:1>
<cluster ID:2> <destination address:3 or 10>
Destination address:
<0x01:1> <destination group:2>
Or:
<0x03:1> <destination EUI64:8> <destination endpoint:1>
Response: <transaction sequence number: 1> <status:1>

```

- #define UNICAST\_BINDING
- #define UNICAST\_MANY\_TO\_ONE\_BINDING
- #define MULTICAST\_BINDING
- #define BIND\_REQUEST
- #define BIND\_RESPONSE
- #define UNBIND\_REQUEST
- #define UNBIND\_RESPONSE

## LQI Table Request / Response

```

Request: <transaction sequence number: 1> <start index:1>
Response: <transaction sequence number: 1> <status:1>
<neighbor table entries:1> <start index:1>
<entry count:1> <entry:22>*
<entry> = <extended PAN ID:8> <EUI64:8> <node ID:2>
<device type, rx on when idle, relationship:1>
<permit joining:1> <depth:1> <LQI:1>

```

The device-type byte has the following fields:

Name	Mask	Values
device type	0x03	0x00 coordinator 0x01 router 0x02 end device 0x03 unknown

rx mode	0x0C	0x00 off when idle 0x04 on when idle 0x08 unknown
relationship	0x70	0x00 parent 0x10 child 0x20 sibling 0x30 other 0x40 previous child
reserved	0x10	

The permit-joining byte has the following fields

Name	Mask	Values
permit joining	0x03	0x00 not accepting join requests 0x01 accepting join requests 0x02 unknown
reserved	0xFC	

- #define [LQI\\_TABLE\\_REQUEST](#)
- #define [LQI\\_TABLE\\_RESPONSE](#)

## Routing Table Request / Response

```

Request: <transaction sequence number: 1> <start index:1>
Response: <transaction sequence number: 1> <status:1>
           <routing table entries:1> <start index:1>
           <entry count:1> <entry:5>*
           <entry> = <destination address:2>
                     <status:1>
                     <next hop:2>

```

The status byte has the following fields:

Name	Mask	Values
status	0x07	0x00 active 0x01 discovery underway 0x02 discovery failed 0x03 inactive 0x04 validation underway
flags	0x38	0x08 memory constrained 0x10 many-to-one 0x20 route record required
reserved	0xC0	

- #define [ROUTING\\_TABLE\\_REQUEST](#)
- #define [ROUTING\\_TABLE\\_RESPONSE](#)

## Binding Table Request / Response

```

Request: <transaction sequence number: 1> <start index:1>
Response: <transaction sequence number: 1>
           <status:1> <binding table entries:1> <start index:1>
           <entry count:1> <entry:14/21>*
           <entry> = <source EUI64:8> <source endpoint:1> <cluster ID:2>
                     <dest addr mode:1> <dest:2/8> <dest endpoint:0/1>

```

### Note

If Dest. Address Mode = 0x03, then the Long Dest. Address will be used and Dest. endpoint will be included. If Dest. Address Mode = 0x01, then the Short Dest. Address will be used and there will be no Dest. endpoint.

- #define **BINDING\_TABLE\_REQUEST**
- #define **BINDING\_TABLE\_RESPONSE**

## Leave Request / Response

```
Request: <transaction sequence number: 1> <EUI64:8> <flags:1>
          The flag bits are:
          0x40 remove children
          0x80 rejoin
Response: <transaction sequence number: 1> <status:1>
```

- #define **LEAVE\_REQUEST**
- #define **LEAVE\_RESPONSE**
- #define **LEAVE\_REQUEST\_REMOVE\_CHILDREN\_FLAG**
- #define **LEAVE\_REQUEST\_REJOIN\_FLAG**

## Permit Joining Request / Response

```
Request: <transaction sequence number: 1>
          <duration:1> <permit authentication:1>
Response: <transaction sequence number: 1> <status:1>
```

- #define **PERMIT\_JOINING\_REQUEST**
- #define **PERMIT\_JOINING\_RESPONSE**

## Network Update Request / Response

```
Request: <transaction sequence number: 1>
          <scan channels:4> <duration:1> <count:0/1> <manager:0/2>

If the duration is in 0x00 ... 0x05, then 'count' is present but
not 'manager'. Perform 'count' scans of the given duration on the
given channels.

If duration is 0xFE, then 'channels' should have a single channel
and 'count' and 'manager' are not present. Switch to the indicated
channel.

If duration is 0xFF, then 'count' is not present. Set the active
channels and the network manager ID to the values given.

Unicast requests always get a response, which is INVALID_REQUEST if the
duration is not a legal value.
```

```
Response: <transaction sequence number: 1> <status:1>
          <scanned channels:4> <transmissions:2> <failures:2>
          <energy count:1> <energy:1>*
```

- #define **NWK\_UPDATE\_REQUEST**
- #define **NWK\_UPDATE\_RESPONSE**

## Unsupported

Not mandatory and not supported.

- #define COMPLEX\_DESCRIPTOR\_REQUEST
- #define COMPLEX\_DESCRIPTOR\_RESPONSE
- #define USER\_DESCRIPTOR\_REQUEST
- #define USER\_DESCRIPTOR\_RESPONSE
- #define DISCOVERY\_REGISTER\_REQUEST
- #define DISCOVERY\_REGISTER\_RESPONSE

## ZDO configuration flags.

For controlling which ZDO requests are passed to the application. These are normally controlled via the following configuration definitions:

```
EMBER_APPLICATION RECEIVES_SUPPORTED_ZDO_REQUESTS EMBER_APPLICATION_HANDLES_UNSUPPORTED_ZDO_REQUESTS EMBER_APPLICATION_HANDLES_ENDPOINT_ZDO_REQUESTS EMBER_APPLICATION_HANDLES_BINDING_ZDO_REQUESTS
```

See `ember-configuration.h` for more information.

- enum `EmberZdoConfigurationFlags` { `EMBER_APP_RECEIVES_SUPPORTED_ZDO_REQUESTS`, `EMBER_APP_HANDLES_UNSUPPORTED_ZDO_REQUESTS`, `EMBER_APP_HANDLES_ENDPOINT_ZDO_REQUESTS`, `EMBER_APP_HANDLES_BINDING_ZDO_REQUESTS` }

### 6.25.1 Detailed Description

See `ember-types.h` for source code.

### 6.25.2 Macro Definition Documentation

#### 6.25.2.1 #define EMBER\_RELEASE\_TYPE\_TO\_STRING\_STRUCT\_DATA

`EmberReleaseTypeStruct` Data that relates release type to the correct string.

Definition at line 75 of file `ember-types.h`.

#### 6.25.2.2 #define EUI64\_SIZE

Size of EUI64 (an IEEE address) in bytes (8).

Definition at line 107 of file `ember-types.h`.

**6.25.2.3 #define EXTENDED\_PAN\_ID\_SIZE**

Size of an extended PAN identifier in bytes (8).

Definition at line 112 of file [ember-types.h](#).

**6.25.2.4 #define EMBER\_ENCRYPTION\_KEY\_SIZE**

Size of an encryption key in bytes (16).

Definition at line 117 of file [ember-types.h](#).

**6.25.2.5 #define EMBER\_CERTIFICATE\_SIZE**

Size of Implicit Certificates used for Certificate Based Key Exchange.

Definition at line 123 of file [ember-types.h](#).

**6.25.2.6 #define EMBER\_PUBLIC\_KEY\_SIZE**

Size of Public Keys used in Elliptical Cryptography ECMQV algorithms.

Definition at line 128 of file [ember-types.h](#).

**6.25.2.7 #define EMBER\_PRIVATE\_KEY\_SIZE**

Size of Private Keys used in Elliptical Cryptography ECMQV algorithms.

Definition at line 133 of file [ember-types.h](#).

**6.25.2.8 #define EMBER\_SMAC\_SIZE**

Size of the SMAC used in Elliptical Cryptography ECMQV algorithms.

Definition at line 138 of file [ember-types.h](#).

**6.25.2.9 #define EMBER\_SIGNATURE\_SIZE**

Size of the DSA signature used in Elliptical Cryptography Digital Signature Algorithms.

Definition at line 144 of file [ember-types.h](#).

**6.25.2.10 #define EMBER\_AES\_HASH\_BLOCK\_SIZE**

The size of AES-128 MMO hash is 16-bytes. This is defined in the core. ZigBee specification.

Definition at line 149 of file [ember-types.h](#).

**6.25.2.11 #define EMBER\_CERTIFICATE\_283K1\_SIZE**

Size of Implicit Certificates used for Certificate Based Key Exchange using the ECC283K1 curve in bytes.

Definition at line 155 of file [ember-types.h](#).

**6.25.2.12 #define EMBER\_PUBLIC\_KEY\_283K1\_SIZE**

Size of Public Keys used in SECT283k1 Elliptical Cryptography ECMQV algorithms.

Definition at line 160 of file [ember-types.h](#).

**6.25.2.13 #define EMBER\_PRIVATE\_KEY\_283K1\_SIZE**

Size of Private Keys used SECT283k1 in Elliptical Cryptography ECMQV algorithms.

Definition at line 165 of file [ember-types.h](#).

**6.25.2.14 #define EMBER\_SIGNATURE\_283K1\_SIZE**

Size of the DSA signature used in SECT283k1 Elliptical Cryptography Digital Signature Algorithms.

Definition at line 171 of file [ember-types.h](#).

**6.25.2.15 #define \_\_EMBERSTATUS\_TYPE\_\_**

Return type for Ember functions.

Definition at line 177 of file [ember-types.h](#).

**6.25.2.16 #define EMBER\_MAX\_802\_15\_4\_CHANNEL\_NUMBER**

The maximum 802.15.4 channel number is 26.

Definition at line 215 of file [ember-types.h](#).

**6.25.2.17 #define EMBER\_MIN\_802\_15\_4\_CHANNEL\_NUMBER**

The minimum 802.15.4 channel number is 11.

Definition at line 220 of file [ember-types.h](#).

**6.25.2.18 #define EMBER\_NUM\_802\_15\_4\_CHANNELS**

There are sixteen 802.15.4 channels.

Definition at line 225 of file [ember-types.h](#).

**6.25.2.19 #define EMBER\_ALL\_802\_15\_4\_CHANNELS\_MASK**

Bitmask to scan all 802.15.4 channels.

Definition at line 231 of file [ember-types.h](#).

**6.25.2.20 #define EMBER\_ZIGBEE\_COORDINATOR\_ADDRESS**

The network ID of the coordinator in a ZigBee network is 0x0000.

Definition at line 236 of file [ember-types.h](#).

**6.25.2.21 #define EMBER\_NULL\_NODE\_ID**

A distinguished network ID that will never be assigned to any node. Used to indicate the absence of a node ID.

Definition at line 242 of file [ember-types.h](#).

**6.25.2.22 #define EMBER\_NULL\_BINDING**

A distinguished binding index used to indicate the absence of a binding.

Definition at line 248 of file [ember-types.h](#).

**6.25.2.23 #define EMBER\_TABLE\_ENTRY\_UNUSED\_NODE\_ID**

A distinguished network ID that will never be assigned to any node.

This value is used when setting or getting the remote node ID in the address table or getting the remote node ID from the binding table. It indicates that address or binding table entry is not in use.

Definition at line 259 of file [ember-types.h](#).

**6.25.2.24 #define EMBER\_MULTICAST\_NODE\_ID**

A distinguished network ID that will never be assigned to any node. This value is returned when getting the remote node ID from the binding table and the given binding table index refers to a multicast binding entry.

Definition at line 267 of file [ember-types.h](#).

**6.25.2.25 #define EMBER\_UNKNOWN\_NODE\_ID**

A distinguished network ID that will never be assigned to any node. This value is used when getting the remote node ID from the address or binding tables. It indicates that the address or binding table entry is currently in use but the node ID corresponding to the EUI64 in the table is currently unknown.

Definition at line 276 of file [ember-types.h](#).

**6.25.2.26 #define EMBER\_DISCOVERY\_ACTIVE\_NODE\_ID**

A distinguished network ID that will never be assigned to any node. This value is used when getting the remote node ID from the address or binding tables. It indicates that the address or binding table entry is currently in use and network address discovery is underway.

Definition at line 285 of file [ember-types.h](#).

**6.25.2.27 #define EMBER\_NULL\_ADDRESS\_TABLE\_INDEX**

A distinguished address table index used to indicate the absence of an address table entry.

Definition at line 291 of file [ember-types.h](#).

**6.25.2.28 #define EMBER\_ZDO\_ENDPOINT**

The endpoint where the ZigBee Device Object (ZDO) resides.

Definition at line [296](#) of file [ember-types.h](#).

**6.25.2.29 #define EMBER\_BROADCAST\_ENDPOINT**

The broadcast endpoint, as defined in the ZigBee spec.

Definition at line [301](#) of file [ember-types.h](#).

**6.25.2.30 #define EMBER\_ZDO\_PROFILE\_ID**

The profile ID used by the ZigBee Device Object (ZDO).

Definition at line [306](#) of file [ember-types.h](#).

**6.25.2.31 #define EMBER\_WILDCARD\_PROFILE\_ID**

The profile ID used to address all the public profiles.

Definition at line [311](#) of file [ember-types.h](#).

**6.25.2.32 #define EMBER\_MAXIMUM\_STANDARD\_PROFILE\_ID**

The maximum value for a profile ID in the standard profile range.

Definition at line [316](#) of file [ember-types.h](#).

**6.25.2.33 #define EMBER\_BROADCAST\_TABLE\_TIMEOUT\_QS**

The broadcast table timeout. How long a broadcast entry persists in the local device's broadcast table. This is the maximum length it will persist, in quarter seconds.

Definition at line [323](#) of file [ember-types.h](#).

**6.25.2.34 #define EMBER\_MANUFACTURER\_ID**

Ember's Manufacturer ID.

Definition at line [329](#) of file [ember-types.h](#).

**6.25.2.35 #define EMBER\_BROADCAST\_ADDRESS**

Broadcast to all routers.

Definition at line [378](#) of file [ember-types.h](#).

**6.25.2.36 #define EMBER\_RX\_ON\_WHEN\_IDLE\_BROADCAST\_ADDRESS**

Broadcast to all non-sleepy devices.

Definition at line 380 of file [ember-types.h](#).

#### **6.25.2.37 #define EMBER\_SLEEPY\_BROADCAST\_ADDRESS**

Broadcast to all devices, including sleepy end devices.

Definition at line 382 of file [ember-types.h](#).

#### **6.25.2.38 #define EMBER\_MIN\_BROADCAST\_ADDRESS**

Definition at line 387 of file [ember-types.h](#).

#### **6.25.2.39 #define emberIsZigbeeBroadcastAddress( *address* )**

Definition at line 389 of file [ember-types.h](#).

#### **6.25.2.40 #define EMBER\_LOW\_RAM\_CONCENTRATOR**

A concentrator with insufficient memory to store source routes for the entire network. Route records are sent to the concentrator prior to every inbound APS unicast.

Definition at line 711 of file [ember-types.h](#).

#### **6.25.2.41 #define EMBER\_HIGH\_RAM\_CONCENTRATOR**

A concentrator with sufficient memory to store source routes for the entire network. Remote nodes stop sending route records once the concentrator has successfully received one.

Definition at line 716 of file [ember-types.h](#).

#### **6.25.2.42 #define EMBER\_JOIN\_DECISION\_STRINGS**

@ brief Defines the CLI enumerations for the [EmberJoinDecision](#) enum

Definition at line 744 of file [ember-types.h](#).

#### **6.25.2.43 #define EMBER\_DEVICE\_UPDATE\_STRINGS**

@ brief Defines the CLI enumerations for the [EmberDeviceUpdate](#) enum.

Definition at line 779 of file [ember-types.h](#).

#### **6.25.2.44 #define emberInitializeNetworkParameters( *parameters* )**

Definition at line 951 of file [ember-types.h](#).

#### **6.25.2.45 #define EMBER\_COUNTER\_STRINGS**

@ brief Defines the CLI enumerations for the [EmberCounterType](#) enum.

Definition at line 1226 of file [ember-types.h](#).

**6.25.2.46 #define EMBER\_TX\_POWER\_MODE\_DEFAULT**

The application should call ::emberSetTxPowerMode() with the txPowerMode parameter set to this value to disable all power mode options, resulting in normal power mode and bi-directional RF transmitter output.

Definition at line 1319 of file [ember-types.h](#).

**6.25.2.47 #define EMBER\_TX\_POWER\_MODE\_BOOST**

The application should call ::emberSetTxPowerMode() with the txPowerMode parameter set to this value to enable boost power mode.

Definition at line 1323 of file [ember-types.h](#).

**6.25.2.48 #define EMBER\_TX\_POWER\_MODE\_ALTERNATE**

The application should call ::emberSetTxPowerMode() with the txPowerMode parameter set to this value to enable the alternate transmitter output.

Definition at line 1328 of file [ember-types.h](#).

**6.25.2.49 #define EMBER\_TX\_POWER\_MODE\_BOOST\_AND\_ALTERNATE**

The application should call ::emberSetTxPowerMode() with the txPowerMode parameter set to this value to enable both boost mode and the alternate transmitter output.

Definition at line 1333 of file [ember-types.h](#).

**6.25.2.50 #define EMBER\_PRIVATE\_PROFILE\_ID**

This is a ZigBee application profile ID that has been assigned to Ember Corporation.

It is used to send for sending messages that have a specific, non-standard interaction with the Ember stack. Its only current use is for alarm messages and stack counters requests.

Definition at line 1357 of file [ember-types.h](#).

**6.25.2.51 #define EMBER\_PRIVATE\_PROFILE\_ID\_START**

Ember's first private profile ID.

Definition at line 1362 of file [ember-types.h](#).

**6.25.2.52 #define EMBER\_PRIVATE\_PROFILE\_ID\_END**

Ember's last private profile ID.

Definition at line 1367 of file [ember-types.h](#).

**6.25.2.53 #define EMBER\_BROADCAST\_ALARM\_CLUSTER**

Alarm messages provide a reliable means for communicating with sleeping end devices.

A messages sent to a sleeping device is normally buffered on the device's parent for a short time (the precise time can be specified using the configuration parameter ::EMBER\_INDIRECT\_TRANSMISSION\_TIMEOUT). If the child does not poll its parent within that time the message is discarded.

In contrast, alarm messages are buffered by the parent indefinitely. Because of the limited RAM available, alarm messages are necessarily brief. In particular, the parent only stores alarm payloads. The header information in alarm messages is not stored on the parent.

The memory used for buffering alarm messages is allocated statically. The amount of memory set aside for alarms is controlled by two configuration parameters:

- ::EMBER\_BROADCAST\_ALARM\_DATA\_SIZE
- ::EMBER\_UNICAST\_ALARM\_DATA\_SIZE

Alarm messages must use the [EMBER\\_PRIVATE\\_PROFILE\\_ID](#) as the application profile ID. The source and destination endpoints are ignored.

Broadcast alarms must use [EMBER\\_BROADCAST\\_ALARM\\_CLUSTER](#) as the cluster id and messages with this cluster ID must be sent to [EMBER\\_RX\\_ON\\_WHEN\\_IDLE\\_BROADCAST\\_ADDRESS](#). A broadcast alarm may not contain more than ::EMBER\_BROADCAST\_ALARM\_DATA\_SIZE bytes of payload.

Broadcast alarm messages arriving at a node are passed to the application via ::emberIncomingMessageHandler(). If the receiving node has sleepy end device children, the payload of the alarm is saved and then forwarded to those children when they poll for data. When a sleepy child polls its parent, it receives only the most recently arrived broadcast alarm. If the child has already received the most recent broadcast alarm it is not forwarded again.

Definition at line 1407 of file [ember-types.h](#).

#### **6.25.2.54 #define EMBER\_UNICAST\_ALARM\_CLUSTER**

Unicast alarms must use [EMBER\\_UNICAST\\_ALARM\\_CLUSTER](#) as the cluster id and messages with this cluster ID must be unicast.

The payload of a unicast alarm consists of three one-byte length fields followed by three variable length fields.

1. flags length
2. priority length (must be 0 or 1)
3. data length
4. flags
5. priority
6. payload

The three lengths must total ::EMBER\_UNICAST\_ALARM\_DATA\_SIZE or less.

When a unicast alarm message arrives at its destination it is passed to the application via ::emberIncomingMessageHandler(). When a node receives a unicast alarm message whose destination is a sleepy end device child of that node, the payload of the message is saved until the child polls for data. To conserve memory, the values of the length fields are not saved. The alarm will be forwarded to the child using the [EMBER\\_CACHED\\_UNICAST\\_ALARM\\_CLUSTER](#) cluster ID.

If a unicast alarm arrives when a previous one is still pending, the two payloads are combined. This combining is controlled by the length fields in the arriving message. The incoming flag bytes are or'ed with those of the pending message. If the priority field is not present, or if it is present and the incoming priority value is equal or greater than the pending priority value, the pending data is replaced by the incoming data.

Because the length fields are not saved, the application designer must fix on a set of field lengths that will be used for all unicast alarm message sent to a particular device.

Definition at line 1445 of file [ember-types.h](#).

#### **6.25.2.55 #define EMBER\_CACHED\_UNICAST\_ALARM\_CLUSTER**

A unicast alarm that has been cached on the parent of a sleepy end device is delivered to that device using the [EMBER\\_CACHED\\_UNICAST\\_ALARM\\_CLUSTER](#) cluster ID. The payload consists of three variable length fields.

1. flags
2. priority
3. payload

The parent will pad the payload out to ::EMBER\_UNICAST\_ALARM\_DATA\_SIZE bytes.

The lengths of the these fields must be fixed by the application designer and must be the same for all unicast alarms sent to a particular device.

Definition at line 1462 of file [ember-types.h](#).

#### **6.25.2.56 #define EMBER\_REPORT\_COUNTERS\_REQUEST**

The cluster id used to request that a node respond with a report of its Ember stack counters. See app/util/counters/counters-ota.h.

Definition at line 1467 of file [ember-types.h](#).

#### **6.25.2.57 #define EMBER\_REPORT\_COUNTERS\_RESPONSE**

The cluster id used to respond to an EMBER\_REPORT\_COUNTERS\_REQUEST.

Definition at line 1470 of file [ember-types.h](#).

#### **6.25.2.58 #define EMBER\_REPORT\_AND\_CLEAR\_COUNTERS\_REQUEST**

The cluster id used to request that a node respond with a report of its Ember stack counters. The node will also reset its clusters to zero after a successful response. See app/util/counters/counters-ota.h.

Definition at line 1476 of file [ember-types.h](#).

#### **6.25.2.59 #define EMBER\_REPORT\_AND\_CLEAR\_COUNTERS\_RESPONSE**

The cluster id used to respond to an EMBER\_REPORT\_AND\_CLEAR\_COUNTERS\_REQUEST.

Definition at line 1479 of file [ember-types.h](#).

**6.25.2.60 #define EMBER\_OTA\_CERTIFICATE\_UPGRADE\_CLUSTER**

The cluster id used to send and receive Over-the-air certificate messages. This is used to field upgrade devices with Smart Energy Certificates and other security data.

Definition at line 1485 of file [ember-types.h](#).

**6.25.2.61 #define EMBER\_STANDARD\_SECURITY\_MODE**

This is an [EmberInitialSecurityBitmask](#) value but it does not actually set anything. It is the default mode used by the ZigBee Pro stack. It is defined here so that no legacy code is broken by referencing it.

Definition at line 1574 of file [ember-types.h](#).

**6.25.2.62 #define EMBER\_TRUST\_CENTER\_NODE\_ID**

This is the short address of the trust center. It never changes from this value throughout the life of the network.

Definition at line 1579 of file [ember-types.h](#).

**6.25.2.63 #define EMBER\_NO\_TRUST\_CENTER\_MODE**

This is the legacy name for the Distributed Trust Center Mode.

Definition at line 1730 of file [ember-types.h](#).

**6.25.2.64 #define EMBER\_GLOBAL\_LINK\_KEY**

This is the legacy name for the Trust Center Global Link Key.

Definition at line 1734 of file [ember-types.h](#).

**6.25.2.65 #define EMBER\_MFG\_SECURITY\_CONFIG\_MAGIC\_NUMBER**

This magic number prevents accidentally changing the key settings. The ::emberSetMfgSecurityConfig() API will return EMBER\_INVALID\_CALL unless it is passed in.

Definition at line 2138 of file [ember-types.h](#).

**6.25.2.66 #define EMBER\_MAC\_FILTER\_MATCH\_ENABLED\_MASK**

### **6.25.3 Typedef Documentation**

#### **6.25.3.1 typedef uint8\_t EmberStatus**

[EmberReleaseTypeStruct](#) Data that relates release type to the correct string.

Definition at line [178](#) of file [ember-types.h](#).

#### **6.25.3.2 typedef uint8\_t EmberEUI64[EUI64\_SIZE]**

EUI 64-bit ID (an IEEE address).

Definition at line [186](#) of file [ember-types.h](#).

#### **6.25.3.3 typedef uint8\_t EmberMessageBuffer**

Incoming and outgoing messages are stored in buffers. These buffers are allocated and freed as needed.

Buffers are 32 bytes in length and can be linked together to hold longer messages.

See [packet-buffer.h](#) for APIs related to stack and linked buffers.

Definition at line [197](#) of file [ember-types.h](#).

#### **6.25.3.4 typedef uint16\_t EmberNodeId**

16-bit ZigBee network address.

Definition at line [202](#) of file [ember-types.h](#).

#### **6.25.3.5 typedef uint16\_t EmberMulticastId**

16-bit ZigBee multicast group identifier.

Definition at line [205](#) of file [ember-types.h](#).

#### **6.25.3.6 typedef uint16\_t EmberPanId**

802.15.4 PAN ID.

Definition at line [210](#) of file [ember-types.h](#).

#### **6.25.3.7 typedef uint8\_t EmberTaskId**

brief An identifier for a task

Definition at line [1264](#) of file [ember-types.h](#).

### 6.25.3.8 `typedef PGM struct EmberEventData_S EmberEventData`

#### 6.25.3.9 `typedef uint16_t EmberMacFilterMatchData`

This is a bitmask describing a filter for MAC data messages that the stack should accept and passthrough to the application.

Definition at line 2176 of file [ember-types.h](#).

#### 6.25.3.10 `typedef uint8_t EmberLibraryStatus`

This indicates the presence, absence, or status of an Ember stack library.

Definition at line 2224 of file [ember-types.h](#).

### 6.25.4 Enumeration Type Documentation

#### 6.25.4.1 `enum EmberVersionType`

Type of Ember software version.

**Enumerator:**

```
EMBER_VERSION_TYPE_PRE_RELEASE
EMBER_VERSION_TYPE_ALPHA_1
EMBER_VERSION_TYPE_ALPHA_2
EMBER_VERSION_TYPE_ALPHA_3
EMBER_VERSION_TYPE_BETA_1
EMBER_VERSION_TYPE_BETA_2
EMBER_VERSION_TYPE_BETA_3
EMBER_VERSION_TYPE_GA
```

Definition at line 37 of file [ember-types.h](#).

#### 6.25.4.2 `enum EmberLeaveRequestFlags`

[EmberReleaseTypeStruct](#) Data that relates release type to the correct string.

**Enumerator:**

```
EMBER_ZIGBEE_LEAVE_AND_REJOIN Leave and rejoin
EMBER_ZIGBEE_LEAVE_AND_REMOVE_CHILDREN Send all children leave command
```

Definition at line 333 of file [ember-types.h](#).

#### 6.25.4.3 `enum EmberLeaveReason`

[EmberReleaseTypeStruct](#) Data that relates release type to the correct string.

Enumerator:

*EMBER\_LEAVE\_REASON\_NONE*  
*EMBER\_LEAVE\_DUE\_TO\_NWK\_LEAVE\_MESSAGE*  
*EMBER\_LEAVE\_DUE\_TO\_AP\_REMOVE\_MESSAGE*  
*EMBER\_LEAVE\_DUE\_TO\_ZDO\_LEAVE\_MESSAGE*  
*EMBER\_LEAVE\_DUE\_TO\_ZLL\_TOUCHLINK*  
*EMBER\_LEAVE\_DUE\_TO\_APP\_EVENT\_I*

Definition at line 347 of file [ember-types.h](#).

#### 6.25.4.4 enum EmberNodeType

Defines the possible types of nodes and the roles that a node might play in a network.

Enumerator:

*EMBER\_UNKNOWN\_DEVICE* Device is not joined  
*EMBER\_COORDINATOR* Will relay messages and can act as a parent to other nodes.  
*EMBER\_ROUTER* Will relay messages and can act as a parent to other nodes.  
*EMBER\_END\_DEVICE* Communicates only with its parent and will not relay messages.  
*EMBER\_SLEEPY\_END\_DEVICE* An end device whose radio can be turned off to save power. The application must call ::emberPollForData() to receive messages.  
*EMBER\_MOBILE\_END\_DEVICE* A sleepy end device that can move through the network.  
*EMBER\_RF4CE\_TARGET* RF4CE target node.  
*EMBER\_RF4CE\_CONTROLLER* RF4CE controller node.

Definition at line 398 of file [ember-types.h](#).

#### 6.25.4.5 enum EmberEndDeviceConfiguration

The configuration advertised by the end device to the parent when joining/rejoining.

Enumerator:

*EMBER\_END\_DEVICE\_CONFIG\_NONE*  
*EMBER\_END\_DEVICE\_CONFIG\_PERSIST\_DATA\_ON\_PARENT*

Definition at line 428 of file [ember-types.h](#).

#### 6.25.4.6 enum EmberNetworkInitBitmask

Defines the options that should be used when initializing the node's network configuration.

Enumerator:

*EMBER\_NETWORK\_INIT\_NO\_OPTIONS*  
*EMBER\_NETWORK\_INIT\_PARENT\_INFO\_IN\_TOKEN* The Parent Node ID and EUI64 are stored in a token. This prevents the need to perform an Orphan scan on startup.

Definition at line 456 of file [ember-types.h](#).

#### 6.25.4.7 enum EmberApsOption

Options to use when sending a message.

The discover route, APS retry, and APS indirect options may be used together. Poll response cannot be combined with any other options.

Enumerator:

***EMBER\_APS\_OPTION\_NONE*** No options.

***EMBER\_APS\_OPTION\_DSA\_SIGN*** This signs the application layer message body (APS Frame not included) and appends the ECDSA signature to the end of the message. Needed by Smart Energy applications. This requires the CBKE and ECC libraries. The ::emberDsaSignHandler() function is called after DSA signing is complete but before the message has been sent by the APS layer. Note that when passing a buffer to the stack for DSA signing, the final byte in the buffer has special significance as an indicator of how many leading bytes should be ignored for signature purposes. Refer to API documentation of emberDsaSign() or the dsaSign EZSP command for further details about this requirement.

***EMBER\_APS\_OPTION\_ENCRYPTION*** Send the message using APS Encryption, using the Link Key shared with the destination node to encrypt the data at the APS Level.

***EMBER\_APS\_OPTION\_RETRY*** Resend the message using the APS retry mechanism. In the mesh stack, this option and the enable route discovery option must be enabled for an existing route to be repaired automatically.

***EMBER\_APS\_OPTION\_ENABLE\_ROUTE\_DISCOVERY*** Send the message with the NWK 'enable route discovery' flag, which causes a route discovery to be initiated if no route to the destination is known. Note that in the mesh stack, this option and the APS retry option must be enabled an existing route to be repaired automatically.

***EMBER\_APS\_OPTION\_FORCE\_ROUTE\_DISCOVERY*** Send the message with the NWK 'force route discovery' flag, which causes a route discovery to be initiated even if one is known.

***EMBER\_APS\_OPTION\_SOURCE\_EUI64*** Include the source EUI64 in the network frame.

***EMBER\_APS\_OPTION\_DESTINATION\_EUI64*** Include the destination EUI64 in the network frame.

***EMBER\_APS\_OPTION\_ENABLE\_ADDRESS\_DISCOVERY*** Send a ZDO request to discover the node ID of the destination, if it is not already known.

***EMBER\_APS\_OPTION\_POLL\_RESPONSE*** This message is being sent in response to a call to ::emberPollHandler(). It causes the message to be sent immediately instead of being queued up until the next poll from the (end device) destination.

***EMBER\_APS\_OPTION\_ZDO\_RESPONSE\_REQUIRED*** This incoming message is a valid ZDO request and the application is responsible for sending a ZDO response. This flag is used only within emberIncomingMessageHandler() when EMBER\_APPLICATION RECEIVES\_UNSUPPORTED\_ZDO\_REQUESTS is defined.

***EMBER\_APS\_OPTION\_FRAGMENT*** This message is part of a fragmented message. This option may only be set for unicasts. The groupId field gives the index of this fragment in the low-order byte. If the low-order byte is zero this is the first fragment and the high-order byte contains the number of fragments in the message.

Definition at line 486 of file [ember-types.h](#).

#### 6.25.4.8 enum EmberIncomingMessageType

Defines the possible incoming message types.

Enumerator:

- EMBER\_INCOMING\_UNICAST*** Unicast.
- EMBER\_INCOMING\_UNICAST\_REPLY*** Unicast reply.
- EMBER\_INCOMING\_MULTICAST*** Multicast.
- EMBER\_INCOMING\_MULTICAST\_LOOPBACK*** Multicast sent by the local device.
- EMBER\_INCOMING\_BROADCAST*** Broadcast.
- EMBER\_INCOMING\_BROADCAST\_LOOPBACK*** Broadcast sent by the local device.

Definition at line 559 of file [ember-types.h](#).

#### 6.25.4.9 enum EmberOutgoingMessageType

Defines the possible outgoing message types.

Enumerator:

- EMBER\_OUTGOING\_DIRECT*** Unicast sent directly to an EmberNodeId.
- EMBER\_OUTGOING\_VIA\_ADDRESS\_TABLE*** Unicast sent using an entry in the address table.
- EMBER\_OUTGOING\_VIA\_BINDING*** Unicast sent using an entry in the binding table.
- EMBER\_OUTGOING\_MULTICAST*** Multicast message. This value is passed to emberMessageSentHandler() only. It may not be passed to emberSendUnicast().
- EMBER\_OUTGOING\_MULTICAST\_WITH\_ALIAS*** aliased multicast message. This value is passed to emberMessageSentHandler() only. It may not be passed to emberSendUnicast().
- EMBER\_OUTGOING\_BROADCAST\_WITH\_ALIAS*** aliased Broadcast message. This value is passed to emberMessageSentHandler() only. It may not be passed to emberSendUnicast().
- EMBER\_OUTGOING\_BROADCAST*** Broadcast message. This value is passed to emberMessageSentHandler() only. It may not be passed to emberSendUnicast().

Definition at line 584 of file [ember-types.h](#).

#### 6.25.4.10 enum EmberZigbeeCommandType

A type of command received by the stack.

This enum provides a way to indicate which protocol layer in the Ember stack an incoming command was meant for.

Enumerator:

- EMBER\_ZIGBEE\_COMMAND\_TYPE\_MAC*** Describes an 802.15.4 MAC layer command.
- EMBER\_ZIGBEE\_COMMAND\_TYPE\_NWK*** Describes a ZigBee Network layer command.
- EMBER\_ZIGBEE\_COMMAND\_TYPE\_APS*** Describes a ZigBee Application Support layer command.
- EMBER\_ZIGBEE\_COMMAND\_TYPE\_ZDO*** Describes a ZigBee Device Object command.
- EMBER\_ZIGBEE\_COMMAND\_TYPE\_ZCL*** Describes a ZigBee Cluster Library command.
- EMBER\_ZIGBEE\_COMMAND\_TYPE\_BEACON*** Although a beacon is not a MAC command, we have it here for simplicity.

Definition at line 616 of file [ember-types.h](#).

#### 6.25.4.11 enum EmberNetworkStatus

Defines the possible join states for a node.

**Enumerator:**

- EMBER\_NO\_NETWORK*** The node is not associated with a network in any way.
- EMBER\_JOINING\_NETWORK*** The node is currently attempting to join a network.
- EMBER\_JOINED\_NETWORK*** The node is joined to a network.
- EMBER\_JOINED\_NETWORK\_NO\_PARENT*** The node is an end device joined to a network but its parent is not responding.
- EMBER\_LEAVING\_NETWORK*** The node is in the process of leaving its current network.

Definition at line 641 of file [ember-types.h](#).

#### 6.25.4.12 enum EmberNetworkScanType

Type for a network scan.

**Enumerator:**

- EMBER\_ENERGY\_SCAN*** An energy scan scans each channel for its RSSI value.
- EMBER\_ACTIVE\_SCAN*** An active scan scans each channel for available networks.

Definition at line 665 of file [ember-types.h](#).

#### 6.25.4.13 enum EmberBindingType

Defines binding types.

**Enumerator:**

- EMBER\_UNUSED\_BINDING*** A binding that is currently not in use.
- EMBER\_UNICAST\_BINDING*** A unicast binding whose 64-bit identifier is the destination EUI64.
- EMBER\_MANY\_TO\_ONE\_BINDING*** A unicast binding whose 64-bit identifier is the many-to-one destination EUI64. Route discovery should be disabled when sending unicasts via many-to-one bindings.
- EMBER\_MULTICAST\_BINDING*** A multicast binding whose 64-bit identifier is the group address. A multicast binding can be used to send messages to the group and to receive messages sent to the group.

Definition at line 682 of file [ember-types.h](#).

#### 6.25.4.14 enum EmberJoinDecision

Decision made by the Trust Center when a node attempts to join.

**Enumerator:**

- EMBER\_USE\_PRECONFIGURED\_KEY*** Allow the node to join. The node has the key.

***EMBER\_SEND\_KEY\_IN\_THE\_CLEAR*** Allow the node to join. Send the key to the node.

***EMBER\_DENY\_JOIN*** Deny join.

***EMBER\_NO\_ACTION*** Take no action.

Definition at line 725 of file [ember-types.h](#).

#### 6.25.4.15 enum EmberDeviceUpdate

The Status of the Update Device message sent to the Trust Center. The device may have joined or rejoined insecurely, rejoined securely, or left. MAC Security has been deprecated and therefore there is no secure join.

Enumerator:

```
EMBER_STANDARD_SECURITY_SECURED_REJOIN
EMBER_STANDARD_SECURITY_UNSECURED_JOIN
EMBER_DEVICE_LEFT
EMBER_STANDARD_SECURITY_UNSECURED_REJOIN
EMBER_HIGH_SECURITY_SECURED_REJOIN
EMBER_HIGH_SECURITY_UNSECURED_JOIN
EMBER_HIGH_SECURITY_UNSECURED_REJOIN
```

Definition at line 759 of file [ember-types.h](#).

#### 6.25.4.16 enum EmberRejoinReason

Notes the last rejoin reason.

Enumerator:

```
EMBER_REJOIN_REASON_NONE
EMBER_REJOIN_DUE_TO_NWK_KEY_UPDATE
EMBER_REJOIN_DUE_TO_LEAVE_MESSAGE
EMBER_REJOIN_DUE_TO_NO_PARENT
EMBER_REJOIN_DUE_TO_ZLL_TOUCHLINK
EMBER_REJOIN_DUE_TO_APP_EVENT_5
EMBER_REJOIN_DUE_TO_APP_EVENT_4
EMBER_REJOIN_DUE_TO_APP_EVENT_3
EMBER_REJOIN_DUE_TO_APP_EVENT_2
EMBER_REJOIN_DUE_TO_APP_EVENT_1
```

Definition at line 793 of file [ember-types.h](#).

#### 6.25.4.17 enum EmberClusterListId

Defines the lists of clusters that must be provided for each endpoint.

**Enumerator:**

**EMBER\_INPUT\_CLUSTER\_LIST** Input clusters the endpoint will accept.

**EMBER\_OUTPUT\_CLUSTER\_LIST** Output clusters the endpoint can send.

Definition at line 823 of file [ember-types.h](#).

#### 6.25.4.18 enum EmberEventUnits

Either marks an event as inactive or specifies the units for the event execution time.

**Enumerator:**

**EMBER\_EVENT\_INACTIVE** The event is not scheduled to run.

**EMBER\_EVENT\_MS\_TIME** The execution time is in approximate milliseconds.

**EMBER\_EVENT\_QS\_TIME** The execution time is in 'binary' quarter seconds (256 approximate milliseconds each).

**EMBER\_EVENT\_MINUTE\_TIME** The execution time is in 'binary' minutes (65536 approximate milliseconds each).

**EMBER\_EVENT\_ZERO\_DELAY** The event is scheduled to run at the earliest opportunity.

Definition at line 841 of file [ember-types.h](#).

#### 6.25.4.19 enum EmberJoinMethod

The type of method used for joining.

**Enumerator:**

**EMBER\_USE\_MAC\_ASSOCIATION** Normally devices use MAC Association to join a network, which respects the "permit joining" flag in the MAC Beacon. For mobile nodes this value causes the device to use an Ember Mobile Node Join, which is functionally equivalent to a MAC association. This value should be used by default.

**EMBER\_USE\_NWK\_REJOIN** For those networks where the "permit joining" flag is never turned on, they will need to use a ZigBee NWK Rejoin. This value causes the rejoin to be sent with OUT NWK security and the Trust Center will be asked to send the NWK key to the device. The NWK key sent to the device can be encrypted with the device's corresponding Trust Center link key. That is determined by the [EmberJoinDecision](#) on the Trust Center returned by the ::emberTrustCenterJoinHandler(). For a mobile node this value will cause it to use an Ember Mobile node rejoin, which is functionally equivalent.

**EMBER\_USE\_NWK\_REJOIN\_HAVE\_NWK\_KEY**

**EMBER\_USE\_NWK\_COMMISSIONING** For those networks where all network and security information is known ahead of time, a router device may be commissioned such that it does not need to send any messages to begin communicating on the network.

Definition at line 866 of file [ember-types.h](#).

#### 6.25.4.20 enum EmberCounterType

Defines the events reported to the application by the [emberCounterHandler\(\)](#).

**Enumerator:**

**EMBER\_COUNTER\_MAC\_RX\_BROADCAST** The MAC received a broadcast.

**EMBER\_COUNTER\_MAC\_TX\_BROADCAST** The MAC transmitted a broadcast.

**EMBER\_COUNTER\_MAC\_RX\_UNICAST** The MAC received a unicast.

**EMBER\_COUNTER\_MAC\_TX\_UNICAST\_SUCCESS** The MAC successfully transmitted a unicast.

**EMBER\_COUNTER\_MAC\_TX\_UNICAST\_RETRY** The MAC retried a unicast. This is a placeholder and is not used by the [emberCounterHandler\(\)](#) callback. Instead the number of MAC retries are returned in the data parameter of the callback for the [EMBER\\_COUNTER\\_MAC\\_TX\\_UNICAST\\_SUCCESS](#) and [EMBER\\_COUNTER\\_MAC\\_TX\\_UNICAST\\_FAILED](#) types.

**EMBER\_COUNTER\_MAC\_TX\_UNICAST\_FAILED** The MAC unsuccessfully transmitted a unicast.

**EMBER\_COUNTERAPS\_DATA\_RX\_BROADCAST** The APS layer received a data broadcast.

**EMBER\_COUNTERAPS\_DATA\_TX\_BROADCAST** The APS layer transmitted a data broadcast.

**EMBER\_COUNTERAPS\_DATA\_RX\_UNICAST** The APS layer received a data unicast.

**EMBER\_COUNTERAPS\_DATA\_TX\_UNICAST\_SUCCESS** The APS layer successfully transmitted a data unicast.

**EMBER\_COUNTERAPS\_DATA\_TX\_UNICAST\_RETRY** The APS layer retried a data unicast. This is a placeholder and is not used by the [emberCounterHandler\(\)](#) callback. Instead the number of APS retries are returned in the data parameter of the callback for the [EMBER\\_COUNTERAPS\\_DATA\\_TX\\_UNICAST\\_SUCCESS](#) and [EMBER\\_COUNTERAPS\\_DATA\\_TX\\_UNICAST\\_FAILED](#) types.

**EMBER\_COUNTERAPS\_DATA\_TX\_UNICAST\_FAILED** The APS layer unsuccessfully transmitted a data unicast.

**EMBER\_COUNTERROUTE\_DISCOVERY\_INITIATED** The network layer successfully submitted a new route discovery to the MAC.

**EMBER\_COUNTERNEIGHBOR\_ADDED** An entry was added to the neighbor table.

**EMBER\_COUNTERNEIGHBOR\_REMOVED** An entry was removed from the neighbor table.

**EMBER\_COUNTERNEIGHBOR\_STALE** A neighbor table entry became stale because it had not been heard from.

**EMBER\_COUNTERJOIN\_INDICATION** A node joined or rejoined to the network via this node.

**EMBER\_COUNTERCHILD\_REMOVED** An entry was removed from the child table.

**EMBER\_COUNTERASH\_OVERFLOW\_ERROR** EZSP-UART only. An overflow error occurred in the UART.

**EMBER\_COUNTERASH\_FRAMING\_ERROR** EZSP-UART only. A framing error occurred in the UART.

**EMBER\_COUNTERASH\_OVERRUN\_ERROR** EZSP-UART only. An overrun error occurred in the UART.

**EMBER\_COUNTER\_NWK\_FRAME\_COUNTER\_FAILURE** A message was dropped at the Network layer because the NWK frame counter was not higher than the last message seen from that source.

**EMBER\_COUNTER\_APSS\_FRAME\_COUNTER\_FAILURE** A message was dropped at the APS layer because the APS frame counter was not higher than the last message seen from that source.

**EMBER\_COUNTER\_ASH\_XOFF** EZSP-UART only. An XOFF was transmitted by the UART.

**EMBER\_COUNTER\_APSS\_LINK\_KEY\_NOT\_AUTHORIZED** A message was dropped at the APS layer because it had APS encryption but the key associated with the sender has not been authenticated, and thus the key is not authorized for use in APS data messages.

**EMBER\_COUNTER\_NWK\_DECRYPTION\_FAILURE** A NWK encrypted message was received but dropped because decryption failed.

**EMBER\_COUNTER\_APSS\_DECRYPTION\_FAILURE** An APS encrypted message was received but dropped because decryption failed.

**EMBER\_COUNTER\_ALLOCATE\_PACKET\_BUFFER\_FAILURE** The number of times we failed to allocate a set of linked packet buffers. This doesn't necessarily mean that the packet buffer count was 0 at the time, but that the number requested was greater than the number free.

**EMBER\_COUNTER\_RELAYED\_UNICAST** The number of relayed unicast packets.

**EMBER\_COUNTER\_PHY\_TO\_MAC\_QUEUE\_LIMIT\_REACHED** The number of times we dropped a packet due to reaching the preset PHY to MAC queue limit (emMaxPhyToMacQueueLength). The limit will determine how many messages are accepted by the PHY between calls to emberTick(). After that limit is hit, packets will be dropped. The number of dropped packets will be recorded in this counter.

NOTE: For each call to `emberCounterHandler()` there may be more than 1 packet that was dropped due to the limit reached. The actual number of packets dropped will be returned in the 'data' parameter passed to that function.

**EMBER\_COUNTER\_PACKET\_VALIDATE\_LIBRARY\_DROPPED\_COUNT** The number of times we dropped a packet due to the packet-validate library checking a packet and rejecting it due to length or other formatting problems.

**EMBER\_COUNTER\_TYPE\_NWK\_RETRY\_OVERFLOW** The number of times the NWK retry queue is full and a new message failed to be added.

**EMBER\_COUNTER\_PHY\_CCA\_FAIL\_COUNT** The number of times the PHY layer was unable to transmit due to a failed CCA

**EMBER\_COUNTER\_BROADCAST\_TABLE\_FULL** The number of times a NWK broadcast was dropped because the broadcast table was full.

**EMBER\_COUNTER\_TYPE\_COUNT** A placeholder giving the number of Ember counter types.

Definition at line 1089 of file `ember-types.h`.

#### 6.25.4.21 enum EmberInitialSecurityBitmask

This is the Initial Security Bitmask that controls the use of various security features.

**Enumerator:**

**EMBER\_DISTRIBUTED\_TRUST\_CENTER\_MODE** This enables Distributed Trust Center Mode for the device forming the network. (Previously known as `EMBER_NO_TRUST_CENTER_MODE`)

**EMBER\_TRUST\_CENTER\_GLOBAL\_LINK\_KEY** This enables a Global Link Key for the Trust Center. All nodes will share the same Trust Center Link Key.

**EMBER\_PRECONFIGURED\_NETWORK\_KEY\_MODE** This enables devices that perform MAC Association with a pre-configured Network Key to join the network. It is only set on the Trust Center.

**EMBER\_HAVE\_TRUST\_CENTER\_EUI64** This denotes that the `EmberInitialSecurityState::preconfiguredTrustCenterEui64` has a value in it containing the trust center EUI64. The device will only join a network and accept commands from a trust center with that EUI64. Normally this bit is NOT set, and the EUI64 of the trust center is learned during the join process. When commissioning a device to join onto an existing network that is using a trust center, and without sending any messages, this bit must be set and the field `EmberInitialSecurityState::preconfiguredTrustCenterEui64` must be populated with the appropriate EUI64.

**EMBER\_TRUST\_CENTERUSES\_HASHED\_LINK\_KEY** This denotes that the `EmberInitialSecurityState::preconfiguredKey` is not the actual Link Key but a Root Key known only to the Trust Center. It is hashed with the IEEE Address of the destination device in order to create the actual Link Key used in encryption. This is bit is only used by the Trust Center. The joining device need not set this.

**EMBER\_HAVE\_PRECONFIGURED\_KEY** This denotes that the `EmberInitialSecurityState::preconfiguredKey` element has valid data that should be used to configure the initial security state.

**EMBER\_HAVE\_NETWORK\_KEY** This denotes that the `EmberInitialSecurityState::networkKey` element has valid data that should be used to configure the initial security state.

**EMBER\_GET\_LINK\_KEY\_WHEN\_JOINING** This denotes to a joining node that it should attempt to acquire a Trust Center Link Key during joining. This is necessary if the device does not have a pre-configured key, or wants to obtain a new one (since it may be using a well-known key during joining).

**EMBER\_REQUIRE\_ENCRYPTED\_KEY** This denotes that a joining device should only accept an encrypted network key from the Trust Center (using its pre-configured key). A key sent in-the-clear by the Trust Center will be rejected and the join will fail. This option is only valid when utilizing a pre-configured key.

**EMBER\_NO\_FRAME\_COUNTER\_RESET** This denotes whether the device should NOT reset its outgoing frame counters (both NWK and APS) when `::emberSetInitialSecurityState()` is called. Normally it is advised to reset the frame counter before joining a new network. However in cases where a device is joining to the same network again (but not using `::emberRejoinNetwork()`) it should keep the NWK and APS frame counters stored in its tokens.

NOTE: The application is allowed to dynamically change the behavior via `EMBER_EXT_NO_FRAME_COUNTER_RESET` field.

**EMBER\_GET\_PRECONFIGURED\_KEY\_FROM\_INSTALL\_CODE** This denotes that the device should obtain its preconfigured key from an installation code stored in the manufacturing token. The token contains a value that will be hashed to obtain the actual preconfigured key. If that token is not valid than the call to `::emberSetInitialSecurityState()` will fail.

Definition at line 1586 of file `ember-types.h`.

#### 6.25.4.22 enum EmberExtendedSecurityBitmask

This is the Extended Security Bitmask that controls the use of various extended security features.

Enumerator:

**EMBER\_JOINER\_GLOBAL\_LINK\_KEY** This denotes whether a joiner node (router or end-device) uses a Global Link Key or a Unique Link Key.

**EMBER\_EXT\_NO\_FRAME\_COUNTER\_RESET** This denotes whether the device's outgoing frame counter is allowed to be reset during forming or joining. If flag is set, the outgoing frame counter is not allowed to be reset. If flag is not set, the frame counter is allowed to be reset.

**EMBER\_NWK\_LEAVE\_REQUEST\_NOT\_ALLOWED** This denotes whether a router node should discard or accept network Leave Commands.

Definition at line 1683 of file [ember-types.h](#).

#### 6.25.4.23 enum EmberCurrentSecurityBitmask

This is the Current Security Bitmask that details the use of various security features.

**Enumerator:**

***EMBER\_STANDARD\_SECURITY\_MODE*** This denotes that the device is running in a network with ZigBee Standard Security.

***EMBER\_DISTRIBUTED\_TRUST\_CENTER\_MODE*** This denotes that the device is running in a network without a centralized Trust Center.

***EMBER\_TRUST\_CENTER\_GLOBAL\_LINK\_KEY*** This denotes that the device has a Global Link Key. The Trust Center Link Key is the same across multiple nodes.

***EMBER\_HAVE\_TRUST\_CENTER\_LINK\_KEY*** This denotes that the node has a Trust Center Link Key.

***EMBER\_TRUST\_CENTERUSES\_HASHED\_LINK\_KEY*** This denotes that the Trust Center is using a Hashed Link Key.

Definition at line 1791 of file [ember-types.h](#).

#### 6.25.4.24 enum EmberKeyStructBitmask

This bitmask describes the presence of fields within the [EmberKeyStruct](#).

**Enumerator:**

***EMBER\_KEY\_HAS\_SEQUENCE\_NUMBER*** This indicates that the key has a sequence number associated with it. (i.e. a Network Key).

***EMBER\_KEY\_HAS\_OUTGOING\_FRAME\_COUNTER*** This indicates that the key has an outgoing frame counter and the corresponding value within the [EmberKeyStruct](#) has been populated with the data.

***EMBER\_KEY\_HAS\_INCOMING\_FRAME\_COUNTER*** This indicates that the key has an incoming frame counter and the corresponding value within the [EmberKeyStruct](#) has been populated with the data.

***EMBER\_KEY\_HAS\_PARTNER\_EUI64*** This indicates that the key has an associated Partner EUI64 address and the corresponding value within the [EmberKeyStruct](#) has been populated with the data.

***EMBER\_KEY\_IS\_AUTHORIZED*** This indicates the key is authorized for use in APS data messages. If the key is not authorized for use in APS data messages it has not yet gone through a key agreement protocol, such as CBKE (i.e. ECC)

***EMBER\_KEY\_PARTNER\_IS\_SLEEPY*** This indicates that the partner associated with the link is a sleepy end device. This bit is set automatically if the local device hears a device announce from the partner indicating it is not an 'RX on when idle' device.

Definition at line 1843 of file [ember-types.h](#).

#### 6.25.4.25 enum EmberKeyType

This denotes the type of security key.

Enumerator:

***EMBER\_TRUST\_CENTER\_LINK\_KEY*** This denotes that the key is a Trust Center Link Key.  
***EMBER\_TRUST\_CENTER\_MASTER\_KEY*** This denotes that the key is a Trust Center Master Key.  
***EMBER\_CURRENT\_NETWORK\_KEY*** This denotes that the key is the Current Network Key.  
***EMBER\_NEXT\_NETWORK\_KEY*** This denotes that the key is the Next Network Key.  
***EMBER\_APPLICATION\_LINK\_KEY*** This denotes that the key is an Application Link Key  
***EMBER\_APPLICATION\_MASTER\_KEY*** This denotes that the key is an Application Master Key

Definition at line 1878 of file [ember-types.h](#).

#### 6.25.4.26 enum EmberKeyStatus

This denotes the status of an attempt to establish a key with another device.

Enumerator:

***EMBER\_KEY\_STATUS\_NONE***  
***EMBER\_APP\_LINK\_KEY\_ESTABLISHED***  
***EMBER\_APP\_MASTER\_KEY\_ESTABLISHED***  
***EMBER\_TRUST\_CENTER\_LINK\_KEY\_ESTABLISHED***  
***EMBER\_KEY\_ESTABLISHMENT\_TIMEOUT***  
***EMBER\_KEY\_TABLE\_FULL***  
***EMBER\_TC RESPONDED\_TO\_KEY\_REQUEST***  
***EMBER\_TC\_APP\_KEY\_SENT\_TO\_REQUESTER***  
***EMBER\_TC\_RESPONSE\_TO\_KEY\_REQUEST\_FAILED***  
***EMBER\_TC\_REQUEST\_KEY\_TYPE\_NOT\_SUPPORTED***  
***EMBER\_TC\_NO\_LINK\_KEY\_FOR\_REQUESTER***  
***EMBER\_TC\_REQUESTER\_EUI64\_UNKNOWN***  
***EMBER\_TC RECEIVED\_FIRST\_APP\_KEY\_REQUEST***  
***EMBER\_TC\_TIMEOUT\_WAITING\_FOR\_SECOND\_APP\_KEY\_REQUEST***  
***EMBER\_TC\_NON\_MATCHING\_APP\_KEY\_REQUEST\_RECEIVED***  
***EMBER\_TC FAILED\_TO\_SEND\_APP\_KEYS***  
***EMBER\_TC FAILED\_TO\_STORE\_APP\_KEY\_REQUEST***  
***EMBER\_TC REJECTED\_APP\_KEY\_REQUEST***  
***EMBER\_TC FAILED\_TO\_GENERATE\_NEW\_KEY***  
***EMBER\_TC FAILED\_TO\_SEND\_TC\_KEY***  
***EMBER\_TRUST\_CENTER\_IS\_PRE\_R21***  
***EMBER\_TC REQUESTER\_VERIFY\_KEY\_TIMEOUT***  
***EMBER\_TC REQUESTER\_VERIFY\_KEY\_FAILURE***  
***EMBER\_TC REQUESTER\_VERIFY\_KEY\_SUCCESS***  
***EMBER\_VERIFY\_LINK\_KEY\_FAILURE***  
***EMBER\_VERIFY\_LINK\_KEY\_SUCCESS***

Definition at line 1929 of file [ember-types.h](#).

#### 6.25.4.27 enum EmberLinkKeyRequestPolicy

This enumeration determines whether or not a Trust Center answers link key requests.

Enumerator:

- EMBER\_DENY\_KEY\_REQUESTS*
- EMBER\_ALLOW\_KEY\_REQUESTS*
- EMBER\_GENERATE\_NEW\_TC\_LINK\_KEY*

Definition at line 1982 of file [ember-types.h](#).

#### 6.25.4.28 enum EmberKeySettings

Enumerator:

- EMBER\_KEY\_PERMISSIONS\_NONE*
- EMBER\_KEY\_PERMISSIONS\_READING\_ALLOWED*
- EMBER\_KEY\_PERMISSIONS\_HASHING\_ALLOWED*

Definition at line 2114 of file [ember-types.h](#).

#### 6.25.4.29 enum EmberMacPassthroughType

The types of MAC passthrough messages that an application may receive. This is a bitmask.

Enumerator:

- EMBER\_MAC\_PASSTHROUGH\_NONE* No MAC passthrough messages
- EMBER\_MAC\_PASSTHROUGH\_SE\_INTERPAN* SE InterPAN messages
- EMBER\_MAC\_PASSTHROUGH\_EMBERNET* EmberNet and first generation (v1) standalone bootloader messages
- EMBER\_MAC\_PASSTHROUGH\_EMBERNET\_SOURCE* EmberNet messages filtered by their source address.
- EMBER\_MAC\_PASSTHROUGH\_APPLICATION* Application-specific passthrough messages.
- EMBER\_MAC\_PASSTHROUGH\_CUSTOM* Custom inter-pan filter

Definition at line 2146 of file [ember-types.h](#).

#### 6.25.4.30 enum EmberZdoStatus

Enumerator:

- EMBER\_ZDP\_SUCCESS*
- EMBER\_ZDP\_INVALID\_REQUEST\_TYPE*
- EMBER\_ZDP\_DEVICE\_NOT\_FOUND*
- EMBER\_ZDP\_INVALID\_ENDPOINT*
- EMBER\_ZDP\_NOT\_ACTIVE*
- EMBER\_ZDP\_NOT\_SUPPORTED*

```
EMBER_ZDP_TIMEOUT
EMBER_ZDP_NO_MATCH
EMBER_ZDP_NO_ENTRY
EMBER_ZDP_NO_DESCRIPTOR
EMBER_ZDP_INSUFFICIENT_SPACE
EMBER_ZDP_NOT_PERMITTED
EMBER_ZDP_TABLE_FULL
EMBER_ZDP_NOTAUTHORIZED
EMBER_NWK_ALREADY_PRESENT
EMBER_NWK_TABLE_FULL
EMBER_NWK_UNKNOWN_DEVICE
```

Definition at line [2237](#) of file `ember-types.h`.

#### 6.25.4.31 enum EmberZdoServerMask

Enumerator:

```
EMBER_ZDP_PRIMARY_TRUST_CENTER
EMBER_ZDP_SECONDARY_TRUST_CENTER
EMBER_ZDP_PRIMARY_BINDING_TABLE_CACHE
EMBER_ZDP_SECONDARY_BINDING_TABLE_CACHE
EMBER_ZDP_PRIMARY_DISCOVERY_CACHE
EMBER_ZDP_SECONDARY_DISCOVERY_CACHE
EMBER_ZDP_NETWORK_MANAGER
```

Definition at line [2447](#) of file `ember-types.h`.

#### 6.25.4.32 enum EmberZdoConfigurationFlags

Enumerator:

```
EMBER_APP RECEIVES SUPPORTED_ZDO_REQUESTS
EMBER_APP HANDLES UNSUPPORTED_ZDO_REQUESTS
EMBER_APP HANDLES ZDO_ENDPOINT_REQUESTS
EMBER_APP HANDLES ZDO_BINDING_REQUESTS
```

Definition at line [2721](#) of file `ember-types.h`.

### 6.25.5 Function Documentation

#### 6.25.5.1 uint8\_t\* emberKeyContents ( EmberKeyData \* key )

This function allows the programmer to gain access to the actual key data bytes of the `EmberKeyData` struct.

##### Parameters

<i>key</i>	A Pointer to an <a href="#">EmberKeyData</a> structure.
------------	---

**Returns**

`uint8_t*` Returns a pointer to the first byte of the Key data.

**6.25.5.2 `uint8_t* emberCertificateContents ( EmberCertificateData * cert )`**

This function allows the programmer to gain access to the actual certificate data bytes of the [EmberCertificateData](#) struct.

**Parameters**

<i>cert</i>	A Pointer to an <a href="#">EmberCertificateData</a> structure.
-------------	---

**Returns**

`uint8_t*` Returns a pointer to the first byte of the certificate data.

**6.25.5.3 `uint8_t* emberPublicKeyContents ( EmberPublicKeyData * key )`**

This function allows the programmer to gain access to the actual public key data bytes of the [EmberPublicKeyData](#) struct.

**Parameters**

<i>key</i>	A Pointer to an <a href="#">EmberPublicKeyData</a> structure.
------------	---

**Returns**

`uint8_t*` Returns a pointer to the first byte of the public key data.

**6.25.5.4 `uint8_t* emberPrivateKeyContents ( EmberPrivateKeyData * key )`**

This function allows the programmer to gain access to the actual private key data bytes of the [EmberPrivateKeyData](#) struct.

**Parameters**

<i>key</i>	A Pointer to an <a href="#">EmberPrivateKeyData</a> structure.
------------	--

**Returns**

`uint8_t*` Returns a pointer to the first byte of the private key data.

**6.25.5.5 `uint8_t* emberSmacContents ( EmberSmacData * key )`**

This function allows the programmer to gain access to the actual SMAC (Secured Message Authentication Code) data of the [EmberSmacData](#) struct.

**6.25.5.6 `uint8_t* emberSignatureContents ( EmberSignatureData * sig )`**

This function allows the programmer to gain access to the actual ECDSA signature data of the [EmberSignatureData](#) struct.

**6.25.5.7 `uint8_t* emberCertificate283k1Contents ( EmberCertificate283k1Data * cert )`**

This function allows the programmer to gain access to the actual certificate data bytes of the [Ember283k1-CertificateData](#) struct.

**Parameters**

<code>cert</code>	A Pointer to an <code>::Ember283k1CertificateData</code> structure.
-------------------	---

**Returns**

`uint8_t*` Returns a pointer to the first byte of the certificate data.

**6.25.5.8 `uint8_t* emberPublicKey283k1Contents ( EmberPublicKey283k1Data * key )`**

This function allows the programmer to gain access to the actual public key data bytes of the [Ember283k1-PublicKeyData](#) struct.

**Parameters**

<code>key</code>	A Pointer to an <code>Ember283k1PublicKeyData</code> structure.
------------------	---

**Returns**

`uint8_t*` Returns a pointer to the first byte of the public key data.

**6.25.5.9 `uint8_t* emberPrivateKey283k1Contents ( EmberPrivateKey283k1Data * key )`**

This function allows the programmer to gain access to the actual private key data bytes of the [Ember283k1-PrivateKeyData](#) struct.

**Parameters**

<code>key</code>	A Pointer to an <code>Ember283k1PrivateKeyData</code> structure.
------------------	--

**Returns**

`uint8_t*` Returns a pointer to the first byte of the private key data.

**6.25.5.10 `uint8_t* ember283k1SignatureContents ( Ember283k1SignatureData * sig )`**

This function allows the programmer to gain access to the actual ECDSA signature data of the Ember283k1-SignatureData struct.

**6.25.6 Variable Documentation****6.25.6.1 `const EmberVersion emberVersion`**

Struct containing the version info.

## 6.26 Attribute Management

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ATTRIBUTE\_READ
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ATTRIBUTE\_WRITE

#### 6.26.1 Detailed Description

Commands related to reading and writing attributes locally on a device.

#### 6.26.2 Macro Definition Documentation

##### 6.26.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ATTRIBUTE\_READ

**read [endpoint:1] [cluster:2] [attribute:2] [mask:1]**

- *Read an attribute from the local attribute table. The attribute is displayed on the command line.*
  - endpoint - INT8U - endpoint of the attribute to read
  - cluster - INT16U - cluster id of the attribute to read
  - attribute - INT16U - attribute id of the attribute to read
  - mask - INT8U - direction mask of the attribute to read (client=0 or server=1)

Definition at line 33 of file [cli.doc](#).

##### 6.26.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ATTRIBUTE\_WRITE

**write [endpoint:1] [cluster:2] [attribute:2] [mask:1] [dataType:1] [dataBytes:-1]**

- *Write an attribute value into the local attribute table*
  - endpoint - INT8U - endpoint of the attribute to write
  - cluster - INT16U - cluster id of the attribute to write
  - attribute - INT16U - attribute id of the attribute to write
  - mask - INT8U - direction mask of the attribute to write (client=0 or server=1)
  - dataType - INT8U - the attribute type as listed in the generated file attribute-type.h
  - dataBytes - OCTET\_STRING - string of bytes you wish to write into the attribute table.

Definition at line 44 of file [cli.doc](#).

## 6.27 Building and Sending Messages

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_SEND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_SEND\_MULTICAST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_BSEND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_TIMESYNC
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_RAW
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_INTERPAN\_GROUP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_INTERPAN\_SHORT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_INTERPAN\_LONG

### 6.27.1 Detailed Description

Commands for building and sending messages out onto the network.

### 6.27.2 Macro Definition Documentation

#### 6.27.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_SEND

##### send [id:2] [src-endpoint:1] [dst-endpoint:1]

- *Send a pre-buffered message from a given endpoint to an endpoint on a device with a given short address.*
  - id - INT16U - short id of the device to send the message to
  - src-endpoint - INT8U - The endpoint to send the message from
  - dst-endpoint - INT8U - The endpoint to send the message to

Definition at line 61 of file [cli.doc](#).

#### 6.27.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_SEND\_MULTICAST

##### send\_multicast [groupId:2] [src-endpoint:1]

- *Send a pre-buffered multicast message to a given group id from a given endpoint.*
  - groupId - INT16U - group id of the multicast group to send the message to
  - src-endpoint - INT8U - The endpoint to send the message from

Definition at line 68 of file [cli.doc](#).

### 6.27.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_BSEND

#### bsend [srcEndpoint:1]

- *send using a binding based on the clusterId in the globalApsFrame and the srcEndpoint specified (if the src endpoint is zero it only sends based on the clusterId)*
  - srcEndpoint - INT8U - source endpoint to send a binding based message from

Definition at line 74 of file [cli.doc](#).

### 6.27.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_TIMESYNC

#### timesync [id:2] [srcEndpoint:1] [destEndpoint:1]

- *This sends a read attr for the time of the device specified. It sets a flag so when it gets the response it writes the time to its own time attr*
  - id - INT16U - two byte short id of the time server
  - srcEndpoint - INT8U - source endpoint to send time sync from
  - destEndpoint - INT8U - destination endpoint to expect response on

Definition at line 82 of file [cli.doc](#).

### 6.27.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_RAW

#### raw [clusterId:2] [data:-1]

- *Creates a message by specifying the raw bytes. Use "send" to send the message once it has been created. Ex: raw 0x000F {00 0A 00 11 22 33 44 55} sends a message to cluster 15 (0x000F) of length 8 which includes the ZCL header.*
  - clusterId - INT16U - two byte cluster id
  - data - OCTET\_STRING - ZCL message, including ZCL header and payload

Definition at line 89 of file [cli.doc](#).

### 6.27.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_INTERPAN\_GROUP

#### interpan group [groupId:2] [destPan:2] [destprofileID:2]

- *send an interpan message to a group id.*
  - groupId - INT16U - group id to send to
  - destPan - INT16U - destination pan id
  - destprofileID - INT16U - destination profile ID

Definition at line 97 of file [cli.doc](#).

**6.27.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_INTERPAN\_SHORT****interpan short [shortId:2] [destPan:2] [destprofileID:2]**

- *Send an interpan message to a short id.*
  - shortId - INT16U - group id to send to
  - destPan - INT16U - destination pan id
  - destprofileID - INT16U - destination profile ID

Definition at line 105 of file [cli.doc](#).**6.27.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BUILD\_SEND\_MSG\_INTERPAN\_LONG****interpan long [longId:8] [destPAN:2] [destProfileID:2] [options:2]**

- *Send an interpan message to a long address (8 byte eui64)*
  - longId - IEEE\_ADDRESS - long ieee address to send the interpan message to
  - destPAN - INT16U - two byte destination PA ID
  - destProfileID - INT16U - two byte destination profile ID
  - options - INT16U - two byte options

Definition at line 114 of file [cli.doc](#).

## 6.28 Endpoint Manipulation

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ENDPOINT\_ENDPOINT\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ENDPOINT\_ENDPOINT\_ENABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ENDPOINT\_ENDPOINT\_DISABLE

#### 6.28.1 Detailed Description

Commands related to the manipulation of endpoints.

#### 6.28.2 Macro Definition Documentation

##### 6.28.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ENDPOINT\_ENDPOINT\_PRINT

###### **endpoint print**

- *Print the status of all the endpoints.*

Definition at line 128 of file [cli.doc](#).

##### 6.28.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ENDPOINT\_ENDPOINT\_ENABLE

###### **endpoint enable [endpoint:1]**

- *Enable the endpoint for processing ZCL messages.*
  - endpoint - INT8U - Endpoint in question.

Definition at line 134 of file [cli.doc](#).

##### 6.28.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ENDPOINT\_ENDPOINT\_DISABLE

###### **endpoint disable [endpoint:1]**

- *Disable the endpoint for processing ZCL messages.*
  - endpoint - INT8U - Endpoint in question.

Definition at line 140 of file [cli.doc](#).

## 6.29 General

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ZCL\_MFG\_CODE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ZCL\_X\_DEFAULT\_RESP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ZCL\_TIME
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_RESET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ECHO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_EVENTS

#### 6.29.1 Detailed Description

General commands that are applicable to the node regardless of clusters or plugins.

#### 6.29.2 Macro Definition Documentation

##### 6.29.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ZCL\_MFG\_CODE

**zcl mfg-code [mfgSpecificId:2]**

- Sets the two byte manufacturer specific identifier to use for the next command if the command is not already built.
  - mfgSpecificId - INT16U - Manufacturer Specific Id

Definition at line 156 of file [cli.doc](#).

##### 6.29.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ZCL\_X\_DEFAULT\_RESP

**zcl x-default-resp [disableDefaultResponse:1]**

- Sets the Disable Default Response Frame Control bit to use for the next command if the command is not already built.
  - disableDefaultResponse - BOOLEAN - bool value indicating whether the disable default response bit is set(1) or not (0).

Definition at line 162 of file [cli.doc](#).

##### 6.29.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ZCL\_TIME

**zcl time [utcTime:4]**

- Cli command to call emberAfSetTime function documented in [af.h](#)
  - utcTime - INT32U - ZigBee UTC time, number of seconds since the year 2000

Definition at line 168 of file [cli.doc](#).

**6.29.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_RESET****reset**

- *resets the device*

Definition at line 173 of file [cli.doc](#).**6.29.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_ECHO****echo [echoOn:1]**

- *Turns echo on the command line on or off depending on the argument*
  - echoOn - INT8U - bool indicating whether to turn echo on (1) or off (0)

Definition at line 179 of file [cli.doc](#).**6.29.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERAL\_EVENTS****events**

- *Print the list of timer events.*

Definition at line 184 of file [cli.doc](#).

## 6.30 Global ZCL

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_READ
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_WRITE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_UWRIT-E
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_NWRIT-E
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DISCOV-ER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_REPORT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_REPORT-\_READ
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_SEND\_M-E\_A\_REPORT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_EXPECT-\_REPORT\_FROM\_ME
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DIRECTION
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DISC\_C-OM\_GEN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DISC\_C-OM\_REC

### 6.30.1 Detailed Description

All the ZCL global commands defined in the ZigBee Cluster Library Specification. These command line commands can be used to send messages over the air to, for instance, read and write attributes to devices on the network.

### 6.30.2 Macro Definition Documentation

#### 6.30.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_READ

**zcl global read [cluster:2] [attributeId:2]**

- Creates a global read command message to read from the cluster and attribute specified
  - cluster - INT16U - The cluster id of the cluster to read from.
  - attributeId - INT16U - The attribute id of the attribute to read.

Definition at line 203 of file [cli.doc](#).

#### 6.30.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_WRITE

**zcl global write [cluster:2] [attributeId:2] [type:4] [data:-1]**

- Creates a global write command message to write to the cluster and attribute specified

- cluster - INT16U - The cluster id of the cluster to write to.
- attributeId - INT16U - The attribute id of the attribute to write.
- type - INT32U - The type of the attribute to write.
- data - OCTET\_STRING - The data to be written.

Definition at line 212 of file [cli.doc](#).

#### **6.30.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_UWRITE**

**zcl global uwrite [cluster:2] [attributeId:2] [type:1] [data:-1]**

- *Creates a global write undivided command message to write to the cluster and attribute specified*
  - cluster - INT16U - The cluster id of the cluster to write to.
  - attributeId - INT16U - The attribute id of the attribute to write.
  - type - INT8U - The type of the attribute to write.
  - data - OCTET\_STRING - The data to be written.

Definition at line 221 of file [cli.doc](#).

#### **6.30.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_NWRITE**

**zcl global nwrite [cluster:2] [attributeId:2] [type:1] [data:-1]**

- *Creates a global write command message to write to the cluster and attribute specified*
  - cluster - INT16U - The cluster id of the cluster to read from.
  - attributeId - INT16U - The attribute id of the attribute to read.
  - type - INT8U - The type of the attribute to write.
  - data - OCTET\_STRING - The data to be written.

Definition at line 230 of file [cli.doc](#).

#### **6.30.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DISCOVER**

**zcl global discover [cluster:2] [attributeId:2] [max:1]**

- *Creates discovery message for devices with the associated cluster and attribute specified.*
  - cluster - INT16U - The cluster id of the cluster to discover.
  - attributeId - INT16U - The attribute id of the attribute to read during discovery.
  - max - INT8U - Max number of discovery responses.

Definition at line 238 of file [cli.doc](#).

### 6.30.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_REPORT

**zcl global report [endpoint:1] [clusterId:2] [attributeId:2] [mask:1]**

- – endpoint - INT8U - The desired endpoint.
- clusterId - INT16U - The cluster id.
- attributeId - INT16U - The attribute id.
- mask - INT8U - The mask.

Definition at line 247 of file [cli.doc](#).

### 6.30.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_REPORT\_READ

**zcl global report-read [cluster:2] [attributeId:2] [direction:1]**

- *Creates a global read reporting command for the associated cluster, attribute and server/client direction.*
  - cluster - INT16U - The cluster id to read from.
  - attributeId - INT16U - The attribute id to read from.
  - direction - INT8U - 0 for client-to-server, 1 for server-to-client.

Definition at line 255 of file [cli.doc](#).

### 6.30.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_SEND\_ME\_A\_REPORT

**zcl global send-me-a-report [cluster:2] [attributeId:2] [dataType:1] [minReportTime:2] [maxReportTime:2] [reportableChange:-1]**

- *Creates a global send me a report command for the associated values.*
  - cluster - INT16U - The cluster id of the requested report.
  - attributeId - INT16U - The attribute id for requested report.
  - dataType - INT8U - The two byte ZigBee type value for the requested report.
  - minReportTime - INT16U - Minimum number of seconds between reports.
  - maxReportTime - INT16U - Maximum number of seconds between reports.
  - reportableChange - OCTET\_STRING - Amount of change to trigger a report.

Definition at line 266 of file [cli.doc](#).

### 6.30.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_EXPECT\_REPORT\_FROM\_ME

**zcl global expect-report-from-me [cluster:2] [attributeId:2] [timeout:2]**

- *Create a expect-report-from-me message with associated values.*

- cluster - INT16U - The cluster id for the requested report.
- attributeId - INT16U - The attribute id for the requested report.
- timeout - INT16U - Maximum amount of time between reports.

Definition at line 274 of file [cli.doc](#).

#### **6.30.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DIRECTION**

##### **zcl global direction [direction:1]**

- *Sets the direction for global commands, either client to server or server to client.*
  - direction - INT8U - The direction for global commands, 0 = client to server, 1 = server to client.

Definition at line 280 of file [cli.doc](#).

#### **6.30.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DISC\_COM\_GEN**

##### **zcl global disc-com-gen [clusterId:2] [startCommandId:1] [maxCommandId:1]**

- *Create a Discover Commands Generated command with associated values.*
  - clusterId - INT16U - The cluster to find commands on.
  - startCommandId - INT8U - The command id to start the command search on.
  - maxCommandId - INT8U - Max command ids to search for.

Definition at line 288 of file [cli.doc](#).

#### **6.30.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZCL\_GLOBAL\_ZCL\_GLOBAL\_DISC\_COM\_REC**

##### **zcl global disc-com-rec [clusterId:2] [startCommandId:1] [maxCommandId:1]**

- *Create a Discover Commands Received command with associated values.*
  - clusterId - INT16U - The cluster to find commands on.
  - startCommandId - INT8U - The command id to start the command search on.
  - maxCommandId - INT8U - Max command ids to search for.

Definition at line 296 of file [cli.doc](#).

## 6.31 Informational

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_LIBS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_OPTION\_PRINT\_RX\_MSGS\_ENABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_OPTION\_PRINT\_RX\_MSGS\_DISABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_OPTION\_BINDING\_TABLE\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_PRINT\_ATTR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_PRINT\_TIME
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_ALL\_ON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_ALL\_OFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_ON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_OFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_VERSION
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_HELP

### 6.31.1 Detailed Description

The Informational command set provides commands for displaying information about the device. These commands include things like printing out the attribute table.

### 6.31.2 Macro Definition Documentation

#### 6.31.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_INFO

##### info

- Gives information about the local node

Definition at line 312 of file [cli.doc](#).

#### 6.31.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_LIBS

##### libs

- Lists which optional libraries of the stack are implemented on this device

Definition at line 317 of file [cli.doc](#).

**6.31.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_OPTION\_PRINT\_RX\_MSGS\_ENABLE**  
**option print-rx-msgs enable**

- *Enable the printing of received messages.*

Definition at line 322 of file [cli.doc](#).

**6.31.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_OPTION\_PRINT\_RX\_MSGS\_DISABLE**  
**option print-rx-msgs disable**

- *Disable the printing of received messages.*

Definition at line 327 of file [cli.doc](#).

**6.31.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_OPTION\_BINDING\_TABLE\_PRINT**  
**option binding-table print**

- *Prints out the binding table to the command line.*

Definition at line 332 of file [cli.doc](#).

**6.31.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_PRINT\_ATTR**  
**print attr**

- *Print the attribute table.*

Definition at line 337 of file [cli.doc](#).

**6.31.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_PRINT\_TIME**  
**print time**

- *Print out the time information*

Definition at line 342 of file [cli.doc](#).

**6.31.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_STATUS**  
**debugprint status**

- *Prints out the current settings for debug printing on the device*

Definition at line 347 of file [cli.doc](#).

**6.31.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_ALL\_ON**  
**debugprint all\_on**

- *Turns on all compiled in debug printing*

Definition at line 352 of file [cli.doc](#).

**6.31.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_ALL\_OFF**  
**debugprint all\_off**

- *Turns off all debug printing*

Definition at line 357 of file [cli.doc](#).

**6.31.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_ON**  
**debugprint on [area:1]**

- *Turns on compiled in debug printing for a specific debug printing area. Debug print areas are defined in the generated <application>.h header file.*
  - area - INT8U - The debug area mask listed in the <application>.h file

Definition at line 363 of file [cli.doc](#).

**6.31.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_DEBUGPRINT\_OFF**  
**debugprint off [area:1]**

- *Turns off compiled in debug printing for a specific debug printing area. Debug print areas are defined in the generated <application>.h header file.*
  - area - INT8U - The debug area mask listed in the <application>.h file

Definition at line 369 of file [cli.doc](#).

**6.31.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_VERSION**  
**version**

- *Shows the version of the software*

Definition at line 374 of file [cli.doc](#).

6.31.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_INFO\_HELP

**help**

- Prints out the cli command options for the device

Definition at line [379](#) of file [cli.doc](#).

## 6.32 Network

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_DISC
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_EDB
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_BINDING\_TABLE\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_BINDING\_TABLE\_SET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_APSPRETRY\_ON

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_SET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_ID

#### 6.32.1 Detailed Description

The Network command set provides commands for interacting with the network. This includes building as well as sending ZigBee commands out on to the network.

#### 6.32.2 Macro Definition Documentation

##### 6.32.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_DISC

**option disc [profileId:2] [clusterId:2]**

- Sends a ZDO Match Descriptor Request for the server side of the specified cluster from the specified application profile. Match Descriptor Responses received are printed to the serial output.

- profileId - INT16U - the profile id to send with the discovery message
- clusterId - INT16U - cluster id to send with the discovery message

Definition at line 397 of file [cli.doc](#).

### 6.32.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_EDB

#### option edb [endpoint:1]

- Sends a ZDO End Device Bind Request using the given local endpoint.
  - endpoint - INT8U - The local endpoint whose simple descriptor will be used to create the request

Definition at line 403 of file [cli.doc](#).

### 6.32.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_BINDING\_TABLE\_CLEAR

#### option binding-table clear

- Clear the binding table

Definition at line 408 of file [cli.doc](#).

### 6.32.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTION\_BINDING\_TABLE\_SET

#### option binding-table set [bindingTableIndex:1] [clusterId:2] [localEndpoint:1] [remoteEndpoint:1] [ieeeAddress:8]

- Set a binding table entry for the arguments specified.
  - bindingTableIndex - INT8U - one byte index into the binding table
  - clusterId - INT16U - cluster id to send with the discovery message
  - localEndpoint - INT8U - local endpoint to bind
  - remoteEndpoint - INT8U - remote endpoint to bind
  - ieeeAddress - IEEE\_ADDRESS - 8 byte IEEE address provided big endian

Definition at line 418 of file [cli.doc](#).

### 6.32.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTIONAPSRETRY\_ON

#### option apsretry on

- Forces the AppFramework to set/clear the APS Retry option (in APS Frame options mask) for all subsequent outgoing messages; Turns APS retry on.

Definition at line 423 of file [cli.doc](#).

### 6.32.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTIONAPSRETRY\_OFF

#### option apsretry off

- Forces the AppFramework to set/clear the APS Retry option (in APS Frame options mask) for all subsequent outgoing messages; Turns APS retry off

Definition at line 428 of file [cli.doc](#).

**6.32.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_OPTIONAPSRETRY\_DEFAULT**  
**option apsretry default**

- Forces the AppFramework to set/clear the APS Retry option (in APS Frame options mask) for all subsequent outgoing messages; a value of "default" allows the AppFramework to use its own default logic to determine when the APS Retry option should be used.

Definition at line 433 of file [cli.doc](#).

**6.32.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_FORM**  
**network form [channel:1] [power:1] [panId:2]**

- Create a network on the given channel, power and panId.
  - channel - INT8U - The channel on which to form the network
  - power - INT8S - One byte signed value indicating the TX power that the radio should be set to
  - panId - INT16U - Two byte pan id for the network

Definition at line 441 of file [cli.doc](#).

**6.32.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_JOIN**  
**network join [channel:1] [power:1] [panId:2]**

- Join an existing network on the given channel, power and panId.
  - channel - INT8U - The channel on which to form the network
  - power - INT8S - One byte signed value indicating the TX power that the radio should be set to
  - panId - INT16U - Two byte pan id for the network

Definition at line 449 of file [cli.doc](#).

**6.32.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_INIT**  
**network init**

- Initialize a network; this is a test command used for tc-swap-out testing.

Definition at line 454 of file [cli.doc](#).

**6.32.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_REJOIN**  
**network rejoin [haveCurrentNetworkKey:1] [channelMask:4]**

- Rejoin an existing network in a secure or insecure manner.

- haveCurrentNetworkKey - INT8U - Boolean indicating whether the device can rejoin secure or not. 1=rejoin with encryption, 0=rejoin without encryption
- channelMask - INT32U - 4 byte channel mask which should be used to search for the network to rejoin.

Definition at line 461 of file [cli.doc](#).

#### **6.32.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_REJOIN\_DIFF\_DEVICE\_TYPE**

**network rejoin-diff-device-type [haveCurrentNetworkKey:1] [channelMask:4] [nodeType:1]**

- *Rejoin an existing network in a secure or insecure manner with a different device type.*

  - haveCurrentNetworkKey - INT8U - Boolean indicating whether the device can rejoin secure or not. 1=rejoin with encryption, 0=rejoin without encryption
  - channelMask - INT32U - 4 byte channel mask which should be used to search for the network to rejoin.
  - nodeType - INT8U - An enumeration indicating the device type to rejoin as. The stack only accepts EMBER\_END\_DEVICE and EMBER\_SLEEPY\_END\_DEVICE.

Definition at line 469 of file [cli.doc](#).

#### **6.32.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_LEAVE**

**network leave**

- *Leave the current network.*

Definition at line 474 of file [cli.doc](#).

#### **6.32.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_PJOIN**

**network pjoin [seconds:1]**

- *Permit joining on the network for a given number of seconds*

  - seconds - INT8U - Number of seconds during which devices will be allowed to join the network. A value of 0xff turns permit joining on permanently

Definition at line 480 of file [cli.doc](#).

#### **6.32.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_BROAD\_PJOIN**

**network broad-pjoin [seconds:1]**

- *Permit joining on the network for a given number of seconds AND broadcast a ZDO Mgmt Permit Joining request to all routers.*

  - seconds - INT8U - Number of seconds during which devices will be allowed to join the network. A value of 0xff turns permit joining on permanently

Definition at line 486 of file [cli.doc](#).

**6.32.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_EXTPANID**

**network extpanid [extPanId:-1]**

- *Write the extended pan id for the device.*
  - extPanId - OCTET\_STRING - The bytes for the extended pan id

Definition at line 492 of file [cli.doc](#).

**6.32.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_FIND\_UNUSED**

**network find unused**

- *Begins a search for an unused Channel and Pan Id. Will automatically form a network on the first unused Channel and Pan Id it finds.*

Definition at line 497 of file [cli.doc](#).

**6.32.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_FIND\_JOINABLE**

**network find joinable**

- *Begins a search for a joinable network. Will automatically attempt to join the first network that it finds.*

Definition at line 502 of file [cli.doc](#).

**6.32.2.19 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_CHANGE\_CHANNEL**

**network change-channel [channel:1]**

- *Attempts to change device over to a different channel given in the channel argument*
  - channel - INT8U - The channel to change to.

Definition at line 508 of file [cli.doc](#).

**6.32.2.20 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_SET**

**network set [networkIndex:1]**

- *Set the network index used by all future CLI commands. Before executing a CLI command, the framework will switch to this network. After the command finishes executing, the framework will switch back to the previous network. The CLI uses the same network index until the device resets or it is changed through this command.*

- networkIndex - INT8U - The network index to use for CLI commands

Definition at line 514 of file [cli.doc](#).

6.32.2.21 #define EMBER\_AF\_DIXGEN\_CLI\_COMMAND\_NETWORK\_NETWORK\_ID

**network id**

- Prints the current Node ID, EUI64, and Pan ID.

Definition at line 519 of file [cli.doc](#).

## 6.33 Security

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_REGISTER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_SECURITY\_APSSOFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_SECURITY\_APSON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_SECURITY\_SET\_ALLOW\_TRUST\_CENTER\_REJOIN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_LINK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_INSTALL\_CODE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_SECURITY\_MFG\_TOKENGET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_SECURITY\_MFG\_TOKENSET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_KEYS\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_KEYS\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_KEYS\_DELETE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_CHANGEKEY\_LINK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_CHANGEKEY\_NETWORK

#### 6.33.1 Detailed Description

The Security command set includes all of the commands related to security configuration on the device.

#### 6.33.2 Macro Definition Documentation

##### 6.33.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_REGISTER

###### option register

- Initiates Smart Energy Registration including Key Establishment. This command expects that the device has already joined a smart energy network.

Definition at line 534 of file [cli.doc](#).

##### 6.33.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_SECURITY\_APSSOFF

###### option security aps off

- Turns aps security off

Definition at line 539 of file [cli.doc](#).

**6.33.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_OPTION\_SECURITYAPS\_ON**  
**option security aps on**

- *Turns aps security on*

Definition at line 544 of file [cli.doc](#).

**6.33.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITYOPTION\_SECURITYSET\_ALLOWTRUSTCENTERREJOIN**

**option security set-allow-trust-center-rejoin [allowTrustCenterRejoin:1]**

- *Set whether or not a Trust Center application will allow trust center rejoins.*
  - allowTrustCenterRejoin - BOOLEAN - Whether or not the Trust Center should allow trust center rejoins.

Definition at line 550 of file [cli.doc](#).

**6.33.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITYOPTIONLINK**

**option link [keyTableIndex:1] [ieeeAddress:8] [linkKey:-1]**

- *Sets a link key in the link key table. Example: option link 0x00 { 06 00 ab 41 64 30 00 0a } {aa bb cc dd ee ff aa bb cc dd ee ff aa bb cc dd}*
  - keyTableIndex - INT8U - index into the link key table
  - ieeeAddress - IEEE\_ADDRESS - IEEE address to enter into the link key table
  - linkKey - OCTET\_STRING - link key to enter into the table

Definition at line 558 of file [cli.doc](#).

**6.33.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITYOPTIONINSTALLCODE**

**option install-code [keyTableIndex:1] [ieeeAddress:8] [installCode:-1]**

- *Derives a link key from an install code and sets it in the link key table.*
  - keyTableIndex - INT8U - index into the link key table
  - ieeeAddress - IEEE\_ADDRESS - IEEE address to enter into the link key table
  - installCode - OCTET\_STRING - install code including two-byte, little-endian CRC

Definition at line 567 of file [cli.doc](#).

**6.33.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITYSECURITYMFGTOKENGET**  
**security mfg-token get**

- 

Definition at line 574 of file [cli.doc](#).

**6.33.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_SECURITY\_MFG\_TOKEN\_SET**  
**security mfg-token set [magicNumber:4] [value:2]**

- – magicNumber - INT32U
- value - INT16U

Definition at line 583 of file [cli.doc](#).

**6.33.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_KEYS\_CLEAR**  
**keys clear**

- *Clear all security keys*

Definition at line 589 of file [cli.doc](#).

**6.33.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_KEYS\_PRINT**  
**keys print**

- *Print all security keys out to the command line.*

Definition at line 594 of file [cli.doc](#).

**6.33.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_KEYS\_DELETE**  
**keys delete [index:1]**

- *Delete a security key from a given index*
  - index - INT8U - index into the security key table

Definition at line 600 of file [cli.doc](#).

**6.33.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_CHANGEKEY\_LINK**  
**changekey link [key:-1]**

- *Change the link key to the one provided in the 16 byte array argument for this command.*
  - key - OCTET\_STRING - The link key provided as a 16 byte array

Definition at line 606 of file [cli.doc](#).

6.33.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SECURITY\_CHANGEKEY\_NETWORK

**changekey network [key:-1]**

- *Change the network key to the 16 byte array provided as an argument to this command.*
  - key - OCTET\_STRING - The network key provided as a 16 byte array

Definition at line 612 of file [cli.doc](#).

## 6.34 Test Harness

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TEST\_ZCL\_TEST\_RESPONSE\_ON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TEST\_ZCL\_TEST\_RESPONSE\_OFF

#### 6.34.1 Detailed Description

All commands related to the testing of a device.

#### 6.34.2 Macro Definition Documentation

##### 6.34.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TEST\_ZCL\_TEST\_RESPONSE\_ON

###### **zcl test response on**

- *Sets a flag so that the application framework WILL respond to the next ZCL message that comes in over the air.*

Definition at line 626 of file [cli.doc](#).

##### 6.34.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TEST\_ZCL\_TEST\_RESPONSE\_OFF

###### **zcl test response off**

- *Sets a flag so that the application framework WILL NOT respond to the next ZCL message that comes in over the air.*

Definition at line 631 of file [cli.doc](#).

## 6.35 ZigBee Device Object Commands (ZDO)

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_IN\_CL\_LIST\_ADD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_IN\_CL\_LIST\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_OUT\_CL\_LIST\_ADD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_OUT\_CL\_LIST\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK\_UPD\_CHAN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK\_UPD\_SCAN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK\_UPD\_SET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_IEEE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_SIMPLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NODE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_MATCH
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_BIND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_ACTIVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_UNBIND\_UNICAST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_UNBIND\_GROUP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_LEAVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_MGMT\_BIND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_MGMT\_LQI
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_POWER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_ROUTE

### 6.35.1 Detailed Description

Commands related to the management of a ZigBee device including device discovery and commissioning.

### 6.35.2 Macro Definition Documentation

#### 6.35.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_IN\_CL\_LIST\_ADD

##### **zdo in-cl-list add [clusterId:2]**

- Add clusters to the known server (in) clusters on this device.
  - clusterId - INT16U - Server cluster id

Definition at line 647 of file [cli.doc](#).

#### 6.35.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_IN\_CL\_LIST\_CLEAR

##### **zdo in-cl-list clear**

- Clear the ZDO list of server (in) clusters.

Definition at line 652 of file [cli.doc](#).

**6.35.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_OUT\_CL\_LIST\_ADD**

**zdo out-cl-list add [clusterId:2]**

- Add clusters to the known client (out) clusters on this device.
  - clusterId - INT16U - Client cluster ids

Definition at line 658 of file [cli.doc](#).

**6.35.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_OUT\_CL\_LIST\_CLEAR**

**zdo out-cl-list clear**

- Clear the ZDO list of client (out) clusters.

Definition at line 663 of file [cli.doc](#).

**6.35.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK\_UPD\_CHAN**

**zdo nwk-upd chan [channel:1]**

- Sends an update channel request.
  - channel - INT8U - One byte channel to change to.

Definition at line 669 of file [cli.doc](#).

**6.35.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK\_UPD\_SCAN**

**zdo nwk-upd scan [targetNodeId:2] [scanDuration:1] [scanCount:2]**

- Performs an energy scan.
  - targetNodeId - INT16U - Two byte short id of the target device
  - scanDuration - INT8U - One byte scan duration. Must be in range 0 - 5
  - scanCount - INT16U - Number of scans to perform. Must be in range 1 - 8

Definition at line 677 of file [cli.doc](#).

**6.35.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK\_UPD\_SET**

**zdo nwk-upd set [nwkMgrId:2] [channelMask:4]**

- Broadcasts the ID of the new network manager and active channels.
  - nwkMgrId - INT16U - Two byte network manager id
  - channelMask - INT32U - Four byte channel mask

Definition at line 684 of file [cli.doc](#).

### 6.35.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NWK

#### **zdo nwk [ieee:8]**

- Sends a network address request for the given IEEE address.
  - ieee - IEEE\_ADDRESS - IEEE address for which a short address is being requested

Definition at line 690 of file [cli.doc](#).

### 6.35.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_IEEE

#### **zdo ieee [nodeId:2]**

- Request an ieee address based on a given node id.
  - nodeId - INT16U - Short address of the device for which a long address is requested

Definition at line 696 of file [cli.doc](#).

### 6.35.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_SIMPLE

#### **zdo simple [dest:2] [targetEndpoint:1]**

- Sends out a simple descriptor request for the short address and endpoint specified.
  - dest - INT16U - Short address of the device where the simple descriptor request should be sent
  - targetEndpoint - INT8U - The endpoint on the target device where the simple descriptor request will be sent

Definition at line 703 of file [cli.doc](#).

### 6.35.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_NODE

#### **zdo node [target:2]**

- Sends a node descriptor request to a given target device
  - target - INT16U - Two byte address for the target device.

Definition at line 709 of file [cli.doc](#).

### 6.35.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_MATCH

#### **zdo match [nodeId:2] [profile:2]**

- Sends a matchDescriptorsRequest to the given destination with the given profile.
  - nodeId - INT16U - Two byte node id indicating wher
  - profile - INT16U - Two byte profile id for the match descriptor request

Definition at line 716 of file [cli.doc](#).

### 6.35.2.13 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_BIND

**zdo bind [destination:2] [source Endpoint:1] [destEndpoint:1] [cluster:2] [remoteEUI64:8] [destEU-I64:8]**

- *Send a ZDO Bind command to a device specified in the command arguments.*
  - destination - INT16U - Two byte destination node id
  - source Endpoint - INT8U - Remote device's source endpoint to bind
  - destEndpoint - INT8U - Remote endpoint to bind
  - cluster - INT16U - Cluster on which to bind
  - remoteEUI64 - IEEE\_ADDRESS - Remote node EUI64
  - destEUI64 - IEEE\_ADDRESS - Binding's dest EUI64. Usually the local node's EUI64

Definition at line 727 of file [cli.doc](#).

### 6.35.2.14 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_ACTIVE

**zdo active [nodeId:2]**

- *Send an active endpoint request to the device with the given short id.*
  - nodeId - INT16U - Two byte short id, destination for the active endpoint request

Definition at line 733 of file [cli.doc](#).

### 6.35.2.15 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_UNBIND\_UNICAST

**zdo unbind unicast [target:2] [source eui64:8] [source endpoint:1] [clusterID:2] [destinationEUI64:8] [destEndpoint:1]**

- *Sends an unbind request for a unicast binding to the target device.*
  - target - INT16U - Target node ID
  - source eui64 - IEEE\_ADDRESS - The source EUI64 of the binding (the remote device's EU-I64)
  - source endpoint - INT8U - The source endpoint of the binding.
  - clusterID - INT16U - The cluster ID to unbind.
  - destinationEUI64 - IEEE\_ADDRESS - The destination EUI64 in the binding (usually the local node's EUI64)
  - destEndpoint - INT8U - The destination endpoint of the binding

Definition at line 744 of file [cli.doc](#).

**6.35.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_UNBIND\_GROUP**

**zdo unbind group [target:2] [source eui64:8] [source endpoint:1] [clusterID:2] [groupAddress:2]**

- Sends an unbind request for a multicast binding to the target device.
  - target - INT16U - Target node ID
  - source eui64 - IEEE\_ADDRESS - The source EUI64 of the binding (the remote device's EU-I64)
  - source endpoint - INT8U - The source endpoint of the binding.
  - clusterID - INT16U - The cluster ID to unbind.
  - groupAddress - INT16U - The group address in the binding

Definition at line 754 of file [cli.doc](#).

**6.35.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_LEAVE**

**zdo leave [target:2] [removeChildren:1] [rejoin:1]**

- Send a ZDO Management Leave command to the target device.
  - target - INT16U - Target node ID
  - removeChildren - BOOLEAN - Remove children
  - rejoin - BOOLEAN - Rejoin after leave

Definition at line 762 of file [cli.doc](#).

**6.35.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_MGMT\_BIND**

**zdo mgmt-bind [target:2] [startIndex:1]**

- Send a ZDO MGMT-Bind (Binding Table) Request to the target device.
  - target - INT16U - Target node ID
  - startIndex - INT8U - Starting index into table query

Definition at line 769 of file [cli.doc](#).

**6.35.2.19 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_MGMT\_LQI**

**zdo mgmt-lqi [target:2] [startIndex:1]**

- Send a ZDO MGMT-LQI (LQI Table) Request to the target device.
  - target - INT16U - Target node ID
  - startIndex - INT8U - Starting index into table query

Definition at line 776 of file [cli.doc](#).

6.35.2.20 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_POWER

**zdo power [target:2]**

- *Send a ZDO Power Descriptor Request to the target device.*
  - target - INT16U - Target node ID

Definition at line 782 of file [cli.doc](#).

6.35.2.21 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ZDO\_ZDO\_ROUTE

**zdo route [target:2] [index:1]**

- *Send a ZDO route request command to the target.*
  - target - INT16U - Target node ID
  - index - INT8U - The index of the remote node's routing table to request.

Definition at line 789 of file [cli.doc](#).

## 6.36 Cluster Commands: BACnet Protocol Tunnel

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BACNET\_PROTOCOL\_TUNNEL\_ZCL\_-BACNET\_TRANSFER\_NPDU\_WHOIS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_B\_A\_CNET\_PROTOCOL\_TUNNEL\_RA-NDOM

#### 6.36.1 Detailed Description

This group describes the CLI commands for the BACnet Protocol Tunnel cluster. Listed below is a description of the cluster:

*Commands and attributes required to tunnel the BACnet protocol.*

#### 6.36.2 Macro Definition Documentation

##### 6.36.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BACNET\_PROTOCOL\_TUNNEL\_ZCL\_BACNET\_TR-ANSFER\_NPDU\_WHOIS

###### **zcl bacnet transfer-npdu whois**

- *Send a sample whois command.*

Definition at line 805 of file [cli.doc](#).

##### 6.36.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_B\_A\_CNET\_PROTOCOL\_TUNNEL\_RANDOM

###### **zcl bacnet transfer-npdu random [npdu:1]**

- *This command is generated when a BACnet network layer wishes to transfer a BACnet NPDU across a ZigBee tunnel to another BACnet network layer.*

– npdu - DATA8

Definition at line 7294 of file [cli.doc](#).

## 6.37 Cluster Commands: Basic

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BASIC\_RTFD

#### 6.37.1 Detailed Description

This group describes the CLI commands for the Basic cluster. Listed below is a description of the cluster:

*Attributes for determining basic information about a device, setting user device information such as location, and enabling a device.*

#### 6.37.2 Macro Definition Documentation

##### 6.37.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_BASIC\_RTFD

###### **zcl basic rtfd**

- *Command that resets all attribute values to factory default.*

Definition at line 7311 of file [cli.doc](#).

## 6.38 Cluster Commands: Calendar

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_CALENDAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_DAY\_PROFILES
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_WEEK\_PROFILES
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_SEASONS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_SPECIAL\_DAYS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_CANCELLATION

### 6.38.1 Detailed Description

This group describes the CLI commands for the Calendar cluster. Listed below is a description of the cluster:

*This cluster provides attributes and commands to assist applications in developing time and date based protocol.*

### 6.38.2 Macro Definition Documentation

#### 6.38.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_CALENDAR

**zcl calendar get-calendar [earliestStartTime:4] [minIssuerEventId:4] [numberOfCalendars:1] [calendarType:1] [providerId:4]**

- This command initiates PublishCalendar command(s) for scheduled Calendar updates.
  - earliestStartTime - UTC\_TIME
  - minIssuerEventId - INT32U
  - numberOfCalendars - INT8U
  - calendarType - CalendarType [ENUM8]
  - providerId - INT32U

#### See Also

[EmberAfCalendarType](#)

Definition at line [7335](#) of file [cli.doc](#).

#### 6.38.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_DAY\_PROFILES

**zcl calendar get-day-profiles [providerId:4] [issuerCalendarId:4] [startDayId:1] [numberOfDays:1]**

- This command initiates one or more PublishDayProfile commands for the referenced Calendar.
  - providerId - INT32U
  - issuerCalendarId - INT32U
  - startDayId - INT8U
  - numberOfDays - INT8U

Definition at line [7344](#) of file [cli.doc](#).

### 6.38.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_WEEK\_PROFILES

**zcl calendar get-week-profiles [providerId:4] [issuerCalendarId:4] [startWeekId:1] [numberOfWeeks:1]**

- This command initiates one or more PublishWeekProfile commands for the referenced Calendar.
  - providerId - INT32U
  - issuerCalendarId - INT32U
  - startWeekId - INT8U
  - numberOfWeeks - INT8U

Definition at line [7353](#) of file [cli.doc](#).

### 6.38.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_SEASONS

**zcl calendar get-seasons [providerId:4] [issuerCalendarId:4]**

- This command initiates one or more PublishSeasons commands for the referenced Calendar.
  - providerId - INT32U
  - issuerCalendarId - INT32U

Definition at line [7360](#) of file [cli.doc](#).

### 6.38.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_SPECIAL\_DAYS

**zcl calendar get-special-days [startTime:4] [numberOfEvents:1] [calendarType:1] [providerId:4] [issuerCalendarId:4]**

- This command initiates one or more PublishSpecialDays commands for the scheduled Special Day Table updates.
  - startTime - UTC\_TIME
  - numberOfEvents - INT8U
  - calendarType - CalendarType [ENUM8]
  - providerId - INT32U
  - issuerCalendarId - INT32U

**See Also**

[EmberAfCalendarType](#)

Definition at line [7372](#) of file [cli.doc](#).

### 6.38.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_CALENDAR\_GET\_CANCELLATION

**zcl calendar get-cancellation**

- This command initiates the return of the last CancelCalendar command held on the associated server.

Definition at line [7377](#) of file [cli.doc](#).

## 6.39 Cluster Commands: Color Control

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOHUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVEHUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEHUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOSAT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVESAT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEPSAT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOHUEANDSAT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOCOLOR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVECOLOR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEP COLOR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOCOLORTEMP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_EMOVETO HUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_EMOVEHUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_ESTEHUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_EMOVETO HUEANDSAT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_LOOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STOPMOVE STEP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVECOLOR TEMP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEP COLOR TEMP

### 6.39.1 Detailed Description

This group describes the CLI commands for the Color Control cluster. Listed below is a description of the cluster:

*Attributes and commands for controlling the color properties of a color-capable light.*

### 6.39.2 Macro Definition Documentation

#### 6.39.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOHUE

**zcl color-control movetohue [hue:1] [direction:1] [transitionTime:2]**

- Move to specified hue.
  - hue - INT8U
  - direction - HueDirection [ENUM8]
  - transitionTime - INT16U

**See Also**

[EmberAfHueDirection](#)

Definition at line 7398 of file [cli.doc](#).

**6.39.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVEHUE**

**zcl color-control movehue [moveMode:1] [rate:1]**

- *Move hue up or down at specified rate.*
  - moveMode - HueMoveMode [ENUM8]
  - rate - INT8U

**See Also**

[EmberAfHueMoveMode](#)

Definition at line 7407 of file [cli.doc](#).

**6.39.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEHUE**

**zcl color-control stephue [stepMode:1] [stepSize:1] [transitionTime:1]**

- *Step hue up or down by specified size at specified rate.*
  - stepMode - HueStepMode [ENUM8]
  - stepSize - INT8U
  - transitionTime - INT8U

**See Also**

[EmberAfHueStepMode](#)

Definition at line 7417 of file [cli.doc](#).

**6.39.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOSAT**

**zcl color-control movetosat [saturation:1] [transitionTime:2]**

- *Move to specified saturation.*
  - saturation - INT8U
  - transitionTime - INT16U

Definition at line 7424 of file [cli.doc](#).

**6.39.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVESAT**

**zcl color-control movesat [moveMode:1] [rate:1]**

- *Move saturation up or down at specified rate.*
  - moveMode - SaturationMoveMode [ENUM8]
  - rate - INT8U

**See Also**

[EmberAfSaturationMoveMode](#)

Definition at line 7433 of file [cli.doc](#).

**6.39.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEPSAT**

**zcl color-control stepsat [stepMode:1] [stepSize:1] [transitionTime:1]**

- *Step saturation up or down by specified size at specified rate.*

- stepMode - SaturationStepMode [ENUM8]
- stepSize - INT8U
- transitionTime - INT8U

**See Also**

[EmberAfSaturationStepMode](#)

Definition at line [7443](#) of file [cli.doc](#).

**6.39.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOHUEANDSAT**

**zcl color-control movetohueandsat [hue:1] [saturation:1] [transitionTime:2]**

- *Move to hue and saturation.*

- hue - INT8U
- saturation - INT8U
- transitionTime - INT16U

Definition at line [7451](#) of file [cli.doc](#).

**6.39.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOCOLOR**

**zcl color-control movetocolor [colorX:2] [colorY:2] [transitionTime:2]**

- *Move to specified color.*

- colorX - INT16U
- colorY - INT16U
- transitionTime - INT16U

Definition at line [7459](#) of file [cli.doc](#).

**6.39.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVECOLOR**

**zcl color-control movecolor [rateX:2] [rateY:2]**

- *Moves the color.*

- rateX - INT16S
- rateY - INT16S

Definition at line [7466](#) of file [cli.doc](#).

**6.39.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEPCOLOR**

**zcl color-control stepcolor [stepX:2] [stepY:2] [transitionTime:2]**

- *Steps the lighting to a specific color.*
  - stepX - INT16S
  - stepY - INT16S
  - transitionTime - INT16U

Definition at line 7474 of file [cli.doc](#).

**6.39.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVETOCOLORTEMP**

**zcl color-control movetocolortemp [colorTemperature:2] [transitionTime:2]**

- *Moves the lighting to a specific color temperature.*
  - colorTemperature - INT16U
  - transitionTime - INT16U

Definition at line 7481 of file [cli.doc](#).

**6.39.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_EMOVETOHUE**

**zcl color-control emovetohue [enhancedHue:2] [direction:1] [transitionTime:2]**

- *Command description for EnhancedMoveToHue*
  - enhancedHue - INT16U
  - direction - HueDirection [ENUM8]
  - transitionTime - INT16U

**See Also**

[EmberAfHueDirection](#)

Definition at line 7491 of file [cli.doc](#).

**6.39.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_EMOVEHUE**

**zcl color-control emovehue [moveMode:1] [rate:2]**

- *Command description for EnhancedMoveHue*
  - moveMode - HueMoveMode [ENUM8]
  - rate - INT16U

**See Also**

[EmberAfHueMoveMode](#)

Definition at line 7500 of file [cli.doc](#).

6.39.2.14 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_ESTEPHUE

**zcl color-control estephue [stepMode:1] [stepSize:2] [transitionTime:2]**

- *Command description for EnhancedStepHue*
  - stepMode - HueStepMode [ENUM8]
  - stepSize - INT16U
  - transitionTime - INT16U

**See Also**

[EmberAfHueStepMode](#)

Definition at line 7510 of file [cli.doc](#).

6.39.2.15 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_EMOTETOHUEANDSAT

**zcl color-control emovetohueandsat [enhancedHue:2] [saturation:1] [transitionTime:2]**

- *Command description for EnhancedMoveToHueAndSaturation*
  - enhancedHue - INT16U
  - saturation - INT8U
  - transitionTime - INT16U

Definition at line 7518 of file [cli.doc](#).

6.39.2.16 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_LOOP

**zcl color-control loop [updateFlags:1] [action:1] [direction:1] [time:2] [startHue:2]**

- *Command description for ColorLoopSet*
  - updateFlags - ColorLoopUpdateFlags [BITMAP8]
  - action - ColorLoopAction [ENUM8]
  - direction - ColorLoopDirection [ENUM8]
  - time - INT16U
  - startHue - INT16U

**See Also**

[EmberAfColorLoopAction](#) [EmberAfColorLoopDirection](#)

Definition at line 7531 of file [cli.doc](#).

6.39.2.17 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STOPMOVESTEP

**zcl color-control stopmovestep**

- *Command description for StopMoveStep*

Definition at line 7536 of file [cli.doc](#).

6.39.2.18 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_MOVECOLORTEMP

**zcl color-control movecolortemp [moveMode:1] [rate:2] [colorTemperatureMinimum:2] [colorTemperatureMaximum:2]**

- *Command description for MoveColorTemperature*

- moveMode - HueMoveMode [ENUM8]
- rate - INT16U
- colorTemperatureMinimum - INT16U
- colorTemperatureMaximum - INT16U

**See Also**

[EmberAfHueMoveMode](#)

Definition at line [7547](#) of file [cli.doc](#).

6.39.2.19 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_COLOR\_CONTROL\_STEPCOLORTEMP

**zcl color-control stepcolortemp [stepMode:1] [stepSize:2] [transitionTime:2] [colorTemperatureMinimum:2] [colorTemperatureMaximum:2]**

- *Command description for StepColorTemperatue*

- stepMode - HueStepMode [ENUM8]
- stepSize - INT16U
- transitionTime - INT16U
- colorTemperatureMinimum - INT16U
- colorTemperatureMaximum - INT16U

**See Also**

[EmberAfHueStepMode](#)

Definition at line [7559](#) of file [cli.doc](#).

## 6.40 Cluster Commands: Demand Response and Load Control

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_ZCL\_DRLC\_LCE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_CL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_CA
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_GSE

#### 6.40.1 Detailed Description

This group describes the CLI commands for the Demand Response and Load Control cluster. Listed below is a description of the cluster:

*This cluster provides an interface to the functionality of Smart Energy Demand Response and Load Control. Devices targeted by this cluster include thermostats and devices that support load control.*

#### 6.40.2 Macro Definition Documentation

##### 6.40.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_ZCL\_DRLC\_LCE

**zcl drlc lce [eventId:4] [utilityEnrollmentGroup:1] [start:4] [duration:2] [eventControl:1]**

- *Populate a buffer to send a static load control event with the following values: all device classes, all uegs, criticality level: normal, 1.1c cooling temp offset, 1.1c heating temp offset, cool temp set point 23.3c, heat temp set point, -10% avg load percent, duty cycle*
  - eventId - INT32U - 4 byte event id for the load control event
  - utilityEnrollmentGroup - INT8U - UEG of the load control event
  - start - INT32U - Start time for the load control event
  - duration - INT16U - Duration for the load control event
  - eventControl - INT8U - Control byte for the load control event

Definition at line 866 of file [cli.doc](#).

##### 6.40.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_CL

**zcl drlc cl [issuerEventId:4] [deviceClass:2] [utilityEnrollmentGroup:1] [cancelControl:1] [effectiveTime:4]**

- *Command description for CancelLoadControlEvent*
  - issuerEventId - INT32U
  - deviceClass - AmiDeviceClass [BITMAP16]

- utilityEnrollmentGroup - INT8U
- cancelControl - AmiCancelControl [BITMAP8]
- effectiveTime - UTC\_TIME

Definition at line [7582](#) of file [cli.doc](#).

#### **6.40.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_CA**

**zcl drlc ca [cancelControl:1]**

- *Command description for CancelAllLoadControlEvents*
  - cancelControl - AmiCancelControl [BITMAP8]

Definition at line [7588](#) of file [cli.doc](#).

#### **6.40.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEMAND\_RESPONSE\_AND\_LOAD\_CONTROL\_GS-E**

**zcl drlc gse [startTime:4] [numberOfEvents:1] [issuerEventId:4]**

- *Command description for GetScheduledEvents*
  - startTime - UTC\_TIME
  - numberOfEvents - INT8U
  - issuerEventId - INT32U

Definition at line [7596](#) of file [cli.doc](#).

## 6.41 Cluster Commands: Device Management

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_CHG\_OF\_TENANCY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_CHG\_OF\_SUPPLIER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_REQ\_NEW\_PASS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_SITE\_ID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_RPT\_EVENT\_CONFIG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_CIN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_PUB\_CHG\_OF\_SUPPLIER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_REQ\_NEW\_PASS\_RESP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_SET\_EVENT\_CONFIG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_EVENT\_CONFIG

### 6.41.1 Detailed Description

This group describes the CLI commands for the Device Management cluster. Listed below is a description of the cluster:

*This cluster provides attributes and commands to support device-cognisant application layer protocols.*

### 6.41.2 Macro Definition Documentation

#### 6.41.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_CHG\_OF\_TENANCY

**zcl dm get-chg-of-tenancy**

- *This command is used to request the ESI to respond with information regarding any available change of tenancy.*

Definition at line 7613 of file [cli.doc](#).

#### 6.41.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_CHG\_OF\_SUPPLIER

**zcl dm get-chg-of-supplier**

- *This command is used to request the ESI to respond with information regarding any available change of supplier.*

Definition at line 7618 of file [cli.doc](#).

**6.41.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_REQ\_NEW\_PASS**

**zcl dm req-new-pass [passwordType:1]**

- This command is used to request the current password from the server.
  - passwordType - PasswordType [ENUM8]

**See Also**

[EmberAfPasswordType](#)

Definition at line [7626](#) of file [cli.doc](#).

**6.41.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_SITE\_ID**

**zcl dm get-site-id**

- This command is used to request the ESI to respond with information regarding any pending change of Site ID.

Definition at line [7631](#) of file [cli.doc](#).

**6.41.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_RPT\_EVENT\_CONFIG**

**zcl dm rpt-event-config [commandIndex:1] [totalCommands:1] [eventConfigurationPayload:3]**

- This command is sent in response to a GetEventConfiguration command.
  - commandIndex - INT8U
  - totalCommands - INT8U
  - eventConfigurationPayload - struct EventConfigurationPayload

Definition at line [7639](#) of file [cli.doc](#).

**6.41.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_CIN**

**zcl dm get-cin**

- This command is used to request the ESI to respond with information regarding any pending change of Customer ID Number.

Definition at line [7644](#) of file [cli.doc](#).

**6.41.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_PUB\_CHG\_OF\_SUPPLIER**

**zcl dm pub-chg-of-supplier [currentProviderId:4] [issuerEventId:4] [tariffType:1] [proposedProviderId:4] [providerChangeImplementationTime:4] [providerChangeControl:4] [proposedProviderName:-1] [proposedProviderContactDetails:-1]**

- This command is used to change the Supplier (energy supplier) that is supplying the meter (s).

- currentProviderId - INT32U
- issuerEventId - INT32U
- tariffType - TariffType [ENUM8]
- proposedProviderId - INT32U
- providerChangeImplementationTime - UTC\_TIME
- providerChangeControl - ProposedChangeControl [BITMAP32]
- proposedProviderName - OCTET\_STRING
- proposedProviderContactDetails - OCTET\_STRING

**See Also**

[EmberAfTariffType](#)

Definition at line [7659](#) of file [cli.doc](#).

#### 6.41.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_REQ\_NEW\_PASS\_RESP

```
zcl dm req-new-pass-resp [issuerEventId:4] [implementationDateTime:4] [durationInMinutes:2] [password-Type:1] [password:-1]
```

- This command is used to send the current password to the client.

- issuerEventId - INT32U
- implementationDateTime - UTC\_TIME
- durationInMinutes - INT16U
- passwordType - PasswordType [ENUM8]
- password - OCTET\_STRING

**See Also**

[EmberAfPasswordType](#)

Definition at line [7671](#) of file [cli.doc](#).

#### 6.41.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_SET\_EVENT\_CONFIG

```
zcl dm set-event-config [issuerEventId:4] [startDateTime:4] [eventConfiguration:1] [configuration-Control:1] [eventConfigurationPayload:1]
```

- This command provides a method to set the event configuration attributes, held in a client device.

- issuerEventId - INT32U
- startDateTime - UTC\_TIME
- eventConfiguration - EventConfiguration [BITMAP8]
- configurationControl - EventConfigurationControl [ENUM8]
- eventConfigurationPayload - INT8U

**See Also**

[EmberAfEventConfigurationControl](#)

Definition at line [7683](#) of file [cli.doc](#).

6.41.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DEVICE\_MANAGEMENT\_GET\_EVENT\_CONFIG  
**zcl dm get-event-config [eventId:2]**

- This command allows the server to request details of event configurations.
  - eventId - INT16U

Definition at line [7689](#) of file [cli.doc](#).

## 6.42 Cluster Commands: Door Lock

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DOOR\_LOCK\_LOCK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DOOR\_LOCK\_UNLOCK

#### 6.42.1 Detailed Description

This group describes the CLI commands for the Door Lock cluster. Listed below is a description of the cluster:

*Provides an interface into a generic way to secure a door.*

#### 6.42.2 Macro Definition Documentation

##### 6.42.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DOOR\_LOCK\_LOCK

###### **zcl lock lock [PIN:-1]**

- *Locks the door*
  - PIN - CHAR\_STRING

Definition at line 7706 of file [cli.doc](#).

##### 6.42.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_DOOR\_LOCK\_UNLOCK

###### **zcl lock unlock [PIN:-1]**

- *Unlocks the door*
  - PIN - CHAR\_STRING

Definition at line 7712 of file [cli.doc](#).

## 6.43 Cluster Commands: Events

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_EVENTS\_GET\_EVENT\_LOG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_EVENTS\_CLEAR\_EVENT\_LOG

#### 6.43.1 Detailed Description

This group describes the CLI commands for the Events cluster. Listed below is a description of the cluster:  
*This cluster provides an interface on which applications can use event-based protocols.*

#### 6.43.2 Macro Definition Documentation

##### 6.43.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_EVENTS\_GET\_EVENT\_LOG

**zcl events get-event-log [eventControlLogId:1] [eventId:2] [startTime:4] [endTime:4] [numberOfEvents:1] [eventOffset:2]**

- *The GetEventLog command allows a client to request events from a server's event logs. One or more PublishEventLog commands are returned on receipt of this command.*
  - eventControlLogId - EventControlLogId [BITMAP8]
  - eventId - INT16U
  - startTime - UTC\_TIME
  - endTime - UTC\_TIME
  - numberOfEvents - INT8U
  - eventOffset - INT16U

Definition at line 7734 of file [cli.doc](#).

##### 6.43.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_EVENTS\_CLEAR\_EVENT\_LOG

**zcl events clear-event-log [logId:1]**

- *The ClearEventLogRequest command requests that an Events server device clear the specified event log(s).*
  - logId - EventLogId [ENUM8]

#### See Also

[EmberAfEventLogId](#)

Definition at line 7742 of file [cli.doc](#).

## 6.44 Cluster Commands: Generic Tunnel

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERIC\_TUNNEL\_MATCH
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERIC\_TUNNEL\_RESPONSE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERIC\_TUNNEL\_ADVERTISE

#### 6.44.1 Detailed Description

This group describes the CLI commands for the Generic Tunnel cluster. Listed below is a description of the cluster:

*The minimum common commands and attributes required to tunnel any protocol.*

#### 6.44.2 Macro Definition Documentation

##### 6.44.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERIC\_TUNNEL\_MATCH

###### **zcl tunnel match [protocolAddress:-1]**

- *This command is generated when an application wishes to find the ZigBee address (node, endpoint) of the Generic Tunnel server cluster with a given ProtocolAddress attribute. The command is typically multicast to a group of inter-communicating Generic Tunnel clusters*
  - protocolAddress - OCTET\_STRING

Definition at line [7759](#) of file [cli.doc](#).

##### 6.44.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERIC\_TUNNEL\_RESPONSE

###### **zcl tunnel response [deviceIeeeAddress:8] [protocolAddress:-1]**

- *This command is generated upon receipt of a Match Protocol Address command to indicate that the Protocol Address was successfully matched.*
  - deviceIeeeAddress - IEEE\_ADDRESS
  - protocolAddress - OCTET\_STRING

Definition at line [7766](#) of file [cli.doc](#).

##### 6.44.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GENERIC\_TUNNEL\_ADVERTISE

###### **zcl tunnel advertise [protocolAddress:-1]**

- *This command is typically sent upon startup, and whenever the ProtocolAddress attribute changes. It is typically multicast to a group of inter-communicating Generic Tunnel clusters.*
  - protocolAddress - OCTET\_STRING

Definition at line [7772](#) of file [cli.doc](#).

## 6.45 Cluster Commands: Groups

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_ADD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_VIEW
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_GET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_REMOVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_RMALL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_ADD\_IF\_ID

### 6.45.1 Detailed Description

This group describes the CLI commands for the Groups cluster. Listed below is a description of the cluster:

*Attributes and commands for group configuration and manipulation.*

### 6.45.2 Macro Definition Documentation

#### 6.45.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_ADD

**zcl groups add [groupId:2] [groupName:-1]**

- *Command description for AddGroup*
  - groupId - INT16U
  - groupName - CHAR\_STRING

Definition at line 7790 of file [cli.doc](#).

#### 6.45.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_VIEW

**zcl groups view [groupId:2]**

- *Command description for ViewGroup*
  - groupId - INT16U

Definition at line 7796 of file [cli.doc](#).

#### 6.45.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_GET

**zcl groups get [groupCount:1] [groupList:2]**

- *Command description for GetGroupMembership*
  - groupCount - INT8U
  - groupList - INT16U

Definition at line 7803 of file [cli.doc](#).

**6.45.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_REMOVE****zcl groups remove [groupId:2]**

- *Command description for RemoveGroup*
  - groupId - INT16U

Definition at line [7809](#) of file [cli.doc](#).

**6.45.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_RMALL****zcl groups rmall**

- *Command description for RemoveAllGroups*

Definition at line [7814](#) of file [cli.doc](#).

**6.45.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_GROUPS\_ADD\_IF\_ID****zcl groups add-if-id [groupId:2] [groupName:-1]**

- *Command description for AddGroupIfIdentifying*
  - groupId - INT16U
  - groupName - CHAR\_STRING

Definition at line [7821](#) of file [cli.doc](#).

## 6.46 Cluster Commands: IAS ACE

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_A
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_B
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_E
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_F
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_P
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_GETZM
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_GETZI

### 6.46.1 Detailed Description

This group describes the CLI commands for the IAS ACE cluster. Listed below is a description of the cluster:

*Attributes and commands for IAS Ancillary Control Equipment.*

### 6.46.2 Macro Definition Documentation

#### 6.46.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_A

**zcl ias-ace a [armMode:1] [armDisarmCode:-1] [zoneId:1]**

- *Command description for Arm*
  - armMode - IasAceArmMode [ENUM8]
  - armDisarmCode - CHAR\_STRING
  - zoneId - INT8U

**See Also**

[EmberAfIasAceArmMode](#)

Definition at line [7842](#) of file [cli.doc](#).

#### 6.46.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_B

**zcl ias-ace b [numberOfZones:1] [zoneIds:1] [armDisarmCode:-1]**

- *Command description for Bypass*
  - numberOfZones - INT8U
  - zoneIds - INT8U
  - armDisarmCode - CHAR\_STRING

Definition at line [7850](#) of file [cli.doc](#).

6.46.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_E

**zcl ias-ace e**

- *Command description for Emergency*

Definition at line [7855](#) of file [cli.doc](#).

6.46.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_F

**zcl ias-ace f**

- *Command description for Fire*

Definition at line [7860](#) of file [cli.doc](#).

6.46.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_P

**zcl ias-ace p**

- *Command description for Panic*

Definition at line [7865](#) of file [cli.doc](#).

6.46.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_GETZM

**zcl ias-ace getzm**

- *Command description for GetZoneIdMap*

Definition at line [7870](#) of file [cli.doc](#).

6.46.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IAS\_ACE\_GETZI

**zcl ias-ace getzi [zoneId:1]**

- *Command description for GetZoneInformation*
  - zoneId - INT8U

Definition at line [7876](#) of file [cli.doc](#).

## 6.47 Cluster Commands: IAS Zone

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_I\_A\_S\_ZONE\_SC
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_I\_A\_S\_ZONE\_ENROLL

### 6.47.1 Detailed Description

This group describes the CLI commands for the IAS Zone cluster. Listed below is a description of the cluster:

*Attributes and commands for IAS security zone devices.*

### 6.47.2 Macro Definition Documentation

#### 6.47.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_I\_A\_S\_ZONE\_SC

**zcl ias-zone sc [zoneStatus:2] [extendedStatus:1] [zoneId:1] [delay:2]**

- *Command description for zoneStatusChangeNotification*
  - zoneStatus - IasZoneStatus [BITMAP16]
  - extendedStatus - BITMAP8
  - zoneId - INT8U
  - delay - INT16U

Definition at line 7896 of file [cli.doc](#).

#### 6.47.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_I\_A\_S\_ZONE\_ENROLL

**zcl ias-zone enroll [zoneType:2] [manufacturerCode:2]**

- *Command description for zoneEnrollRequest*
  - zoneType - IasZoneType [ENUM16]
  - manufacturerCode - INT16U

#### See Also

[EmberAflasZoneType](#)

Definition at line 7905 of file [cli.doc](#).

## 6.48 Cluster Commands: Identify

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_ZCL\_IDENTIFY\_ON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_ZCL\_IDENTIFY\_OFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_ID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_QUERY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_EZ\_MODE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_TRIGGER

### 6.48.1 Detailed Description

This group describes the CLI commands for the Identify cluster. Listed below is a description of the cluster:  
*Attributes and commands for putting a device into Identification mode (e.g. flashing a light).*

### 6.48.2 Macro Definition Documentation

#### 6.48.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_ZCL\_IDENTIFY\_ON

**zcl identify on [endpoint:1] [time:2]**

- Writes the *IdentifyTime* attribute
  - endpoint - INT8U - The endpoint on the device which should begin identifying
  - time - INT16U - The number of seconds to spend identifying

Definition at line 962 of file [cli.doc](#).

#### 6.48.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_ZCL\_IDENTIFY\_OFF

**zcl identify off [endpoint:1]**

- Writes the *IdentifyTime* attribute
  - endpoint - INT8U - The endpoint on which to stop identifying

Definition at line 968 of file [cli.doc](#).

#### 6.48.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTIFY\_ID

**zcl identify id [identifyTime:2]**

- Command description for *Identify*
  - identifyTime - INT16U

Definition at line 7922 of file [cli.doc](#).

**6.48.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTITY\_QUERY****zcl identify query**

- *Command description for IdentifyQuery*

Definition at line [7927](#) of file [cli.doc](#).

**6.48.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTITY\_EZ\_MODE****zcl identify ez-mode [action:1]**

- *Invoke EZMode on an Identify Server*
  - action - BITMAP8

Definition at line [7933](#) of file [cli.doc](#).

**6.48.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_IDENTITY\_TRIGGER****zcl identify trigger [effectId:1] [effectVariant:1]**

- *Command description for TriggerEffect*
  - effectId - IdentifyEffectIdentifier [ENUM8]
  - effectVariant - IdentifyEffectVariant [ENUM8]

**See Also**

[EmberAfIdentifyEffectIdentifier](#) [EmberAfIdentifyEffectVariant](#)

Definition at line [7943](#) of file [cli.doc](#).

## 6.49 Cluster Commands: Level Control

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_MV\_TO\_LEVEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_MOVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_STEP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_MV\_TO\_LEVEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_MOVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_STEP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_STOP

### 6.49.1 Detailed Description

This group describes the CLI commands for the Level Control cluster. Listed below is a description of the cluster:

*Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.'*

### 6.49.2 Macro Definition Documentation

#### 6.49.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_MV\_TO\_LEVEL

**zcl level-control mv-to-level [level:1] [transitionTime:2]**

- *Command description for MoveToLevel*
  - level - INT8U
  - transitionTime - INT16U

Definition at line 7962 of file [cli.doc](#).

#### 6.49.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_MOVE

**zcl level-control move [moveMode:1] [rate:1]**

- *Command description for Move*
  - moveMode - MoveMode [ENUM8]
  - rate - INT8U

**See Also**

[EmberAfMoveMode](#)

Definition at line 7971 of file [cli.doc](#).

**6.49.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_STEP**

**zcl level-control step [stepMode:1] [stepSize:1] [transitionTime:2]**

- *Command description for Step*
  - stepMode - StepMode [ENUM8]
  - stepSize - INT8U
  - transitionTime - INT16U

**See Also**

[EmberAfStepMode](#)

Definition at line [7981](#) of file [cli.doc](#).

**6.49.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_STOP**

**zcl level-control stop**

- *Command description for Stop*

Definition at line [7986](#) of file [cli.doc](#).

**6.49.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_MV\_TO\_LEVEL**

**zcl level-control o-mv-to-level [level:1] [transitionTime:2]**

- *Command description for MoveToLevelWithOnOff*
  - level - INT8U
  - transitionTime - INT16U

Definition at line [7993](#) of file [cli.doc](#).

**6.49.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_MOVE**

**zcl level-control o-move [moveMode:1] [rate:1]**

- *Command description for MoveWithOnOff*
  - moveMode - MoveMode [ENUM8]
  - rate - INT8U

**See Also**

[EmberAfMoveMode](#)

Definition at line [8002](#) of file [cli.doc](#).

**6.49.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_STEP****zcl level-control o-step [stepMode:1] [stepSize:1] [transitionTime:2]**

- *Command description for StepWithOnOff*

- stepMode - StepMode [ENUM8]
- stepSize - INT8U
- transitionTime - INT16U

**See Also**[EmberAfStepMode](#)

Definition at line 8012 of file [cli.doc](#).

**6.49.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_LEVEL\_CONTROL\_O\_STOP****zcl level-control o-stop**

- *Command description for StopWithOnOff*

Definition at line 8017 of file [cli.doc](#).

## 6.50 Cluster Commands: Messaging

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_DISP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_CANCEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_DISP\_PROTD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_X\_ALL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_GET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_CONFIRM
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_GET\_MSG\_X

### 6.50.1 Detailed Description

This group describes the CLI commands for the Messaging cluster. Listed below is a description of the cluster:

*This cluster provides an interface for passing text messages between SE devices.*

### 6.50.2 Macro Definition Documentation

#### 6.50.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_DISP

**zcl msg disp [messageId:4] [messageControl:1] [startTime:4] [durationInMinutes:2] [message:-1] [optionalExtendedMessageControl:1]**

- *Command description for DisplayMessage*
  - messageId - INT32U
  - messageControl - MessagingControlMask [BITMAP8]
  - startTime - UTC\_TIME
  - durationInMinutes - INT16U
  - message - CHAR\_STRING
  - optionalExtendedMessageControl - MessagingExtendedControlMask [BITMAP8]

Definition at line 8039 of file [cli.doc](#).

#### 6.50.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_CANCEL

**zcl msg cancel [messageId:4] [messageControl:1]**

- *The CancelMessage command provides the ability to cancel the sending or acceptance of previously sent messages.*
  - messageId - INT32U
  - messageControl - MessagingControlMask [BITMAP8]

Definition at line 8046 of file [cli.doc](#).

#### 6.50.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_DISP\_PROTD

**zcl msg disp-protd [messageId:4] [messageControl:1] [startTime:4] [durationInMinutes:2] [message:-1] [optionalExtendedMessageControl:1]**

- *The DisplayProtected Message command is for use with messages that are protected by a password or PIN.*
  - messageId - INT32U
  - messageControl - MessagingControlMask [BITMAP8]
  - startTime - UTC\_TIME
  - durationInMinutes - INT16U
  - message - CHAR\_STRING
  - optionalExtendedMessageControl - MessagingExtendedControlMask [BITMAP8]

Definition at line 8057 of file [cli.doc](#).

#### 6.50.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_X\_ALL

**zcl msg x-all [implementationDateTime:4]**

- *The CancelAllMessages command indicates to a client device that it should cancel all display messages currently held by it.*
  - implementationDateTime - UTC\_TIME

Definition at line 8063 of file [cli.doc](#).

#### 6.50.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_GET

**zcl msg get**

- *Command description for GetLastMessage*

Definition at line 8068 of file [cli.doc](#).

#### 6.50.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_CONFIRM

**zcl msg confirm [messageId:4] [confirmationTime:4] [messageConfirmationControl:1] [messageResponse:-1]**

- *The Message Confirmation command provides an indication that a Utility Customer has acknowledged and/or accepted the contents of a previously sent message. Enhanced Message Confirmation commands shall contain an answer of 'NO', 'YES' and/or a message confirmation string.*

- messageId - INT32U
- confirmationTime - UTC\_TIME
- messageConfirmationControl - BITMAP8
- messageResponse - OCTET\_STRING

Definition at line 8077 of file [cli.doc](#).

6.50.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_MESSAGING\_GET\_MSG\_X

**zcl msg get-msg-x [earliestImplementationTime:4]**

- *This command initiates the return of the first (and maybe only) Cancel All Messages command held on the associated server, and which has an implementation time equal to or later than the value indicated in the payload.*

– earliestImplementationTime - UTC\_TIME

Definition at line 8083 of file [cli.doc](#).

## 6.51 Cluster Commands: On/off

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ON

### 6.51.1 Detailed Description

This group describes the CLI commands for the On/off cluster. Listed below is a description of the cluster:

*Attributes and commands for switching devices between 'On' and 'Off' states.*

### 6.51.2 Macro Definition Documentation

#### 6.51.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ON

**zcl on-off off**

**zcl on-off ontimedoff [onOffControl:1] [onTime:2] [offWaitTime:2]**

**zcl on-off onrecall**

**zcl on-off offeffect [effectId:1] [effectVariant:1]**

**zcl on-off toggle**

**zcl on-off on**

- *Command description for Off*

- *Command description for On*

- *Command description for Toggle*

– *Command description for OffWithEffect*

  \* effectId - OnOffEffectIdentifier [ENUM8]

  \* effectVariant - ENUM8

**See Also**

[EmberAfOnOffEffectIdentifier](#)

- *Command description for OnWithRecallGlobalScene*

- *Command description for OnWithTimedOff*

  – onOffControl - OnOffControl [BITMAP8]

  – onTime - INT16U

  – offWaitTime - INT16U

Definition at line 8131 of file [cli.doc](#).

### 6.51.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ON

**zcl on-off off**

**zcl on-off ontimedoff [onOffControl:1] [onTime:2] [offWaitTime:2]**

**zcl on-off onrecall**

**zcl on-off offeffect [effectId:1] [effectVariant:1]**

**zcl on-off toggle**

**zcl on-off on**

- *Command description for Off*

- *Command description for On*

- *Command description for Toggle*

- *Command description for OffWithEffect*

- \* effectId - OnOffEffectIdentifier [ENUM8]

- \* effectVariant - ENUM8

**See Also**

[EmberAfOnOffEffectIdentifier](#)

- *Command description for OnWithRecallGlobalScene*

- *Command description for OnWithTimedOff*

- onOffControl - OnOffControl [BITMAP8]

- onTime - INT16U

- offWaitTime - INT16U

Definition at line 8131 of file [cli.doc](#).

### 6.51.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ON

**zcl on-off off**

**zcl on-off ontimedoff [onOffControl:1] [onTime:2] [offWaitTime:2]**

**zcl on-off onrecall**

**zcl on-off offeffect [effectId:1] [effectVariant:1]**

**zcl on-off toggle**

**zcl on-off on**

- *Command description for Off*

- *Command description for On*

- *Command description for Toggle*

- *Command description for OffWithEffect*
  - \* effectId - OnOffEffectIdentifier [ENUM8]
  - \* effectVariant - ENUM8

**See Also**

[EmberAfOnOffEffectIdentifier](#)

- *Command description for OnWithRecallGlobalScene*
- *Command description for OnWithTimedOff*
  - onOffControl - OnOffControl [BITMAP8]
  - onTime - INT16U
  - offWaitTime - INT16U

Definition at line [8131](#) of file [cli.doc](#).

#### 6.51.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ON

**zcl on-off off**

**zcl on-off ontimedoff [onOffControl:1] [onTime:2] [offWaitTime:2]**

**zcl on-off onrecall**

**zcl on-off offeffect [effectId:1] [effectVariant:1]**

**zcl on-off toggle**

**zcl on-off on**

- *Command description for Off*
- *Command description for On*
- *Command description for Toggle*
  - *Command description for OffWithEffect*
    - \* effectId - OnOffEffectIdentifier [ENUM8]
    - \* effectVariant - ENUM8

**See Also**

[EmberAfOnOffEffectIdentifier](#)

- *Command description for OnWithRecallGlobalScene*
- *Command description for OnWithTimedOff*
  - onOffControl - OnOffControl [BITMAP8]
  - onTime - INT16U
  - offWaitTime - INT16U

Definition at line [8131](#) of file [cli.doc](#).

### 6.51.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ON

**zcl on-off off**

**zcl on-off ontimedoff [onOffControl:1] [onTime:2] [offWaitTime:2]**

**zcl on-off onrecall**

**zcl on-off offeffect [effectId:1] [effectVariant:1]**

**zcl on-off toggle**

**zcl on-off on**

- *Command description for Off*

- *Command description for On*

- *Command description for Toggle*

- *Command description for OffWithEffect*

- \* effectId - OnOffEffectIdentifier [ENUM8]

- \* effectVariant - ENUM8

**See Also**

[EmberAfOnOffEffectIdentifier](#)

- *Command description for OnWithRecallGlobalScene*

- *Command description for OnWithTimedOff*

- onOffControl - OnOffControl [BITMAP8]

- onTime - INT16U

- offWaitTime - INT16U

Definition at line 8131 of file [cli.doc](#).

### 6.51.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_ON

**zcl on-off off**

**zcl on-off ontimedoff [onOffControl:1] [onTime:2] [offWaitTime:2]**

**zcl on-off onrecall**

**zcl on-off offeffect [effectId:1] [effectVariant:1]**

**zcl on-off toggle**

**zcl on-off on**

- *Command description for Off*

- *Command description for On*

- *Command description for Toggle*

- *Command description for OffWithEffect*
  - \* effectId - OnOffEffectIdentifier [ENUM8]
  - \* effectVariant - ENUM8

**See Also**

[EmberAfOnOffEffectIdentifier](#)

- *Command description for OnWithRecallGlobalScene*
- *Command description for OnWithTimedOff*
  - onOffControl - OnOffControl [BITMAP8]
  - onTime - INT16U
  - offWaitTime - INT16U

Definition at line [8131](#) of file [cli.doc](#).

## 6.52 Cluster Commands: Poll Control

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POLL\_CONTROL\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POLL\_CONTROL\_LONG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POLL\_CONTROL\_SHORT

#### 6.52.1 Detailed Description

This group describes the CLI commands for the Poll Control cluster. Listed below is a description of the cluster:

*This cluster provides a mechanism for the management of an end device's MAC Data Poll rate. For the purposes of this cluster, the term "poll" always refers to the sending of a MAC Data Poll from the end device to the end device's parent.*

#### 6.52.2 Macro Definition Documentation

##### 6.52.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POLL\_CONTROL\_STOP

###### **zcl poll-control stop**

- *The Fast Poll Stop command is used to stop the fast poll mode initiated by the Check-in response.*

Definition at line 8149 of file [cli.doc](#).

##### 6.52.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POLL\_CONTROL\_LONG

###### **zcl poll-control long [newLongPollInterval:4]**

- *The Set Long Poll Interval command is used to set the read only Long Poll Interval Attribute.*
  - newLongPollInterval - INT32U

Definition at line 8155 of file [cli.doc](#).

##### 6.52.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POLL\_CONTROL\_SHORT

###### **zcl poll-control short [newShortPollInterval:2]**

- *The Set Short Poll Interval command is used to set the read only Short Poll Interval Attribute.*
  - newShortPollInterval - INT16U

Definition at line 8161 of file [cli.doc](#).

## 6.53 Cluster Commands: Power Profile

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_STATE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_ENERGY\_PHASES\_SCHEDULE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_SCHEDULE\_CONSTRAINTS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_ENERGY\_PHASES\_SCHEDULE\_STATES

### 6.53.1 Detailed Description

This group describes the CLI commands for the Power Profile cluster. Listed below is a description of the cluster:

*This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).*

### 6.53.2 Macro Definition Documentation

#### 6.53.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_PROFILE

**zcl power-profile profile [powerProfileId:1]**

- *The PowerProfileRequest Command is generated by a device supporting the client side of the Power Profile cluster in order to request the Power Profile of a server device.*
  - powerProfileId - INT8U

Definition at line 8181 of file [cli.doc](#).

#### 6.53.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_STATE

**zcl power-profile state**

- *The PowerProfileStateRequest Command is generated in order to retrieve the identifiers of current Power Profiles.*

Definition at line 8186 of file [cli.doc](#).

#### 6.53.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_ENERGY\_PHASES\_SCHEDULE

**zcl power-profile energy-phases-schedule [powerProfileId:1] [numOfScheduledPhases:1] [scheduled-Phases:3]**

- The *EnergyPhasesScheduleNotification Command* is generated by a device supporting the client side of the Power Profile cluster in order to schedule the start of the selected Power Profile and its phases.
  - powerProfileId - INT8U
  - numOfScheduledPhases - INT8U
  - scheduledPhases - struct ScheduledPhase

Definition at line 8194 of file [cli.doc](#).

#### **6.53.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_SCHEDULE\_CONSTRAINTS**

##### **zcl power-profile schedule-constraints [powerProfileId:1]**

- The *PowerProfileScheduleConstraintsRequest Command* is generated by a device supporting the client side of the Power Profile cluster in order to request the constraints -if set- of Power Profile of a client device, in order to set the proper boundaries for the scheduling when calculating the schedules.
  - powerProfileId - INT8U

Definition at line 8200 of file [cli.doc](#).

#### **6.53.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_POWER\_PROFILE\_ENERGY\_PHASES\_SCHEDULE\_STATES**

##### **zcl power-profile energy-phases-schedule-states [powerProfileId:1]**

- The *EnergyPhasesScheduleStateRequest Command* is generated by a device supporting the client side of the Power Profile cluster to check the states of the scheduling of a power profile, which is supported in the device implementing the server side of Power Profile cluster.
  - powerProfileId - INT8U

Definition at line 8206 of file [cli.doc](#).

## 6.54 Cluster Commands: Prepayment

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_SEL\_AV\_EM\_CRED
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_CHG\_DEBT

### 6.54.1 Detailed Description

This group describes the CLI commands for the Prepayment cluster. Listed below is a description of the cluster:

*The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN.*

### 6.54.2 Macro Definition Documentation

#### 6.54.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_SEL\_AV\_EM\_CRED

**zcl prepayment sel-av-em-cred [commandIssueDateTime:4] [originatingDevice:1] [siteId:-1] [meterSerialNumber:-1]**

- This command is sent to the Metering Device to activate the use of any Emergency Credit available on the Metering Device.
  - commandIssueDateTime - UTC\_TIME
  - originatingDevice - OriginatingDevice [ENUM8]
  - siteId - OCTET\_STRING
  - meterSerialNumber - OCTET\_STRING

#### See Also

[EmberAfOriginatingDevice](#)

Definition at line 8229 of file [cli.doc](#).

#### 6.54.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_CHG\_DEBT

**zcl prepayment chg-debt [issuerEventId:4] [debtLabel:-1] [debtAmount:4] [debtRecoveryMethod:1] [debtAmountType:1] [debtRecoveryStartTime:4] [debtRecoveryCollectionTime:2] [debtRecoveryFrequency:1] [debtRecoveryAmount:4] [debtRecoveryBalancePercentage:2]**

- *The ChangeDebt command is send to the Metering Device to change the fuel or Non fuel debt values.*
  - issuerEventId - INT32U
  - debtLabel - OCTET\_STRING
  - debtAmount - INT32U
  - debtRecoveryMethod - DebtRecoveryMethod [ENUM8]
  - debtAmountType - DebtAmountType [ENUM8]
  - debtRecoveryStartTime - UTC\_TIME
  - debtRecoveryCollectionTime - INT16U
  - debtRecoveryFrequency - DebtRecoveryFrequency [ENUM8]
  - debtRecoveryAmount - INT32U
  - debtRecoveryBalancePercentage - INT16U

**See Also**

[EmberAfDebtRecoveryMethod](#) [EmberAfDebtAmountType](#) [EmberAfDebtRecoveryFrequency](#)

Definition at line 8248 of file [cli.doc](#).

#### 6.54.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_EM\_CRED\_SETUP

**zcl prepayment em-cred-setup [issuerEventId:4] [startTime:4] [emergencyCreditLimit:4] [emergencyCreditThreshold:4]**

- *This command is a method to set up the parameters for the emergency credit.*
  - issuerEventId - INT32U
  - startTime - UTC\_TIME
  - emergencyCreditLimit - INT32U
  - emergencyCreditThreshold - INT32U

Definition at line 8257 of file [cli.doc](#).

#### 6.54.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_CONS\_TOP\_UP

**zcl prepayment cons-top-up [originatingDevice:1] [topUpCode:-1]**

- *The ConsumerTopUp command is used by the IPD and the ESI as a method of applying credit top up values to the prepayment meter.*
  - originatingDevice - OriginatingDevice [ENUM8]
  - topUpCode - OCTET\_STRING

**See Also**

[EmberAfOriginatingDevice](#)

Definition at line 8266 of file [cli.doc](#).

#### 6.54.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_CRED\_ADJ

**zcl prepayment cred-adj [issuerEventId:4] [startTime:4] [creditAdjustmentType:1] [creditAdjustmentValue:4]**

- *The CreditAdjustment command is sent to update the accounting base for the Prepayment meter.*

- issuerEventId - INT32U
- startTime - UTC\_TIME
- creditAdjustmentType - CreditAdjustmentType [ENUM8]
- creditAdjustmentValue - INT32U

##### See Also

[EmberAfCreditAdjustmentType](#)

Definition at line 8277 of file [cli.doc](#).

#### 6.54.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_CHG\_PMT\_MODE

**zcl prepayment chg-pmt-mode [providerId:4] [issuerEventId:4] [implementationDateTime:4] [proposedPaymentControlConfiguration:2] [cutOffValue:4]**

- *This command is sent to a Metering Device to instruct it to change its mode of operation. i.e. from Credit to Prepayment.*

- providerId - INT32U
- issuerEventId - INT32U
- implementationDateTime - UTC\_TIME
- proposedPaymentControlConfiguration - PaymentControlConfiguration [BITMAP16]
- cutOffValue - INT32U

Definition at line 8287 of file [cli.doc](#).

#### 6.54.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_GET\_PP\_SS

**zcl prepayment get-pp-ss [earliestStartTime:4] [latestEndTime:4] [snapshotOffset:1] [snapshotCause:4]**

- *This command is used to request the cluster server for snapshot data.*

- earliestStartTime - UTC\_TIME
- latestEndTime - UTC\_TIME
- snapshotOffset - INT8U
- snapshotCause - PrepaySnapshotPayloadCause [BITMAP32]

Definition at line 8296 of file [cli.doc](#).

**6.54.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_GET\_TOP\_UP\_LOG**

**zcl prepayment get-top-up-log [latestEndTime:4] [numberOfRecords:1]**

- *This command is sent to the Metering Device to retrieve the log of Top Up codes received by the meter.*
  - latestEndTime - UTC\_TIME
  - numberOfRecords - INT8U

Definition at line 8303 of file [cli.doc](#).

**6.54.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_SET\_LOW\_CRED\_WNG\_LVL**

**zcl prepayment set-low-cred-wng-lvl [lowCreditWarningLevel:4]**

- *This command is sent from client to a Prepayment server to set the warning level for low credit.*
  - lowCreditWarningLevel - INT32U

Definition at line 8309 of file [cli.doc](#).

**6.54.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_GET\_DEBT\_REPMT\_LOG**

**zcl prepayment get-debt-repmt-log [latestEndTime:4] [numberOfDebts:1] [debtType:1]**

- *This command is used to request the contents of the repayment log.*
  - latestEndTime - UTC\_TIME
  - numberOfDebts - INT8U
  - debtType - RepaymentDebtType [ENUM8]

**See Also**

[EmberAfRepaymentDebtType](#)

Definition at line 8319 of file [cli.doc](#).

**6.54.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_SET\_MAX\_CRED\_LMT**

**zcl prepayment set-max-cred-lmt [providerId:4] [issuerEventId:4] [implementationDateTime:4] [maximumCreditLevel:4] [maximumCreditPerTopUp:4]**

- *This command is sent from a client to the Prepayment server to set the maximum credit level allowed in the meter.*
  - providerId - INT32U
  - issuerEventId - INT32U
  - implementationDateTime - UTC\_TIME
  - maximumCreditLevel - INT32U
  - maximumCreditPerTopUp - INT32U

Definition at line 8329 of file [cli.doc](#).

#### 6.54.2.12 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_SET\_OA\_DEBT\_CAP

**zcl prepayment set-**oa-debt-cap** [providerId:4] [issuerEventId:4] [implementationDateTime:4] [overall-**DebtCap**:4]**

- This command is sent from a client to the Prepayment server to set the overall debt cap allowed in the meter.

- providerId - INT32U
- issuerEventId - INT32U
- implementationDateTime - UTC\_TIME
- overallDebtCap - INT32U

Definition at line [8338](#) of file [cli.doc](#).

#### 6.54.2.13 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_PUB\_PREP\_SS

**zcl prepayment pub-prep-ss [snapshotId:4] [snapshotTime:4] [totalSnapshotsFound:1] [command-Index:1] [totalNumberOfCommands:1] [snapshotCause:4] [snapshotPayloadType:1] [snapshotPayload:1]**

- This command is generated in response to a GetPrepaySnapshot command. It is used to return a single snapshot to the client.

- snapshotId - INT32U
- snapshotTime - UTC\_TIME
- totalSnapshotsFound - INT8U
- commandIndex - INT8U
- totalNumberOfCommands - INT8U
- snapshotCause - PrepaySnapshotPayloadCause [BITMAP32]
- snapshotPayloadType - PrepaySnapshotPayloadType [ENUM8]
- snapshotPayload - INT8U

##### See Also

Definition at line [8353](#) of file [cli.doc](#).

#### 6.54.2.14 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_CHG\_PMT\_MODE\_RESP

**zcl prepayment chg-pmt-mode-resp [friendlyCredit:1] [friendlyCreditCalendarId:4] [emergencyCredit-Limit:4] [emergencyCreditThreshold:4]**

- This command is send in response to the ChangePaymentMode Command.

- friendlyCredit - FriendlyCredit [BITMAP8]
- friendlyCreditCalendarId - INT32U
- emergencyCreditLimit - INT32U
- emergencyCreditThreshold - INT32U

Definition at line [8362](#) of file [cli.doc](#).

**6.54.2.15 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_CONS\_TOP\_UP\_RESP**

**zcl prepayment cons-top-up-resp [resultType:1] [topUpValue:4] [sourceOfTopUp:1] [creditRemaining:4]**

- This command is send in response to the ConsumerTopUp Command.

- resultType - ResultType [ENUM8]
- topUpValue - INT32U
- sourceOfTopUp - OriginatingDevice [ENUM8]
- creditRemaining - INT32U

**See Also**

[EmberAfResultType](#) [EmberAfOriginatingDevice](#)

Definition at line 8374 of file [cli.doc](#).

**6.54.2.16 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_PUB\_TOP\_UP\_LOG**

**zcl prepayment pub-top-up-log [commandIndex:1] [totalNumberOfCommands:1] [topUpPayload:7]**

- This command is used to send the Top Up Code Log entries to the client.

- commandIndex - INT8U
- totalNumberOfCommands - INT8U
- topUpPayload - struct TopUpPayload

Definition at line 8382 of file [cli.doc](#).

**6.54.2.17 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PREPAYMENT\_PUB\_DEBT\_LOG**

**zcl prepayment pub-debt-log [commandIndex:1] [totalNumberOfCommands:1] [debtPayload:13]**

- This command is used to send the contents of the Repayment Log.

- commandIndex - INT8U
- totalNumberOfCommands - INT8U
- debtPayload - struct DebtPayload

Definition at line 8390 of file [cli.doc](#).

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_TARIFF\_CANCELLATION

### 6.55.1 Detailed Description

This group describes the CLI commands for the Price cluster. Listed below is a description of the cluster:

*The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises.*

## 6.55.2 Macro Definition Documentation

### 6.55.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_PRICE

```
zcl price pub-price [providerId:4] [rateLabel:-1] [issuerEventId:4] [currentTime:4] [unitOfMeasure:  
:1] [currency:2] [priceTrailingDigitAndPriceTier:1] [numberOfPriceTiersAndRegisterTier:1] [start-  
Time:4] [durationInMinutes:2] [price:4] [priceRatio:1] [generationPrice:4] [generationPriceRatio-  
:1] [alternateCostDelivered:4] [alternateCostUnit:1] [alternateCostTrailingDigit:1] [numberofBlock-  
Thresholds:1] [priceControl:1] [numberOfGenerationTiers:1] [generationTier:1] [extendedNumber-  
OfPriceTiers:1] [extendedPriceTier:1] [extendedRegisterTier:1]
```

- *The PublishPrice command is generated in response to receiving a Get Current Price command, in response to a Get Scheduled Prices command, and when an update to the pricing information is available from the commodity provider, either before or when a TOU price becomes active.*

- providerId - INT32U
- rateLabel - OCTET\_STRING
- issuerEventId - INT32U
- currentTime - UTC\_TIME
- unitOfMeasure - AmiUnitOfMeasure [ENUM8]
- currency - INT16U
- priceTrailingDigitAndPriceTier - PriceTrailingDigitAndPriceTier [BITMAP8]
- numberOfPriceTiersAndRegisterTier - PriceNumberOfPriceTiersAndRegisterTier [BITMAP8]
- startTime - UTC\_TIME
- durationInMinutes - INT16U
- price - INT32U
- priceRatio - INT8U
- generationPrice - INT32U
- generationPriceRatio - INT8U
- alternateCostDelivered - INT32U
- alternateCostUnit - AlternateCostUnit [ENUM8]
- alternateCostTrailingDigit - AlternateCostTrailingDigit [BITMAP8]
- numberofBlockThresholds - INT8U
- priceControl - PriceControlMask [BITMAP8]
- numberOfGenerationTiers - INT8U
- generationTier - GenerationTier [ENUM8]
- extendedNumberOfPriceTiers - ExtendedNumberOfPriceTiers [ENUM8]
- extendedPriceTier - ExtendedPriceTier [ENUM8]
- extendedRegisterTier - ExtendedRegisterTier [ENUM8]

#### See Also

[EmberAfAmiUnitOfMeasure](#) [EmberAfAlternateCostUnit](#) [EmberAfGenerationTier](#) [Ember-  
AfExtendedNumberOfPriceTiers](#) [EmberAfExtendedPriceTier](#) [EmberAfExtendedRegister-  
Tier](#)

Definition at line 8438 of file [cli.doc](#).

#### 6.55.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_BLOCK\_PERIOD

**zcl price pub-block-period [providerId:4] [issuerEventId:4] [blockPeriodStartTime:4] [blockPeriodDuration:3] [numberOfPriceTiersAndNumberOfBlockThresholds:1] [blockPeriodControl:1] [blockPeriodDurationType:1] [tariffType:1] [tariffResolutionPeriod:1]**

- *The PublishBlockPeriod command is generated in response to receiving a GetBlockPeriod(s) command or when an update to the block tariff schedule is available from the commodity provider.*

- providerId - INT32U
- issuerEventId - INT32U
- blockPeriodStartTime - UTC\_TIME
- blockPeriodDuration - INT24U
- numberOfPriceTiersAndNumberOfBlockThresholds - BITMAP8
- blockPeriodControl - BlockPeriodControl [BITMAP8]
- blockPeriodDurationType - BlockPeriodDurationType [BITMAP8]
- tariffType - TariffType [ENUM8]
- tariffResolutionPeriod - TariffResolutionPeriod [ENUM8]

##### See Also

[EmberAfTariffType](#) [EmberAfTariffResolutionPeriod](#)

Definition at line 8455 of file [cli.doc](#).

#### 6.55.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_X\_FACTOR

**zcl price pub-x-factor [issuerEventId:4] [startTime:4] [conversionFactor:4] [conversionFactorTrailingDigit:1]**

- *The PublishConversionFactor command is sent in response to a GetConversionFactor command or if a new Conversion factor is available.*

- issuerEventId - INT32U
- startTime - UTC\_TIME
- conversionFactor - INT32U
- conversionFactorTrailingDigit - ConversionFactorTrailingDigit [BITMAP8]

Definition at line 8464 of file [cli.doc](#).

#### 6.55.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_CAL\_VAL

**zcl price pub-cal-val [issuerEventId:4] [startTime:4] [calorificValue:4] [calorificValueUnit:1] [calorificValueTrailingDigit:1]**

- *The PublishCalorificValue command is sent in response to a GetCalorificValue command or if a new calorific value is available.*

- issuerEventId - INT32U
- startTime - UTC\_TIME

- calorificValue - INT32U
- calorificValueUnit - CalorificValueUnit [ENUM8]
- calorificValueTrailingDigit - CalorificValueTrailingDigit [BITMAP8]

**See Also**

[EmberAfCalorificValueUnit](#)

Definition at line 8476 of file [cli.doc](#).

#### 6.55.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_TARIFF\_INFO

```
zcl price pub-tariff-info [providerId:4] [issuerEventId:4] [issuerTariffId:4] [startTime:4] [tariffType-
ChargingScheme:1] [tariffLabel:-1] [numberOfPriceTiersInUse:1] [numberOfBlockThresholdsIn-
Use:1] [unitOfMeasure:1] [currency:2] [priceTrailingDigit:1] [standingCharge:4] [tierBlockMode:1]
[blockThresholdMultiplier:3] [blockThresholdDivisor:3]
```

- *The PublishTariffInformation command is sent in response to a GetTariffInformation command or if new tariff information is available (including price matrix and block thresholds).*

- providerId - INT32U
- issuerEventId - INT32U
- issuerTariffId - INT32U
- startTime - UTC\_TIME
- tariffTypeChargingScheme - TariffTypeChargingScheme [BITMAP8]
- tariffLabel - OCTET\_STRING
- numberOfPriceTiersInUse - INT8U
- numberOfBlockThresholdsInUse - INT8U
- unitOfMeasure - AmiUnitOfMeasure [ENUM8]
- currency - INT16U
- priceTrailingDigit - PriceTrailingDigit [BITMAP8]
- standingCharge - INT32U
- tierBlockMode - TierBlockMode [ENUM8]
- blockThresholdMultiplier - INT24U
- blockThresholdDivisor - INT24U

**See Also**

[EmberAfAmiUnitOfMeasure](#) [EmberAfTierBlockMode](#)

Definition at line 8499 of file [cli.doc](#).

#### 6.55.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_PRICE\_MATRIX

```
zcl price pub-price-matrix [providerId:4] [issuerEventId:4] [startTime:4] [issuerTariffId:4] [command-
Index:1] [numberOfCommands:1] [subPayloadControl:1] [payload:5]
```

- *PublishPriceMatrix command is used to publish the Block Price Information Set (up to 15 tiers x 15 blocks) and the Extended Price Information Set (up to 48 tiers). The PublishPriceMatrix command is sent in response to a GetPriceMatrix command.*

- providerId - INT32U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- issuerTariffId - INT32U
- commandIndex - INT8U
- numberOfCommands - INT8U
- subPayloadControl - PriceMatrixSubPayloadControl [BITMAP8]
- payload - struct PriceMatrixSubPayload

Definition at line 8512 of file [cli.doc](#).

#### **6.55.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_BLOCK\_THRESHOLD**

**zcl price pub-block-threshold [providerId:4] [issuerEventId:4] [startTime:4] [issuerTariffId:4] [commandIndex:1] [numberOfCommands:1] [subPayloadControl:1] [payload:7]**

- *The PublishBlockThreshold command is sent in response to a GetBlockThreshold command.*

- providerId - INT32U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- issuerTariffId - INT32U
- commandIndex - INT8U
- numberOfCommands - INT8U
- subPayloadControl - BlockThresholdSubPayloadControl [BITMAP8]
- payload - struct BlockThresholdSubPayload

Definition at line 8525 of file [cli.doc](#).

#### **6.55.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_CO2\_VAL**

**zcl price pub-co2-val [providerId:4] [issuerEventId:4] [startTime:4] [tariffType:1] [cO2Value:4] [cO2ValueUnit:1] [cO2ValueTrailingDigit:1]**

- *The PublishCO2Value command is sent in response to a GetCO2Value command or if a new CO2 conversion factor is available.*

- providerId - INT32U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- tariffType - TariffType [ENUM8]
- cO2Value - INT32U
- cO2ValueUnit - CO2Unit [ENUM8]
- cO2ValueTrailingDigit - CO2TrailingDigit [BITMAP8]

#### **See Also**

[EmberAfTariffType](#) [EmberAfCO2Unit](#)

Definition at line 8540 of file [cli.doc](#).

#### 6.55.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_TIER\_LABELS

**zcl price pub-tier-labels [providerId:4] [issuerEventId:4] [issuerTariffId:4] [commandIndex:1] [numberOfCommands:1] [numberOfLabels:1] [tierLabelsPayload:1]**

- *The PublishTierLabels command is generated in response to receiving a GetTierLabels command or when there is a tier label change.*
  - providerId - INT32U
  - issuerEventId - INT32U
  - issuerTariffId - INT32U
  - commandIndex - INT8U
  - numberOfCommands - INT8U
  - numberOfLabels - INT8U
  - tierLabelsPayload - INT8U

Definition at line 8552 of file [cli.doc](#).

#### 6.55.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_BILLING\_PERIOD

**zcl price pub-billing-period [providerId:4] [issuerEventId:4] [billingPeriodStartTime:4] [billingPeriodDuration:3] [billingPeriodDurationType:1] [tariffType:1]**

- *The PublishBillingPeriod command is generated in response to receiving a GetBillingPeriod(s) command or when an update to the Billing schedule is available from the commodity Supplier.*

- providerId - INT32U
- issuerEventId - INT32U
- billingPeriodStartTime - UTC\_TIME
- billingPeriodDuration - BillingPeriodDuration [BITMAP24]
- billingPeriodDurationType - BillingPeriodDurationType [BITMAP8]
- tariffType - TariffType [ENUM8]

##### See Also

[EmberAfTariffType](#)

Definition at line 8565 of file [cli.doc](#).

#### 6.55.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_CONsolidated\_BILL

**zcl price pub-consolidated-bill [providerId:4] [issuerEventId:4] [billingPeriodStartTime:4] [billingPeriodDuration:3] [billingPeriodDurationType:1] [tariffType:1] [consolidatedBill:4] [currency:2] [billTrailingDigit:1]**

- *The PublishConsolidatedBill command is used to make consolidated billing information of previous billing periods available to other end devices. This command is issued in response to a GetConsolidatedBill command or if new billing information is available.*

- providerId - INT32U

- issuerEventId - INT32U
- billingPeriodStartTime - UTC\_TIME
- billingPeriodDuration - BillingPeriodDuration [BITMAP24]
- billingPeriodDurationType - BillingPeriodDurationType [BITMAP8]
- tariffType - TariffType [ENUM8]
- consolidatedBill - INT32U
- currency - INT16U
- billTrailingDigit - BillTrailingDigit [BITMAP8]

**See Also**

[EmberAfTariffType](#)

Definition at line 8581 of file [cli.doc](#).

**6.55.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_CPP\_EVENT**

**zcl price pub-cpp-event [providerId:4] [issuerEventId:4] [startTime:4] [durationInMinutes:2] [tariffType:1] [cppPriceTier:1] [cppAuth:1]**

- *The PublishCPPEvent command is sent from an ESI to its price clients to notify them of a Critical Peak Pricing event.*

- providerId - INT32U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- durationInMinutes - INT16U
- tariffType - TariffType [ENUM8]
- cppPriceTier - CppPriceTier [ENUM8]
- cppAuth - PublishCppEventCppAuth [ENUM8]

**See Also**

[EmberAfTariffType](#) [EmberAfCppPriceTier](#) [EmberAfPublishCppEventCppAuth](#)

Definition at line 8597 of file [cli.doc](#).

**6.55.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_CREDIT\_PAYMENT**

**zcl price pub-credit-payment [providerId:4] [issuerEventId:4] [creditPaymentDueDate:4] [creditPaymentOverDueAmount:4] [creditPaymentStatus:1] [creditPayment:4] [creditPaymentDate:4] [creditPaymentRef:-1]**

- *The PublishCreditPayment command is used to update the credit payment information is available.*

- providerId - INT32U
- issuerEventId - INT32U
- creditPaymentDueDate - UTC\_TIME
- creditPaymentOverDueAmount - INT32U

- creditPaymentStatus - CreditPaymentStatus [ENUM8]
- creditPayment - INT32U
- creditPaymentDate - UTC\_TIME
- creditPaymentRef - OCTET\_STRING

**See Also**

[EmberAfCreditPaymentStatus](#)

Definition at line 8612 of file [cli.doc](#).

#### 6.55.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PUB\_CURRENCY\_CONVERSION

**zcl price pub-currency-conversion [providerId:4] [issuerEventId:4] [startTime:4] [oldCurrency:2] [newCurrency:2] [conversionFactor:4] [conversionFactorTrailingDigit:1] [currencyChangeControlFlags:4]**

- *The PublishCurrencyConversion command is sent in response to a GetCurrencyConversion command or when a new currency becomes available.*

- providerId - INT32U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- oldCurrency - INT16U
- newCurrency - INT16U
- conversionFactor - INT32U
- conversionFactorTrailingDigit - ConversionFactorTrailingDigit [BITMAP8]
- currencyChangeControlFlags - CurrencyChangeControl [BITMAP32]

Definition at line 8625 of file [cli.doc](#).

#### 6.55.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_CANCEL\_TARIFF

**zcl price cancel-tariff [providerId:4] [issuerTariffId:4] [tariffType:1]**

- *The CancelTariff command indicates that all data associated with a particular tariff instance should be discarded.*

- providerId - INT32U
- issuerTariffId - INT32U
- tariffType - TariffType [ENUM8]

**See Also**

[EmberAfTariffType](#)

Definition at line 8635 of file [cli.doc](#).

**6.55.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_CURRENT**

**zcl price current [commandOptions:1]**

- *The GetCurrentPrice command initiates a PublishPrice command for the current time.*
  - commandOptions - AmiCommandOptions [BITMAP8]

Definition at line 8641 of file [cli.doc](#).

**6.55.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_SCHEDULED**

**zcl price scheduled [startTime:4] [numberOfEvents:1]**

- *The GetScheduledPrices command initiates a PublishPrice command for available price events.*
  - startTime - UTC\_TIME
  - numberOfEvents - INT8U

Definition at line 8648 of file [cli.doc](#).

**6.55.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_PRICE\_ACK**

**zcl price price-ack [providerId:4] [issuerEventId:4] [priceAckTime:4] [control:1]**

- *The PriceAcknowledgement command described provides the ability to acknowledge a previously sent PublishPrice command.*
  - providerId - INT32U
  - issuerEventId - INT32U
  - priceAckTime - UTC\_TIME
  - control - PriceControlMask [BITMAP8]

Definition at line 8657 of file [cli.doc](#).

**6.55.2.19 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_BLOCK\_PERIODS**

**zcl price get-block-periods [startTime:4] [numberOfEvents:1] [tariffType:1]**

- *The GetBlockPeriods command initiates a PublishBlockPeriod command for the currently scheduled block periods.*
  - startTime - UTC\_TIME
  - numberOfEvents - INT8U
  - tariffType - TariffType [ENUM8]

**See Also**

[EmberAfTariffType](#)

Definition at line 8667 of file [cli.doc](#).

**6.55.2.20 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_CONVERSION\_FACTOR**

**zcl price get-conversion-factor [earliestStartTime:4] [minIssuerEventId:4] [numberOfCommands:1]**

- *The GetConversionFactor command initiates a PublishConversionFactor command for the scheduled conversion factor updates.*

- earliestStartTime - UTC\_TIME
- minIssuerEventId - INT32U
- numberOfCommands - INT8U

Definition at line [8675](#) of file [cli.doc](#).

**6.55.2.21 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_CAL\_VAL**

**zcl price get-cal-val [earliestStartTime:4] [minIssuerEventId:4] [numberOfCommands:1]**

- *The GetCalorificValue command initiates a PublishCalorificValue command for the scheduled conversion factor updates.*

- earliestStartTime - UTC\_TIME
- minIssuerEventId - INT32U
- numberOfCommands - INT8U

Definition at line [8683](#) of file [cli.doc](#).

**6.55.2.22 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_TARIFF\_INFO**

**zcl price get-tariff-info [earliestStartTime:4] [minIssuerEventId:4] [numberOfCommands:1] [tariffType:1]**

- *The GetTariffInformation command initiates a PublishTariffInformation command for the scheduled tariff updates.*

- earliestStartTime - UTC\_TIME
- minIssuerEventId - INT32U
- numberOfCommands - INT8U
- tariffType - TariffType [ENUM8]

**See Also**

[EmberAfTariffType](#)

Definition at line [8694](#) of file [cli.doc](#).

**6.55.2.23 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_PRICE\_MATRIX**

**zcl price get-price-matrix [issuerTariffId:4]**

- *The GetPriceMatrix command initiates a PublishPriceMatrix command for the scheduled Price Matrix updates.*

– issuerTariffId - INT32U

Definition at line 8700 of file [cli.doc](#).

**6.55.2.24 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_BLOCK\_THRESHOLDS**

**zcl price get-block-thresholds [issuerTariffId:4]**

- *The GetBlockThresholds command initiates a PublishBlockThreshold command for the scheduled Block Threshold updates.*

– issuerTariffId - INT32U

Definition at line 8706 of file [cli.doc](#).

**6.55.2.25 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_CO2\_VALUE**

**zcl price get-co2-value [earliestStartTime:4] [minIssuerEventId:4] [numberOfCommands:1] [tariffType:1]**

- *The GetCO2Value command initiates a PublishCO2Value command for the scheduled CO2 conversion factor updates.*

– earliestStartTime - UTC\_TIME  
 – minIssuerEventId - INT32U  
 – numberOfCommands - INT8U  
 – tariffType - TariffType [ENUM8]

**See Also**

[EmberAfTariffType](#)

Definition at line 8717 of file [cli.doc](#).

**6.55.2.26 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_TIER\_LABELS**

**zcl price get-tier-labels [issuerTariffId:4]**

- *The GetTierLabels command allows a client to retrieve the tier labels associated with a given tariff; this command initiates a PublishTierLabels command from the server.*

– issuerTariffId - INT32U

Definition at line 8723 of file [cli.doc](#).

6.55.2.27 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_BILLING\_PERIOD

**zcl price get-billing-period [earliestStartTime:4] [minIssuerEventId:4] [numberOfCommands:1] [tariffType:1]**

- The *GetBillingPeriod* command initiates one or more *PublishBillingPeriod* commands for the currently scheduled billing periods.

- earliestStartTime - UTC\_TIME
- minIssuerEventId - INT32U
- numberOfCommands - INT8U
- tariffType - TariffType [ENUM8]

**See Also**

[EmberAfTariffType](#)

Definition at line 8734 of file [cli.doc](#).

6.55.2.28 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_CON\_BILL

**zcl price get-con-bill [earliestStartTime:4] [minIssuerEventId:4] [numberOfCommands:1] [tariffType:1]**

- The *GetConsolidatedBill* command initiates one or more *PublishConsolidatedBill* commands with the requested billing information.

- earliestStartTime - UTC\_TIME
- minIssuerEventId - INT32U
- numberOfCommands - INT8U
- tariffType - TariffType [ENUM8]

**See Also**

[EmberAfTariffType](#)

Definition at line 8745 of file [cli.doc](#).

6.55.2.29 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PRICE\_CPP\_EVENT\_RESP

**zcl price cpp-event-resp [issuerEventId:4] [cppAuth:1]**

- The *CPPEventResponse* command is sent from a Client (IHD) to the ESI to notify it of a Critical Peak Pricing event authorization.

- issuerEventId - INT32U
- cppAuth - CppEventResponseCppAuth [ENUM8]

**See Also**

[EmberAfCppEventResponseCppAuth](#)

Definition at line 8754 of file [cli.doc](#).

**6.55.2.30 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_CREDIT\_PAYMENT**

**zcl price get-credit-payment [latestEndTime:4] [numberOfRecords:1]**

- *The GetCreditPayment command initiates PublishCreditPayment commands for the requested credit payment information.*
  - latestEndTime - UTC\_TIME
  - numberOfRecords - INT8U

Definition at line [8761](#) of file [cli.doc](#).

**6.55.2.31 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_CUR\_CONV\_CMD**

**zcl price get-cur-conv-cmd**

- *The GetCurrencyConversionCommand command initiates a PublishCurrencyConversion command for the currency conversion factor updates. A server shall be capable of storing both the old and the new currencies.*

Definition at line [8766](#) of file [cli.doc](#).

**6.55.2.32 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PRICE\_GET\_TARIFF\_CANCELLATION**

**zcl price get-tariff-cancellation**

- *The GetTariffCancellation command initiates the return of the last CancelTariff command held on the associated server.*

Definition at line [8771](#) of file [cli.doc](#).

## 6.56 Cluster Commands: Scenes

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_ADD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_VIEW
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_REMOVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_RMALL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_STORE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_RECALL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_GET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_EADD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_EVIEW
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_COPY

### 6.56.1 Detailed Description

This group describes the CLI commands for the Scenes cluster. Listed below is a description of the cluster:  
*Attributes and commands for scene configuration and manipulation.*

### 6.56.2 Macro Definition Documentation

#### 6.56.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_ADD

**zcl scenes add [groupId:2] [sceneId:1] [transitionTime:2] [sceneName:-1] [extensionFieldSets:4]**

- Add a scene to the scene table. Extension field sets are supported, and are inputed as arrays of the form [[cluster ID] [length] [value0...n] ...]
  - groupId - INT16U
  - sceneId - INT8U
  - transitionTime - INT16U
  - sceneName - CHAR\_STRING
  - extensionFieldSets - struct SceneExtensionFieldSet

Definition at line 8792 of file [cli.doc](#).

#### 6.56.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_VIEW

**zcl scenes view [groupId:2] [sceneId:1]**

- Command description for ViewScene
  - groupId - INT16U
  - sceneId - INT8U

Definition at line 8799 of file [cli.doc](#).

**6.56.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_REMOVE****zcl scenes remove [groupId:2] [sceneId:1]**

- *Command description for RemoveScene*
  - groupId - INT16U
  - sceneId - INT8U

Definition at line [8806](#) of file [cli.doc](#).**6.56.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_RMALL****zcl scenes rmall [groupId:2]**

- *Command description for RemoveAllScenes*
  - groupId - INT16U

Definition at line [8812](#) of file [cli.doc](#).**6.56.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_STORE****zcl scenes store [groupId:2] [sceneId:1]**

- *Command description for StoreScene*
  - groupId - INT16U
  - sceneId - INT8U

Definition at line [8819](#) of file [cli.doc](#).**6.56.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_RECALL****zcl scenes recall [groupId:2] [sceneId:1]**

- *Command description for RecallScene*
  - groupId - INT16U
  - sceneId - INT8U

Definition at line [8826](#) of file [cli.doc](#).**6.56.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_GET****zcl scenes get [groupId:2]**

- *Command description for GetSceneMembership*
  - groupId - INT16U

Definition at line [8832](#) of file [cli.doc](#).

**6.56.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_EADD**

**zcl scenes eadd [groupId:2] [sceneId:1] [transitionTime:2] [sceneName:-1] [extensionFieldSets:4]**

- *Command description for EnhancedAddScene*
  - groupId - INT16U
  - sceneId - INT8U
  - transitionTime - INT16U
  - sceneName - CHAR\_STRING
  - extensionFieldSets - struct SceneExtensionFieldSet

Definition at line 8842 of file [cli.doc](#).

**6.56.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_EVIEW**

**zcl scenes eview [groupId:2] [sceneId:1]**

- *Command description for EnhancedViewScene*
  - groupId - INT16U
  - sceneId - INT8U

Definition at line 8849 of file [cli.doc](#).

**6.56.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SCENES\_COPY**

**zcl scenes copy [mode:1] [groupIdFrom:2] [sceneIdFrom:1] [groupIdTo:2] [sceneIdTo:1]**

- *Command description for CopyScene*
  - mode - ScenesCopyMode [BITMAP8]
  - groupIdFrom - INT16U
  - sceneIdFrom - INT8U
  - groupIdTo - INT16U
  - sceneIdTo - INT8U

Definition at line 8859 of file [cli.doc](#).

## 6.57 Cluster Commands: Simple Metering

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_REQUEST\_MIRROR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_REMOVE\_MIRROR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SCH\_SNAPSHOT\_RESP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_TAKE\_SNAPSHOT\_RESP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_PUB\_SS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CFG\_MIRROR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CFG\_NFT\_SCHEMA
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CFG\_NFT\_FLAGS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_NTFY\_MSG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SUP\_STAT\_RSP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_START\_SAMPLE\_RSP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_PROFILE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_MIRROR\_REMOVED
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_REQ\_FAST\_POLL\_MODE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SCH\_SNAPSHOT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_TAKE\_SNAPSHOT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_SNAPSHOT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_START\_SAMPLING
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_SAMPLED\_DATA
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_RST\_LOAD\_LIMIT\_CTR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CHG\_SUPPLY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_LOCAL\_CHG\_SUPPLY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SET\_SUPPLY\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SET\_UNCNTRL\_FLOW\_THRESHOLD

### 6.57.1 Detailed Description

This group describes the CLI commands for the Simple Metering cluster. Listed below is a description of the cluster:

*The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices.*

## 6.57.2 Macro Definition Documentation

**6.57.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_REQUEST\_MIRROR**

**zcl metering request-mirror**

- *This command is used to request the ESI to mirror Metering Device data.*

Definition at line 8876 of file [cli.doc](#).

**6.57.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_REMOVE\_MIRROR**

**zcl metering remove-mirror**

- *This command is used to request the ESI to remove its mirror of Metering Device data.*

Definition at line 8881 of file [cli.doc](#).

**6.57.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SCH\_SNAPSHOT\_RESP**

**zcl metering sch-snapshot-resp [issuerEventId:4] [snapshotResponsePayload:2]**

- *This command is generated in response to a ScheduleSnapshot command, and is sent to confirm whether the requested snapshot schedule has been set up.*

- issuerEventId - INT32U
- snapshotResponsePayload - struct SnapshotResponsePayload

Definition at line 8888 of file [cli.doc](#).

**6.57.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_TAKE\_SNAPSHOT\_RESP**

**zcl metering take-snapshot-resp [snapshotId:4] [snapshotConfirmation:1]**

- *This command is generated in response to a TakeSnapshot command, and is sent to confirm whether the requested snapshot has been accepted and successfully taken.*

- snapshotId - INT32U
- snapshotConfirmation - SnapshotConfirmation [ENUM8]

**See Also**

[EmberAfSnapshotConfirmation](#)

Definition at line 8897 of file [cli.doc](#).

#### 6.57.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_PUB\_SS

**zcl metering pub-ss [snapshotId:4] [snapshotTime:4] [totalSnapshotsFound:1] [commandIndex:1] [totalCommands:1] [snapshotCause:4] [snapshotPayloadType:1] [snapshotPayload:1]**

- This command is generated in response to a GetSnapshot command. It is used to return a single snapshot to the client.
  - snapshotId - INT32U
  - snapshotTime - UTC\_TIME
  - totalSnapshotsFound - INT8U
  - commandIndex - INT8U
  - totalCommands - INT8U
  - snapshotCause - SnapshotCause [BITMAP32]
  - snapshotPayloadType - SnapshotPayloadType [ENUM8]
  - snapshotPayload - INT8U

##### See Also

[EmberAfSnapshotPayloadType](#)

Definition at line 8912 of file [cli.doc](#).

#### 6.57.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CFG\_MIRROR

**zcl metering cfg-mirror [issuerEventId:4] [reportingInterval:3] [mirrorNotificationReporting:1] [notificationScheme:1]**

- ConfigureMirror is sent to the mirror once the mirror has been created. The command deals with the operational configuration of the Mirror.
  - issuerEventId - INT32U
  - reportingInterval - INT24U
  - mirrorNotificationReporting - BOOLEAN
  - notificationScheme - INT8U

Definition at line 8921 of file [cli.doc](#).

#### 6.57.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CFG\_NFT\_SCHEME

**zcl metering cfg-nft-scheme [issuerEventId:4] [notificationScheme:1] [notificationFlagOrder:4]**

- The ConfigureNotificationScheme is sent to the mirror once the mirror has been created. The command deals with the operational configuration of the Mirror and the device that reports to the mirror. No default schemes are allowed to be overwritten.
  - issuerEventId - INT32U
  - notificationScheme - INT8U
  - notificationFlagOrder - BITMAP32

Definition at line 8929 of file [cli.doc](#).

#### 6.57.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CFG\_NFT\_FLAGS

**zcl metering cfg-nft-flags [issuerEventId:4] [notificationScheme:1] [notificationFlagAttributeId:2] [clusterId:2] [manufacturerCode:2] [numberOfCommands:1] [commandIds:1]**

- *The ConfigureNotificationFlags command is used to set the commands relating to the bit value for each NotificationFlags attribute that the scheme is proposing to use.*
  - issuerEventId - INT32U
  - notificationScheme - INT8U
  - notificationFlagAttributeId - INT16U
  - clusterId - INT16U
  - manufacturerCode - INT16U
  - numberOfCommands - INT8U
  - commandIds - INT8U

Definition at line 8941 of file [cli.doc](#).

#### 6.57.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_NTFY\_MSG

**zcl metering get-ntfy-msg [notificationScheme:1] [notificationFlagAttributeId:2] [notificationFlagsN:4]**

- *The GetNotifiedMessage command is used only when a BOMD is being mirrored. This command provides a method for the BOMD to notify the Mirror message queue that it wants to receive commands that the Mirror has queued. The Notification flags set within the command shall inform the mirror of the commands that the BOMD is requesting.*
  - notificationScheme - INT8U
  - notificationFlagAttributeId - INT16U
  - notificationFlagsN - BITMAP32

Definition at line 8949 of file [cli.doc](#).

#### 6.57.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SUP\_STAT\_RSP

**zcl metering sup-stat-rsp [providerId:4] [issuerEventId:4] [implementationDateTime:4] [supplyStatus:1]**

- *This command is transmitted by a Metering Device in response to a ChangeSupply command.*
  - providerId - INT32U
  - issuerEventId - INT32U
  - implementationDateTime - UTC\_TIME
  - supplyStatus - MeteringSupplyStatus [ENUM8]

##### See Also

[EmberAfMeteringSupplyStatus](#)

Definition at line 8960 of file [cli.doc](#).

**6.57.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_START\_SAMP\_RSP**  
**zcl metering start-samp-rsp [sampleId:2]**

- This command is transmitted by a Metering Device in response to a StartSampling command.
  - sampleId - INT16U

Definition at line 8966 of file [cli.doc](#).

**6.57.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_PROFILE**  
**zcl metering get-profile [intervalChannel:1] [endTime:4] [numberOfPeriods:1]**

- The GetProfile command is generated when a client device wishes to retrieve a list of captured Energy, Gas or water consumption for profiling purposes.
  - intervalChannel - AmiIntervalChannel [ENUM8]
  - endTime - UTC\_TIME
  - numberOfPeriods - INT8U

**See Also**

[EmberAfAmiIntervalChannel](#)

Definition at line 8976 of file [cli.doc](#).

**6.57.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_MIRROR\_REMOVED**

**zcl metering mirror-removed [endpointId:2]**

- The Mirror Removed Command allows the ESI to inform a sleepy Metering Device mirroring support has been removed or halted.
  - endpointId - INT16U

Definition at line 8982 of file [cli.doc](#).

**6.57.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_REQ\_FAST\_POLL\_MODE**

**zcl metering req-fast-poll-mode [fastPollUpdatePeriod:1] [duration:1]**

- The Request Fast Poll Mode command is generated when the metering client wishes to receive near real-time updates of InstantaneousDemand.
  - fastPollUpdatePeriod - INT8U
  - duration - INT8U

Definition at line 8989 of file [cli.doc](#).

**6.57.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_SCH\_SNAPSHOT**

**zcl metering sch-snapshot [issuerEventId:4] [commandIndex:1] [commandCount:1] [snapshotSchedulePayload:13]**

- This command is used to set up a schedule of when the device shall create snapshot data.
  - issuerEventId - INT32U
  - commandIndex - INT8U
  - commandCount - INT8U
  - snapshotSchedulePayload - struct SnapshotSchedulePayload

Definition at line [8998](#) of file [cli.doc](#).

**6.57.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_TAKE\_SNAPSHOT**

**zcl metering take-snapshot [snapshotCause:4]**

- This command is used to instruct the cluster server to take a single snapshot.
  - snapshotCause - SnapshotCause [BITMAP32]

Definition at line [9004](#) of file [cli.doc](#).

**6.57.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_SNAPSHOT**

**zcl metering get-snapshot [earliestStartTime:4] [latestEndTime:4] [snapshotOffset:1] [snapshotCause:4]**

- This command is used to request snapshot data from the cluster server.
  - earliestStartTime - UTC\_TIME
  - latestEndTime - UTC\_TIME
  - snapshotOffset - INT8U
  - snapshotCause - SnapshotCause [BITMAP32]

Definition at line [9013](#) of file [cli.doc](#).

**6.57.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_START\_SAMPLING**

**zcl metering start-sampling [issuerEventId:4] [startSamplingTime:4] [sampleType:1] [sampleRequestInterval:2] [maxNumberOfSamples:2]**

- The sampling mechanism allows a set of samples of the specified type of data to be taken, commencing at the stipulated start time. This mechanism may run concurrently with the capturing of profile data, and may refer the same parameters, albeit possibly at a different sampling rate.
  - issuerEventId - INT32U
  - startSamplingTime - UTC\_TIME

- sampleType - SampleType [ENUM8]
- sampleRequestInterval - INT16U
- maxNumberOfSamples - INT16U

**See Also**

[EmberAfSampleType](#)

Definition at line 9025 of file [cli.doc](#).

**6.57.2.19 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_GET\_SAMPLED\_DATA**  
**zcl metering get-sampled-data [sampleId:2] [earliestSampleTime:4] [sampleType:1] [numberOfSamples:2]**

- *This command is used to request sampled data from the server. Note that it is the responsibility of the client to ensure that it does not request more samples than can be held in a single command payload.*

- sampleId - INT16U
- earliestSampleTime - UTC\_TIME
- sampleType - SampleType [ENUM8]
- numberOfSamples - INT16U

**See Also**

[EmberAfSampleType](#)

Definition at line 9036 of file [cli.doc](#).

**6.57.2.20 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_RST\_LOAD\_LIMIT\_CTR**

**zcl metering rst-load-limit-ctr [providerId:4] [issuerEventId:4]**

- *The ResetLoadLimitCounter command shall cause the LoadLimitCounter attribute to be reset.*

- providerId - INT32U
- issuerEventId - INT32U

Definition at line 9043 of file [cli.doc](#).

**6.57.2.21 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_CHG\_SUPPLY**

**zcl metering chg-supply [providerId:4] [issuerEventId:4] [requestDateTime:4] [implementationDateTime:4] [proposedSupplyStatus:1] [supplyControlBits:1]**

- *This command is sent from the Head-end or ESI to the Metering Device to instruct it to change the status of the valve or load switch, i.e. the supply.*

- providerId - INT32U
- issuerEventId - INT32U
- requestDateTime - UTC\_TIME

- implementationDateTime - UTC\_TIME
- proposedSupplyStatus - MeteringSupplyStatus [ENUM8]
- supplyControlBits - SupplyControlBits [BITMAP8]

**See Also**

[EmberAfMeteringSupplyStatus](#)

Definition at line [9056](#) of file `cli.doc`.

#### **6.57.2.22 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_SIMPLE\_METERING\_LOCAL\_CHG\_SUPPLY**

**zcl metering local-chg-supply [proposedSupplyStatus:1]**

- *This command is a simplified version of the ChangeSupply command, intended to be sent from an IHD to a meter as the consequence of a user action on the IHD. Its purpose is to provide a local disconnection/reconnection button on the IHD in addition to the one on the meter.*

- proposedSupplyStatus - ProposedSupplyStatus [ENUM8]

## 6.58 Cluster Commands: Thermostat

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_THERMOSTAT\_SET

#### 6.58.1 Detailed Description

This group describes the CLI commands for the Thermostat cluster. Listed below is a description of the cluster:

*An interface for configuring and controlling the functionality of a thermostat.*

#### 6.58.2 Macro Definition Documentation

##### 6.58.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_THERMOSTAT\_SET

**zcl tstat set [mode:1] [amount:1]**

- *Command description for SetpointRaiseLower*
  - mode - SetpointAdjustMode [ENUM8]
  - amount - INT8S

**See Also**

[EmberAfSetpointAdjustMode](#)

Definition at line [9114](#) of file [cli.doc](#).

## 6.59 Cluster Commands: Tunneling

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_RANDOM\_TO\_SERVER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_TRANSFER\_TO\_SERVER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_TRANSFER\_TO\_CLIENT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_RANDOM\_TO\_CLIENT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_REQUEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_CLOSE

### 6.59.1 Detailed Description

This group describes the CLI commands for the Tunneling cluster. Listed below is a description of the cluster:

*The tunneling cluster provides an interface for tunneling protocols.*

### 6.59.2 Macro Definition Documentation

#### 6.59.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_RANDOM\_TO\_SERVER

##### **zcl tunneling random-to-server [tunnel-id:2] [length:2]**

- *Send a random amount of data through a tunnel to the server (used for testing)*
  - tunnel-id - INT16U - The two byte tunnel id
  - length - INT16U - The two byte length of the random data to send

Definition at line 1105 of file [cli.doc](#).

#### 6.59.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_TRANSFER\_TO\_SERVER

##### **zcl tunneling transfer-to-server [tunnel-id:2] [data:-1]**

- *Transfer data through a tunnel to the server.*
  - tunnel-id - INT16U - The two byte tunnel id
  - data - OCTET\_STRING - data to transfer to the client

Definition at line 1112 of file [cli.doc](#).

**6.59.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_TRANSFER\_TO\_CLIENT**

**zcl tunneling transfer-to-client [tunnel-id:2] [data:-1]**

- *Transfer data through a tunnel to the client (used for testing)*
  - tunnel-id - INT16U - The two byte tunnel id
  - data - OCTET\_STRING - data to transfer to the client

Definition at line 1119 of file [cli.doc](#).

**6.59.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_ZCL\_TUNNELING\_RANDOM\_TO\_CLIENT**

**zcl tunneling random-to-client [tunnel-id:2] [length:2]**

- *Send a random amount of data through a tunnel to the server (used for testing)*
  - tunnel-id - INT16U - The two byte tunnel id
  - length - INT16U - the length of random data to send to the client

Definition at line 1126 of file [cli.doc](#).

**6.59.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_REQUEST**

**zcl tunneling request [protocolId:1] [manufacturerCode:2] [flowControlSupport:1] [maximumIncomingTransferSize:2]**

- *RequestTunnel is the client command used to setup a tunnel association with the server. The request payload specifies the protocol identifier for the requested tunnel, a manufacturer code in case of proprietary protocols and the use of flow control for streaming protocols.*
  - protocolId - INT8U
  - manufacturerCode - INT16U
  - flowControlSupport - BOOLEAN
  - maximumIncomingTransferSize - INT16U

Definition at line 9134 of file [cli.doc](#).

**6.59.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_TUNNELING\_CLOSE**

**zcl tunneling close [tunnelId:2]**

- *Client command used to close the tunnel with the server. The parameter in the payload specifies the tunnel identifier of the tunnel that has to be closed. The server leaves the tunnel open and the assigned resources allocated until the client sends the CloseTunnel command or the CloseTunnel-Timeout fires.*
  - tunnelId - INT16U

Definition at line 9140 of file [cli.doc](#).

## 6.60 Cluster Commands: Window Covering

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_UP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_DOWN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_LIFT\_V-  
ALUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_LIFT\_P-  
ERCENT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_TILT\_V-  
ALUE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_TILT\_P-  
ERCENTAGE

### 6.60.1 Detailed Description

This group describes the CLI commands for the Window Covering cluster. Listed below is a description of the cluster:

*Provides an interface for controlling and adjusting automatic window coverings.*

### 6.60.2 Macro Definition Documentation

#### 6.60.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_UP

##### **zcl window-covering up**

- Moves window covering to InstalledOpenLimit - Lift and InstalledOpenLimit - Tilt

Definition at line 9156 of file [cli.doc](#).

#### 6.60.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_DOWN

##### **zcl window-covering down**

- Moves window covering to InstalledClosedLimit - Lift and InstalledCloseLimit - Tilt

Definition at line 9161 of file [cli.doc](#).

#### 6.60.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_STOP

##### **zcl window-covering stop**

- Stop any adjusting of window covering

Definition at line 9166 of file [cli.doc](#).

**6.60.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_LIFT\_VALUE**

**zcl window-covering go-to-lift-value [liftValue:2]**

- *Goto lift value specified*

– liftValue - INT16U

Definition at line [9172](#) of file [cli.doc](#).

**6.60.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_LIFT\_PERCENT**

**zcl window-covering go-to-lift-percent [percentageLiftValue:1]**

- *Goto lift percentage specified*

– percentageLiftValue - INT8U

Definition at line [9178](#) of file [cli.doc](#).

**6.60.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_TILT\_VALUE**

**zcl window-covering go-to-tilt-value [tiltValue:2]**

- *Goto tilt value specified*

– tiltValue - INT16U

Definition at line [9184](#) of file [cli.doc](#).

**6.60.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_WINDOW\_COVERING\_GO\_TO\_TILT\_PERCENTAGE**

**zcl window-covering go-to-tilt-percentage [percentageTiltValue:1]**

- *Goto tilt percentage specified*

– percentageTiltValue - INT8U

Definition at line [9190](#) of file [cli.doc](#).

## 6.61 Plugin Commands: Address Table

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_ADD
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_SET
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_REMOVE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_LOOKUP
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_PRINT

### 6.61.1 Detailed Description

This plugin provides a set of APIs and CLI commands for managing the address table

### 6.61.2 Macro Definition Documentation

#### 6.61.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_ADD

**plugin address-table add [entry:8]**

- Add an entry to the address table.
  - entry - IEEE\_ADDRESS - Entry to be added.

Definition at line 1153 of file [cli.doc](#).

#### 6.61.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_SET

**plugin address-table set [index:1] [eui64:8] [nodeId:2]**

- Set an entry in the address table according to the arguments specified
  - index - INT8U
  - eui64 - IEEE\_ADDRESS
  - nodeId - INT16U

Definition at line 1161 of file [cli.doc](#).

6.61.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_REMOVE

**plugin address-table remove [entry:8]**

- Remove an entry from the address table.
  - entry - IEEE\_ADDRESS - Entry to be removed.

Definition at line 1167 of file [cli.doc](#).

6.61.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_LOOKUP

**plugin address-table lookup [entry:8]**

- Lookup an entry in the address table.
  - entry - IEEE\_ADDRESS - Entry to be looked up.

Definition at line 1173 of file [cli.doc](#).

6.61.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ADDRESS\_TABLE\_PLUGIN\_ADDRESS\_TABLE\_PRINT

**plugin address-table print**

- Prints the address table.

Definition at line 1178 of file [cli.doc](#).

## 6.62 Plugin Commands: Button Joining

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_BUTTON\_JOINING\_PLUGIN\_-  
BUTTON\_JOINING\_BUTTON0
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_BUTTON\_JOINING\_PLUGIN\_-  
BUTTON\_JOINING\_BUTTON1

#### 6.62.1 Detailed Description

The Button Joining plugin contributes CLI commands to simulate button presses for the purposes of joining networks.

#### 6.62.2 Macro Definition Documentation

##### 6.62.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_BUTTON\_JOINING\_PLUGIN\_BUTTON\_JO- INING\_BUTTON0

###### **plugin button-joining button0**

- *Simulate a depression of button 0.*

Definition at line 1193 of file [cli.doc](#).

##### 6.62.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_BUTTON\_JOINING\_PLUGIN\_BUTTON\_JO- INING\_BUTTON1

###### **plugin button-joining button1**

- *Simulate a depression of button 1.*

Definition at line 1198 of file [cli.doc](#).

## 6.63 Plugin Commands: Calendar Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR\_CLIENT\_PLUGIN \_CALENDAR\_CLIENT\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR\_CLIENT\_PLUGIN \_CALENDAR\_CLIENT\_PRINT

#### 6.63.1 Detailed Description

The Calendar Client plugin contributes several commands to the application framework's CLI. These commands are used for interacting with calendars.

#### 6.63.2 Macro Definition Documentation

##### 6.63.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR\_CLIENT\_PLUGIN CALENDAR\_CLIENT\_CLEAR

**plugin calendar-client clear [endpoint:1]**

- *Clear the calendars.*
  - endpoint - INT8U - The endpoint.

Definition at line 1214 of file [cli.doc](#).

##### 6.63.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR\_CLIENT\_PLUGIN CALENDAR\_CLIENT\_PRINT

**plugin calendar-client print [endpoint:1]**

- *Print the calendars.*
  - endpoint - INT8U - The endpoint.

Definition at line 1220 of file [cli.doc](#).

## 6.64 Plugin Commands: Calendar Common

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SELECT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_SUMMARY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_WEEKS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_DAYS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_SPECIAL\_DAYS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_SEASONS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_TEST\_INIT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_SIMPLE\_CALENDAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_ENHANCED\_CALENDAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_FLAT\_CALENDAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_SIMPLE\_SPECIAL\_DAYS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_ENHANCED\_SPECIAL\_DAYS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_CAL\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_ADD\_CAL\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_DAY\_PROF\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_WEEK\_PROF\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_SEASONS\_INFO

### 6.64.1 Detailed Description

The calendar common plugin commands provide commands to view and manipulate the local copy of the calendar.

### 6.64.2 Macro Definition Documentation

6.64.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SELECT

**plugin calendar-common select [index:1]**

- *Selects a calendar to be printed.*
  - index - INT8U - The index of the calendar to be selected.

Definition at line 1236 of file [cli.doc](#).

6.64.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_SUMMARY

**plugin calendar-common print summary**

- *Prints the local calendar summary at the previously selected index.*

Definition at line 1241 of file [cli.doc](#).

6.64.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_WEEKS

**plugin calendar-common print weeks**

- *Prints the local calendar's weeks.*

Definition at line 1246 of file [cli.doc](#).

6.64.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_DAYS

**plugin calendar-common print days**

- *Prints the local calendar's days*

Definition at line 1251 of file [cli.doc](#).

6.64.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_SPECIAL\_DAYS

**plugin calendar-common print special-days**

- *Prints the local calendar's special days.*

Definition at line 1256 of file [cli.doc](#).

**6.64.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_PRINT\_SEASONS**

**plugin calendar-common print seasons**

- Prints the local calendar's seasons.

Definition at line 1261 of file [cli.doc](#).

**6.64.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_TEST\_INIT**

**plugin calendar-common test-init**

- Initializes test calendars with dummy data.

Definition at line 1266 of file [cli.doc](#).

**6.64.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_CLEAR**

**plugin calendar-common clear**

- Clear the calendars.

Definition at line 1271 of file [cli.doc](#).

**6.64.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_SIMPLE\_CALENDAR**

**plugin calendar-common load-simple-calendar [index:1] [providerId:4] [issuerEventId:4] [issuerCalendarId:4] [startTime:4] [type:1] [name:-1]**

- Loads the Simple Calendar defined in Appendix D.1 in the SE 1.2 Test specification.
  - index - INT8U - The index in the internal calendar table where this calendar is to be stored
  - providerId - INT32U - The provider ID
  - issuerEventId - INT32U - The issuer event ID
  - issuerCalendarId - INT32U - The issuer calendar ID
  - startTime - INT32U - The time when this calendar is to be considered active
  - type - INT8U - The type: Del=0x00, Rec=0x01, DelAndRec=0x02, Friendly=0x03, Aux=0x04
  - name - OCTET\_STRING - The calendar name

Definition at line 1283 of file [cli.doc](#).

**6.64.2.10 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_ENHANCED\_CALENDAR**

**plugin calendar-common load-enhanced-calendar [index:1] [providerId:4] [issuerEventId:4] [issuerCalendarId:4] [startTime:4] [type:1] [name:-1]**

- *Loads the Enhanced Calendar defined in Appendix D.2 in the SE 1.2 Test specification.*
  - index - INT8U - The index in the internal calendar table where this calendar is to be stored
  - providerId - INT32U - The provider ID
  - issuerEventId - INT32U - The issuer event ID
  - issuerCalendarId - INT32U - The issuer calendar ID
  - startTime - INT32U - The time when this calendar is to be considered active
  - type - INT8U - The type: Del=0x00, Rec=0x01, DelAndRec=0x02, Friendly=0x03, Aux=0x04
  - name - OCTET\_STRING - The calendar name

Definition at line 1295 of file [cli.doc](#).

**6.64.2.11 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_FLAT\_CALENDAR**

**plugin calendar-common load-flat-calendar [index:1] [providerId:4] [issuerEventId:4] [issuerCalendarId:4] [startTime:4] [type:1] [name:-1]**

- *Loads the Flat Calendar defined in Appendix D.3 in the SE 1.2 Test specification.*
  - index - INT8U - The index in the internal calendar table where this calendar is to be stored
  - providerId - INT32U - The provider ID
  - issuerEventId - INT32U - The issuer event ID
  - issuerCalendarId - INT32U - The issuer calendar ID
  - startTime - INT32U - The time when this calendar is to be considered active
  - type - INT8U - The type: Del=0x00, Rec=0x01, DelAndRec=0x02, Friendly=0x03, Aux=0x04
  - name - OCTET\_STRING - The calendar name

Definition at line 1307 of file [cli.doc](#).

**6.64.2.12 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_SIMPLE\_SPECIAL\_DAYS**

**plugin calendar-common load-simple-special-days [index:1]**

- *Loads the Simple Special Days defined in Appendix D.4 in the SE 1.2 Test specification.*
  - index - INT8U - The index in the internal calendar table where the speical days are to be stored

Definition at line 1313 of file [cli.doc](#).

**6.64.2.13 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_LOAD\_ENHANCED\_SPECIAL\_DAYS**

**plugin calendar-common load-enhanced-special-days [index:1]**

- Loads the Simple Special Days defined in Appendix D.5 in the SE 1.2 Test specification.
  - index - INT8U - The index in the internal calendar table where the speical days are to be stored

Definition at line 1319 of file [cli.doc](#).

**6.64.2.14 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_CAL\_INFO**

**plugin calendar-common set-cal-info [index:1] [providerId:4] [issuerEventId:4] [calId:4] [startTime:4] [calType:1] [calName:-1] [numberOfSeasons:1] [numberOfWeekProfiles:1] [numberOfDayProfiles:1]**

- Manually set local calendar information.
  - index - INT8U
  - providerId - INT32U
  - issuerEventId - INT32U
  - calId - INT32U
  - startTime - INT32U
  - calType - INT8U
  - calName - OCTET\_STRING
  - numberOfSeasons - INT8U
  - numberOfWeekProfiles - INT8U
  - numberOfDayProfiles - INT8U

Definition at line 1334 of file [cli.doc](#).

**6.64.2.15 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_ADD\_CAL\_INFO**

**plugin calendar-common add-cal-info [providerId:4] [issuerEventId:4] [calId:4] [startTime:4] [calType:1] [calName:-1] [numberOfSeasons:1] [numberOfWeekProfiles:1] [numberOfDayProfiles:1]**

- Adding calendar information.
  - providerId - INT32U
  - issuerEventId - INT32U
  - calId - INT32U
  - startTime - INT32U
  - calType - INT8U
  - calName - OCTET\_STRING

- numberOfSeasons - INT8U
- numberOfWeekProfiles - INT8U
- numberOfDayProfiles - INT8U

Definition at line 1348 of file [cli.doc](#).

**6.64.2.16 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_DAY\_PROF\_INFO**

**plugin calendar-common set-day-prof-info [index:1] [dayId:1] [entryId:1] [minutesFromMidnight:2] [data:1]**

- *Manually set local calendar's day profiles information.*

- index - INT8U
- dayId - INT8U
- entryId - INT8U
- minutesFromMidnight - INT16U
- data - INT8U

Definition at line 1358 of file [cli.doc](#).

**6.64.2.17 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_WEEK\_PROF\_INFO**

**plugin calendar-common set-week-prof-info [index:1] [weekId:1] [dayIdRefMon:1] [dayIdRefTue:1] [dayIdRefWed:1] [dayIdRefThu:1] [dayIdRefFri:1] [dayIdRefSat:1] [dayIdRefSun:1]**

- *Manually set local calendar's week profiles information.*

- index - INT8U
- weekId - INT8U
- dayIdRefMon - INT8U
- dayIdRefTue - INT8U
- dayIdRefWed - INT8U
- dayIdRefThu - INT8U
- dayIdRefFri - INT8U
- dayIdRefSat - INT8U
- dayIdRefSun - INT8U

Definition at line 1372 of file [cli.doc](#).

6.64.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CALENDAR\_COMMON\_PLUGIN\_CALENDAR\_COMMON\_SET\_SEASONS\_INFO

**plugin calendar-common set-seasons-info [index:1] [weekId:1] [startDate:4] [weekIdRef:1]**

- *Manually set local calendar's seasons information.*

- index - INT8U
- weekId - INT8U
- startDate - DATE
- weekIdRef - INT8U

Definition at line 1381 of file [cli.doc](#).

## 6.65 Plugin Commands: Calendar Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH CALENDAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH DAY PROFILES
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH WEEK PROFILE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH SEASONS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH SPECIAL DAYS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH CALENDAR CANCEL CALENDAR

### 6.65.1 Detailed Description

The calendar-server plugin contributes several commands to the application framework's CLI. These commands are used for adding, clearing, and printing calendars.

### 6.65.2 Macro Definition Documentation

#### 6.65.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH CALENDAR

**plugin calendar-server publish-calendar [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [calendarIndex:1]**

- *Publish an calendar.*
  - nodeId - INT16U - the destination node id
  - srcEndpoint - INT8U - the source endpoint
  - dstEndpoint - INT8U - the destination endpoint
  - calendarIndex - INT8U - the index of the calendar within the calendar table

Definition at line 1401 of file [cli.doc](#).

#### 6.65.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN CALENDAR SERVER PLUGIN CALENDAR SERVER PUBLISH DAY PROFILES

**plugin calendar-server publish-day-profiles [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [calendarIndex:1] [dayIndex:1]**

- *Publish the day profiles of the specified day in the specified calendar.*
  - nodeId - INT16U - the destination node id
  - srcEndpoint - INT8U - the source endpoint

- dstEndpoint - INT8U - the destination endpoint

## 6.66 Plugin Commands: Comms Hub Function

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_SIMULATE\_GBZ\_MSG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PRINT\_SUPPORTED\_USE\_CASES
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_SEND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_TIMEOUT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_GET\_TUNNEL\_ENDPOINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_CLOSE\_TUNNEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_CREATE\_TUNNEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PRINT

### 6.66.1 Detailed Description

The comms-hub-function plugin contributes several CLI commands to the application framework to be used in configuring and managing the CHF.

### 6.66.2 Macro Definition Documentation

#### 6.66.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_SIMULATE\_GBZ\_MSG

**plugin comms-hub-function simulate-gbz-msg [dstEUI64:8] [useCase:2]**

- *Simulate transmission of a GBZ message to the Comms Hub Function.*
  - dstEUI64 - IEEE\_ADDRESS
  - useCase - INT16U

Definition at line 1465 of file [cli.doc](#).

#### 6.66.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PLUGIN\_COMMIS\_HUB\_FUNCTION\_PRINT\_SUPPORTED\_USE\_CASES

**plugin comms-hub-function print-supported-use-cases**

- *Print the list of supported use cases. The message code printed should be used with the simulate-gbz-msg command.*

Definition at line 1470 of file [cli.doc](#).

**6.66.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMM\_HUB\_FUNCTION\_PLUGIN\_COMM\_HUB\_FUNCTION\_SEND**

**plugin comms-hub-function send [dstEUI64:8] [payload:-1]**

- *Send a message.*
  - dstEUI64 - IEEE\_ADDRESS
  - payload - OCTET\_STRING

Definition at line 1477 of file [cli.doc](#).

**6.66.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMM\_HUB\_FUNCTION\_PLUGIN\_COMM\_HUB\_FUNCTION\_TIMEOUT**

**plugin comms-hub-function timeout [timeout:4]**

- *Set the default sleepy message timeout.*
  - timeout - INT32U

Definition at line 1483 of file [cli.doc](#).

**6.66.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMM\_HUB\_FUNCTION\_PLUGIN\_COMM\_HUB\_FUNCTION\_GET\_TUNNEL\_ENDPOINT**

**plugin comms-hub-function get-tunnel-endpoint [nodeId:2]**

- *Retrieve the tunneling endpoint for a given nodeId.*
  - nodeId - INT16U

Definition at line 1489 of file [cli.doc](#).

**6.66.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMM\_HUB\_FUNCTION\_PLUGIN\_COMM\_HUB\_FUNCTION\_CLOSE\_TUNNEL**

**plugin comms-hub-function close-tunnel [dstEUI64:8]**

- *Remove the tunnel for a given device.*
  - dstEUI64 - IEEE\_ADDRESS

Definition at line 1495 of file [cli.doc](#).

6.66.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMM\_HUB\_FUNCTION\_PLUGIN\_COMMS\_HUB\_FUNCTION\_CREATE\_TUNNEL

**plugin comms-hub-function create-tunnel [dstEUI64:8] [endpoint:1]**

- *Create tunnel for the given device and endpoint.*

- dstEUI64 - IEEE\_ADDRESS
- endpoint - INT8U

Definition at line 1502 of file [cli.doc](#).

6.66.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COMM\_HUB\_FUNCTION\_PLUGIN\_COMM\_S\_HUB\_FUNCTION\_PRINT

**plugin comms-hub-function print**

- *Prints the comms hub tunnel table.*

Definition at line 1507 of file [cli.doc](#).

## 6.67 Plugin Commands: Concentrator

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_C-ONCENTRATOR\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_C-ONCENTRATOR\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_C-ONCENTRATOR\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_C-ONCENTRATOR\_AGG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_C-ONCENTRATOR\_PRINT\_TABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_C-ONCENTRATOR\_SET\_ROUTER\_BEHAVIOR

### 6.67.1 Detailed Description

The Concentrator plugin contributes several CLI commands to the application framework for controlling the sending of MTORRs.

### 6.67.2 Macro Definition Documentation

#### 6.67.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_CONCENTRATOR\_STATUS

##### **plugin concentrator status**

- Prints current status and configured parameters of the concentrator

Definition at line 1522 of file [cli.doc](#).

#### 6.67.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_CONCENTRATOR\_START

##### **plugin concentrator start**

- Starts the periodic broadcast of MTORRs

Definition at line 1527 of file [cli.doc](#).

#### 6.67.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_CONCENTRATOR\_STOP

##### **plugin concentrator stop**

- Stops the periodic broadcast of MTORRs

Definition at line 1532 of file [cli.doc](#).

**6.67.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_CONCENTRATOR\_AGG**

**plugin concentrator agg**

- (*Requires Concentrator Support to be enabled on this device.*) *Schedules a ZigBee PRO Many To One Route Request (MTORR) to be sent out at next opportunity, which will cause aggregation (many-to-one) routes to be created towards this concentrator.*

Definition at line 1537 of file [cli.doc](#).

**6.67.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_CONCENTRATOR\_PRINT\_TABLE**

**plugin concentrator print-table**

- *Print the source route table.*

Definition at line 1542 of file [cli.doc](#).

**6.67.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONCENTRATOR\_PLUGIN\_CONCENTRATOR\_SET\_ROUTER\_BEHAVIOR**

**plugin concentrator set-router-behavior [behavior:1]**

- *This command allows the user to set the router behavior for this plugin. The argument values come from [concentrator-support.h](#) in the enum with members starting with EMBER\_AF\_PLUGIN\_CONCENTRATOR\_ROUTER\_BEHAVIOR\_.*
  - behavior - INT8U - The value of a EMBER\_AF\_PLUGIN\_CONCENTRATOR\_ROUTER\_BEHAVIOR\_ enum member.

Definition at line 1548 of file [cli.doc](#).

## 6.68 Plugin Commands: Connection Manager

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONNECTION\_MANAGER\_PLUGIN\_CONNECTION\_MANAGER\_SET\_FORCE\_SHORT\_POLL

#### 6.68.1 Detailed Description

Runtime configuration CLI commands for Connection Manager

#### 6.68.2 Macro Definition Documentation

##### 6.68.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_CONNECTION\_MANAGER\_PLUGIN\_CONNECTION\_MANAGER\_SET\_FORCE\_SHORT\_POLL

**plugin connection-manager set-force-short-poll [sleepyEnable:1]**

- *Can be used to force the device to permanently poll on a short interval (must enabled for HA testing).*
  - sleepyEnable - INT8U - 1 to permanently force short polling, 0 to behave as normal (default).

Definition at line 1563 of file [cli.doc](#).

## 6.69 Plugin Commands: Counters

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTER\_TYPE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_SIMPLE\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_PRINT\_THRESHOLDS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_SET\_THRESHOLD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_RESET\_THRESHOLD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_SEND\_REQUEST

### 6.69.1 Detailed Description

This plugin provides APIs and CLI commands for reading and manipulating counters that record different events in the stack.

### 6.69.2 Macro Definition Documentation

#### 6.69.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_PRINT

##### plugin counters print

- Print all counter values and clear them.

Definition at line 1578 of file [cli.doc](#).

#### 6.69.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTER\_PRINT\_TYPE

##### plugin counter print-counter-type [type:1]

- Print value of this particular counter.
  - type - INT8U - The counter type to print.

Definition at line 1584 of file [cli.doc](#).

6.69.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_SIMPLE\_PRINT

### **plugin counters simple-print**

- Print all counter values.

Definition at line 1589 of file [cli.doc](#).

6.69.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_CLEAR

### **plugin counters clear**

- Clear all counter values.

Definition at line 1594 of file [cli.doc](#).

6.69.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_PRINT\_THRESHOLDS

### **plugin counters print-thresholds**

- Prints the thresholds of all the counters.

Definition at line 1599 of file [cli.doc](#).

6.69.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_SET\_THRESHOLD

### **plugin counters set-threshold [type:1] [threshold:2]**

- Set a threshold value for a particular type of counter.
  - type - INT8U - type of counter
  - threshold - INT16U - Threshold Value

Definition at line 1606 of file [cli.doc](#).

6.69.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_RESET\_THRESHOLD

### **plugin counters reset-threshold**

- Resets all thresholds values to 0xFFFF.

Definition at line 1611 of file [cli.doc](#).

6.69.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_COUNTERS\_PLUGIN\_COUNTERS\_SEND\_-  
REQUEST

**plugin counters send-request**

- *Sends a request for ota counters*

Definition at line 1616 of file [cli.doc](#).

## 6.70 Plugin Commands: Demand Response and Load Control

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_OPT\_IN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_OPT\_OUT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_CLEAR

#### 6.70.1 Detailed Description

The drlc plugin contributes CLI commands to the application framework to be used for constructing demand response load control commands.

#### 6.70.2 Macro Definition Documentation

##### 6.70.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_OPT\_IN

###### **plugin drlc opt in [endpoint:1] [eventId:4]**

- *Modify the entry in the clients load control event table to opt in for a scheduled load control event.*
  - endpoint - INT8U - The relevant endpoint.
  - eventId - INT32U - The event id of the event that the user is opting in or out of.

Definition at line 1633 of file [cli.doc](#).

##### 6.70.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_OPT\_OUT

###### **plugin drlc opt out [endpoint:1] [eventId:4]**

- *Modify the entry in the clients load control event table to opt out of a scheduled load control event.*
  - endpoint - INT8U - The relevant endpoint.
  - eventId - INT32U - The event id of the event that the user is opting in or out of.

Definition at line 1640 of file [cli.doc](#).

##### 6.70.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_PRINT

###### **plugin drlc print [endpoint:1]**

- *Print the Demand Response Load Control Table.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 1646 of file [cli.doc](#).

6.70.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_PLUGIN\_DRLC\_CLEAR  
**plugin drlc clear [endpoint:1]**

- *Clear the load control event table.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 1652 of file [cli.doc](#).

## 6.71 Plugin Commands: Demand Response and Load Control Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DR-LC\_SERVER\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DR-LC\_SERVER\_SLCE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DR-LC\_SERVER\_LCE\_SCHEDULE\_MAND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DR-LC\_SERVER\_SSLCE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DR-LC\_SERVER\_CSLE

### 6.71.1 Detailed Description

The drlc-server plugin contributes CLI commands to the application framework to be used for constructing demand response load control commands on the server side.

### 6.71.2 Macro Definition Documentation

#### 6.71.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DRLC\_SERVER- \_PRINT

##### plugin drlc-server print [endpoint:1]

- *Print the Demand Response Load Control Table.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 1669 of file [cli.doc](#).

#### 6.71.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DRLC\_SERVER- \_SLCE

##### plugin drlc-server slce [endpoint:1] [index:1] [length:1] [event:-1]

- *Schedule a load control event in the load control event table on a load control server. load control event bytes are expected as 23 raw bytes in the form {<eventId:4> <deviceClass:2> >ueg:1> >startTime:4> >duration:2> <criticalityLevel:1> >coolingTempOffset:1> >heatingTempOffset:1> >coolingTempSetPoint:2> >heatingTempSetPoint:2> >afgLoadPercentage:1> <dutyCycle:1> <eventControl:1>} all multibyte values should be little endian as though they were coming over the air. Example: plugin drlc-server slce 0 23 { ab 00 00 00 ff 0f 00 00 00 00 01 00 01 00 00 09 1a 09 1a 0a 00 }*
  - endpoint - INT8U - The relevant endpoint.
  - index - INT8U - Location in the load control event table for the event to be scheduled
  - length - INT8U - The length in the number of bytes
  - event - OCTET\_STRING - Byte array value for the load control event

Definition at line 1684 of file [cli.doc](#).

**6.71.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DRLC\_SERVER\_LCE\_SCHEDULE\_MAND**

**plugin drlc-server lce-schedule-mand [endpoint:1] [index:1] [eventId:4] [deviceClass:2] [utilityEnrollmentGroup:1] [startTime:4] [duration:2] [criticalityLevel:1] [eventControl:1]**

- *Schedules a load control event on the server.*
  - endpoint - INT8U - The relevant endpoint.
  - index - INT8U - Index of the load control event table that will be configured.
  - eventId - INT32U - The issuer event ID for this load control event.
  - deviceClass - INT16U - The device class bitfield this event applies to.
  - utilityEnrollmentGroup - INT8U - The UEG of the load control event.
  - startTime - INT32U - Time when the load control event should start.
  - duration - INT16U - Duration, in minutes, of the event.
  - criticalityLevel - INT8U - The level of criticality of the event. Higher values are more critical.
  - eventControl - INT8U - Bitmask that identifies other control options for the event.

Definition at line 1698 of file [cli.doc](#).

**6.71.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DRLC\_SERVER\_SSLLCE**

**plugin drlc-server ssllce [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [index:1]**

- *Command used on a DRLC server to send a scheduled load control event out of the load control event table.*
  - nodeId - INT16U - The destination node id.
  - srcEndpoint - INT8U - The source endpoint.
  - dstEndpoint - INT8U - The destination endpoint.
  - index - INT8U - index of the load control event in the server's load control event table.

Definition at line 1707 of file [cli.doc](#).

**6.71.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DRLC\_SERVER\_PLUGIN\_DRLC\_SERVER\_CSLCE**

**plugin drlc-server csllce [endpoint:1]**

- *Clear the scheduled load control events table.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 1713 of file [cli.doc](#).

## 6.72 Plugin Commands: Device Database

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_DATABASE\_PRINT\_ALL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_DATABASE\_DEVICE\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_DATABASE\_DEVICE\_ERASE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_DATABASE\_DEVICE\_ADD\_DUMMY

#### 6.72.1 Detailed Description

This plugin provides a set of CLI commands for printing and manipulating the device database.

#### 6.72.2 Macro Definition Documentation

##### 6.72.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_DATABASE\_PRINT\_ALL

###### **plugin device-database print-all**

- Print all devices in the database.

Definition at line 1728 of file [cli.doc](#).

##### 6.72.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_DATABASE\_DEVICE\_PRINT

###### **plugin device-database device print [eui64:8]**

- Print all the clusters and endpoints known about the specified device in the database.
  - eui64 - IEEE\_ADDRESS - The address of the device to be looked up (little endian)

Definition at line 1734 of file [cli.doc](#).

##### 6.72.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_DATABASE\_DEVICE\_ERASE

###### **plugin device-database device erase [eui64:8]**

- Erase the device with specified EUI64 from the database.
  - eui64 - IEEE\_ADDRESS - The address of the device to erase from the database.

Definition at line 1740 of file [cli.doc](#).

6.72.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_DATABASE\_PLUGIN\_DEVICE\_D-  
ATABASE\_DEVICE\_ADD\_DUMMY

**plugin device-database device add-dummy [eui64:8] [endpoints:1] [clusters:2]**

- Add a device with specified EUI64 and a sequential number of clusters and endpoints.

- eui64 - IEEE\_ADDRESS - The address of the dummy device to add.
- endpoints - INT8U - The number of dummy endpoints to add.
- clusters - INT16U - The number of dummy clusters to add.

Definition at line 1748 of file [cli.doc](#).

## 6.73 Plugin Commands: Device Management Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_CLIENT\_PLUGIN\_DEVICE\_MANAGEMENT\_CLIENT\_PRINT

#### 6.73.1 Detailed Description

The device management client plugin contributes CLI commands to the application framework to be used for getting, setting, and displaying information relevant to the Smart Energy 1.2 Device Management Cluster.

#### 6.73.2 Macro Definition Documentation

##### 6.73.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_CLIENT\_PLUGIN\_DEVICE\_MANAGEMENT\_CLIENT\_PRINT

###### **plugin device-management-client print**

- *Print the info relevant to device management.*

Definition at line 1764 of file [cli.doc](#).

## 6.74 Plugin Commands: Device Management Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PROVIDER\_ID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_ISSUER\_EVENT\_ID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_TARIFF\_TYPE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_TENANCY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_SUPPLIER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_SITE\_ID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_CIN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PASSWORD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PUB\_CHG\_OF\_TENANCY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PUB\_CHG\_OF\_SUPPLIER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_UPDATE\_SITE\_ID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_UPDATE\_CIN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PENDING\_UPDATES
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_SEND\_REQ\_NEW\_PASS\_RESP

### 6.74.1 Detailed Description

The device management server plugin contributes CLI commands to the application framework to be used for getting, setting, and displaying information relevant to the Smart Energy 1.2 Device Management Cluster.

### 6.74.2 Macro Definition Documentation

#### 6.74.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PRINT

##### **plugin device-management-server print**

- *Print the info relevant to device management.*

Definition at line 1780 of file [cli.doc](#).

6.74.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PROVIDER\_ID

**plugin device-management-server provider-id [providerId:4]**

- Set the provider id.
  - providerId - INT32U

Definition at line 1786 of file [cli.doc](#).

6.74.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_ISSUER\_EVENT\_ID

**plugin device-management-server issuer-event-id [issuerEventId:4]**

- Set the issuer event id.
  - issuerEventId - INT32U

Definition at line 1792 of file [cli.doc](#).

6.74.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_TARIFF\_TYPE

**plugin device-management-server tariff-type [tariffType:1]**

- Set the tariff type.
  - tariffType - INT8U

Definition at line 1798 of file [cli.doc](#).

6.74.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_PLUGIN\_DEVICE\_MANAGEMENT\_SERVER\_TENANCY

**plugin device-management-server tenancy [implementationDateTime:4] [tenancy:4]**

- Set the tenancy information.
  - implementationDateTime - UTC\_TIME
  - tenancy - INT32U

Definition at line 1805 of file [cli.doc](#).

## 6.75 Plugin Commands: Device Query Service

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_ENABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_DISABLE

#### 6.75.1 Detailed Description

This plugin provides a set of CLI commands for printing and manipulating the device database.

#### 6.75.2 Macro Definition Documentation

##### 6.75.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_STATUS

###### **plugin device-query-service status**

- *Print the current status of the device query service.*

Definition at line 1901 of file [cli.doc](#).

##### 6.75.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_ENABLE

###### **plugin device-query-service enable**

- *Enable the Device Query Service.*

Definition at line 1906 of file [cli.doc](#).

##### 6.75.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_PLUGIN\_DEVICE\_QUERY\_SERVICE\_DISABLE

###### **plugin device-query-service disable**

- *Disable the Device Query Service.*

Definition at line 1911 of file [cli.doc](#).

## 6.76 Plugin Commands: EEPROM

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EEPROM\_PLUGIN\_EEPROM\_-  
DATA\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EEPROM\_PLUGIN\_EEPROM\_-  
STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EEPROM\_PLUGIN\_EEPROM\_-  
INFO

#### 6.76.1 Detailed Description

The OTA Storage Common plugin provides Over-the-air commands for upgrading firmware and downloading specific files common to both server and client.

#### 6.76.2 Macro Definition Documentation

##### 6.76.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EEPROM\_PLUGIN\_EEPROM\_DATA\_PRIN- T

###### **plugin eeprom data-print [offset:4]**

- *Print raw bytes stored in the EEPROM*
  - offset - INT32U - The offset within the EEPROM to print.

Definition at line 1929 of file [cli.doc](#).

##### 6.76.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EEPROM\_PLUGIN\_EEPROM\_STATUS

###### **plugin eeprom status**

- *Print the state of the EEPROM driver.*

Definition at line 1934 of file [cli.doc](#).

##### 6.76.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EEPROM\_PLUGIN\_EEPROM\_INFO

###### **plugin eeprom info**

- *Print detailed info about the EEPROM part.*

Definition at line 1939 of file [cli.doc](#).

## 6.77 Plugin Commands: EZ-Mode Commissioning

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EZMODE\_COMMISSIONING\_PLUGIN\_EZMODE\_COMMISSIONING\_CLIENT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EZMODE\_COMMISSIONING\_PLUGIN\_EZMODE\_COMMISSIONING\_SERVER

### 6.77.1 Detailed Description

The EZ-Mode Commissioning plugin contributes several commands to the application framework's CLI.

### 6.77.2 Macro Definition Documentation

#### 6.77.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EZMODE\_COMMISSIONING\_PLUGIN\_EZMODE\_COMMISSIONING\_CLIENT

**plugin ezmode-commissioning client [endpoint:1] [direction:1] [clusterIds:2]**

- Start EZ-Mode client commissioning.
  - endpoint - INT8U - The local endpoint.
  - direction - INT8U - EMBER\_AF\_EZMODE\_COMMISSIONING\_SERVER\_TO\_CLIENT or EMBER\_AF\_EZMODE\_COMMISSIONING\_CLIENT\_TO\_SERVER.
  - clusterIds - INT16U - A list of cluster ids.

Definition at line 1957 of file [cli.doc](#).

#### 6.77.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EZMODE\_COMMISSIONING\_PLUGIN\_EZMODE\_COMMISSIONING\_SERVER

**plugin ezmode-commissioning server [endpoint:1] [identifyTimeS:2]**

- Start EZ-Mode server commissioning.
  - endpoint - INT8U - The local endpoint.
  - identifyTimeS - INT16U - The identify time in seconds.

Definition at line 1964 of file [cli.doc](#).

## 6.78 Plugin Commands: End Device Support

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_END\_DEVICE\_SUPPORT\_PLUGIN\_END\_DEVICE\_SUPPORT\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_END\_DEVICE\_SUPPORT\_PLUGIN\_END\_DEVICE\_SUPPORT\_POLL\_COMPLETED\_CALLBACK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_END\_DEVICE\_SUPPORT\_PLUGIN\_END\_DEVICE\_SUPPORT\_FORCE\_SHORT\_POLL

#### 6.78.1 Detailed Description

The End Device Support plugin contributes commands for controlling the polling behavior of the device.

#### 6.78.2 Macro Definition Documentation

##### 6.78.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_END\_DEVICE\_SUPPORT\_PLUGIN\_END\_DEVICE\_SUPPORT\_STATUS

###### **plugin end-device-support status**

- *Display the status of the End Device's polling.*

Definition at line 1979 of file [cli.doc](#).

##### 6.78.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_END\_DEVICE\_SUPPORT\_PLUGIN\_END\_DEVICE\_SUPPORT\_POLL\_COMPLETED\_CALLBACK

###### **plugin end-device-support poll-completed-callback [pollCompletedCallbackCommand:1]**

- *Sets whether the device's poll completed callback function is enabled.*
  - pollCompletedCallbackCommand - BOOLEAN - The value indicating whether the device's poll completed callback function is enabled.

Definition at line 1985 of file [cli.doc](#).

##### 6.78.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_END\_DEVICE\_SUPPORT\_PLUGIN\_END\_DEVICE\_SUPPORT\_FORCE\_SHORT\_POLL

###### **plugin end-device-support force-short-poll [shortPoll:1]**

- *Sets whether the CLI forces the device to short poll.*
  - shortPoll - BOOLEAN - The value indicating whether the device should short poll.

Definition at line 1991 of file [cli.doc](#).

## 6.79 Plugin Commands: Events Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_EPRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_SET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_ADD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_PUBLISH

### 6.79.1 Detailed Description

The events-server plugin contributes several commands to the application framework's CLI. These commands are used for adding, clearing, and printing events.

### 6.79.2 Macro Definition Documentation

#### 6.79.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_CLEAR

**plugin events-server clear [endpoint:1] [logId:1]**

- Clear out the specified event log for the provided endpoint.
  - endpoint - INT8U - the relevant endpoint
  - logId - INT8U - the log to be cleared

Definition at line 2009 of file [cli.doc](#).

#### 6.79.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_PRINT

**plugin events-server print [endpoint:1] [logId:1]**

- Print the specified event log for the provided endpoint.
  - endpoint - INT8U - the relevant endpoint
  - logId - INT8U - the log to be printed

Definition at line 2016 of file [cli.doc](#).

**6.79.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_EPRINT**

**plugin events-server eprint [endpoint:1] [logId:1] [index:1]**

- Print the event at the given index in the specified event log for the provided endpoint.

- endpoint - INT8U - the relevant endpoint
- logId - INT8U - the relevant log
- index - INT8U - the index within the event log to print

Definition at line 2024 of file [cli.doc](#).

**6.79.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_SET**

**plugin events-server set [endpoint:1] [logId:1] [index:1] [eventId:2] [eventTime:4] [eventData:-1]**

- Set the event at the specified index in the event log for the provided endpoint.

- endpoint - INT8U - the relevant endpoint
- logId - INT8U - the relevant log
- index - INT8U - the index within the event log to set
- eventId - INT16U - the event id
- eventTime - INT32U - the event time
- eventData - OCTET\_STRING - additional event data

Definition at line 2035 of file [cli.doc](#).

**6.79.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_ADD**

**plugin events-server add [endpoint:1] [logId:1] [eventId:2] [eventTime:4] [eventData:-1]**

- Append the event to the event log for the provided endpoint. Once the event log is full, new events will start overwriting old events at the beginning of the table.

- endpoint - INT8U - the relevant endpoint
- logId - INT8U - the relevant log
- eventId - INT16U - the event id
- eventTime - INT32U - the event time
- eventData - OCTET\_STRING - additional event data

Definition at line 2046 of file [cli.doc](#).

**6.79.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_EVENTS\_SERVER\_PLUGIN\_EVENTS\_SERVER\_PUBLISH****plugin events-server publish [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [logId:1] [index:1] [eventControl:1]**

- *Publish an event.*
  - nodeId - INT16U - the destination node id
  - srcEndpoint - INT8U - the source endpoint
  - dstEndpoint - INT8U - the destination endpoint
  - logId - INT8U - the relevant log
  - index - INT8U - the index within the event log to set
  - eventControl - INT8U - the event control

Definition at line [2057](#) of file [cli.doc](#).

## 6.80 Plugin Commands: Find and Bind Initiator

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_FIND\_AND\_BIND\_INITIATOR\_PLUGIN\_FIND\_AND\_BIND\_INITIATOR

#### 6.80.1 Detailed Description

Commands for the finding and binding initiator process from the Base Device Behavior spec.

#### 6.80.2 Macro Definition Documentation

##### 6.80.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_FIND\_AND\_BIND\_INITIATOR\_PLUGIN\_FIND\_AND\_BIND\_INITIATOR

**plugin find-and-bind initiator [endpoint:1]**

- *Makes this node start the initiator part of the finding and binding process.*
  - endpoint - INT8U - The endpoint on which to begin the Finding and Binding initiator process.

Definition at line 2073 of file [cli.doc](#).

## 6.81 Plugin Commands: Find and Bind Target

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_FIND\_AND\_BIND\_TARGET\_PLUGIN\_FIND\_AND\_BIND\_TARGET

#### 6.81.1 Detailed Description

Commands for the finding and binding target process from the Base Device Behavior spec.

#### 6.81.2 Macro Definition Documentation

##### 6.81.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_FIND\_AND\_BIND\_TARGET\_PLUGIN\_FIND\_AND\_BIND\_TARGET

**plugin find-and-bind target [endpoint:1]**

- *Makes this node start identifying as a target for binding with an initiator node.*
  - endpoint - INT8U - The endpoint on which to begin the Finding and Binding target process.

Definition at line 2089 of file [cli.doc](#).

## 6.82 Plugin Commands: Fragmentation

The Fragmentation Plugin provides the ability to support fragmentation transmissions. The CLI allows it to introduce negative behavior to foster testing.

## 6.83 Plugin Commands: GBCS Device Log

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_RESET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_COUNT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_STORE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_REMOVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_GET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_EXISTS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_IS\_SLEEPY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_FILL

### 6.83.1 Detailed Description

The gbc-device-log plugin contributes several CLI commands to the application framework to be used in configuring and managing the GBCS Device Log.

### 6.83.2 Macro Definition Documentation

#### 6.83.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_CLEAR

##### **plugin gbc-device-log clear**

- Clear all entries from the GBCS Device Log.

Definition at line 2132 of file [cli.doc](#).

#### 6.83.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_RESET

##### **plugin gbc-device-log reset**

- Reset the GBCS Device Log to include just those entries configured with the plugin.

Definition at line 2137 of file [cli.doc](#).

**6.83.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_COUNT**

**plugin gbc-device-log count**

- *Get the number of entries in the GBCS Device Log.*

Definition at line 2142 of file [cli.doc](#).

**6.83.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_STORE**

**plugin gbc-device-log store [deviceId:8] [deviceType:1]**

- *Add or update an entry within the GBCS Device Log.*
  - deviceId - IEEE\_ADDRESS - The EUI64 of the device to be added or updated
  - deviceType - INT8U - The GBCS device type of the device to be added or updated

Definition at line 2149 of file [cli.doc](#).

**6.83.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_REMOVE**

**plugin gbc-device-log remove [deviceId:8]**

- *Remove an entry from the GBCS Device Log.*
  - deviceId - IEEE\_ADDRESS - The EUI64 of the device to be removed

Definition at line 2155 of file [cli.doc](#).

**6.83.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_GET**

**plugin gbc-device-log get [deviceId:8]**

- *Get device info about an entry in the GBCS Device Log*
  - deviceId - IEEE\_ADDRESS - The EUI64 of the device for which information is requested

Definition at line 2161 of file [cli.doc](#).

**6.83.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_EXISTS**

**plugin gbc-device-log exists [deviceId:8] [deviceType:1]**

- *Check to see if a device exists in the GBCS Device Log.*
  - deviceId - IEEE\_ADDRESS - The EUI64 of the device in question
  - deviceType - INT8U - The GBCS device type of the device in question

Definition at line 2168 of file [cli.doc](#).

6.83.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_PRINT

**plugin gbcst-device-log print**

- Print all entries in the GBCS Device log.

Definition at line 2173 of file [cli.doc](#).

6.83.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_IS\_SLEEPY

**plugin gbcst-device-log is-sleepy [deviceType:1]**

- Is the given device type a sleepy device.
  - deviceType - INT8U - The GBCS device type to be checked

Definition at line 2179 of file [cli.doc](#).

6.83.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_DEVICE\_LOG\_PLUGIN\_GBCS\_DEVICE\_LOG\_FILL

**plugin gbcst-device-log fill**

- Helper command to fill the GBCS Device Log with random info.

Definition at line 2184 of file [cli.doc](#).

## 6.84 Plugin Commands: GBCS Gas Meter

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_GAS\_METER\_PLUGIN\_GBCS\_GAS\_METER\_REPORT\_ATTRIBUTES

#### 6.84.1 Detailed Description

The GBCS gas meter plugin contributes several CLI commands to the application framework to be used in configuring and managing the GSME.

#### 6.84.2 Macro Definition Documentation

##### 6.84.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GBCS\_GAS\_METER\_PLUGIN\_GBCS\_GAS\_METER\_REPORT\_ATTRIBUTES

###### **plugin gbcsgasmeter report-attributes**

- *Report the gas meter attributes to the mirror.*

Definition at line 2199 of file [cli.doc](#).

## 6.85 Plugin Commands: Gas Proxy Function

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_SIMULATE\_GBZ\_MSG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_SIMULATE\_GBZ\_MSG\_CREATION
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PRINT\_SUPPORTED\_USE\_CASES
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PRINT\_LOG\_CATCHUPS\_IN\_PROGRESS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_SIMULATE\_FUTURE\_DATED\_MSG

### 6.85.1 Detailed Description

The reporting plugin contributes several CLI commands to the application framework to be used in creating and managing Gas Proxy Function functionality on the device.

### 6.85.2 Macro Definition Documentation

#### 6.85.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_SIMULATE\_GBZ\_MSG

##### **plugin gas-proxy-function simulate-gbz-msg [useCase:2]**

- *Simulate transmission of a GBZ message to the Gas Proxy Function.*
  - useCase - INT16U

Definition at line 2216 of file [cli.doc](#).

#### 6.85.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_SIMULATE\_GBZ\_MSG\_CREATION

##### **plugin gas-proxy-function simulate-gbz-msg-creation**

- *Testing of GBZ message controller API.*

Definition at line 2221 of file [cli.doc](#).

#### 6.85.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PRINT\_SUPPORTED\_USE\_CASES

##### **plugin gas-proxy-function print-supported-use-cases**

- *Print the list of supported use cases. The message code printed should be used with the simulate-gbz-msg command.*

Definition at line 2226 of file [cli.doc](#).

6.85.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_-  
PROXY\_FUNCTION\_PRINT\_LOG\_CATCHUPS\_IN\_PROGRESS

**plugin gas-proxy-function print-log-catchups-in-progress**

- *Print the number of logs that are currently catching up with missed entries.*

Definition at line 2231 of file [cli.doc](#).

6.85.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GAS\_PROXY\_FUNCTION\_PLUGIN\_GAS\_-  
PROXY\_FUNCTION\_SIMULATE\_FUTURE\_DATED\_MSG

**plugin gas-proxy-function simulate-future-dated-msg**

- *Simulate transmission of a GBZ message to the Gas Proxy Function.*

Definition at line 2236 of file [cli.doc](#).

## 6.86 Plugin Commands: Generic Device Profile

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_PUSH\_BUTTON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_INITIATE\_KEY\_EXCHANGE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_SET\_VALIDATION
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_PUSH\_ATTRIBUTE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_IDENTIFY

### 6.86.1 Detailed Description

The RF4CE GDP plugin contributes several commands to the application framework's CLI.

### 6.86.2 Macro Definition Documentation

#### 6.86.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_PUSH\_BUTTON

##### **plugin rf4ce-gdp push-button [setPending:1]**

- Set or clear the "push-button stimulus received" flag.
  - setPending - BOOLEAN - 0 to clear the flag or any other value to set it.

Definition at line [2252](#) of file [cli.doc](#).

#### 6.86.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_INITIATE\_KEY\_EXCHANGE

##### **plugin rf4ce-gdp initiate-key-exchange [pairingIndex:1]**

- Initiate key exchange.
  - pairingIndex - INT8U - The index of the entry in the pairing table with which to initiate key exchange.

Definition at line [2258](#) of file [cli.doc](#).

#### 6.86.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_SET\_VALIDATION

##### **plugin rf4ce-gdp set-validation [success:1]**

- Accept or reject the validation.

- success - BOOLEAN - 0 if validation has failed or any other value if it succeeded.

Definition at line 2264 of file [cli.doc](#).

#### **6.86.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_PUSH\_ATTRIBUTE**

**plugin rf4ce-gdp push-attribute [pairingIndex:1] [profileId:1] [vendorId:2] [attributeId:1] [entryId:2] [value:-1]**

- *Send a Push Attributes command.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - profileId - INT8U - The profile id.
  - vendorId - INT16U - The vendor id.
  - attributeId - INT8U - The attribute id.
  - entryId - INT16U - The entry id.
  - value - OCTET\_STRING - The value.

Definition at line 2275 of file [cli.doc](#).

#### **6.86.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_PLUGIN\_RF4CE\_GDP\_IDEN-TIFY**

- *Send an Identify command.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - vendorId - INT16U - The vendor id.
  - flags - INT8U - The identify flags.
  - timeS - INT16U - The identify time in seconds.

Definition at line 2284 of file [cli.doc](#).

## 6.87 Plugin Commands: Generic Device Profile Identification Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_CLIENT\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_CLIENT\_USER\_INTERACTION

#### 6.87.1 Detailed Description

The RF4CE GDP Identification Client plugin contributes several commands to the application framework's CLI.

#### 6.87.2 Macro Definition Documentation

##### 6.87.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_CLIENT\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_CLIENT\_USER\_INTERACTION

**plugin rf4ce-gdp-identification-client user-interaction**

- *Indicate that user interaction has occurred.*

Definition at line 2299 of file [cli.doc](#).

## 6.88 Plugin Commands: Generic Device Profile Identification Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_SERVER\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_SERVER\_IDENTITY

#### 6.88.1 Detailed Description

The RF4CE GDP Identification Server plugin contributes several commands to the application framework's CLI.

#### 6.88.2 Macro Definition Documentation

##### 6.88.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_SERVER\_PLUGIN\_RF4CE\_GDP\_IDENTIFICATION\_SERVER\_IDENTITY

**plugin rf4ce-gdp-identification-server identify [pairingIndex:1] [flags:1] [timeS:2]**

- *Send an Identify command to an identification client. If the local device is a polling server and the identification client is also a polling client, the plugin will wait for the next poll before sending the command.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - flags - INT8U - The identify flags.
  - timeS - INT16U - The identify time in seconds.

Definition at line 2317 of file [cli.doc](#).

## 6.89 Plugin Commands: Green Power Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_SET\_PROXY\_ENTRY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_ADD\_SINK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_ADD\_GROUP\_SINK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_RM\_GPD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_RM\_SINK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_PRINT\_PROXY\_TABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_CLEAR\_PROXY\_TABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_DUPLICATE\_FILTER\_TEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_SET\_KEY

### 6.89.1 Detailed Description

The Green Power Client plugin contributes CLI commands to the application framework to be used for getting, setting, and displaying information relevant to the Green Power Client cluster.

### 6.89.2 Macro Definition Documentation

#### 6.89.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_SET\_PROXY\_ENTRY

**plugin green-power-client set-proxy-entry [index:1] [sourceID:4] [sinkNodeId:2] [options:4]**

- *Set a proxy table entry*
  - index - INT8U - index to proxy table
  - sourceID - INT32U - GPD Source ID
  - sinkNodeId - INT16U - Sink's node address
  - options - INT32U

Definition at line 2337 of file [cli.doc](#).

#### 6.89.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_ADD\_SINK

**plugin green-power-client add-sink [sourceID:4] [sinkIeee:8]**

- Add a sink for a given GPD
  - sourceID - INT32U - GPD Source ID
  - sinkIeee - IEEE\_ADDRESS - Sink's IEEE address

Definition at line 2344 of file [cli.doc](#).

**6.89.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_ADD\_GROUP\_SINK**

**plugin green-power-client add-group-sink [sourceID:4] [sinkGroup:2]**

- Add a groupcast sink for a given GPD
  - sourceID - INT32U - GPD Source ID
  - sinkGroup - INT16U - Sink group

Definition at line 2351 of file [cli.doc](#).

**6.89.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_RM\_GPD**

**plugin green-power-client rm-gpd [sourceID:4]**

- Remove a given GPD from the proxy table
  - sourceID - INT32U - GPD Source ID

Definition at line 2357 of file [cli.doc](#).

**6.89.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_RM\_SINK**

**plugin green-power-client rm-sink [sourceID:4] [sinkIeee:8]**

- remove a sink for a given GPD. If that's the last sink, remove the proxy table entry
  - sourceID - INT32U - GPD Source ID
  - sinkIeee - IEEE\_ADDRESS - Sink's IEEE address

Definition at line 2364 of file [cli.doc](#).

**6.89.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_PRINT\_PROXY\_TABLE**

**plugin green-power-client print-proxy-table**

- Print the proxy table

Definition at line 2369 of file [cli.doc](#).

6.89.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_CLEAR\_PROXY\_TABLE

**plugin green-power-client clear-proxy-table**

- *clear the proxy table*

Definition at line 2374 of file [cli.doc](#).

6.89.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_DUPLICATE\_FILTER\_TEST

**plugin green-power-client duplicate-filter-test [endpoint:1] [sourceId:4] [sequenceNumber:1]**

- *This is used to instrument the current device receiving a message in order to test the duplicate message filtering functionality.*
  - endpoint - INT8U
  - sourceId - INT32U - source Id of the fake incoming message
  - sequenceNumber - INT8U

Definition at line 2382 of file [cli.doc](#).

6.89.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_CLIENT\_PLUGIN\_GREEN\_POWER\_CLIENT\_SET\_KEY

**plugin green-power-client set-key [index:1] [key:16]**

- *This is used to set the key for a proxy table entry*
  - index - INT8U
  - key - SECURITY\_KEY - source Id of the fake incoming message

Definition at line 2389 of file [cli.doc](#).

## 6.90 Plugin Commands: Green Power Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_CRYPTOTEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_COMMISION
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_TABLE\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_TABLE\_SET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_TABLE\_PRINT

#### 6.90.1 Detailed Description

The Green Power Server plugin contributes CLI commands to the application framework to be used for getting, setting, and displaying information relevant to the Green Power Server cluster.

#### 6.90.2 Macro Definition Documentation

##### 6.90.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_CRYPTOTEST

###### **plugin green-power-server cryptotest**

- *Crypto test*

Definition at line 2405 of file [cli.doc](#).

##### 6.90.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_COMMISION

###### **plugin green-power-server commission [action:1]**

- *Put the GPS in commissioning mode*
  - action - INT8U - 1 to enter, 2 to leave

Definition at line 2411 of file [cli.doc](#).

##### 6.90.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_TABLE\_CLEAR

###### **plugin green-power-server table-clear**

- *Clear all entries within the customized translation table.*

Definition at line 2416 of file [cli.doc](#).

**6.90.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_TABLE\_SET**

**plugin green-power-server table-set [index:1] [valid:1] [options:1] [gpdEndpoint:1] [gpdIeeeAddr:8] [sourceId:4] [endpoint:1] [gpdCommand:1] [zigbeeProfile:2] [zigbeeCluster:2] [zigbeeCommandId:2] [payloadSrc:1] [zclPayloadDefault:-1]**

- *Clear all entries within the customized translation table.*
  - index - INT8U - index to translation table
  - valid - BOOLEAN - flag indicating if the entry is valid or not
  - options - INT8U
  - gpdEndpoint - INT8U
  - gpdIeeeAddr - IEEE\_ADDRESS
  - sourceId - INT32U
  - endpoint - INT8U - the endpoint for which the translation is valid.
  - gpdCommand - INT8U
  - zigbeeProfile - INT16U
  - zigbeeCluster - INT16U
  - zigbeeCommandId - INT16U
  - payloadSrc - INT8U
  - zclPayloadDefault - OCTET\_STRING

Definition at line [2434](#) of file [cli.doc](#).

**6.90.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_SERVER\_PLUGIN\_GREEN\_POWER\_SERVER\_TABLE\_PRINT**

**plugin green-power-server table-print**

- *Clear all entries within the customized translation table.*

Definition at line [2439](#) of file [cli.doc](#).

## 6.91 Plugin Commands: Green Power Test Device

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_TEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_IEEE\_TEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_COMM
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_CHANNEL\_REQUEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SET\_PHY\_CHANNEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SETUP\_GPD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SETUP\_IEEE\_GPD

#### 6.91.1 Detailed Description

The Green Power Test Device plugin contributes CLI commands to the application framework to be used for generating commands from a GPD

#### 6.91.2 Macro Definition Documentation

##### 6.91.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_TEST

**plugin green-power-test-device send-test [gpdCommandId:1] [gpdCommandPayload:-1]**

- *Send a test GPD command*
  - gpdCommandId - INT8U - gpd command ID
  - gpdCommandPayload - OCTET\_STRING - gpd command payload

Definition at line 2456 of file [cli.doc](#).

##### 6.91.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_IEEE\_TEST

**plugin green-power-test-device send-ieee-test [gpdCommandId:1] [gpdCommandPayload:-1]**

- *Send a test GPD command*
  - gpdCommandId - INT8U - gpd command ID
  - gpdCommandPayload - OCTET\_STRING - gpd command payload

Definition at line 2463 of file [cli.doc](#).

6.91.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_COMM

**plugin green-power-test-device send-comm [type:1]**

- *Send a test GPD command*
  - type - INT8U - 0 for tx only, 1 for bidir

Definition at line 2469 of file [cli.doc](#).

6.91.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SEND\_CHANNEL\_REQUEST

**plugin green-power-test-device send-channel-request [channel:1]**

- *Send a test GPD command*
  - channel - INT8U - Channel to set

Definition at line 2475 of file [cli.doc](#).

6.91.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SET\_PHY\_CHANNEL

**plugin green-power-test-device set-phy-channel [channel:1]**

- *set the phy channel*
  - channel - INT8U - Channel to set

Definition at line 2481 of file [cli.doc](#).

6.91.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_SETUP\_GPD

**plugin green-power-test-device setup-gpd [srcId:4] [key:-1]**

- *init a GPD*
  - srcId - INT32U - gpd src ID
  - key - OCTET\_STRING - the key

Definition at line 2488 of file [cli.doc](#).

6.91.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GREEN\_POWER\_TEST\_DEVICE\_PLUGIN-  
\_GREEN\_POWER\_TEST\_DEVICE\_SETUP\_IEEE\_GPD

**plugin green-power-test-device setup-ieee-gpd [eui:-1] [key:-1]**

- *init a Ieee GPD*
  - eui - OCTET\_STRING - gpd Ieee ID
  - key - OCTET\_STRING - the key

Definition at line [2495](#) of file [cli.doc](#).

## 6.92 Plugin Commands: Groups Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GROUPS\_SERVER\_PLUGIN\_GROUPS\_SERVER\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GROUPS\_SERVER\_PLUGIN\_GROUPS\_SERVER\_CLEAR

#### 6.92.1 Detailed Description

The groups server plugin contributes a CLI command to the application framework to be used for printing information related to groups.

#### 6.92.2 Macro Definition Documentation

##### 6.92.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GROUPS\_SERVER\_PLUGIN\_GROUPS\_SERVER\_PRINT

###### **plugin groups-server print**

- *Print information about the contents of the groups table.*

Definition at line 2510 of file [cli.doc](#).

##### 6.92.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_GROUPS\_SERVER\_PLUGIN\_GROUPS\_SERVER\_CLEAR

###### **plugin groups-server clear**

- *Clear the groups table on every endpoint.*

Definition at line 2515 of file [cli.doc](#).

## 6.93 Plugin Commands: IAS Zone Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_CLIENT\_PLUGIN\_IAS\_ZONE\_CLIENT\_PRINT\_SERVERS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_CLIENT\_PLUGIN\_IAS\_ZONE\_CLIENT\_CLEAR\_ALL

#### 6.93.1 Detailed Description

This plugin provides a set of CLI commands for managing the servers known to the IAS Zone client.

#### 6.93.2 Macro Definition Documentation

##### 6.93.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_CLIENT\_PLUGIN\_IAS\_ZONE\_CLIENT\_PRINT\_SERVERS

###### **plugin ias-zone-client print-servers**

- *Print the known IAS Zone Servers.*

Definition at line 2530 of file [cli.doc](#).

##### 6.93.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_CLIENT\_PLUGIN\_IAS\_ZONE\_CLIENT\_CLEAR\_ALL

###### **plugin ias-zone-client clear-all**

- *Clear all known IAS Zone Servers from local device.*

Definition at line 2535 of file [cli.doc](#).

## 6.94 Plugin Commands: IAS Zone Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_SERVER\_PLUGIN\_IAS\_ZONE\_SERVER\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_SERVER\_PLUGIN\_IAS\_ZONE\_SERVER\_CHANGE\_STATUS

#### 6.94.1 Detailed Description

This plugin provides a set of CLI commands for managing the local IAS Zone server.

#### 6.94.2 Macro Definition Documentation

##### 6.94.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_SERVER\_PLUGIN\_IAS\_ZONE\_SERVER\_INFO

**plugin ias-zone-server info [endpoint:1]**

- *Print current value of the following cluster attributes: zone type, zone state, zone status, zone id*
  - endpoint - INT8U - The endpoint whose IAS Zone Cluster information is to be printed

Definition at line 2551 of file [cli.doc](#).

##### 6.94.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IAS\_ZONE\_SERVER\_PLUGIN\_IAS\_ZONE\_SERVER\_CHANGE\_STATUS

**plugin ias-zone-server changeStatus [newStatus:2] [timeSinceOccurredSeconds:1] [endpoint:1]**

- *Update the zone status attribute of a given endpoint's IAS Zone cluster to the given value*
  - newStatus - INT16U - The new status to be written
  - timeSinceOccurredSeconds - INT8U - The amount time that has passed since the last update occurred (seconds)
  - endpoint - INT8U - The endpoint whose zone status attribute is to be updated

Definition at line 2559 of file [cli.doc](#).

## 6.95 Plugin Commands: Identify

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDENTIFY\_PLUGIN\_IDEN-  
Y\_PRINT

#### 6.95.1 Detailed Description

The identify plugin contributes a CLI command to the application framework to be used for printing information related to identification.

#### 6.95.2 Macro Definition Documentation

##### 6.95.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDENTIFY\_PLUGIN\_IDEN- Y\_PRINT

###### plugin identify print

- *Print which endpoints are reporting.*

Definition at line 2574 of file [cli.doc](#).

## 6.96 Plugin Commands: Idle/Sleep

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDLE\_SLEEP\_PLUGIN\_IDLE\_SLEEP\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDLE\_SLEEP\_PLUGIN\_IDLE\_SLEEP\_FORCE\_AWAKE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDLE\_SLEEP\_PLUGIN\_IDLE\_SLEEP\_AWAKE\_WHEN\_NOT\_JOINED

### 6.96.1 Detailed Description

The Sleep plugin contributes several commands to the application framework's CLI. These commands are used to control the idling and sleeping behavior of the device.

### 6.96.2 Macro Definition Documentation

#### 6.96.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDLE\_SLEEP\_PLUGIN\_IDLE\_SLEEP\_STATUS

##### **plugin idle-sleep status**

- *Display the status of the sleeping behavior.*

Definition at line 2590 of file [cli.doc](#).

#### 6.96.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDLE\_SLEEP\_PLUGIN\_IDLE\_SLEEP\_FORCE\_AWAKE

##### **plugin idle-sleep force-awake [stayAwake:1]**

- *Sets whether the device is forced to stay awake.*
  - stayAwake - BOOLEAN - The value indicating whether the device should stay awake.

Definition at line 2596 of file [cli.doc](#).

#### 6.96.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_IDLE\_SLEEP\_PLUGIN\_IDLE\_SLEEP\_AWAKE\_WHEN\_NOT\_JOINED

##### **plugin idle-sleep awake-when-not-joined [stayAwakeWhenNotJoined:1]**

- *Sets whether the device stays awake when not joined to a ZigBee network.*
  - stayAwakeWhenNotJoined - BOOLEAN - The value indicating whether the device should stay awake when not joined to a ZigBee network.

Definition at line 2602 of file [cli.doc](#).

## 6.97 Plugin Commands: Infrared LED

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_TOGGLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_ON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_OFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_BUTTON\_TOGGLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_BUTTON\_ON\_OFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_SIMULATE\_PRESS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_SIMULATE\_HOLD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_SIMULATE\_REMOTE

### 6.97.1 Detailed Description

The Infrared LED plugin contributes several commands to the application framework's CLI. These commands are used for testing low level operation of the LED and sending out IR waveforms as if a button had been pressed or held.

### 6.97.2 Macro Definition Documentation

#### 6.97.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_TOGGLE

##### **plugin infrared-led toggle**

- *Toggle IR LED once.*

Definition at line 2618 of file [cli.doc](#).

#### 6.97.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_ON

##### **plugin infrared-led on**

- *Turn on IR LED.*

Definition at line 2623 of file [cli.doc](#).

**6.97.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_OFF**

**plugin infrared-led off**

- Turn off IR LED.

Definition at line 2628 of file [cli.doc](#).

**6.97.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_BUTTON\_TOGGLE**

**plugin infrared-led button-toggle**

- Toggle IR LED each time BUTTON1 is pressed.

Definition at line 2633 of file [cli.doc](#).

**6.97.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_BUTTON\_ON\_OFF**

**plugin infrared-led button-on-off**

- Turn IR LED on and off based on state of BUTTON1.

Definition at line 2638 of file [cli.doc](#).

**6.97.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_SIMULATE\_PRESS**

**plugin infrared-led simulate-press [index:1]**

- Output IR waveform as if a button were pressed.
  - index - INT8U - The index of UIRD database to use for the waveform.

Definition at line 2644 of file [cli.doc](#).

**6.97.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_SIMULATE\_HOLD**

**plugin infrared-led simulate-hold [index:1]**

- Output IR waveform as if a button were held.
  - index - INT8U - The index of UIRD database to use for the waveform.

Definition at line 2650 of file [cli.doc](#).

6.97.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INFRARED\_LED\_PLUGIN\_INFRARED\_LED\_SIMULATE\_REMOTE

**plugin infrared-led simulate-remote [index:1]**

- *Output IR waveform when BUTTON1 is pressed or held.*

- index - INT8U - The index of UIRD database to use for the waveform.

Definition at line [2656](#) of file [cli.doc](#).

## 6.98 Plugin Commands: Interpan

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_ENABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_DISABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_FRAGMENT\_TEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_SET\_MSG\_TIMEOUT

#### 6.98.1 Detailed Description

The Interpan commands provide commands to set global interpan state and test interpan fragmentation.

#### 6.98.2 Macro Definition Documentation

##### 6.98.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_ENABLE

###### plugin interpan enable

- Enables inter-PAN globally.

Definition at line 2671 of file [cli.doc](#).

##### 6.98.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_DISABLE

###### plugin interpan disable

- Disables inter-PAN globally.

Definition at line 2676 of file [cli.doc](#).

##### 6.98.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_FRAGMENT\_TEST

###### plugin interpan fragment-test [panId:2] [eui64:8] [clusterId:2] [msgLen:2]

- Sends a message of specified length of random values to target device over inter-PAN.

- panId - INT16U - The PAN ID that the target is located on
- eui64 - IEEE\_ADDRESS - The target's EUI64 (big endian)
- clusterId - INT16U - The cluster ID that the sample message should contain
- msgLen - INT16U - The length of the randomly-filled message to be sent across inter-PAN

Definition at line 2685 of file [cli.doc](#).

6.98.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_INTERPAN\_PLUGIN\_INTERPAN\_SET\_MS-G\_TIMEOUT

**plugin interpan set-msg-timeout [timeout:1]**

- Sets the timeout for inter-PAN messages sent and received.

- timeout - INT8U - Message timeout in seconds.

Definition at line 2691 of file [cli.doc](#).

## 6.99 Plugin Commands: Key Establishment

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_KEY\_ESTABLISHMENT\_PLUGIN\_KEY\_ESTABLISHMENT\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_KEY\_ESTABLISHMENT\_PLUGIN\_KEY\_ESTABLISHMENT\_INTERPAN

#### 6.99.1 Detailed Description

The Key Establishment commands provide commands to initiate key establishment with a remote target.

#### 6.99.2 Macro Definition Documentation

##### 6.99.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_KEY\_ESTABLISHMENT\_PLUGIN\_KEY\_ES-TABLISHMENT\_START

**plugin key-establishment start [nodeId:2] [endpoint:1]**

- *Initiates key establishment with the target node ID.*
  - nodeId - INT16U - Target node ID.
  - endpoint - INT8U - Target node's endpoint.

Definition at line 2708 of file [cli.doc](#).

##### 6.99.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_KEY\_ESTABLISHMENT\_PLUGIN\_KEY\_ES-TABLISHMENT\_INTERPAN

**plugin key-establishment interpan [panId:2] [eui64:-1]**

- *Initiate key establishment with the target device over interpan.*
  - panId - INT16U - The PAN ID that the target is located on.
  - eui64 - OCTET\_STRING - The target's EUI64 (big endian)

Definition at line 2715 of file [cli.doc](#).

## 6.100 Plugin Commands: LED Dim PWM

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_LED\_DIM\_PWM\_PLUGIN\_PWM\_CONTROL\_TEST

#### 6.100.1 Detailed Description

RGB-PWM is a plugin to control color for a 3 LED system with red, blue, and green.

#### 6.100.2 Macro Definition Documentation

##### 6.100.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_LED\_DIM\_PWM\_PLUGIN\_PWM\_CONTROL\_TEST

**plugin pwm-control test [value:2]**

- *Value of white PWM.*
  - value - INT16U - Value to write to the white PWM output.

Definition at line [2731](#) of file [cli.doc](#).

## 6.101 Plugin Commands: Low Voltage Shutdown

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_ENABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PRINT\_VDD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_SHUTDOWN

### 6.101.1 Detailed Description

The Low Voltage Shutdown plugin provides a few commands to monitor the VDD voltage or disable the checking and shutdown logic.

### 6.101.2 Macro Definition Documentation

#### 6.101.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_STATUS

##### **plugin low-voltage-shutdown status**

- *Display the status of the check and shutdown behavior.*

Definition at line 2746 of file [cli.doc](#).

#### 6.101.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_ENABLE

##### **plugin low-voltage-shutdown enable [forceDisable:1]**

- *Sets whether the plugin's check and shutdown logic is enabled or disabled.*
  - forceDisable - BOOLEAN - The value indicating whether the shutdown logic should be disabled.

Definition at line 2752 of file [cli.doc](#).

#### 6.101.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PRINT\_VDD

##### **plugin low-voltage-shutdown print-vdd**

- *Report the current VDD voltage as checked by the shutdown logic. (Doesn't do any shutdown logic if VDD is below threshold; this is just informational.)*

Definition at line 2757 of file [cli.doc](#).

6.101.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_PLUGIN\_-  
LOW\_VOLTAGE\_SHUTDOWN\_SHUTDOWN

**plugin low-voltage-shutdown shutdown**

- Force the shutdown logic to engage immediately, regardless of VDD voltage.

Definition at line 2762 of file [cli.doc](#).

## 6.102 Plugin Commands: Manufacturing Library

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_TONE\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_TONE\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SET\_CHANNEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SET\_POWER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_TEST\_MOD\_CAL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SYN\_OFFSET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_STREAM\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_STREAM\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SEND\_RANDOM
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SEND\_TEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SEND\_MESSAGE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SLEEP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_PROGRAM\_EUI
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_MFGENABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_CALDATA

### 6.102.1 Detailed Description

CLI commands related to the manufacturing library.

### 6.102.2 Macro Definition Documentation

#### 6.102.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_START

**plugin mfplib start [useCallback:1]**

- Start the *mfplib* test mode.
  - useCallback - BOOLEAN - Use the Rx callback.

Definition at line [2777](#) of file [cli.doc](#).

**6.102.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_STOP**

### **plugin mfplib stop**

- Stop the *mfplib* test mode.

Definition at line [2782](#) of file [cli.doc](#).

**6.102.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_TONE\_START**

### **plugin mfplib tone start**

- Starts a tone test.

Definition at line [2787](#) of file [cli.doc](#).

**6.102.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_TONE\_STOP**

### **plugin mfplib tone stop**

- Stops the tone test.

Definition at line [2792](#) of file [cli.doc](#).

**6.102.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_STATUS**

### **plugin mfplib status**

- Prints the current status of the manufacturing library.

Definition at line [2797](#) of file [cli.doc](#).

**6.102.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_MFGLIB\_SET\_CHANNEL**

### **plugin mfplib set-channel [channel:1]**

- Sets the channel used by the manufacturing library for testing.
  - channel - INT8U - The 802.15.4 channel number.

Definition at line [2803](#) of file [cli.doc](#).

6.102.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_SET\_POWER

**plugin mfplib set-power [powerLevel:1] [powerMode:2]**

- Set the power level and mode for the manufacturing test.
  - powerLevel - INT8S - The power level
  - powerMode - INT16U - The power mode

Definition at line 2810 of file [cli.doc](#).

6.102.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_TEST\_MOD\_CAL

**plugin mfplib test-mod-cal [channel:1] [timeMs:4]**

- Run the mod DAC calibration on the specified channel for the specified time.
  - channel - INT8U - The channel to calibrate.
  - timeMs - INT32U - The length of time to run the test is ms.

Definition at line 2817 of file [cli.doc](#).

6.102.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_SYN\_OFFSET

**plugin mfplib syn-offset [synOffset:1]**

- Sets the Synth offset.
  - synOffset - INT8S - The synth offset.

Definition at line 2823 of file [cli.doc](#).

6.102.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_STREAM\_START

**plugin mfplib stream start**

- Start the stream test.

Definition at line 2828 of file [cli.doc](#).

6.102.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_STREAM\_STOP

**plugin mfplib stream stop**

- Stop the stream test.

Definition at line 2833 of file [cli.doc](#).

6.102.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_SEND\_RANDOM

**plugin mfplib send random [numPackets:2] [length:1]**

- *Send a series of test packets with random data..*
  - numPackets - INT16U - The number of packets to send.
  - length - INT8U - The length of the packet to send.

Definition at line 2840 of file [cli.doc](#).

6.102.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_SEND\_TEST

**plugin mfplib send test [numPackets:2] [length:1]**

- *Send a series of test packets with fixed data..*
  - numPackets - INT16U - The number of packets to send.
  - length - INT8U - The length of the packet to send.

Definition at line 2847 of file [cli.doc](#).

6.102.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_SEND\_MESSAGE

**plugin mfplib send message [data:-1] [numPackets:2]**

- *Send a test message with the specified data in it..*
  - data - OCTET\_STRING - The hex data to send, up to 16 bytes.
  - numPackets - INT16U - The number of packets to send.

Definition at line 2854 of file [cli.doc](#).

6.102.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MANUFACTURING\_LIBRARY\_PLUGIN\_-  
MFGLIB\_SLEEP

**plugin mfplib sleep [duration:2]**

- *Sleep..*
  - duration - INT16U - Sleep duration (mS).

Definition at line 2860 of file [cli.doc](#).

```
6.102.2.16 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_MANUFACTURING_LIBRARY_PLUGIN_-  
MFGLIB_PROGRAM_EUI
```

**plugin mfplib programEui [duration:8]**

- *Program EUI.*
  - duration - IEEE\_ADDRESS - IEEE address to program.

Definition at line [2866](#) of file [cli.doc](#).

```
6.102.2.17 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_MANUFACTURING_LIBRARY_PLUGIN_-  
MFGLIB_MFGENABLE
```

**plugin mfplib mfgenable [enabled:1]**

- *Enable mfplib.*
  - enabled - INT8U - 1 = enable, 0 = disable.

Definition at line [2872](#) of file [cli.doc](#).

```
6.102.2.18 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_MANUFACTURING_LIBRARY_PLUGIN_-  
MFGLIB_CALDATA
```

**plugin mfplib caldata**

- *Print out channel calibration data.*

Definition at line [2877](#) of file [cli.doc](#).

## 6.103 Plugin Commands: Messaging Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_CLIENT\_PLUGIN\_MESSAGING\_CLIENT\_CONFIRM
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_CLIENT\_PLUGIN\_MESSAGING\_CLIENT\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_CLIENT\_PLUGIN\_MESSAGING\_CLIENT\_CLEAR

### 6.103.1 Detailed Description

The messaging-client plugin contributes CLI commands to the application framework to be used for manipulating messages in a client context.

### 6.103.2 Macro Definition Documentation

#### 6.103.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_CLIENT\_PLUGIN\_MESSAGING\_CLIENT\_CONFIRM

##### **plugin messaging-client confirm [endpoint:1]**

- *Send the message confirmation.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 2893 of file [cli.doc](#).

#### 6.103.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_CLIENT\_PLUGIN\_MESSAGING\_CLIENT\_PRINT

##### **plugin messaging-client print [endpoint:1]**

- *Print the message info.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 2899 of file [cli.doc](#).

#### 6.103.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_CLIENT\_PLUGIN\_MESSAGING\_CLIENT\_CLEAR

##### **plugin messaging-client clear [endpoint:1]**

- *Clear the message.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 2905 of file [cli.doc](#).

## 6.104 Plugin Commands: Messaging Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_MESSAGE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_APPEND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_ID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_TIME
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_RELATIVE\_TIME
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_TRANSMISSION\_NORMAL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_TRANSMISSION\_IPAN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_TRANSMISSION\_BOTH
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_IMPORTANCE\_LOW
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_IMPORTANCE\_MEDIUM
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_IMPORTANCE\_HIGH
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_IMPORTANCE\_CRITICAL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_CONFIRM\_NOT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_CONFIRM\_REQ
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_VALID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_INVALID
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_DISPLAY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_CANCEL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_PRINT

### 6.104.1 Detailed Description

The messaging-server plugin contributes CLI commands to the application framework to be used for manipulating messages in a server context.

## 6.104.2 Macro Definition Documentation

6.104.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_MESSAGE

**plugin messaging-server message [message:-1]**

- Set the message used by the message plugin.
  - message - OCTET\_STRING - The message to set

Definition at line 2921 of file [cli.doc](#).

6.104.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_APPEND

**plugin messaging-server append [message:-1]**

- Append an additional string to the message contained in the message plugin
  - message - OCTET\_STRING - the string to append to the current message

Definition at line 2927 of file [cli.doc](#).

6.104.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_ID

**plugin messaging-server id [messageId:4]**

- Set the message id for the message contained in the messaging plugin
  - messageId - INT32U - message id

Definition at line 2933 of file [cli.doc](#).

6.104.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_TIME

**plugin messaging-server time [time:4] [duration:2]**

- Set the start time and duration for the message used by the message plugin.
  - time - INT32U - start time
  - duration - INT16U - duration

Definition at line 2940 of file [cli.doc](#).

6.104.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_RELATIVE\_TIME

#### **plugin messaging-server relative-time [time:4] [duration:4]**

- *Set the relative time on the message.*

- time - INT32U - number of minutes to add to the message time above the current time
- duration - INT32U - duration in minutes for the message to be valid

Definition at line 2947 of file [cli.doc](#).

6.104.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_TRANSMISSION\_NORMAL

#### **plugin messaging-server transmission normal**

- *Sets the message control bit mask to normal transmission.*

Definition at line 2952 of file [cli.doc](#).

6.104.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_TRANSMISSION\_IPAN

#### **plugin messaging-server transmission ipan**

- *Set the message control bit mask in the message to anonymous.*

Definition at line 2957 of file [cli.doc](#).

6.104.2.8 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_TRANSMISSION\_BOTH

#### **plugin messaging-server transmission both**

- *Set the message control bit mask in the message to normal and anonymous.*

Definition at line 2962 of file [cli.doc](#).

6.104.2.9 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGEGING\_SERVER\_IMPORTANCE\_LOW

#### **plugin messaging-server importance low**

- *Set the message importance to low.*

Definition at line 2967 of file [cli.doc](#).

6.104.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_IMPORTANCE\_MEDIUM

**plugin messaging-server importance medium**

- Set the message importance to medium.

Definition at line 2972 of file [cli.doc](#).

6.104.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_IMPORTANCE\_HIGH

**plugin messaging-server importance high**

- Set the message importance to high.

Definition at line 2977 of file [cli.doc](#).

6.104.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_IMPORTANCE\_CRITICAL

**plugin messaging-server importance critical**

- Set the message importance to critical.

Definition at line 2982 of file [cli.doc](#).

6.104.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_CONFIRM\_NOT

**plugin messaging-server confirm not**

- Set the message confirmation to not used.

Definition at line 2987 of file [cli.doc](#).

6.104.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_CONFIRM\_REQ

**plugin messaging-server confirm req**

- Set message confirmation to required.

Definition at line 2992 of file [cli.doc](#).

**6.104.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_VALID**

**plugin messaging-server valid [endpoint:1]**

- *Set the message validity to valid.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 2998 of file [cli.doc](#).

**6.104.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_INVALID**

**plugin messaging-server invalid [endpoint:1]**

- *Set the message validity to invalid.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 3004 of file [cli.doc](#).

**6.104.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_DISPLAY**

**plugin messaging-server display [nodeId:2] [srcEndpoint:1] [dstEndpoint:1]**

- *Display the message.*
  - nodeId - INT16U - The destination of the message.
  - srcEndpoint - INT8U - The source endpoint of the message.
  - dstEndpoint - INT8U - The destination endpoint of the message.

Definition at line 3012 of file [cli.doc](#).

**6.104.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MESSAGING\_SERVER\_PLUGIN\_MESSAGING\_SERVER\_CANCEL**

**plugin messaging-server cancel [nodeId:2] [srcEndpoint:1] [dstEndpoint:1]**

- *Cancel the message.*
  - nodeId - INT16U - The destination of the message.
  - srcEndpoint - INT8U - The source endpoint of the message.
  - dstEndpoint - INT8U - The destination endpoint of the message.

Definition at line 3020 of file [cli.doc](#).

```
6.104.2.19 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_MESSAGING_SERVER_PLUGIN_MESS-  
AGING_SERVER_PRINT
```

**plugin messaging-server print [endpoint:1]**

- *Print the message info.*
  - endpoint - INT8U - The relevant endpoint.

Definition at line 3026 of file [cli.doc](#).

## 6.105 Plugin Commands: Meter Mirror

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_MIRROR\_PLUGIN\_METER\_MIRROR\_STATUS
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_MIRROR\_PLUGIN\_METER\_MIRROR\_REMOVE

#### 6.105.1 Detailed Description

The Meter mirror plugin provides commands for managing the meter devices whose attributes are mirrored locally.

#### 6.105.2 Macro Definition Documentation

##### 6.105.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_MIRROR\_PLUGIN\_METER\_MIRROR\_STATUS

###### **plugin meter-mirror status**

- Prints the status of all mirrors.

Definition at line 3041 of file [cli.doc](#).

##### 6.105.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_MIRROR\_PLUGIN\_METER\_MIRROR\_REMOVE

###### **plugin meter-mirror remove [endpoint:1]**

- Manually removes a registered mirror at the specified endpoint.
  - endpoint - INT8U - The endpoint of the mirror to remove.

Definition at line 3047 of file [cli.doc](#).

## 6.106 Plugin Commands: Meter Snapshot Server

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_TAKE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_PUBLISH

### 6.106.1 Detailed Description

The meter-snapshot-server plugin contributes several commands to the application framework's CLI. These commands are used for taking and publishing snapshots.

### 6.106.2 Macro Definition Documentation

#### 6.106.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_TAKE

**plugin meter-snapshot-server take [endpoint:1] [cause:4]**

- *Take a snapshot.*
  - endpoint - INT8U - the source endpoint
  - cause - INT32U - the cause of the snapshot

Definition at line 3065 of file [cli.doc](#).

#### 6.106.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_PLUGIN\_METER\_SNAPSHOT\_SERVER\_PUBLISH

**plugin meter-snapshot-server publish [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [startTime:4] [endTime:4] [offset:1] [cause:4]**

- *Publish a snapshot.*
  - nodeId - INT16U - the destination node id
  - srcEndpoint - INT8U - the source endpoint
  - dstEndpoint - INT8U - the destination endpoint
  - startTime - INT32U - the earliest time of a snapshot to be published
  - endTime - INT32U - the latest time of a snapshot to be published
  - offset - INT8U - identifies the snapshot to be published
  - cause - INT32U - select only snapshots that were taken due to a specific cause

Definition at line 3077 of file [cli.doc](#).

## 6.107 Plugin Commands: Multi-Network Price Passthrough

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MN\_PRICE\_PASSTHROUGH\_-  
PLUGIN\_MN\_PRICE\_PASSTHROUGH\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MN\_PRICE\_PASSTHROUGH\_-  
PLUGIN\_MN\_PRICE\_PASSTHROUGH\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MN\_PRICE\_PASSTHROUGH\_-  
PLUGIN\_MN\_PRICE\_PASSTHROUGH\_SET\_ROUTING

PLUGIN\_MN\_PRICE\_PASSTHROUGH\_PRINT

### 6.107.1 Detailed Description

The Multi-Network Price Passthrough plugin is a plugin designed to demonstrate multi-network functionality by passing data from a "real" ESI on one network to a "proxy" ESI on another network via periodic polling and forwarding.

### 6.107.2 Macro Definition Documentation

#### 6.107.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MN\_PRICE\_PASSTHROUGH\_PLUGIN\_M- N\_PRICE\_PASSTHROUGH\_START

##### **plugin mn-price-passthrough start**

- Starts polling and forwarding.

Definition at line 3094 of file [cli.doc](#).

#### 6.107.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MN\_PRICE\_PASSTHROUGH\_PLUGIN\_M- N\_PRICE\_PASSTHROUGH\_STOP

##### **plugin mn-price-passthrough stop**

- Stops polling and forwarding.

Definition at line 3099 of file [cli.doc](#).

#### 6.107.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MN\_PRICE\_PASSTHROUGH\_PLUGIN\_M- N\_PRICE\_PASSTHROUGH\_SET\_ROUTING

##### **plugin mn-price-passthrough set-routing [fwdId:2] [fwdEndpoint:1] [esiEndpoint:1]**

- Set the routing parameters.
  - fwdId - INT16U - The node id of the forwarding endpoint.
  - fwdEndpoint - INT8U - The forwarding endpoint.
  - esiEndpoint - INT8U - The endpoint of the proxy ESI.

Definition at line 3107 of file [cli.doc](#).

6.107.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_MN\_PRICE\_PASSTHROUGH\_PLUGIN\_M-  
N\_PRICE\_PASSTHROUGH\_PRINT

**plugin mn-price-passthrough print**

- *Print the current price known to the proxy esi.*

Definition at line 3112 of file [cli.doc](#).

## 6.108 Plugin Commands: Network Creator

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_START
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_STOP
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_MASK\_ADD
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_MASK\_SUBTRACT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_MASK\_SET
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_STATUS

### 6.108.1 Detailed Description

Commands pertaining to network creation with the Network Creator plugin.

### 6.108.2 Macro Definition Documentation

#### 6.108.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_START

**plugin network-creator start [useCentralizedSecurity:1]**

- Starts the network formation process.
  - useCentralizedSecurity - BOOLEAN - Whether or not to form a centralized network. If this value is false, the device will attempt to join a distributed network.

Definition at line 3127 of file [cli.doc](#).

#### 6.108.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_STOP

**plugin network-creator stop**

- Stops the network formation process.

Definition at line 3132 of file [cli.doc](#).

#### 6.108.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_MASK\_ADD

**plugin network-creator mask add [mask:1] [channel:4]**

- Add a channel to the channel mask of choice.

- mask - INT8U - The mask of choice to which to add the channel. Entering an argument of '1' will choose the primary channel mask. Any other argument will choose the secondary channel mask.
- channel - INT32U - The channel to add to the channel mask.

Definition at line 3139 of file [cli.doc](#).

**6.108.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_MASK\_SUBTRACT**

**plugin network-creator mask subtract [mask:1] [channel:4]**

- Subtract a channel from the channel mask of choice.

- mask - INT8U - The mask of choice from which to subtract the channel. Entering an argument of '1' will choose the primary channel mask. Any other argument will choose the secondary channel mask.
- channel - INT32U - The channel to subtract from the channel mask.

Definition at line 3146 of file [cli.doc](#).

**6.108.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_MASK\_SET**

**plugin network-creator mask set [mask:1] [newChannelMask:4]**

- Set a channel mask.

- mask - INT8U - The mask of choice to set. Entering an argument of '1' will choose the primary channel mask. Any other argument will choose the secondary channel mask.
- newChannelMask - INT32U - The bit mask to which to set the chosen channel mask.

Definition at line 3153 of file [cli.doc](#).

**6.108.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_PLUGIN\_NETWORK\_CREATOR\_STATUS**

**plugin network-creator status**

- Print the status of the network-creator plugin.

Definition at line 3158 of file [cli.doc](#).

## 6.109 Plugin Commands: Network Creator Security

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_SET\_JOINING\_LINK\_KEY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_CLEAR\_JOINING\_LINK\_KEYS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_OPEN\_NETWORK
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_CLOSE\_NETWORK

#### 6.109.1 Detailed Description

Commands pertaining to network creation with the Network Creator plugin.

#### 6.109.2 Macro Definition Documentation

##### 6.109.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_SET\_JOINING\_LINK\_KEY

**plugin network-creator-security set-joining-link-key [eui64:8] [joiningLinkKey:-1]**

- Set the link key that a specific joining device will use when joining the network. This command can be also used to add install code derived link keys. If all FF's are entered for the EUI64 for the joining device, then this link key will be used for all joining devices without a joining key entry.
  - eui64 - IEEE\_ADDRESS - The EUI64 of the joining device.
  - joiningLinkKey - OCTET\_STRING - The link key that the joining device will use to enter the network.

Definition at line 3174 of file [cli.doc](#).

##### 6.109.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_CLEAR\_JOINING\_LINK\_KEYS

**plugin network-creator-security clear-joining-link-keys**

- Clear all of the joining link keys stored in the stack.

Definition at line 3179 of file [cli.doc](#).

##### 6.109.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_OPEN\_NETWORK

**plugin network-creator-security open-network**

- Open the network for joining.

Definition at line 3184 of file [cli.doc](#).

6.109.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_PLUGIN\_NETWORK\_CREATOR\_SECURITY\_CLOSE\_NETWORK

**plugin network-creator-security close-network**

- *Close the network for joining.*

Definition at line 3189 of file [cli.doc](#).

## 6.110 Plugin Commands: Network Steering

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_MASK\_ADD
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_MASK\_SUBTRACT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_MASK\_SET
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_STATUS
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_START
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_STOP

### 6.110.1 Detailed Description

The Network Steering plugin commands are currently being used for the Profile Interop event.

### 6.110.2 Macro Definition Documentation

#### 6.110.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_MASK\_ADD

**plugin network-steering mask add [whichMask:1] [channel:1]**

- Adds a channel to either the primary or secondary channel mask of the network-steering plugin.
  - whichMask - INT8U - The channel mask to add a channel to.
  - channel - INT8U - The channel to add to the mask.

Definition at line 3206 of file [cli.doc](#).

#### 6.110.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_MASK\_SUBTRACT

**plugin network-steering mask subtract [whichMask:1] [channel:1]**

- Subtracts a channel from either the primary or secondary channel mask of the network-steering plugin.
  - whichMask - INT8U - The channel mask to subtract the channel from.
  - channel - INT8U - The channel to subtract the mask from.

Definition at line 3213 of file [cli.doc](#).

6.110.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_MASK\_SET

**plugin network-steering mask set [whichMask:1] [mask:4]**

- *Set either the primary or secondary channel mask.*
  - whichMask - INT8U - The channel mask to subtract the channel from.
  - mask - INT32U - The value to set the channel mask to.

Definition at line 3220 of file [cli.doc](#).

6.110.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_STATUS

**plugin network-steering status**

- *Displays the current status of the network steering process.*

Definition at line 3225 of file [cli.doc](#).

6.110.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_START

**plugin network-steering start [options:1]**

- *Starts the network steering process.*
  - options - INT8U - A mask of options for indicating specific behavior within the network-steering process.

Definition at line 3231 of file [cli.doc](#).

6.110.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_NETWORK\_STEERING\_PLUGIN\_NETWORK\_STEERING\_STOP

**plugin network-steering stop**

- *Stops the network steering process.*

Definition at line 3236 of file [cli.doc](#).

## 6.111 Plugin Commands: OTA Bootload

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_BOOTLOAD\_PLUGIN\_OTA\_BOOTLOAD\_INFO

#### 6.111.1 Detailed Description

The OTA Bootload Plugin provides information on the installed bootloader.

#### 6.111.2 Macro Definition Documentation

- 6.111.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_BOOTLOAD\_PLUGIN\_OTA\_BOOTLOAD\_INFO

##### plugin ota-bootload info

- Prints info about the installed bootloader.

Definition at line [3250](#) of file [cli.doc](#).

## 6.112 Plugin Commands: OTA Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_BOOTLOAD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_VERIFY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_BLOCK\_TEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_PAGE\_REQUEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_PAUSE\_AT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_UPGRADE\_REQUEST

### 6.112.1 Detailed Description

The OTA Client plugin provides Over-the-air commands for upgrading firmware and downloading specific files on the client side.

### 6.112.2 Macro Definition Documentation

#### 6.112.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_BOOTLOAD

##### plugin ota-client bootload [index:1]

- *Bootloads the image at the specified index by calling the OTA bootload callback.*
  - index - INT8U - The index at which to begin bootloading the image

Definition at line 3266 of file [cli.doc](#).

#### 6.112.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_VERIFY

##### plugin ota-client verify [index:1]

- *Perform signature verification on the image at the specified index*

- index - INT8U - The index at which to begin verification of the image

Definition at line 3272 of file [cli.doc](#).

**6.112.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_INFO**

#### **plugin ota-client info**

- Prints the manufacturer ID, Image Type ID, and Version information that are used when a query next image is sent to the server by the client

Definition at line 3277 of file [cli.doc](#).

**6.112.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_START**

#### **plugin ota-client start**

- Starts the ota client state machine. The state machine discovers the OTA server, queries for new images, downloads the images and waits for the server command to upgrade

Definition at line 3282 of file [cli.doc](#).

**6.112.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_STOP**

#### **plugin ota-client stop**

- Stops the OTA state machine

Definition at line 3287 of file [cli.doc](#).

**6.112.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_STATUS**

#### **plugin ota-client status**

- Prints information on the current state of the OTA client download.

Definition at line 3292 of file [cli.doc](#).

**6.112.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_BLOCK\_TEST**

#### **plugin ota-client block-test**

- Sends an image block request for a file the server should not have. Test harness only (test case 9.5.6 - Missing File)

Definition at line 3297 of file [cli.doc](#).

6.112.2.8 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_PAGE\_REQUEST

**plugin ota-client page-request [pageRequest:1]**

- pageRequest - INT8U - boolean value turning on (1) or off (0) the page request flag

Definition at line [3303](#) of file [cli.doc](#).

6.112.2.9 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_PAUSE\_AT

**plugin ota-client pause-at [stopDownloadPercentage:1]**

- stopDownloadPercentage - INT8U

Definition at line [3309](#) of file [cli.doc](#).

6.112.2.10 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_CLIENT\_PLUGIN\_OTA\_CLIENT\_UPGRADE\_REQUEST

**plugin ota-client upgrade-request**

- *Send an OTA server an UpgradeEndRequest*

Definition at line [3314](#) of file [cli.doc](#).

## 6.113 Plugin Commands: OTA Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_NOTIFY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_UPGRADE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_POLICY\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_POLICY\_QUERY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_UPGRADE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_POLICY\_PAGE\_REQ\_MISS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_POLICY\_PAGE\_REQ\_SUP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_BLOCK\_REQUEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_POLICY\_IMAGE\_REQ\_MIN\_PERIOD

### 6.113.1 Detailed Description

The OTA Server plugin provides Over-the-air commands for upgrading firmware and downloading specific files on the server side.

### 6.113.2 Macro Definition Documentation

#### 6.113.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_NOTIFY

**plugin ota-server notify [destination:2] [endpoint:1] [payloadType:1] [jitter:1] [manuf-id:2] [image-TypeId:2] [version:4]**

- Sends an OTA Image Notify message to the specified destination indicating a new version of an image is available for download.
  - destination - INT16U - The node ID (can be a broadcast address) to which this OTA Notify message should be sent
  - endpoint - INT8U - Target endpoint for the OTA Notify message (only really meaningful for non-broadcast target destination).
  - payloadType - INT8U - Used to specify which parameters you want included in the OTA Notify cluster command payload (0 = jitter value only; 1 = jitter and manufacturer id; 2 = jitter, mfr id, and device id; 3 = jitter, mfr id, device id, and firmware version)
  - jitter - INT8U - Corresponds to QueryJitter parameter in the OTA Upgrade cluster specification. The parameter indicates whether the client receiving Image Notify Command should send in Query Next Image Request command or not.

- manuf-id - INT16U - Manufacturer ID for the image being advertised (should match the mfr ID in the OTA file's header)
- imageTypeId - INT16U - Image type ID for the image being advertised (should match the image type ID from the OTA file's header)
- version - INT32U - Firmware version of the image being advertised (should match the version from the OTA file's header)

Definition at line [3336](#) of file `cli.doc`.

#### **6.113.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_UPGRADE**

**plugin ota-server upgrade [nodeId:2] [endpoint:1] [mfrId:2] [imageType:2] [fileVersion:4]**

- *Instruct a device to upgrade now.*
  - nodeId - INT16U - Short destination to send message
  - endpoint - INT8U - Endpoint destination to send message
  - mfrId - INT16U - Manufacturer ID for the image (0xFFFF for wildcard)
  - imageType - INT16U - Image type for the image (0xFFFF for wildcard)
  - fileVersion - INT32U - File version for the image (0xFFFFFFFF for wildcard)

Definition at line [3346](#) of file `cli.doc`.

#### **6.113.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_POLICY\_PRINT**

**plugin ota-server policy print**

- *Prints the policies used by the OTA Server Policy Plugin*

Definition at line [3351](#) of file `cli.doc`.

#### **6.113.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_POLICY\_QUERY**

**plugin ota-server policy query [policyValue:1]**

- *Sets the policy used by the OTA Server Policy Plugin when it receives a query request from the client.*
  - policyValue - INT8U - 0: Upgrade if server has newer (default), 1: Downgrade if server has older, 2: Reinstall if server has same, 3: No next version (no next image is available for download)

Definition at line [3357](#) of file `cli.doc`.

**6.113.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_-  
POLICY\_UPGRADE**

**plugin ota-server policy upgrade [policyValue:1]**

- Sets the policy used by the OTA Server Policy Plugin when it receives an upgrade end request
  - policyValue - INT8U - 0: Upgrade Now (default), 1: Upgrade in 2 minutes, 2: Ask me later to upgrade, 3: Abort Upgrade (send default response)

Definition at line [3363](#) of file [cli.doc](#).

**6.113.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_-  
POLICY\_PAGE\_REQ\_MISS**

**plugin ota-server policy page-req-miss [policyValue:1]**

- – policyValue - INT8U - 0: Upgrade if server has newer (default), 1: Downgrade if server has older, 2: Reinstall if server has same, 3: No next version (no next image is available for download)

Definition at line [3369](#) of file [cli.doc](#).

**6.113.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_-  
POLICY\_PAGE\_REQ\_SUP**

**plugin ota-server policy page-req-sup [policyValue:1]**

- – policyValue - INT8U - 0: Upgrade if server has newer (default), 1: Downgrade if server has older, 2: Reinstall if server has same, 3: No next version (no next image is available for download)

Definition at line [3375](#) of file [cli.doc](#).

**6.113.2.8 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_SERVER\_PLUGIN\_OTA\_SERVER\_-  
POLICY\_BLOCK\_REQUEST**

**plugin ota-server policy blockRequest [policyValue:1]**

- Sets the policy used by the ota-server Policy Plugin when it receives an image block request.
  - policyValue - INT8U - 0: Send block (default), 1: Delay download once for 2 minutes, 2: Always abort download after first block

Definition at line [3381](#) of file [cli.doc](#).

```
6.113.2.9 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_OTA_SERVER_PLUGIN_OTA_SERVER_-  
POLICY_IMAGE_REQ_MIN_PERIOD
```

**plugin ota-server policy image-req-min-period [period:2]**

- – period - INT16U - The minimum request period in seconds.

Definition at line [3387](#) of file [cli.doc](#).

## 6.114 Plugin Commands: OTA Simple Storage EEPROM

These commands are specific to the OTA Simple Storage EEPROM plugin.

## 6.115 Plugin Commands: OTA Storage Common

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_P-LUGIN\_OTA\_STORAGE\_COMMON\_PRINT\_IMAGES
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_P-LUGIN\_OTA\_STORAGE\_COMMON\_DELETE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_P-LUGIN\_OTA\_STORAGE\_COMMON\_RELOAD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_P-LUGIN\_OTA\_STORAGE\_COMMON\_STORAGE\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_P-LUGIN\_OTA\_STORAGE\_COMMON\_DATA\_PRINT

### 6.115.1 Detailed Description

The OTA Storage Common plugin provides Over-the-air commands for upgrading firmware and downloading specific files common to both server and client.

### 6.115.2 Macro Definition Documentation

#### 6.115.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_PLUGIN\_OT-A\_STORAGE\_COMMON\_PRINT\_IMAGES

##### **plugin ota-storage-common printImages**

- Prints the images.

Definition at line 3428 of file [cli.doc](#).

#### 6.115.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_PLUGIN\_OT-A\_STORAGE\_COMMON\_DELETE

##### **plugin ota-storage-common delete [index:1]**

- Deletes the image at the specified index.
  - index - INT8U - The index at which to begin bootloading the image

Definition at line 3434 of file [cli.doc](#).

#### 6.115.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_PLUGIN\_OT-A\_STORAGE\_COMMON\_RELOAD

##### **plugin ota-storage-common reload**

- Reload the storage device.

Definition at line 3439 of file [cli.doc](#).

6.115.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_PLUGIN\_OTA\_STORAGE\_COMMON\_STORAGE\_INFO

**plugin ota-storage-common storage-info**

- *Print information about the storage device.*

Definition at line 3444 of file [cli.doc](#).

6.115.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_OTA\_STORAGE\_COMMON\_PLUGIN\_OTA\_STORAGE\_COMMON\_DATA\_PRINT

**plugin ota-storage-common data-print [index:1] [offset:4]**

- *Print arbitray bytes of the OTA image on disk.*
  - index - INT8U - The index of the image to print its data.
  - offset - INT32U - The offset into the OTA image that will be printed.

Definition at line 3451 of file [cli.doc](#).

## 6.116 Plugin Commands: Partner Link Key Exchange

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_PARTNER
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_ALLOW\_PARTNER

#### 6.116.1 Detailed Description

The partner link key exchange plugin contributes CLI commands to the application framework to be used for controlling facets of link key exchanges among partners.

#### 6.116.2 Macro Definition Documentation

6.116.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_PARTNER

**plugin partner-link-key-exchange partner [nodeId:2] [endpoint:1]**

- *Initiate partner link key exchange.*
  - nodeId - INT16U - The 2 byte short address of the node
  - endpoint - INT8U - The endpoint of the device with whom ot start cbke.

Definition at line 3469 of file [cli.doc](#).

6.116.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_PLUGIN\_PARTNER\_LINK\_KEY\_EXCHANGE\_ALLOW\_PARTNER

**plugin partner-link-key-exchange allow-partner [allowPartner:1]**

- *Set the allow partner flag within the device for Certificate Based Key Exchange*
  - allowPartner - INT8U - Boolean value to allow or disallow partner based key exchange

Definition at line 3475 of file [cli.doc](#).

## 6.117 Plugin Commands: Poll Control Client

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POLL\_CONTROL\_CLIENT\_MODE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POLL\_CONTROL\_CLIENT\_TIMEOUT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POLL\_CONTROL\_CLIENT\_RESPOND
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PRINT

#### 6.117.1 Detailed Description

The poll-control-client plugin contributes CLI commands to the application framework to be used for setting poll control parameters in a local, client context.

#### 6.117.2 Macro Definition Documentation

##### 6.117.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POLL\_CONTROL\_CLIENT\_MODE

###### **plugin poll-control-client mode [mode:1]**

- Set the fast polling mode.
  - mode - BOOLEAN - The fast polling mode.

Definition at line 3492 of file [cli.doc](#).

##### 6.117.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POLL\_CONTROL\_CLIENT\_TIMEOUT

###### **plugin poll-control-client timeout [timeout:2]**

- Set the fast polling timeout.
  - timeout - INT16U - The fast polling timeout.

Definition at line 3498 of file [cli.doc](#).

##### 6.117.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POLL\_CONTROL\_CLIENT\_RESPOND

###### **plugin poll-control-client respond [mode:1]**

- Set the response mode.
  - mode - BOOLEAN - The response mode.

Definition at line 3504 of file [cli.doc](#).

6.117.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_POLL\_CONTROL\_CLIENT\_PLUGIN\_POL-L\_CONTROL\_CLIENT\_PRINT

**plugin poll-control-client print**

- *Print the fast polling mode and timeout.*

Definition at line [3509](#) of file [cli.doc](#).

## 6.118 Plugin Commands: Prepayment Server

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_WRITE\_ATTRIBUTE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_VERIFY\_PAYMENT\_MODE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_VERIFY\_ATTRIBUTE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_PUBLISH\_PREPAY\_SNAPSHOT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_INIT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_ADD\_SNAPSHOT\_EVENT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_READ\_DEBT\_LOG
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_READ\_DEBT\_ATTRIBS
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_GET\_TOP\_UP\_PERCENT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_CHECK\_CALENDAR
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_GET\_WEEKDAY\_FROM\_UTC
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_SCHED\_DEBT\_REPAY

### 6.118.1 Detailed Description

The prepayment server handles all implemented commands of the prepayment cluster server.

### 6.118.2 Macro Definition Documentation

#### 6.118.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_WRITE\_ATTRIBUTE

**plugin prepayment-server writeAttribute [endpoint:1] [attributeId:2] [attributeType:1] [numBytes:1] [value:4]**

- Write the value of a local prepayment attribute (1-4 byte attribute value supported).
  - endpoint - INT8U - Endpoint whose prepayment attribute is being written.
  - attributeId - INT16U - The attribute ID that should be written.
  - attributeType - INT8U - The attribute type (eg 0x23=U32)
  - numBytes - INT8U - The number of bytes (1-4) of data to write.
  - value - INT32U - The data that should be written to the attribute.

Definition at line 3529 of file [cli.doc](#).

**6.118.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_VERIFY\_PAYMENT\_MODE**

**plugin prepayment-server verifyPaymentMode [endpoint:1] [expectedPaymentModeValue:2]**

- *Verify the payment mode matches an expected payment mode value.*
  - endpoint - INT8U - Metering endpoint whose payment mode value is being queried.
  - expectedPaymentModeValue - INT16U - Expected payment mode value.

Definition at line 3536 of file [cli.doc](#).

**6.118.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_VERIFY\_ATTRIBUTE**

**plugin prepayment-server verifyAttribute [endpoint:1] [attributeId:2] [attributeSize:1] [expectedAttributeValue:4]**

- *Verify the prepayment attribute value matches an expected value.*
  - endpoint - INT8U - Metering endpoint whose payment mode value is being queried.
  - attributeId - INT16U - Attribute ID of the attribute that will be verified.
  - attributeSize - INT8U - Size of the attribute in bytes.
  - expectedAttributeValue - INT32U - Expected payment mode value.

Definition at line 3545 of file [cli.doc](#).

**6.118.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_PUBLISH\_PREPAY\_SNAPSHOT**

**plugin prepayment-server publishPrepaySnapshot [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [snapshotTableIndex:4]**

- *Send the publish prepay snapshot command.*
  - nodeId - INT16U - NodeId of the destination device
  - srcEndpoint - INT8U - The source endpoint of the sending device
  - dstEndpoint - INT8U - The destination endpoint of the receiving device
  - snapshotTableIndex - INT32U - A unique identifier assigned by the device creating the snapshot

Definition at line 3554 of file [cli.doc](#).

**6.118.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_INIT**

**plugin prepayment-server init [endpoint:1]**

- *Initialize the prepayment server and snapshot table.*
  - endpoint - INT8U - Endpoint of the prepayment server.

Definition at line 3560 of file [cli.doc](#).

6.118.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_ADD\_SNAPSHOT\_EVENT

**plugin prepayment-server addSnapshotEvent [endpoint:1] [snapshotCause:4]**

- *Add a snapshot event to the prepayment server.*
  - endpoint - INT8U - Endpoint of the device from which the snapshot will be taken
  - snapshotCause - INT32U - A bitmask indicating the cause of the snapshot

Definition at line [3567](#) of file [cli.doc](#).

6.118.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_READ\_DEBT\_LOG

**plugin prepayment-server readDebtLog [index:1]**

- *Read the values from the debt log from a specified index.*
  - index - INT8U - The index of the debt log to read.

Definition at line [3573](#) of file [cli.doc](#).

6.118.2.8 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_READ\_DEBT\_ATTRIBS

**plugin prepayment-server readDebtAttrs [endpoint:1] [index:1]**

- *Read the values from the debt attribute set for a given index (1,2,3).*
  - endpoint - INT8U - The endpoint from which the debt attribute set will be read.
  - index - INT8U - The index of the debt attribute set to read - 1, 2, or 3.

Definition at line [3580](#) of file [cli.doc](#).

6.118.2.9 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_GET\_TOP\_UP\_PERCENT

**plugin prepayment-server getTopUpPercent [endpoint:1] [topUpValue:4]**

- *Determine the total top up percentage required for debt reduction.*
  - endpoint - INT8U - The endpoint from which the debt attribute set will be read.
  - topUpValue - INT32U - The current top up value from which a percentage may be required for debt reduction

Definition at line [3587](#) of file [cli.doc](#).

6.118.2.10 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_CHECK\_CALENDAR

**plugin prepayment-server checkCalendar [utcTime:4]**

- *Check that UTC time and calendar dates can be interchanged correctly.*

- utcTime - INT32U - The UTC time that should be tested.

Definition at line [3593](#) of file [cli.doc](#).

6.118.2.11 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_GET\_WEEKDAY\_FROM\_UTC

**plugin prepayment-server getWeekdayFromUtc [utcTime:4]**

- *Read the day of the week for a given UTC time.*

- utcTime - INT32U - The UTC time that should be converted.

Definition at line [3599](#) of file [cli.doc](#).

6.118.2.12 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PREPAYMENT\_SERVER\_PLUGIN\_PREPAYMENT\_SERVER\_SCHED\_DEBT\_REPAY

**plugin prepayment-server schedDebtRepay [endpoint:1] [issuerEvtId:4] [debtType:1] [collectTime:2] [startTime:4] [collectFreq:1]**

- *Check that debt repayment handling correctly calculates and schedules various attributes.*

- endpoint - INT8U - The endpoint of the prepayment server.
- issuerEvtId - INT32U - The issuer event ID for the debt.
- debtType - INT8U - The type of debt (0,1,2) that will be set.
- collectTime - INT16U - The time in mins from midnight when the debt should be collected.
- startTime - INT32U - The starting UTC time when debt should be collected.
- collectFreq - INT8U - The frequency at which debt should be collected. 0=hourly, 1=daily, 2=weekly, 3=monthly, 4=quarterly.

Definition at line [3610](#) of file [cli.doc](#).

## 6.119 Plugin Commands: Price Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_INIT

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CURRENCY\_CONVERS\_PRINT\_EVENT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CURRENCY\_CONVERS\_PRINT\_CURRENT

### 6.119.1 Detailed Description

The identify plugin contributes a CLI command to the application framework to be used for printing information related to identification.

## 6.119.2 Macro Definition Documentation

6.119.2.1 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_CLIENT_PLUGIN_PRICE_CLIENT_INIT`

**plugin price-client init [endpoint:1]**

- *Initialize the price info for the provided endpoint.*
  - endpoint - INT8U - The relevant endpoint

Definition at line 3626 of file [cli.doc](#).

6.119.2.2 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_CLIENT_PLUGIN_PRICE_CLIENT_PRINT`

**plugin price-client print [endpoint:1]**

- *Print the price info for the provided endpoint.*
  - endpoint - INT8U - The relevant endpoint

Definition at line 3632 of file [cli.doc](#).

6.119.2.3 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_CLIENT_PLUGIN_PRICE_CLIENT_PRINT_EVENT`

**plugin price-client printEvent [endpoint:1] [issuerEventId:4]**

- *Print the price info for the provided endpoint and event ID.*
  - endpoint - INT8U - The relevant endpoint
  - issuerEventId - INT32U - The event ID that should be printed if found in the price table

Definition at line 3639 of file [cli.doc](#).

6.119.2.4 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_CLIENT_PLUGIN_PRICE_CLIENT_CONV_FACTOR_PRINT_EVENT`

**plugin price-client conv-factor printEvent [endpoint:1] [issuerEventId:4]**

- *Prints the conversion factor table entry with a matching event ID.*
  - endpoint - INT8U - The relevant endpoint
  - issuerEventId - INT32U - The event ID that should be printed if found in the conversion factor table

Definition at line 3646 of file [cli.doc](#).

6.119.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CALF\_VALUE\_PRINT\_EVENT

**plugin price-client calf-value printEvent [endpoint:1] [issuerEventId:4]**

- Prints the calorific value table entry with a matching event ID.
  - endpoint - INT8U - The relevant endpoint
  - issuerEventId - INT32U - The event ID that should be printed if found in the calorific value table

Definition at line 3653 of file [cli.doc](#).

6.119.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CO2\_VALUE\_PRINT\_CURRENT

**plugin price-client co2-value printCurrent [endpoint:1]**

- Prints the active CO2 value.
  - endpoint - INT8U - The relevant endpoint

Definition at line 3659 of file [cli.doc](#).

6.119.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_BILL\_PERIOD\_PRINT\_CURRENT

**plugin price-client bill-period printCurrent [endpoint:1]**

- Prints the billing period table entry that is currently active.
  - endpoint - INT8U - The relevant endpoint

Definition at line 3665 of file [cli.doc](#).

6.119.2.8 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_BLOCK\_PERIOD\_PRINT\_EVENT

**plugin price-client block-period printEvent [endpoint:1] [issuerEventId:4]**

- Prints the entry of the Block Period table with a matching event ID.
  - endpoint - INT8U - The relevant endpoint.
  - issuerEventId - INT32U - The event ID whose information in the block period table should be printed.

Definition at line 3672 of file [cli.doc](#).

6.119.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_TIER\_LABEL\_PRINT\_TARIFF

**plugin price-client tier-label printTariff [endpoint:1] [issuerTariffId:4]**

- Prints the tier label table entry with a matching tariff ID.
  - endpoint - INT8U - The relevant endpoint.
  - issuerTariffId - INT32U - The issuer tariff ID that should be looked for in the tier label table

Definition at line 3679 of file [cli.doc](#).

6.119.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_TABLE\_CLEAR

**plugin price-client table-clear [endpoint:1]**

- Clears out the currently set price for the supplied endpoint.
  - endpoint - INT8U - The relevant endpoint

Definition at line 3685 of file [cli.doc](#).

6.119.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CONSOL\_BILL\_PRINT

**plugin price-client consol-bill print [endpoint:1] [index:1]**

- Prints the entry of the consolidated bill table.
  - endpoint - INT8U - The relevant endpoint.
  - index - INT8U - The index of the consolidated bill table that should be printed.

Definition at line 3692 of file [cli.doc](#).

6.119.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CONSOL\_BILL\_PRINT\_CURRENT

**plugin price-client consol-bill printCurrent [endpoint:1]**

- Prints the entry of the active consolidated bill in the consolidated bills table.
  - endpoint - INT8U - The relevant endpoint.

Definition at line 3698 of file [cli.doc](#).

6.119.2.13 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CONSOLE\_BILL\_PRINT\_EVENT

**plugin price-client consol-bill printEvent [endpoint:1] [issuerEventId:4]**

- Prints the entry of the consolidated bill table with a matching event ID.
  - endpoint - INT8U - The relevant endpoint.
  - issuerEventId - INT32U - The event ID whose information in the consolidated bill table should be printed.

Definition at line 3705 of file [cli.doc](#).

6.119.2.14 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CPP\_EVENT\_SET\_AUTH

**plugin price-client cpp-event setAuth [cppEventAuth:1]**

- Sets the authorization status for future CPP events.
  - cppEventAuth - INT8U - The authorization status for future CPP events.

Definition at line 3711 of file [cli.doc](#).

6.119.2.15 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CPP\_EVENT\_PRINT

**plugin price-client cpp-event print [endpoint:1]**

- Prints the entry of the cpp event table.
  - endpoint - INT8U

Definition at line 3717 of file [cli.doc](#).

6.119.2.16 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CREDIT\_PMT\_PRINT

**plugin price-client credit-pmt print [endpoint:1] [index:1]**

- Prints the entry of the credit payment table.
  - endpoint - INT8U - The relevant endpoint.
  - index - INT8U - The index of the credit payment table entry that should be printed.

Definition at line 3724 of file [cli.doc](#).

6.119.2.17 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CREDIT\_PMT\_PRINT\_EVENT

**plugin price-client credit-pmt printEvent [endpoint:1] [issuerEventId:4]**

- Prints the entry of the credit payment table with a matching issuer event ID.
  - endpoint - INT8U - The relevant endpoint.
  - issuerEventId - INT32U - The issuerEventId of the credit payment table entry that should be printed.

Definition at line 3731 of file [cli.doc](#).

6.119.2.18 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CURRENCY\_CONVERS\_PRINT\_EVENT

**plugin price-client currency-convers printEvent [endpoint:1] [issuerEventId:4]**

- Prints the entry of the currency conversion table with a matching issuer event ID.
  - endpoint - INT8U - The relevant endpoint.
  - issuerEventId - INT32U - The issuerEventId of the currency conversion table entry that should be printed.

Definition at line 3738 of file [cli.doc](#).

6.119.2.19 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_CLIENT\_PLUGIN\_PRICE\_CLIENT\_CURRENCY\_CONVERS\_PRINT\_CURRENT

**plugin price-client currency-convers printCurrent [endpoint:1]**

- Prints the active entry of the currency conversion table.
  - endpoint - INT8U - The relevant endpoint.

Definition at line 3744 of file [cli.doc](#).

## 6.120 Plugin Commands: Price Common

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_COMMON\_PLUGIN\_PRICE\_COMMON\_ADJ\_ST\_T
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_COMMON\_PLUGIN\_PRICE\_COMMON\_CNVRT\_DURN\_TO\_SEC

#### 6.120.1 Detailed Description

Utility functions common to both Price Client / Server.

#### 6.120.2 Macro Definition Documentation

6.120.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_COMMON\_PLUGIN\_PRICE\_COMMON\_ADJ\_ST\_T

**plugin price-common adj-st-t [startTimeUtc:4] [durationType:1]**

- *Calculates a new UTC start time value based on the duration type parameter.*
  - startTimeUtc - INT32U
  - durationType - INT8U

Definition at line 3760 of file [cli.doc](#).

6.120.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_COMMON\_PLUGIN\_PRICE\_COMMON\_CNVRT\_DURN\_TO\_SEC

**plugin price-common cnvrt-durn-to-sec [startTimeUtc:4] [duration:4] [durationType:1]**

- *Converts the duration to a number of seconds based on the duration type parameter.*
  - startTimeUtc - INT32U
  - duration - INT32U
  - durationType - INT8U

Definition at line 3768 of file [cli.doc](#).

### 6.121.1 Detailed Description

The identify plugin contributes a CLI command to the application framework to be used for printing information related to identification.

### 6.121.2 Macro Definition Documentation

6.121.2.1 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_SERVER_PLUGIN_PRICE_SERVER_INIT`

#### **plugin price-server init [endpoint:1]**

- *Initialize the price info for the provided endpoint.*
  - endpoint - INT8U - The relevant endpoint

Definition at line [3784](#) of file [cli.doc](#).

6.121.2.2 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_SERVER_PLUGIN_PRICE_SERVER_PRINT`

#### **plugin price-server print [endpoint:1]**

- *Print the price info for the provided endpoint.*
  - endpoint - INT8U - The relevant endpoint

Definition at line [3790](#) of file [cli.doc](#).

6.121.2.3 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_SERVER_PLUGIN_PRICE_SERVER_CLEAR`

#### **plugin price-server clear [endpoint:1]**

- *Clears out the currently set price for the supplied endpoint.*
  - endpoint - INT8U - The relevant endpoint

Definition at line [3820](#) of file [cli.doc](#).

6.121.2.4 `#define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_PRICE_SERVER_PLUGIN_PRICE_SERVER_WHO`

#### **plugin price-server who [provId:4] [label:-1] [eventId:4]**

- *Sets identifying information about the price.*
  - provId - INT32U - provider id
  - label - OCTET\_STRING - rate label
  - eventId - INT32U - issuer event id

Definition at line [3852](#) of file [cli.doc](#).

6.121.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_WHAT

**plugin price-server what [unitOfMeas:1] [curr:2] [ptd:1] [prt:1] [bt:1]**

- *Indicates what units the price is presented in.*

- unitOfMeas - INT8U - unit of measure
- curr - INT16U - currency
- ptd - INT8U - price trailing digit and tier
- prt - INT8U - number of price tiers and tier
- bt - INT8U - number of block thresholds

Definition at line 3873 of file [cli.doc](#).

6.121.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_WHEN

**plugin price-server when [startTime:4] [duration:2]**

- *Sets start time and duration for the price.*

- startTime - UTC\_TIME
- duration - INT16U

Definition at line 3894 of file [cli.doc](#).

6.121.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_PRICE

**plugin price-server price [price:4] [ratio:1] [genPrice:4] [genRatio:1]**

- *Set the single price held within the price plugin server*

- price - INT32U - price
- ratio - INT8U - ratio
- genPrice - INT32U - generation price
- genRatio - INT8U - generation price ratio

Definition at line 3911 of file [cli.doc](#).

6.121.2.8 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_ALTERNATE

**plugin price-server alternate [alternateCostDelivered:4] [alternateCostUnit:1] [alternateCostTrailing-Digit:1]**

- *Set the alternate values for the price.*

- alternateCostDelivered - INT32U - alternate cost delivered
- alternateCostUnit - INT8U - alternate cost unit
- alternateCostTrailingDigit - INT8U - alternate cost trailing digit

Definition at line [3929](#) of file [cli.doc](#).

**6.121.2.9 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_ACK**

#### **plugin price-server ack [req:1]**

- *Turn price acknowledgement on or off depending on passed bool value.*
  - req - INT8U - bool acknowledgement required

Definition at line [3935](#) of file [cli.doc](#).

**6.121.2.10 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_VALID**

#### **plugin price-server valid [endpoint:1] [index:1]**

- *Make a price at a given index valid.*
  - endpoint - INT8U - the relevant endpoint
  - index - INT8U - index in the price table

Definition at line [3942](#) of file [cli.doc](#).

**6.121.2.11 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_INVALID**

#### **plugin price-server invalid [endpoint:1] [index:1]**

- *Make a price at a given index invalid.*
  - endpoint - INT8U - the relevant endpoint
  - index - INT8U - index in the price table

Definition at line [3949](#) of file [cli.doc](#).

**6.121.2.12 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_GET**

#### **plugin price-server get [endpoint:1] [index:1]**

- *Retrieve a price from a given index into the price buffer for editing.*
  - endpoint - INT8U - the relevant endpoint
  - index - INT8U - index of the price to retrieve

Definition at line [3984](#) of file [cli.doc](#).

6.121.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_SPRINT

**plugin price-server sprint [endpoint:1]**

- Print the contents of the price buffer for the provided endpoint.

- endpoint - INT8U - the relevant endpoint

Definition at line 3999 of file [cli.doc](#).

6.121.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_PUBLISH

**plugin price-server publish [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [priceIndex:1]**

- Publish the current price.

- nodeId - INT16U - the destination node id
- srcEndpoint - INT8U - the source endpoint
- dstEndpoint - INT8U - the destination endpoint
- priceIndex - INT8U - index of the price to publish

Definition at line 4015 of file [cli.doc](#).

6.121.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_PUB\_TARIFF\_INFO

**plugin price-server pub-tariff-info [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [tariffIndex:1]**

- Publish the tariff info.

- nodeId - INT16U - the destination node id
- srcEndpoint - INT8U - the source endpoint
- dstEndpoint - INT8U - the destination endpoint
- tariffIndex - INT8U - index of the tariff to publish

Definition at line 4024 of file [cli.doc](#).

6.121.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CONVERSION\_FACTOR\_ADD

**plugin price-server conversion-factor add [endpoint:1] [issuerEventId:4] [startTime:4] [conversionFactor:4] [conversionFactorTrailingDigit:1]**

- Set the conversion factor information in the conversion factor table.

- endpoint - INT8U
- issuerEventId - INT32U

- startTime - UTC\_TIME
- conversionFactor - INT32U
- conversionFactorTrailingDigit - INT8U

Definition at line 4217 of file [cli.doc](#).

**6.121.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CONVERSION\_FACTOR\_CLEAR**

**plugin price-server conversion-factor clear [endpoint:1]**

- *Clear conversion factor table.*
  - endpoint - INT8U

Definition at line 4223 of file [cli.doc](#).

**6.121.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CONVERSION\_FACTOR\_PRINT**

**plugin price-server conversion-factor print [endpoint:1]**

- *Print out conversion factor table.*
  - endpoint - INT8U

Definition at line 4229 of file [cli.doc](#).

**6.121.2.19 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CONVERSION\_FACTOR\_PUB**

**plugin price-server conversion-factor pub [tableIndex:1] [server:2] [clientEndpoint:1] [serverEndpoint:1]**

- *publish specified conversion factor entry*
  - tableIndex - INT8U - The network address of the server to which the request will be sent.
  - server - INT16U - The network address of the server to which the request will be sent.
  - clientEndpoint - INT8U - The local endpoint from which the request will be sent.
  - serverEndpoint - INT8U - The remote endpoint to which the request will be sent.

Definition at line 4238 of file [cli.doc](#).

**6.121.2.20 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CALORIFIC\_VALUE\_ADD**

**plugin price-server calorific-value add [endpoint:1] [issuerEventId:4] [startTime:4] [calorificValue:4] [calorificValueUnit:1] [calorificValueTrailingDigit:1]**

- Set the calorific value in table.

- endpoint - INT8U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- calorificValue - INT32U
- calorificValueUnit - INT8U
- calorificValueTrailingDigit - INT8U

Definition at line 4249 of file [cli.doc](#).

**6.121.2.21 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CALORIFIC\_VALUE\_CLEAR**

**plugin price-server calorific-value clear [endpoint:1]**

- Clear the table.

- endpoint - INT8U

Definition at line 4255 of file [cli.doc](#).

**6.121.2.22 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BLOCK\_PERIOD\_PRINT**

**plugin price-server block-period print [endpoint:1] [index:1]**

- Print the block period table.

- endpoint - INT8U
- index - INT8U

Definition at line 4262 of file [cli.doc](#).

**6.121.2.23 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BLOCK\_PERIOD\_ADD**

**plugin price-server block-period add [endpoint:1] [providerId:4] [issuerEventId:4] [blockPeriodStartTime:4] [blockPeriodDuration:4] [blockPeriodControl:1] [blockPeriodDurationType:1] [thresholdMultiplier:4] [thresholdDivisor:4] [tariffType:1] [tariffResolutionPeriod:1]**

- Set the block period value in the table.

- endpoint - INT8U
- providerId - INT32U
- issuerEventId - INT32U
- blockPeriodStartTime - INT32U
- blockPeriodDuration - INT32U

- blockPeriodControl - INT8U
- blockPeriodDurationType - INT8U
- thresholdMultiplier - INT32U
- thresholdDivisor - INT32U
- tariffType - INT8U
- tariffResolutionPeriod - INT8U

Definition at line 4278 of file [cli.doc](#).

**6.121.2.24 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BLOCK\_PERIOD\_PUB**

**plugin price-server block-period pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [index:1]**

- Sends a Publish Block Period command.

  - nodeId - INT16U
  - srcEndpoint - INT8U
  - dstEndpoint - INT8U
  - index - INT8U

Definition at line 4287 of file [cli.doc](#).

**6.121.2.25 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BLOCK\_PERIOD\_CLEAR**

**plugin price-server block-period clear [endpoint:1]**

- Clears the local Block Period table.

  - endpoint - INT8U

Definition at line 4293 of file [cli.doc](#).

**6.121.2.26 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CALORIFIC\_VALUE\_PRINT**

**plugin price-server calorific-value print [endpoint:1]**

- Print out the table.

  - endpoint - INT8U

Definition at line 4299 of file [cli.doc](#).

6.121.2.27 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CO2\_VAL\_ADD

**plugin price-server co2-val add [endpoint:1] [issuerEventId:4] [startTime:4] [providerId:4] [tariffType:1] [co2Value:4] [co2ValueUnit:1] [co2ValueTrailingDigit:1]**

- Set the CO2 value in table.

- endpoint - INT8U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- providerId - INT32U
- tariffType - INT8U
- co2Value - INT32U
- co2ValueUnit - INT8U
- co2ValueTrailingDigit - INT8U

Definition at line 4312 of file [cli.doc](#).

6.121.2.28 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CO2\_VAL\_CLEAR

**plugin price-server co2-val clear [endpoint:1]**

- Clear the table.

- endpoint - INT8U

Definition at line 4318 of file [cli.doc](#).

6.121.2.29 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CO2\_VAL\_PRINT

**plugin price-server co2-val print [endpoint:1]**

- Print out the table.

- endpoint - INT8U

Definition at line 4324 of file [cli.doc](#).

6.121.2.30 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CO2\_VAL\_PUB

**plugin price-server co2-val pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [tariffIndex:1]**

- Publish table entry.

- nodeId - INT16U - the destination node id

- srcEndpoint - INT8U - the source endpoint
- dstEndpoint - INT8U - the destination endpoint
- tariffIndex - INT8U - index of the tariff to publish

Definition at line 4333 of file [cli.doc](#).

**6.121.2.31 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_TIER\_LABEL\_SET**

**plugin price-server tier-label set [endpoint:1] [index:1] [valid:1] [providerId:4] [issuerEventId:4] [issuerTariffId:4] [tierId:1] [tierLabel:-1]**

- *Set specific info for tier label*
  - endpoint - INT8U
  - index - INT8U
  - valid - INT8U
  - providerId - INT32U
  - issuerEventId - INT32U
  - issuerTariffId - INT32U
  - tierId - INT8U
  - tierLabel - OCTET\_STRING

Definition at line 4346 of file [cli.doc](#).

**6.121.2.32 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_TIER\_LABEL\_ADD\_LABEL**

**plugin price-server tier-label add-label [endpoint:1] [issuerTariffId:4] [tierId:1] [tierLabel:-1]**

- *Add additional tier labels to a given tier.*
  - endpoint - INT8U
  - issuerTariffId - INT32U
  - tierId - INT8U
  - tierLabel - OCTET\_STRING

Definition at line 4355 of file [cli.doc](#).

**6.121.2.33 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_TIER\_LABEL\_PRINT**

**plugin price-server tier-label print [endpoint:1]**

- *Print out the table.*
  - endpoint - INT8U

Definition at line 4361 of file [cli.doc](#).

6.121.2.34 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_TIER\_LABEL\_PUB

**plugin price-server tier-label pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [tariffIndex:1]**

- *Publish the table.*

- nodeId - INT16U - the destination node id
- srcEndpoint - INT8U - the source endpoint
- dstEndpoint - INT8U - the destination endpoint
- tariffIndex - INT8U - index of the tariff to publish

Definition at line 4370 of file [cli.doc](#).

6.121.2.35 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BILLING\_PERIOD\_ADD

**plugin price-server billing-period add [endpoint:1] [startTime:4] [issuerEventId:4] [providerId:4] [billingPeriodDuration:4] [billingPeriodDurationType:1] [tariffType :1]**

- *Set specific info for billing period*
- endpoint - INT8U
- startTime - UTC\_TIME
- issuerEventId - INT32U
- providerId - INT32U
- billingPeriodDuration - INT32U
- billingPeriodDurationType - INT8U
- tariffType - INT8U

Definition at line 4382 of file [cli.doc](#).

6.121.2.36 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BILLING\_PERIOD\_PRINT

**plugin price-server billing-period print [endpoint:1]**

- *Print out the table.*
- endpoint - INT8U

Definition at line 4388 of file [cli.doc](#).

6.121.2.37 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BILLING\_PERIOD\_PUB

**plugin price-server billing-period pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [index:1]**

- *Publish billing period entry.*
  - nodeId - INT16U - the destination node id
  - srcEndpoint - INT8U - the source endpoint
  - dstEndpoint - INT8U - the destination endpoint
  - index - INT8U - index of the billing period entry to publish

Definition at line 4397 of file [cli.doc](#).

6.121.2.38 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_BILLING\_PERIOD\_REPEAT

**plugin price-server billing-period repeat [repeat:1]**

- *Set whether or not a billing period should repeat after it finishes. Per the SE spec, the billing period is supposed to repeat, but this command can be used to turn that feature off for debugging.*
  - repeat - INT8U - Whether or not a billing period should repeat. 0 can be passed to stop all billing periods from repeating.

Definition at line 4403 of file [cli.doc](#).

6.121.2.39 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CONSOL\_BILL\_ADD

**plugin price-server consol-bill add [endpoint:1] [startTime:4] [issuerEventId:4] [providerId:4] [billingPeriodDuration:4] [billingPeriodDurationType:1] [tariffType :1] [consolidatedBill:4] [currency:2] [billTrailingDigit:1]**

- *Set specific info for consolidated bill*
  - endpoint - INT8U
  - startTime - UTC\_TIME
  - issuerEventId - INT32U
  - providerId - INT32U
  - billingPeriodDuration - INT32U
  - billingPeriodDurationType - INT8U
  - tariffType - INT8U
  - consolidatedBill - INT32U
  - currency - INT16U
  - billTrailingDigit - INT8U

Definition at line 4418 of file [cli.doc](#).

6.121.2.40 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CONSOL\_BILL\_PRINT

**plugin price-server consol-bill print [endpoint:1] [index:1]**

- Print out the consolidated bills table.

- endpoint - INT8U
- index - INT8U

Definition at line 4425 of file [cli.doc](#).

6.121.2.41 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CONSOL\_BILL\_PUB

**plugin price-server consol-bill pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [index:1]**

- Publish billing period entry.

- nodeId - INT16U - the destination node id
- srcEndpoint - INT8U - the source endpoint
- dstEndpoint - INT8U - the destination endpoint
- index - INT8U - index of the consolidated bill entry to publish

Definition at line 4434 of file [cli.doc](#).

6.121.2.42 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CPP\_EVENT\_SET

**plugin price-server cpp-event set [endpoint:1] [valid:1] [providerId:4] [issuerEventId:4] [startTime:4] [durationInMins:2] [tariffType:1] [cppPriceTier:1] [cppAuth:1]**

- Configure values for a CPP event.

- endpoint - INT8U
- valid - INT8U
- providerId - INT32U
- issuerEventId - INT32U
- startTime - INT32U
- durationInMins - INT16U
- tariffType - INT8U
- cppPriceTier - INT8U
- cppAuth - INT8U

Definition at line 4448 of file [cli.doc](#).

6.121.2.43 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CPP\_EVENT\_PUB

**plugin price-server cpp-event pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1]**

- Publish a CPP event command using the configured values for the CPP event.

- nodeId - INT16U
- srcEndpoint - INT8U
- dstEndpoint - INT8U

Definition at line 4456 of file [cli.doc](#).

6.121.2.44 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CPP\_EVENT\_PRINT

**plugin price-server cpp-event print [endpoint:1]**

- Print the current CPP event values.
- endpoint - INT8U

Definition at line 4462 of file [cli.doc](#).

6.121.2.45 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CREDIT\_PMT\_PUB

**plugin price-server credit-pmt pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [index:1]**

- Publish Credit Payment command.
- nodeId - INT16U - the destination node id
- srcEndpoint - INT8U - the source endpoint
- dstEndpoint - INT8U - the destination endpoint
- index - INT8U - index of the credit payment table entry to publish

Definition at line 4471 of file [cli.doc](#).

6.121.2.46 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CREDIT\_PMT\_SET

**plugin price-server credit-pmt set [endpoint:1] [index:1] [valid:1] [providerId:4] [issuerEventId:4] [creditPaymentDueDate:4] [creditPaymentOverdueAmount:4] [creditPaymentStatus:1] [creditPayment:4] [creditPaymentDate:4] [creditPaymentRef:-1]**

- Set specific info for credit payment
- endpoint - INT8U
- index - INT8U

- valid - INT8U
- providerId - INT32U
- issuerEventId - INT32U
- creditPaymentDueDate - UTC\_TIME
- creditPaymentOverdueAmount - INT32U
- creditPaymentStatus - INT8U
- creditPayment - INT32U
- creditPaymentDate - UTC\_TIME
- creditPaymentRef - OCTET\_STRING

Definition at line 4487 of file [cli.doc](#).

**6.121.2.47 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CURRENCY\_CONV\_PUB**

**plugin price-server currency-conv pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1]**

- Publish the currency conversion command.

- nodeId - INT16U - the destination node id
- srcEndpoint - INT8U - the source endpoint
- dstEndpoint - INT8U - the destination endpoint

Definition at line 4495 of file [cli.doc](#).

**6.121.2.48 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_CURRENCY\_CONV\_SET**

**plugin price-server currency-conv set [endpoint:1] [valid:1] [providerId:4] [issuerEventId:4] [startTime:4] [oldCurrency:2] [newCurrency:2] [conversionFactor:4] [conversionFactorTrailingDigit:1] [currencyChangeControlFlags:4]**

- Configure the currency conversion settings.

- endpoint - INT8U
- valid - INT8U
- providerId - INT32U
- issuerEventId - INT32U
- startTime - UTC\_TIME
- oldCurrency - INT16U
- newCurrency - INT16U
- conversionFactor - INT32U
- conversionFactorTrailingDigit - INT8U
- currencyChangeControlFlags - INT32U

Definition at line 4510 of file [cli.doc](#).

**6.121.2.49 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_TARIFF\_CANCEL\_SET**

**plugin price-server tariff-cancel set [endpoint:1] [valid:1] [providerId:4] [issuerTariffId:4] [tariffType:1]**

- Set the values of the Tariff Cancellation structure.
  - endpoint - INT8U
  - valid - INT8U
  - providerId - INT32U
  - issuerTariffId - INT32U
  - tariffType - INT8U

Definition at line 4520 of file [cli.doc](#).

**6.121.2.50 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_PRICE\_SERVER\_PLUGIN\_PRICE\_SERVER\_TARIFF\_CANCEL\_PUB**

**plugin price-server tariff-cancel pub [nodeId:2] [srcEndpoint:1] [dstEndpoint:1]**

- Send a Tariff Cancellation command using the values of the Tariff Cancellation structure.
  - nodeId - INT16U
  - srcEndpoint - INT8U
  - dstEndpoint - INT8U

Definition at line 4528 of file [cli.doc](#).

## 6.122 Plugin Commands: RF4CE Multiple System Operators IR-RF Database Originator

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_SET\_FLAGS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_SET\_PRESSED

### 6.122.1 Detailed Description

The RF4CE MSO IR-RF Database Originator plugin contributes several commands to the application framework's CLI.

### 6.122.2 Macro Definition Documentation

#### 6.122.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_SET\_FLAGS

**plugin rf4ce-mso-ir-rf-database-originator set-flags [flags:1]**

- Set the flags of the IR-RF database element.
  - flags - INT8U - The flags.

Definition at line 4544 of file [cli.doc](#).

#### 6.122.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_SET\_PRESSED

**plugin rf4ce-mso-ir-rf-database-originator set-pressed [rfConfig:1] [txOptions:1] [payload:-1]**

- Set the RF pressed descriptor of the IR-RF database element.

- rfConfig - INT8U - The RF config.
- txOptions - INT8U - The TX options.
- payload - OCTET\_STRING - The payload.

Definition at line 4552 of file [cli.doc](#).

**6.122.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_SET\_REPEATED**

**plugin rf4ce-mso-ir-rf-database-originator set-repeated [rfConfig:1] [txOptions:1] [payload:-1]**

- Set the RF repeated descriptor of the IR-RF database element.
  - rfConfig - INT8U - The RF config.
  - txOptions - INT8U - The TX options.
  - payload - OCTET\_STRING - The payload.

Definition at line 4560 of file [cli.doc](#).

**6.122.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_SET\_RELEASED**

**plugin rf4ce-mso-ir-rf-database-originator set-released [rfConfig:1] [txOptions:1] [payload:-1]**

- Set the RF released descriptor of the IR-RF database element.
  - rfConfig - INT8U - The RF config.
  - txOptions - INT8U - The TX options.
  - payload - OCTET\_STRING - The payload.

Definition at line 4568 of file [cli.doc](#).

**6.122.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_ORIGINATOR\_SET\_IR**

**plugin rf4ce-mso-ir-rf-database-originator set-ir [irConfig:1] [irCode:-1]**

- Set the IR descriptor of the IR-RF database element.
  - irConfig - INT8U - The IR config.
  - irCode - OCTET\_STRING - The IR code.

Definition at line 4575 of file [cli.doc](#).

```
6.122.2.6 #define EMBER_AF_DDOXYGEN_CLI_COMMAND_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_ORIGINATOR_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_ORIGINATOR_SET
```

**plugin rf4ce-mso-ir-rf-database-originator set [keyCode:1]**

- Set the IR-RF database element.
  - keyCode - INT8U - The key code.

Definition at line [4581](#) of file [cli.doc](#).

```
6.122.2.7 #define EMBER_AF_DDOXYGEN_CLI_COMMAND_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_ORIGINATOR_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_ORIGINATOR_CLEAR
```

**plugin rf4ce-mso-ir-rf-database-originator clear [keyCode:1]**

- Clear the IR-RF database element.
  - keyCode - INT8U - The key code.

Definition at line [4587](#) of file [cli.doc](#).

```
6.122.2.8 #define EMBER_AF_DDOXYGEN_CLI_COMMAND_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_ORIGINATOR_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_ORIGINATOR_CLEAR_ALL
```

**plugin rf4ce-mso-ir-rf-database-originator clear-all**

- Clear all IR-RF database elements.

Definition at line [4592](#) of file [cli.doc](#).

## 6.123 Plugin Commands: RF4CE Multiple System Operators IR-RF Database Recipient

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_FLAGS
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_PRESSED
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_REPEATED
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_RELEASED
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_IR
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_REMOVE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_REMOVE\_ALL
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_GET\_CALLBACK

### 6.123.1 Detailed Description

The RF4CE MSO IR-RF Database Recipient plugin contributes several commands to the application framework's CLI.

### 6.123.2 Macro Definition Documentation

#### 6.123.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_FLAGS

**plugin rf4ce-mso-ir-rf-database-recipient add-flags [flags:1]**

- Add the flags of the IR-RF database element.
  - flags - INT8U - The flags.

Definition at line 4608 of file [cli.doc](#).

#### 6.123.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_PRESSED

**plugin rf4ce-mso-ir-rf-database-recipient add-pressed [rfConfig:1] [txOptions:1] [payload:-1]**

- Add the RF pressed descriptor of the IR-RF database element.
  - rfConfig - INT8U - The RF config.

- txOptions - INT8U - The TX options.
- payload - OCTET\_STRING - The payload.

Definition at line 4616 of file [cli.doc](#).

**6.123.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_REPEATED**

**plugin rf4ce-mso-ir-rf-database-recipient add-repeated [rfConfig:1] [txOptions:1] [payload:-1]**

- Add the RF repeated descriptor of the IR-RF database element.
  - rfConfig - INT8U - The RF config.
  - txOptions - INT8U - The TX options.
  - payload - OCTET\_STRING - The payload.

Definition at line 4624 of file [cli.doc](#).

**6.123.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_RELEASED**

**plugin rf4ce-mso-ir-rf-database-recipient add-released [rfConfig:1] [txOptions:1] [payload:-1]**

- Add the RF released descriptor of the IR-RF database element.
  - rfConfig - INT8U - The RF config.
  - txOptions - INT8U - The TX options.
  - payload - OCTET\_STRING - The payload.

Definition at line 4632 of file [cli.doc](#).

**6.123.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD\_IR**

**plugin rf4ce-mso-ir-rf-database-recipient add-ir [irConfig:1] [irCode:-1]**

- Add the IR descriptor of the IR-RF database element.
  - irConfig - INT8U - The IR config.
  - irCode - OCTET\_STRING - The IR code.

Definition at line 4639 of file [cli.doc](#).

**6.123.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_PLUGIN\_RF4CE\_MSO\_IR\_RF\_DATABASE\_RECIPIENT\_ADD**

**plugin rf4ce-mso-ir-rf-database-recipient add [keyCode:1]**

- Add the IR-RF database element.
  - keyCode - INT8U - The key code.

Definition at line 4645 of file [cli.doc](#).

```
6.123.2.7 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_RECIPIENT_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_RECIPIENT_REMOVE
```

**plugin rf4ce-mso-ir-rf-database-recipient remove [keyCode:1]**

- Remove the IR-RF database element.

- keyCode - INT8U - The key code.

Definition at line [4651](#) of file [cli.doc](#).

```
6.123.2.8 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_RECIPIENT_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_RECIPIENT_REMOVE_ALL
```

**plugin rf4ce-mso-ir-rf-database-recipient remove-all**

- Remove all IR-RF database elements.

Definition at line [4656](#) of file [cli.doc](#).

```
6.123.2.9 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_RECIPIENT_PLUGIN_RF4CE_MSO_IR_RF_DATABASE_RECIPIENT_GET_CALLBACK
```

**plugin rf4ce-mso-ir-rf-database-recipient get-callback [keyCode:1]**

- Call the Get Callback and print out IR-RF database element.

- keyCode - INT8U - The key code.

Definition at line [4662](#) of file [cli.doc](#).

## 6.124 Plugin Commands: RF4CE Multiple System Operators Profile

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_BIND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_VALIDATE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_TERMINATE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_ABORT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_PRESS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_RELEASE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_SET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_GET

### 6.124.1 Detailed Description

The RF4CE MSO plugin contributes several commands to the application framework's CLI. These commands are used for sending HDMI UI commands.

### 6.124.2 Macro Definition Documentation

#### 6.124.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_BIND

##### plugin rf4ce-mso bind

- Start the MSO binding procedure.

Definition at line 4677 of file [cli.doc](#).

#### 6.124.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_VALIDATE

##### plugin rf4ce-mso validate

- Validate a controller.

Definition at line 4682 of file [cli.doc](#).

6.124.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_TERMINATE

**plugin rf4ce-mso terminate**

- *Terminate the validation procedure.*

Definition at line 4687 of file [cli.doc](#).

6.124.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_ABORT

**plugin rf4ce-mso abort [full:1]**

- *Abort the validation procedure.*
  - full - BOOLEAN - TRUE for a full abort or FALSE otherwise.

Definition at line 4693 of file [cli.doc](#).

6.124.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_PRESS

**plugin rf4ce-mso press [pairingIndex:1] [rcCommandCode:1] [rcCommandPayload:-1] [atomic:1]**

- *Send User Control Pressed command.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - rcCommandCode - INT8U - The HDMI CEC operand [UI Command].
  - rcCommandPayload - OCTET\_STRING - The additional operands, if any, required by the HDMI CEC command.
  - atomic - BOOLEAN - TRUE if the user control is atomic or FALSE if it should repeat.

Definition at line 4702 of file [cli.doc](#).

6.124.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_RELEASE

**plugin rf4ce-mso release [pairingIndex:1] [rcCommandCode:1]**

- *Send User Control Released command.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - rcCommandCode - INT8U - The HDMI CEC operand [UI Command].

Definition at line 4709 of file [cli.doc](#).

6.124.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_SET  
plugin rf4ce-mso set [pairingIndex:1] [attributeId:1] [index:1] [value:-1]

- *Send Set Attribute Request command.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - attributeId - INT8U - The attribute id to store.
  - index - INT8U - The index of the element to store.
  - value - OCTET\_STRING - The value of the attribute element to store.

Definition at line 4718 of file [cli.doc](#).

6.124.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_MSO\_PLUGIN\_RF4CE\_MSO\_GET  
plugin rf4ce-mso get [pairingIndex:1] [attributeId:1] [index:1] [valueLen:1]

- *Send Get Attribute Request command.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - attributeId - INT8U - The attribute id to retrieve.
  - index - INT8U - The index of the element to retrieve.
  - valueLen - INT8U - The length of the attribute element to retrieve.

Definition at line 4727 of file [cli.doc](#).

## 6.125 Plugin Commands: RF4CE Profile

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_STOP
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_PAIR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_SEND
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_VENDOR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_UNPAIR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_POWER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_RX
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_AGILITY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_LQI
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_PRINT

### 6.125.1 Detailed Description

The RF4CE Profile plugin contributes several commands to the application framework's CLI. These commands are used for sending and receiving RF4CE profile message.

### 6.125.2 Macro Definition Documentation

#### 6.125.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_START

##### **plugin rf4ce-profile start**

- Start an RF4CE network.

Definition at line 4743 of file [cli.doc](#).

#### 6.125.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_STOP

##### **plugin rf4ce-profile stop**

- Stop the network operations of an RF4CE network.

Definition at line 4748 of file [cli.doc](#).

6.125.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_PAIR

**plugin rf4ce-profile pair [channel:1] [panId:2] [eui64:8] [keyExchangeTransferCount:1]**

- *Initiate the pairing process.*
  - channel - INT8U - The logical channel of the device with which to pair.
  - panId - INT16U - The PAN identifier of the device with which to pair.
  - eui64 - IEEE\_ADDRESS - The IEEE address of the device with which to pair.
  - keyExchangeTransferCount - INT8U - The number of transfers the target should use to exchange the link key with the pairing originator.

Definition at line [4757](#) of file [cli.doc](#).

6.125.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_SEND

**plugin rf4ce-profile send [pairingIndex:1] [profileId:1] [message:-1]**

- *Send an RF4CE profile message.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - profileId - INT8U - The profile ID to be included in the RF4CE network header of the outgoing RF4CE network DATA frame.
  - message - OCTET\_STRING - The message to be sent.

Definition at line [4765](#) of file [cli.doc](#).

6.125.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_VENDOR

**plugin rf4ce-profile vendor [pairingIndex:1] [profileId:1] [vendorId:2] [message:-1]**

- *Send a vendor-specific RF4CE profile message.*
  - pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
  - profileId - INT8U - The profile ID to be included in the RF4CE network header of the outgoing RF4CE network DATA frame.
  - vendorId - INT16U - The vendor ID to be included in the RF4CE network header of the outgoing RF4CE network DATA frame.
  - message - OCTET\_STRING - The message to be sent.

Definition at line [4774](#) of file [cli.doc](#).

6.125.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_UNPAIR

**plugin rf4ce-profile unpair [pairingIndex:1]**

- *Initiate the unpairing process.*
  - pairingIndex - INT8U - The index of the entry in the pairing table with which to unpair.

Definition at line 4780 of file [cli.doc](#).

6.125.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_POWER

**plugin rf4ce-profile power [dutyCycle:4] [activePeriod:4]**

- *Set the power saving parameters.*
  - dutyCycle - INT32U - The duty cycle of a device in milliseconds.
  - activePeriod - INT32U - The active period of a device in milliseconds.

Definition at line 4787 of file [cli.doc](#).

6.125.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_RX

**plugin rf4ce-profile rx [profileId:1] [enable:1]**

- *Set the RX-enabled state of a profile.*
  - profileId - INT8U - The profile id to enable or disable.
  - enable - INT8U - 0 to disable or 1 to enable.

Definition at line 4794 of file [cli.doc](#).

6.125.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PROFILE\_AGILITY

**plugin rf4ce-profile agility [rssWindowSize:1] [channelChangeReads:1] [rssThreshold:1] [readInterval:2] [readDuration:1]**

- *Set the frequency agility parameters.*
  - rssWindowSize - INT8U - The number of the most recent RSSI reads that are taken into consideration to decide whether a channel switch is required or not.
  - channelChangeReads - INT8U - The number of RSSI reads above the RSSI threshold that will trigger a channel switch.
  - rssThreshold - INT8S - The RSSI threshold above which a channel will be considered congested.
  - readInterval - INT16U - The interval length in seconds between two consecutive RSSI reads.
  - readDuration - INT8U - The exponent of the number of scan periods of the RSSI read process.

Definition at line 4804 of file [cli.doc](#).

6.125.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PR-  
OFILE\_LQI

**plugin rf4ce-profile lqi [threshold:1]**

- Set the discovery LQI threshold parameter.
  - threshold - INT8U - The LQI threshold below which discovery requests will be rejected.

Definition at line 4810 of file [cli.doc](#).

6.125.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_PROFILE\_PLUGIN\_RF4CE\_PR-  
OFILE\_PRINT

**plugin rf4ce-profile print**

- Print the pairing table.

Definition at line 4815 of file [cli.doc](#).

## 6.126 Plugin Commands: RGB control for PWM

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_LED\_RGB\_PWM\_PLUGIN\_LED\_RGB\_PWM\_XY\_Y

#### 6.126.1 Detailed Description

RGB-PWM is a plugin to control color for a 3 LED system with red, blue, and green.

#### 6.126.2 Macro Definition Documentation

##### 6.126.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_LED\_RGB\_PWM\_PLUGIN\_LED\_RGB\_PWM\_XY\_Y

**plugin led-rgb-pwm xyY [currentX:2] [currentY:2]**

- *Value of white LED.*
  - currentX - INT16U - CIE attribute X.
  - currentY - INT16U - CIE attribute Y.

Definition at line 4832 of file [cli.doc](#).

## 6.127 Plugin Commands: Relay Control Server

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RELAY\_CONTROL\_SERVER\_PLUGIN\_RELAY\_CONTROL\_SERVER\_GET
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RELAY\_CONTROL\_SERVER\_PLUGIN\_RELAY\_CONTROL\_SERVER\_SET

#### 6.127.1 Detailed Description

The relay control plugin provides the functionality to enable or disable the stack's relay capabilities, and also to view the relay state.

#### 6.127.2 Macro Definition Documentation

##### 6.127.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RELAY\_CONTROL\_SERVER\_PLUGIN\_RELAY\_CONTROL\_SERVER\_GET

**plugin relay-control-server get [nodeId:2] [srcEndpoint:1] [dstEndpoint:1]**

- *Get the relay state*
  - nodeId - INT16U - the destination node id
  - srcEndpoint - INT8U - the source endpoint
  - dstEndpoint - INT8U - the destination endpoint

Definition at line 4850 of file [cli.doc](#).

##### 6.127.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RELAY\_CONTROL\_SERVER\_PLUGIN\_RELAY\_CONTROL\_SERVER\_SET

**plugin relay-control-server set [nodeId:2] [srcEndpoint:1] [dstEndpoint:1] [isEnabled:1]**

- *Set the relay state*
  - nodeId - INT16U - the destination node id
  - srcEndpoint - INT8U - the source endpoint
  - dstEndpoint - INT8U - the destination endpoint
  - isEnabled - INT8U - state value to be set

Definition at line 4859 of file [cli.doc](#).

## 6.128 Plugin Commands: Reporting

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_REMOVE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_ADD
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_CLEAR\_LAST\_REPORT\_TIME

### 6.128.1 Detailed Description

The reporting plugin contributes several CLI commands to the application framework to be used in creating and managing reporting table entries directly on the device.

### 6.128.2 Macro Definition Documentation

#### 6.128.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_PRINTER

##### **plugin reporting print**

- *Print the report table.*

Definition at line 4875 of file [cli.doc](#).

#### 6.128.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_CLEAR

##### **plugin reporting clear**

- *Clear all entries from the report table.*

Definition at line 4880 of file [cli.doc](#).

#### 6.128.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_REMOVE

##### **plugin reporting remove [index:1]**

- *Remove an entry from the report table.*
  - index - INT8U - The index of the report to be removed.

Definition at line 4886 of file [cli.doc](#).

6.128.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_ADD

**plugin reporting add [endpoint:1] [clusterId:2] [attributeId:2] [mask:1] [minInterval:2] [maxInterval:2] [reportableChange:4]**

- *Add a new entry to the report table.*

- endpoint - INT8U - The local endpoint from which the attribute is reported.
- clusterId - INT16U - The cluster where the attribute is located.
- attributeId - INT16U - The id of the attribute being reported.
- mask - INT8U - 0 for client-side attributes or 1 for server-side attributes.
- minInterval - INT16U - The minimum reporting interval, measured in seconds.
- maxInterval - INT16U - The maximum reporting interval, measured in seconds.
- reportableChange - INT32U - The minimum change to the attribute that will result in a report being sent.

Definition at line 4898 of file [cli.doc](#).

6.128.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_REPORTING\_PLUGIN\_REPORTING\_CLEAR\_LAST\_REPORT\_TIME

**plugin reporting clear-last-report-time**

- *Clear last report time of attributes.*

Definition at line 4903 of file [cli.doc](#).

## 6.129 Plugin Commands: SB1 Gesture Sensor

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SB1\_GESTURE\_SENSOR\_PLUGIN\_SB1\_GESTURE\_SENSOR\_MSG\_READY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SB1\_GESTURE\_SENSOR\_PLUGIN\_SB1\_GESTURE\_SENSOR\_READ\_MSG
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SB1\_GESTURE\_SENSOR\_PLUGIN\_SB1\_GESTURE\_SENSOR\_SEND\_GEST

### 6.129.1 Detailed Description

Diagnostic commands for the SB1 Gesture Sensor.

### 6.129.2 Macro Definition Documentation

6.129.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SB1\_GESTURE\_SENSOR\_PLUGIN\_SB1\_GESTURE\_SENSOR\_MSG\_READY

**plugin sb1-gesture-sensor msg-ready**

- Will print "msg ready" or "no msg ready" based on the state of the SB1's IRQ pin

Definition at line 4917 of file [cli.doc](#).

6.129.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SB1\_GESTURE\_SENSOR\_PLUGIN\_SB1\_GESTURE\_SENSOR\_READ\_MSG

**plugin sb1-gesture-sensor read-msg**

- Will generate an i2c read of the sb1 gesture sensor, printing the resulting message (or i2c bus state in case of error)

Definition at line 4922 of file [cli.doc](#).

6.129.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SB1\_GESTURE\_SENSOR\_PLUGIN\_SB1\_GESTURE\_SENSOR\_SEND\_GEST

**plugin sb1-gesture-sensor send-gest [gesture:1] [button:1]**

- Will simulate receiving a gesture of type specified by the argument
  - gesture - INT8U - Gesture to simulate.
  - button - INT8U - Button to simulate gesture on.

Definition at line 4929 of file [cli.doc](#).

## 6.130 Plugin Commands: Scenes Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SCENES\_PLUGIN\_SCENES\_PRINT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SCENES\_PLUGIN\_SCENES\_CLEAR

#### 6.130.1 Detailed Description

The Scenes server plugin contributes a CLI command to the application framework to be used for printing information related to scenes.

#### 6.130.2 Macro Definition Documentation

##### 6.130.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SCENES\_PLUGIN\_SCENES\_PRINT

###### **plugin scenes print**

- *Print information about the contents of the scenes table.*

Definition at line 4944 of file [cli.doc](#).

##### 6.130.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SCENES\_PLUGIN\_SCENES\_CLEAR

###### **plugin scenes clear**

- *Clear the scenes table on every endpoint.*

Definition at line 4949 of file [cli.doc](#).

## 6.131 Plugin Commands: Simple Metering Client

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_SCH\_SNAPSHOT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_START\_SAMPLING
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_GET\_SAMPLED\_DATA
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_LOCAL\_CHANGE\_SUPPLY

### 6.131.1 Detailed Description

The simple-metering-client plugin contributes CLI commands to the application framework to be used in conjunction with the Simple Metering cluster in a client context.

### 6.131.2 Macro Definition Documentation

#### 6.131.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_SCH\_SNAPSHOT

**plugin simple-metering-client sch-snapshot [server:2] [clientEndpoint:1] [serverEndpoint:1] [issuerId:4] [commandIndex:1] [numberOfCommands:1] [snapshotScheduleId:1] [snapshotStartDate:4] [snapshotSchedule:4] [snapshotType:1] [snapshotCause:4]**

- *Schedule a snapshot.*
  - server - INT16U - The network address of the server to which the request will be sent.
  - clientEndpoint - INT8U - The local endpoint from which the request will be sent.
  - serverEndpoint - INT8U - The remote endpoint to which the request will be sent.
  - issuerId - INT32U - The issuerId.
  - commandIndex - INT8U - The commandIndex.
  - numberOfCommands - INT8U - The total number of commands
  - snapshotScheduleId - INT8U - The snapshot schedule Id.
  - snapshotStartDate - INT32U - The start time.
  - snapshotSchedule - INT32U - The snapshot schedule. 3 bytes
  - snapshotType - INT8U - The snapshot Type.
  - snapshotCause - INT32U - The snapshot schedule cause.

Definition at line 4976 of file [cli.doc](#).

#### 6.131.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_START\_SAMPLING

**plugin simple-metering-client start-sampling [server:2] [clientEndpoint:1] [serverEndpoint:1] [issuerId:4] [startTime:4] [sampleType:1] [SampleRequestInterval:2] [maxNumberOfSamples:2]**

- *Send a start sampling command to a metering server.*
  - server - INT16U - The network address of the server to which the request will be sent.
  - clientEndpoint - INT8U - The local endpoint from which the request will be sent.
  - serverEndpoint - INT8U - The remote endpoint to which the request will be sent.
  - issuerId - INT32U - The issuerId.
  - startTime - INT32U - The time to start sampling
  - sampleType - INT8U - An 8 bit enumeration that identifies the type of data being sampled
  - SampleRequestInterval - INT16U - An unsigned 16-bit field representing the interval or time in seconds between samples.
  - maxNumberOfSamples - INT16U - A 16 bit unsigned integer that represents the number of samples to be taken.

Definition at line [4989](#) of file [cli.doc](#).

#### **6.131.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_S- IMPLE\_METERING\_CLIENT\_GET\_SAMPLED\_DATA**

**plugin simple-metering-client get-sampled-data [server:2] [clientEndpoint:1] [serverEndpoint:1] [sample-  
Id:2] [startTime:4] [sampleType:1] [numberOfSamples:2]**

- *Send a start sampling command to a metering server.*
  - server - INT16U - The network address of the server to which the request will be sent.
  - clientEndpoint - INT8U - The local endpoint from which the request will be sent.
  - serverEndpoint - INT8U - The remote endpoint to which the request will be sent.
  - sampleId - INT16U - The sample id as received in a previous startSamplingResponse
  - startTime - INT32U - The earliest start time sampling
  - sampleType - INT8U - An 8 bit enumeration that identifies the required type of sampled data
  - numberOfSamples - INT16U - The total number of samples.

Definition at line [5001](#) of file [cli.doc](#).

#### **6.131.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_CLIENT\_PLUGIN\_S- IMPLE\_METERING\_CLIENT\_LOCAL\_CHANGE\_SUPPLY**

**plugin simple-metering-client local-change-supply [server:2] [clientEndpoint:1] [serverEndpoint:1]  
[proposedSupplyStatus:1]**

- *Send a start sampling command to a metering server.*
  - server - INT16U - The network address of the server to which the request will be sent.
  - clientEndpoint - INT8U - The local endpoint from which the request will be sent.
  - serverEndpoint - INT8U - The remote endpoint to which the request will be sent.
  - proposedSupplyStatus - INT8U - The proposed supply status: either ON(2) or OFF/ARME-  
D(1)

Definition at line [5010](#) of file [cli.doc](#).

## 6.132 Plugin Commands: Simple Metering Server

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_SERVER\_PLUGIN\_SIMPLE\_METERING\_SERVER\_CONFIGURE\_MIRROR
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_SERVER\_PLUGIN\_SIMPLE\_METERING\_SERVER\_TOGGLE\_FAST\_POLL\_MODE

### 6.132.1 Detailed Description

The simple-metering-server plugin contributes CLI commands to the application framework to be used in conjunction with the Simple Metering cluster in a server context

### 6.132.2 Macro Definition Documentation

#### 6.132.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_SERVER\_PLUGIN\_SIMPLE\_METERING\_SERVER\_CONFIGURE\_MIRROR

**plugin simple-metering-server configure-mirror [client:2] [serverEndpoint:1] [clientEndpoint:1] [IssuerEventId:4] [ReportingInterval:4] [mirrorNotificationReporting:1] [NotificationScheme:1]**

- *Send configure mirror command to Metering client.*
  - client - INT16U - The network address of the server to which the request will be sent.
  - serverEndpoint - INT8U - The local endpoint from which the request will be sent.
  - clientEndpoint - INT8U - The remote endpoint to which the request will be sent.
  - IssuerEventId - INT32U - The issuer event Id as specified by the device.
  - ReportingInterval - INT32U - 3 bytes of Reporting Interval value.
  - mirrorNotificationReporting - INT8U - Mirror Notification Reporting value
  - NotificationScheme - INT8U - Mirror Notification Reporting value

Definition at line 5114 of file [cli.doc](#).

#### 6.132.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SIMPLE\_METERING\_SERVER\_PLUGIN\_SIMPLE\_METERING\_SERVER\_TOGGLE\_FAST\_POLL\_MODE

**plugin simple-metering-server toggle-fast-poll-mode [enableFastPolling:1]**

- *Disable fast polling mode for testing.*
  - enableFastPolling - INT8U - 1 to enable, 0 to disable fast polling mode.

Definition at line 5120 of file [cli.doc](#).

## 6.133 Plugin Commands: Sleepy Message Queue

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_INIT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_STORE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_GET\_PENDING\_MSG\_ID
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_GET\_PENDING\_MSG
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_GET\_NUM\_MSG
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_REMOVE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_REMOVE\_ALL
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_UNUSED\_CNT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_REMAIN\_TIME
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_TIMESTAMP

### 6.133.1 Detailed Description

The sleepy-message-queue plugin provides a means to store packets up to a specified period of time.

### 6.133.2 Macro Definition Documentation

#### 6.133.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_INIT

##### **plugin sleepy-message-queue init**

- Initialize the sleepy message queue.

Definition at line 5135 of file [cli.doc](#).

#### 6.133.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_STORE

##### **plugin sleepy-message-queue store [timeoutSec:4] [payloadPtr:4] [payloadLength:2] [payloadId:2] [dstEui64:-1]**

- Store a message into the sleepy message queue.
  - timeoutSec - INT32U - Message timeout, in seconds

- payloadPtr - INT32U - Pointer to (address of) the message payload
- payloadLength - INT16U - The length of the message payload
- payloadId - INT16U - The payload ID of this message
- dstEui64 - OCTET\_STRING - The EUI64 of the device to which the message is being sent

Definition at line [5145](#) of file [cli.doc](#).

#### **6.133.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_GET\_PENDING\_MSG\_ID**

##### **plugin sleepy-message-queue getPendingMsgId [dstEui64:-1]**

- *Get the first pending message ID for a given destination EUI64.*
  - dstEui64 - OCTET\_STRING - The EUI64 of the device for which the first pending message ID is being queried

Definition at line [5151](#) of file [cli.doc](#).

#### **6.133.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_GET\_PENDING\_MSG**

##### **plugin sleepy-message-queue getPendingMsg [msgId:1]**

- *Get the first pending message ID for a given destination EUI64.*
  - msgId - INT8U - The messageID of the message to be retrieved.

Definition at line [5157](#) of file [cli.doc](#).

#### **6.133.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_GET\_NUM\_MSG**

##### **plugin sleepy-message-queue getNumMsg [dstEui64:-1]**

- *Get the number of pending messages for a given destination EUI64.*
  - dstEui64 - OCTET\_STRING - The EUI64 of the device for which the number of pending messages is being queried

Definition at line [5163](#) of file [cli.doc](#).

#### **6.133.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_REMOVE**

##### **plugin sleepy-message-queue remove [msgId:1]**

- *Remove the message from the queue with the given messageID.*
  - msgId - INT8U - The messageID of the message to be removed.

Definition at line [5169](#) of file [cli.doc](#).

6.133.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_S-  
LEEPY\_MESSAGE\_QUEUE\_REMOVE\_ALL

**plugin sleepy-message-queue removeAll [dstEui64:-1]**

- Remove all messages from the queue with the given EUI64.
  - dstEui64 - OCTET\_STRING - The EUI64 of the device whose messages should be removed.

Definition at line [5175](#) of file [cli.doc](#).

6.133.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_S-  
LEEPY\_MESSAGE\_QUEUE\_UNUSED\_CNT

**plugin sleepy-message-queue unusedCnt**

- Reads the number of unused queue entries.

Definition at line [5180](#) of file [cli.doc](#).

6.133.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_S-  
LEEPY\_MESSAGE\_QUEUE\_REMAIN\_TIME

**plugin sleepy-message-queue remainTime [msgId:1]**

- Report the remaining timeout on the message specified by the message ID.
  - msgId - INT8U - The messageID of the message whose remaining time will be reported.

Definition at line [5186](#) of file [cli.doc](#).

6.133.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SLEEPY\_MESSAGE\_QUEUE\_PLUGIN\_S-  
LEEPY\_MESSAGE\_QUEUE\_TIMESTAMP

**plugin sleepy-message-queue timestamp**

- Retrieve the current value of `halCommonGetInt32uMillisecondTick()`.

Definition at line [5191](#) of file [cli.doc](#).

## 6.134 Plugin Commands: Smart Energy Registration

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SMART\_ENERGY\_REGISTRATION\_PLUGIN\_SMART\_ENERGY\_REGISTRATION\_SET\_PERIOD

#### 6.134.1 Detailed Description

The Smart Energy Registration plugin contributes several CLI commands to the application framework to be used in managing registration.

#### 6.134.2 Macro Definition Documentation

##### 6.134.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_SMART\_ENERGY\_REGISTRATION\_PLUGIN\_SMART\_ENERGY\_REGISTRATION\_SET\_PERIOD

**plugin smart-energy-registration set-period [discoveryPeriod:4]**

- Sets the discovery period (in seconds)
  - discoveryPeriod - INT32U - The discovery period (in seconds).

Definition at line 5207 of file [cli.doc](#).

## 6.135 Plugin Commands: Stack Diagnostics

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_INFO
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_CHILD\_TABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_NEIGHBOR\_TABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_ROUTE\_TABLE

### 6.135.1 Detailed Description

These commands give more information about the status of the stack, such as routing tables, neighbor tables, and child tables.

### 6.135.2 Macro Definition Documentation

#### 6.135.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_INFO

##### **plugin stack-diagnostics info**

- Prints out general information about the state of the stack.

Definition at line 5222 of file [cli.doc](#).

#### 6.135.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_CHILD\_TABLE

##### **plugin stack-diagnostics child-table**

- Prints out the entries in the stack's child table.

Definition at line 5227 of file [cli.doc](#).

#### 6.135.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_NEIGHBOR\_TABLE

##### **plugin stack-diagnostics neighbor-table**

- Prints out the entries in the stack's neighbor table.

Definition at line 5232 of file [cli.doc](#).

6.135.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_STACK\_DIAGNOSTICS\_PLUGIN\_STACK\_DIAGNOSTICS\_ROUTE\_TABLE

**plugin stack-diagnostics route-table**

- Prints out the entries in the stack's route table.

Definition at line [5237](#) of file [cli.doc](#).

## 6.136 Plugin Commands: Standalone Bootloader Client

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_CLIENT\_PLUGIN\_STANDALONE\_BOOTLOADER\_CLIENT\_STATUS

#### 6.136.1 Detailed Description

The Standalone Bootloader Client contributes commands about its current status.

#### 6.136.2 Macro Definition Documentation

##### 6.136.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_CLIENT\_PLUGIN\_STANDALONE\_BOOTLOADER\_CLIENT\_STATUS

**plugin standalone-bootloader-client status**

- *Print the standalone bootload client's current status.*

Definition at line 5252 of file [cli.doc](#).

## 6.137 Plugin Commands: Standalone Bootloader Server

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_STATUS
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_QUERY
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PRINT\_TARGET
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_BOOTLOAD\_TARGET
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_BOOTLOAD\_EUI

### 6.137.1 Detailed Description

The Standalone Bootloader Server contributes commands to tell client's to launch their standalone bootloader and send them a new application image.

### 6.137.2 Macro Definition Documentation

#### 6.137.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_STATUS

##### **plugin standalone-bootloader-server status**

- Print the standalone bootload server's current status.

Definition at line 5267 of file [cli.doc](#).

#### 6.137.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_QUERY

##### **plugin standalone-bootloader-server query**

- n  
Send a broadcast standalone bootloader query to all nearby nodes.

Definition at line 5274 of file [cli.doc](#).

#### 6.137.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PRINT\_TARGET

##### **plugin standalone-bootloader-server print-target**

- Print the cached info about the current bootload target.

Definition at line 5279 of file [cli.doc](#).

6.137.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_BOOTLOAD\_TARGET

**plugin standalone-bootloader-server bootload target [index:1] [tag:1]**

- Starts the process for bootloading a device using the currently cached target info.
  - index - INT8U - The index of the image being sent to the target
  - tag - INT8U - The tag ID within the image, which will be sent to the target.

Definition at line [5286](#) of file [cli.doc](#).

6.137.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_PLUGIN\_STANDALONE\_BOOTLOADER\_SERVER\_BOOTLOAD\_EUI

**plugin standalone-bootloader-server bootload eui [eui64:8] [index:1] [tag:1]**

- Starts the process for bootloading a device using the passed EUI64.
  - eui64 - IEEE\_ADDRESS - The EUI64 of the target of the bootload.
  - index - INT8U - The index of the image being sent to the target
  - tag - INT8U - The tag ID within the image, which will be sent to the target.

Definition at line [5294](#) of file [cli.doc](#).

## 6.138 Plugin Commands: Temperature Measurement Server commands

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEMPERATURE\_MEASUREMENT\_SERVER\_PLUGIN\_TEMPERATURE\_MEASUREMENT\_SERVER\_READ

#### 6.138.1 Detailed Description

Example sensor code for reading the temperature sensor. Currently reads it from the EM357 dev kit board.

#### 6.138.2 Macro Definition Documentation

- 6.138.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEMPERATURE\_MEASUREMENT\_SERVER\_PLUGIN\_TEMPERATURE\_MEASUREMENT\_SERVER\_READ

**plugin temperature-measurement-server read**

- *Read the temperature sensor.*

Definition at line [5309](#) of file [cli.doc](#).

## 6.139 Plugin Commands: Test Harness

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_STATUS
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_APSSEC\_FOR\_CLUSTER\_ON
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_APSSEC\_FOR\_CLUSTER\_OFF
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ATTR\_OPTIONS
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ATTR\_SET\_DEST
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ATTR\_START\_TEST
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_HASH\_THE\_FLASH
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_REGISTRATION\_ON
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_REGISTRATION\_OFF
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_NORMAL\_MODE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_NO\_RESOURCES
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_OUT\_OF\_SEQUENCE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_TIMEOUT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_DELAY\_CBKE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_DEFAULT\_RESP
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_NEW\_KEY\_POLICY
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_RESET\_APSSFC
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_ADV\_APSSFC
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_LENGTH
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_ISSUER
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_CORRUPT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_CHANGE\_BYTE
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_SUBJECT
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_SUITE

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_KEY\_ESTABLISHMENT\_SET\_AVAILABLE\_SUITE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_KEY\_ESTABLISHMENT\_KEY\_MANGLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_PRICE\_SEND\_NEW\_FIELDS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_PRICE\_SEND\_SE10\_FIELDS

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_KEY\_UPDATE\_UNICAST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_KEY\_UPDATE\_BROADCAST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_KEY\_UPDATE\_NOW
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_STACK\_LIMIT\_BEACONS\_ON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_STACK\_LIMIT\_BEACONS\_OFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_ENDPOINT\_ENABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_ENDPOINT\_DISABLE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_ENDPOINT\_STATUS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_ENDPOINT\_CLUSTER\_ENDPOINT\_INDEX
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_RADIO\_ON
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_RADIO\_OFF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TE-ST\_HARNESS\_ADD\_CHILD

### 6.139.1 Detailed Description

The test harness commands are used to test various unusual functionality or behavior of a remote device.

## 6.139.2 Macro Definition Documentation

6.139.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_STATUS

### **plugin test-harness status**

- *Display the current status of the test harness.*

Definition at line 5324 of file [cli.doc](#).

6.139.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_AP\_SSEC\_FOR\_CLUSTER\_ON

### **plugin test-harness aps-sec-for-cluster on [clusterId:2]**

- *Turns on automatic APS security for the specified cluster.*
  - clusterId - INT16U - The cluster ID to add APS security to automatically.

Definition at line 5330 of file [cli.doc](#).

6.139.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_AP\_SSEC\_FOR\_CLUSTER\_OFF

### **plugin test-harness aps-sec-for-cluster off**

- *Turns off automatic APS security for the previously specified cluster.*

Definition at line 5335 of file [cli.doc](#).

6.139.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ATTR\_OPTIONS

### **plugin test-harness attr options [type:1] [timeout:2]**

- *Set the options for the attributes tests.*
  - type - INT8U
  - timeout - INT16U

Definition at line 5342 of file [cli.doc](#).

6.139.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ATTR\_SET\_DEST

### **plugin test-harness attr set-dest [addr:2] [endpoint:1]**

- *Set the destination for the attributes tests.*

- addr - INT16U
- endpoint - INT8U

Definition at line [5349](#) of file [cli.doc](#).

**6.139.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ATTR\_START\_TEST**

**plugin test-harness attr start-test [clusterId:2] [attrStartId:2] [attrEndId:2] [clientToServer:1]**

- *Start the attributes test.*
  - clusterId - INT16U
  - attrStartId - INT16U
  - attrEndId - INT16U
  - clientToServer - BOOLEAN

Definition at line [5358](#) of file [cli.doc](#).

**6.139.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_HASH\_THE\_FLASH**

**plugin test-harness hash-the-flash**

- *Runs the AES-CCM algorithm over the contents of the software image to calculate the image stamp.*

Definition at line [5363](#) of file [cli.doc](#).

**6.139.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_REGISTRATION\_ON**

**plugin test-harness registration on**

- *Turns on automatic SE registration.*

Definition at line [5368](#) of file [cli.doc](#).

**6.139.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_REGISTRATION\_OFF**

**plugin test-harness registration off**

- *Turns off automatic SE registration.*

Definition at line [5373](#) of file [cli.doc](#).

6.139.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_NORMAL\_MODE

#### **plugin test-harness key-establishment normal-mode**

- Sets the key establishment mode to normal.

Definition at line 5378 of file [cli.doc](#).

6.139.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_NO\_RESOURCES

#### **plugin test-harness key-establishment no-resources**

- All received KE requests will be responded with 'no resources'.

Definition at line 5383 of file [cli.doc](#).

6.139.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_OUT\_OF\_SEQUENCE

#### **plugin test-harness key-establishment out-of-sequence [commandId:1]**

- All received KE requests will be responded with 'no resources'.
  - commandId - INT8U - The out-of-sequence command ID to send.

Definition at line 5389 of file [cli.doc](#).

6.139.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_TIMEOUT

#### **plugin test-harness key-establishment timeout**

- Artificially creates a timeout by delaying an outgoing message.

Definition at line 5394 of file [cli.doc](#).

6.139.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_DELAY\_CBKE

#### **plugin test-harness key-establishment delay-cbke [actualDelay:2] [advertisedDelay:2]**

- Changes the advertised delays by the local device for CBKE.
  - actualDelay - INT16U - Set the actual delay that occurs.
  - advertisedDelay - INT16U - Sets the advertised delay sent to the partner of key establishment

Definition at line 5401 of file [cli.doc](#).

6.139.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_DEFAULT\_RESP

**plugin test-harness key-establishment default-resp**

- Sends a default response error message in response to initiate KE.

Definition at line 5406 of file [cli.doc](#).

6.139.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_NEW\_KEY\_POLICY

**plugin test-harness key-establishment new-key-policy [allowKeyEstablishmentPolicy:1]**

- Sets the policy of whether the TC allows new KE requests.
  - allowKeyEstablishmentPolicy - INT8U - Allows / disallows new key establishment requests.

Definition at line 5412 of file [cli.doc](#).

6.139.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_RESET\_AP\_S\_FC

**plugin test-harness key-establishment reset-aps-fc**

- Forces the local device to reset its outgoing APS FC.

Definition at line 5417 of file [cli.doc](#).

6.139.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_ADV\_AP\_S\_FC

**plugin test-harness key-establishment adv-aps-fc**

- Advances the local device's outgoing APS FC by 4096.

Definition at line 5422 of file [cli.doc](#).

6.139.2.19 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_LENGTH

**plugin test-harness key-establishment cert-mangle length [lengthModifier:1]**

- Mangles the length of the certificate
  - lengthModifier - INT8S - The positive or negative change in length.

Definition at line 5428 of file [cli.doc](#).

6.139.2.20 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_ISSUER

**plugin test-harness key-establishment cert-mangle issuer [issuer:-1]**

- *Changes the issuer in the certificate.*
  - issuer - OCTET\_STRING - The EUI64 of the issuer (big endian).

Definition at line [5434](#) of file [cli.doc](#).

6.139.2.21 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_CORRUPT

**plugin test-harness key-establishment cert-mangle corrupt [corruptionIndex:1]**

- *Corrupts a single byte in the cert*
  - corruptionIndex - INT8U - The index of the certificate byte to corrupt

Definition at line [5440](#) of file [cli.doc](#).

6.139.2.22 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE\_CHANGE\_BYTE

**plugin test-harness key-establishment cert-mangle change-byte [byteIndex:1] [byteValue:1]**

- *Changes a single byte in the cert*
  - byteIndex - INT8U - The index of the certificate byte to change
  - byteValue - INT8U - The new value of the certificate byte

Definition at line [5447](#) of file [cli.doc](#).

6.139.2.23 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_CERT\_MANGLE SUBJECT

**plugin test-harness key-establishment cert-mangle subject [subject:-1]**

- *Changes the subject (EUI64) of the cert*
  - subject - OCTET\_STRING - The EUI64 of the subject (big endian).

Definition at line [5453](#) of file [cli.doc](#).

6.139.2.24 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_SUITE

**plugin test-harness key-establishment suite [suite:2]**

- *Selects between the CBKE 163k1 and 283k1 suites.*

- suite - INT16U - This field holds the type of key establishment suite. It can be EMBER\_AF\_CBKE\_KEY\_ESTABLISHMENT\_SUITE\_163K1, EMBER\_AF\_CBKE\_KEY\_ESTABLISHMENT\_SUITE\_283K1, or EMBER\_AF\_INVALID\_KEY\_ESTABLISHMENT\_SUITE

Definition at line 5459 of file [cli.doc](#).

6.139.2.25 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_SET\_AVAILABLE\_SUITE

**plugin test-harness key-establishment set-available-suite [suite:2]**

- *Selects between the CBKE 163k1 and 283k1 suites.*

- suite - INT16U - This field holds the type of key establishment suite. It can be EMBER\_AF\_CBKE\_KEY\_ESTABLISHMENT\_SUITE\_163K1, EMBER\_AF\_CBKE\_KEY\_ESTABLISHMENT\_SUITE\_283K1, or EMBER\_AF\_INVALID\_KEY\_ESTABLISHMENT\_SUITE

Definition at line 5465 of file [cli.doc](#).

6.139.2.26 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_ESTABLISHMENT\_KEY\_MANGLE

**plugin test-harness key-establishment key-mangle [lengthModifier:1]**

- *Mangles the length of the empheral key.*
  - lengthModifier - INT8S - The positive or negative change in length.

Definition at line 5471 of file [cli.doc](#).

6.139.2.27 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_PRICE\_SEND\_NEW\_FIELDS

**plugin test-harness price send-new-fields [sendNewFields:1]**

- *Controls whether the new SE 1.1 price fields are included.*
  - sendNewFields - INT8U - Boolean indicating whether to send new fields.

Definition at line 5477 of file [cli.doc](#).

6.139.2.28 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_PRICE\_SEND\_SE10\_FIELDS

**plugin test-harness price send-se10-fields [sendNewFields:1]**

- *Controls whether the new SE 1.1 price fields are included.*
  - sendNewFields - INT8U - Boolean indicating whether to send new fields.

Definition at line 5483 of file [cli.doc](#).

6.139.2.29 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_TC\_KEEPALIVE\_SEND

**plugin test-harness tc-keepalive send**

- *Sends a Trust Center Keepalive.*

Definition at line 5488 of file [cli.doc](#).

6.139.2.30 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_TC\_KEEPALIVE\_START

**plugin test-harness tc-keepalive start**

- *Starts the TC keepalive state machine.*

Definition at line 5493 of file [cli.doc](#).

6.139.2.31 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_TC\_KEEPALIVE\_STOP

**plugin test-harness tc-keepalive stop**

- *Stops the TC keepalive state machine.*

Definition at line 5498 of file [cli.doc](#).

6.139.2.32 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_OTA\_IMAGE\_MANGLE

**plugin test-harness ota image-mangle [index:2]**

- *Mangles the Simple Storage RAM OTA image.*
  - index - INT16U - The byte index into the OTA image that will be mangled.

Definition at line 5504 of file [cli.doc](#).

6.139.2.33 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_CONCENTRATOR\_START

### **plugin test-harness concentrator start**

- Starts the concentrator's periodic broadcasts.

Definition at line 5509 of file [cli.doc](#).

6.139.2.34 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_CONCENTRATOR\_STOP

### **plugin test-harness concentrator stop**

- Starts the concentrator's periodic broadcasts.

Definition at line 5514 of file [cli.doc](#).

6.139.2.35 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_UPDATE\_UNICAST

### **plugin test-harness key-update unicast**

- Changes TC NWK key update mechanism to unicast with APS security.

Definition at line 5519 of file [cli.doc](#).

6.139.2.36 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_UPDATE\_BROADCAST

### **plugin test-harness key-update broadcast**

- Changes TC NWK key update mechanism to broadcast.

Definition at line 5524 of file [cli.doc](#).

6.139.2.37 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_KEY\_UPDATE\_NOW

### **plugin test-harness key-update now**

- Starts a TC NWK key update now

Definition at line 5529 of file [cli.doc](#).

6.139.2.38 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_STACK\_LIMIT\_BEACONS\_ON

**plugin test-harness stack limit-beacons on**

- Enables a limit to the max number of outgoing beacons.

Definition at line 5534 of file [cli.doc](#).

6.139.2.39 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_STACK\_LIMIT\_BEACONS\_OFF

**plugin test-harness stack limit-beacons off**

- Disables a limit to the max number of outgoing beacons.

Definition at line 5539 of file [cli.doc](#).

6.139.2.40 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ENDPOINT\_ENABLE

**plugin test-harness endpoint enable [endpoint:1]**

- Enables the endpoint to receive messages and be discovered
  - endpoint - INT8U - The endpoint number.

Definition at line 5582 of file [cli.doc](#).

6.139.2.41 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ENDPOINT\_DISABLE

**plugin test-harness endpoint disable [endpoint:1]**

- Disables the endpoint to receive messages and be discovered
  - endpoint - INT8U - The endpoint number.

Definition at line 5588 of file [cli.doc](#).

6.139.2.42 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ENDPOINT\_STATUS

**plugin test-harness endpoint status**

- Disables the endpoint to receive messages and be discovered

Definition at line 5593 of file [cli.doc](#).

6.139.2.43 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ENDPOINT\_CLUSTER\_ENDPOINT\_INDEX

**plugin test-harness endpoint cluster-endpoint-index [endpoint:1] [clusterId:2] [mask:1]**

- *Get cluster endpoint index*

- endpoint - INT8U - The local endpoint of the cluster.
- clusterId - INT16U - The cluster whose index is needed.
- mask - INT8U - 0 for client-side attributes or 1 for server-side attributes.

Definition at line 5601 of file [cli.doc](#).

6.139.2.44 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_RADIO\_ON

**plugin test-harness radio on**

- *Turns on the radio if it was previously turned off*

Definition at line 5606 of file [cli.doc](#).

6.139.2.45 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_RADIO\_OFF

**plugin test-harness radio off**

- *Turns off the radio so that no messages are sent.*

Definition at line 5611 of file [cli.doc](#).

6.139.2.46 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_PLUGIN\_TEST\_HARNESS\_ADD\_CHILD

**plugin test-harness add-child [ShortId:2] [EUI:-1] [nodeType:1]**

- *Adds a child to the child table.*

- ShortId - INT16U - The shortId of the child device.
- EUI - OCTET\_STRING - The EUI64 of the child (big endian).
- nodeType - INT8U - The node type of the child device.

Definition at line 5619 of file [cli.doc](#).

## 6.140 Plugin Commands: Throughput

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_INFLIGHT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_DURATION
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_START
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_END
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_RESULT

### 6.140.1 Detailed Description

The throughput commands allow you to test your application's network throughput by measuring how many packets are able to be sent.

### 6.140.2 Macro Definition Documentation

#### 6.140.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_INFLIGHT

##### plugin throughput inflight [Count:1]

- Set the number of packets in flight during the test.
  - Count - INT8U - Number of packets

Definition at line 5635 of file [cli.doc](#).

#### 6.140.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_DURATION

##### plugin throughput duration [Time:2]

- Set the duration in ms for the test.
  - Time - INT16U - Duration in ms

Definition at line 5641 of file [cli.doc](#).

#### 6.140.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT\_START

##### plugin throughput start

- Start the throughput test.

Definition at line 5646 of file [cli.doc](#).

6.140.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT-END

**plugin throughput end**

- *Abort the test while running.*

Definition at line 5651 of file [cli.doc](#).

6.140.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_THROUGHPUT\_PLUGIN\_THROUGHPUT-RESULT

**plugin throughput result**

- *Show the results of the last test.*

Definition at line 5656 of file [cli.doc](#).

## 6.141 Plugin Commands: Trust Center Backup

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PRINT\_EXPORT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_IMPORT\_KEY
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_SET\_EXT\_PAN
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PRINT\_IMPORT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_CLEAR\_IMPORT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_RESTORE

### 6.141.1 Detailed Description

The Trust Center Backup plugin contributes several CLI commands to the application framework to be used in creating and managing reporting table entries directly on the device.

### 6.141.2 Macro Definition Documentation

#### 6.141.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PRINT\_EXPORT

##### **plugin trust-center-backup print-export**

- Print the set of export data that a TC must backup.

Definition at line 5672 of file [cli.doc](#).

#### 6.141.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_IMPORT\_KEY

##### **plugin trust-center-backup import-key [index:1] [partnerEUI64:8] [newKey:-1]**

- Set a key in the import data set.
  - index - INT8U
  - partnerEUI64 - IEEE\_ADDRESS
  - newKey - OCTET\_STRING

Definition at line 5680 of file [cli.doc](#).

6.141.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_SET\_EXT\_PAN

**plugin trust-center-backup set-ext-pan [extendedPanId:8]**

- Set the extended PAN ID in the import data set.

– extendedPanId - IEEE\_ADDRESS

Definition at line [5686](#) of file [cli.doc](#).

6.141.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PRINT\_IMPORT

**plugin trust-center-backup print-import**

- Print the import data set.

Definition at line [5691](#) of file [cli.doc](#).

6.141.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_CLEAR\_IMPORT

**plugin trust-center-backup clear-import**

- Clear the import data set.

Definition at line [5696](#) of file [cli.doc](#).

6.141.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TRUST\_CENTER\_BACKUP\_PLUGIN\_TRUST\_CENTER\_BACKUP\_RESTORE

**plugin trust-center-backup restore**

- Use the import data set in a restore operation to bring the TC back online.

Definition at line [5701](#) of file [cli.doc](#).

## 6.142 Plugin Commands: Tunneling Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_REQUEST
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_TRANSFER
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_CLOSE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_PRINT

### 6.142.1 Detailed Description

The Tunneling Client Plugin contributes several commands to the application framework's CLI. These commands may be used to create messages related to opening and closing a tunnel between two devices.

### 6.142.2 Macro Definition Documentation

#### 6.142.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_REQUEST

**plugin tunneling-client request [server:2] [clientEndpoint:1] [serverEndpoint:1] [protocolId:1] [manufacturerCode:2] [flowControlSupport:1]**

- Request a Tunneling cluster tunnel with a server.
  - server - INT16U - The network address of the server to which the request will be sent.
  - clientEndpoint - INT8U - The local endpoint from which the request will be sent.
  - serverEndpoint - INT8U - The remote endpoint to which the request will be sent.
  - protocolId - INT8U - The protocol id of the requested tunnel.
  - manufacturerCode - INT16U - The manufacturer code of the requested tunnel.
  - flowControlSupport - BOOLEAN - 1 if flow control support is requested or 0 if not.

Definition at line 5739 of file [cli.doc](#).

#### 6.142.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_TRANSFER

**plugin tunneling-client transfer [tunnelIndex:1] [data:-1]**

- Transfer data to a server through a Tunneling cluster tunnel.
  - tunnelIndex - INT8U - The index of the tunnel through which to send the data.
  - data - OCTET\_STRING - The data to send through the tunnel.

Definition at line 5746 of file [cli.doc](#).

6.142.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_CLOSE

**plugin tunneling-client close [tunnelIndex:1]**

- *Close a Tunneling cluster tunnel.*
  - tunnelIndex - INT8U - The index of the tunnel to close.

Definition at line [5752](#) of file [cli.doc](#).

6.142.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_CLIENT\_PLUGIN\_TUNNELING\_CLIENT\_PRINT

**plugin tunneling-client print**

- *Print out the status of active tunnels.*

Definition at line [5757](#) of file [cli.doc](#).

## 6.143 Plugin Commands: Tunneling Server

### Macros

- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_SERVER\_PLUGIN\_TUNNELING\_SERVER\_TRANSFER
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_SERVER\_PLUGIN\_TUNNELING\_SERVER\_BUSY
- #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_SERVER\_PLUGIN\_TUNNELING\_SERVER\_PRINT

### 6.143.1 Detailed Description

The Tunneling Server Plugin contributes several commands to the application framework CLI. These commands are used for the transfer of data over an opened tunnel.

### 6.143.2 Macro Definition Documentation

#### 6.143.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_SERVER\_PLUGIN\_TUNNELING\_SERVER\_TRANSFER

**plugin tunneling-server transfer [tunnelIndex:2] [data:-1]**

- *Transfer data to a client through a Tunneling cluster tunnel.*
  - tunnelIndex - INT16U - The identifier of the tunnel through which to send the data.
  - data - OCTET\_STRING - The data to send through the tunnel.

Definition at line [5775](#) of file [cli.doc](#).

#### 6.143.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_SERVER\_PLUGIN\_TUNNELING\_SERVER\_BUSY

**plugin tunneling-server busy**

- *This command can be used as a test harness for testing a client's handling of a server that returns busy.*

Definition at line [5780](#) of file [cli.doc](#).

#### 6.143.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TUNNELING\_SERVER\_PLUGIN\_TUNNELING\_SERVER\_PRINT

**plugin tunneling-server print**

- *Print out the status of active tunnels.*

Definition at line [5785](#) of file [cli.doc](#).

## 6.144 Plugin Commands: ZigBee 3.0 Test Harness

### Macros

- #define EMBER\_AF\_DODYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_\_TEST\_HARNESS\_PACKET\_PRINTING\_BEACON\_PRINTING\_ENABLE

### 6.144.1 Detailed Description

The test harness commands are used to test various unusual functionality or behavior of a remote device.

### 6.144.2 Macro Definition Documentation

#### 6.144.2.1 #define EMBER\_AF\_DODYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_PACKET\_PRINTING\_BEACON\_PRINTING\_ENABLE

**plugin test-harness packet-printing beacon-printing enable**

- *Enable the printing of beacon requests and received beacons.*

Definition at line 5800 of file [cli.doc](#).

6.144.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HA-RNESS\_PACKET\_PRINTING\_BEACON\_PRINTING\_DISABLE

**plugin test-harness packet-printing beacon-printing disable**

- *Disable the printing of beacon requests and received beacons.*

Definition at line 5805 of file [cli.doc](#).

6.144.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HA-RNESS\_PACKET\_PRINTING\_ZDO\_PRINTING\_ENABLE

**plugin test-harness packet-printing zdo-printing enable**

- *Enable the printing of ZDO commands.*

Definition at line 5810 of file [cli.doc](#).

6.144.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HA-RNESS\_PACKET\_PRINTING\_ZDO\_PRINTING\_DISABLE

**plugin test-harness packet-printing zdo-printing disable**

- *Disable the printing of ZDO commands.*

Definition at line 5815 of file [cli.doc](#).

6.144.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HA-RNESS\_PACKET\_PRINTING\_NWK\_PRINTING\_ENABLE

**plugin test-harness packet-printing nwk-printing enable**

- *Enable the printing of network commands.*

Definition at line 5820 of file [cli.doc](#).

6.144.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HA-RNESS\_PACKET\_PRINTING\_NWK\_PRINTING\_DISABLE

**plugin test-harness packet-printing nwk-printing disable**

- *Disable the printing of network commands.*

Definition at line 5825 of file [cli.doc](#).

6.144.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_PACKET\_PRINTINGAPS\_PRINTING\_ENABLE

**plugin test-harness packet-printing aps-printing enable**

- *Enable the printing of APS commands.*

Definition at line 5830 of file [cli.doc](#).

6.144.2.8 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_PACKET\_PRINTINGAPS\_PRINTING\_DISABLE

**plugin test-harness packet-printing aps-printing disable**

- *Disable the printing of APS commands.*

Definition at line 5835 of file [cli.doc](#).

6.144.2.9 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_BEACON\_BEACON\_REQ

**plugin test-harness z3 beacon beacon-req**

- *Send a beacon request.*

Definition at line 5840 of file [cli.doc](#).

6.144.2.10 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_BEACON\_BEACONS\_CONFIG

**plugin test-harness z3 beacon beacons-config [options:4]**

- *Send a beacon.*
  - options - INT32U - The negative behavior options for this command.

Definition at line 5846 of file [cli.doc](#).

6.144.2.11 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_NWK\_NWK\_REJOIN\_REQUEST

**plugin test-harness z3 nwk nwk-rejoin-request [destination:2]**

- *Send a Rejoin Request command.*
  - destination - INT16U - The destination address of the command.

Definition at line 5852 of file [cli.doc](#).

**6.144.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_NWK\_NWK\_REJOIN\_RESPONSE**

**plugin test-harness z3 nwk nwk-rejoin-response [newAddress:2] [status:1] [destination:2]**

- *Send a Rejoin Response command.*
  - newAddress - INT16U - The new short address of the destination node.
  - status - INT8U - The status of the rejoin.
  - destination - INT16U - The destination address of the command.

Definition at line 5860 of file [cli.doc](#).

**6.144.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_NWK\_NWK\_LEAVE**

**plugin test-harness z3 nwk nwk-leave [rejoin:1] [request:1] [removeChildren:1] [destination:2] [options:4]**

- *Send a Network Leave command.*
  - rejoin - BOOLEAN - Whether or not the device should rejoin.
  - request - BOOLEAN - Whether or not this command is a request.
  - removeChildren - BOOLEAN - Whether or not the leaving device should remove its children.
  - destination - INT16U - The destination address of the command.
  - options - INT32U - The negative behavior options for this command.

Definition at line 5870 of file [cli.doc](#).

**6.144.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_NWK\_NWK\_LEAVE\_SUPPRESSION\_ON**

**plugin test-harness z3 nwk nwk-leave-supression on**

- *Supress network leave commands.*

Definition at line 5875 of file [cli.doc](#).

**6.144.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_NWK\_NWK\_LEAVE\_SUPPRESSION\_OFF**

**plugin test-harness z3 nwk nwk-leave-supression off**

- *Do not supress network leave commands.*

Definition at line 5880 of file [cli.doc](#).

6.144.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_H-  
ARNESS\_Z3\_NWK\_NWK\_KEY\_SUPRESSION\_ON

**plugin test-harness z3 nwk nwk-key-supression on**

- *Supress network leave commands.*

Definition at line 5885 of file [cli.doc](#).

6.144.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_H-  
ARNESS\_Z3\_NWK\_NWK\_KEY\_SUPRESSION\_OFF

**plugin test-harness z3 nwk nwk-key-supression off**

- *Do not supress network leave commands.*

Definition at line 5890 of file [cli.doc](#).

6.144.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_H-  
ARNESS\_Z3APS\_APSS\_REMOVE\_DEVICE

**plugin test-harness z3 aps aps-remove-device [parentLongAddress:-1] [destinationLongAddress:-1]**

- *Send an APS remove device command.*
  - parentLongAddress - OCTET\_STRING - The long address of the parent whose child will be removed.
  - destinationLongAddress - OCTET\_STRING - The long address of the node which will be removed.

Definition at line 5897 of file [cli.doc](#).

6.144.2.19 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_H-  
ARNESS\_Z3APS\_APSS\_REQUEST\_KEY

**plugin test-harness z3 aps aps-request-key [destination:2] [keyType:1] [partnerAddress:-1] [options:-4]**

- *Send an APS request key command.*
  - destination - INT16U - The short address destination of the command.
  - keyType - INT8U - The key type in the command payload.
  - partnerAddress - OCTET\_STRING - The partner address for the requested link key.
  - options - INT32U - The negative behavior options for this command.

Definition at line 5906 of file [cli.doc](#).

6.144.2.20 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_SCAN\_REQUEST\_PROCESS

**plugin test-harness z3 touchlink scan-request-process [linkInitiator:1] [unused:2] [options:4]**

- *Start the scan request process.*
  - linkInitiator - INT8U - The link initiator bit in scan requests.
  - unused - INT16U - This argument is unused.
  - options - INT32U - The negative behavior options for this command.

Definition at line 5914 of file [cli.doc](#).

6.144.2.21 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_START\_AS\_ROUTER

**plugin test-harness z3 touchlink start-as-router [panId:2] [options:4]**

- *Start a distributed network on which to perform ZLL operations.*
  - panId - INT16U - The PAN ID that will be used.
  - options - INT32U - The negative behavior options for this command.

Definition at line 5921 of file [cli.doc](#).

6.144.2.22 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_IS\_SCANNING

**plugin test-harness z3 touchlink is-scanning**

- *Print out whether or not the device is currently performing the scan process for touchlinking.*

Definition at line 5926 of file [cli.doc](#).

6.144.2.23 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_DEVICE\_INFORMATION\_REQUEST

**plugin test-harness z3 touchlink device-information-request [startIndex:1] [options:4]**

- *Send an device information request to the target found in the scan request process.*
  - startIndex - INT8U - The start index in the device information request command
  - options - INT32U - The negative behavior options for this command.

Definition at line 5933 of file [cli.doc](#).

**6.144.2.24 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_IDENTIFY\_REQUEST**

**plugin test-harness z3 touchlink identify-request [duration:2] [options:4]**

- *Send an identify request to the target found in the scan request process.*
  - duration - INT16U - The duration length of the identify state.
  - options - INT32U - The negative behavior options for this command.

Definition at line [5940](#) of file [cli.doc](#).

**6.144.2.25 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_RESET\_TO\_FACTORY\_NEW\_REQUEST**

**plugin test-harness z3 touchlink reset-to-factory-new-request [options:4]**

- *Send a reset to factory new request to the target found in the scan request process.*
  - options - INT32U - The negative behavior options for this command.

Definition at line [5946](#) of file [cli.doc](#).

**6.144.2.26 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_NETWORK\_START\_REQUEST**

**plugin test-harness z3 touchlink network-start-request [networkAddress:2] [freeAddrBegin:2] [freeAddrEnd:2] [freeGroupBegin:2] [freeGroupEnd:2] [options:4]**

- *Send a network start request to the target found in the scan request process.*
  - networkAddress - INT16U - The designated node ID for the target node.
  - freeAddrBegin - INT16U - The free address range begin.
  - freeAddrEnd - INT16U - The free address range end.
  - freeGroupBegin - INT16U - The free group range begin.
  - freeGroupEnd - INT16U - The free group range end.
  - options - INT32U - The negative behavior options for this command.

Definition at line [5957](#) of file [cli.doc](#).

**6.144.2.27 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_TEST\_HARNESS\_Z3\_PLUGIN\_TEST\_HARNESS\_Z3\_TOUCHLINK\_NETWORK\_JOIN\_ROUTER\_REQUEST**

**plugin test-harness z3 touchlink network-join-router-request [networkAddress:2] [freeAddrBegin:2] [freeAddrEnd:2] [freeGroupBegin:2] [freeGroupEnd:2] [options:4]**

- *Send a network router join request to the target found in the scan request process.*
  - networkAddress - INT16U - The designated node ID for the target node.

- freeAddrBegin - INT16U - The free address range begin.
- freeAddrEnd - INT16U - The free address range end.
- freeGroupBegin - INT16U - The free group range begin.
- freeGroupEnd - INT16U - The free group range end.
- options - INT32U - The negative behavior options for this command.

Definition at line 5968 of file [cli.doc](#).

```
6.144.2.28 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_TEST_HARNESS_Z3_PLUGIN_TEST_H-
ARNESS_Z3_TOUCHLINK_NETWORK_JOIN_END_DEVICE_REQUEST
```

**plugin test-harness z3 touchlink network-join-end-device-request [networkAddress:2] [freeAddrBegin:2] [freeAddrEnd:2] [freeGroupBegin:2] [freeGroupEnd:2] [options:4]**

- *Send a network end device join request to the target found in the scan request process.*
  - networkAddress - INT16U - The designated node ID for the target node.
  - freeAddrBegin - INT16U - The free address range begin.
  - freeAddrEnd - INT16U - The free address range end.
  - freeGroupBegin - INT16U - The free group range begin.
  - freeGroupEnd - INT16U - The free group range end.
  - options - INT32U - The negative behavior options for this command.

Definition at line 5979 of file [cli.doc](#).

```
6.144.2.29 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_TEST_HARNESS_Z3_PLUGIN_TEST_H-
ARNESS_Z3_TOUCHLINK_NETWORK_UPDATE_REQUEST
```

**plugin test-harness z3 touchlink network-update-request [options:4]**

- *Send a network update request.*
  - options - INT32U - The negative behavior options for this command.

Definition at line 5985 of file [cli.doc](#).

```
6.144.2.30 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_TEST_HARNESS_Z3_PLUGIN_TEST_H-
ARNESS_Z3_MGMT_PERMIT_JOINING_REQ
```

**plugin test-harness z3 mgmt permit-joining-req [permitDurationS:2] [destination:2] [options:4]**

- *Unicast a permit joining command.*
  - permitDurationS - INT16U - The permit duration, in seconds.
  - destination - INT16U - The destination address of the command.
  - options - INT32U - The negative behavior options for this command.

### 6.145.1 Detailed Description

The ZigBee Light Link (ZLL) Commissioning Plugin contributes several commands to the application framework's CLI. These commands are used for forming and managing a ZLL network.

### 6.145.2 Macro Definition Documentation

6.145.2.1 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_FORM

### **plugin zll-commissioning form [channel:1] [power:1] [panId:2]**

- *Form a ZLL network.*
  - channel - INT8U - The channel on which to form the network.
  - power - INT8S - The power setting for network transmissions.
  - panId - INT16U - The PAN identifier for the network.

Definition at line 6388 of file [cli.doc](#).

6.145.2.2 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_SCAN\_DEVICE

### **plugin zll-commissioning scan device**

- *Initiate a touch link for the purpose of retrieving information about a target device.*

Definition at line 6393 of file [cli.doc](#).

6.145.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_SCAN\_IDENTIFY

### **plugin zll-commissioning scan identify**

- *Initiate a touch link for the purpose of causing a target device to identify itself.*

Definition at line 6398 of file [cli.doc](#).

6.145.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_SCAN\_RESET

### **plugin zll-commissioning scan reset**

- *Initiate a touch link for the purpose of resetting a target device.*

Definition at line 6403 of file [cli.doc](#).

6.145.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_ABORT

### **plugin zll-commissioning abort**

- *Abort the touch link procedure.*

Definition at line 6408 of file [cli.doc](#).

6.145.2.6 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_LINK

### **plugin zll-commissioning link**

- *Initiate the touch link procedure.*

Definition at line [6413](#) of file [cli.doc](#).

6.145.2.7 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_IDENTIFY

### **plugin zll-commissioning identify [identifyDurationDs:2]**

- *Set the duration that a target device should remain in identify mode during touch linking.*
  - identifyDurationDs - INT16U - The duration (in tenths of a second) of identify mode or 0xFFFF to indicate that the target should use its own application-specific duration.

Definition at line [6419](#) of file [cli.doc](#).

6.145.2.8 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_INFO

### **plugin zll-commissioning info [destination:2] [sourceEndpoint:1] [destinationEndpoint:1]**

- *Send an EndpointInformationRequest to a client.*
  - destination - INT16U - The network address of the device to which the request will be sent.
  - sourceEndpoint - INT8U - The source endpoint from which the request will be sent.
  - destinationEndpoint - INT8U - The destination endpoint to which the request will be sent.

Definition at line [6427](#) of file [cli.doc](#).

6.145.2.9 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_GROUPS

### **plugin zll-commissioning groups [destination:2] [sourceEndpoint:1] [destinationEndpoint:1] [startIndex:1]**

- *Send a GroupIdentifiersRequest to a server.*
  - destination - INT16U - The network address of the device to which the request will be sent.
  - sourceEndpoint - INT8U - The source endpoint from which the request will be sent.
  - destinationEndpoint - INT8U - The destination endpoint to which the request will be sent.
  - startIndex - INT8U - The group table index at which to start retrieving data.

Definition at line [6436](#) of file [cli.doc](#).

**6.145.2.10 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-OMMISSIONING\_ENDPOINTS**

**plugin zll-commissioning endpoints [destination:2] [sourceEndpoint:1] [destinationEndpoint:1] [startIndex:1]**

- *Send a GetEndpointListRequest to a server.*
  - destination - INT16U - The network address of the device to which the request will be sent.
  - sourceEndpoint - INT8U - The source endpoint from which the request will be sent.
  - destinationEndpoint - INT8U - The destination endpoint to which the request will be sent.
  - startIndex - INT8U - The endpoint index at which to start retrieving data.

Definition at line [6445](#) of file [cli.doc](#).

**6.145.2.11 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-OMMISSIONING\_TOKENS**

**plugin zll-commissioning tokens**

- *Print the ZLL tokens.*

Definition at line [6450](#) of file [cli.doc](#).

**6.145.2.12 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-OMMISSIONING\_CHANNEL**

**plugin zll-commissioning channel [channel:1]**

- *Set the scan channel used by the ZLL Commissioning plugin.*
  - channel - INT8U - The channel to be used.

Definition at line [6456](#) of file [cli.doc](#).

**6.145.2.13 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-OMMISSIONING\_MASK**

**plugin zll-commissioning mask [index:1]**

- *Set the scan channel set used by the ZLL Commissioning plugin. An index of 0 sets the primary ZLL channel set, 1 is the +1 channel set, 2 is the +2 channel set, 3 is the +3 channel set, and 4 is all ZigBee channels.*
  - index - INT8U - The index of the channel mask to be used.

Definition at line [6462](#) of file [cli.doc](#).

6.145.2.14 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_STATUS

#### **plugin zll-commissioning status**

- Print the ZLL channel set and tokens.

Definition at line 6467 of file [cli.doc](#).

6.145.2.15 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_JOINABLE

#### **plugin zll-commissioning joinable**

- Scan for joinable networks and attempt to join if a network is found.

Definition at line 6472 of file [cli.doc](#).

6.145.2.16 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_UNUSED

#### **plugin zll-commissioning unused**

- Scan for an unused PAN identifier and form a new ZLL network.

Definition at line 6477 of file [cli.doc](#).

6.145.2.17 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_RESET

#### **plugin zll-commissioning reset**

- Reset the local device to factory new.

6.145.2.18 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_ZLL\_COMMISSIONING\_PLUGIN\_ZLL\_C-  
OMMISSIONING\_NOTOUCHLINK\_NFN

#### **plugin zll-commissioning notouchlink-nfn**

- Disable touchlinking for NFN.

Definition at line 6487 of file [cli.doc](#).

## 6.146 Plugin Commands: ZigBee Remote Control 1.1 Profile

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11\_PAIR\_ORIGINATOR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11\_PAIR\_RECIPIENT
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11\_PRESS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11\_RELEASE
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11\_DISCOVERY

### 6.146.1 Detailed Description

The RF4CE ZRC 1.1 plugin contributes several commands to the application framework's CLI. These commands are used for initiating the push-button pairing operation and for sending HDMI UI commands.

### 6.146.2 Macro Definition Documentation

#### 6.146.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11 - PAIR\_ORIGINATOR

**plugin rf4ce-zrc11 pair originator [panId:2] [nodeId:2] [searchDevType:1]**

- *Initiate the push-button pairing operation as an originator.*
  - panId - INT16U - The PAN ID of the destination device for the discovery.
  - nodeId - INT16U - The network address of the destination device for the discovery.
  - searchDevType - INT8U - The device type to discovery.

Definition at line 6506 of file [cli.doc](#).

#### 6.146.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11 - PAIR\_RECIPIENT

**plugin rf4ce-zrc11 pair recipient**

- *Initiate the push-button pairing operation as a recipient.*

Definition at line 6511 of file [cli.doc](#).

#### 6.146.2.3 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11 - PRESS

**plugin rf4ce-zrc11 press [pairingIndex:1] [rcCommandCode:1] [rcCommandPayload:-1] [atomic:1]**

- *Send User Control Pressed command.*

- pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
- rcCommandCode - INT8U - The HDMI CEC operand [UI Command].
- rcCommandPayload - OCTET\_STRING - The additional operands, if any, required by the H-DMI CEC command.
- atomic - BOOLEAN - TRUE if the user control is atomic or FALSE if it should repeat.

Definition at line 6520 of file [cli.doc](#).

#### **6.146.2.4 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11 - RELEASE**

##### **plugin rf4ce-zrc11 release [pairingIndex:1] [rcCommandCode:1]**

- *Send User Control Released command.*

- pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.
- rcCommandCode - INT8U - The HDMI CEC operand [UI Command].

Definition at line 6527 of file [cli.doc](#).

#### **6.146.2.5 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC11\_PLUGIN\_RF4CE\_ZRC11 - DISCOVERY**

##### **plugin rf4ce-zrc11 discovery [pairingIndex:1]**

- *Send Command Discovery Request command.*

- pairingIndex - INT8U - The index of the entry in the pairing table to which to send the command.

Definition at line 6533 of file [cli.doc](#).

## 6.147 Plugin Commands: ZigBee Remote Control 2.0 Action Mapping Client

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_CLEAR\_ALL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_CLEAR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_GET
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET\_FLAGS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET\_RF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET\_IR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET

### 6.147.1 Detailed Description

The RF4CE ZRC 2.0 Action Mapping Client plugin contributes several commands to the application framework's CLI.

### 6.147.2 Macro Definition Documentation

#### 6.147.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_CLEAR\_ALL

**plugin rf4ce-zrc20-action-mapping-client clear-all**

- *Clear all action mapping entries.*

Definition at line 6548 of file [cli.doc](#).

#### 6.147.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_CLEAR

**plugin rf4ce-zrc20-action-mapping-client clear [pairingIndex:1] [actionDeviceType:1] [actionBank:1] [actionCode:1]**

- *Clear action mapping entry.*
  - pairingIndex - INT8U - Pairing Index.
  - actionDeviceType - INT8U - Action Device Type.
  - actionBank - INT8U - Action Bank.
  - actionCode - INT8U - Action Code.

Definition at line 6557 of file [cli.doc](#).

6.147.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_GET

**plugin rf4ce-zrc20-action-mapping-client get [pairingIndex:1] [actionDeviceType:1] [actionBank:1] [actionCode:1]**

- Get an action mapping entry.

- pairingIndex - INT8U - Pairing Index.
- actionDeviceType - INT8U - Action Device Type.
- actionBank - INT8U - Action Bank.
- actionCode - INT8U - Action Code.

Definition at line [6566](#) of file [cli.doc](#).

6.147.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET\_FLAGS

**plugin rf4ce-zrc20-action-mapping-client set-flags [mappingFlags:1]**

- All members of the action mapping structure have to be transferred before an entry can be added to the client. This command transfers the mappingFlags field and stores it temporarily. This command shall be followed by the set-rf command.
- mappingFlags - INT8U - Mapping Flags.

Definition at line [6575](#) of file [cli.doc](#).

6.147.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET\_RF

**plugin rf4ce-zrc20-action-mapping-client set-rf [rfConfig:1] [rf4ceTxOptions:1] [actionData:-1]**

- All members of the action mapping structure have to be transferred before an entry can be added to the client. This command transfers the following fields: rfConfig, rf4ceTxOptions and actionData and stores them temporarily. This command shall be followed by the set-ir command.
- rfConfig - INT8U - The RF config.
- rf4ceTxOptions - INT8U - The RF4CE TX options.
- actionData - OCTET\_STRING - The action data.

Definition at line [6587](#) of file [cli.doc](#).

6.147.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET\_IR

**plugin rf4ce-zrc20-action-mapping-client set-ir [irConfig:1] [irVendorId:2] [irCode:-1]**

- All members of the action mapping structure have to be transferred before an entry can be added to the client. This command transfers the following fields: irConfig, irVendorId and irCode and stores them temporarily. This command shall be followed by the set command.

- irConfig - INT8U - The IR config.
- irVendorId - INT16U - The IR vendor ID.
- irCode - OCTET\_STRING - The IR code.

Definition at line 6598 of file [cli.doc](#).

**6.147.2.7 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_CLIENT\_SET**

**plugin rf4ce-zrc20-action-mapping-client set [pairingIndex:1] [actionDeviceType:1] [actionBank:1] [actionCode:1]**

- All members of the action mapping structure have to be transferred before an entry can be added to the client. This command takes all temporarily stored fields transferred by set-flags, set-rf and set-ir commands, looks up the mappable action entry specified by the pairing index, action device type, action bank and action code and sets its action mapping entry on the client.
  - pairingIndex - INT8U - Pairing Index.
  - actionDeviceType - INT8U - Action Device Type.
  - actionBank - INT8U - Action Bank.
  - actionCode - INT8U - Action Code.

Definition at line 6612 of file [cli.doc](#).

## 6.148 Plugin Commands: ZigBee Remote Control 2.0 Action Mapping Server

### Macros

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET\_FLAGS
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET\_RF
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET\_IR
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET

- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_RESET\_ALL
- #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_GET

### 6.148.1 Detailed Description

The RF4CE ZRC 2.0 Action Mapping Server plugin contributes several commands to the application framework's CLI.

### 6.148.2 Macro Definition Documentation

#### 6.148.2.1 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET\_FLAGS

**plugin rf4ce-zrc20-action-mapping-server set-flags [mappingFlags:1]**

- This command transfers the mappingFlags member of the action mapping structure and stores it temporarily.
  - mappingFlags - INT8U - Mapping Flags.

Definition at line 6629 of file [cli.doc](#).

#### 6.148.2.2 #define EMBER\_AF\_DOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET\_RF

**plugin rf4ce-zrc20-action-mapping-server set-rf [rfConfig:1] [rf4ceTxOptions:1] [actionData:-1]**

- This command transfers the rfConfig, rf4ceTxOptions and actionData members of the action mapping structure and stores them temporarily.
  - rfConfig - INT8U - The RF config.
  - rf4ceTxOptions - INT8U - The RF4CE TX options.
  - actionData - OCTET\_STRING - The action data.

Definition at line 6638 of file [cli.doc](#).

**6.148.2.3 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET\_IR**

**plugin rf4ce-zrc20-action-mapping-server set-ir [irConfig:1] [irVendorId:2] [irCode:-1]**

- This command transfers the irConfig, irVendorId and irCode members of the action mapping structure and stores them temporarily.

- irConfig - INT8U - The IR config.
- irVendorId - INT16U - The IR vendor ID.
- irCode - OCTET\_STRING - The IR code.

Definition at line 6647 of file [cli.doc](#).

**6.148.2.4 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_SET**

**plugin rf4ce-zrc20-action-mapping-server set [actionDeviceType:1] [actionBank:1] [actionCode:1]**

- This command takes the temporarily stored members of the action mapping structure transferred by set-flags, set-rf and set-ir commands and remaps the action specified by actionDeviceType, actionBank and actionCode on the server.

- actionDeviceType - INT8U - Action Device Type.
- actionBank - INT8U - Action Bank.
- actionCode - INT8U - Action Code.

Definition at line 6658 of file [cli.doc](#).

**6.148.2.5 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_RESET**

**plugin rf4ce-zrc20-action-mapping-server reset [actionDeviceType:1] [actionBank:1] [actionCode:1]**

- Restore default action of the mappable action on the server.

- actionDeviceType - INT8U - Action Device Type.
- actionBank - INT8U - Action Bank.
- actionCode - INT8U - Action Code.

Definition at line 6666 of file [cli.doc](#).

**6.148.2.6 #define EMBER\_AF\_DDOXYGEN\_CLI\_COMMAND\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_PLUGIN\_RF4CE\_ZRC20\_ACTION\_MAPPING\_SERVER\_RESET\_ALL**

**plugin rf4ce-zrc20-action-mapping-server reset-all**

- Restore all actions to default on the server.

Definition at line 6671 of file [cli.doc](#).

```
6.148.2.7 #define EMBER_AF_DOXYGEN_CLI_COMMAND_PLUGIN_RF4CE_ZRC20_ACTION_MAPPING_SERVER_PLUGIN_RF4CE_ZRC20_ACTION_MAPPING_SERVER_GET
```

```
plugin rf4ce-zrc20-action-mapping-server get [actionDeviceType:1] [actionBank:1] [actionCode:1]
```

- *Get action mapping from the action mapping server.*
  - actionDeviceType - INT8U - Action Device Type.
  - actionBank - INT8U - Action Bank.
  - actionCode - INT8U - Action Code.

Definition at line [6679](#) of file [cli.doc](#).

## 6.151 Plugin Commands: RGB control for PWM

Bulb Config is a plugin that implements a HAL layer for the light bulb. It includes a bulb-specific PWM driver, as well as CIB token space for configuring the PWM driver as well as the TX Power.

## 6.152 Scan Dispatch

### Data Structures

- struct [EmberAfPluginScanDispatchScanResults](#)  
*Information regarding scan results.*
- struct [EmberAfPluginScanDispatchScanData](#)  
*A structure containing data for scheduling a scan.*

### Macros

- #define [EMBER\\_AF\\_PLUGIN\\_SCAN\\_DISPATCH\\_SCAN\\_QUEUE\\_SIZE](#)

### Typedefs

- typedef void(\* [EmberAfPluginScanDispatchScanResultsHandler](#))([EmberAfPluginScanDispatchScanResults](#) \*results)

### Functions

- [EmberNetworkScanType](#) [emberAfPluginScanDispatchScanResultsGetScanType](#) ([EmberAfPluginScanDispatchScanResults](#) \*results)
- bool [emberAfPluginScanDispatchScanResultsAreComplete](#) ([EmberAfPluginScanDispatchScanResults](#) \*results)
- bool [emberAfPluginScanDispatchScanResultsAreFailure](#) ([EmberAfPluginScanDispatchScanResults](#) \*results)
- [EmberStatus](#) [emberAfPluginScanDispatchScheduleScan](#) ([EmberAfPluginScanDispatchScanData](#) \*data)
- void [emberAfPluginScanDispatchClear](#) (void)

#### 6.152.1 Detailed Description

This plugin allows for there to be multiple consumers of stack 802.15.4 scan callbacks.

#### 6.152.2 Macro Definition Documentation

##### 6.152.2.1 #define EMBER\_AF\_PLUGIN\_SCAN\_DISPATCH\_SCAN\_QUEUE\_SIZE

The size of the dispatch queue.

Definition at line 26 of file [scan-dispatch.h](#).

#### 6.152.3 Typedef Documentation

##### 6.152.3.1 typedef void(\* EmberAfPluginScanDispatchScanResultsHandler)(EmberAfPluginScanDispatchScanResults \*results)

A function type that handles scan results.

Definition at line 122 of file [scan-dispatch.h](#).

## 6.152.4 Function Documentation

### 6.152.4.1 EmberNetworkScanType emberAfPluginScanDispatchScanResultsGetScanType ( EmberAfPluginScanDispatchScanResults \* *results* )

Get Scan Type.

Gets the scan type from an [EmberAfPluginScanDispatchScanResults](#). This value will either be [EMBER\\_ENERGY\\_SCAN](#) or [EMBER\\_ACTIVE\\_SCAN](#).

#### Parameters

<i>results</i>	The <a href="#">EmberAfPluginScanDispatchScanResults</a> for which the scan type will be found.
----------------	---

#### Returns

The [EmberNetworkScanType](#) of the scan results.

### 6.152.4.2 bool emberAfPluginScanDispatchScanResultsAreComplete ( EmberAfPluginScanDispatchScanResults \* *results* )

Results Are Complete.

Get whether or not the scan that was originally requested by the consumer has completed. This can happen either when the dispatcher asks the stack for a scan (see `::emberStartScan`) or after all of the scan results have been delivered to the consumer (see [emberAfScanCompleteCallback](#)).

#### Parameters

<i>results</i>	The <a href="#">EmberAfPluginScanDispatchScanResults</a> that belong to a potentially complete scan.
----------------	--

#### Returns

Whether or not the scan for the scan results is complete.

### 6.152.4.3 bool emberAfPluginScanDispatchScanResultsAreFailure ( EmberAfPluginScanDispatchScanResults \* *results* )

Results Are Failure.

Get whether or not the scan results are from a failed call to `::emberStartScan`.

#### Parameters

<i>results</i>	The <a href="#">EmberAfPluginScanDispatchScanResults</a> for which the call to <code>::emberStartScan</code> may have failed.
----------------	---

#### Returns

Whether or not the call to `::emberStartScan` failed for these results.

#### 6.152.4.4 EmberStatus emberAfPluginScanDispatchScheduleScan ( EmberAfPluginScanDispatchScanData \* *data* )

Schedule Scan.

This API will schedule an 802.15.4 scan. The results will be delivered to the consumer via a handler in the passed [EmberAfPluginScanDispatchScanData](#).

##### Parameters

<i>data</i>	An <a href="#">EmberAfPluginScanDispatchScanData</a> that holds the scanType, channelMask, duration, and <a href="#">EmberAfPluginScanDispatchScanResultsHandler</a> for the scan.
-------------	--

##### Returns

An [EmberStatus](#) value describing the result of the scheduling of a scan.

#### 6.152.4.5 void emberAfPluginScanDispatchClear ( void )

Clear.

A call to this function will remove all consumers in the queue for scan results. It will also cancel any 802.15.4 scan that the stack is currently performing.

## 6.153 Framework Callbacks

### Functions

- int `main` (MAIN\_FUNCTION\_PARAMETERS)

#### 6.153.1 Detailed Description

These callbacks are contributed by the framework.

#### 6.153.2 Function Documentation

##### 6.153.2.1 int main ( MAIN\_FUNCTION\_PARAMETERS )

Main Application Entry Point.

This callback provides the main application entry point for an NCP application.

## 6.154 Button Callbacks

### Functions

- void `halButtonIsr` (uint8\_t button, uint8\_t state)

#### 6.154.1 Detailed Description

These callbacks are contributed by the Button plugin.

#### 6.154.2 Function Documentation

##### 6.154.2.1 void `halButtonIsr` ( uint8\_t *button*, uint8\_t *state* )

A callback called in interrupt context whenever a button changes its state.

#### Application Usage:

Must be implemented by the application. This function should contain the functionality to be executed in response to changes of state in each of the buttons, or callbacks to the appropriate functionality.

#### Parameters

<i>button</i>	The button which has changed state, either BUTTON0 or BUTTON1 as defined in the appropriate BOARD_HEADER.
<i>state</i>	The new state of the button referenced by the button parameter, either ::BUTTON_PRESSED if the button has been pressed or ::BUTTON_RELEASED if the button has been released.

Definition at line 46 of file [ncp/doc/callback.doc](#).

## 6.155 Debug Basic Library Callbacks

### Functions

- void `emberDebugHandler (EmberMessageBuffer message)`

#### 6.155.1 Detailed Description

These callbacks are contributed by the Debug Basic Library plugin.

#### 6.155.2 Function Documentation

##### 6.155.2.1 void `emberDebugHandler ( EmberMessageBuffer message )`

Definition at line [61](#) of file [ncp/doc/callback.doc](#).

## 6.156 ZigBee PRO Core Security Library EZSP Command Handlers Call-backs

### Functions

- `EmberJoinDecision emberAfPluginEzspSecurityTrustCenterJoinCallback (EmberNodeId newNodeId, const EmberEUI64 newNodeEui64, EmberDeviceUpdate status, EmberNodeId parentOfNewNode, EzspDecisionId decisionId, EmberJoinDecision joinDecision)`

#### 6.156.1 Detailed Description

These callbacks are contributed by the ZigBee PRO Core Security Library EZSP Command Handlers plugin.

#### 6.156.2 Function Documentation

##### 6.156.2.1 `EmberJoinDecision emberAfPluginEzspSecurityTrustCenterJoinCallback ( EmberNodeId newNodeId, const EmberEUI64 newNodeEui64, EmberDeviceUpdate status, EmberNodeId parentOfNewNode, EzspDecisionId decisionId, EmberJoinDecision joinDecision )`

Trust Center Join.

This callback is called on the NCP when emberTrustCenterJoinHandler is called from the stack. The NCP will perform initial processing based on the current ::EZSP\_TRUST\_CENTER\_POLICY value, and then it will pass this callback to the NCP application. Implementations of this callback should return the `EmberJoinDecision` value that will dictate the behavior of the trust center in response to the new device joining or rejoining to the network.

Please see documentation on the stack emberTrustCenterJoinHandler callback for more information.

#### Parameters

<code>newNodeId</code>	The node id of the device wishing to join.
<code>newNodeEui64</code>	The EUI64 of the device wishing to join.
<code>status</code>	The ::EmberUpdateDevice status indicating whether the device is joining/rejoining or leaving, and whether the join/rejoin is secure (using network encryption) or a trust center rejoin.
<code>parentOfNewNode</code>	The node id of the parent of device wishing to join.
<code>decisionId</code>	The ::EzspDecisionId that the NCP is currently using as set by the HOST application.
<code>joinDecision</code>	The current <code>EmberJoinDecision</code> that the NCP has chosen based on the ::EzspDecisionId for the ::EZSP_TRUST_CENTER_POLICY as set by the HOST application. Implementations of this callback may want to return a different value based on their desired security.

#### Returns

An `EmberJoinDecision` value that will dictate the behavior of the trust center in response to the new device joining or rejoining to the network.

Definition at line 106 of file `ncp/doc/callback.doc`.

## 6.157 ZigBee PRO Library EZSP Command Handlers Callbacks

### Functions

- `EmberStatus emberAfPluginEzspZigbeeProSetConcentratorCommandCallback (bool on, uint16_t concentratorType, uint16_t minTime, uint16_t maxTime, uint8_t routeErrorThreshold, uint8_t deliveryFailureThreshold, uint8_t maxHops)`

#### 6.157.1 Detailed Description

These callbacks are contributed by the ZigBee PRO Library EZSP Command Handlers plugin.

#### 6.157.2 Function Documentation

##### 6.157.2.1 `EmberStatus emberAfPluginEzspZigbeeProSetConcentratorCommandCallback ( bool on, uint16_t concentratorType, uint16_t minTime, uint16_t maxTime, uint8_t routeErrorThreshold, uint8_t deliveryFailureThreshold, uint8_t maxHops )`

Definition at line 128 of file [ncp/doc/callback.doc](#).

References [EMBER\\_INVALID\\_CALL](#).

## 6.158 HAL Library Callbacks

### Functions

- void [halRadioPowerUpHandler](#) (void)
- void [halRadioPowerDownHandler](#) (void)

#### 6.158.1 Detailed Description

These callbacks are contributed by the HAL Library plugin.

#### 6.158.2 Function Documentation

##### 6.158.2.1 void halRadioPowerUpHandler ( void )

Handler called whenever the radio is powered on.

Definition at line [152](#) of file [ncp/doc/callback.doc](#).

##### 6.158.2.2 void halRadioPowerDownHandler ( void )

Handler called whenever the radio is powered off.

Definition at line [159](#) of file [ncp/doc/callback.doc](#).

## 6.159 Microphone Codec MSADPCM Callbacks

### Functions

- void [halMicrophoneCodecMsadpcmDataReadyCallback](#) (int8u \*data, int8u length)

#### 6.159.1 Detailed Description

These callbacks are contributed by the Microphone Codec MSADPCM plugin.

#### 6.159.2 Function Documentation

##### 6.159.2.1 void [halMicrophoneCodecMsadpcmDataReadyCallback](#) ( int8u \* *data*, int8u *length* )

A callback called when new microphone data is ready.

#### Application Usage:

This function is called by the plugin when new data has been processed and is ready to be processed by other parts of the system.

#### Parameters

<i>data</i>	Pointer to the data that is ready
<i>length</i>	Length of the data

Definition at line 183 of file [ncp/doc/callback.doc](#).

## 6.160 Microphone IMAADPCM Callbacks

### Functions

- void [halMicrophoneImaadpcmDataReadyCallback](#) (int8u \*data, int8u length)

#### 6.160.1 Detailed Description

These callbacks are contributed by the Microphone IMAADPCM plugin.

#### 6.160.2 Function Documentation

##### 6.160.2.1 void halMicrophonelmaadpcmDataReadyCallback ( int8u \* *data*, int8u *length* )

A callback called when new microphone data is ready.

#### Application Usage:

This function is called by the plugin when new data has been processed and is ready to be processed by other parts of the system.

#### Parameters

<i>data</i>	Pointer to the data that is ready
<i>length</i>	Length of the data

Definition at line 207 of file [ncp/doc/callback.doc](#).

## 6.161 Multi-Network Stub Library Callbacks

### Functions

- void `emberZigbeeKeyEstablishmentHandler (EmberEUI64 partner, EmberKeyStatus status)`

#### 6.161.1 Detailed Description

These callbacks are contributed by the Multi-Network Stub Library plugin.

#### 6.161.2 Function Documentation

##### 6.161.2.1 void `emberZigbeeKeyEstablishmentHandler ( EmberEUI64 partner, EmberKeyStatus status )`

A callback to the application to notify it of the status of the request for a Link Key. The application should define EMBER\_APPLICATION\_HAS\_ZIGBEE\_KEY\_ESTABLISHMENT\_HANDLER in order to implement its own handler.

#### Parameters

<code>partner</code>	The IEEE address of the partner device. Or all zeros if the Key establishment failed.
<code>status</code>	The status of the key establishment.

Definition at line 231 of file [ncp/doc/callback.doc](#).

## 6.162 STM32F103RET Library Callbacks

### Functions

- void [halNcpIsAwakeIsr](#) (bool *isAwake*)

#### 6.162.1 Detailed Description

These callbacks are contributed by the STM32F103RET Library plugin.

#### 6.162.2 Function Documentation

##### 6.162.2.1 void halNcpIsAwakeIsr ( bool *isAwake* )

The SPI Protocol calls [halNcpIsAwakeIsr\(\)](#) once the wakeup handshaking is complete and the NCP is ready to accept a command.

#### Parameters

<i>isAwake</i>	true if the wake handshake completed and the NCP is awake. false is the wake handshake failed and the NCP is unresponsive.
----------------	--

Definition at line 254 of file [ncp/doc/callback.doc](#).

## 6.163 XNCP Library Callbacks

### Functions

- `EmberStatus emberAfPluginXncpIncomingCustomFrameCallback (uint8_t messageLength, uint8_t *messagePayload, uint8_t *replyPayloadLength, uint8_t *replyPayload)`
- `bool emberAfIncomingMessageCallback (EmberIncomingMessageType type, EmberApsFrame *apsFrame, EmberMessageBuffer message)`
- `bool emberAfPluginCommandHandlerPermitNcpToHostFrameCallback (uint8_t frameId, uint8_t payloadLength, uint8_t *payload)`
- `bool emberAfPluginCommandHandlerPermitHostToNcpFrameCallback (uint8_t frameId, uint8_t payloadLength, uint8_t *payload)`
- `void emberAfPluginXncpGetXncpInformation (uint16_t *manufacturerId, uint16_t *versionNumber)`

#### 6.163.1 Detailed Description

These callbacks are contributed by the XNCP Library plugin.

#### 6.163.2 Function Documentation

##### 6.163.2.1 `EmberStatus emberAfPluginXncpIncomingCustomFrameCallback ( uint8_t messageLength, uint8_t * messagePayload, uint8_t * replyPayloadLength, uint8_t * replyPayload )`

Incoming Custom EZSP Message Callback.

This function is called when the NCP receives a custom EZSP message from the HOST. The message length and payload is passed to the callback in the first two arguments. The implementation can then fill in the replyPayload and set the replyPayloadLength to the number of bytes in the replyPayload. See documentation for the function ezspCustomFrame on sending these messages from the HOST.

#### Parameters

<code>messageLength</code>	The length of the messagePayload.
<code>message- Payload</code>	The custom message that was sent from the HOST. Ver.: always
<code>replyPayload- Length</code>	The length of the replyPayload. This needs to be set by the implementation in order for a properly formed response to be sent back to the HOST. Ver.: always
<code>replyPayload</code>	The custom message to send back to the HOST in response to the custom message. Ver.: always

#### Returns

An `EmberStatus` indicating the result of the custom message handling. This returned status is always the first byte of the EZSP response.

Definition at line 291 of file `ncp/doc/callback.doc`.

References `EMBER_LIBRARY_NOT_PRESENT`.

### 6.163.2.2 bool emberAfIncomingMessageCallback ( EmberIncomingMessageType *type*, EmberApsFrame \* *apsFrame*, EmberMessageBuffer *message* )

Incoming Message Callback.

This function is called when the NCP receives an incoming ZigBee PRO message. This handling is done before any other action is taken by the NCP on the callback. If the function returns true, that indicates that the incoming message is done being handled, and the NCP does not need to record the callback or report it to the HOST.

#### Parameters

<i>type</i>	The <a href="#">EmberIncomingMessageType</a> of the incoming message. Ver.: always
<i>apsFrame</i>	The <a href="#">EmberApsFrame</a> received in the incoming message. Ver.: always
<i>message</i>	The payload of the incoming message, in the form of an <a href="#">EmberMessageBuffer</a> . Ver.: always

#### Returns

A ::bool value. If this value is true, the NCP will not handle the incoming message any further and it will not report the incoming message to the HOST. If the returned value is false, then the NCP will continue to process the incoming message and the callback will also be passed to the HOST.

Definition at line 320 of file [ncp/doc/callback.doc](#).

### 6.163.2.3 bool emberAfPluginCommandHandlerPermitNcpToHostFrameCallback ( uint8\_t *frameId*, uint8\_t *payloadLength*, uint8\_t \* *payload* )

Outgoing EZSP Stack Handler.

This function is called when the NCP wants to inform the HOST of a callback that has been called on the NCP. If this function returns false, the NCP will not notify the HOST of the callback. If the function returns true, then the NCP will continue scheduling the notification of the HOST regarding the callback.

#### Parameters

<i>frameId</i>	The frameId of the callback. Ver.: always
<i>payloadLength</i>	The length of the payload carried in the callback. Ver.: always
<i>payload</i>	The actual payload carried by the callback. Ver.: always

#### Returns

A ::bool value. If the value is false, then the NCP will not notify the HOST of the callback. If the return value is true, then the NCP will continue scheduling the notification of the HOST regarding the callback.

Definition at line 345 of file [ncp/doc/callback.doc](#).

### 6.163.2.4 bool emberAfPluginCommandHandlerPermitHostToNcpFrameCallback ( uint8\_t *frameId*, uint8\_t *payloadLength*, uint8\_t \* *payload* )

Incoming EZSP Message.

The application can use this callback to enable or disable the processing of EZSP commands on the NCP. If this function returns true, that indicates that the frame should be handled by the NCP in a normal manner. If this function returns false, then the NCP will disregard this command and respond to the HOST that it is an invalid frame.

#### Parameters

<i>frameId</i>	The EZSP frame ID of the message. Ver.: always
<i>payloadLength</i>	The length of the payload of the EZSP message. Ver.: always
<i>payload</i>	The EZSP message payload. Ver.: always

#### Returns

A ::bool value indicating whether or not the frame should continue to be handled. If this function returns true, that indicates that the frame should be handled by the NCP in a normal manner. If this function returns false, then the NCP will disregard this command and respond to the HOST that it is an invalid frame.

Definition at line 371 of file [ncp/doc/callback.doc](#).

**6.163.2.5 void emberAfPluginXncpGetXncpInformation ( uint16\_t \* manufacturerId, uint16\_t \* versionNumber )**

Get XNCP Information.

This callback enables users to communicate the version number and manufacturer ID of their NCP application to the framework. This information is needed for the EZSP command frame called `getXncpInfo`. This callback will be called when that frame is received so that the application can report its version number and manufacturer ID to be sent back to the HOST.

#### Parameters

<i>versionNumber</i>	The version number of the NCP application.
<i>manufacturerId</i>	The manufacturer ID of the NCP application.

Definition at line 389 of file [ncp/doc/callback.doc](#).

## 6.164 ZigBee PRO Stack Library Callbacks

### Functions

- void `emberOrphanNotificationHandler (EmberEUI64 longId)`
- bool `emberMacPassthroughFilterHandler (uint8_t *macHeader)`
- void `emberIncomingCommandHandler (EmberZigbeeCommandType commandType, EmberMessageBuffer commandBuffer, uint8_t indexOfCommand, void *data)`

#### 6.164.1 Detailed Description

These callbacks are contributed by the ZigBee PRO Stack Library plugin.

#### 6.164.2 Function Documentation

##### 6.164.2.1 void `emberOrphanNotificationHandler ( EmberEUI64 longId )`

Definition at line 406 of file [ncp/doc/callback.doc](#).

##### 6.164.2.2 bool `emberMacPassthroughFilterHandler ( uint8_t * macHeader )`

A callback invoked by the EmberZNet stack to filter out incoming application MAC passthrough messages. If this returns true for a message the complete message will be passed to `emberMacPassthroughMessageHandler()` with a type of `EMBER_MAC_PASSTHROUGH_APPLICATION`.

Note that this callback may be invoked in ISR context and should execute as quickly as possible.

Note that this callback may be called more than once per incoming message. Therefore the callback code should not depend on being called only once, and should return the same value each time it is called with a given header.

If the application includes this callback, it must define `EMBER_APPLICATION_HAS_MAC_PASSTHROUGH_FILTER_HANDLER` in its `CONFIGURATION_HEADER`.

#### Parameters

<code>macHeader</code>	A pointer to the initial portion of the incoming MAC header. This contains the MAC frame control and addressing fields. Subsequent MAC fields, and the MAC payload, may not be present.
------------------------	---

#### Returns

true if the message is an application MAC passthrough message.

Definition at line 433 of file [ncp/doc/callback.doc](#).

##### 6.164.2.3 void `emberIncomingCommandHandler ( EmberZigbeeCommandType commandType, EmberMessageBuffer commandBuffer, uint8_t indexOfCommand, void * data )`

A protocol layer command has been received by the stack.

This is called when the stack receives a command that is meant for one of the protocol layers specified in [EmberZigbeeCommandType](#). The implementation can get a flat buffer of bytes representing the command byte plus the command payload by calling `::emberCopyFromLinkedBuffers()` with a contents array big enough to hold the command payload.

The `commandType` argument is one of the values of the [EmberZigbeeCommandType](#) enum. If the stack receives an 802.15.4 MAC beacon, it will call this function with the `commandType` argument set to [EMBER\\_ZIGBEE\\_COMMAND\\_TYPE\\_BEACON](#).

The implementation of this callback should **not** alter the data contained in the [EmberMessageBuffer](#), since the stack will still be processing the command at the time that this is called.

#### Parameters

<code>commandType</code>	The type of command received. See <a href="#">EmberZigbeeCommandType</a> .
<code>command-Buffer</code>	The <a href="#">EmberMessageBuffer</a> for the command payload.
<code>indexOf-Command</code>	The starting index in the <a href="#">EmberMessageBuffer</a> for the command. This means the first byte at this index will be the command byte itself, and the reset will be the command payload.
<code>data</code>	This is a pointer to auxillary data for the command. ZDO commands pass the <a href="#">EmberApsFrame</a> associated with the packet here. Otherwise, this value is NULL.

Definition at line 467 of file [ncp/doc/callback.doc](#).

## 6.165 main API Callbacks

### Functions

- void [emberAfMainInitCallback](#) (void)
- void [emberAfMainTickCallback](#) (void)

#### 6.165.1 Detailed Description

These callbacks were contributed by the main API.

#### 6.165.2 Function Documentation

##### 6.165.2.1 void [emberAfMainInitCallback](#) ( void )

Main Init.

This function is called when the application starts and can be used to perform any additional initialization required at system startup.

Definition at line [490](#) of file [ncp/doc/callback.doc](#).

##### 6.165.2.2 void [emberAfMainTickCallback](#) ( void )

Main Tick.

This function is called in each iteration of the main application loop and can be used to perform periodic functions. The frequency with which this function is called depends on how quickly the main loop runs. If the application blocks at any time during the main loop, this function will not be called until execution resumes.

Definition at line [502](#) of file [ncp/doc/callback.doc](#).

## 6.166 ncp API Callbacks

### Functions

- void [emberSetOrGetEzspTokenCommandHandler](#) (bool *isSet*)
- bool [emberAfPluginEzspAddEndpointCommandCallback](#) ([EmberMessageBuffer](#) *buffer*)

#### 6.166.1 Detailed Description

These callbacks were contributed by the ncp API.

#### 6.166.2 Function Documentation

##### 6.166.2.1 void [emberSetOrGetEzspTokenCommandHandler](#) ( bool *isSet* )

Definition at line [517](#) of file [ncp/doc/callback.doc](#).

References [EMBER\\_INVALID\\_CALL](#).

##### 6.166.2.2 bool [emberAfPluginEzspAddEndpointCommandCallback](#) ( [EmberMessageBuffer](#) *buffer* )

Definition at line [522](#) of file [ncp/doc/callback.doc](#).

## 6.167 sim-eeprom API Callbacks

### Functions

- void `halSimEepromCallback (EmberStatus status)`

#### 6.167.1 Detailed Description

These callbacks were contributed by the sim-eeprom API.

#### 6.167.2 Function Documentation

##### 6.167.2.1 void `halSimEepromCallback ( EmberStatus status )`

The Simulated EEPROM callback function, implemented by the application.

#### Parameters

<code>status</code>	An <code>EmberStatus</code> error code indicating one of the conditions described below.
---------------------	--

This callback will report an EmberStatus of `EMBER_SIM_EEPROM_ERASE_PAGE_GREEN` whenever a token is set and a page needs to be erased. If the main application loop does not periodically call `halSimEepromErasePage()`, it is best to then erase a page in response to `EMBER_SIM_EEPROM_ERASE_PAGE_GREEN`.

This callback will report an EmberStatus of `EMBER_SIM_EEPROM_ERASE_PAGE_RED` when the pages *must* be erased to prevent data loss. `halSimEepromErasePage()` needs to be called until it returns 0 to indicate there are no more pages that need to be erased. Ignoring this indication and not erasing the pages will cause dropping the new data trying to be written.

This callback will report an EmberStatus of `EMBER_SIM_EEPROM_FULL` when the new data cannot be written due to unerased pages. **Not erasing pages regularly, not erasing in response to `EMBER_SIM_EEPROM_ERASE_PAGE_GREEN`, or not erasing in response to `EMBER_SIM_EEPROM_ERASE_PAGE_RED` will cause `EMBER_SIM_EEPROM_FULL` and the new data will be lost!.** Any future write attempts will be lost as well.

This callback will report an EmberStatus of `EMBER_SIM_EEPROM_REPAIRING` when the Simulated EEPROM needs to repair itself. While there's nothing for an app to do when the SimEE is going to repair itself (SimEE has to be fully functional for the rest of the system to work), alert the application to the fact that repairing is occurring. There are debugging scenarios where an app might want to know that repairing is happening; such as monitoring frequency.

#### Note

Common situations will trigger an expected repair, such as using a new chip or changing token definitions.

If the callback ever reports the status `EMBER_ERR_FLASH_WRITE_INHIBITED` or `EMBER_ERR_FLASH_VERIFY_FAILED`, this indicates a catastrophic failure in flash writing, meaning either the address being written is not empty or the write itself has failed. If `EMBER_ERR_FLASH_WRITE_INHIBITED` is encountered, the function `:halInternalSimEeRepair(false)` should be called and the chip should then be reset to allow proper initialization to recover. If `EMBER_ERR_FLASH_VERIFY_FAILED` is encountered the Simulated EEPROM (and tokens) on the specific chip with this error should not be trusted anymore.

Definition at line 585 of file ncp/doc/callback.doc.

References EMBER\_ERR\_FLASH\_VERIFY\_FAILED, EMBER\_ERR\_FLASH\_WRITE\_INHIBITED, EMBER\_SIM\_EEPROM\_ERASE\_PAGE\_GREEN, EMBER\_SIM\_EEPROM\_ERASE\_PAGE\_RED, EMBER\_SIM\_EEPROM\_FULL, and EMBER\_SIM\_EEPROM\_REPAIRING.

## 6.168 stack API Callbacks

### Functions

- void `emberCounterHandler` (`EmberCounterType type, uint8_t data`)
- void `emberStackStatusHandler` (`EmberStatus status`)
- void `emberEnergyScanResultHandler` (`uint8_t channel, int8_t maxRssiValue`)
- void `emberRadioNeedsCalibratingHandler` (`void`)

#### 6.168.1 Detailed Description

These callbacks were contributed by the stack API.

#### 6.168.2 Function Documentation

##### 6.168.2.1 void `emberCounterHandler` ( `EmberCounterType type, uint8_t data` )

A callback invoked to inform the application of the occurrence of an event defined by `EmberCounterType`, for example, transmissions and receptions at different layers of the stack.

The application must define `::EMBER_APPLICATION_HAS_COUNTER_HANDLER` in its `CONFIGURATION_HEADER` to use this. This function may be called in ISR context, so processing should be kept to a minimum.

#### Parameters

<code>type</code>	The type of the event.
<code>data</code>	For transmission events, the number of retries used. For other events, this parameter is unused and is set to zero.

Definition at line 700 of file [ncp/doc/callback.doc](#).

##### 6.168.2.2 void `emberStackStatusHandler` ( `EmberStatus status` )

A callback invoked when the status of the stack changes. If the status parameter equals `EMBER_NETWORK_UP`, then the `::emberGetNetworkParameters()` function can be called to obtain the new network parameters. If any of the parameters are being stored in nonvolatile memory by the application, the stored values should be updated.

The application is free to begin messaging once it receives the `EMBER_NETWORK_UP` status. However, routes discovered immediately after the stack comes up may be suboptimal. This is because the routes are based on the neighbor table's information about two-way links with neighboring nodes, which is obtained from periodic ZigBee Link Status messages. It can take two or three link status exchange periods (of 16 seconds each) before the neighbor table has a good estimate of link quality to neighboring nodes. Therefore, the application may improve the quality of initially discovered routes by waiting after startup to give the neighbor table time to be populated.

**Parameters**

<i>status</i>	Stack status. One of the following: <ul style="list-style-type: none"><li>• EMBER_NETWORK_UP</li><li>• EMBER_NETWORK_DOWN</li><li>• EMBER_JOIN_FAILED</li><li>• EMBER_MOVE_FAILED</li><li>• EMBER_CANNOT_JOIN_AS_ROUTER</li><li>• EMBER_NODE_ID_CHANGED</li><li>• EMBER_PAN_ID_CHANGED</li><li>• EMBER_CHANNEL_CHANGED</li><li>• EMBER_NO_BEACONS</li><li>• EMBER RECEIVED KEY IN THE CLEAR</li><li>• EMBER_NO_NETWORK_KEY RECEIVED</li><li>• EMBER_NO_LINK_KEY RECEIVED</li><li>• EMBER_PRECONFIGURED_KEY REQUIRED</li></ul>
---------------	---

Definition at line 738 of file [ncp/doc/callback.doc](#).

**6.168.2.3 void emberEnergyScanResultHandler ( uint8\_t channel, int8\_t maxRssiValue )**

Reports the maximum RSSI value measured on the channel.

**Parameters**

<i>channel</i>	The 802.15.4 channel number on which the RSSI value was measured.
<i>maxRssiValue</i>	The maximum RSSI value measured (in units of dBm).

Definition at line 750 of file [ncp/doc/callback.doc](#).

**6.168.2.4 void emberRadioNeedsCalibratingHandler ( void )**

The radio calibration callback function.

The Voltage Controlled Oscillator (VCO) can drift with temperature changes. During every call to ::emberTick(), the stack will check to see if the VCO has drifted. If the VCO has drifted, the stack will call [emberRadioNeedsCalibratingHandler\(\)](#) to inform the application that it should perform calibration of the current channel as soon as possible. Calibration can take up to 150ms. The default callback function implementation provided here performs calibration immediately. If the application wishes, it can define its own callback by defining ::EMBER\_APPLICATION\_HAS\_CUSTOM\_RADIO\_CALIBRATION\_CALLBACK in its CONFIGURATION\_HEADER. It can then failsafe any critical processes or peripherals before calling ::emberCalibrateCurrentChannel(). The application must call ::emberCalibrateCurrentChannel() in response to this callback to maintain expected radio performance.

Definition at line 770 of file [ncp/doc/callback.doc](#).

## Chapter 7

# Data Structure Documentation

### 7.1 CryptoTimingInfo Struct Reference

```
#include <green-power-crypto.h>
```

#### Data Fields

- `uint32_t micTimingMicroSeconds`
- `uint8_t micPacketSize`
- `uint32_t encryptDecryptTimingMicroSeconds`
- `uint8_t encryptDecryptPacketSize`
- `uint32_t frameCounter`

#### 7.1.1 Detailed Description

Definition at line [67](#) of file `green-power-crypto.h`.

#### 7.1.2 Field Documentation

##### 7.1.2.1 `uint32_t CryptoTimingInfo::micTimingMicroSeconds`

Definition at line [68](#) of file `green-power-crypto.h`.

##### 7.1.2.2 `uint8_t CryptoTimingInfo::micPacketSize`

Definition at line [69](#) of file `green-power-crypto.h`.

##### 7.1.2.3 `uint32_t CryptoTimingInfo::encryptDecryptTimingMicroSeconds`

Definition at line [70](#) of file `green-power-crypto.h`.

#### 7.1.2.4 `uint8_t CryptoTimingInfo::encryptDecryptPacketSize`

Definition at line 71 of file [green-power-crypto.h](#).

#### 7.1.2.5 `uint32_t CryptoTimingInfo::frameCounter`

Definition at line 72 of file [green-power-crypto.h](#).

The documentation for this struct was generated from the following file:

- [green-power-crypto.h](#)

## 7.2 DestStruct Struct Reference

```
#include <rf4ce-zrc20-ha-server.h>
```

### Data Fields

- `EmberOutgoingMessageType type`
- `uint16_t indexOrDestination`
- `uint8_t sourceEndpoint`
- `uint8_t destinationEndpoint`

#### 7.2.1 Detailed Description

Definition at line 191 of file [rf4ce-zrc20-ha-server.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-ha-server.h](#)

## 7.3 EmAfBindingInfo Struct Reference

```
#include <rf4ce-gdp-internal.h>
```

### Data Fields

- `uint8_t localConfigurationStatus`
- `uint8_t candidateIndex`

#### 7.3.1 Detailed Description

Definition at line 447 of file [rf4ce-gdp-internal.h](#).

### 7.3.2 Field Documentation

#### 7.3.2.1 uint8\_t EmAfBindingInfo::localConfigurationStatus

Definition at line 448 of file [rf4ce-gdp-internal.h](#).

#### 7.3.2.2 uint8\_t EmAfBindingInfo::candidateIndex

Definition at line 449 of file [rf4ce-gdp-internal.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-gdp-internal.h](#)

## 7.4 EmAfDiscoveryOrPairRequestData Struct Reference

```
#include <rf4ce-gdp-internal.h>
```

### Data Fields

- [EmberEUI64 srcIEEEAddr](#)
- [uint8\\_t nodeCapabilities](#)
- [EmberRf4ceVendorInfo vendorInfo](#)
- [EmberRf4ceApplicationInfo appInfo](#)
- [uint8\\_t searchDevType](#)

### 7.4.1 Detailed Description

Definition at line 439 of file [rf4ce-gdp-internal.h](#).

### 7.4.2 Field Documentation

#### 7.4.2.1 EmberEUI64 EmAfDiscoveryOrPairRequestData::srcIEEEAddr

Definition at line 440 of file [rf4ce-gdp-internal.h](#).

#### 7.4.2.2 uint8\_t EmAfDiscoveryOrPairRequestData::nodeCapabilities

Definition at line 441 of file [rf4ce-gdp-internal.h](#).

#### 7.4.2.3 EmberRf4ceVendorInfo EmAfDiscoveryOrPairRequestData::vendorInfo

Definition at line 442 of file [rf4ce-gdp-internal.h](#).

#### 7.4.2.4 EmberRf4ceApplicationInfo EmAfDiscoveryOrPairRequestData::appInfo

Definition at line 443 of file [rf4ce-gdp-internal.h](#).

#### 7.4.2.5 `uint8_t EmAfDiscoveryOrPairrequestData::searchDevType`

Definition at line 444 of file [rf4ce-gdp-internal.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-gdp-internal.h](#)

## 7.5 EmAfGbzPayloadHeader Struct Reference

```
#include <gbz-message-controller.h>
```

### Data Fields

- `uint8_t * payload`
- `uint8_t payloadLength`

#### 7.5.1 Detailed Description

Definition at line 126 of file [gbz-message-controller.h](#).

#### 7.5.2 Field Documentation

##### 7.5.2.1 `uint8_t* EmAfGbzPayloadHeader::payload`

Definition at line 127 of file [gbz-message-controller.h](#).

##### 7.5.2.2 `uint8_t EmAfGbzPayloadHeader::payloadLength`

Definition at line 128 of file [gbz-message-controller.h](#).

The documentation for this struct was generated from the following file:

- [gbz-message-controller.h](#)

## 7.6 EmAfGbzUseCaseSpecificComponent Struct Reference

```
#include <gbz-message-controller.h>
```

### Data Fields

- `uint8_t * payload`
- `uint16_t payloadLength`
- `struct EmAfGbzUseCaseSpecificComponent * next`

### 7.6.1 Detailed Description

Definition at line 137 of file [gbz-message-controller.h](#).

### 7.6.2 Field Documentation

#### 7.6.2.1 `uint8_t* EmAfGbzUseCaseSpecificComponent::payload`

Definition at line 138 of file [gbz-message-controller.h](#).

#### 7.6.2.2 `uint16_t EmAfGbzUseCaseSpecificComponent::payloadLength`

Definition at line 139 of file [gbz-message-controller.h](#).

#### 7.6.2.3 `struct EmAfGbzUseCaseSpecificComponent* EmAfGbzUseCaseSpecificComponent::next`

Definition at line 140 of file [gbz-message-controller.h](#).

The documentation for this struct was generated from the following file:

- [gbz-message-controller.h](#)

## 7.7 EmAfGdpPairingCandidat Struct Reference

```
#include <rf4ce-gdp-internal.h>
```

### Data Fields

- `EmberEUI64 ieeeAddr`
- `EmberPanId panId`
- `uint8_t supportedProfiles [EMBER_RF4CE_APPLICATION_PROFILE_ID_LIST_MAX_LENGTH]`
- `uint8_t supportedProfilesLength`
- `uint8_t channel`
- `uint8_t primaryClassDescriptor`
- `uint8_t secondaryClassDescriptor`
- `uint8_t tertiaryClassDescriptor`
- `uint8_t rxLqi`
- `uint8_t info`

### 7.7.1 Detailed Description

Definition at line 426 of file [rf4ce-gdp-internal.h](#).

## 7.7.2 Field Documentation

### 7.7.2.1 EmberEUI64 EmAfGdpPairingCandidat::ieeeAddr

Definition at line 427 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.2 EmberPanId EmAfGdpPairingCandidat::panId

Definition at line 428 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.3 uint8\_t EmAfGdpPairingCandidat::supportedProfiles[EMBER\_RF4CE\_APPLICATION\_PROFILE\_ID\_LIST\_MAX\_LENGTH]

Definition at line 429 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.4 uint8\_t EmAfGdpPairingCandidat::supportedProfilesLength

Definition at line 430 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.5 uint8\_t EmAfGdpPairingCandidat::channel

Definition at line 431 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.6 uint8\_t EmAfGdpPairingCandidat::primaryClassDescriptor

Definition at line 432 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.7 uint8\_t EmAfGdpPairingCandidat::secondaryClassDescriptor

Definition at line 433 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.8 uint8\_t EmAfGdpPairingCandidat::tertiaryClassDescriptor

Definition at line 434 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.9 uint8\_t EmAfGdpPairingCandidat::rxLqi

Definition at line 435 of file [rf4ce-gdp-internal.h](#).

### 7.7.2.10 uint8\_t EmAfGdpPairingCandidat::info

Definition at line 436 of file [rf4ce-gdp-internal.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-gdp-internal.h](#)

## 7.8 EmAfMsoPairingCandidat Struct Reference

```
#include <rf4ce-mso-internal.h>
```

### Data Fields

- `uint8_t channel`
- `EmberPanId panId`
- `EmberEUI64 ieeeAddr`
- `uint8_t primaryClassDescriptor`
- `uint8_t secondaryClassDescriptor`
- `uint8_t tertiaryClassDescriptor`
- `uint8_t basicLqiThreshold`
- `uint8_t strictLqiThreshold`
- `uint8_t rxLqi`
- `uint8_t control`

### 7.8.1 Detailed Description

Definition at line 256 of file [rf4ce-mso-internal.h](#).

### 7.8.2 Field Documentation

#### 7.8.2.1 `uint8_t EmAfMsoPairingCandidat::channel`

Definition at line 257 of file [rf4ce-mso-internal.h](#).

#### 7.8.2.2 `EmberPanId EmAfMsoPairingCandidat::panId`

Definition at line 258 of file [rf4ce-mso-internal.h](#).

#### 7.8.2.3 `EmberEUI64 EmAfMsoPairingCandidat::ieeeAddr`

Definition at line 259 of file [rf4ce-mso-internal.h](#).

#### 7.8.2.4 `uint8_t EmAfMsoPairingCandidat::primaryClassDescriptor`

Definition at line 260 of file [rf4ce-mso-internal.h](#).

#### 7.8.2.5 `uint8_t EmAfMsoPairingCandidat::secondaryClassDescriptor`

Definition at line 261 of file [rf4ce-mso-internal.h](#).

#### 7.8.2.6 `uint8_t EmAfMsoPairingCandidat::tertiaryClassDescriptor`

Definition at line 262 of file [rf4ce-mso-internal.h](#).

### 7.8.2.7 `uint8_t EmAfMsoPairingCandidat::basicLqiThreshold`

Definition at line 263 of file [rf4ce-mso-internal.h](#).

### 7.8.2.8 `uint8_t EmAfMsoPairingCandidat::strictLqiThreshold`

Definition at line 264 of file [rf4ce-mso-internal.h](#).

### 7.8.2.9 `uint8_t EmAfMsoPairingCandidat::rxLqi`

Definition at line 265 of file [rf4ce-mso-internal.h](#).

### 7.8.2.10 `uint8_t EmAfMsoPairingCandidat::control`

Definition at line 266 of file [rf4ce-mso-internal.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-mso-internal.h](#)

## 7.9 `EmAfOtaStorageLinuxConfig` Struct Reference

```
#include <ota-storage-linux.h>
```

### Data Fields

- `bool memoryDebug`
- `bool fileDebug`
- `bool fieldDebug`
- `bool ignoreFilesWithUnderscorePrefix`
- `bool printFileDiscoveryOrRemoval`
- `EmAfOtaStorageFileAddedHandler * fileAddedHandler`

### 7.9.1 Detailed Description

Definition at line 5 of file [ota-storage-linux.h](#).

### 7.9.2 Field Documentation

#### 7.9.2.1 `bool EmAfOtaStorageLinuxConfig::memoryDebug`

Definition at line 6 of file [ota-storage-linux.h](#).

#### 7.9.2.2 `bool EmAfOtaStorageLinuxConfig::fileDebug`

Definition at line 7 of file [ota-storage-linux.h](#).

### 7.9.2.3 bool EmAfOtaStorageLinuxConfig::fieldDebug

Definition at line 8 of file [ota-storage-linux.h](#).

### 7.9.2.4 bool EmAfOtaStorageLinuxConfig::ignoreFilesWithUnderscorePrefix

Definition at line 9 of file [ota-storage-linux.h](#).

### 7.9.2.5 bool EmAfOtaStorageLinuxConfig::printFileDiscoveryOrRemoval

Definition at line 10 of file [ota-storage-linux.h](#).

### 7.9.2.6 EmAfOtaStorageFileAddedHandler\* EmAfOtaStorageLinuxConfig::fileAddedHandler

Definition at line 11 of file [ota-storage-linux.h](#).

The documentation for this struct was generated from the following file:

- [ota-storage-linux.h](#)

## 7.10 EmAfPartialWriteStruct Struct Reference

```
#include <eprom.h>
```

### Data Fields

- `uint32_t address`
- `uint8_t data`

### 7.10.1 Detailed Description

Definition at line 42 of file [eprom.h](#).

### 7.10.2 Field Documentation

#### 7.10.2.1 uint32\_t EmAfPartialWriteStruct::address

Definition at line 43 of file [eprom.h](#).

#### 7.10.2.2 uint8\_t EmAfPartialWriteStruct::data

Definition at line 44 of file [eprom.h](#).

The documentation for this struct was generated from the following file:

- [eprom.h](#)

## 7.11 EmAfPluginNetworkCreatorChannelComposite Struct Reference

```
#include <network-creator-composite.h>
```

### Data Fields

- `uint8_t beaconsHeard`
- `int8_t maxRssiHeard`

#### 7.11.1 Detailed Description

Definition at line 11 of file [network-creator-composite.h](#).

#### 7.11.2 Field Documentation

##### 7.11.2.1 `uint8_t EmAfPluginNetworkCreatorChannelComposite::beaconsHeard`

Definition at line 12 of file [network-creator-composite.h](#).

##### 7.11.2.2 `int8_t EmAfPluginNetworkCreatorChannelComposite::maxRssiHeard`

Definition at line 13 of file [network-creator-composite.h](#).

The documentation for this struct was generated from the following file:

- [network-creator-composite.h](#)

## 7.12 EmAfPluginReportVolatileData Struct Reference

```
#include <reporting.h>
```

### Data Fields

- `uint32_t lastReportTimeMs`
- `uint32_t lastReportValue`
- `bool reportableChange`

#### 7.12.1 Detailed Description

Definition at line 8 of file [reporting.h](#).

#### 7.12.2 Field Documentation

##### 7.12.2.1 `uint32_t EmAfPluginReportVolatileData::lastReportTimeMs`

Definition at line 9 of file [reporting.h](#).

### 7.12.2.2 `uint32_t EmAfPluginReportVolatileData::lastReportValue`

Definition at line 10 of file [reporting.h](#).

### 7.12.2.3 `bool EmAfPluginReportVolatileData::reportableChange`

Definition at line 11 of file [reporting.h](#).

The documentation for this struct was generated from the following file:

- [reporting.h](#)

## 7.13 EmAfPollingState Struct Reference

```
#include <end-device-support.h>
```

### Data Fields

- `uint32_t pollIntervalMs`
- `uint8_t numPollsFailing`

### 7.13.1 Detailed Description

Definition at line 5 of file [end-device-support.h](#).

### 7.13.2 Field Documentation

#### 7.13.2.1 `uint32_t EmAfPollingState::pollIntervalMs`

Definition at line 6 of file [end-device-support.h](#).

#### 7.13.2.2 `uint8_t EmAfPollingState::numPollsFailing`

Definition at line 7 of file [end-device-support.h](#).

The documentation for this struct was generated from the following file:

- [end-device-support.h](#)

## 7.14 EmAfRf4ceGdpAttributeDescriptor Struct Reference

```
#include <rf4ce-gdp-attributes.h>
```

## Data Fields

- `uint8_t id`
- `uint8_t size`
- `uint8_t bitmask`
- `uint16_t dimension`

### 7.14.1 Detailed Description

Definition at line 131 of file `rf4ce-gdp-attributes.h`.

### 7.14.2 Field Documentation

#### 7.14.2.1 `uint8_t EmAfRf4ceGdpAttributeDescriptor::id`

Definition at line 132 of file `rf4ce-gdp-attributes.h`.

#### 7.14.2.2 `uint8_t EmAfRf4ceGdpAttributeDescriptor::size`

Definition at line 133 of file `rf4ce-gdp-attributes.h`.

#### 7.14.2.3 `uint8_t EmAfRf4ceGdpAttributeDescriptor::bitmask`

Definition at line 134 of file `rf4ce-gdp-attributes.h`.

#### 7.14.2.4 `uint16_t EmAfRf4ceGdpAttributeDescriptor::dimension`

Definition at line 135 of file `rf4ce-gdp-attributes.h`.

The documentation for this struct was generated from the following file:

- `rf4ce-gdp-attributes.h`

## 7.15 EmAfRf4ceGdpAttributes Struct Reference

```
#include <rf4ce-gdp-attributes.h>
```

## Data Fields

- `uint16_t gdpVersion`
- `uint32_t gdpCapabilities`
- `uint8_t powerStatus`
- `uint8_t pollConstraints [APL_GDP_POLL_CONSTRAINTS_SIZE]`
- `uint8_t pollConfiguration [APL_GDP_POLL_CONFIGURATION_SIZE]`
- `uint16_t autoCheckValidationPeriod`
- `uint16_t linkLostWaitTime`
- `uint8_t identificationCapabilities`

### 7.15.1 Detailed Description

Definition at line 168 of file [rf4ce-gdp-attributes.h](#).

### 7.15.2 Field Documentation

#### 7.15.2.1 `uint16_t EmAfRf4ceGdpAttributes::gdpVersion`

Definition at line 169 of file [rf4ce-gdp-attributes.h](#).

#### 7.15.2.2 `uint32_t EmAfRf4ceGdpAttributes::gdpCapabilities`

Definition at line 170 of file [rf4ce-gdp-attributes.h](#).

#### 7.15.2.3 `uint8_t EmAfRf4ceGdpAttributes::powerStatus`

Definition at line 171 of file [rf4ce-gdp-attributes.h](#).

#### 7.15.2.4 `uint8_t EmAfRf4ceGdpAttributes::pollConstraints[APL_GDP_POLL_CONSTRAINTS_SIZE]`

Definition at line 172 of file [rf4ce-gdp-attributes.h](#).

#### 7.15.2.5 `uint8_t EmAfRf4ceGdpAttributes::pollConfiguration[APL_GDP_POLL_CONFIGURATION_SIZE]`

Definition at line 173 of file [rf4ce-gdp-attributes.h](#).

#### 7.15.2.6 `uint16_t EmAfRf4ceGdpAttributes::autoCheckValidationPeriod`

Definition at line 174 of file [rf4ce-gdp-attributes.h](#).

#### 7.15.2.7 `uint16_t EmAfRf4ceGdpAttributes::linkLostWaitTime`

Definition at line 175 of file [rf4ce-gdp-attributes.h](#).

#### 7.15.2.8 `uint8_t EmAfRf4ceGdpAttributes::identificationCapabilities`

Definition at line 176 of file [rf4ce-gdp-attributes.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-gdp-attributes.h](#)

## 7.16 EmAfRf4ceMsoAttributeDescriptor Struct Reference

```
#include <rf4ce-mso-attributes.h>
```

## Data Fields

- `EmberAfRf4ceMsoAttributeId id`
- `uint8_t size`
- `uint8_t bitmask`
- `uint8_t dimension`

### 7.16.1 Detailed Description

Definition at line 29 of file `rf4ce-mso-attributes.h`.

### 7.16.2 Field Documentation

#### 7.16.2.1 `EmberAfRf4ceMsoAttributeId EmAfRf4ceMsoAttributeDescriptor::id`

Definition at line 30 of file `rf4ce-mso-attributes.h`.

#### 7.16.2.2 `uint8_t EmAfRf4ceMsoAttributeDescriptor::size`

Definition at line 31 of file `rf4ce-mso-attributes.h`.

#### 7.16.2.3 `uint8_t EmAfRf4ceMsoAttributeDescriptor::bitmask`

Definition at line 32 of file `rf4ce-mso-attributes.h`.

#### 7.16.2.4 `uint8_t EmAfRf4ceMsoAttributeDescriptor::dimension`

Definition at line 33 of file `rf4ce-mso-attributes.h`.

The documentation for this struct was generated from the following file:

- `rf4ce-mso-attributes.h`

## 7.17 `EmAfRf4ceMsoPeripheralIdEntry` Struct Reference

```
#include <rf4ce-mso-attributes.h>
```

## Data Fields

- `uint8_t deviceType`
- `uint8_t peripheralId [MSO_RIB_ATTRIBUTE_PERIPHERAL_IDS_LENGTH]`

### 7.17.1 Detailed Description

Definition at line 36 of file `rf4ce-mso-attributes.h`.

### 7.17.2 Field Documentation

#### 7.17.2.1 uint8\_t EmAfRf4ceMsoPeripheralEntry::deviceType

Definition at line 37 of file [rf4ce-mso-attributes.h](#).

#### 7.17.2.2 uint8\_t EmAfRf4ceMsoPeripheralEntry::peripheralId[MSO\_RIB\_ATTRIBUTE\_PERIPHERAL\_IDS\_LENGTH]

Definition at line 38 of file [rf4ce-mso-attributes.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-mso-attributes.h](#)

## 7.18 EmAfRf4ceMsoRibAttributes Struct Reference

```
#include <rf4ce-mso-attributes.h>
```

### Data Fields

Definition at line 49 of file [rf4ce-mso-attributes.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-mso-attributes.h](#)

## 7.19 EmAfRf4cePowerSavingState Struct Reference

```
#include <rf4ce-profile-internal.h>
```

### Data Fields

- `uint32_t dutyCycleMs`
- `uint32_t activePeriodMs`

#### 7.19.1 Detailed Description

Definition at line 108 of file [rf4ce-profile-internal.h](#).

#### 7.19.2 Field Documentation

**7.19.2.1 uint32\_t EmAfRf4cePowerSavingState::dutyCycleMs**

Definition at line 109 of file [rf4ce-profile-internal.h](#).

### 7.19.2.2 uint32\_t EmAfRf4cePowerSavingState::activePeriodMs

Definition at line 110 of file [rf4ce-profile-internal.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-profile-internal.h](#)

## 7.20 EmAfRf4ceZrcAttributeDescriptor Struct Reference

```
#include <rf4ce-zrc20-attributes.h>
```

### Data Fields

- `uint8_t id`
- `uint8_t size`
- `uint8_t bitmask`

### 7.20.1 Detailed Description

Definition at line 68 of file [rf4ce-zrc20-attributes.h](#).

### 7.20.2 Field Documentation

#### 7.20.2.1 uint8\_t EmAfRf4ceZrcAttributeDescriptor::id

Definition at line 69 of file [rf4ce-zrc20-attributes.h](#).

#### 7.20.2.2 uint8\_t EmAfRf4ceZrcAttributeDescriptor::size

Definition at line 70 of file [rf4ce-zrc20-attributes.h](#).

#### 7.20.2.3 uint8\_t EmAfRf4ceZrcAttributeDescriptor::bitmask

Definition at line 71 of file [rf4ce-zrc20-attributes.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-attributes.h](#)

## 7.21 EmAfRf4ceZrcAttributes Struct Reference

```
#include <rf4ce-zrc20-attributes.h>
```

## Data Fields

- uint16\_t `zrcProfileVersion`
- uint16\_t `zrcActionBanksVersion`
- `EmAfZrcBitmask` \* `actionBanksSupportedRx`
- `EmAfZrcBitmask` \* `actionBanksSupportedTx`
- `EmAfZrcArrayedBitmask` \* `actionCodesSupportedRx`
- `EmAfZrcArrayedBitmask` \* `actionCodesSupportedTx`

### 7.21.1 Detailed Description

Definition at line 84 of file [rf4ce-zrc20-attributes.h](#).

### 7.21.2 Field Documentation

#### 7.21.2.1 uint16\_t `EmAfRf4ceZrcAttributes::zrcProfileVersion`

Definition at line 86 of file [rf4ce-zrc20-attributes.h](#).

#### 7.21.2.2 uint16\_t `EmAfRf4ceZrcAttributes::zrcActionBanksVersion`

Definition at line 87 of file [rf4ce-zrc20-attributes.h](#).

#### 7.21.2.3 `EmAfZrcBitmask*` `EmAfRf4ceZrcAttributes::actionBanksSupportedRx`

Definition at line 88 of file [rf4ce-zrc20-attributes.h](#).

#### 7.21.2.4 `EmAfZrcBitmask*` `EmAfRf4ceZrcAttributes::actionBanksSupportedTx`

Definition at line 89 of file [rf4ce-zrc20-attributes.h](#).

#### 7.21.2.5 `EmAfZrcArrayedBitmask*` `EmAfRf4ceZrcAttributes::actionCodesSupportedRx`

Definition at line 97 of file [rf4ce-zrc20-attributes.h](#).

#### 7.21.2.6 `EmAfZrcArrayedBitmask*` `EmAfRf4ceZrcAttributes::actionCodesSupportedTx`

Definition at line 98 of file [rf4ce-zrc20-attributes.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-attributes.h](#)

## 7.22 EmAfZrcArrayedBitmask Struct Reference

```
#include <rf4ce-zrc20-attributes.h>
```

## Data Fields

- bool `inUse`
- uint8\_t `entryId`
- uint8\_t `contents` [ZRC\_BITMASK\_SIZE]

### 7.22.1 Detailed Description

Definition at line 78 of file [rf4ce-zrc20-attributes.h](#).

### 7.22.2 Field Documentation

#### 7.22.2.1 bool EmAfZrcArrayedBitmask::inUse

Definition at line 79 of file [rf4ce-zrc20-attributes.h](#).

#### 7.22.2.2 uint8\_t EmAfZrcArrayedBitmask::entryId

Definition at line 80 of file [rf4ce-zrc20-attributes.h](#).

#### 7.22.2.3 uint8\_t EmAfZrcArrayedBitmask::contents[ZRC\_BITMASK\_SIZE]

Definition at line 81 of file [rf4ce-zrc20-attributes.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-attributes.h](#)

## 7.23 EmAfZrcBitmask Struct Reference

```
#include <rf4ce-zrc20-attributes.h>
```

## Data Fields

- uint8\_t `contents` [ZRC\_BITMASK\_SIZE]

### 7.23.1 Detailed Description

Definition at line 74 of file [rf4ce-zrc20-attributes.h](#).

### 7.23.2 Field Documentation

#### 7.23.2.1 uint8\_t EmAfZrcBitmask::contents[ZRC\_BITMASK\_SIZE]

Definition at line 75 of file [rf4ce-zrc20-attributes.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-attributes.h](#)

## 7.24 EmberAesMmoHashContext Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint8_t result [EMBER_AES_HASH_BLOCK_SIZE]`
- `uint32_t length`

#### 7.24.1 Detailed Description

This data structure contains the context data when calculating an AES MMO hash (message digest).

Definition at line [1537](#) of file [ember-types.h](#).

#### 7.24.2 Field Documentation

##### 7.24.2.1 `uint8_t EmberAesMmoHashContext::result[EMBER_AES_HASH_BLOCK_SIZE]`

Definition at line [1538](#) of file [ember-types.h](#).

##### 7.24.2.2 `uint32_t EmberAesMmoHashContext::length`

Definition at line [1539](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.25 EmberAfAllowedInterPanMessage Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberAfProfileId profileId](#)
- [EmberAfClusterId clusterId](#)
- `uint8_t commandId`
- [EmberAfAllowedInterpanOptions options](#)

#### 7.25.1 Detailed Description

This structure is used define an interpan message that will be accepted by the interpan filters.

Definition at line [377](#) of file [af-types.h](#).

## 7.25.2 Field Documentation

### 7.25.2.1 EmberAfProfileId EmberAfAllowedInterPanMessage::profileId

Definition at line 378 of file [af-types.h](#).

### 7.25.2.2 EmberAfClusterId EmberAfAllowedInterPanMessage::clusterId

Definition at line 379 of file [af-types.h](#).

### 7.25.2.3 uint8\_t EmberAfAllowedInterPanMessage::commandId

Definition at line 380 of file [af-types.h](#).

### 7.25.2.4 EmberAfAllowedInterpanOptions EmberAfAllowedInterPanMessage::options

Definition at line 381 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.26 EmberAfAttributeMetadata Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberAfAttributeId attributeId](#)
- [EmberAfAttributeType attributeType](#)
- [uint8\\_t size](#)
- [EmberAfAttributeMask mask](#)
- [EmberAfDefaultOrMinMaxAttributeValue defaultValue](#)

### 7.26.1 Detailed Description

Each attribute has it's metadata stored in such struct.

There is only one of these per attribute across all endpoints.

Definition at line 138 of file [af-types.h](#).

## 7.26.2 Field Documentation

### 7.26.2.1 EmberAfAttributeId EmberAfAttributeMetadata::attributeId

Attribute ID, according to ZCL specs.

Definition at line 142 of file [af-types.h](#).

### 7.26.2.2 EmberAfAttributeType EmberAfAttributeMetadata::attributeType

Attribute type, according to ZCL specs.

Definition at line 146 of file [af-types.h](#).

### 7.26.2.3 uint8\_t EmberAfAttributeMetadata::size

Size of this attribute in bytes.

Definition at line 150 of file [af-types.h](#).

### 7.26.2.4 EmberAfAttributeMask EmberAfAttributeMetadata::mask

Attribute mask, tagging attribute with specific functionality. See ATTRIBUTE\_MASK\_ macros defined in att-storage.h.

Definition at line 156 of file [af-types.h](#).

### 7.26.2.5 EmberAfDefaultOrMinMaxAttributeValue EmberAfAttributeMetadata::defaultValue

Pointer to the default value union. Actual value stored depends on the mask.

Definition at line 161 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.27 EmberAfAttributeMinMaxValue Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberAfDefaultAttributeValue defaultValue](#)
- [EmberAfDefaultAttributeValue minValue](#)
- [EmberAfDefaultAttributeValue maxValue](#)

### 7.27.1 Detailed Description

Type describing the attribute default, min and max values.

This struct is required if the attribute mask specifies that this attribute has a known min and max values.

Definition at line 96 of file [af-types.h](#).

### 7.27.2 Field Documentation

### 7.27.2.1 EmberAfDefaultAttributeValue EmberAfAttributeMinMaxValue::defaultValue

Default value of the attribute.

Definition at line 100 of file [af-types.h](#).

### 7.27.2.2 EmberAfDefaultAttributeValue EmberAfAttributeMinMaxValue::minValue

Minimum allowed value

Definition at line 104 of file [af-types.h](#).

### 7.27.2.3 EmberAfDefaultAttributeValue EmberAfAttributeMinMaxValue::maxValue

Maximum allowed value.

Definition at line 108 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.28 EmberAfAttributeSearchRecord Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t endpoint`
- `EmberAfClusterId clusterId`
- `EmberAfClusterMask clusterMask`
- `EmberAfAttributeId attributeId`
- `uint16_t manufacturerCode`

### 7.28.1 Detailed Description

Struct used to find an attribute in storage. Together the elements in this search record constitute the "primary key" used to identify a unique attribute value in attribute storage.

Definition at line 204 of file [af-types.h](#).

### 7.28.2 Field Documentation

#### 7.28.2.1 `uint8_t EmberAfAttributeSearchRecord::endpoint`

Endpoint that the attribute is located on

Definition at line 209 of file [af-types.h](#).

#### 7.28.2.2 EmberAfClusterId EmberAfAttributeSearchRecord::clusterId

Cluster that the attribute is located on. If the cluster id is inside the manufacturer specific range, 0xfc00 - 0xffff, The manufacturer code should also be set to the code associated with the manufacturer specific cluster.

Definition at line 217 of file [af-types.h](#).

#### 7.28.2.3 EmberAfClusterMask EmberAfAttributeSearchRecord::clusterMask

Cluster mask for the cluster, used to determine if it is the server or client version of the cluster. See CLUSTER\_MASK\_ macros defined in att-storage.h

Definition at line 224 of file [af-types.h](#).

#### 7.28.2.4 EmberAfAttributeId EmberAfAttributeSearchRecord::attributeId

The two byte identifier for the attribute. If the cluster id is inside the manufacturer specific range 0xfc00 - 0xffff, or the manufacturer code is NOT 0, the attribute is assumed to be manufacturer specific.

Definition at line 231 of file [af-types.h](#).

#### 7.28.2.5 uint16\_t EmberAfAttributeSearchRecord::manufacturerCode

Manufacturer Code associated with the cluster and or attribute. If the cluster id is inside the manufacturer specific range, this value should indicate the manufacturer code for the manufacturer specific cluster. Otherwise if this value is non zero, and the cluster id is a standard ZCL cluster, it is assumed that the attribute being sought is a manufacturer specific extension to the standard ZCL cluster indicated by the cluster id.

Definition at line 242 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.29 EmberAfCalendar Struct Reference

```
#include <calendar-client.h>
```

### Data Fields

- bool [inUse](#)
- uint32\_t [providerId](#)
- uint32\_t [issuerEventId](#)
- uint32\_t [issuerCalendarId](#)
- uint32\_t [startTimeUtc](#)
- [EmberAfCalendarType](#) [calendarType](#)
- uint8\_t [calendarName](#) [EMBER\_AF\_CALENDAR\_MAXIMUM\_CALENDAR\_NAME\_LENGTH\_H+1]
- uint8\_t [numberOfSeasons](#)
- uint8\_t [receivedSeasons](#)

- `uint8_t numberOfWeekProfiles`
- `uint8_t numberOfDayProfiles`
- `EmberAfCalendarSeason seasons [EMBER_AF_PLUGIN_CALENDAR_CLIENT_SEASONS]`
- `EmberAfCalendarWeekProfile weekProfiles [EMBER_AF_PLUGIN_CALENDAR_CLIENT_WEEK_PROFILES]`
- `EmberAfCalendarDayProfile dayProfiles [EMBER_AF_PLUGIN_CALENDAR_CLIENT_DAY_PROFILES]`
- `EmberAfCalendarSpecialDayProfile specialDayProfile`

### 7.29.1 Detailed Description

Definition at line 63 of file `calendar-client.h`.

### 7.29.2 Field Documentation

#### 7.29.2.1 `bool EmberAfCalendar::inUse`

Definition at line 64 of file `calendar-client.h`.

#### 7.29.2.2 `uint32_t EmberAfCalendar::providerId`

Definition at line 65 of file `calendar-client.h`.

#### 7.29.2.3 `uint32_t EmberAfCalendar::issuerEventId`

Definition at line 66 of file `calendar-client.h`.

#### 7.29.2.4 `uint32_t EmberAfCalendar::issuerCalendarId`

Definition at line 67 of file `calendar-client.h`.

#### 7.29.2.5 `uint32_t EmberAfCalendar::startTimeUtc`

Definition at line 68 of file `calendar-client.h`.

#### 7.29.2.6 `EmberAfCalendarType EmberAfCalendar::calendarType`

Definition at line 69 of file `calendar-client.h`.

#### 7.29.2.7 `uint8_t EmberAfCalendar::calendarName[EMBER_AF_CALENDAR_MAXIMUM_CALENDAR_NAME_LENGTH+1]`

Definition at line 70 of file `calendar-client.h`.

#### 7.29.2.8 `uint8_t EmberAfCalendar::numberOfSeasons`

Definition at line 71 of file `calendar-client.h`.

### 7.29.2.9 uint8\_t EmberAfCalendar::receivedSeasons

Definition at line 72 of file [calendar-client.h](#).

### 7.29.2.10 uint8\_t EmberAfCalendar::numberOfWeekProfiles

Definition at line 73 of file [calendar-client.h](#).

### 7.29.2.11 uint8\_t EmberAfCalendar::numberOfDayProfiles

Definition at line 74 of file [calendar-client.h](#).

### 7.29.2.12 EmberAfCalendarSeason EmberAfCalendar::seasons[EMBER\_AF\_PLUGIN\_CALENDAR\_CLIENT\_SEASONS]

Definition at line 75 of file [calendar-client.h](#).

### 7.29.2.13 EmberAfCalendarWeekProfile EmberAfCalendar::weekProfiles[EMBER\_AF\_PLUGIN\_CALENDAR\_CLIENT\_WEEK\_PROFILES]

Definition at line 76 of file [calendar-client.h](#).

### 7.29.2.14 EmberAfCalendarDayProfile EmberAfCalendar::dayProfiles[EMBER\_AF\_PLUGIN\_CALENDAR\_CLIENT\_DAY\_PROFILES]

Definition at line 77 of file [calendar-client.h](#).

### 7.29.2.15 EmberAfCalendarSpecialDayProfile EmberAfCalendar::specialDayProfile

Definition at line 78 of file [calendar-client.h](#).

The documentation for this struct was generated from the following file:

- [calendar-client.h](#)

## 7.30 EmberAfCalendarDayProfile Struct Reference

```
#include <calendar-client.h>
```

### Data Fields

- bool [inUse](#)
- uint8\_t [numberOfScheduleEntries](#)
- uint8\_t [receivedScheduleEntries](#)
- EmberAfCalendarScheduleEntry [scheduleEntries](#) [EMBER\_AF\_PLUGIN\_CALENDAR\_CLIENT\_SCHEDULE\_ENTRIES]

### 7.30.1 Detailed Description

Definition at line 43 of file [calendar-client.h](#).

### 7.30.2 Field Documentation

#### 7.30.2.1 bool EmberAfCalendarDayProfile::inUse

Definition at line 44 of file [calendar-client.h](#).

#### 7.30.2.2 uint8\_t EmberAfCalendarDayProfile::numberOfScheduleEntries

Definition at line 45 of file [calendar-client.h](#).

#### 7.30.2.3 uint8\_t EmberAfCalendarDayProfile::receivedScheduleEntries

Definition at line 46 of file [calendar-client.h](#).

#### 7.30.2.4 EmberAfCalendarScheduleEntry EmberAfCalendarDayProfile::scheduleEntries[EMBER\_AF\_P-LUGIN\_CALENDAR\_CLIENT\_SCHEDULE\_ENTRIES]

Definition at line 47 of file [calendar-client.h](#).

The documentation for this struct was generated from the following file:

- [calendar-client.h](#)

## 7.31 EmberAfCalendarDayScheduleEntryStruct Struct Reference

```
#include <calendar-common.h>
```

### Data Fields

- `uint16_t minutesFromMidnight`
- `uint8_t data`

### 7.31.1 Detailed Description

Definition at line 10 of file [calendar-common.h](#).

### 7.31.2 Field Documentation

#### 7.31.2.1 uint16\_t EmberAfCalendarDayScheduleEntryStruct::minutesFromMidnight

Definition at line 11 of file [calendar-common.h](#).

### 7.31.2.2 uint8\_t EmberAfCalendarDayScheduleEntryStruct::data

Definition at line 20 of file [calendar-common.h](#).

The documentation for this struct was generated from the following file:

- [calendar-common.h](#)

## 7.32 EmberAfCalendarDayStruct Struct Reference

```
#include <calendar-common.h>
```

### Data Fields

- [EmberAfCalendarDayScheduleEntryStruct scheduleEntries](#) [EMBER\_AF\_PLUGIN\_CALENDAR\_COMMON\_SCHEDULE\_ENTRIES\_MAX]
- [uint8\\_t id](#)
- [uint8\\_t numberOfScheduleEntries](#)

### 7.32.1 Detailed Description

Definition at line 26 of file [calendar-common.h](#).

### 7.32.2 Field Documentation

#### 7.32.2.1 EmberAfCalendarDayScheduleEntryStruct EmberAfCalendarDayStruct::scheduleEntries[EMBER\_AF\_PLUGIN\_CALENDAR\_COMMON\_SCHEDULE\_ENTRIES\_MAX]

Definition at line 27 of file [calendar-common.h](#).

#### 7.32.2.2 uint8\_t EmberAfCalendarDayStruct::id

Definition at line 28 of file [calendar-common.h](#).

#### 7.32.2.3 uint8\_t EmberAfCalendarDayStruct::numberOfScheduleEntries

Definition at line 29 of file [calendar-common.h](#).

The documentation for this struct was generated from the following file:

- [calendar-common.h](#)

## 7.33 EmberAfCalendarScheduleEntry Union Reference

```
#include <calendar-client.h>
```

## Data Fields

- struct {
   
    uint16\_t startTimeM
   
    uint8\_t priceTier
   
} rateSwitchTime
  
- struct {
   
    uint16\_t startTimeM
   
    bool friendlyCreditEnable
   
} friendlyCreditSwitchTime
  
- struct {
   
    uint16\_t startTimeM
   
    uint8\_t auxiliaryLoadSwitchState
   
} auxilliaryLoadSwitchTime

### 7.33.1 Detailed Description

Definition at line 28 of file [calendar-client.h](#).

### 7.33.2 Field Documentation

#### 7.33.2.1 uint16\_t EmberAfCalendarScheduleEntry::startTimeM

Definition at line 30 of file [calendar-client.h](#).

#### 7.33.2.2 uint8\_t EmberAfCalendarScheduleEntry::priceTier

Definition at line 31 of file [calendar-client.h](#).

#### 7.33.2.3 struct { ... } EmberAfCalendarScheduleEntry::rateSwitchTime

#### 7.33.2.4 bool EmberAfCalendarScheduleEntry::friendlyCreditEnable

Definition at line 35 of file [calendar-client.h](#).

#### 7.33.2.5 struct { ... } EmberAfCalendarScheduleEntry::friendlyCreditSwitchTime

#### 7.33.2.6 uint8\_t EmberAfCalendarScheduleEntry::auxiliaryLoadSwitchState

Definition at line 39 of file [calendar-client.h](#).

#### 7.33.2.7 struct { ... } EmberAfCalendarScheduleEntry::auxilliaryLoadSwitchTime

The documentation for this union was generated from the following file:

- [calendar-client.h](#)

## 7.34 EmberAfCalendarSeason Struct Reference

```
#include <calendar-client.h>
```

### Data Fields

- [EmberAfDate seasonStartDate](#)
- [uint8\\_t weekIdRef](#)

#### 7.34.1 Detailed Description

Definition at line [7](#) of file [calendar-client.h](#).

#### 7.34.2 Field Documentation

##### 7.34.2.1 EmberAfDate EmberAfCalendarSeason::seasonStartDate

Definition at line [8](#) of file [calendar-client.h](#).

##### 7.34.2.2 uint8\_t EmberAfCalendarSeason::weekIdRef

Definition at line [9](#) of file [calendar-client.h](#).

The documentation for this struct was generated from the following file:

- [calendar-client.h](#)

## 7.35 EmberAfCalendarSeasonStruct Struct Reference

```
#include <calendar-common.h>
```

### Data Fields

- [EmberAfDate startDate](#)
- [uint8\\_t weekIndex](#)

#### 7.35.1 Detailed Description

Definition at line [49](#) of file [calendar-common.h](#).

#### 7.35.2 Field Documentation

##### 7.35.2.1 EmberAfDate EmberAfCalendarSeasonStruct::startDate

Definition at line [50](#) of file [calendar-common.h](#).

### 7.35.2.2 uint8\_t EmberAfCalendarSeasonStruct::weekIndex

Definition at line 51 of file [calendar-common.h](#).

The documentation for this struct was generated from the following file:

- [calendar-common.h](#)

## 7.36 EmberAfCalendarSpecialDayEntry Struct Reference

```
#include <calendar-client.h>
```

### Data Fields

- [EmberAfDate specialDayDate](#)
- [uint8\\_t dayIdRef](#)

### 7.36.1 Detailed Description

Definition at line 50 of file [calendar-client.h](#).

### 7.36.2 Field Documentation

#### 7.36.2.1 EmberAfDate EmberAfCalendarSpecialDayEntry::specialDayDate

Definition at line 51 of file [calendar-client.h](#).

#### 7.36.2.2 uint8\_t EmberAfCalendarSpecialDayEntry::dayIdRef

Definition at line 52 of file [calendar-client.h](#).

The documentation for this struct was generated from the following file:

- [calendar-client.h](#)

## 7.37 EmberAfCalendarSpecialDayProfile Struct Reference

```
#include <calendar-client.h>
```

### Data Fields

- [bool inUse](#)
- [uint32\\_t startTimeUtc](#)

## 7.40 EmberAfCalendarWeekProfile Struct Reference

```
#include <calendar-client.h>
```

## Data Fields

- bool `inUse`
- uint8\_t `dayIdRefMonday`
- uint8\_t `dayIdRefTuesday`
- uint8\_t `dayIdRefWednesday`
- uint8\_t `dayIdRefThursday`
- uint8\_t `dayIdRefFriday`
- uint8\_t `dayIdRefSaturday`
- uint8\_t `dayIdRefSunday`

### 7.40.1 Detailed Description

Definition at line 12 of file [calendar-client.h](#).

### 7.40.2 Field Documentation

#### 7.40.2.1 bool EmberAfCalendarWeekProfile::inUse

Definition at line 13 of file [calendar-client.h](#).

#### 7.40.2.2 uint8\_t EmberAfCalendarWeekProfile::dayIdRefMonday

Definition at line 14 of file [calendar-client.h](#).

#### 7.40.2.3 uint8\_t EmberAfCalendarWeekProfile::dayIdRefTuesday

Definition at line 15 of file [calendar-client.h](#).

#### 7.40.2.4 uint8\_t EmberAfCalendarWeekProfile::dayIdRefWednesday

Definition at line 16 of file [calendar-client.h](#).

Definition at line 19 of file [calendar-client.h](#).

#### 7.40.2.8 uint8\_t EmberAfCalendarWeekProfile::dayIdRefSunday

Definition at line 20 of file [calendar-client.h](#).

The documentation for this struct was generated from the following file:

- [calendar-client.h](#)

### 7.41 EmberAfCalendarWeekStruct Struct Reference

```
#include <calendar-common.h>
```

#### Data Fields

- uint8\_t [normalDayIndexes \[EMBER\\_AF\\_DAYS\\_IN\\_THE\\_WEEK\]](#)
- uint8\_t [id](#)

#### 7.41.1 Detailed Description

Definition at line 44 of file [calendar-common.h](#).

#### 7.41.2 Field Documentation

##### 7.41.2.1 uint8\_t EmberAfCalendarWeekStruct::normalDayIndexes[EMBER\_AF\_DAYS\_IN\_THE\_WEEK]

Definition at line 45 of file [calendar-common.h](#).

##### 7.41.2.2 uint8\_t EmberAfCalendarWeekStruct::id

Definition at line 46 of file [calendar-common.h](#).

The documentation for this struct was generated from the following file:

- [calendar-common.h](#)

### 7.42 EmberAfCluster Struct Reference

```
#include <af-types.h>
```

#### Data Fields

- [EmberAfClusterId clusterId](#)
- [EmberAfAttributeMetadata \\* attributes](#)
- uint16\_t [attributeCount](#)
- uint16\_t [clusterSize](#)
- [EmberAfClusterMask mask](#)

- const  
**EmberAfGenericClusterFunction \* functions**

### 7.42.1 Detailed Description

Struct describing cluster.

Definition at line 167 of file [af-types.h](#).

### 7.42.2 Field Documentation

#### 7.42.2.1 EmberAfClusterId EmberAfCluster::clusterId

ID of cluster according to ZCL spec

Definition at line 171 of file [af-types.h](#).

#### 7.42.2.2 EmberAfAttributeMetadata\* EmberAfCluster::attributes

Pointer to attribute metadata array for this cluster.

Definition at line 175 of file [af-types.h](#).

#### 7.42.2.3 uint16\_t EmberAfCluster::attributeCount

Total number of attributes

Definition at line 179 of file [af-types.h](#).

#### 7.42.2.4 uint16\_t EmberAfCluster::clusterSize

Total size of non-external, non-singleton attribute for this cluster.

Definition at line 183 of file [af-types.h](#).

#### 7.42.2.5 EmberAfClusterMask EmberAfCluster::mask

Mask with additional functionality for cluster. See CLUSTER\_MASK macros.

Definition at line 188 of file [af-types.h](#).

#### 7.42.2.6 const EmberAfGenericClusterFunction\* EmberAfCluster::functions

An array into the cluster functions. The length of the array is determined by the function bits in mask. This may be null if this cluster has no functions.

Definition at line 195 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.43 EmberAfClusterCommand Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `EmberApsFrame * apsFrame`
- `EmberIncomingMessageType type`
- `EmberNodeId source`
- `uint8_t * buffer`
- `uint16_t buffLen`
- `bool clusterSpecific`
- `bool mfgSpecific`
- `uint16_t mfgCode`
- `uint8_t seqNum`
- `uint8_t commandId`
- `uint8_t payloadStartIndex`
- `uint8_t direction`
- `EmberAfInterpanHeader * interPanHeader`
- `uint8_t networkIndex`

### 7.43.1 Detailed Description

The EmberAFClusterCommand is a struct wrapper for all the data pertaining to a command which comes in over the air. This enables struct is used to encapsulate a command in a single place on the stack and pass a pointer to that location around during command processing.

Definition at line 393 of file [af-types.h](#).

### 7.43.2 Field Documentation

#### 7.43.2.1 EmberApsFrame\* EmberAfClusterCommand::apsFrame

Aps frame for the incoming message

Definition at line 397 of file [af-types.h](#).

#### 7.43.2.2 EmberIncomingMessageType EmberAfClusterCommand::type

Definition at line 398 of file [af-types.h](#).

#### 7.43.2.3 EmberNodeId EmberAfClusterCommand::source

Definition at line 399 of file [af-types.h](#).

#### 7.43.2.4 uint8\_t\* EmberAfClusterCommand::buffer

Definition at line 400 of file [af-types.h](#).

**7.43.2.5 uint16\_t EmberAfClusterCommand::bufLen**

Definition at line 401 of file [af-types.h](#).

**7.43.2.6 bool EmberAfClusterCommand::clusterSpecific**

Definition at line 402 of file [af-types.h](#).

**7.43.2.7 bool EmberAfClusterCommand::mfgSpecific**

Definition at line 403 of file [af-types.h](#).

**7.43.2.8 uint16\_t EmberAfClusterCommand::mfgCode**

Definition at line 404 of file [af-types.h](#).

**7.43.2.9 uint8\_t EmberAfClusterCommand::seqNum**

Definition at line 405 of file [af-types.h](#).

**7.43.2.10 uint8\_t EmberAfClusterCommand::commandId**

Definition at line 406 of file [af-types.h](#).

**7.43.2.11 uint8\_t EmberAfClusterCommand::payloadstartIndex**

Definition at line 407 of file [af-types.h](#).

**7.43.2.12 uint8\_t EmberAfClusterCommand::direction**

Definition at line 408 of file [af-types.h](#).

**7.43.2.13 EmberAfInterpanHeader\* EmberAfClusterCommand::interPanHeader**

Definition at line 409 of file [af-types.h](#).

**7.43.2.14 uint8\_t EmberAfClusterCommand::networkIndex**

Definition at line 410 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.44 EmberAfClusterInfo Struct Reference

```
#include <af-types.h>
```

## Data Fields

- [EmberAfClusterId clusterId](#)
- [bool server](#)

### 7.44.1 Detailed Description

Definition at line [1797](#) of file [af-types.h](#).

### 7.44.2 Field Documentation

#### 7.44.2.1 EmberAfClusterId EmberAfClusterInfo::clusterId

Definition at line [1798](#) of file [af-types.h](#).

#### 7.44.2.2 bool EmberAfClusterInfo::server

Definition at line [1799](#) of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.45 EmberAfClusterList Struct Reference

```
#include <af-types.h>
```

## Data Fields

- [uint8\\_t inClusterCount](#)
- [const uint16\\_t \\* inClusterList](#)
- [uint8\\_t outClusterCount](#)
- [const uint16\\_t \\* outClusterList](#)
- [EmberAfProfileId profileId](#)
- [uint16\\_t deviceId](#)
- [uint8\\_t endpoint](#)

### 7.45.1 Detailed Description

A list of clusters received during a service discovery attempt. This will be returned for a simple descriptor request.

Definition at line [664](#) of file [af-types.h](#).

### 7.45.2 Field Documentation

#### 7.45.2.1 uint8\_t EmberAfClusterList::inClusterCount

Definition at line [665](#) of file [af-types.h](#).

#### 7.45.2.2 const uint16\_t\* EmberAfClusterList::inClusterList

Definition at line [666](#) of file [af-types.h](#).

#### 7.45.2.3 uint8\_t EmberAfClusterList::outClusterCount

Definition at line [667](#) of file [af-types.h](#).

#### 7.45.2.4 const uint16\_t\* EmberAfClusterList::outClusterList

Definition at line [668](#) of file [af-types.h](#).

#### 7.45.2.5 EmberAfProfileId EmberAfClusterList::profileId

Definition at line [669](#) of file [af-types.h](#).

#### 7.45.2.6 uint16\_t EmberAfClusterList::deviceId

Definition at line [670](#) of file [af-types.h](#).

#### 7.45.2.7 uint8\_t EmberAfClusterList::endpoint

Definition at line [671](#) of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.46 EmberAfCommandMetadata Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint16\_t [clusterId](#)
- uint8\_t [commandId](#)
- uint8\_t [mask](#)

#### 7.46.1 Detailed Description

A data struct used to keep track of incoming and outgoing commands for command discovery.

Definition at line [1485](#) of file [af-types.h](#).

## 7.46.2 Field Documentation

### 7.46.2.1 `uint16_t EmberAfCommandMetadata::clusterId`

Definition at line 1486 of file [af-types.h](#).

### 7.46.2.2 `uint8_t EmberAfCommandMetadata::commandId`

Definition at line 1487 of file [af-types.h](#).

### 7.46.2.3 `uint8_t EmberAfCommandMetadata::mask`

Definition at line 1488 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.47 EmberAfDate Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t year`
- `uint8_t month`
- `uint8_t dayOfMonth`
- `uint8_t dayOfWeek`

### 7.47.1 Detailed Description

A data structure used to describe the ZCL Date data type.

Definition at line 1509 of file [af-types.h](#).

## 7.47.2 Field Documentation

### 7.47.2.1 `uint8_t EmberAfDate::year`

Definition at line 1510 of file [af-types.h](#).

### 7.47.2.2 `uint8_t EmberAfDate::month`

Definition at line 1511 of file [af-types.h](#).

### 7.47.2.3 `uint8_t EmberAfDate::dayOfMonth`

Definition at line 1512 of file [af-types.h](#).

#### 7.47.2.4 uint8\_t EmberAfDate::dayOfWeek

Definition at line 1513 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.48 EmberAfDefaultAttributeValue Union Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t * ptrToDefaultValue`
- `uint16_t defaultValue`

#### 7.48.1 Detailed Description

Type for default values.

Default value is either a value itself, if it is 2 bytes or less, or a pointer to the value itself, if attribute type is longer than 2 bytes.

Definition at line 77 of file [af-types.h](#).

#### 7.48.2 Field Documentation

##### 7.48.2.1 uint8\_t\* EmberAfDefaultAttributeValue::ptrToDefaultValue

Points to data if size is more than 2 bytes. If size is more than 2 bytes, and this value is NULL, then the default value is all zeroes.

Definition at line 83 of file [af-types.h](#).

##### 7.48.2.2 uint16\_t EmberAfDefaultAttributeValue::defaultValue

Actual default value if the attribute size is 2 bytes or less.

Definition at line 87 of file [af-types.h](#).

The documentation for this union was generated from the following file:

- [af-types.h](#)

## 7.49 EmberAfDefaultOrMinMaxAttributeValue Union Reference

```
#include <af-types.h>
```

## Data Fields

- `uint8_t * ptrToDefaultValue`
- `uint16_t defaultValue`
- `EmberAfAttributeMinMaxValue * ptrToMinMaxValue`

### 7.49.1 Detailed Description

Union describing the attribute default/min/max values.

Definition at line 114 of file `af-types.h`.

### 7.49.2 Field Documentation

#### 7.49.2.1 `uint8_t* EmberAfDefaultOrMinMaxAttributeValue::ptrToDefaultValue`

Points to data if size is more than 2 bytes. If size is more than 2 bytes, and this value is NULL, then the default value is all zeroes.

Definition at line 120 of file `af-types.h`.

#### 7.49.2.2 `uint16_t EmberAfDefaultOrMinMaxAttributeValue::defaultValue`

Actual default value if the attribute size is 2 bytes or less.

Definition at line 124 of file `af-types.h`.

#### 7.49.2.3 `EmberAfAttributeMinMaxValue* EmberAfDefaultOrMinMaxAttributeValue::ptrToMinMaxValue`

Points to the min max attribute value structure, if min/max is supported for this attribute.

Definition at line 129 of file `af-types.h`.

The documentation for this union was generated from the following file:

- `af-types.h`

## 7.50 EmberAfDefinedEndpoint Struct Reference

```
#include <af-types.h>
```

## Data Fields

- `uint8_t endpoint`
- `EmberAfProfileId profileId`
- `uint16_t deviceId`
- `uint8_t deviceVersion`
- `EmberAfEndpointType * endpointType`
- `uint8_t networkIndex`
- `EmberAfEndpointBitmask bitmask`

### 7.50.1 Detailed Description

Struct that maps actual endpoint type, onto a specific endpoint.

Definition at line 501 of file [af-types.h](#).

### 7.50.2 Field Documentation

#### 7.50.2.1 `uint8_t EmberAfDefinedEndpoint::endpoint`

Actual ZigBee endpoint number.

Definition at line 505 of file [af-types.h](#).

#### 7.50.2.2 `EmberAfProfileId EmberAfDefinedEndpoint::profileId`

Profile ID of the device on this endpoint.

Definition at line 509 of file [af-types.h](#).

#### 7.50.2.3 `uint16_t EmberAfDefinedEndpoint::deviceId`

Device ID of the device on this endpoint.

Definition at line 513 of file [af-types.h](#).

#### 7.50.2.4 `uint8_t EmberAfDefinedEndpoint::deviceVersion`

Version of the device.

Definition at line 517 of file [af-types.h](#).

#### 7.50.2.5 `EmberAfEndpointType* EmberAfDefinedEndpoint::endpointType`

Endpoint type for this endpoint.

Definition at line 521 of file [af-types.h](#).

#### 7.50.2.6 `uint8_t EmberAfDefinedEndpoint::networkIndex`

Network index for this endpoint.

Definition at line 525 of file [af-types.h](#).

#### 7.50.2.7 `EmberAfEndpointBitmask EmberAfDefinedEndpoint::bitmask`

Meta-data about the endpoint

Definition at line 529 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.51 EmberAfDeviceDatabaseIterator Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint16\_t [deviceIndex](#)

#### 7.51.1 Detailed Description

Definition at line [1848](#) of file [af-types.h](#).

#### 7.51.2 Field Documentation

##### 7.51.2.1 uint16\_t EmberAfDeviceDatabaseIterator::deviceIndex

Definition at line [1849](#) of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.52 EmberAfDeviceInfo Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberEUI64 eui64](#)
- [EmberAfEndpointInfoStruct endpoints](#) [[EMBER\\_AF\\_MAX\\_ENDPOINTS\\_PER\\_DEVICE](#)]
- [EmberAfDeviceDiscoveryStatus status](#)
- uint8\_t [discoveryFailures](#)
- uint8\_t [capabilities](#)
- uint8\_t [endpointCount](#)

#### 7.52.1 Detailed Description

A struct containing endpoint information about a device.

Definition at line [1839](#) of file [af-types.h](#).

#### 7.52.2 Field Documentation

##### 7.52.2.1 EmberEUI64 EmberAfDeviceInfo::eui64

Definition at line [1840](#) of file [af-types.h](#).

### **7.52.2.2 EmberAfEndpointInfoStruct EmberAfDeviceInfo::endpoints[EMBER\_AF\_MAX\_ENDPOINTS\_PER\_DEVICE]**

Definition at line 1841 of file [af-types.h](#).

### **7.52.2.3 EmberAfDeviceDiscoveryStatus EmberAfDeviceInfo::status**

Definition at line 1842 of file [af-types.h](#).

### **7.52.2.4 uint8\_t EmberAfDeviceInfo::discoveryFailures**

Definition at line 1843 of file [af-types.h](#).

### **7.52.2.5 uint8\_t EmberAfDeviceInfo::capabilities**

Definition at line 1844 of file [af-types.h](#).

### **7.52.2.6 uint8\_t EmberAfDeviceInfo::endpointCount**

Definition at line 1845 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## **7.53 EmberAfDeviceManagementAttributeRange Struct Reference**

```
#include <af-types.h>
```

### **Data Fields**

- `uint8_t startIndex`
- `uint8_t endIndex`

### **7.53.1 Detailed Description**

Definition at line 1729 of file [af-types.h](#).

### **7.53.2 Field Documentation**

#### **7.53.2.1 uint8\_t EmberAfDeviceManagementAttributeRange::startIndex**

Definition at line 1730 of file [af-types.h](#).

### 7.53.2.2 `uint8_t EmberAfDeviceManagementAttributeRange::endIndex`

Definition at line 1731 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.54 `EmberAfDeviceManagementAttributeTable` Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t attributeSetId`
- `EmberAfDeviceManagementAttributeRange attributeRange [7]`

### 7.54.1 Detailed Description

Definition at line 1740 of file [af-types.h](#).

### 7.54.2 Field Documentation

#### 7.54.2.1 `uint8_t EmberAfDeviceManagementAttributeTable::attributeSetId`

Definition at line 1741 of file [af-types.h](#).

#### 7.54.2.2 `EmberAfDeviceManagementAttributeRange EmberAfDeviceManagementAttributeTable-::attributeRange[7]`

Definition at line 1742 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.55 `EmberAfDeviceManagementCIN` Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t cin [EMBER_AF_DEVICE_MANAGEMENT_MAXIMUM_CIN_LENGTH+1]`
- `uint32_t implementationDateTime`
- `uint32_t issuerEventId`

### 7.55.1 Detailed Description

Definition at line 1675 of file [af-types.h](#).

### 7.55.2 Field Documentation

**7.55.2.1 `uint8_t EmberAfDeviceManagementCIN::cin[EMBER_AF_DEVICE_MANAGEMENT_MAXIMUM_CIN_LENGTH+1]`**

Definition at line 1676 of file [af-types.h](#).

**7.55.2.2 `uint32_t EmberAfDeviceManagementCIN::implementationDateTime`**

Definition at line 1677 of file [af-types.h](#).

**7.55.2.3 `uint32_t EmberAfDeviceManagementCIN::issuerEventId`**

Definition at line 1678 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.56 EmberAfDeviceManagementInfo Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberAfDeviceManagementTenancy tenancy](#)
- [EmberAfDeviceManagementSupplier supplier](#)
- [EmberAfDeviceManagementSupply supply](#)
- [EmberAfDeviceManagementSiteId siteId](#)
- [EmberAfDeviceManagementCIN cin](#)
- [EmberAfDeviceManagementSupplyStatusFlags supplyStatusFlags](#)
- [EmberAfDeviceManagementSupplyStatus supplyStatus](#)
- [EmberAfDeviceManagementPassword servicePassword](#)
- [EmberAfDeviceManagementPassword consumerPassword](#)
- [EmberAfDeviceManagementUncontrolledFlowThreshold threshold](#)

Definition at line 1725 of file [af-types.h](#).

### 7.56.2.15 `EmberAfDeviceManagementChangePendingFlags EmberAfDeviceManagementInfo::pendingUpdates`

Definition at line 1726 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.57 `EmberAfDeviceManagementPassword` Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t password [EMBER_AF_DEVICE_MANAGEMENT_MAXIMUM_PASSWORD_LENGTH+1]`
- `uint32_t implementationDateTime`
- `uint16_t durationInMinutes`
- `EmberAfDeviceManagementPasswordType passwordType`

### 7.57.1 Detailed Description

Definition at line 1703 of file [af-types.h](#).

### 7.57.2 Field Documentation

#### 7.57.2.1 `uint8_t EmberAfDeviceManagementPassword::password[EMBER_AF_DEVICE_MANAGEMENT_MAXIMUM_PASSWORD_LENGTH+1]`

Definition at line 1704 of file [af-types.h](#).

#### 7.57.2.2 `uint32_t EmberAfDeviceManagementPassword::implementationDateTime`

Definition at line 1705 of file [af-types.h](#).

### 7.57.2.3 `uint16_t EmberAfDeviceManagementPassword::durationInMinutes`

Definition at line 1706 of file [af-types.h](#).

### 7.57.2.4 `EmberAfDeviceManagementPasswordType EmberAfDeviceManagementPassword::passwordType`

Definition at line 1707 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.58 `EmberAfDeviceManagementSiteId` Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t siteId [EMBER_AF_DEVICE_MANAGEMENT_MAXIMUM_SITE_ID_LENGTH+1]`
- `uint32_t implementationDateTime`
- `uint32_t issuerEventId`

### 7.58.1 Detailed Description

Definition at line 1669 of file [af-types.h](#).

### 7.58.2 Field Documentation

#### 7.58.2.1 `uint8_t EmberAfDeviceManagementSiteId::siteId[EMBER_AF_DEVICE_MANAGEMENT_MAXIMUM_SITE_ID_LENGTH+1]`

Definition at line 1670 of file [af-types.h](#).

#### 7.58.2.2 `uint32_t EmberAfDeviceManagementSiteId::implementationDateTime`

Definition at line 1671 of file [af-types.h](#).

#### 7.58.2.3 `uint32_t EmberAfDeviceManagementSiteId::issuerEventId`

Definition at line 1672 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.59 EmberAfDeviceManagementSupplier Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint32\_t proposedProviderId
- uint32\_t implementationDateTime
- uint32\_t providerChangeControl
- uint8\_t proposedProviderName [EMBER\_AF\_DEVICE\_MANAGEMENT\_MAXIMUM\_PROPOSED\_PROVIDER\_NAME\_LENGTH+1]
- uint8\_t proposedProviderContactDetails [EMBER\_AF\_DEVICE\_MANAGEMENT\_MAXIMUM\_PROPOSED\_PROVIDER\_CONTACT\_DETAILS\_LENGTH+1]

#### 7.59.1 Detailed Description

Definition at line 1654 of file [af-types.h](#).

#### 7.59.2 Field Documentation

##### 7.59.2.1 uint32\_t EmberAfDeviceManagementSupplier::proposedProviderId

Definition at line 1655 of file [af-types.h](#).

##### 7.59.2.2 uint32\_t EmberAfDeviceManagementSupplier::implementationDateTime

Definition at line 1656 of file [af-types.h](#).

##### 7.59.2.3 uint32\_t EmberAfDeviceManagementSupplier::providerChangeControl

Definition at line 1657 of file [af-types.h](#).

##### 7.59.2.4 uint8\_t EmberAfDeviceManagementSupplier::proposedProviderName[EMBER\_AF\_DEVICE\_MANAGEMENT\_MAXIMUM\_PROPOSED\_PROVIDER\_NAME\_LENGTH+1]

Definition at line 1658 of file [af-types.h](#).

##### 7.59.2.5 uint8\_t EmberAfDeviceManagementSupplier::proposedProviderContactDetails[EMBER\_AF\_DEVICE\_MANAGEMENT\_MAXIMUM\_PROPOSED\_PROVIDER\_CONTACT\_DETAILS\_LENGTH+1]

Definition at line 1659 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.60 EmberAfDeviceManagementSupply Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint32\_t `requestDateTime`
- uint32\_t `implementationDateTime`
- uint8\_t `supplyStatus`
- uint8\_t `originatorIdSupplyControlBits`

### 7.60.1 Detailed Description

Definition at line 1662 of file `af-types.h`.

### 7.60.2 Field Documentation

#### 7.60.2.1 uint32\_t EmberAfDeviceManagementSupply::requestDateTime

Definition at line 1663 of file `af-types.h`.

#### 7.60.2.2 uint32\_t EmberAfDeviceManagementSupply::implementationDateTime

Definition at line 1664 of file `af-types.h`.

#### 7.60.2.3 uint8\_t EmberAfDeviceManagementSupply::supplyStatus

Definition at line 1665 of file `af-types.h`.

#### 7.60.2.4 uint8\_t EmberAfDeviceManagementSupply::originatorIdSupplyControlBits

Definition at line 1666 of file `af-types.h`.

The documentation for this struct was generated from the following file:

- `af-types.h`

## 7.61 EmberAfDeviceManagementSupplyStatus Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint32\_t `implementationDateTime`
- uint8\_t `supplyStatus`

### 7.61.1 Detailed Description

Definition at line 1698 of file [af-types.h](#).

### 7.61.2 Field Documentation

#### 7.61.2.1 uint32\_t EmberAfDeviceManagementSupplyStatus::implementationDateTime

Definition at line 1699 of file [af-types.h](#).

#### 7.61.2.2 uint8\_t EmberAfDeviceManagementSupplyStatus::supplyStatus

Definition at line 1700 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.62 EmberAfDeviceManagementSupplyStatusFlags Struct Reference

```
#include <af-types.h>
```

### Data Fields

- bool [supplyTamperState](#)
- bool [supplyDepletionState](#)
- bool [supplyUncontrolledFlowState](#)
- bool [loadLimitSupplyState](#)

### 7.62.1 Detailed Description

Definition at line 1681 of file [af-types.h](#).

### 7.62.2 Field Documentation

#### 7.62.2.1 bool EmberAfDeviceManagementSupplyStatusFlags::supplyTamperState

Definition at line 1682 of file [af-types.h](#).

#### 7.62.2.2 bool EmberAfDeviceManagementSupplyStatusFlags::supplyDepletionState

Definition at line 1683 of file [af-types.h](#).

#### 7.62.2.3 bool EmberAfDeviceManagementSupplyStatusFlags::supplyUncontrolledFlowState

Definition at line 1684 of file [af-types.h](#).

#### 7.62.2.4 bool EmberAfDeviceManagementSupplyStatusFlags::loadLimitSupplyState

Definition at line 1685 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.63 EmberAfDeviceManagementTenancy Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint32_t providerId`
- `uint32_t issuerEventId`
- `uint8_t tariffType`
- `uint32_t implementationDateTime`
- `uint32_t tenancy`

### 7.63.1 Detailed Description

Definition at line 1643 of file [af-types.h](#).

### 7.63.2 Field Documentation

#### 7.63.2.1 `uint32_t EmberAfDeviceManagementTenancy::providerId`

Definition at line 1645 of file [af-types.h](#).

#### 7.63.2.2 `uint32_t EmberAfDeviceManagementTenancy::issuerEventId`

Definition at line 1646 of file [af-types.h](#).

#### 7.63.2.3 `uint8_t EmberAfDeviceManagementTenancy::tariffType`

Definition at line 1647 of file [af-types.h](#).

#### 7.63.2.4 `uint32_t EmberAfDeviceManagementTenancy::implementationDateTime`

Definition at line 1650 of file [af-types.h](#).

#### 7.63.2.5 `uint32_t EmberAfDeviceManagementTenancy::tenancy`

Definition at line 1651 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- af-types.h

## 7.64 EmberAfDeviceManagementUncontrolledFlowThreshold Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint16\_t uncontrolledFlowThreshold
- uint16\_t multiplier
- uint16\_t divisor
- uint16\_t measurementPeriod
- uint8\_t unitOfMeasure
- uint8\_t stabilisationPeriod

#### 7.64.1 Detailed Description

Definition at line 1688 of file af-types.h.

#### 7.64.2 Field Documentation

##### 7.64.2.1 uint16\_t EmberAfDeviceManagementUncontrolledFlowThreshold::uncontrolledFlowThreshold

Definition at line 1689 of file af-types.h.

##### 7.64.2.2 uint16\_t EmberAfDeviceManagementUncontrolledFlowThreshold::multiplier

Definition at line 1690 of file af-types.h.

##### 7.64.2.3 uint16\_t EmberAfDeviceManagementUncontrolledFlowThreshold::divisor

Definition at line 1691 of file af-types.h.

##### 7.64.2.4 uint16\_t EmberAfDeviceManagementUncontrolledFlowThreshold::measurementPeriod

Definition at line 1692 of file af-types.h.

##### 7.64.2.5 uint8\_t EmberAfDeviceManagementUncontrolledFlowThreshold::unitOfMeasure

Definition at line 1693 of file af-types.h.

### 7.64.2.6 uint8\_t EmberAfDeviceManagementUncontrolledFlowThreshold::stabilisationPeriod

Definition at line 1694 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.65 EmberAfDoorLockScheduleEntry Struct Reference

```
#include <door-lock-server.h>
```

### Data Fields

- `uint16_t userID`
- `uint8_t daysMask`
- `uint8_t startHour`
- `uint8_t startMinute`
- `uint8_t stopHour`
- `uint8_t stopMinute`

### 7.65.1 Detailed Description

Definition at line 33 of file [door-lock-server.h](#).

### 7.65.2 Field Documentation

#### 7.65.2.1 uint16\_t EmberAfDoorLockScheduleEntry::userID

Definition at line 34 of file [door-lock-server.h](#).

#### 7.65.2.2 uint8\_t EmberAfDoorLockScheduleEntry::daysMask

Definition at line 35 of file [door-lock-server.h](#).

#### 7.65.2.3 uint8\_t EmberAfDoorLockScheduleEntry::startHour

Definition at line 36 of file [door-lock-server.h](#).

#### 7.65.2.4 uint8\_t EmberAfDoorLockScheduleEntry::startMinute

Definition at line 37 of file [door-lock-server.h](#).

#### 7.65.2.5 uint8\_t EmberAfDoorLockScheduleEntry::stopHour

Definition at line 38 of file [door-lock-server.h](#).

### 7.65.2.6 `uint8_t EmberAfDoorLockScheduleEntry::stopMinute`

Definition at line 39 of file [door-lock-server.h](#).

The documentation for this struct was generated from the following file:

- [door-lock-server.h](#)

## 7.66 EmberAfDoorLockUser Struct Reference

```
#include <door-lock-server.h>
```

### Data Fields

- [EmberAfDoorLockUserStatus status](#)
- [EmberAfDoorLockUserType type](#)
- [uint8\\_t pinLength](#)
- [uint8\\_t pin \[DOOR\\_LOCK\\_MAX\\_PIN\\_LENGTH\]](#)

### 7.66.1 Detailed Description

Definition at line 26 of file [door-lock-server.h](#).

### 7.66.2 Field Documentation

#### 7.66.2.1 EmberAfDoorLockUserStatus `EmberAfDoorLockUser::status`

Definition at line 27 of file [door-lock-server.h](#).

#### 7.66.2.2 EmberAfDoorLockUserType `EmberAfDoorLockUser::type`

Definition at line 28 of file [door-lock-server.h](#).

#### 7.66.2.3 `uint8_t EmberAfDoorLockUser::pinLength`

Definition at line 29 of file [door-lock-server.h](#).

#### 7.66.2.4 `uint8_t EmberAfDoorLockUser::pin[DOOR_LOCK_MAX_PIN_LENGTH]`

Definition at line 30 of file [door-lock-server.h](#).

The documentation for this struct was generated from the following file:

- [door-lock-server.h](#)

## 7.67 EmberAfEndpointInfoStruct Struct Reference

```
#include <af-types.h>
```

### Data Fields

- EmberAfClusterInfo clusters [EMBER\_AF\_MAX\_CLUSTERS\_PER\_ENDPOINT]
- EmberAfProfileId profileId
- uint16\_t deviceId
- uint8\_t endpoint
- uint8\_t clusterCount

#### 7.67.1 Detailed Description

A struct containing basic information about an endpoint.

Definition at line 1810 of file [af-types.h](#).

#### 7.67.2 Field Documentation

##### 7.67.2.1 EmberAfClusterInfo EmberAfEndpointInfoStruct::clusters[EMBER\_AF\_MAX\_CLUSTERS\_PER\_ENDPOINT]

Definition at line 1811 of file [af-types.h](#).

##### 7.67.2.2 EmberAfProfileId EmberAfEndpointInfoStruct::profileId

Definition at line 1812 of file [af-types.h](#).

##### 7.67.2.3 uint16\_t EmberAfEndpointInfoStruct::deviceId

Definition at line 1813 of file [af-types.h](#).

##### 7.67.2.4 uint8\_t EmberAfEndpointInfoStruct::endpoint

Definition at line 1814 of file [af-types.h](#).

##### 7.67.2.5 uint8\_t EmberAfEndpointInfoStruct::clusterCount

Definition at line 1815 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.68 EmberAfEndpointList Struct Reference

```
#include <af-types.h>
```

## Data Fields

- `uint8_t count`
- `const uint8_t * list`

### 7.68.1 Detailed Description

A list of endpoints received during a service discovery attempt. This will be returned for a match descriptor request and a active endpoint request.

Definition at line [655](#) of file `af-types.h`.

### 7.68.2 Field Documentation

#### 7.68.2.1 `uint8_t EmberAfEndpointList::count`

Definition at line [656](#) of file `af-types.h`.

#### 7.68.2.2 `const uint8_t* EmberAfEndpointList::list`

Definition at line [657](#) of file `af-types.h`.

The documentation for this struct was generated from the following file:

- `af-types.h`

## 7.69 EmberAfEndpointType Struct Reference

```
#include <af-types.h>
```

## Data Fields

- `EmberAfCluster * cluster`
- `uint8_t clusterCount`
- `uint16_t endpointSize`

### 7.69.1 Detailed Description

Endpoint type struct describes clusters that are on the endpoint.

Definition at line [416](#) of file `af-types.h`.

### 7.69.2 Field Documentation

#### 7.69.2.1 `EmberAfCluster* EmberAfEndpointType::cluster`

Pointer to the cluster structs, describing clusters on this endpoint type.

Definition at line [421](#) of file `af-types.h`.

### 7.69.2.2 `uint8_t EmberAfEndpointType::clusterCount`

Number of clusters in this endpoint type.

Definition at line 425 of file [af-types.h](#).

### 7.69.2.3 `uint16_t EmberAfEndpointType::endpointSize`

Size of all non-external, non-singlet attribute in this endpoint type.

Definition at line 429 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.70 EmberAfEvent Struct Reference

```
#include <events-server.h>
```

### Data Fields

- `uint16_t eventId`
- `uint32_t eventTime`
- `uint8_t eventData [EMBER_AF_PLUGIN_EVENTS_SERVER_EVENT_DATA_LENGTH+1]`

### 7.70.1 Detailed Description

Definition at line 8 of file [events-server.h](#).

### 7.70.2 Field Documentation

#### 7.70.2.1 `uint16_t EmberAfEvent::eventId`

Definition at line 9 of file [events-server.h](#).

#### 7.70.2.2 `uint32_t EmberAfEvent::eventTime`

Definition at line 10 of file [events-server.h](#).

#### 7.70.2.3 `uint8_t EmberAfEvent::eventData[EMBER_AF_PLUGIN_EVENTS_SERVER_EVENT_DATA_LENGTH+1]`

Definition at line 11 of file [events-server.h](#).

The documentation for this struct was generated from the following file:

- [events-server.h](#)

## 7.71 EmberAfEventContext Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint8\_t `endpoint`
- `EmberAfClusterId` `clusterId`
- bool `isClient`
- `EmberAfEventPollControl` `pollControl`
- `EmberAfEventSleepControl` `sleepControl`
- `EmberEventControl *` `eventControl`

### 7.71.1 Detailed Description

a structure used to keep track of cluster related events and their sleep control values. The cluster code will not know at runtime all of the events that it has access to in the event table. This structure is stored by the application framework in an event context table which along with helper functions allows the cluster code to schedule and deactivate its associated events.

Definition at line [785](#) of file `af-types.h`.

### 7.71.2 Field Documentation

#### 7.71.2.1 uint8\_t EmberAfEventContext::endpoint

The endpoint of the associated cluster event.

Definition at line [789](#) of file `af-types.h`.

#### 7.71.2.2 EmberAfClusterId EmberAfEventContext::clusterId

The cluster id of the associated cluster event.

Definition at line [793](#) of file `af-types.h`.

#### 7.71.2.3 bool EmberAfEventContext::isClient

The server/client identity of the associated cluster event.

Definition at line [797](#) of file `af-types.h`.

#### 7.71.2.4 EmberAfEventPollControl EmberAfEventContext::pollControl

A poll control value used to control the network polling behavior while the event is active.

Definition at line [802](#) of file `af-types.h`.

### 7.71.2.5 EmberAfEventSleepControl EmberAfEventContext::sleepControl

A sleep control value used to control the processor's sleep behavior while the event is active.

Definition at line 807 of file [af-types.h](#).

### 7.71.2.6 EmberEventControl\* EmberAfEventContext::eventControl

A pointer to the event control value which is stored in the event table and is used to actually schedule the event.

Definition at line 812 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.72 EmberAfFileDescriptorDispatchStruct Struct Reference

```
#include <file-descriptor-dispatch.h>
```

### Data Fields

- [EmberAfFileDescriptorReadyCallback](#) callback
- void \* [dataPassedToCallback](#)
- [EmberAfFileDescriptorOperation](#) operation
- int [fileDescriptor](#)

### 7.72.1 Detailed Description

Definition at line 10 of file [file-descriptor-dispatch.h](#).

### 7.72.2 Field Documentation

#### 7.72.2.1 EmberAfFileDescriptorReadyCallback EmberAfFileDescriptorDispatchStruct::callback

Definition at line 11 of file [file-descriptor-dispatch.h](#).

#### 7.72.2.2 void\* EmberAfFileDescriptorDispatchStruct::dataPassedToCallback

Definition at line 12 of file [file-descriptor-dispatch.h](#).

#### 7.72.2.3 EmberAfFileDescriptorOperation EmberAfFileDescriptorDispatchStruct::operation

Definition at line 13 of file [file-descriptor-dispatch.h](#).

#### 7.72.2.4 int EmberAfFileDescriptorDispatchStruct::fileDescriptor

Definition at line 14 of file [file-descriptor-dispatch.h](#).

The documentation for this struct was generated from the following file:

- [file-descriptor-dispatch.h](#)

### 7.73 EmberAfGBCSDeviceLogInfo Struct Reference

```
#include <gbcs-device-log.h>
```

#### Data Fields

- [EmberAfGBCSDeviceType deviceType](#)

#### 7.73.1 Detailed Description

Definition at line 26 of file [gbcs-device-log.h](#).

#### 7.73.2 Field Documentation

##### 7.73.2.1 EmberAfGBCSDeviceType EmberAfGBCSDeviceLogInfo::deviceType

Definition at line 27 of file [gbcs-device-log.h](#).

The documentation for this struct was generated from the following file:

- [gbcs-device-log.h](#)

### 7.74 EmberAfGbzMessengerCreatorResult Struct Reference

```
#include <gbz-message-controller.h>
```

#### Data Fields

- [uint8\\_t \\* payload](#)
- [uint16\\_t payloadLength](#)
- [bool freeRequired](#)

#### 7.74.1 Detailed Description

Definition at line 145 of file [gbz-message-controller.h](#).

## 7.74.2 Field Documentation

### 7.74.2.1 `uint8_t* EmberAfGbzMessagCreatorResult::payload`

Definition at line 146 of file [gbz-message-controller.h](#).

### 7.74.2.2 `uint16_t EmberAfGbzMessagCreatorResult::payloadLength`

Definition at line 147 of file [gbz-message-controller.h](#).

### 7.74.2.3 `bool EmberAfGbzMessagCreatorResult::freeRequired`

Definition at line 148 of file [gbz-message-controller.h](#).

The documentation for this struct was generated from the following file:

- [gbz-message-controller.h](#)

## 7.75 EmberAfGbzMessagCreatorState Struct Reference

```
#include <gbz-message-controller.h>
```

### Data Fields

- `bool allocateMemoryForResponses`
- `uint8_t * command`
- `uint16_t commandIndex`
- `uint16_t commandLength`
- `EmAfGbzUseCaseSpecificComponent * responses`
- `EmAfGbzUseCaseSpecificComponent * lastResponse`
- `EmAfGbzPayloadHeader * header`
- `uint8_t nextEncryptedComponentZclSequenceNumber`
- `uint8_t nextComponentZclSequenceNumber`
- `uint8_t nextAdditionalHeaderFrameCounter`
- `uint8_t * componentsCount`
- `uint8_t * lastExtHeaderControlField`
- `uint16_t messageCode`
- `EmberAfGbzMessagCreatorResult result`

## 7.75.1 Detailed Description

Definition at line 151 of file [gbz-message-controller.h](#).

## 7.75.2 Field Documentation

### 7.75.2.1 `bool EmberAfGbzMessagCreatorState::allocateMemoryForResponses`

Definition at line 152 of file [gbz-message-controller.h](#).

**7.75.2.2 uint8\_t\* EmberAfGbzMessageCreatorState::command**

Definition at line 155 of file [gbz-message-controller.h](#).

**7.75.2.3 uint16\_t EmberAfGbzMessageCreatorState::commandIndex**

Definition at line 156 of file [gbz-message-controller.h](#).

**7.75.2.4 uint16\_t EmberAfGbzMessageCreatorState::commandLength**

Definition at line 157 of file [gbz-message-controller.h](#).

**7.75.2.5 EmAfGbzUseCaseSpecificComponent\* EmberAfGbzMessageCreatorState::responses**

Definition at line 160 of file [gbz-message-controller.h](#).

**7.75.2.6 EmAfGbzUseCaseSpecificComponent\* EmberAfGbzMessageCreatorState::lastResponse**

Definition at line 161 of file [gbz-message-controller.h](#).

**7.75.2.7 EmAfGbzPayloadHeader\* EmberAfGbzMessageCreatorState::header**

Definition at line 162 of file [gbz-message-controller.h](#).

**7.75.2.8 uint8\_t EmberAfGbzMessageCreatorState::nextEncryptedComponentZclSequenceNumber**

Definition at line 165 of file [gbz-message-controller.h](#).

**7.75.2.9 uint8\_t EmberAfGbzMessageCreatorState::nextComponentZclSequenceNumber**

Definition at line 166 of file [gbz-message-controller.h](#).

**7.75.2.10 uint8\_t EmberAfGbzMessageCreatorState::nextAdditionalHeaderFrameCounter**

Definition at line 167 of file [gbz-message-controller.h](#).

**7.75.2.11 uint8\_t\* EmberAfGbzMessageCreatorState::componentsCount**

Definition at line 168 of file [gbz-message-controller.h](#).

**7.75.2.12 uint8\_t\* EmberAfGbzMessageCreatorState::lastExtHeaderControlField**

Definition at line 169 of file [gbz-message-controller.h](#).

### 7.75.2.13 `uint16_t EmberAfGbzMessagCreatorState::messageCode`

Definition at line 170 of file [gbz-message-controller.h](#).

### 7.75.2.14 `EmberAfGbzMessagCreatorResult EmberAfGbzMessagCreatorState::result`

Definition at line 173 of file [gbz-message-controller.h](#).

The documentation for this struct was generated from the following file:

- [gbz-message-controller.h](#)

## 7.76 `EmberAfGbzMessagData` Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `bool encryption`
- `uint8_t * plainPayload`
- `uint16_t plainPayloadLength`
- `uint8_t * encryptedPayload`
- `uint16_t encryptedPayloadLength`

### 7.76.1 Detailed Description

Definition at line 1745 of file [af-types.h](#).

### 7.76.2 Field Documentation

#### 7.76.2.1 `bool EmberAfGbzMessagData::encryption`

Definition at line 1746 of file [af-types.h](#).

#### 7.76.2.2 `uint8_t* EmberAfGbzMessagData::plainPayload`

Definition at line 1748 of file [af-types.h](#).

#### 7.76.2.3 `uint16_t EmberAfGbzMessagData::plainPayloadLength`

Definition at line 1749 of file [af-types.h](#).

#### 7.76.2.4 `uint8_t* EmberAfGbzMessagData::encryptedPayload`

Definition at line 1751 of file [af-types.h](#).

### 7.76.2.5 uint16\_t EmberAfGbzMessa gedata::encryptedPayloadLength

Definition at line 1752 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.77 EmberAfGbzMessa gedParserState Struct Reference

```
#include <gbz-message-controller.h>
```

### Data Fields

- bool [freeRequired](#)
- uint8\_t \* [command](#)
- [EmberAfGbzMessa gedType](#) [type](#)
- uint16\_t [alertCode](#)
- uint32\_t [alertTimestamp](#)
- uint16\_t [profileId](#)
- uint8\_t [nextComponentZclSequenceNumber](#)
- uint8\_t [componentsSize](#)
- uint8\_t [componentsParsed](#)
- uint16\_t [parseIndex](#)
- uint16\_t [length](#)
- uint16\_t [messageCode](#)

### 7.77.1 Detailed Description

Definition at line 111 of file [gbz-message-controller.h](#).

### 7.77.2 Field Documentation

#### 7.77.2.1 bool EmberAfGbzMessa gedParserState::[freeRequired](#)

Definition at line 112 of file [gbz-message-controller.h](#).

Definition at line 47 of file [green-power-server.h](#).

### 7.83.2.9 EmberAfGreenPowerServerGpdToZclCmdMappingPayloadSrc EmberAfGreenPowerServerGpdCommandTranslation::payloadSrc

Definition at line 48 of file [green-power-server.h](#).

### 7.83.2.10 uint8\_t EmberAfGreenPowerServerGpdCommandTranslation::zclPayloadDefault[EMBER\_AF\_\_ GREEN\_POWER\_SERVER\_TRANSLATION\_TABLE\_ENTRY\_ZCL\_PAYLOAD\_L- EN]

Definition at line 57 of file [green-power-server.h](#).

The documentation for this struct was generated from the following file:

- [green-power-server.h](#)

## 7.84 EmberAfImageBlockRequestCallbackStruct Struct Reference

```
#include <af-types.h>
```

### Data Fields

- const [EmberAfOtaImageId](#) \* id
- uint32\_t offset
- uint32\_t waitTimeMinutesResponse
- [EmberNodeId](#) source
- uint16\_t minBlockRequestPeriod
- uint8\_t maxDataSize
- uint8\_t clientEndpoint
- [EmberAfImageBlockRequestOptions](#) bitmask

### 7.84.1 Detailed Description

This is the data structure that is passed to the `emberAfImageBlockRequestCallback()` to let the application decide what to do.

Definition at line 1151 of file [af-types.h](#).

## 7.84.2 Field Documentation

**7.84.2.1 const EmberAfOtaImageId\* EmberAfImageBlockRequestCallbackStruct::id**

Definition at line 1152 of file [af-types.h](#).

**7.84.2.2 uint32\_t EmberAfImageBlockRequestCallbackStruct::offset**

Definition at line 1153 of file [af-types.h](#).

**7.84.2.3 uint32\_t EmberAfImageBlockRequestCallbackStruct::waitTimeMinutesResponse**

Definition at line 1154 of file [af-types.h](#).

**7.84.2.4 EmberNodeId EmberAfImageBlockRequestCallbackStruct::source**

Definition at line 1155 of file [af-types.h](#).

**7.84.2.5 uint16\_t EmberAfImageBlockRequestCallbackStruct::minBlockRequestPeriod**

This value is in milliseconds.

Definition at line 1157 of file [af-types.h](#).

**7.84.2.6 uint8\_t EmberAfImageBlockRequestCallbackStruct::maxDataSize**

Definition at line 1158 of file [af-types.h](#).

**7.84.2.7 uint8\_t EmberAfImageBlockRequestCallbackStruct::clientEndpoint**

Definition at line 1159 of file [af-types.h](#).

**7.84.2.8 EmberAfImageBlockRequestOptions EmberAfImageBlockRequestCallbackStruct::bitmask**

Definition at line 1160 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.85 EmberAflIncomingMessage Struct Reference

```
#include <af-types.h>
```

## Data Fields

- `EmberIncomingMessageType type`
- `EmberApsFrame * apsFrame`
- `uint8_t * message`
- `uint16_t msgLen`
- `uint16_t source`
- `uint8_t lastHopLqi`
- `int8_t lastHopRssi`
- `uint8_t bindingTableIndex`
- `uint8_t addressTableIndex`
- `uint8_t networkIndex`

### 7.85.1 Detailed Description

a struct containing the superset of values passed to both emberIncomingMessageHandler on the SOC and ezspIncomingMessageHandler on the host.

Definition at line [259](#) of file `af-types.h`.

### 7.85.2 Field Documentation

#### 7.85.2.1 `EmberIncomingMessageType EmberAfIncomingMessage::type`

The type of the incoming message

Definition at line [263](#) of file `af-types.h`.

#### 7.85.2.2 `EmberApsFrame* EmberAfIncomingMessage::apsFrame`

Aps frame for the incoming message

Definition at line [267](#) of file `af-types.h`.

#### 7.85.2.3 `uint8_t* EmberAfIncomingMessage::message`

The message copied into a flat buffer

Definition at line [271](#) of file `af-types.h`.

#### 7.85.2.4 `uint16_t EmberAfIncomingMessage::msgLen`

Length of the incoming message

Definition at line [275](#) of file `af-types.h`.

#### 7.85.2.5 `uint16_t EmberAfIncomingMessage::source`

Two byte node id of the sending node.

Definition at line [279](#) of file `af-types.h`.

**7.85.2.6 uint8\_t EmberAfIncomingMessage::lastHopLqi**

Link quality from the node that last relayed the message.

Definition at line 284 of file [af-types.h](#).

**7.85.2.7 int8\_t EmberAfIncomingMessage::lastHopRssi**

The energy level (in units of dBm) observed during the reception.

Definition at line 288 of file [af-types.h](#).

**7.85.2.8 uint8\_t EmberAfIncomingMessage::bindingTableIndex**

The index of a binding that matches the message or 0xFF if there is no matching binding.

Definition at line 293 of file [af-types.h](#).

**7.85.2.9 uint8\_t EmberAfIncomingMessage::addressTableIndex**

The index of the entry in the address table that matches the sender of the message or 0xFF if there is no matching entry.

Definition at line 299 of file [af-types.h](#).

**7.85.2.10 uint8\_t EmberAfIncomingMessage::networkIndex**

The index of the network on which this message was received.

Definition at line 303 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.86 EmberAfInterpanHeader Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberAfInterpanMessageType messageType](#)
- [EmberEUI64 longAddress](#)
- [EmberNodeId shortAddress](#)
- [EmberPanId panId](#)
- [EmberAfProfileId profileId](#)
- [EmberAfClusterId clusterId](#)
- [EmberMulticastId groupId](#)
- [EmberAfInterpanOptions options](#)

### 7.86.1 Detailed Description

Interpan header used for sending and receiving interpan messages.

Definition at line 334 of file [af-types.h](#).

### 7.86.2 Field Documentation

#### 7.86.2.1 EmberAfInterpanMessageType EmberAfInterpanHeader::messageType

Definition at line 335 of file [af-types.h](#).

#### 7.86.2.2 EmberEUI64 EmberAfInterpanHeader::longAddress

MAC addressing For outgoing messages this is the destination. For incoming messages it is the source, which always has a long address.

Definition at line 342 of file [af-types.h](#).

#### 7.86.2.3 EmberNodeId EmberAfInterpanHeader::shortAddress

Definition at line 343 of file [af-types.h](#).

#### 7.86.2.4 EmberPanId EmberAfInterpanHeader::panId

Definition at line 344 of file [af-types.h](#).

#### 7.86.2.5 EmberAfProfileId EmberAfInterpanHeader::profileId

APS data

Definition at line 349 of file [af-types.h](#).

#### 7.86.2.6 EmberAfClusterId EmberAfInterpanHeader::clusterId

Definition at line 350 of file [af-types.h](#).

#### 7.86.2.7 EmberMulticastId EmberAfInterpanHeader::groupId

The groupId is only used for EMBER\_AF\_INTERPAN\_MULTICAST

Definition at line 355 of file [af-types.h](#).

#### 7.86.2.8 EmberAfInterpanOptions EmberAfInterpanHeader::options

Definition at line 356 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.87 EmberAfJoiningDevice Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberNodeId](#) emberNodeId
- [uint32\\_t](#) timeStamp

#### 7.87.1 Detailed Description

Definition at line [1852](#) of file [af-types.h](#).

#### 7.87.2 Field Documentation

##### 7.87.2.1 EmberNodeId EmberAfJoiningDevice::emberNodeId

Definition at line [1853](#) of file [af-types.h](#).

##### 7.87.2.2 uint32\_t EmberAfJoiningDevice::timeStamp

Definition at line [1854](#) of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.88 EmberAfLinkKeyBackupData Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberEUI64](#) deviceId
- [EmberKeyData](#) key

#### 7.88.1 Detailed Description

A data struct for a link key backup.

Each entry notes the EUI64 of the device it is paired to and the key data. This key may be hashed and not the actual link key currently in use.

Definition at line [1436](#) of file [af-types.h](#).

## 7.88.2 Field Documentation

### 7.88.2.1 EmberEUI64 EmberAfLinkKeyBackupData::deviceId

Definition at line 1437 of file [af-types.h](#).

### 7.88.2.2 EmberKeyData EmberAfLinkKeyBackupData::key

Definition at line 1438 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.89 EmberAfLoadControlEvent Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint32\_t `eventId`
- uint8\_t `destinationEndpoint`
- uint16\_t `deviceClass`
- uint8\_t `utilityEnrollmentGroup`
- uint32\_t `startTime`
- uint16\_t `duration`
- uint8\_t `criticalityLevel`
- uint8\_t `coolingTempOffset`
- uint8\_t `heatingTempOffset`
- int16\_t `coolingTempSetPoint`
- int16\_t `heatingTempSetPoint`
- int8\_t `avgLoadPercentage`
- uint8\_t `dutyCycle`
- uint8\_t `eventControl`
- uint32\_t `startRand`
- uint32\_t `durationRand`
- uint8\_t `optionControl`

### 7.89.1 Detailed Description

Struct that describes a load control event.

This is used in the load control event callback and within the demand response load control cluster code.

Definition at line 556 of file [af-types.h](#).

## 7.89.2 Field Documentation

### 7.89.2.1 uint32\_t EmberAfLoadControlEvent::eventId

Definition at line 557 of file [af-types.h](#).

**7.89.2.2 uint8\_t EmberAfLoadControlEvent::destinationEndpoint**

Definition at line [567](#) of file [af-types.h](#).

**7.89.2.3 uint16\_t EmberAfLoadControlEvent::deviceClass**

Definition at line [568](#) of file [af-types.h](#).

**7.89.2.4 uint8\_t EmberAfLoadControlEvent::utilityEnrollmentGroup**

Definition at line [569](#) of file [af-types.h](#).

**7.89.2.5 uint32\_t EmberAfLoadControlEvent::startTime**

Start time in seconds

Definition at line [573](#) of file [af-types.h](#).

**7.89.2.6 uint16\_t EmberAfLoadControlEvent::duration**

Duration in minutes

Definition at line [577](#) of file [af-types.h](#).

**7.89.2.7 uint8\_t EmberAfLoadControlEvent::criticalityLevel**

Definition at line [578](#) of file [af-types.h](#).

**7.89.2.8 uint8\_t EmberAfLoadControlEvent::coolingTempOffset**

Definition at line [579](#) of file [af-types.h](#).

**7.89.2.9 uint8\_t EmberAfLoadControlEvent::heatingTempOffset**

Definition at line [580](#) of file [af-types.h](#).

**7.89.2.10 int16\_t EmberAfLoadControlEvent::coolingTempSetPoint**

Definition at line [581](#) of file [af-types.h](#).

**7.89.2.11 int16\_t EmberAfLoadControlEvent::heatingTempSetPoint**

Definition at line [582](#) of file [af-types.h](#).

**7.89.2.12 int8\_t EmberAfLoadControlEvent::avgLoadPercentage**

Definition at line [583](#) of file [af-types.h](#).

**7.89.2.13 uint8\_t EmberAfLoadControlEvent::dutyCycle**

Definition at line [584](#) of file [af-types.h](#).

**7.89.2.14 uint8\_t EmberAfLoadControlEvent::eventControl**

Definition at line [585](#) of file [af-types.h](#).

**7.89.2.15 uint32\_t EmberAfLoadControlEvent::startRand**

Definition at line [586](#) of file [af-types.h](#).

**7.89.2.16 uint32\_t EmberAfLoadControlEvent::durationRand**

Definition at line [587](#) of file [af-types.h](#).

**7.89.2.17 uint8\_t EmberAfLoadControlEvent::optionControl**

Definition at line [588](#) of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## **7.90 EmberAfManufacturerCodeEntry Struct Reference**

```
#include <af-types.h>
```

### **Data Fields**

- [uint16\\_t index](#)
- [uint16\\_t manufacturerCode](#)

### **7.90.1 Detailed Description**

A struct used to construct a table of manufacturer codes for manufacturer specific attributes and clusters.

Definition at line [249](#) of file [af-types.h](#).

### **7.90.2 Field Documentation**

#### **7.90.2.1 uint16\_t EmberAfManufacturerCodeEntry::index**

Definition at line [250](#) of file [af-types.h](#).

### 7.90.2.2 `uint16_t EmberAfManufacturerCodeEntry::manufacturerCode`

Definition at line 251 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.91 `EmberAfMessageStruct` Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `EmberAfMessageSentFunction` callback
- `EmberApsFrame * apsFrame`
- `uint8_t * message`
- `uint16_t indexOrDestination`
- `uint16_t messageLength`
- `EmberOutgoingMessageType type`
- `bool broadcast`

### 7.91.1 Detailed Description

The `EmberAfMessageStruct` is a struct wrapper that contains all the data about a low-level message to be sent (it may be ZCL or may be some other protocol).

Definition at line 1418 of file [af-types.h](#).

### 7.91.2 Field Documentation

#### 7.91.2.1 `EmberAfMessageSentFunction` `EmberAfMessageStruct::callback`

Definition at line 1419 of file [af-types.h](#).

#### 7.91.2.2 `EmberApsFrame*` `EmberAfMessageStruct::apsFrame`

Definition at line 1420 of file [af-types.h](#).

#### 7.91.2.3 `uint8_t*` `EmberAfMessageStruct::message`

Definition at line 1421 of file [af-types.h](#).

#### 7.91.2.4 `uint16_t` `EmberAfMessageStruct::indexOrDestination`

Definition at line 1422 of file [af-types.h](#).

### 7.91.2.5 `uint16_t EmberAfMessageStruct::messageLength`

Definition at line 1423 of file [af-types.h](#).

### 7.91.2.6 `EmberOutgoingMessageType EmberAfMessageStruct::type`

Definition at line 1424 of file [af-types.h](#).

### 7.91.2.7 `bool EmberAfMessageStruct::broadcast`

Definition at line 1425 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.92 EmberAfOtaHeader Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint16_t headerVersion`
- `uint16_t headerLength`
- `uint16_t fieldControl`
- `uint16_t manufacturerId`
- `uint16_t imageTypeId`
- `uint32_t firmwareVersion`
- `uint16_t zigbeeStackVersion`
- `uint8_t headerString [EMBER_AF_OTA_MAX_HEADER_STRING_LENGTH+1]`
- `uint32_t imageSize`
- `uint8_t securityCredentials`
- `uint8_t upgradeFileDestination [EUI64_SIZE]`
- `uint16_t minimumHardwareVersion`
- `uint16_t maximumHardwareVersion`

### 7.92.1 Detailed Description

This structure is an in-memory representation of the Over-the-air header data that resides on disk. It is not a byte-for-byte copy.

Definition at line 1201 of file [af-types.h](#).

### 7.92.2 Field Documentation

#### 7.92.2.1 `uint16_t EmberAfOtaHeader::headerVersion`

Definition at line 1203 of file [af-types.h](#).

**7.92.2.2 uint16\_t EmberAfOtaHeader::headerLength**

Definition at line [1204](#) of file [af-types.h](#).

**7.92.2.3 uint16\_t EmberAfOtaHeader::fieldControl**

Definition at line [1205](#) of file [af-types.h](#).

**7.92.2.4 uint16\_t EmberAfOtaHeader::manufacturerId**

Definition at line [1206](#) of file [af-types.h](#).

**7.92.2.5 uint16\_t EmberAfOtaHeader::imageTypeId**

Definition at line [1207](#) of file [af-types.h](#).

**7.92.2.6 uint32\_t EmberAfOtaHeader::firmwareVersion**

Definition at line [1208](#) of file [af-types.h](#).

**7.92.2.7 uint16\_t EmberAfOtaHeader::zigbeeStackVersion**

Definition at line [1209](#) of file [af-types.h](#).

**7.92.2.8 uint8\_t EmberAfOtaHeader::headerString[EMBER\_AF\_OTA\_MAX\_HEADER\_STRING\_LENGTH+1]**

The spec. does NOT require that the string be NULL terminated in the header stored on disk. Therefore we make sure we can support a 32-character string without a NULL terminator by adding +1 in the data structure.

Definition at line [1217](#) of file [af-types.h](#).

**7.92.2.9 uint32\_t EmberAfOtaHeader::imageSize**

When reading the header this will be the complete length of the file. When writing the header, this must be set to the length of the MFG image data portion including all tags.

Definition at line [1224](#) of file [af-types.h](#).

**7.92.2.10 uint8\_t EmberAfOtaHeader::securityCredentials**

The remaining four fields are optional. The field control should be checked to determine if their values are valid.

Definition at line [1230](#) of file [af-types.h](#).

### 7.92.2.11 `uint8_t EmberAfOtaHeader::upgradeFileDestination[EUI64_SIZE]`

Definition at line 1231 of file [af-types.h](#).

### 7.92.2.12 `uint16_t EmberAfOtaHeader::minimumHardwareVersion`

Definition at line 1232 of file [af-types.h](#).

### 7.92.2.13 `uint16_t EmberAfOtaHeader::maximumHardwareVersion`

Definition at line 1233 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.93 EmberAfOtalmagId Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint16_t manufacturerId`
- `uint16_t imageTypeId`
- `uint32_t firmwareVersion`
- `uint8_t deviceSpecificFileEui64 [EUI64_SIZE]`

### 7.93.1 Detailed Description

This is a unique identifier for referencing ZigBee Over-the-air upgrade images. It is used by the OTA plugins when passing around information about an upgrade file.

Definition at line 1122 of file [af-types.h](#).

### 7.93.2 Field Documentation

#### 7.93.2.1 `uint16_t EmberAfOtalmagId::manufacturerId`

Definition at line 1123 of file [af-types.h](#).

#### 7.93.2.2 `uint16_t EmberAfOtalmagId::imageTypeld`

Definition at line 1124 of file [af-types.h](#).

#### 7.93.2.3 `uint32_t EmberAfOtalmagId::firmwareVersion`

Definition at line 1125 of file [af-types.h](#).

#### 7.93.2.4 `uint8_t EmberAfOtaImageId::deviceSpecificFileEui64[EUI64_SIZE]`

This is only used for device specific files. It will be set to all 0's when the image does not have an upgrade destination field in it. Little endian format.

Definition at line 1133 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.94 EmberAfPluginEsiManagementEsiEntry Struct Reference

```
#include <esi-management.h>
```

### Data Fields

- [EmberEUI64 eui64](#)
- [EmberNodeId nodeId](#)
- [uint8\\_t networkIndex](#)
- [uint8\\_t endpoint](#)
- [uint8\\_t age](#)

### 7.94.1 Detailed Description

Definition at line 22 of file [esi-management.h](#).

### 7.94.2 Field Documentation

#### 7.94.2.1 `EmberEUI64 EmberAfPluginEsiManagementEsiEntry::eui64`

Definition at line 23 of file [esi-management.h](#).

#### 7.94.2.2 `EmberNodeId EmberAfPluginEsiManagementEsiEntry::nodeId`

Definition at line 24 of file [esi-management.h](#).

#### 7.94.2.3 `uint8_t EmberAfPluginEsiManagementEsiEntry::networkIndex`

Definition at line 25 of file [esi-management.h](#).

#### 7.94.2.4 `uint8_t EmberAfPluginEsiManagementEsiEntry::endpoint`

Definition at line 26 of file [esi-management.h](#).

### 7.94.2.5 uint8\_t EmberAfPluginEsiManagementEsiEntry::age

Definition at line 27 of file [esi-management.h](#).

The documentation for this struct was generated from the following file:

- [esi-management.h](#)

## 7.95 EmberAfPluginMessagingClientMessage Struct Reference

```
#include <af-types.h>
```

### Data Fields

- bool valid
- bool active
- [EmberAfPluginEsiManagementBitmask](#) esiBitmask
- uint8\_t clientEndpoint
- uint32\_t messageId
- uint8\_t messageControl
- uint32\_t startTime
- uint32\_t endTime
- uint16\_t durationInMinutes
- uint8\_t message [EMBER\_AF\_PLUGIN\_MESSAGING\_CLIENT\_MESSAGE\_SIZE+1]

### 7.95.1 Detailed Description

Definition at line 940 of file [af-types.h](#).

### 7.95.2 Field Documentation

#### 7.95.2.1 bool EmberAfPluginMessagingClientMessage::valid

Definition at line 941 of file [af-types.h](#).

#### 7.95.2.2 bool EmberAfPluginMessagingClientMessage::active

Definition at line 942 of file [af-types.h](#).

#### 7.95.2.3 EmberAfPluginEsiManagementBitmask EmberAfPluginMessagingClientMessage::esiBitmask

Definition at line 943 of file [af-types.h](#).

#### 7.95.2.4 uint8\_t EmberAfPluginMessagingClientMessage::clientEndpoint

Definition at line 944 of file [af-types.h](#).

### 7.95.2.5 `uint32_t EmberAfPluginMessagingClientMessage::messageId`

Definition at line 945 of file [af-types.h](#).

### 7.95.2.6 `uint8_t EmberAfPluginMessagingClientMessage::messageControl`

Definition at line 946 of file [af-types.h](#).

### 7.95.2.7 `uint32_t EmberAfPluginMessagingClientMessage::startTime`

Definition at line 947 of file [af-types.h](#).

### 7.95.2.8 `uint32_t EmberAfPluginMessagingClientMessage::endTime`

Definition at line 948 of file [af-types.h](#).

### 7.95.2.9 `uint16_t EmberAfPluginMessagingClientMessage::durationInMinutes`

Definition at line 949 of file [af-types.h](#).

### 7.95.2.10 `uint8_t EmberAfPluginMessagingClientMessage::message[EMBER_AF_PLUGIN_MESSAGING_CLIENT_MESSAGE_SIZE+1]`

Definition at line 950 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.96 EmberAfPluginMessagingServerMessage Struct Reference

```
#include <messaging-server.h>
```

### Data Fields

- `uint32_t messageId`
- `uint8_t messageControl`
- `uint32_t startTime`
- `uint16_t durationInMinutes`
- `uint8_t message [EMBER_AF_PLUGIN_MESSAGING_SERVER_MESSAGE_SIZE+1]`
- `uint8_t extendedMessageControl`

### 7.96.1 Detailed Description

The message and metadata used by the Messaging server plugin.

The application can get and set the message used by the plugin by calling [emberAfPluginMessagingServerGetMessage](#) and [emberAfPluginMessagingServerSetMessage](#).

Definition at line 28 of file [messaging-server.h](#).

## 7.96.2 Field Documentation

### 7.96.2.1 `uint32_t EmberAfPluginMessagingServerMessage::messageId`

The unique unsigned 32-bit number identifier for this message.

Definition at line 30 of file [messaging-server.h](#).

### 7.96.2.2 `uint8_t EmberAfPluginMessagingServerMessage::messageControl`

The control bitmask for this message.

Definition at line 32 of file [messaging-server.h](#).

### 7.96.2.3 `uint32_t EmberAfPluginMessagingServerMessage::startTime`

The time at which the message becomes valid.

Definition at line 34 of file [messaging-server.h](#).

### 7.96.2.4 `uint16_t EmberAfPluginMessagingServerMessage::durationInMinutes`

The amount of time in minutes after the start time during which the message is displayed.

Definition at line 38 of file [messaging-server.h](#).

### 7.96.2.5 `uint8_t EmberAfPluginMessagingServerMessage::message[EMBER_AF_PLUGIN_MESSAGING_SERVER_MESSAGE_SIZE+1]`

The string containing the message to be delivered.

Definition at line 40 of file [messaging-server.h](#).

### 7.96.2.6 `uint8_t EmberAfPluginMessagingServerMessage::extendedMessageControl`

additional control and status information for a given message

Definition at line 42 of file [messaging-server.h](#).

The documentation for this struct was generated from the following file:

- [messaging-server.h](#)

## 7.97 EmberAfPluginPriceClientPrice Struct Reference

```
#include <af-types.h>
```

## Data Fields

- bool `valid`
- bool `active`
- uint8\_t `clientEndpoint`
- uint32\_t `providerId`
- uint8\_t `rateLabel` [ZCL\_PRICE\_CLUSTER\_MAXIMUM\_RATE\_LABEL\_LENGTH+1]
- uint32\_t `issuerEventId`
- uint32\_t `currentTime`
- uint8\_t `unitOfMeasure`
- uint16\_t `currency`
- uint8\_t `priceTrailingDigitAndPriceTier`
- uint8\_t `numberOfPriceTiersAndRegisterTier`
- uint32\_t `startTime`
- uint32\_t `endTime`
- uint16\_t `durationInMinutes`
- uint32\_t `price`
- uint8\_t `priceRatio`
- uint32\_t `generationPrice`
- uint8\_t `generationPriceRatio`
- uint32\_t `alternateCostDelivered`
- uint8\_t `alternateCostUnit`
- uint8\_t `alternateCostTrailingDigit`
- uint8\_t `numberOfBlockThresholds`
- uint8\_t `priceControl`

### 7.97.1 Detailed Description

Definition at line 954 of file `af-types.h`.

### 7.97.2 Field Documentation

#### 7.97.2.1 bool EmberAfPluginPriceClientPrice::valid

Definition at line 955 of file `af-types.h`.

#### 7.97.2.2 bool EmberAfPluginPriceClientPrice::active

Definition at line 956 of file `af-types.h`.

#### 7.97.2.3 uint8\_t EmberAfPluginPriceClientPrice::clientEndpoint

Definition at line 957 of file `af-types.h`.

#### 7.97.2.4 uint32\_t EmberAfPluginPriceClientPrice::providerId

Definition at line 958 of file `af-types.h`.

**7.97.2.5 uint8\_t EmberAfPluginPriceClientPrice::rateLabel[ZCL\_PRICE\_CLUSTER\_MAXIMUM\_RATE\_LABEL\_LENGTH+1]**

Definition at line [959](#) of file [af-types.h](#).

**7.97.2.6 uint32\_t EmberAfPluginPriceClientPrice::issuerEventId**

Definition at line [960](#) of file [af-types.h](#).

**7.97.2.7 uint32\_t EmberAfPluginPriceClientPrice::currentTime**

Definition at line [961](#) of file [af-types.h](#).

**7.97.2.8 uint8\_t EmberAfPluginPriceClientPrice::unitOfMeasure**

Definition at line [962](#) of file [af-types.h](#).

**7.97.2.9 uint16\_t EmberAfPluginPriceClientPrice::currency**

Definition at line [963](#) of file [af-types.h](#).

**7.97.2.10 uint8\_t EmberAfPluginPriceClientPrice::priceTrailingDigitAndPriceTier**

Definition at line [964](#) of file [af-types.h](#).

**7.97.2.11 uint8\_t EmberAfPluginPriceClientPrice::numberOfPriceTiersAndRegisterTier**

Definition at line [965](#) of file [af-types.h](#).

**7.97.2.12 uint32\_t EmberAfPluginPriceClientPrice::startTime**

Definition at line [966](#) of file [af-types.h](#).

**7.97.2.13 uint32\_t EmberAfPluginPriceClientPrice::endTime**

Definition at line [967](#) of file [af-types.h](#).

**7.97.2.14 uint16\_t EmberAfPluginPriceClientPrice::durationInMinutes**

Definition at line [968](#) of file [af-types.h](#).

**7.97.2.15 uint32\_t EmberAfPluginPriceClientPrice::price**

Definition at line [969](#) of file [af-types.h](#).

**7.97.2.16 uint8\_t EmberAfPluginPriceClientPrice::priceRatio**

Definition at line [970](#) of file [af-types.h](#).

**7.97.2.17 uint32\_t EmberAfPluginPriceClientPrice::generationPrice**

Definition at line [971](#) of file [af-types.h](#).

**7.97.2.18 uint8\_t EmberAfPluginPriceClientPrice::generationPriceRatio**

Definition at line [972](#) of file [af-types.h](#).

**7.97.2.19 uint32\_t EmberAfPluginPriceClientPrice::alternateCostDelivered**

Definition at line [973](#) of file [af-types.h](#).

**7.97.2.20 uint8\_t EmberAfPluginPriceClientPrice::alternateCostUnit**

Definition at line [974](#) of file [af-types.h](#).

Definition at line [976](#) of file [af-types.h](#).

**7.97.2.23 uint8\_t EmberAfPluginPriceClientPrice::priceControl**

Definition at line [977](#) of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## **7.98 EmberAfPluginReportingEntry Struct Reference**

```
#include <af-types.h>
```

### **Data Fields**

- [EmberAfReportingDirection direction](#)
- [uint8\\_t endpoint](#)
- [EmberAfClusterId clusterId](#)
- [EmberAfAttributeId attributeId](#)

```

• uint8_t mask
• uint16_t manufacturerCode
• union {
    struct {
        uint16_t minInterval
        uint16_t maxInterval
        uint32_t reportableChange
    } reported
    struct {
        EmberNodeId source
        uint8_t endpoint
        uint16_t timeout
    } received
} data

```

### 7.98.1 Detailed Description

A structure used to store reporting configurations. If endpoint field is [EMBER\\_AF\\_PLUGIN\\_REPORTING\\_UNUSED\\_ENDPOINT\\_ID](#), the entry is unused.

Definition at line [1009](#) of file [af-types.h](#).

### 7.98.2 Field Documentation

#### 7.98.2.1 EmberAfReportingDirection EmberAfPluginReportingEntry::direction

`EMBER_ZCL_REPORTING_DIRECTION_REPORTED` for reports sent from the local device or `EMBER_ZCL_REPORTING_DIRECTION_RECEIVED` for reports received from a remote device.

Definition at line [1014](#) of file [af-types.h](#).

#### 7.98.2.2 uint8\_t EmberAfPluginReportingEntry::endpoint

The local endpoint from which the attribute is reported or to which the report is received. If [EMBER\\_AF\\_PLUGIN\\_REPORTING\\_UNUSED\\_ENDPOINT\\_ID](#), the entry is unused.

The remote endpoint from which the attribute is reported.

Definition at line [1019](#) of file [af-types.h](#).

#### 7.98.2.3 EmberAfClusterId EmberAfPluginReportingEntry::clusterId

The cluster where the attribute is located.

Definition at line [1021](#) of file [af-types.h](#).

#### 7.98.2.4 EmberAfAttributeId EmberAfPluginReportingEntry::attributeId

The id of the attribute being reported or received.

Definition at line [1023](#) of file [af-types.h](#).

#### **7.98.2.5 uint8\_t EmberAfPluginReportingEntry::mask**

CLUSTER\_MASK\_SERVER for server-side attributes or CLUSTER\_MASK\_CLIENT for client-side attributes.

Definition at line 1027 of file [af-types.h](#).

#### **7.98.2.6 uint16\_t EmberAfPluginReportingEntry::manufacturerCode**

Manufacturer code associated with the cluster and/or attribute. If the cluster id is inside the manufacturer-specific range, this value indicates the manufacturer code for the cluster. Otherwise, if this value is non-zero and the cluster id is a standard ZCL cluster, it indicates the manufacturer code for attribute.

Definition at line 1034 of file [af-types.h](#).

#### **7.98.2.7 uint16\_t EmberAfPluginReportingEntry::minInterval**

The minimum reporting interval, measured in seconds.

Definition at line 1038 of file [af-types.h](#).

#### **7.98.2.8 uint16\_t EmberAfPluginReportingEntry::maxInterval**

The maximum reporting interval, measured in seconds.

Definition at line 1040 of file [af-types.h](#).

#### **7.98.2.9 uint32\_t EmberAfPluginReportingEntry::reportableChange**

The minimum change to the attribute that will result in a report being sent.

Definition at line 1044 of file [af-types.h](#).

#### **7.98.2.10 struct { ... } EmberAfPluginReportingEntry::reported**

#### **7.98.2.11 EmberNodeId EmberAfPluginReportingEntry::source**

The node id of the source of the received reports.

Definition at line 1048 of file [af-types.h](#).

#### **7.98.2.12 uint16\_t EmberAfPluginReportingEntry::timeout**

The maximum expected time between reports, measured in seconds.

Definition at line 1052 of file [af-types.h](#).

#### **7.98.2.13 struct { ... } EmberAfPluginReportingEntry::received**

#### **7.98.2.14 union { ... } EmberAfPluginReportingEntry::data**

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.99 EmberAfPluginScanDispatchScanData Struct Reference

```
#include <scan-dispatch.h>
```

### Data Fields

- [EmberNetworkScanType](#) `scanType`
- [uint32\\_t](#) `channelMask`
- [uint8\\_t](#) `duration`
- [EmberAfPluginScanDispatchScanResultsHandler](#) `handler`

### 7.99.1 Detailed Description

A structure containing data for scheduling a scan.

Definition at line [127](#) of file [scan-dispatch.h](#).

### 7.99.2 Field Documentation

#### 7.99.2.1 [EmberNetworkScanType](#) `EmberAfPluginScanDispatchScanData::scanType`

The 802.15.4 scan type to be scheduled.

Definition at line [129](#) of file [scan-dispatch.h](#).

#### 7.99.2.2 [uint32\\_t](#) `EmberAfPluginScanDispatchScanData::channelMask`

The channel mask to be scanned.

Definition at line [131](#) of file [scan-dispatch.h](#).

#### 7.99.2.3 [uint8\\_t](#) `EmberAfPluginScanDispatchScanData::duration`

The duration of the scan period, as an exponent.

Definition at line [133](#) of file [scan-dispatch.h](#).

#### 7.99.2.4 [EmberAfPluginScanDispatchScanResultsHandler](#) `EmberAfPluginScanDispatchScanData::handler`

The handler to be called with the scan results.

Definition at line [135](#) of file [scan-dispatch.h](#).

The documentation for this struct was generated from the following file:

- [scan-dispatch.h](#)

## 7.100 EmberAfPluginScanDispatchScanResults Struct Reference

```
#include <scan-dispatch.h>
```

### Data Fields

- union {
 EmberStatus status
 int8\_t rssi
 };
- union {
 uint8\_t channel
 uint8\_t lqi
 };
- EmberZigbeeNetwork \* network
- uint16\_t mask

#### 7.100.1 Detailed Description

Information regarding scan results.

Definition at line 32 of file [scan-dispatch.h](#).

#### 7.100.2 Field Documentation

##### 7.100.2.1 EmberStatus EmberAfPluginScanDispatchScanResults::status

Definition at line 35 of file [scan-dispatch.h](#).

##### 7.100.2.2 int8\_t EmberAfPluginScanDispatchScanResults::rssi

Definition at line 36 of file [scan-dispatch.h](#).

##### 7.100.2.3 union { ... }

##### 7.100.2.4 uint8\_t EmberAfPluginScanDispatchScanResults::channel

Definition at line 41 of file [scan-dispatch.h](#).

##### 7.100.2.5 uint8\_t EmberAfPluginScanDispatchScanResults::lqi

Definition at line 42 of file [scan-dispatch.h](#).

### 7.100.2.6 union { ... }

#### 7.100.2.7 EmberZigbeeNetwork\* EmberAfPluginScanDispatchScanResults::network

The ZigBee network found in the scan.

Definition at line 46 of file [scan-dispatch.h](#).

#### 7.100.2.8 uint16\_t EmberAfPluginScanDispatchScanResults::mask

A mask containing information about the scan.

Definition at line 49 of file [scan-dispatch.h](#).

The documentation for this struct was generated from the following file:

- [scan-dispatch.h](#)

## 7.101 EmberAfPrepaymentSnapshotPayload Struct Reference

```
#include <prepayment-snapshot-storage.h>
```

### Data Fields

- `uint32_t snapshotId`
- `uint32_t snapshotCauseBitmap`
- `uint32_t snapshotTime`
- `uint8_t snapshotType`
- `int32_t accumulatedDebt`
- `uint32_t type1DebtRemaining`
- `uint32_t type2DebtRemaining`
- `uint32_t type3DebtRemaining`
- `int32_t emergencyCreditRemaining`
- `int32_t creditRemaining`

### 7.101.1 Detailed Description

Definition at line 39 of file [prepayment-snapshot-storage.h](#).

### 7.101.2 Field Documentation

#### 7.101.2.1 uint32\_t EmberAfPrepaymentSnapshotPayload::snapshotId

Definition at line 40 of file [prepayment-snapshot-storage.h](#).

#### 7.101.2.2 uint32\_t EmberAfPrepaymentSnapshotPayload::snapshotCauseBitmap

Definition at line 41 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.3 uint32\_t EmberAfPrepaymentSnapshotPayload::snapshotTime

Definition at line 42 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.4 uint8\_t EmberAfPrepaymentSnapshotPayload::snapshotType

Definition at line 43 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.5 int32\_t EmberAfPrepaymentSnapshotPayload::accumulatedDebt

Definition at line 47 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.6 uint32\_t EmberAfPrepaymentSnapshotPayload::type1DebtRemaining

Definition at line 48 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.7 uint32\_t EmberAfPrepaymentSnapshotPayload::type2DebtRemaining

Definition at line 49 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.8 uint32\_t EmberAfPrepaymentSnapshotPayload::type3DebtRemaining

Definition at line 50 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.9 int32\_t EmberAfPrepaymentSnapshotPayload::emergencyCreditRemaining

Definition at line 51 of file [prepayment-snapshot-storage.h](#).

### 7.101.2.10 int32\_t EmberAfPrepaymentSnapshotPayload::creditRemaining

Definition at line 52 of file [prepayment-snapshot-storage.h](#).

The documentation for this struct was generated from the following file:

- [prepayment-snapshot-storage.h](#)

## 7.102 EmberAfPrepaymentSnapshotSchedulePayload Struct Reference

```
#include <prepayment-snapshot-storage.h>
```

### Data Fields

- uint32\_t [snapshotScheduleId](#)
- uint32\_t [snapshotStartTime](#)
- uint32\_t [snapshotCauseBitmap](#)
- EmberNodeId [requestingId](#)

- `uint8_t srcEndpoint`
- `uint8_t dstEndpoint`
- `uint8_t snapshotPayloadType`

### 7.102.1 Detailed Description

Definition at line [57](#) of file `prepayment-snapshot-storage.h`.

### 7.102.2 Field Documentation

#### 7.102.2.1 `uint32_t EmberAfPrepaymentSnapshotSchedulePayload::snapshotScheduleId`

Definition at line [59](#) of file `prepayment-snapshot-storage.h`.

#### 7.102.2.2 `uint32_t EmberAfPrepaymentSnapshotSchedulePayload::snapshotStartTime`

Definition at line [60](#) of file `prepayment-snapshot-storage.h`.

#### 7.102.2.3 `uint32_t EmberAfPrepaymentSnapshotSchedulePayload::snapshotCauseBitmap`

Definition at line [61](#) of file `prepayment-snapshot-storage.h`.

#### 7.102.2.4 `EmberNodeId EmberAfPrepaymentSnapshotSchedulePayload::requestingId`

Definition at line [62](#) of file `prepayment-snapshot-storage.h`.

#### 7.102.2.5 `uint8_t EmberAfPrepaymentSnapshotSchedulePayload::srcEndpoint`

Definition at line [63](#) of file `prepayment-snapshot-storage.h`.

Definition at line [64](#) of file `prepayment-snapshot-storage.h`.

#### 7.102.2.7 `uint8_t EmberAfPrepaymentSnapshotSchedulePayload::snapshotPayloadType`

Definition at line [65](#) of file `prepayment-snapshot-storage.h`.

The documentation for this struct was generated from the following file:

- `prepayment-snapshot-storage.h`

## 7.103 EmberAfPriceBillingPeriod Struct Reference

```
#include <price-server.h>
```

## Data Fields

- `uint32_t providerId`
- `uint32_t rawBillingPeriodStartTime`
- `uint32_t billingPeriodDuration`
- `uint8_t billingPeriodDurationType`
- `uint8_t tariffType`

### 7.103.1 Detailed Description

Definition at line 117 of file `price-server.h`.

### 7.103.2 Field Documentation

#### 7.103.2.1 `uint32_t EmberAfPriceBillingPeriod::providerId`

Definition at line 118 of file `price-server.h`.

#### 7.103.2.2 `uint32_t EmberAfPriceBillingPeriod::rawBillingPeriodStartTime`

Definition at line 119 of file `price-server.h`.

#### 7.103.2.3 `uint32_t EmberAfPriceBillingPeriod::billingPeriodDuration`

Definition at line 120 of file `price-server.h`.

#### 7.103.2.4 `uint8_t EmberAfPriceBillingPeriod::billingPeriodDurationType`

Definition at line 121 of file `price-server.h`.

#### 7.103.2.5 `uint8_t EmberAfPriceBillingPeriod::tariffType`

Definition at line 122 of file `price-server.h`.

The documentation for this struct was generated from the following file:

- `price-server.h`

## 7.104 EmberAfPriceBillingPeriodTable Struct Reference

```
#include <price-server.h>
```

## Data Fields

- `EmberAfPriceCommonInfo commonInfos [EMBER_AF_PRICE_CLUSTER_SERVER_ENDPOINT_COUNT][EMBER_AF_PLUGIN_PRICE_SERVER_BILLING_PERIOD_TABLE_SIZE]`

Definition at line 201 of file [price-server.h](#).

### 7.147.2 Field Documentation

#### 7.147.2.1 EmberAfPriceTierLabelValue EmberAfPriceTierLabelTable::entry[EMBER\_AF\_PRICE\_CLUSTER\_SERVER\_ENDPOINT\_COUNT][EMBER\_AF\_PLUGIN\_PRICE\_SERVER\_TIER\_LABELS\_TABLE\_SIZE]

Definition at line 202 of file [price-server.h](#).

The documentation for this struct was generated from the following file:

- [price-server.h](#)

## 7.148 EmberAfPriceTierLabelValue Struct Reference

```
#include <price-server.h>
```

### Data Fields

- `uint32_t providerId`
- `uint32_t issuerEventId`
- `uint32_t issuerTariffId`
- `uint8_t valid`
- `uint8_t numberOfWorkers`
- `uint8_t tierIds [EMBER_AF_PLUGIN_PRICE_SERVER_MAX_TIERS_PER_TARIFF]`
- `uint8_t tierLabels [EMBER_AF_PLUGIN_PRICE_SERVER_MAX_TIERS_PER_TARIFF][TIER_LABEL_SIZE+1]`

### 7.148.1 Detailed Description

Definition at line 191 of file [price-server.h](#).

### 7.148.2 Field Documentation

#### 7.148.2.1 `uint32_t EmberAfPriceTierLabelValue::providerId`

Definition at line 192 of file [price-server.h](#).

#### 7.148.2.2 `uint32_t EmberAfPriceTierLabelValue::issuerEventId`

Definition at line 193 of file [price-server.h](#).

#### 7.148.2.3 `uint32_t EmberAfPriceTierLabelValue::issuerTariffId`

Definition at line 194 of file [price-server.h](#).

#### 7.148.2.4 `uint8_t EmberAfPriceTierLabelValue::valid`

Definition at line 195 of file [price-server.h](#).

#### 7.148.2.5 `uint8_t EmberAfPriceTierLabelValue::numberOfTiers`

Definition at line 196 of file [price-server.h](#).

#### 7.148.2.6 `uint8_t EmberAfPriceTierLabelValue::tierIds[EMBER_AF_PLUGIN_PRICE_SERVER_MAX_TIERS_PER_TARIFF]`

Definition at line 197 of file [price-server.h](#).

#### 7.148.2.7 `uint8_t EmberAfPriceTierLabelValue::tierLabels[EMBER_AF_PLUGIN_PRICE_SERVER_MAX_TIERS_PER_TARIFF][TIER_LABEL_SIZE+1]`

Definition at line 198 of file [price-server.h](#).

The documentation for this struct was generated from the following file:

- [price-server.h](#)

## 7.149 EmberAfRemoteBindingStruct Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberEUI64 targetEUI64](#)
- [uint8\\_t sourceEndpoint](#)
- [uint8\\_t destEndpoint](#)
- [uint16\\_t clusterId](#)
- [EmberEUI64 destEUI64](#)
- [EmberEUI64 sourceEUI64](#)

### 7.149.1 Detailed Description

Zigbee Internet Client/Server Remote Binding struct.

Definition at line 1788 of file [af-types.h](#).

### 7.149.2 Field Documentation

#### 7.149.2.1 `EmberEUI64 EmberAfRemoteBindingStruct::targetEUI64`

Definition at line 1789 of file [af-types.h](#).

### 7.149.2.2 `uint8_t EmberAfRemoteBindingStruct::sourceEndpoint`

Definition at line 1790 of file [af-types.h](#).

### 7.149.2.3 `uint8_t EmberAfRemoteBindingStruct::destEndpoint`

Definition at line 1791 of file [af-types.h](#).

### 7.149.2.4 `uint16_t EmberAfRemoteBindingStruct::clusterId`

Definition at line 1792 of file [af-types.h](#).

### 7.149.2.5 `EmberEUI64 EmberAfRemoteBindingStruct::destEUI64`

Definition at line 1793 of file [af-types.h](#).

### 7.149.2.6 `EmberEUI64 EmberAfRemoteBindingStruct::sourceEUI64`

Definition at line 1794 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.150 `EmberAfRemoteClusterStruct` Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `EmberAfClusterId clusterId`
- `EmberAfProfileId profileId`
- `uint16_t deviceId`
- `uint8_t endpoint`
- `EmberAfRemoteClusterType type`

### 7.150.1 Detailed Description

Zigbee Internet Client/Server remote cluster struct.

Definition at line 1777 of file [af-types.h](#).

### 7.150.2 Field Documentation

#### 7.150.2.1 `EmberAfClusterId EmberAfRemoteClusterStruct::clusterId`

Definition at line 1778 of file [af-types.h](#).

### 7.150.2.2 EmberAfProfileId EmberAfRemoteClusterStruct::profileId

Definition at line 1779 of file [af-types.h](#).

### 7.150.2.3 uint16\_t EmberAfRemoteClusterStruct::deviceId

Definition at line 1780 of file [af-types.h](#).

### 7.150.2.4 uint8\_t EmberAfRemoteClusterStruct::endpoint

Definition at line 1781 of file [af-types.h](#).

### 7.150.2.5 EmberAfRemoteClusterType EmberAfRemoteClusterStruct::type

Definition at line 1782 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.151 EmberAfRf4ceGdpAttributelidentificationRecord Struct Reference

```
#include <rf4ce-gdp-types.h>
```

### Data Fields

- [EmberAfRf4ceGdpAttributeId attributeId](#)
- [uint16\\_t entryId](#)

### 7.151.1 Detailed Description

RF4CE GDP attribute identification record for Get Attributes and Pull Attributes messages.

Definition at line 135 of file [rf4ce-gdp-types.h](#).

### 7.151.2 Field Documentation

#### 7.151.2.1 EmberAfRf4ceGdpAttributeId EmberAfRf4ceGdpAttributelidentificationRecord::attributeld

Definition at line 136 of file [rf4ce-gdp-types.h](#).

#### 7.151.2.2 uint16\_t EmberAfRf4ceGdpAttributelidentificationRecord::entryId

Definition at line 137 of file [rf4ce-gdp-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-gdp-types.h](#)

## 7.152 EmberAfRf4ceGdpAttributeRecord Struct Reference

```
#include <rf4ce-gdp-types.h>
```

### Data Fields

- `EmberAfRf4ceGdpAttributeId attributeId`
- `uint16_t entryId`
- `uint8_t valueLength`
- `const uint8_t * value`

#### 7.152.1 Detailed Description

RF4CE GDP attribute identification record for Set Attributes and Push Attributes messages.

Definition at line 156 of file `rf4ce-gdp-types.h`.

#### 7.152.2 Field Documentation

##### 7.152.2.1 EmberAfRf4ceGdpAttributeId EmberAfRf4ceGdpAttributeRecord::attributeId

Definition at line 157 of file `rf4ce-gdp-types.h`.

##### 7.152.2.2 uint16\_t EmberAfRf4ceGdpAttributeRecord::entryId

Definition at line 158 of file `rf4ce-gdp-types.h`.

##### 7.152.2.3 uint8\_t EmberAfRf4ceGdpAttributeRecord::valueLength

Definition at line 159 of file `rf4ce-gdp-types.h`.

##### 7.152.2.4 const uint8\_t\* EmberAfRf4ceGdpAttributeRecord::value

Definition at line 160 of file `rf4ce-gdp-types.h`.

The documentation for this struct was generated from the following file:

- `rf4ce-gdp-types.h`

## 7.153 EmberAfRf4ceGdpAttributeStatusRecord Struct Reference

```
#include <rf4ce-gdp-types.h>
```

### Data Fields

- `EmberAfRf4ceGdpAttributeId attributeId`
- `uint16_t entryId`

- `EmberAfRf4ceGdpAttributeStatus status`
- `uint8_t valueLength`
- `const uint8_t * value`

### 7.153.1 Detailed Description

RF4CE GDP attribute identification record for Get Attributes Response and Pull Attributes Response messages.

Definition at line 144 of file `rf4ce-gdp-types.h`.

### 7.153.2 Field Documentation

#### 7.153.2.1 `EmberAfRf4ceGdpAttributeId EmberAfRf4ceGdpAttributeStatusRecord::attributedId`

Definition at line 145 of file `rf4ce-gdp-types.h`.

#### 7.153.2.2 `uint16_t EmberAfRf4ceGdpAttributeStatusRecord::entryId`

Definition at line 146 of file `rf4ce-gdp-types.h`.

#### 7.153.2.3 `EmberAfRf4ceGdpAttributeStatus EmberAfRf4ceGdpAttributeStatusRecord::status`

Definition at line 147 of file `rf4ce-gdp-types.h`.

#### 7.153.2.4 `uint8_t EmberAfRf4ceGdpAttributeStatusRecord::valueLength`

Definition at line 148 of file `rf4ce-gdp-types.h`.

#### 7.153.2.5 `const uint8_t* EmberAfRf4ceGdpAttributeStatusRecord::value`

Definition at line 149 of file `rf4ce-gdp-types.h`.

The documentation for this struct was generated from the following file:

- `rf4ce-gdp-types.h`

## 7.154 `EmberAfRf4ceGdpRand` Struct Reference

```
#include <rf4ce-gdp-types.h>
```

### Data Fields

- `uint8_t contents [EMBER_AF_RF4CE_GDP_RAND_SIZE]`

### 7.154.1 Detailed Description

This data structure contains the GDP random byte string that is passed into various other functions.

Definition at line 265 of file [rf4ce-gdp-types.h](#).

### 7.154.2 Field Documentation

#### 7.154.2.1 `uint8_t EmberAfRf4ceGdpRand::contents[EMBER_AF_RF4CE_GDP_RAND_SIZE]`

This is the random byte string.

Definition at line 267 of file [rf4ce-gdp-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-gdp-types.h](#)

## 7.155 EmberAfRf4ceGdpTag Struct Reference

```
#include <rf4ce-gdp-types.h>
```

### Data Fields

- `uint8_t contents [EMBER_AF_RF4CE_GDP_TAG_SIZE]`

### 7.155.1 Detailed Description

This data structure contains the GDP tag value that is passed into various other functions.

Definition at line 279 of file [rf4ce-gdp-types.h](#).

### 7.155.2 Field Documentation

#### 7.155.2.1 `uint8_t EmberAfRf4ceGdpTag::contents[EMBER_AF_RF4CE_GDP_TAG_SIZE]`

This is the tag value.

Definition at line 281 of file [rf4ce-gdp-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-gdp-types.h](#)

## 7.156 EmberAfRf4ceMsolrRfDatabaseEntry Struct Reference

```
#include <rf4ce-mso-types.h>
```

## Data Fields

- [EmberAfRf4ceMsoIrRfDatabaseFlags](#) flags
- [EmberAfRf4ceMsoIrRfDatabaseRfDescriptor](#) rfPressedDescriptor
- [EmberAfRf4ceMsoIrRfDatabaseRfDescriptor](#) rfRepeatedDescriptor
- [EmberAfRf4ceMsoIrRfDatabaseRfDescriptor](#) rfReleasedDescriptor
- [EmberAfRf4ceMsoIrRfDatabaseIrDescriptor](#) irDescriptor

### 7.156.1 Detailed Description

RF4CE MSO IR-RF database entry.

Definition at line [472](#) of file [rf4ce-mso-types.h](#).

### 7.156.2 Field Documentation

#### 7.156.2.1 EmberAfRf4ceMsoIrRfDatabaseFlags EmberAfRf4ceMsolrRfDatabaseEntry::flags

Definition at line [473](#) of file [rf4ce-mso-types.h](#).

#### 7.156.2.2 EmberAfRf4ceMsoIrRfDatabaseRfDescriptor EmberAfRf4ceMsolrRfDatabaseEntry::rf-PressedDescriptor

Definition at line [474](#) of file [rf4ce-mso-types.h](#).

#### 7.156.2.3 EmberAfRf4ceMsoIrRfDatabaseRfDescriptor EmberAfRf4ceMsolrRfDatabaseEntry::rf-RepeatedDescriptor

Definition at line [475](#) of file [rf4ce-mso-types.h](#).

#### 7.156.2.4 EmberAfRf4ceMsoIrRfDatabaseRfDescriptor EmberAfRf4ceMsolrRfDatabaseEntry::rf-ReleasedDescriptor

Definition at line [476](#) of file [rf4ce-mso-types.h](#).

#### 7.156.2.5 EmberAfRf4ceMsoIrRfDatabaseIrDescriptor EmberAfRf4ceMsolrRfDatabaseEntry::ir-Descriptor

Definition at line [477](#) of file [rf4ce-mso-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-mso-types.h](#)

## 7.157 EmberAfRf4ceMsolrRfDatabaseIrDescriptor Struct Reference

```
#include <rf4ce-mso-types.h>
```

## Data Fields

- [EmberAfRf4ceMsoIrRfDatabaseIrConfig](#) irConfig
- [uint8\\_t](#) irCodeLength
- [const uint8\\_t \\*](#) irCode

### 7.157.1 Detailed Description

RF4CE MSO IR-RF database IR descriptor.

Definition at line [463](#) of file [rf4ce-mso-types.h](#).

### 7.157.2 Field Documentation

#### 7.157.2.1 EmberAfRf4ceMsoIrRfDatabaseIrConfig EmberAfRf4ceMsoIrRfDatabaseIrDescriptor::ir-Config

Definition at line [464](#) of file [rf4ce-mso-types.h](#).

#### 7.157.2.2 uint8\_t EmberAfRf4ceMsoIrRfDatabaseIrDescriptor::irCodeLength

Definition at line [465](#) of file [rf4ce-mso-types.h](#).

#### 7.157.2.3 const uint8\_t\* EmberAfRf4ceMsoIrRfDatabaseIrDescriptor::irCode

Definition at line [466](#) of file [rf4ce-mso-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-mso-types.h](#)

## 7.158 EmberAfRf4ceMsoIrRfDatabaseRfDescriptor Struct Reference

```
#include <rf4ce-mso-types.h>
```

## Data Fields

- [EmberAfRf4ceMsoIrRfDatabaseRfConfig](#) rfConfig
- [EmberRf4ceTxOption](#) txOptions
- [uint8\\_t](#) payloadLength
- [const uint8\\_t \\*](#) payload

### 7.158.1 Detailed Description

RF4CE MSO IR-RF database RF descriptor.

Definition at line [423](#) of file [rf4ce-mso-types.h](#).

## 7.158.2 Field Documentation

### 7.158.2.1 EmberAfRf4ceMsoIrRfDatabaseRfConfig EmberAfRf4ceMsolrRfDatabaseRfDescriptor::rfConfig

Definition at line 424 of file [rf4ce-mso-types.h](#).

### 7.158.2.2 EmberRf4ceTxOption EmberAfRf4ceMsolrRfDatabaseRfDescriptor::txOptions

Definition at line 425 of file [rf4ce-mso-types.h](#).

### 7.158.2.3 uint8\_t EmberAfRf4ceMsolrRfDatabaseRfDescriptor::payloadLength

Definition at line 426 of file [rf4ce-mso-types.h](#).

### 7.158.2.4 const uint8\_t\* EmberAfRf4ceMsolrRfDatabaseRfDescriptor::payload

Definition at line 427 of file [rf4ce-mso-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-mso-types.h](#)

## 7.159 EmberAfRf4ceMsoUserControlRecord Struct Reference

```
#include <rf4ce-mso-types.h>
```

### Data Fields

- `uint8_t pairingIndex`
- `EmberAfRf4ceMsoCommandCode commandCode`
- `EmberAfRf4ceMsoKeyCode rcCommandCode`
- `const uint8_t * rcCommandPayload`
- `uint8_t rcCommandPayloadLength`
- `uint16_t timeMs`

### 7.159.1 Detailed Description

This data structure contains the MSO user control record.

Definition at line 320 of file [rf4ce-mso-types.h](#).

## 7.159.2 Field Documentation

### 7.159.2.1 uint8\_t EmberAfRf4ceMsoUserControlRecord::pairingIndex

Definition at line 321 of file [rf4ce-mso-types.h](#).

### 7.159.2.2 EmberAfRf4ceMsoCommandCode EmberAfRf4ceMsoUserControlRecord::commandCode

Definition at line 322 of file [rf4ce-mso-types.h](#).

### 7.159.2.3 EmberAfRf4ceMsoKeyCode EmberAfRf4ceMsoUserControlRecord::rcCommandCode

Definition at line 323 of file [rf4ce-mso-types.h](#).

### 7.159.2.4 const uint8\_t\* EmberAfRf4ceMsoUserControlRecord::rcCommandPayload

Definition at line 324 of file [rf4ce-mso-types.h](#).

### 7.159.2.5 uint8\_t EmberAfRf4ceMsoUserControlRecord::rcCommandPayloadLength

Definition at line 325 of file [rf4ce-mso-types.h](#).

### 7.159.2.6 uint16\_t EmberAfRf4ceMsoUserControlRecord::timeMs

Definition at line 326 of file [rf4ce-mso-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-mso-types.h](#)

## 7.160 EmberAfRf4ceZrcActionMapping Struct Reference

```
#include <rf4ce-zrc20-types.h>
```

### Data Fields

- `uint8_t mappingFlags`
- `uint8_t rfConfig`
- `uint8_t rf4ceTxOptions`
- `uint8_t actionDataLength`
- `uint8_t * actionData`
- `uint8_t irConfig`
- `uint16_t irVendorId`
- `uint8_t irCodeLength`
- `uint8_t * irCode`

### 7.160.1 Detailed Description

RF4CE ZRC Action Mapping.

Definition at line 403 of file [rf4ce-zrc20-types.h](#).

## 7.160.2 Field Documentation

### 7.160.2.1 `uint8_t EmberAfRf4ceZrcActionMapping::mappingFlags`

Definition at line 404 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.2 `uint8_t EmberAfRf4ceZrcActionMapping::rfConfig`

Definition at line 406 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.3 `uint8_t EmberAfRf4ceZrcActionMapping::rf4ceTxOptions`

Definition at line 407 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.4 `uint8_t EmberAfRf4ceZrcActionMapping::actionDataLength`

Definition at line 408 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.5 `uint8_t* EmberAfRf4ceZrcActionMapping::actionData`

Definition at line 409 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.6 `uint8_t EmberAfRf4ceZrcActionMapping::irConfig`

Definition at line 411 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.7 `uint16_t EmberAfRf4ceZrcActionMapping::irVendorId`

Definition at line 412 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.8 `uint8_t EmberAfRf4ceZrcActionMapping::irCodeLength`

Definition at line 413 of file [rf4ce-zrc20-types.h](#).

### 7.160.2.9 `uint8_t* EmberAfRf4ceZrcActionMapping::irCode`

Definition at line 414 of file [rf4ce-zrc20-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-types.h](#)

## 7.161 EmberAfRf4ceZrcActionRecord Struct Reference

```
#include <rf4ce-zrc20-types.h>
```

## Data Fields

- `uint8_t pairingIndex`
- `EmberAfRf4ceZrcActionType actionType`
- `EmberAfRf4ceZrcModifierBit modifierBits`
- `uint8_t actionPayloadLength`
- `EmberAfRf4ceZrcActionBank actionBank`
- `EmberAfRf4ceZrcActionCode actionCode`
- `uint16_t actionVendorId`
- `const uint8_t * actionPayload`
- `uint16_t timeMs`

### 7.161.1 Detailed Description

This data structure contains the ZRC action record.

Definition at line 353 of file [rf4ce-zrc20-types.h](#).

### 7.161.2 Field Documentation

#### 7.161.2.1 `uint8_t EmberAfRf4ceZrcActionRecord::pairingIndex`

Definition at line 354 of file [rf4ce-zrc20-types.h](#).

#### 7.161.2.2 `EmberAfRf4ceZrcActionType EmberAfRf4ceZrcActionRecord::actionType`

Definition at line 355 of file [rf4ce-zrc20-types.h](#).

#### 7.161.2.3 `EmberAfRf4ceZrcModifierBit EmberAfRf4ceZrcActionRecord::modifierBits`

Definition at line 356 of file [rf4ce-zrc20-types.h](#).

#### 7.161.2.4 `uint8_t EmberAfRf4ceZrcActionRecord::actionPayloadLength`

Definition at line 357 of file [rf4ce-zrc20-types.h](#).

#### 7.161.2.5 `EmberAfRf4ceZrcActionBank EmberAfRf4ceZrcActionRecord::actionBank`

Definition at line 358 of file [rf4ce-zrc20-types.h](#).

#### 7.161.2.6 `EmberAfRf4ceZrcActionCode EmberAfRf4ceZrcActionRecord::actionCode`

Definition at line 359 of file [rf4ce-zrc20-types.h](#).

#### 7.161.2.7 `uint16_t EmberAfRf4ceZrcActionRecord::actionVendorId`

Definition at line 360 of file [rf4ce-zrc20-types.h](#).

### 7.161.2.8 const uint8\_t\* EmberAfRf4ceZrcActionRecord::actionPayload

Definition at line 361 of file [rf4ce-zrc20-types.h](#).

### 7.161.2.9 uint16\_t EmberAfRf4ceZrcActionRecord::timeMs

Definition at line 362 of file [rf4ce-zrc20-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-types.h](#)

## 7.162 EmberAfRf4ceZrcCommandsSupported Struct Reference

```
#include <rf4ce-zrc11-types.h>
```

### Data Fields

- `uint8_t contents [EMBER_AF_RF4CE_ZRC_COMMANDS_SUPPORTED_SIZE]`

### 7.162.1 Detailed Description

This data structure contains the ZRC 1.x command discovery data.

Definition at line 133 of file [rf4ce-zrc11-types.h](#).

### 7.162.2 Field Documentation

#### 7.162.2.1 uint8\_t EmberAfRf4ceZrcCommandsSupported::contents

This is the command discovery data.

Definition at line 135 of file [rf4ce-zrc11-types.h](#).

The documentation for this struct was generated from the following files:

- [rf4ce-zrc11-types.h](#)
- [rf4ce-zrc20-types.h](#)

## 7.163 EmberAfRf4ceZrcHomeAutomationAttribute Struct Reference

```
#include <rf4ce-zrc20-types.h>
```

### Data Fields

- `uint8_t * contents`
- `uint8_t contentsLength`
- `uint8_t instanceId`
- `uint8_t attributeId`

### 7.163.1 Detailed Description

RF4CE ZRC Home Automation attribute.

Definition at line 427 of file [rf4ce-zrc20-types.h](#).

### 7.163.2 Field Documentation

#### 7.163.2.1 `uint8_t* EmberAfRf4ceZrcHomeAutomationAttribute::contents`

Definition at line 428 of file [rf4ce-zrc20-types.h](#).

#### 7.163.2.2 `uint8_t EmberAfRf4ceZrcHomeAutomationAttribute::contentsLength`

Definition at line 429 of file [rf4ce-zrc20-types.h](#).

#### 7.163.2.3 `uint8_t EmberAfRf4ceZrcHomeAutomationAttribute::instanceId`

Definition at line 430 of file [rf4ce-zrc20-types.h](#).

#### 7.163.2.4 `uint8_t EmberAfRf4ceZrcHomeAutomationAttribute::attributeId`

Definition at line 431 of file [rf4ce-zrc20-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-types.h](#)

## 7.164 EmberAfRf4ceZrcHomeAutomationSupported Struct Reference

```
#include <rf4ce-zrc20-types.h>
```

### Data Fields

- `uint8_t contents [32]`

### 7.164.1 Detailed Description

RF4CE ZRC Home Automation supported.

Definition at line 420 of file [rf4ce-zrc20-types.h](#).

### 7.164.2 Field Documentation

#### 7.164.2.1 `uint8_t EmberAfRf4ceZrcHomeAutomationSupported::contents[32]`

Definition at line 421 of file [rf4ce-zrc20-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-types.h](#)

## 7.165 EmberAfRf4ceZrcMappableAction Struct Reference

```
#include <rf4ce-zrc20-types.h>
```

### Data Fields

- [EmberAfRf4ceDeviceType actionDeviceType](#)
- [EmberAfRf4ceZrcActionBank actionBank](#)
- [EmberAfRf4ceZrcActionCode actionCode](#)

### 7.165.1 Detailed Description

RF4CE ZRC Mappable Action.

Definition at line [368](#) of file [rf4ce-zrc20-types.h](#).

### 7.165.2 Field Documentation

#### 7.165.2.1 EmberAfRf4ceDeviceType EmberAfRf4ceZrcMappableAction::actionDeviceType

Definition at line [370](#) of file [rf4ce-zrc20-types.h](#).

#### 7.165.2.2 EmberAfRf4ceZrcActionBank EmberAfRf4ceZrcMappableAction::actionBank

Definition at line [371](#) of file [rf4ce-zrc20-types.h](#).

#### 7.165.2.3 EmberAfRf4ceZrcActionCode EmberAfRf4ceZrcMappableAction::actionCode

Definition at line [372](#) of file [rf4ce-zrc20-types.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-types.h](#)

## 7.166 EmberAfRf4ceZrcUserControlRecord Struct Reference

```
#include <rf4ce-zrc11-types.h>
```

### Data Fields

- [uint8\\_t pairingIndex](#)
- [EmberAfRf4ceZrcCommandCode commandCode](#)
- [EmberAfRf4ceUserControlCode rcCommandCode](#)
- [const uint8\\_t \\* rcCommandPayload](#)

- `uint8_t rcCommandPayloadLength`
- `uint16_t timeMs`

### 7.166.1 Detailed Description

This data structure contains the ZRC 1.x user control record.

Definition at line 116 of file `rf4ce-zrc11-types.h`.

### 7.166.2 Field Documentation

#### 7.166.2.1 `uint8_t EmberAfRf4ceZrcUserControlRecord::pairingIndex`

Definition at line 117 of file `rf4ce-zrc11-types.h`.

#### 7.166.2.2 `EmberAfRf4ceZrcCommandCode EmberAfRf4ceZrcUserControlRecord::commandCode`

Definition at line 118 of file `rf4ce-zrc11-types.h`.

#### 7.166.2.3 `EmberAfRf4ceUserControlCode EmberAfRf4ceZrcUserControlRecord::rcCommandCode`

Definition at line 119 of file `rf4ce-zrc11-types.h`.

#### 7.166.2.4 `const uint8_t* EmberAfRf4ceZrcUserControlRecord::rcCommandPayload`

Definition at line 120 of file `rf4ce-zrc11-types.h`.

#### 7.166.2.5 `uint8_t EmberAfRf4ceZrcUserControlRecord::rcCommandPayloadLength`

Definition at line 121 of file `rf4ce-zrc11-types.h`.

#### 7.166.2.6 `uint16_t EmberAfRf4ceZrcUserControlRecord::timeMs`

Definition at line 122 of file `rf4ce-zrc11-types.h`.

The documentation for this struct was generated from the following file:

- `rf4ce-zrc11-types.h`

## 7.167 EmberAfSceneTableEntry Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint8_t endpoint`
- `uint16_t groupId`

- `uint8_t sceneId`
- `uint16_t transitionTime`
- `uint8_t transitionTime100ms`

### 7.167.1 Detailed Description

A structure used to store scene table entries in RAM or in tokens, depending on a plugin setting. If endpoint field is `EMBER_AF_SCENE_TABLE_UNUSED_ENDPOINT_ID`, the entry is unused.

Definition at line 880 of file `af-types.h`.

### 7.167.2 Field Documentation

#### 7.167.2.1 `uint8_t EmberAfSceneTableEntry::endpoint`

Definition at line 881 of file `af-types.h`.

#### 7.167.2.2 `uint16_t EmberAfSceneTableEntry::groupId`

Definition at line 882 of file `af-types.h`.

#### 7.167.2.3 `uint8_t EmberAfSceneTableEntry::sceneId`

Definition at line 883 of file `af-types.h`.

#### 7.167.2.4 `uint16_t EmberAfSceneTableEntry::transitionTime`

Definition at line 887 of file `af-types.h`.

#### 7.167.2.5 `uint8_t EmberAfSceneTableEntry::transitionTime100ms`

Definition at line 888 of file `af-types.h`.

The documentation for this struct was generated from the following file:

- `af-types.h`

## 7.168 EmberAfScheduledBlockThresholds Struct Reference

```
#include <price-server.h>
```

### Data Fields

- `union {`
  - `emAfPriceBlockThreshold blockAndTier [ZCL_PRICE_CLUSTER_MAX_TOU_BLOCK_TIERS][ZCL_PRICE_CLUS`
  - `emAfPriceBlockThreshold block [ZCL_PRICE_CLUSTER_MAX_TOU_BLOCKS-1]``}` `thresholds`

- `uint32_t providerId`
- `uint32_t issuerTariffId`
- `uint8_t status`

### 7.168.1 Detailed Description

Definition at line 284 of file [price-server.h](#).

### 7.168.2 Field Documentation

**7.168.2.1 `emAfPriceBlockThreshold EmberAfScheduledBlockThresholds::blockAndTier[ZCL_PRICE_CLUSTER_MAX_TOU_BLOCK_TIERS][ZCL_PRICE_CLUSTER_MAX_TOU_BLOCKS-1]`**

Definition at line 286 of file [price-server.h](#).

**7.168.2.2 `emAfPriceBlockThreshold EmberAfScheduledBlockThresholds::block[ZCL_PRICE_CLUSTER_MAX_TOU_BLOCKS-1]`**

Definition at line 287 of file [price-server.h](#).

**7.168.2.3 `union { ... } EmberAfScheduledBlockThresholds::thresholds`**

**7.168.2.4 `uint32_t EmberAfScheduledBlockThresholds::providerId`**

Definition at line 289 of file [price-server.h](#).

**7.168.2.5 `uint32_t EmberAfScheduledBlockThresholds::issuerTariffId`**

Definition at line 290 of file [price-server.h](#).

**7.168.2.6 `uint8_t EmberAfScheduledBlockThresholds::status`**

Definition at line 291 of file [price-server.h](#).

The documentation for this struct was generated from the following file:

- [price-server.h](#)

## 7.169 EmberAfScheduledBlockThresholdsTable Struct Reference

```
#include <price-server.h>
```

### Data Fields

- `EmberAfPriceCommonInfo commonInfos [EMBER_AF_PRICE_CLUSTER_SERVER_ENDPOINT_COUNT][EMBER_AF_PLUGIN_PRICE_SERVER_TARIFF_TABLE_SIZE]`

- EmberAfScheduledBlockThresholds scheduledBlockThresholds [EMBER\_AF\_PRICE\_CLUSTER\_SERVER\_ENDPOINT\_COUNT][EMBER\_AF\_PLUGIN\_PRICE\_SERVER\_TARIFF\_TABLE\_SIZE]

### 7.169.1 Detailed Description

Definition at line 294 of file [price-server.h](#).

### 7.169.2 Field Documentation

- 7.169.2.1 EmberAfPriceCommonInfo EmberAfScheduledBlockThresholdsTable::commonInfos[EMBER\_AF\_PRICE\_CLUSTER\_SERVER\_ENDPOINT\_COUNT][EMBER\_AF\_PLUGIN\_PRICE\_SERVER\_TARIFF\_TABLE\_SIZE]

Definition at line 295 of file [price-server.h](#).

- 7.169.2.2 EmberAfScheduledBlockThresholds EmberAfScheduledBlockThresholdsTable::scheduledBlockThresholds[EMBER\_AF\_PRICE\_CLUSTER\_SERVER\_ENDPOINT\_COUNT][EMBER\_AF\_PLUGIN\_PRICE\_SERVER\_TARIFF\_TABLE\_SIZE]

Definition at line 296 of file [price-server.h](#).

The documentation for this struct was generated from the following file:

- [price-server.h](#)

## 7.170 EmberAfScheduledPrice Struct Reference

```
#include <mn-price-passthrough.h>
```

### Data Fields

- uint32\_t providerId
- uint8\_t rateLabel [ZCL\_PRICE\_CLUSTER\_MAXIMUM\_RATE\_LABEL\_LENGTH+1]
- uint32\_t issuerEventID
- uint8\_t unitOfMeasure
- uint16\_t currency
- uint8\_t priceTrailingDigitAndTier
- uint8\_t numberOfPriceTiersAndTier
- uint32\_t startTime
- uint16\_t duration
- uint32\_t price
- uint8\_t priceRatio
- uint32\_t generationPrice
- uint8\_t generationPriceRatio
- uint32\_t alternateCostDelivered
- uint8\_t alternateCostUnit
- uint8\_t alternateCostTrailingDigit
- uint8\_t numberOfBlockThresholds
- uint8\_t priceControl

### 7.170.1 Detailed Description

The price and metadata used by the MnPricePassthrough plugin.

Definition at line 20 of file [mn-price-passthrough.h](#).

### 7.170.2 Field Documentation

#### 7.170.2.1 `uint32_t EmberAfScheduledPrice::providerId`

Definition at line 21 of file [mn-price-passthrough.h](#).

#### 7.170.2.2 `uint8_t EmberAfScheduledPrice::rateLabel`

Definition at line 22 of file [mn-price-passthrough.h](#).

#### 7.170.2.3 `uint32_t EmberAfScheduledPrice::issuerEventID`

Definition at line 23 of file [mn-price-passthrough.h](#).

#### 7.170.2.4 `uint8_t EmberAfScheduledPrice::unitOfMeasure`

Definition at line 24 of file [mn-price-passthrough.h](#).

#### 7.170.2.5 `uint16_t EmberAfScheduledPrice::currency`

Definition at line 25 of file [mn-price-passthrough.h](#).

#### 7.170.2.6 `uint8_t EmberAfScheduledPrice::priceTrailingDigitAndTier`

Definition at line 26 of file [mn-price-passthrough.h](#).

#### 7.170.2.7 `uint8_t EmberAfScheduledPrice::numberOfPriceTiersAndTier`

Definition at line 27 of file [mn-price-passthrough.h](#).

#### 7.170.2.8 `uint32_t EmberAfScheduledPrice::startTime`

Definition at line 28 of file [mn-price-passthrough.h](#).

#### 7.170.2.9 `uint16_t EmberAfScheduledPrice::duration`

Definition at line 29 of file [mn-price-passthrough.h](#).

#### 7.170.2.10 `uint32_t EmberAfScheduledPrice::price`

Definition at line 30 of file [mn-price-passthrough.h](#).

### 7.170.2.11 `uint8_t EmberAfScheduledPrice::priceRatio`

Definition at line 31 of file [mn-price-passthrough.h](#).

### 7.170.2.12 `uint32_t EmberAfScheduledPrice::generationPrice`

Definition at line 32 of file [mn-price-passthrough.h](#).

### 7.170.2.13 `uint8_t EmberAfScheduledPrice::generationPriceRatio`

Definition at line 33 of file [mn-price-passthrough.h](#).

### 7.170.2.14 `uint32_t EmberAfScheduledPrice::alternateCostDelivered`

Definition at line 34 of file [mn-price-passthrough.h](#).

### 7.170.2.15 `uint8_t EmberAfScheduledPrice::alternateCostUnit`

Definition at line 35 of file [mn-price-passthrough.h](#).

### 7.170.2.16 `uint8_t EmberAfScheduledPrice::alternateCostTrailingDigit`

Definition at line 36 of file [mn-price-passthrough.h](#).

### 7.170.2.17 `uint8_t EmberAfScheduledPrice::numberOfBlockThresholds`

Definition at line 37 of file [mn-price-passthrough.h](#).

### 7.170.2.18 `uint8_t EmberAfScheduledPrice::priceControl`

Definition at line 38 of file [mn-price-passthrough.h](#).

The documentation for this struct was generated from the following files:

- [mn-price-passthrough.h](#)
- [price-server.h](#)

## 7.171 EmberAfScheduledPriceMatrix Struct Reference

```
#include <price-server.h>
```

### Data Fields

- union {
 uint32\_t [blockAndTier](#) [[ZCL\\_PRICE\\_CLUSTER\\_MAX\\_TOU\\_BLOCK\\_TIERS](#)][[ZCL\\_PRICE\\_CLUSTER\\_MAX\\_TOU\\_BLOCK\\_TIERS](#)];
 uint32\_t [tier](#) [[ZCL\\_PRICE\\_CLUSTER\\_MAX\\_TOU\\_TIERS](#)];
 }

```

    } matrix

    • uint32_t providerId
    • uint32_t issuerTariffId
    • uint8_t status

```

### 7.171.1 Detailed Description

Definition at line 324 of file [price-server.h](#).

### 7.171.2 Field Documentation

**7.171.2.1 uint32\_t EmberAfScheduledPriceMatrix::blockAndTier[ZCL\_PRICE\_CLUSTER\_MAX\_TOU\_BLOCK\_TIERS][ZCL\_PRICE\_CLUSTER\_MAX\_TOU\_BLOCKS]**

Definition at line 326 of file [price-server.h](#).

**7.171.2.2 uint32\_t EmberAfScheduledPriceMatrix::tier[ZCL\_PRICE\_CLUSTER\_MAX\_TOU\_TIERS]**

Definition at line 327 of file [price-server.h](#).

**7.171.2.3 union { ... } EmberAfScheduledPriceMatrix::matrix**

**7.171.2.4 uint32\_t EmberAfScheduledPriceMatrix::providerId**

Definition at line 329 of file [price-server.h](#).

**7.171.2.5 uint32\_t EmberAfScheduledPriceMatrix::issuerTariffId**

Definition at line 330 of file [price-server.h](#).

**7.171.2.6 uint8\_t EmberAfScheduledPriceMatrix::status**

Definition at line 331 of file [price-server.h](#).

The documentation for this struct was generated from the following file:

- [price-server.h](#)

## 7.172 EmberAfScheduledPriceMatrixTable Struct Reference

```
#include <price-server.h>
```

### Data Fields

- [EmberAfPriceCommonInfo commonInfos \[EMBER\\_AF\\_PRICE\\_CLUSTER\\_SERVER\\_ENDPOINT\\_COUNT\]\[EMBER\\_AF\\_PLUGIN\\_PRICE\\_SERVER\\_TARIFF\\_TABLE\\_SIZE\]](#)

- EmberAfScheduledPriceMatrix scheduledPriceMatrix [EMBER\_AF\_PRICE\_CLUSTER\_SERVER\_ENDPOINT\_COUNT][EMBER\_AF\_PLUGIN\_PRICE\_SERVER\_TARIFF\_TABLE\_SIZE]

### 7.172.1 Detailed Description

Definition at line 334 of file [price-server.h](#).

### 7.172.2 Field Documentation

- 7.172.2.1 EmberAfPriceCommonInfo EmberAfScheduledPriceMatrixTable::commonInfos[EMBER\_AF\_PRICE\_CLUSTER\_SERVER\_ENDPOINT\_COUNT][EMBER\_AF\_PLUGIN\_PRICE\_SERVER\_TARIFF\_TABLE\_SIZE]

Definition at line 335 of file [price-server.h](#).

- 7.172.2.2 EmberAfScheduledPriceMatrix EmberAfScheduledPriceMatrixTable::scheduledPriceMatrix[EMBER\_AF\_PRICE\_CLUSTER\_SERVER\_ENDPOINT\_COUNT][EMBER\_AF\_PLUGIN\_PRICE\_SERVER\_TARIFF\_TABLE\_SIZE]

Definition at line 336 of file [price-server.h](#).

The documentation for this struct was generated from the following file:

- [price-server.h](#)

## 7.173 EmberAfScheduledTariff Struct Reference

```
#include <price-server.h>
```

### Data Fields

- uint32\_t providerId
- uint32\_t issuerTariffId
- uint8\_t status
- uint8\_t tariffTypeChargingScheme
- uint8\_t tariffLabel [ZCL\_PRICE\_CLUSTER\_MAXIMUM\_RATE\_LABEL\_LENGTH+1]
- uint8\_t numberofPriceTiersInUse
- uint8\_t numberofBlockThresholdsInUse
- uint8\_t tierBlockMode
- uint8\_t unitOfMeasure
- uint16\_t currency
- uint8\_t priceTrailingDigit
- uint32\_t standingCharge
- uint32\_t blockThresholdMultiplier
- uint32\_t blockThresholdDivisor

### 7.173.1 Detailed Description

Definition at line 299 of file [price-server.h](#).

### 7.173.2 Field Documentation

#### 7.173.2.1 `uint32_t EmberAfScheduledTariff::providerId`

Definition at line 300 of file [price-server.h](#).

#### 7.173.2.2 `uint32_t EmberAfScheduledTariff::issuerTariffId`

Definition at line 301 of file [price-server.h](#).

#### 7.173.2.3 `uint8_t EmberAfScheduledTariff::status`

Definition at line 302 of file [price-server.h](#).

#### 7.173.2.4 `uint8_t EmberAfScheduledTariff::tariffTypeChargingScheme`

Definition at line 303 of file [price-server.h](#).

#### 7.173.2.5 `uint8_t EmberAfScheduledTariff::tariffLabel[ZCL_PRICE_CLUSTER_MAXIMUM_RATE_ - LABEL_LENGTH+1]`

Definition at line 306 of file [price-server.h](#).

#### 7.173.2.6 `uint8_t EmberAfScheduledTariff::numberOfPriceTiersInUse`

Definition at line 307 of file [price-server.h](#).

Definition at line [465](#) of file [af-types.h](#).

#### 7.175.2.4 uint16\_t EmberAfSecurityProfileData::nodeBitmask

Definition at line [466](#) of file [af-types.h](#).

#### 7.175.2.5 EmberExtendedSecurityBitmask EmberAfSecurityProfileData::nodeExtendedBitmask

Definition at line [467](#) of file [af-types.h](#).

### 7.175.2.6 EmberAfLinkKeyRequestPolicy EmberAfSecurityProfileData::tcLinkKeyRequestPolicy

Definition at line 468 of file [af-types.h](#).

### 7.175.2.7 EmberAfLinkKeyRequestPolicy EmberAfSecurityProfileData::appLinkKeyRequestPolicy

Definition at line 469 of file [af-types.h](#).

### 7.175.2.8 EmberKeyData EmberAfSecurityProfileData::preconfiguredKey

Definition at line 470 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.176 EmberAfServiceDiscoveryResult Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberAfServiceDiscoveryStatus status](#)
- [uint16\\_t zdoRequestClusterId](#)
- [EmberNodeId matchAddress](#)
- [const void \\* responseData](#)

### 7.176.1 Detailed Description

A structure containing general information about the service discovery.

Definition at line 616 of file [af-types.h](#).

### 7.176.2 Field Documentation

#### 7.176.2.1 EmberAfServiceDiscoveryStatus EmberAfServiceDiscoveryResult::status

The status indicates both the type of request (broadcast or unicast) and whether a response has been received.

Definition at line 621 of file [af-types.h](#).

#### 7.176.2.2 uint16\_t EmberAfServiceDiscoveryResult::zdoRequestClusterId

This indicates what ZDO request cluster was associated with the request. It is helpful for a callback that may be used for multiple ZDO request types to determine the type of data returned. This will be based on the ZDO cluster values defined in [ember-types.h](#).

Definition at line 629 of file [af-types.h](#).

### 7.176.2.3 EmberNodeId EmberAfServiceDiscoveryResult::matchAddress

This is the address of the device that matched the request, which may be different than the device that *actually* is responding. This occurs when parents respond on behalf of their children.

Definition at line 636 of file [af-types.h](#).

### 7.176.2.4 const void\* EmberAfServiceDiscoveryResult::responseData

Only if the status code indicates a response will this data be non-NULL. When there is data, the type is according to the ZDO cluster ID sent out. For NETWORK\_ADDRESS\_REQUEST or IEEE\_ADDRESS\_REQUEST, the long ID will be contained in the responseData, so it will be a value of type [EmberEUI64](#). The short ID will be in the matchAddress parameter field. For the MATCH\_DESCRIPTORS\_REQUEST the responseData will point to an [EmberAfEndpointList](#) structure.

Definition at line 647 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.177 EmberAfSleepyMessage Struct Reference

```
#include <sleepy-message-queue.h>
```

### Data Fields

- [uint8\\_t \\* payload](#)
- [uint16\\_t length](#)
- [uint16\\_t payloadId](#)
- [EmberEUI64 dstEui64](#)

### 7.177.1 Detailed Description

## 7.180 EmberAfStandaloneBootloaderQueryResponseData Struct Reference

```
#include <af-types.h>
```

### Data Fields

- uint8\_t **hardwareTag** [EMBER\_AF\_STANDALONE\_BOOTLOADER\_HARDWARE\_TAG\_LENGTH]
- uint8\_t **eui64** [[EUI64\\_SIZE](#)]
- uint16\_t **mfgId**
- uint16\_t **bootloaderVersion**
- uint8\_t **capabilities**
- uint8\_t **platform**
- uint8\_t **micro**
- uint8\_t **phy**
- bool **bootloaderActive**

### 7.180.1 Detailed Description

A data struct for the information retrieved during a response to an Ember Bootloader over-the-air query.

Definition at line 1469 of file [af-types.h](#).

### 7.180.2 Field Documentation

**7.180.2.1 uint8\_t EmberAfStandaloneBootloaderQueryResponseData::hardwareTag[EMBER\_AF\_STANDALONE\_BOOTLOADER\_HARDWARE\_TAG\_LENGTH]**

Definition at line 1470 of file [af-types.h](#).

**7.180.2.2 uint8\_t EmberAfStandaloneBootloaderQueryResponseData::eui64[EUI64\_SIZE]**

Definition at line 1471 of file [af-types.h](#).

**7.180.2.3 uint16\_t EmberAfStandaloneBootloaderQueryResponseData::mfqid**

Definition at line 1472 of file [af-types.h](#).

**7.180.2.4 uint16\_t EmberAfStandaloneBootloaderQueryResponseData::bootloaderVersion**

Definition at line 1473 of file [af-types.h](#).

**7.180.2.5 uint8\_t EmberAfStandaloneBootloaderQueryResponseData::capabilities**

Definition at line 1474 of file [af-types.h](#).

**7.180.2.6 uint8\_t EmberAfStandaloneBootloaderQueryResponseData::platform**

Definition at line 1475 of file [af-types.h](#).

**7.180.2.7 uint8\_t EmberAfStandaloneBootloaderQueryResponseData::micro**

Definition at line 1476 of file [af-types.h](#).

**7.180.2.8 uint8\_t EmberAfStandaloneBootloaderQueryResponseData::phy**

Definition at line 1477 of file [af-types.h](#).

**7.180.2.9 bool EmberAfStandaloneBootloaderQueryResponseData::bootloaderActive**

Definition at line 1478 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.181 EmberAfTagData Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint16_t id`
- `uint32_t length`

#### 7.181.1 Detailed Description

This structure contains information about a tag that resides within an Over-the-air bootload file.

Definition at line 1240 of file [af-types.h](#).

#### 7.181.2 Field Documentation

##### 7.181.2.1 `uint16_t EmberAfTagData::id`

Definition at line 1241 of file [af-types.h](#).

##### 7.181.2.2 `uint32_t EmberAfTagData::length`

Definition at line 1242 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.182 EmberAfTimeStruct Struct Reference

```
#include <af-types.h>
```

### Data Fields

- `uint16_t year`
- `uint8_t month`
- `uint8_t day`
- `uint8_t hours`
- `uint8_t minutes`
- `uint8_t seconds`

#### 7.182.1 Detailed Description

A data structure used to describe the time in a human understandable format (as opposed to 32-bit UTC)

Definition at line 1496 of file [af-types.h](#).

## 7.182.2 Field Documentation

### 7.182.2.1 uint16\_t EmberAfTimeStruct::year

Definition at line 1497 of file [af-types.h](#).

### 7.182.2.2 uint8\_t EmberAfTimeStruct::month

Definition at line 1498 of file [af-types.h](#).

### 7.182.2.3 uint8\_t EmberAfTimeStruct::day

Definition at line 1499 of file [af-types.h](#).

### 7.182.2.4 uint8\_t EmberAfTimeStruct::hours

Definition at line 1500 of file [af-types.h](#).

### 7.182.2.5 uint8\_t EmberAfTimeStruct::minutes

Definition at line 1501 of file [af-types.h](#).

### 7.182.2.6 uint8\_t EmberAfTimeStruct::seconds

Definition at line 1502 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.183 EmberAfTrustCenterBackupData Struct Reference

```
#include <af-types.h>
```

### Data Fields

- [EmberEUI64 extendedPanId](#)
- [uint8\\_t keyListLength](#)
- [uint8\\_t maxKeyListLength](#)
- [EmberAfLinkKeyBackupData \\* keyList](#)

### 7.183.1 Detailed Description

A data struct for all the trust center backup data.

The 'keyList' pointer must point to an array and 'maxKeyListLength' must be populated with the maximum number of entries the array can hold.

Functions that modify this data structure will populate 'keyListLength' indicating how many keys were actually written into 'keyList'.

Definition at line 1451 of file [af-types.h](#).

### 7.183.2 Field Documentation

#### 7.183.2.1 EmberEUI64 EmberAfTrustCenterBackupData::extendedPanId

Definition at line 1452 of file [af-types.h](#).

#### 7.183.2.2 uint8\_t EmberAfTrustCenterBackupData::keyListLength

Definition at line 1453 of file [af-types.h](#).

#### 7.183.2.3 uint8\_t EmberAfTrustCenterBackupData::maxKeyListLength

Definition at line 1454 of file [af-types.h](#).

#### 7.183.2.4 EmberAfLinkKeyBackupData\* EmberAfTrustCenterBackupData::keyList

Definition at line 1455 of file [af-types.h](#).

The documentation for this struct was generated from the following file:

- [af-types.h](#)

## 7.184 EmberApsFrame Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint16_t profileId`
- `uint16_t clusterId`
- `uint8_t sourceEndpoint`
- `uint8_t destinationEndpoint`
- `EmberApsOption options`
- `uint16_t groupId`
- `uint8_t sequence`

### 7.184.1 Detailed Description

An in-memory representation of a ZigBee APS frame of an incoming or outgoing message.

Definition at line 960 of file [ember-types.h](#).

## 7.184.2 Field Documentation

### 7.184.2.1 `uint16_t EmberApsFrame::profileId`

The application profile ID that describes the format of the message.

Definition at line 962 of file [ember-types.h](#).

### 7.184.2.2 `uint16_t EmberApsFrame::clusterId`

The cluster ID for this message.

Definition at line 964 of file [ember-types.h](#).

### 7.184.2.3 `uint8_t EmberApsFrame::sourceEndpoint`

The source endpoint.

Definition at line 966 of file [ember-types.h](#).

### 7.184.2.4 `uint8_t EmberApsFrame::destinationEndpoint`

The destination endpoint.

Definition at line 968 of file [ember-types.h](#).

### 7.184.2.5 `EmberApsOption EmberApsFrame::options`

A bitmask of options from the enumeration above.

Definition at line 970 of file [ember-types.h](#).

### 7.184.2.6 `uint16_t EmberApsFrame::groupId`

The group ID for this message, if it is multicast mode.

Definition at line 972 of file [ember-types.h](#).

### 7.184.2.7 `uint8_t EmberApsFrame::sequence`

The sequence number.

Definition at line 974 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.185 EmberBindingTableEntry Struct Reference

```
#include <ember-types.h>
```

## Data Fields

- [EmberBindingType](#) type
- [uint8\\_t](#) local
- [uint16\\_t](#) clusterId
- [uint8\\_t](#) remote
- [EmberEUI64](#) identifier
- [uint8\\_t](#) networkIndex

### 7.185.1 Detailed Description

Defines an entry in the binding table.

A binding entry specifies a local endpoint, a remote endpoint, a cluster ID and either the destination EUI64 (for unicast bindings) or the 64-bit group address (for multicast bindings).

Definition at line [984](#) of file [ember-types.h](#).

### 7.185.2 Field Documentation

#### 7.185.2.1 [EmberBindingType](#) EmberBindingTableEntry::type

The type of binding.

Definition at line [986](#) of file [ember-types.h](#).

#### 7.185.2.2 [uint8\\_t](#) EmberBindingTableEntry::local

The endpoint on the local node.

Definition at line [988](#) of file [ember-types.h](#).

#### 7.185.2.3 [uint16\\_t](#) EmberBindingTableEntry::clusterId

A cluster ID that matches one from the local endpoint's simple descriptor. This cluster ID is set by the provisioning application to indicate which part an endpoint's functionality is bound to this particular remote node and is used to distinguish between unicast and multicast bindings. Note that a binding can be used to send messages with any cluster ID, not just that listed in the binding.

Definition at line [996](#) of file [ember-types.h](#).

#### 7.185.2.4 [uint8\\_t](#) EmberBindingTableEntry::remote

The endpoint on the remote node (specified by `identifier`).

Definition at line [998](#) of file [ember-types.h](#).

#### 7.185.2.5 [EmberEUI64](#) EmberBindingTableEntry::identifier

A 64-bit identifier. This is either:

- The destination EUI64, for unicasts

- A 16-bit multicast group address, for multicasts

Definition at line 1003 of file [ember-types.h](#).

#### **7.185.2.6 uint8\_t EmberBindingTableEntry::networkIndex**

The index of the network the binding belongs to.

Definition at line 1005 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## **7.186 EmberCertificate283k1Data Struct Reference**

```
#include <ember-types.h>
```

### **Data Fields**

- `uint8_t contents [EMBER_CERTIFICATE_283K1_SIZE]`

#### **7.186.1 Detailed Description**

This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.

Definition at line 1544 of file [ember-types.h](#).

#### **7.186.2 Field Documentation**

##### **7.186.2.1 uint8\_t EmberCertificate283k1Data::contents[EMBER\_CERTIFICATE\_283K1\_SIZE]**

Definition at line 1546 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## **7.187 EmberCertificateData Struct Reference**

```
#include <ember-types.h>
```

### **Data Fields**

- `uint8_t contents [EMBER_CERTIFICATE_SIZE]`

### 7.187.1 Detailed Description

This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE).

Definition at line 1499 of file [ember-types.h](#).

### 7.187.2 Field Documentation

#### 7.187.2.1 `uint8_t EmberCertificateData::contents[EMBER_CERTIFICATE_SIZE]`

Definition at line 1500 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.188 EmberCurrentSecurityState Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [EmberCurrentSecurityBitmask bitmask](#)
- [EmberEUI64 trustCenterLongAddress](#)

### 7.188.1 Detailed Description

This describes the security features used by the stack for a joined device.

Definition at line 1828 of file [ember-types.h](#).

### 7.188.2 Field Documentation

#### 7.188.2.1 `EmberCurrentSecurityBitmask EmberCurrentSecurityState::bitmask`

This bitmask indicates the security features currently in use on this node.

Definition at line 1831 of file [ember-types.h](#).

#### 7.188.2.2 `EmberEUI64 EmberCurrentSecurityState::trustCenterLongAddress`

This indicates the EUI64 of the Trust Center. It will be all zeroes if the Trust Center Address is not known (i.e. the device is in a Distributed Trust Center network).

Definition at line 1835 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.189 EmberEventControl Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [EmberEventUnits status](#)
- [EmberTaskId taskid](#)
- [uint32\\_t timeToExecute](#)

### 7.189.1 Detailed Description

Control structure for events.

This structure should not be accessed directly. This holds the event status (one of the *EMBER\_EVENT\_* values) and the time left before the event fires.

Definition at line [1272](#) of file [ember-types.h](#).

### 7.189.2 Field Documentation

#### 7.189.2.1 EmberEventUnits EmberEventControl::status

The event's status, either inactive or the units for timeToExecute.

Definition at line [1274](#) of file [ember-types.h](#).

#### 7.189.2.2 EmberTaskId EmberEventControl::taskid

The id of the task this event belongs to.

Definition at line [1276](#) of file [ember-types.h](#).

#### 7.189.2.3 uint32\_t EmberEventControl::timeToExecute

How long before the event fires. Units are always in milliseconds

Definition at line [1280](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.190 EmberEventData\_S Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [EmberEventControl \\* control](#)
- [void\(\\* handler \)\(void\)](#)

### 7.190.1 Detailed Description

Complete events with a control and a handler procedure.

An application typically creates an array of events along with their handlers. The main loop passes the array to `::emberRunEvents()` in order to call the handlers of any events whose time has arrived.

Definition at line 1290 of file [ember-types.h](#).

### 7.190.2 Field Documentation

#### 7.190.2.1 EmberEventControl\* EmberEventData\_S::control

The control structure for the event.

Definition at line 1292 of file [ember-types.h](#).

#### 7.190.2.2 void(\* EmberEventData\_S::handler)(void)

The procedure to call when the event fires.

Definition at line 1294 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.191 EmberInitialSecurityState Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint16_t bitmask`
- `EmberKeyData preconfiguredKey`
- `EmberKeyData networkKey`
- `uint8_t networkKeySequenceNumber`
- `EmberEUI64 preconfiguredTrustCenterEui64`

### 7.191.1 Detailed Description

This describes the Initial Security features and requirements that will be used when forming or joining the network.

Definition at line 1748 of file [ember-types.h](#).

### 7.191.2 Field Documentation

#### 7.191.2.1 `uint16_t EmberInitialSecurityState::bitmask`

This bitmask enumerates which security features should be used, as well as the presence of valid data within other elements of the `EmberInitialSecurityState` data structure. For more details see the `EmberInitialSecurityBitmask`.

Definition at line 1753 of file `ember-types.h`.

#### 7.191.2.2 `EmberKeyData EmberInitialSecurityState::preconfiguredKey`

This is the pre-configured key that can be used by devices when joining the network if the Trust Center does not send the initial security data in-the-clear. For the Trust Center, it will be the global link key and **must** be set regardless of whether joining devices are expected to have a pre-configured Link Key. This parameter will only be used if the `EmberInitialSecurityState::bitmask` sets the bit indicating `EMBER_HAVE_PRECONFIGURED_KEY`.

Definition at line 1762 of file `ember-types.h`.

#### 7.191.2.3 `EmberKeyData EmberInitialSecurityState::networkKey`

This is the Network Key used when initially forming the network. This must be set on the Trust Center. It is not needed for devices joining the network. This parameter will only be used if the `EmberInitialSecurityState::bitmask` sets the bit indicating `EMBER_HAVE_NETWORK_KEY`.

Definition at line 1768 of file `ember-types.h`.

#### 7.191.2.4 `uint8_t EmberInitialSecurityState::networkKeySequenceNumber`

This is the sequence number associated with the network key. It must be set if the Network Key is set. It is used to indicate a particular of the network key for updating and switching. This parameter will only be used if the `EMBER_HAVE_NETWORK_KEY` is set. Generally it should be set to 0 when forming the network; joining devices can ignore this value.

Definition at line 1775 of file `ember-types.h`.

#### 7.191.2.5 `EmberEUI64 EmberInitialSecurityState::preconfiguredTrustCenterEui64`

This is the long address of the trust center on the network that will be joined. It is usually NOT set prior to joining the network and instead it is learned during the joining message exchange. This field is only examined if `EMBER_HAVE_TRUST_CENTER_EUI64` is set in the `EmberInitialSecurityState::bitmask`. Most devices should clear that bit and leave this field alone. This field must be set when using commissioning mode. It is required to be in little-endian format.

Definition at line 1783 of file `ember-types.h`.

The documentation for this struct was generated from the following file:

- `ember-types.h`

## 7.192 EmberKeyData Struct Reference

```
#include <ember-types.h>
```

## Data Fields

- `uint8_t contents [EMBER_ENCRYPTION_KEY_SIZE]`

### 7.192.1 Detailed Description

This data structure contains the key data that is passed into various other functions.

Definition at line 1492 of file `ember-types.h`.

### 7.192.2 Field Documentation

#### 7.192.2.1 `uint8_t EmberKeyData::contents[EMBER_ENCRYPTION_KEY_SIZE]`

This is the key byte data.

Definition at line 1494 of file `ember-types.h`.

The documentation for this struct was generated from the following file:

- `ember-types.h`

## 7.193 EmberKeyStruct Struct Reference

```
#include <ember-types.h>
```

## Data Fields

- `EmberKeyStructBitmask bitmask`
- `EmberKeyType type`
- `EmberKeyData key`
- `uint32_t outgoingFrameCounter`
- `uint32_t incomingFrameCounter`
- `uint8_t sequenceNumber`
- `EmberEUI64 partnerEUI64`

### 7.193.1 Detailed Description

This describes a one of several different types of keys and its associated data.

Definition at line 1901 of file `ember-types.h`.

### 7.193.2 Field Documentation

#### 7.193.2.1 `EmberKeyStructBitmask EmberKeyStruct::bitmask`

This bitmask indicates whether various fields in the structure contain valid data. It also contains the index of the network the key belongs to.

Definition at line 1905 of file `ember-types.h`.

### 7.193.2.2 EmberKeyType EmberKeyStruct::type

This indicates the type of the security key.

Definition at line 1907 of file [ember-types.h](#).

### 7.193.2.3 EmberKeyData EmberKeyStruct::key

This is the actual key data.

Definition at line 1909 of file [ember-types.h](#).

### 7.193.2.4 uint32\_t EmberKeyStruct::outgoingFrameCounter

This is the outgoing frame counter associated with the key. It will contain valid data based on the [EmberKeyStructBitmask](#).

Definition at line 1912 of file [ember-types.h](#).

### 7.193.2.5 uint32\_t EmberKeyStruct::incomingFrameCounter

This is the incoming frame counter associated with the key. It will contain valid data based on the [EmberKeyStructBitmask](#).

Definition at line 1915 of file [ember-types.h](#).

### 7.193.2.6 uint8\_t EmberKeyStruct::sequenceNumber

This is the sequence number associated with the key. It will contain valid data based on the [EmberKeyStructBitmask](#).

Definition at line 1918 of file [ember-types.h](#).

### 7.193.2.7 EmberEUI64 EmberKeyStruct::partnerEUI64

This is the Partner EUI64 associated with the key. It will contain valid data based on the [EmberKeyStructBitmask](#).

Definition at line 1921 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.194 EmberMacFilterMatchStruct Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [uint8\\_t filterIndexMatch](#)

- `EmberMacPassthroughType legacyPassthroughType`
- `EmberMessageBuffer message`

### 7.194.1 Detailed Description

This structure indicates a matching raw MAC message has been received by the application configured MAC filters.

Definition at line 2214 of file `ember-types.h`.

### 7.194.2 Field Documentation

#### 7.194.2.1 `uint8_t EmberMacFilterMatchStruct::filterIndexMatch`

Definition at line 2215 of file `ember-types.h`.

#### 7.194.2.2 `EmberMacPassthroughType EmberMacFilterMatchStruct::legacyPassthroughType`

Definition at line 2216 of file `ember-types.h`.

#### 7.194.2.3 `EmberMessageBuffer EmberMacFilterMatchStruct::message`

Definition at line 2217 of file `ember-types.h`.

The documentation for this struct was generated from the following file:

- `ember-types.h`

## 7.195 EmberMessageDigest Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint8_t contents [EMBER_AES_HASH_BLOCK_SIZE]`

### 7.195.1 Detailed Description

This data structure contains an AES-MMO Hash (the message digest).

Definition at line 1530 of file `ember-types.h`.

### 7.195.2 Field Documentation

#### 7.195.2.1 `uint8_t EmberMessageDigest::contents[EMBER_AES_HASH_BLOCK_SIZE]`

Definition at line 1531 of file `ember-types.h`.

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.196 EmberMfgSecurityStruct Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [EmberKeySettings keySettings](#)

#### 7.196.1 Detailed Description

This structure is used to get/set the security config that is stored in manufacturing tokens.

Definition at line [2129](#) of file [ember-types.h](#).

#### 7.196.2 Field Documentation

##### 7.196.2.1 EmberKeySettings EmberMfgSecurityStruct::keySettings

Definition at line [2130](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.197 EmberMulticastTableEntry Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [EmberMulticastId multicastId](#)
- [uint8\\_t endpoint](#)
- [uint8\\_t networkIndex](#)

#### 7.197.1 Detailed Description

Defines an entry in the multicast table.

A multicast table entry indicates that a particular endpoint is a member of a particular multicast group. Only devices with an endpoint in a multicast group will receive messages sent to that multicast group.

Definition at line [1073](#) of file [ember-types.h](#).

## 7.197.2 Field Documentation

### 7.197.2.1 EmberMulticastId EmberMulticastTableEntry::multicastId

The multicast group ID.

Definition at line 1075 of file [ember-types.h](#).

### 7.197.2.2 uint8\_t EmberMulticastTableEntry::endpoint

The endpoint that is a member, or 0 if this entry is not in use (the ZDO is not a member of any multicast groups).

Definition at line 1079 of file [ember-types.h](#).

### 7.197.2.3 uint8\_t EmberMulticastTableEntry::networkIndex

The network index of the network the entry is related to.

Definition at line 1081 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.198 EmberNeighborTableEntry Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint16_t shortId`
- `uint8_t averageLqi`
- `uint8_t inCost`
- `uint8_t outCost`
- `uint8_t age`
- `EmberEUI64 longId`

### 7.198.1 Detailed Description

Defines an entry in the neighbor table.

A neighbor table entry stores information about the reliability of RF links to and from neighboring nodes.

Definition at line 1014 of file [ember-types.h](#).

## 7.198.2 Field Documentation

### 7.198.2.1 uint16\_t EmberNeighborTableEntry::shortId

The neighbor's two byte network id.

Definition at line 1016 of file [ember-types.h](#).

#### **7.198.2.2 uint8\_t EmberNeighborTableEntry::averageLqi**

An exponentially weighted moving average of the link quality values of incoming packets from this neighbor as reported by the PHY.

Definition at line 1019 of file [ember-types.h](#).

#### **7.198.2.3 uint8\_t EmberNeighborTableEntry::inCost**

The incoming cost for this neighbor, computed from the average LQI. Values range from 1 for a good link to 7 for a bad link.

Definition at line 1022 of file [ember-types.h](#).

#### **7.198.2.4 uint8\_t EmberNeighborTableEntry::outCost**

The outgoing cost for this neighbor, obtained from the most recently received neighbor exchange message from the neighbor. A value of zero means that a neighbor exchange message from the neighbor has not been received recently enough, or that our id was not present in the most recently received one. EmberZNet Pro only.

Definition at line 1029 of file [ember-types.h](#).

#### **7.198.2.5 uint8\_t EmberNeighborTableEntry::age**

In EmberZNet Pro, the number of aging periods elapsed since a neighbor exchange message was last received from this neighbor. In stack profile 1, the number of aging periods since any packet was received. An entry with an age greater than 3 is considered stale and may be reclaimed. The aging period is 16 seconds.

Definition at line 1035 of file [ember-types.h](#).

#### **7.198.2.6 EmberEUI64 EmberNeighborTableEntry::longId**

The 8 byte EUI64 of the neighbor.

Definition at line 1037 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## **7.199 EmberNetworkInitStruct Struct Reference**

```
#include <ember-types.h>
```

### **Data Fields**

- [EmberNetworkInitBitmask bitmask](#)

### 7.199.1 Detailed Description

Defines the network initialization configuration that should be used when ::emberNetworkInitExtended() is called by the application.

Definition at line 474 of file [ember-types.h](#).

### 7.199.2 Field Documentation

#### 7.199.2.1 EmberNetworkInitBitmask EmberNetworkInitStruct::bitmask

Definition at line 475 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.200 EmberNetworkParameters Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [uint8\\_t extendedPanId \[8\]](#)
- [uint16\\_t panId](#)
- [int8\\_t radioTxPower](#)
- [uint8\\_t radioChannel](#)
- [EmberJoinMethod joinMethod](#)
- [EmberNodeId nwkManagerId](#)
- [uint8\\_t nwkUpdateId](#)
- [uint32\\_t channels](#)

### 7.200.1 Detailed Description

Holds network parameters.

For information about power settings and radio channels, see the technical specification for the RF communication module in your Developer Kit.

Definition at line 915 of file [ember-types.h](#).

### 7.200.2 Field Documentation

#### 7.200.2.1 [uint8\\_t EmberNetworkParameters::extendedPanId\[8\]](#)

The network's extended PAN identifier.

Definition at line 917 of file [ember-types.h](#).

**7.200.2.2 uint16\_t EmberNetworkParameters::panId**

The network's PAN identifier.

Definition at line 919 of file [ember-types.h](#).

**7.200.2.3 int8\_t EmberNetworkParameters::radioTxPower**

A power setting, in dBm.

Definition at line 921 of file [ember-types.h](#).

**7.200.2.4 uint8\_t EmberNetworkParameters::radioChannel**

A radio channel. Be sure to specify a channel supported by the radio.

Definition at line 923 of file [ember-types.h](#).

**7.200.2.5 EmberJoinMethod EmberNetworkParameters::joinMethod**

Join method: The protocol messages used to establish an initial parent. It is ignored when forming a ZigBee network, or when querying the stack for its network parameters.

Definition at line 928 of file [ember-types.h](#).

**7.200.2.6 EmberNodeId EmberNetworkParameters::nwkManagerId**

NWK Manager ID. The ID of the network manager in the current network. This may only be set at joining when using EMBER\_USE\_NWK\_COMMISSIONING as the join method.

Definition at line 934 of file [ember-types.h](#).

**7.200.2.7 uint8\_t EmberNetworkParameters::nwkUpdateId**

NWK Update ID. The value of the ZigBee nwkUpdateId known by the stack. This is used to determine the newest instance of the network after a PAN ID or channel change. This may only be set at joining when using EMBER\_USE\_NWK\_COMMISSIONING as the join method.

Definition at line 940 of file [ember-types.h](#).

**7.200.2.8 uint32\_t EmberNetworkParameters::channels**

NWK channel mask. The list of preferred channels that the NWK manager has told this device to use when searching for the network. This may only be set at joining when using EMBER\_USE\_NWK\_COMMISSIONING as the join method.

Definition at line 946 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.201 EmberPrivateKey283k1Data Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- uint8\_t [contents \[EMBER\\_PRIVATE\\_KEY\\_283K1\\_SIZE\]](#)

#### 7.201.1 Detailed Description

This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.

Definition at line [1557](#) of file [ember-types.h](#).

#### 7.201.2 Field Documentation

##### 7.201.2.1 uint8\_t EmberPrivateKey283k1Data::contents[EMBER\_PRIVATE\_KEY\_283K1\_SIZE]

Definition at line [1558](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.202 EmberPrivateKeyData Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- uint8\_t [contents \[EMBER\\_PRIVATE\\_KEY\\_SIZE\]](#)

#### 7.202.1 Detailed Description

This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE).

Definition at line [1511](#) of file [ember-types.h](#).

#### 7.202.2 Field Documentation

##### 7.202.2.1 uint8\_t EmberPrivateKeyData::contents[EMBER\_PRIVATE\_KEY\_SIZE]

Definition at line [1512](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.203 EmberPublicKey283k1Data Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- uint8\_t [contents \[EMBER\\_PUBLIC\\_KEY\\_283K1\\_SIZE\]](#)

### 7.203.1 Detailed Description

This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.

Definition at line [1551](#) of file [ember-types.h](#).

### 7.203.2 Field Documentation

#### 7.203.2.1 uint8\_t EmberPublicKey283k1Data::contents[EMBER\_PUBLIC\_KEY\_283K1\_SIZE]

Definition at line [1552](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.204 EmberPublicKeyData Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- uint8\_t [contents \[EMBER\\_PUBLIC\\_KEY\\_SIZE\]](#)

### 7.204.1 Detailed Description

This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE).

Definition at line [1505](#) of file [ember-types.h](#).

### 7.204.2 Field Documentation

#### 7.204.2.1 uint8\_t EmberPublicKeyData::contents[EMBER\_PUBLIC\_KEY\_SIZE]

Definition at line [1506](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.205 EmberReleaseTypeStruct Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [EmberVersionType typeNum](#)
- [PGM\\_P typeString](#)

#### 7.205.1 Detailed Description

A structure relating version types to human readable strings.

Definition at line [67](#) of file [ember-types.h](#).

#### 7.205.2 Field Documentation

##### 7.205.2.1 EmberVersionType EmberReleaseTypeStruct::typeNum

Definition at line [68](#) of file [ember-types.h](#).

##### 7.205.2.2 PGM\_P EmberReleaseTypeStruct::typeString

Definition at line [69](#) of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.206 EmberRouteTableEntry Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [uint16\\_t destination](#)
- [uint16\\_t nextHop](#)
- [uint8\\_t status](#)
- [uint8\\_t age](#)
- [uint8\\_t concentratorType](#)
- [uint8\\_t routeRecordState](#)

#### 7.206.1 Detailed Description

Defines an entry in the route table.

A route table entry stores information about the next hop along the route to the destination.

Definition at line [1045](#) of file [ember-types.h](#).

## 7.206.2 Field Documentation

### 7.206.2.1 uint16\_t EmberRouteTableEntry::destination

The short id of the destination.

Definition at line 1047 of file [ember-types.h](#).

### 7.206.2.2 uint16\_t EmberRouteTableEntry::nextHop

The short id of the next hop to this destination.

Definition at line 1049 of file [ember-types.h](#).

### 7.206.2.3 uint8\_t EmberRouteTableEntry::status

Indicates whether this entry is active (0), being discovered (1), or unused (3).

Definition at line 1052 of file [ember-types.h](#).

### 7.206.2.4 uint8\_t EmberRouteTableEntry::age

The number of seconds since this route entry was last used to send a packet.

Definition at line 1055 of file [ember-types.h](#).

### 7.206.2.5 uint8\_t EmberRouteTableEntry::concentratorType

Indicates whether this destination is a High RAM Concentrator (2), a Low RAM Concentrator (1), or not a concentrator (0).

Definition at line 1058 of file [ember-types.h](#).

### 7.206.2.6 uint8\_t EmberRouteTableEntry::routeRecordState

For a High RAM Concentrator, indicates whether a route record is needed (2), has been sent (1), or is no long needed (0) because a source routed message from the concentrator has been received.

Definition at line 1063 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.207 EmberSignature283k1Data Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint8_t contents [EMBER_SIGNATURE_283K1_SIZE]`

### 7.207.1 Detailed Description

This data structure contains a DSA signature used in SECT283k1 Elliptical Cryptography. It is the bit concatenation of the 'r' and 's' components of the signature.

Definition at line 1565 of file [ember-types.h](#).

### 7.207.2 Field Documentation

#### 7.207.2.1 uint8\_t EmberSignature283k1Data::contents[EMBER\_SIGNATURE\_283K1\_SIZE]

Definition at line 1566 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.208 EmberSignatureData Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [uint8\\_t contents \[EMBER\\_SIGNATURE\\_SIZE\]](#)

### 7.208.1 Detailed Description

This data structure contains a DSA signature. It is the bit concatenation of the 'r' and 's' components of the signature.

Definition at line 1524 of file [ember-types.h](#).

### 7.208.2 Field Documentation

#### 7.208.2.1 uint8\_t EmberSignatureData::contents[EMBER\_SIGNATURE\_SIZE]

Definition at line 1525 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.209 EmberSmacData Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- [uint8\\_t contents \[EMBER\\_SMAC\\_SIZE\]](#)

### 7.209.1 Detailed Description

This data structure contains the Shared Message Authentication Code (SMAC) data that is used for Certificate Based Key Exchange (CBKE).

Definition at line 1517 of file [ember-types.h](#).

### 7.209.2 Field Documentation

#### 7.209.2.1 `uint8_t EmberSmacData::contents[EMBER_SMAC_SIZE]`

Definition at line 1518 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.210 EmberTaskControl Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint32_t nextEventTime`
- `EmberEventData * events`
- `bool busy`

### 7.210.1 Detailed Description

Control structure for tasks.

This structure should not be accessed directly.

Definition at line 1301 of file [ember-types.h](#).

### 7.210.2 Field Documentation

#### 7.210.2.1 `uint32_t EmberTaskControl::nextEventTime`

Definition at line 1303 of file [ember-types.h](#).

#### 7.210.2.2 `EmberEventData* EmberTaskControl::events`

Definition at line 1305 of file [ember-types.h](#).

#### 7.210.2.3 `bool EmberTaskControl::busy`

Definition at line 1307 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.211 EmberVersion Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint16_t build`
- `uint8_t major`
- `uint8_t minor`
- `uint8_t patch`
- `uint8_t special`
- `EmberVersionType type`

### 7.211.1 Detailed Description

Version struct containing all version information.

Definition at line [90](#) of file [ember-types.h](#).

### 7.211.2 Field Documentation

#### 7.211.2.1 `uint16_t EmberVersion::build`

Definition at line [91](#) of file [ember-types.h](#).

#### 7.211.2.2 `uint8_t EmberVersion::major`

Definition at line [92](#) of file [ember-types.h](#).

#### 7.211.2.3 `uint8_t EmberVersion::minor`

Definition at line [93](#) of file [ember-types.h](#).

#### 7.211.2.4 `uint8_t EmberVersion::patch`

Definition at line [94](#) of file [ember-types.h](#).

#### 7.211.2.5 `uint8_t EmberVersion::special`

Definition at line [95](#) of file [ember-types.h](#).

### 7.211.2.6 EmberVersionType EmberVersion::type

Definition at line 96 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.212 EmberZigbeeNetwork Struct Reference

```
#include <ember-types.h>
```

### Data Fields

- `uint16_t panId`
- `uint8_t channel`
- `bool allowingJoin`
- `uint8_t extendedPanId [8]`
- `uint8_t stackProfile`
- `uint8_t nwkUpdateId`

### 7.212.1 Detailed Description

Defines a ZigBee network and the associated parameters.

Definition at line 441 of file [ember-types.h](#).

### 7.212.2 Field Documentation

#### 7.212.2.1 uint16\_t EmberZigbeeNetwork::panId

Definition at line 442 of file [ember-types.h](#).

#### 7.212.2.2 uint8\_t EmberZigbeeNetwork::channel

Definition at line 443 of file [ember-types.h](#).

#### 7.212.2.3 bool EmberZigbeeNetwork::allowingJoin

Definition at line 444 of file [ember-types.h](#).

#### 7.212.2.4 uint8\_t EmberZigbeeNetwork::extendedPanId[8]

Definition at line 445 of file [ember-types.h](#).

#### 7.212.2.5 uint8\_t EmberZigbeeNetwork::stackProfile

Definition at line 446 of file [ember-types.h](#).

### 7.212.2.6 uint8\_t EmberZigbeeNetwork::nwkUpdatedId

Definition at line 447 of file [ember-types.h](#).

The documentation for this struct was generated from the following file:

- [ember-types.h](#)

## 7.213 emDebtScheduleEntry Struct Reference

```
#include <prepayment-debt-schedule.h>
```

### Data Fields

- uint32\_t [issuerEventId](#)
- uint16\_t [collectionTime](#)
- uint32\_t [nextCollectionTimeUtc](#)
- uint32\_t [firstCollectionTimeSec](#)
- uint8\_t [collectionFrequency](#)
- uint8\_t [debtType](#)
- uint8\_t [endpoint](#)

### 7.213.1 Detailed Description

Definition at line 5 of file [prepayment-debt-schedule.h](#).

### 7.213.2 Field Documentation

#### 7.213.2.1 uint32\_t emDebtScheduleEntry::issuerEventId

Definition at line 6 of file [prepayment-debt-schedule.h](#).

#### 7.213.2.2 uint16\_t emDebtScheduleEntry::collectionTime

Definition at line 7 of file [prepayment-debt-schedule.h](#).

#### 7.213.2.3 uint32\_t emDebtScheduleEntry::nextCollectionTimeUtc

Definition at line 8 of file [prepayment-debt-schedule.h](#).

#### 7.213.2.4 uint32\_t emDebtScheduleEntry::firstCollectionTimeSec

Definition at line 9 of file [prepayment-debt-schedule.h](#).

#### 7.213.2.5 uint8\_t emDebtScheduleEntry::collectionFrequency

Definition at line 10 of file [prepayment-debt-schedule.h](#).

### 7.213.2.6 `uint8_t emDebtScheduleEntry::debtType`

Definition at line 11 of file [prepayment-debt-schedule.h](#).

### 7.213.2.7 `uint8_t emDebtScheduleEntry::endpoint`

Definition at line 12 of file [prepayment-debt-schedule.h](#).

The documentation for this struct was generated from the following file:

- [prepayment-debt-schedule.h](#)

## 7.214 `HaAttributesInfo` Struct Reference

```
#include <rf4ce-zrc20-ha-server.h>
```

### Data Fields

- `uint8_t id`
- `uint8_t length`

### 7.214.1 Detailed Description

Definition at line 199 of file [rf4ce-zrc20-ha-server.h](#).

The documentation for this struct was generated from the following file:

- [rf4ce-zrc20-ha-server.h](#)

## 7.215 `iasZoneDevice` Struct Reference

```
#include <ias-zone-client.h>
```

### Data Fields

- `EmberEUI64 ieeeAddress`
- `uint16_t zoneType`
- `uint16_t zoneStatus`
- `uint8_t zoneState`
- `uint8_t endpoint`
- `uint8_t zoneId`

### 7.215.1 Detailed Description

Definition at line 2 of file [ias-zone-client.h](#).

## 7.215.2 Field Documentation

### 7.215.2.1 EmberEUI64 lasZoneDevice::ieeeAddress

Definition at line 3 of file [ias-zone-client.h](#).

### 7.215.2.2 uint16\_t lasZoneDevice::zoneType

Definition at line 4 of file [ias-zone-client.h](#).

### 7.215.2.3 uint16\_t lasZoneDevice::zoneStatus

Definition at line 5 of file [ias-zone-client.h](#).

### 7.215.2.4 uint8\_t lasZoneDevice::zoneState

Definition at line 6 of file [ias-zone-client.h](#).

### 7.215.2.5 uint8\_t lasZoneDevice::endpoint

Definition at line 7 of file [ias-zone-client.h](#).

### 7.215.2.6 uint8\_t lasZoneDevice::zonId

Definition at line 8 of file [ias-zone-client.h](#).

The documentation for this struct was generated from the following file:

- [ias-zone-client.h](#)

## 7.216 rxFragmentedPacket Struct Reference

```
#include <fragmentation.h>
```

### Data Fields

- `rxPacketStatus status`
- `uint8_t ackedPacketAge`
- `uint8_t buffer [EMBER_AF_PLUGIN_FRAGMENTATION_BUFFER_SIZE]`
- `EmberNodeId fragmentSource`
- `uint8_t fragmentSequenceNumber`
- `uint8_t fragmentBase`
- `uint16_t windowFinger`
- `uint8_t fragmentsExpected`
- `uint8_t fragmentsReceived`
- `uint8_t fragmentMask`
- `uint8_t lastfragmentLen`
- `uint8_t fragmentLen`
- `EmberEventControl * fragmentEventControl`

### 7.216.1 Detailed Description

Definition at line 107 of file [fragmentation.h](#).

### 7.216.2 Field Documentation

#### 7.216.2.1 rxPacketStatus rxFragmentedPacket::status

Definition at line 108 of file [fragmentation.h](#).

## 8.3 \_AF\_API.top File Reference

### 8.4 \_AF\_API.top

00001

## 8.5 address-table.h File Reference

### Macros

- `#define emberAfPluginAddressTableAddEntry(longId)`
- `#define emberAfPluginAddressTableRemoveEntryByIndex(index)`
- `#define emberAfPluginAddressTableLookupByEui64(longId)`

### Functions

- `EmberStatus emberAfPluginAddressTableRemoveEntry (EmberEUI64 entry)`
- `uint8_t emberAfLookupAddressTableEntryByEui64 (EmberEUI64 longId)`
- `EmberStatus emberAfPluginAddressTableLookupByIndex (uint8_t index, EmberEUI64 entry)`
- `EmberNodeId emberAfPluginAddressTableLookupNodeIdByIndex (uint8_t index)`
- `EmberStatus emberAfSendUnicastToEui64 (EmberEUI64 destination, EmberApsFrame *apsFrame, uint16_t messageLength, uint8_t *message)`
- `EmberStatus emberAfSendCommandUnicastToEui64 (EmberEUI64 destination)`
- `EmberStatus emberAfGetCurrentSenderEui64 (EmberEUI64 address)`

### 8.5.1 Macro Definition Documentation

#### 8.5.1.1 #define emberAfPluginAddressTableAddEntry( *longId* )

Definition at line 16 of file [address-table.h](#).

#### 8.5.1.2 #define emberAfPluginAddressTableRemoveEntryByIndex( *index* )

Definition at line 31 of file [address-table.h](#).

#### 8.5.1.3 #define emberAfPluginAddressTableLookupByEui64( *longId* )

Definition at line 39 of file [address-table.h](#).

### 8.5.2 Function Documentation

#### 8.5.2.1 EmberStatus emberAfPluginAddressTableRemoveEntry ( EmberEUI64 *entry* )

#### 8.5.2.2 uint8\_t emberAfLookupAddressTableEntryByEui64 ( EmberEUI64 *longId* )

#### 8.5.2.3 EmberStatus emberAfPluginAddressTableLookupByIndex ( uint8\_t *index*, EmberEUI64 *entry* )

#### 8.5.2.4 EmberNodeId emberAfPluginAddressTableLookupNodeIdByIndex ( uint8\_t *index* )

#### 8.5.2.5 EmberStatus emberAfSendUnicastToEui64 ( EmberEUI64 *destination*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message* )

Allows to send a unicast message specifying the EUI64 of the destination node. Note: the specified EUI64 must be present in the address table, otherwise the status EMBER\_INVALID\_CALL is returned.

#### 8.5.2.6 EmberStatus emberAfSendCommandUnicastToEui64 ( EmberEUI64 *destination* )

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API. It will be sent as unicast to the node that corresponds in the address table to the passed EUI64.

#### 8.5.2.7 EmberStatus emberAfGetCurrentSenderEui64 ( EmberEUI64 *address* )

If the sender EUI64 is available it copies it in the passed variable and returns EMBER\_SUCCESS. Otherwise, it returns EMBER\_INVALID\_CALL.

#### 8.7.1.3 #define initToConstRb( x )

Definition at line 12 of file [aes-cmac.h](#).

### 8.7.2 Function Documentation

#### 8.7.2.1 void emberAfPluginAesMacAuthenticate ( const uint8\_t \* key, const uint8\_t \* message, uint8\_t messageLength, uint8\_t \* out )

Computes the Cipher-based Message Authentication Code (CMAC) corresponding to the passed message and the passed key.

#### Parameters

<i>key</i>	The key to be used to produce the cipher-based authentication code.
<i>message</i>	A pointer to the message for which a cipher-based authentication code should be computed.
<i>messageLength</i>	The length in bytes of the message to be authenticated.

A pointer to a 4-byte area memory in which the resulting cipher-based authentication code will be stored.

### Data Structures

- union [EmberAfDefaultAttributeValue](#)  
*Type for default values.*
- struct [EmberAfAttributeMinMaxValue](#)  
*Type describing the attribute default, min and max values.*
- union [EmberAfDefaultOrMinMaxAttributeValue](#)  
*Union describing the attribute default/min/max values.*
- struct [EmberAfAttributeMetadata](#)  
*Each attribute has it's metadata stored in such struct.*
- struct [EmberAfCluster](#)  
*Struct describing cluster.*
- struct [EmberAfAttributeSearchRecord](#)  
*Struct used to find an attribute in storage. Together the elements in this search record constitute the "primary key" used to identify a unique attribute value in attribute storage.*
- struct [EmberAfManufacturerCodeEntry](#)
- struct [EmberAfIncomingMessage](#)  
*a struct containing the superset of values passed to both emberIncomingMessageHandler on the SOC and ezspIncomingMessageHandler on the host.*
- struct [EmberAfInterpanHeader](#)  
*Interpan header used for sending and receiving interpan messages.*
- struct [EmberAfAllowedInterPanMessage](#)  
*This structure is used define an interpan message that will be accepted by the interpan filters.*
- struct [EmberAfClusterCommand](#)  
*The EmberAFClusterCommand is a struct wrapper for all the data pertaining to a command which comes in over the air. This enables struct is used to encapsulate a command in a single place on the stack and pass a pointer to that location around during command processing.*
- struct [EmberAfEndpointType](#)  
*Endpoint type struct describes clusters that are on the endpoint.*
- struct [EmberAfSecurityProfileData](#)
- struct [EmberAfDefinedEndpoint](#)

- struct [EmberAfLoadControlEvent](#)

*Struct that maps actual endpoint type, onto a specific endpoint.*
- struct [EmberAfServiceDiscoveryResult](#)

*A structure containing general information about the service discovery.*
- struct [EmberAfEndpointList](#)

*A list of endpoints received during a service discovery attempt. This will be returned for a match descriptor request and a active endpoint request.*
- struct [EmberAfClusterList](#)

*A list of clusters received during a service discovery attempt. This will be returned for a simple descriptor request.*
- struct [EmberAfEventContext](#)

*a structure used to keep track of cluster related events and their sleep control values. The cluster code will not know at runtime all of the events that it has access to in the event table. This structure is stored by the application framework in an event context table which along with helper functions allows the cluster code to schedule and deactivate its associated events.*
- struct [EmberAfSceneTableEntry](#)

*A structure used to store scene table entries in RAM or in tokens, depending on a plugin setting. If endpoint field is `EMBER_AF_SCENE_TABLE_UNUSED_ENDPOINT_ID`, the entry is unused.*
- struct [EmberAfPluginMessagingClientMessage](#)
- struct [EmberAfPluginPriceClientPrice](#)
- struct [EmberAfPluginReportingEntry](#)

*A structure used to store reporting configurations. If endpoint field is `EMBER_AF_PLUGIN_REPORTING_UNUSED_ENDPOINT_ID`, the entry is unused.*
- struct [EmberAfOtaImageId](#)

*This is a unique identifier for referencing ZigBee Over-the-air upgrade images. It is used by the OTA plugins when passing around information about an upgrade file.*
- struct [EmberAfImageBlockRequestCallbackStruct](#)

*This is the data structure that is passed to the `emberAfImageBlockRequestCallback()` to let the application decide what to do.*
- struct [EmberAfOtaHeader](#)

*This structure is an in-memory representation of the Over-the-air header data that resides on disk. It is not a byte-for-byte copy.*
- struct [EmberAfTagData](#)

*This structure contains information about a tag that resides within an Over-the-air bootload file.*
- struct [EmberAfMessageStruct](#)

*The `EmberAfMessageStruct` is a struct wrapper that contains all the data about a low-level message to be sent (it may be ZCL or may be some other protocol).*
- struct [EmberAfLinkKeyBackupData](#)

*A data struct for a link key backup.*
- struct [EmberAfTrustCenterBackupData](#)

*A data struct for all the trust center backup data.*
- struct [EmberAfStandaloneBootloaderQueryResponseData](#)

*A data struct for the information retrieved during a response to an Ember Bootloader over-the-air query.*
- struct [EmberAfCommandMetadata](#)

*A data struct used to keep track of incoming and outgoing commands for command discovery.*
- struct [EmberAfTimeStruct](#)

*A data structure used to describe the time in a human understandable format (as opposed to 32-bit UTC)*
- struct [EmberAfDate](#)

*A data structure used to describe the ZCL Date data type.*

- struct [EmberAfDeviceManagementTenancy](#)
- struct [EmberAfDeviceManagementSupplier](#)
- struct [EmberAfDeviceManagementSupply](#)
- struct [EmberAfDeviceManagementSiteId](#)
- struct [EmberAfDeviceManagementCIN](#)
- struct [EmberAfDeviceManagementSupplyStatusFlags](#)
- struct [EmberAfDeviceManagementUncontrolledFlowThreshold](#)
- struct [EmberAfDeviceManagementSupplyStatus](#)
- struct [EmberAfDeviceManagementPassword](#)
- struct [EmberAfDeviceManagementInfo](#)
- struct [EmberAfDeviceManagementAttributeRange](#)
- struct [EmberAfDeviceManagementAttributeTable](#)
- struct [EmberAfGbzMessageData](#)
- struct [EmberAfGpfMessage](#)
- struct [EmberAfRemoteClusterStruct](#)

*Zigbee Internet Client/Server remote cluster struct.*

- struct [EmberAfRemoteBindingStruct](#)

*Zigbee Internet Client/Server Remote Binding struct.*

- struct [EmberAfClusterInfo](#)
- struct [EmberAfEndpointInfoStruct](#)

*A struct containing basic information about an endpoint.*

- struct [EmberAfDeviceInfo](#)

*A struct containing endpoint information about a device.*

- struct [EmberAfDeviceDatabaseIterator](#)
- struct [EmberAfJoiningDevice](#)

### 8.11.1 Detailed Description

The master include file for the Ember ApplicationFramework API.

Definition in file `af.h`.

## 8.11.2 Macro Definition Documentation

### 8.11.2.1 #define emberAfMaxPowerLevel( )

The maximum power level that can be used by the chip.

Definition at line 2065 of file af.h.

## 8.12 af.h

## 8.15.2 Function Documentation

**8.15.2.1 uint16\_t emberAfBulbConfigMask( void )**

Returns the bitmask of which bulb configuration parameters have been set.

Function to return a bitmask that details which of the bulb configuration parameters have been set.

### Returns

An ::uint16\_t value bitmask that shows which parameters where set. A value of 1 means not set, and a value of 0 means set.

**8.15.2.2 int8\_t emberAfBulbConfigTxPower( void )**

Returns configured value for transmit power.

This function will read the CIB area specified by the bulb config plugin for the TX power required by this device. Note: this function does not check to see if the value was valid. The valid value must be checked from the function [emberAfBulbConfigHasTxPower\(\)](#).

**Returns**

An `:int8_t` value with the preferred transmit power for this hardware.

**8.15.2.3 `uint16_t emberAfBulbConfigFrequency( void )`**

PWM Frequency for the bulb drive PWMs.

This function will read the CIB area specified by the bulb config plugin for the PWM frequency, in HZ. Note: this function does not check to see if the value was valid. The value must be checked with the function [emberAfBulbConfigHasFrequency\(\)](#).

**Returns**

An `:uint16_t` value that specifies the PWM frequency in Hz.

**8.15.2.4 `uint16_t emberAfBulbConfigMinOnUs( void )`**

Specify minimum on time in microseconds.

This function will read the CIB area specified by the bulb config plugin for the minimum on time in microseconds. Note: this function does not check to see if the value was valid. The value must be checked with the function [emberAfBulbConfigHasMinOnUs\(\)](#).

**Returns**

An `:uint16_t` value that specifies the minimum on time in microseconds.

**8.15.2.5 `uint16_t emberAfBulbConfigMaxOnUs( void )`**

Specify maximum on time in microseconds.

This function will read the CIB area specified by the bulb config plugin for the maximum on time in microseconds. Note: this function does not check to see if the value was valid. The value must be checked with the function [emberAfBulbConfigHasMaxOnUs\(\)](#).

**Returns**

An `:uint16_t` value that specifies the maximum on time in microseconds.

**8.15.2.6 `uint8_t emberAfBulbConfigPwmWhitePort( void )`**

Port and pin for the white PWM.

This function will read the CIB area specified by the bulb config plugin for the GPIO port and pin of the white PWM output. The port is specified by bits 3 and 4, while the pin is specified by bits 0 to 2. Note: this function does not check to see if the value was valid. The value must be checked with the function [emberAfBulbConfigHasWhitePwm\(\)](#).

**Returns**

An `:uint8_t` value that specifies the port and pin of the white PWM.

### **8.15.2.7 uint8\_t emberAfBulbConfigPwmRedPort( void )**

Port and pin for the red PWM.

This function will read the CIB area specified by the bulb config plugin for the GPIO port and pin of the red PWM output. The port is specified by bits 3 and 4, while the pin is specified by bits 0 to 2. Note: this function does not check to see if the value was valid. The value must be checked with the function [emberAfBulbConfigHasRedPwm\(\)](#).

#### **Returns**

An ::uint8\_t value that specifies the port and pin of the red PWM.

### **8.15.2.8 uint8\_t emberAfBulbConfigPwmGreenPort( void )**

Port and pin for the green PWM.

This function will read the CIB area specified by the bulb config plugin for the GPIO port and pin of the green PWM output. The port is specified by bits 3 and 4, while the pin is specified by bits 0 to 2. Note: this function does not check to see if the value was valid. The value must be checked with the function [emberAfBulbConfigHasGreenPwm\(\)](#).

#### **Returns**

An ::uint8\_t value that specifies the port and pin of the green PWM.

### **8.15.2.9 uint8\_t emberAfBulbConfigPwmBluePort( void )**

Port and pin for the blue PWM.

This function will read the CIB area specified by the bulb config plugin for the GPIO port and pin of the blue PWM output. The port is specified by bits 3 and 4, while the pin is specified by bits 0 to 2. Note: this function does not check to see if the value was valid. The value must be checked with the function [emberAfBulbConfigHasBluePwm\(\)](#).

#### **Returns**

An ::uint8\_t value that specifies the port and pin of the blue PWM.

### **8.15.2.10 uint8\_t emberAfBulbConfigHardwareVersion( void )**

Returns the hardware version.

This function will read the CIB area specified by the bulb config plugin for the hardware version. Note: this function does not check to see if the value is valid. The value must be checked with the function [emberAfBulbconfigHasHardwareVersion\(\)](#);

#### **Returns**

An ::uint8\_t value that represents the hardware version.

**8.15.2.11 bool emberAfBulbConfigHasTxPower ( void )**

Function to return whether the TX power was configured.

This function returns true if the TX power was configured, and false if not.

**Returns**

A ::bool value stating whether the TX power was configured.

**8.15.2.12 bool emberAfBulbConfigHasFrequency ( void )**

Function to return whether the PWM frequency was configured.

This function returns true if the PWM frequency was configured, and false if not.

**Returns**

A ::bool value stating whether the PWM frequency was configured.

**8.15.2.13 bool emberAfBulbConfigHasMinOnUs ( void )**

Function to return whether the min on time was configured.

This function returns true if the min on time was configured, and false if not.

**Returns**

A ::bool value stating whether the min on time was configured.

**8.15.2.14 bool emberAfBulbConfigHasMaxOnUs ( void )**

Function to return whether the max on time was configured.

This function returns true if the max on time was configured, and false if not.

**Returns**

A ::bool value stating whether the max on time was configured.

**8.15.2.15 bool emberAfBulbConfigHasWhitePwm ( void )**

Function to return whether the white PWM was configured.

This function returns true if the white PWM was configured, and false if not.

**Returns**

A ::bool value stating whether the white PWM was configured.

**8.15.2.16 bool emberAfBulbConfigHasRedPwm ( void )**

Function to return whether the red PWM was configured.

This function returns true if the red PWM was configured, and false if not.

**Returns**

A ::bool value stating whether the red PWM was configured.

**8.15.2.17 bool emberAfBulbConfigHasGreenPwm ( void )**

Function to return whether the green PWM was configured.

This function returns true if the green PWM was configured, and false if not.

**Returns**

A ::bool value stating whether the green PWM was configured.

**8.15.2.18 bool emberAfBulbConfigHasBluePwm ( void )**

Function to return whether the blue PWM was configured.

This function returns true if the blue PWM was configured, and false if not.

**Returns**

A ::bool value stating whether the blue PWM was configured.

**8.15.2.19 bool emberAfBulbConfigHasHardwareVersion ( void )**

Function to return whether the hardware version was configured.

This function returns true if the hardware version was configured, and false if not.

**Returns**

A ::bool value stating whether the hardware version was configured.

**8.15.2.20 uint8\_t emberAfBulbConfigWhitePort ( void )**

Port number for the white PWM.

Function to return the white port number. It returns an enum 0, 1, or 2 for port a, b, or c respectively. It will return 0xff if the port has not been configured.

**Returns**

An ::uint8\_t value for the white port.

**8.15.2.21 uint8\_t emberAfBulbConfigWhitePin ( void )**

Pin number for the white PWM.

Function to return the white pin number. It returns a value between 0 and 7 inclusive corresponding to the pin number of the white PWM. It will return 0xff if the pin has not been configured.

**Returns**

An ::uint8\_t value for the white pin.

**8.15.2.22 uint8\_t emberAfBulbConfigRedPort ( void )**

Port number for the red PWM.

Function to return the red port number. It returns an enum 0, 1, or 2 for port a, b, or c respectively. It will return 0xff if the port has not been configured.

**Returns**

An ::uint8\_t value for the red port.

**8.15.2.23 uint8\_t emberAfBulbConfigRedPin ( void )**

Pin number for the red PWM.

Function to return the red pin number. It returns a value between 0 and 7 inclusive corresponding to the pin number of the red PWM. It will return 0xff if the pin has not been configured.

**Returns**

An ::uint8\_t value for the red pin.

**8.15.2.24 uint8\_t emberAfBulbConfigGreenPort ( void )**

Port number for the green PWM.

Function to return the green port number. It returns an enum 0, 1, or 2 for port a, b, or c respectively. It will return 0xff if the port has not been configured.

**Returns**

An ::uint8\_t value for the green port.

**8.15.2.25 uint8\_t emberAfBulbConfigGreenPin ( void )**

Pin number for the green PWM.

Function to return the green pin number. It returns a value between 0 and 7 inclusive corresponding to the pin number of the green PWM. It will return 0xff if the pin has not been configured.

**Returns**

An ::uint8\_t value for the green pin.

**8.15.2.26 uint8\_t emberAfBulbConfigBluePort( void )**

Port number for the blue PWM.

Function to return the blue port number. It returns an enum 0, 1, or 2 for port a, b, or c respectively. It will return 0xff if the port has not been configured.

**Returns**

An ::uint8\_t value for the blue port.

**8.15.2.27 uint8\_t emberAfBulbConfigBluePin( void )**

Pin number for the blue PWM.

Function to return the blue pin number. It returns a value between 0 and 7 inclusive corresponding to the pin number of the blue PWM. It will return 0xff if the pin has not been configured.

**Returns**

An ::uint8\_t value for the blue pin.

**8.15.2.28 volatile uint32\_t\* emberAfPwmControlWhitePwm( void )**

Pointer to the white compare register.

This function will examine the bulb configuration and return a pointer to the white compare register. It will return a pointer to the default register as specified in the board header file if none has been configured through the bulb config plugin.

**Returns**

An ::uint32\_t\* pointer to the white PWM compare register.

**8.15.2.29 volatile uint32\_t\* emberAfPwmControlRedPwm( void )**

Pointer to the red compare register.

This function will examine the bulb configuration and return a pointer to the red compare register. It will return a pointer to the default register as specified in the board header file if none has been configured through the bulb config plugin.

**Returns**

An ::uint32\_t\* pointer to the red PWM compare register.

**8.15.2.30 volatile uint32\_t\* emberAfPwmControlGreenPwm( void )**

Pointer to the green compare register.

This function will examine the bulb configuration and return a pointer to the green compare register. It will return a pointer to the default register as specified in the board header file if none has been configured through the bulb config plugin.

**Returns**

An ::uint32\_t\* pointer to the green PWM compare register.

**8.15.2.31 volatile uint32\_t\* emberAfPwmControlBluePwm ( void )**

Pointer to the white blue register.

This function will examine the bulb configuration and return a pointer to the blue compare register. It will return a pointer to the default register as specified in the board header file if none has been configured through the bulb config plugin.

**Returns**

An ::uint32\_t\* pointer to the blue PWM compare register.

**8.15.2.32 uint16\_t emberAfPluginBulbConfigMinDriveValue ( void )**

Return the minimum valid value for the PWM.

This function will examine the configuration values and return the minimum valid PWM value when it is on. Note: the PWM will still be set to zero for an off condition. However, values between zero and the minimum drive are invalid as they may damage hardware or yield unpredictable flashing behavior on the LED output.

**Returns**

An ::uint16\_t value that is the minimum drive level for the PWM when on.

**8.15.2.33 uint16\_t emberAfPluginBulbConfigMaxDriveValue ( void )**

Return the maximum valid value for the PWM.

This function will examine the configuration values and return the maximum valid PWM value when it is on. Note: if the max on microseconds is not configured, this value will be equal to the PWM tics per period value.

**Returns**

An ::uint16\_t value that is the maximum drive level for the PWM when on.

**8.15.2.34 uint16\_t emberAfBulbConfigTicsPerPeriod ( void )**

Return the tics per PWM period..

This function will examine the frequency configuration and determine the number of PWM ticks required to implement that frequency.

**Returns**

An ::uint16\_t value that is the number of PWM ticks per period.

### 8.15.2.35 void emberAfPluginBulbConfigConfigurePwm ( void )

Initialize PWM output hardware based on configuration.

This function will examine the bulb configuration values and configure the PWM hardware to match those settings.

### 8.15.2.36 void emberAfPluginBulbConfigDriveWRGB ( uint16\_t white, uint16\_t red, uint16\_t green, uint16\_t blue )

Function to drive the white, red, green, and blue PWM outputs.

This function will set the compare registers for the white, red, green, and blue PWM drivers.

#### Parameters

<i>white,:</i>	value for the white comparison register.
<i>red,:</i>	value for the red comparison register.
<i>green,:</i>	value for the green comparison register.
<i>blue,:</i>	value for the blue comparison register.

### 8.15.2.37 void emberAfPluginBulbConfigDrivePwm ( uint16\_t value )

Function to drive the white PWM output.

This function will set the compare registers for the white pwm output. It will automatically set the values for red, green, and blue to zero. It is intended for a simple, white dimmable bulb.

#### Parameters

<i>value,:</i>	value for the white comparison register.
----------------	--

### 8.15.2.38 void emberAfPluginBulbConfigLedOn ( uint8\_t time )

Function to turn on the LED output.

Function to turn the LED on full brightness as an indication to the user. After the time, the LED will be reset to the appropriate values as determined by the level, on/off, and color control cluster (if appropriate).

#### Parameters

<i>time,:</i>	Number of seconds to turn the LED on. 0 means forever.
---------------	--

### 8.15.2.39 void emberAfPluginBulbConfigLedOff ( uint8\_t time )

Function to turn off the LED output.

Function to turn the LED off as an indication to the user. After the time, the LED will be reset to the appropriate values as determined by the level, on/off, and color control cluster (if appropriate).

**Parameters**

<i>time,:</i>	Number of seconds to turn the LED off. 0 means forever.
---------------	---

**8.15.2.40 void emberAfPluginBulbConfigLedBlink ( uint8\_t count, uint16\_t blinkTime )**

Blink the LED.

Function to blink the LED as an indication to the user. Note: this will blink the LED symmetrically. If asymmetric blinking is required, please use the function [emberAfPluginBulbConfigLedBlinkPattern\(...\)](#).

**Parameters**

<i>count,:</i>	Number of times to blink. 0 means forever.
<i>blinkTime,:</i>	Amount of time the bulb will be on or off during the blink.

**8.15.2.41 void emberAfPluginBulbConfigLedBlinkPattern ( uint8\_t count, uint8\_t length, uint16\_t \* pattern )**

Blink a pattern on the LED.

Function to blink a pattern on the LED. User sets up a pattern of on/off events.

**Parameters**

<i>count,:</i>	Number of times to blink the pattern. 0 means forever
<i>length,:</i>	Length of the pattern. 20 is the maximum lenght.
<i>pattern[ ],:</i>	Series of on/off times for the blink pattern.

**8.15.2.42 void emberAfBulbConfigDimIndicate ( uint8\_t count, uint16\_t timeMs )**

Dim the bulb on/off.

Function to dim the bulb on and off. This is an option disabled by default but requested by several customers. Instead of transitioning from on to off immediately, this function creates a slower transition from on to off and back to on over the course of ::time milliseconds.

**Parameters**

<i>count,:</i>	Number of times to blink. 0 means forever
<i>timeMs,:</i>	Length time, in milliseconds, for the transition.

#### 8.21.1.2 #define EMBER\_AF\_CALENDAR\_MAXIMUM\_CALENDAR\_NAME\_LENGTH

Definition at line 5 of file `calendar-client.h`.

### 8.21.2 Function Documentation

#### 8.21.2.1 uint8\_t `emberAfPluginCalendarClientGetCalendarIndexByType` ( *uint8\_t endpoint, uint8\_t calendarType* )

Gets the first calendar index based on the calendar type.

##### Parameters

<i>endpoint</i>	The relevant endpoint.
<i>calendarType</i>	The type of calendar that should be searched for in the table.

##### Returns

The index of the first matching calendar, or EMBER\_AF\_PLUGIN\_CALENDAR\_CLIENT\_CALENDARS if a match cannot be found.

#### 8.21.2.2 uint32\_t `emberAfPluginCalendarClientGetCalendarId` ( *uint8\_t endpoint, uint8\_t index* )

Gets the calendar ID at the specified index.

##### Parameters

<i>endpoint</i>	The relevant endpoint.
<i>index</i>	The index in the calendar table whose calendar ID should be returned.

## Returns

The calendar ID of the calendar at the specified index. If index is out of bounds, EMBER\_AF\_PLUGIN\_CALENDAR\_CLIENT\_INVALID\_CALENDAR\_ID will be returned. If a match cannot be found.

### Functions

- void **emberAfCalendarServerPublishCalendarMessage** (EmberNodeId nodeId, uint8\_t srcEndpoint, uint8\_t dstEndpoint, uint8\_t calendarIndex)
- void **emberAfCalendarServerPublishDayProfilesMessage** (EmberNodeId nodeId, uint8\_t srcEndpoint, uint8\_t dstEndpoint, uint8\_t calendarIndex, uint8\_t dayIndex)

- void `emberAfCalendarServerPublishWeekProfileMessage` (`EmberNodeId nodeId, uint8_t srcEndpoint, uint8_t dstEndpoint, uint8_t calendarIndex, uint8_t weekIndex`)
- void `emberAfCalendarServerPublishSeasonsMessage` (`EmberNodeId nodeId, uint8_t srcEndpoint, uint8_t dstEndpoint, uint8_t calendarIndex`)
- void `emberAfCalendarServerPublishSpecialDaysMessage` (`EmberNodeId nodeId, uint8_t srcEndpoint, uint8_t dstEndpoint, uint8_t calendarIndex`)
- void `emberAfCalendarServerCancelCalendarMessage` (`EmberNodeId nodeId, uint8_t srcEndpoint, uint8_t dstEndpoint, uint8_t calendarIndex`)

### 8.25.1 Function Documentation

#### 8.25.1.1 void `emberAfCalendarServerPublishCalendarMessage` ( `EmberNodeId nodeId, uint8_t srcEndpoint, uint8_t dstEndpoint, uint8_t calendarIndex` )

Publish an calendar.

This function will locate the calendar in the calendar table at the specified location and using the information from the calendar build and send a PublishCalendar command.

##### Parameters

<code>nodeId</code>	The destination nodeId
<code>srcEndpoint</code>	The source endpoint
<code>dstEndpoint</code>	The destination endpoint
<code>calendarIndex</code>	The index in the calendar table.

#### 8.25.1.2 void `emberAfCalendarServerPublishDayProfilesMessage` ( `EmberNodeId nodeId, uint8_t srcEndpoint, uint8_t dstEndpoint, uint8_t calendarIndex, uint8_t dayIndex` )

Publish the day profiles of the specified day in the specified calendar.

This function will locate the calendar in the calendar table at the specified location and using the information from the calendar build and send a PublishDayProfiles command.

##### Parameters

<code>nodeId</code>	The destination nodeId
<code>srcEndpoint</code>	The source endpoint
<code>dstEndpoint</code>	The destination endpoint
<code>calendarIndex</code>	The index in the calendar table.
<code>dayIndex</code>	The index of the day in the calendar.

#### 8.25.1.3 void `emberAfCalendarServerPublishWeekProfileMessage` ( `EmberNodeId nodeId, uint8_t srcEndpoint, uint8_t dstEndpoint, uint8_t calendarIndex, uint8_t weekIndex` )

Publish the week profile of the specified week in the specified calendar.

This function will locate the calendar in the calendar table at the specified location and using the information from the calendar build and send a PublishWeekProfile command.

**Parameters**

<i>nodeId</i>	The destination nodeId
<i>srcEndpoint</i>	The source endpoint
<i>dstEndpoint</i>	The destination endpoint
<i>calendarIndex</i>	The index in the calendar table.
<i>weekIndex</i>	The index of the week in the calendar.

**8.25.1.4 void emberAfCalendarServerPublishSeasonsMessage ( EmberNodeId *nodeId*, uint8\_t *srcEndpoint*, uint8\_t *dstEndpoint*, uint8\_t *calendarIndex* )**

Publish the seasons in the specified calendar.

This function will locate the calendar in the calendar table at the specified location and using the information from the calendar build and send a PublishSeasons command.

**Parameters**

<i>nodeId</i>	The destination nodeId
<i>srcEndpoint</i>	The source endpoint
<i>dstEndpoint</i>	The destination endpoint
<i>calendarIndex</i>	The index in the calendar table.

**8.25.1.5 void emberAfCalendarServerPublishSpecialDaysMessage ( EmberNodeId *nodeId*, uint8\_t *srcEndpoint*, uint8\_t *dstEndpoint*, uint8\_t *calendarIndex* )**

Publish the special days of the specified calendar.

This function will locate the calendar in the calendar table at the specified location and using the information from the calendar build and send a PublishSpecialDays command.

**Parameters**

<i>nodeId</i>	The destination nodeId
<i>srcEndpoint</i>	The source endpoint
<i>dstEndpoint</i>	The destination endpoint
<i>calendarIndex</i>	The index in the calendar table.

**8.25.1.6 void emberAfCalendarServerCancelCalendarMessage ( EmberNodeId *nodeId*, uint8\_t *srcEndpoint*, uint8\_t *dstEndpoint*, uint8\_t *calendarIndex* )**

Publish the special days of the specified calendar.

This function will locate the calendar in the calendar table at the specified location and using the information from the calendar build and send a CancelCalendar command. Note: it's up to the caller to invalidate the local copy of the calendar.

**Parameters**

<i>nodeId</i>	The destination nodeId
<i>srcEndpoint</i>	The source endpoint
<i>dstEndpoint</i>	The destination endpoint
<i>calendarIndex</i>	The index in the calendar table.

- boolean `emberAfRssiLocationClusterSetDeviceConfigurationCallback` (int16s power, int16u pathLossExponent, int16u calculationPeriod, int8u numberRssiMeasurements, int16u reportingPeriod)

## Binary Input (Basic) Cluster Callbacks

- void `emberAfBinaryInputBasicClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfBinaryInputBasicClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfBinaryInputBasicClusterClientInitCallback` (int8u endpoint)
- void `emberAfBinaryInputBasicClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfBinaryInputBasicClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfBinaryInputBasicClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfBinaryInputBasicClusterClientTickCallback` (int8u endpoint)

- void `emberAfBinaryInputBasicClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfBinaryInputBasicClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfBinaryInputBasicClusterServerInitCallback` (int8u endpoint)
- void `emberAfBinaryInputBasicClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfBinaryInputBasicClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfBinaryInputBasicClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfBinaryInputBasicClusterServerTickCallback` (int8u endpoint)

## Commissioning Cluster Callbacks

- void `emberAfCommissioningClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfCommissioningClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfCommissioningClusterClientInitCallback` (int8u endpoint)
- void `emberAfCommissioningClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfCommissioningClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfCommissioningClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfCommissioningClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfCommissioningClusterResetStartupParametersCallback` (int8u options, int8u index)
- boolean `emberAfCommissioningClusterResetStartupParametersResponseCallback` (int8u status)
- boolean `emberAfCommissioningClusterRestartDeviceCallback` (int8u options, int8u delay, int8u jitter)
- boolean `emberAfCommissioningClusterRestartDeviceResponseCallback` (int8u status)
- boolean `emberAfCommissioningClusterRestoreStartupParametersCallback` (int8u options, int8u index)
- boolean `emberAfCommissioningClusterRestoreStartupParametersResponseCallback` (int8u status)
- void `emberAfCommissioningClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfCommissioningClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfCommissioningClusterServerInitCallback` (int8u endpoint)
- void `emberAfCommissioningClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfCommissioningClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfCommissioningClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfCommissioningClusterServerTickCallback` (int8u endpoint)

## Partition Cluster Callbacks

- void `emberAfPartitionClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPartitionClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPartitionClusterClientInitCallback` (int8u endpoint)
- void `emberAfPartitionClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPartitionClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfPartitionClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPartitionClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfPartitionClusterMultipleAckCallback` (int8u ackOptions, int8u \*firstFrameIdAndNackList)
- boolean `emberAfPartitionClusterReadHandshakeParamCallback` (int16u partitionedClusterId, int8u \*attributeList)
- boolean `emberAfPartitionClusterReadHandshakeParamResponseCallback` (int16u partitionedClusterId, int8u \*readAttributeStatusRecords)
- void `emberAfPartitionClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPartitionClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPartitionClusterServerInitCallback` (int8u endpoint)
- void `emberAfPartitionClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPartitionClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfPartitionClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPartitionClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfPartitionClusterTransferPartitionedFrameCallback` (int8u fragmentationOptions, int8u \*partitionedIndicatorAndFrame)
- boolean `emberAfPartitionClusterWriteHandshakeParamCallback` (int16u partitionedClusterId, int8u \*writeAttributeRecords)

## Over the Air Bootloading Cluster Callbacks

- void `emberAfOtaBootloadClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfOtaBootloadClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfOtaBootloadClusterClientInitCallback` (int8u endpoint)
- void `emberAfOtaBootloadClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfOtaBootloadClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)

- `EmberAfStatus emberAfOtaBootloadClusterClientPreAttributeChangedCallback (int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u *value)`
- `void emberAfOtaBootloadClusterClientTickCallback (int8u endpoint)`
- `void emberAfOtaBootloadClusterServerAttributeChangedCallback (int8u endpoint, EmberAfAttributeId attributeId)`
- `void emberAfOtaBootloadClusterServerDefaultResponseCallback (int8u endpoint, int8u commandId, EmberAfStatus status)`
- `void emberAfOtaBootloadClusterServerInitCallback (int8u endpoint)`
- `void emberAfOtaBootloadClusterServerManufacturerSpecificAttributeChangedCallback (int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode)`
- `void emberAfOtaBootloadClusterServerMessageSentCallback (EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame *apsFrame, int16u msgLen, int8u *message, EmberStatus status)`
- `EmberAfStatus emberAfOtaBootloadClusterServerPreAttributeChangedCallback (int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u *value)`
- `void emberAfOtaBootloadClusterServerTickCallback (int8u endpoint)`

## Power Profile Cluster Callbacks

- `void emberAfPowerProfileClusterClientAttributeChangedCallback (int8u endpoint, EmberAfAttributeId attributeId)`
- `void emberAfPowerProfileClusterClientDefaultResponseCallback (int8u endpoint, int8u commandId, EmberAfStatus status)`
- `void emberAfPowerProfileClusterClientInitCallback (int8u endpoint)`
- `void emberAfPowerProfileClusterClientManufacturerSpecificAttributeChangedCallback (int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode)`
- `void emberAfPowerProfileClusterClientMessageSentCallback (EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame *apsFrame, int16u msgLen, int8u *message, EmberStatus status)`
- `EmberAfStatus emberAfPowerProfileClusterClientPreAttributeChangedCallback (int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u *value)`
- `void emberAfPowerProfileClusterClientTickCallback (int8u endpoint)`
- `boolean emberAfPowerProfileClusterEnergyPhasesScheduleNotificationCallback (int8u powerProfileId, int8u numOfScheduledPhases, int8u *scheduledPhases)`
- `boolean emberAfPowerProfileClusterEnergyPhasesScheduleRequestCallback (int8u powerProfileId)`
- `boolean emberAfPowerProfileClusterEnergyPhasesScheduleResponseCallback (int8u powerProfileId, int8u numOfScheduledPhases, int8u *scheduledPhases)`
- `boolean emberAfPowerProfileClusterEnergyPhasesScheduleStateNotificationCallback (int8u powerProfileId, int8u numOfScheduledPhases, int8u *scheduledPhases)`

- `void emberAfWindowCoveringClusterClientTickCallback` (int8u endpoint)
- `void emberAfWindowCoveringClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- `void emberAfWindowCoveringClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- `void emberAfWindowCoveringClusterServerInitCallback` (int8u endpoint)
- `void emberAfWindowCoveringClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)

- void `emberAfWindowCoveringClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfWindowCoveringClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfWindowCoveringClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfWindowCoveringClusterWindowCoveringDownCloseCallback` (void)
- boolean `emberAfWindowCoveringClusterWindowCoveringGoToLiftPercentageCallback` (int8u percentage-LiftValue)
- boolean `emberAfWindowCoveringClusterWindowCoveringGoToLiftValueCallback` (int16u liftValue)
- boolean `emberAfWindowCoveringClusterWindowCoveringGoToTiltPercentageCallback` (int8u percentage-TiltValue)
- boolean `emberAfWindowCoveringClusterWindowCoveringGoToTiltValueCallback` (int16u tiltValue)
- boolean `emberAfWindowCoveringClusterWindowCoveringStopCallback` (void)
- boolean `emberAfWindowCoveringClusterWindowCoveringUpOpenCallback` (void)

## Pump Configuration and Control Cluster Callbacks

- void `emberAfPumpConfigControlClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPumpConfigControlClusterClientDefaultResponseCallback` (int8u endpoint, int8u command-Id, `EmberAfStatus` status)
- void `emberAfPumpConfigControlClusterClientInitCallback` (int8u endpoint)
- void `emberAfPumpConfigControlClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPumpConfigControlClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfPumpConfigControlClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPumpConfigControlClusterClientTickCallback` (int8u endpoint)
- void `emberAfPumpConfigControlClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPumpConfigControlClusterServerDefaultResponseCallback` (int8u endpoint, int8u command-Id, `EmberAfStatus` status)
- void `emberAfPumpConfigControlClusterServerInitCallback` (int8u endpoint)
- void `emberAfPumpConfigControlClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPumpConfigControlClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfPumpConfigControlClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPumpConfigControlClusterServerTickCallback` (int8u endpoint)

## Thermostat Cluster Callbacks

- boolean `emberAfThermostatClusterClearWeeklyScheduleCallback` (void)
- void `emberAfThermostatClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)

- void `emberAfThermostatClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfThermostatClusterClientInitCallback` (int8u endpoint)
- void `emberAfThermostatClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfThermostatClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfThermostatClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfThermostatClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfThermostatClusterCurrentWeeklyScheduleCallback` (int8u numberOfTransitionsForSequence, int8u dayOfWeekForSequence, int8u modeForSequence, int8u \*payload)
- boolean `emberAfThermostatClusterGetRelayStatusLogCallback` (void)
- boolean `emberAfThermostatClusterGetWeeklyScheduleCallback` (int8u daysToReturn, int8u modeToReturn)
- boolean `emberAfThermostatClusterRelayStatusLogCallback` (int16u timeOfDay, int16u relayStatus, int16s localTemperature, int8u humidityInPercentage, int16s setpoint, int16u unreadEntries)
- void `emberAfThermostatClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfThermostatClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfThermostatClusterServerInitCallback` (int8u endpoint)
- void `emberAfThermostatClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfThermostatClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfThermostatClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfThermostatClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfThermostatClusterSetWeeklyScheduleCallback` (int8u numberOfTransitionsForSequence, int8u dayOfWeekForSequence, int8u modeForSequence, int8u \*payload)
- boolean `emberAfThermostatClusterSetpointRaiseLowerCallback` (int8u mode, int8s amount)

## Fan Control Cluster Callbacks

- void `emberAfFanControlClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfFanControlClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfFanControlClusterClientInitCallback` (int8u endpoint)
- void `emberAfFanControlClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfFanControlClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfFanControlClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfFanControlClusterClientTickCallback` (int8u endpoint)

- void `emberAfFanControlClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfFanControlClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfFanControlClusterServerInitCallback` (int8u endpoint)
- void `emberAfFanControlClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfFanControlClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfFanControlClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfFanControlClusterServerTickCallback` (int8u endpoint)

## Dehumidification Control Cluster Callbacks

- void `emberAfDehumidControlClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDehumidControlClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDehumidControlClusterClientInitCallback` (int8u endpoint)
- void `emberAfDehumidControlClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDehumidControlClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDehumidControlClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDehumidControlClusterClientTickCallback` (int8u endpoint)
- void `emberAfDehumidControlClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDehumidControlClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDehumidControlClusterServerInitCallback` (int8u endpoint)
- void `emberAfDehumidControlClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDehumidControlClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDehumidControlClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDehumidControlClusterServerTickCallback` (int8u endpoint)

## Thermostat User Interface Configuration Cluster Callbacks

- void `emberAfThermostatUiConfigClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfThermostatUiConfigClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfThermostatUiConfigClusterClientInitCallback` (int8u endpoint)

- void `emberAfThermostatUiConfigClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfThermostatUiConfigClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfThermostatUiConfigClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfThermostatUiConfigClusterClientTickCallback` (int8u endpoint)
- void `emberAfThermostatUiConfigClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfThermostatUiConfigClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfThermostatUiConfigClusterServerInitCallback` (int8u endpoint)
- void `emberAfThermostatUiConfigClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfThermostatUiConfigClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfThermostatUiConfigClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfThermostatUiConfigClusterServerTickCallback` (int8u endpoint)

## Color Control Cluster Callbacks

- void `emberAfColorControlClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfColorControlClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfColorControlClusterClientInitCallback` (int8u endpoint)
- void `emberAfColorControlClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfColorControlClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfColorControlClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfColorControlClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfColorControlClusterColorLoopSetCallback` (int8u updateFlags, int8u action, int8u direction, int16u time, int16u startHue)
- boolean `emberAfColorControlClusterEnhancedMoveHueCallback` (int8u moveMode, int16u rate)
- boolean `emberAfColorControlClusterEnhancedMoveToHueAndSaturationCallback` (int16u enhancedHue, int8u saturation, int16u transitionTime)
- boolean `emberAfColorControlClusterEnhancedMoveToHueCallback` (int16u enhancedHue, int8u direction, int16u transitionTime)
- boolean `emberAfColorControlClusterEnhancedStepHueCallback` (int8u stepMode, int16u stepSize, int16u transitionTime)
- boolean `emberAfColorControlClusterMoveColorCallback` (int16s rateX, int16s rateY)
- boolean `emberAfColorControlClusterMoveColorTemperatureCallback` (int8u moveMode, int16u rate, int16u colorTemperatureMinimum, int16u colorTemperatureMaximum)
- boolean `emberAfColorControlClusterMoveHueCallback` (int8u moveMode, int8u rate)
- boolean `emberAfColorControlClusterMoveSaturationCallback` (int8u moveMode, int8u rate)

- boolean `emberAfColorControlClusterMoveToColorCallback` (int16u colorX, int16u colorY, int16u transitionTime)
- boolean `emberAfColorControlClusterMoveToColorTemperatureCallback` (int16u colorTemperature, int16u transitionTime)
- boolean `emberAfColorControlClusterMoveToHueAndSaturationCallback` (int8u hue, int8u saturation, int16u transitionTime)
- boolean `emberAfColorControlClusterMoveToHueCallback` (int8u hue, int8u direction, int16u transitionTime)
- boolean `emberAfColorControlClusterMoveToSaturationCallback` (int8u saturation, int16u transitionTime)
- void `emberAfColorControlClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)

- void `emberAfIllumMeasurementClusterClientTickCallback` (int8u endpoint)
- void `emberAfIllumMeasurementClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfIllumMeasurementClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfIllumMeasurementClusterServerInitCallback` (int8u endpoint)
- void `emberAfIllumMeasurementClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfIllumMeasurementClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfIllumMeasurementClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfIllumMeasurementClusterServerTickCallback` (int8u endpoint)

## Illuminance Level Sensing Cluster Callbacks

- void `emberAfIllumLevelSensingClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfIllumLevelSensingClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfIllumLevelSensingClusterClientInitCallback` (int8u endpoint)
- void `emberAfIllumLevelSensingClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)

- void `emberAfIllumLevelSensingClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, `int16u` indexOrDestination, `EmberApsFrame` \*`apsFrame`, `int16u` `msgLen`, `int8u` \*`message`, `EmberStatus` `status`)
- `EmberAfStatus` `emberAfIllumLevelSensingClusterClientPreAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`, `EmberAfAttributeType` `attributeType`, `int8u` `size`, `int8u` \*`value`)
- void `emberAfIllumLevelSensingClusterClientTickCallback` (`int8u` endpoint)
- void `emberAfIllumLevelSensingClusterServerAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`)
- void `emberAfIllumLevelSensingClusterServerDefaultResponseCallback` (`int8u` endpoint, `int8u` command-`Id`, `EmberAfStatus` `status`)
- void `emberAfIllumLevelSensingClusterServerInitCallback` (`int8u` endpoint)
- void `emberAfIllumLevelSensingClusterServerManufacturerSpecificAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`, `int16u` manufacturerCode)
- void `emberAfIllumLevelSensingClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, `int16u` indexOrDestination, `EmberApsFrame` \*`apsFrame`, `int16u` `msgLen`, `int8u` \*`message`, `EmberStatus` `status`)
- `EmberAfStatus` `emberAfIllumLevelSensingClusterServerPreAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`, `EmberAfAttributeType` `attributeType`, `int8u` `size`, `int8u` \*`value`)
- void `emberAfIllumLevelSensingClusterServerTickCallback` (`int8u` endpoint)

## Temperature Measurement Cluster Callbacks

- void `emberAfTempMeasurementClusterClientAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`)
- void `emberAfTempMeasurementClusterClientDefaultResponseCallback` (`int8u` endpoint, `int8u` command-`Id`, `EmberAfStatus` `status`)
- void `emberAfTempMeasurementClusterClientInitCallback` (`int8u` endpoint)
- void `emberAfTempMeasurementClusterClientManufacturerSpecificAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`, `int16u` manufacturerCode)
- void `emberAfTempMeasurementClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, `int16u` indexOrDestination, `EmberApsFrame` \*`apsFrame`, `int16u` `msgLen`, `int8u` \*`message`, `EmberStatus` `status`)
- `EmberAfStatus` `emberAfTempMeasurementClusterClientPreAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`, `EmberAfAttributeType` `attributeType`, `int8u` `size`, `int8u` \*`value`)
- void `emberAfTempMeasurementClusterClientTickCallback` (`int8u` endpoint)
- void `emberAfTempMeasurementClusterServerAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`)
- void `emberAfTempMeasurementClusterServerDefaultResponseCallback` (`int8u` endpoint, `int8u` command-`Id`, `EmberAfStatus` `status`)
- void `emberAfTempMeasurementClusterServerInitCallback` (`int8u` endpoint)
- void `emberAfTempMeasurementClusterServerManufacturerSpecificAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`, `int16u` manufacturerCode)
- void `emberAfTempMeasurementClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, `int16u` indexOrDestination, `EmberApsFrame` \*`apsFrame`, `int16u` `msgLen`, `int8u` \*`message`, `EmberStatus` `status`)
- `EmberAfStatus` `emberAfTempMeasurementClusterServerPreAttributeChangedCallback` (`int8u` endpoint, `EmberAfAttributeId` `attributeId`, `EmberAfAttributeType` `attributeType`, `int8u` `size`, `int8u` \*`value`)
- void `emberAfTempMeasurementClusterServerTickCallback` (`int8u` endpoint)

## Pressure Measurement Cluster Callbacks

- void `emberAfPressureMeasurementClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPressureMeasurementClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPressureMeasurementClusterClientInitCallback` (int8u endpoint)
- void `emberAfPressureMeasurementClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPressureMeasurementClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfPressureMeasurementClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPressureMeasurementClusterClientTickCallback` (int8u endpoint)
- void `emberAfPressureMeasurementClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPressureMeasurementClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPressureMeasurementClusterServerInitCallback` (int8u endpoint)
- void `emberAfPressureMeasurementClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPressureMeasurementClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfPressureMeasurementClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPressureMeasurementClusterServerTickCallback` (int8u endpoint)

## Flow Measurement Cluster Callbacks

- void `emberAfFlowMeasurementClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfFlowMeasurementClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfFlowMeasurementClusterClientInitCallback` (int8u endpoint)
- void `emberAfFlowMeasurementClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfFlowMeasurementClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfFlowMeasurementClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfFlowMeasurementClusterClientTickCallback` (int8u endpoint)
- void `emberAfFlowMeasurementClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfFlowMeasurementClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfFlowMeasurementClusterServerInitCallback` (int8u endpoint)
- void `emberAfFlowMeasurementClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)

- void `emberAfFlowMeasurementClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfFlowMeasurementClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfFlowMeasurementClusterServerTickCallback` (int8u endpoint)

## Relative Humidity Measurement Cluster Callbacks

- void `emberAfRelativeHumidityMeasurementClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfRelativeHumidityMeasurementClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfRelativeHumidityMeasurementClusterClientInitCallback` (int8u endpoint)
- void `emberAfRelativeHumidityMeasurementClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfRelativeHumidityMeasurementClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfRelativeHumidityMeasurementClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfRelativeHumidityMeasurementClusterClientTickCallback` (int8u endpoint)
- void `emberAfRelativeHumidityMeasurementClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfRelativeHumidityMeasurementClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfRelativeHumidityMeasurementClusterServerInitCallback` (int8u endpoint)
- void `emberAfRelativeHumidityMeasurementClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfRelativeHumidityMeasurementClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfRelativeHumidityMeasurementClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfRelativeHumidityMeasurementClusterServerTickCallback` (int8u endpoint)

## Occupancy Sensing Cluster Callbacks

- void `emberAfOccupancySensingClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfOccupancySensingClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfOccupancySensingClusterClientInitCallback` (int8u endpoint)

- void `emberAfElectricalMeasurementClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfElectricalMeasurementClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfElectricalMeasurementClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfElectricalMeasurementClusterServerTickCallback` (int8u endpoint)

## Diagnostics Cluster Callbacks

- void `emberAfDiagnosticsClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDiagnosticsClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDiagnosticsClusterClientInitCallback` (int8u endpoint)
- void `emberAfDiagnosticsClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDiagnosticsClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDiagnosticsClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDiagnosticsClusterClientTickCallback` (int8u endpoint)
- void `emberAfDiagnosticsClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDiagnosticsClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDiagnosticsClusterServerInitCallback` (int8u endpoint)
- void `emberAfDiagnosticsClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDiagnosticsClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDiagnosticsClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDiagnosticsClusterServerTickCallback` (int8u endpoint)

## ZLL Commissioning Cluster Callbacks

- void `emberAfZllCommissioningClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfZllCommissioningClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfZllCommissioningClusterClientInitCallback` (int8u endpoint)
- void `emberAfZllCommissioningClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfZllCommissioningClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfZllCommissioningClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfZllCommissioningClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfZllCommissioningClusterDeviceInformationRequestCallback` (int32u transaction, int8u startIndex)
- boolean `emberAfZllCommissioningClusterDeviceInformationResponseCallback` (int32u transaction, int8u numberofSubDevices, int8u startIndex, int8u deviceInformationRecordCount, int8u \*deviceInformationRecordList)
- boolean `emberAfZllCommissioningClusterEndpointInformationCallback` (int8u \*ieeeAddress, int16u networkAddress, int8u endpointId, int16u profileId, int16u deviceId, int8u version)
- boolean `emberAfZllCommissioningClusterGetEndpointListRequestCallback` (int8u startIndex)
- boolean `emberAfZllCommissioningClusterGetEndpointListResponseCallback` (int8u total, int8u startIndex, int8u count, int8u \*endpointInformationRecordList)
- boolean `emberAfZllCommissioningClusterGetGroupIdentifiersRequestCallback` (int8u startIndex)
- boolean `emberAfZllCommissioningClusterGetGroupIdentifiersResponseCallback` (int8u total, int8u startIndex, int8u count, int8u \*groupInformationRecordList)
- boolean `emberAfZllCommissioningClusterIdentifyRequestCallback` (int32u transaction, int16u identifyDuration)
- boolean `emberAfZllCommissioningClusterNetworkJoinEndDeviceRequestCallback` (int32u transaction, int8u \*extendedPanId, int8u keyIndex, int8u \*encryptedNetworkKey, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress, int16u groupIdentifiersBegin, int16u groupIdentifiersEnd, int16u freeNetworkAddressRangeBegin, int16u freeNetworkAddressRangeEnd, int16u freeGroupIdentifierRangeBegin, int16u freeGroupIdentifierRangeEnd)
- boolean `emberAfZllCommissioningClusterNetworkJoinEndDeviceResponseCallback` (int32u transaction, int8u status)
- boolean `emberAfZllCommissioningClusterNetworkJoinRouterRequestCallback` (int32u transaction, int8u \*extendedPanId, int8u keyIndex, int8u \*encryptedNetworkKey, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress, int16u groupIdentifiersBegin, int16u groupIdentifiersEnd, int16u freeNetworkAddressRangeBegin, int16u freeNetworkAddressRangeEnd, int16u freeGroupIdentifierRangeBegin, int16u freeGroupIdentifierRangeEnd)
- boolean `emberAfZllCommissioningClusterNetworkJoinRouterResponseCallback` (int32u transaction, int8u status)
- boolean `emberAfZllCommissioningClusterNetworkStartRequestCallback` (int32u transaction, int8u \*extendedPanId, int8u keyIndex, int8u \*encryptedNetworkKey, int8u logicalChannel, int16u panId, int16u networkAddress, int16u groupIdentifiersBegin, int16u groupIdentifiersEnd, int16u freeNetworkAddressRangeBegin, int16u freeNetworkAddressRangeEnd, int16u freeGroupIdentifierRangeBegin, int16u freeGroupIdentifierRangeEnd, int8u \*initiatorIeeeAddress, int16u initiatorNetworkAddress)
- boolean `emberAfZllCommissioningClusterNetworkStartResponseCallback` (int32u transaction, int8u status, int8u \*extendedPanId, int8u networkUpdateId, int8u logicalChannel, int16u panId)

- boolean `emberAfZllCommissioningClusterNetworkUpdateRequestCallback` (int32u transaction, int8u \*extendedPanId, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress)
- boolean `emberAfZllCommissioningClusterResetToFactoryNewRequestCallback` (int32u transaction)
- boolean `emberAfZllCommissioningClusterScanRequestCallback` (int32u transaction, int8u zigbeeInformation, int8u zllInformation)
- boolean `emberAfZllCommissioningClusterScanResponseCallback` (int32u transaction, int8u rssiCorrection, int8u zigbeeInformation, int8u zllInformation, int16u keyBitmask, int32u responseId, int8u \*extendedPanId, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress, int8u numberOfSubDevices, int8u totalGroupIds, int8u endpointId, int16u profileId, int16u deviceId, int8u version, int8u groupIdCount)
- void `emberAfZllCommissioningClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfZllCommissioningClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfZllCommissioningClusterServerInitCallback` (int8u endpoint)
- void `emberAfZllCommissioningClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfZllCommissioningClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfZllCommissioningClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfZllCommissioningClusterServerTickCallback` (int8u endpoint)

## Sample Mfg Specific Cluster Cluster Callbacks

- void `emberAfSampleMfgSpecificClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfSampleMfgSpecificClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfSampleMfgSpecificClusterClientInitCallback` (int8u endpoint)
- void `emberAfSampleMfgSpecificClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfSampleMfgSpecificClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfSampleMfgSpecificClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfSampleMfgSpecificClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfSampleMfgSpecificClusterCommandOneCallback` (int8u argOne)
- void `emberAfSampleMfgSpecificClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfSampleMfgSpecificClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfSampleMfgSpecificClusterServerInitCallback` (int8u endpoint)
- void `emberAfSampleMfgSpecificClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfSampleMfgSpecificClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfSampleMfgSpecificClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfSampleMfgSpecificClusterServerTickCallback` (int8u endpoint)

## Basic Server Cluster Plugin Callbacks

- void `emberAfPluginBasicResetToFactoryDefaultsCallback` (uint8\_t endpoint)

## Bulb PWM Configuration Plugin Callbacks

- void `emberAfPluginBulbPwmConfigurationBlinkStopCallback` (uint8\_t endpoint)

## Bulb user interface Plugin Callbacks

- void `emberAfPluginBulbUiFinishedCallback` (`EmberStatus` status)

## Button Form/Join Code Plugin Callbacks

- void `emberAfPluginButtonJoiningButtonEventCallback` (uint8\_t buttonNumber, uint32\_t buttonPressDurationMs)

## Calendar Server Plugin Callbacks

- void `emberAfPluginCalendarServerPublishInfoCallback` (uint8\_t publishCommandId, `EmberNodeId` clientNodeId, uint8\_t clientEndpoint, uint8\_t totalCommands)

## Color Control Cluster Plugin Callbacks

- bool `emberAfPluginColorControlIsColorSupportedCallback` (uint8\_t hue, uint8\_t saturation)

## Comms Hub Function (CHF) Plugin Callbacks

- void `emberAfPluginCommsHubFunctionSendCallback` (uint8\_t status, `EmberEUI64` destinationDeviceId, uint16\_t dataLen, uint8\_t \*data)
- void `emberAfPluginCommsHubFunctionReceivedCallback` (`EmberEUI64` senderDeviceId, uint16\_t dataLen, uint8\_t \*data)
- void `emberAfPluginCommsHubFunctionAlertWANCallback` (uint16\_t alertCode, uint8\_t \*gbzAlert, uint16\_t gbazLength)
- void `emberAfPluginCommsHubFunctionTunnelOpenedCallback` (`EmberEUI64` remoteDeviceId)

## Concentrator Support Plugin Callbacks

- void `emberAfPluginConcentratorBroadcastSentCallback` (void)

## Counters Plugin Callbacks

- void `emberAfPluginCountersRolloverCallback` (`EmberCounterType` type)

## Device Database Plugin Callbacks

- void `emberAfPluginDeviceDatabaseDiscoveryCompleteCallback` (const `EmberAfDeviceInfo` \*device)

## Device Management Client Plugin Callbacks

- void `emberAfPluginDeviceManagementClientEnactChangeOfTenancyCallback` (uint8\_t endpoint, `EmberAfDeviceManagementTenancy` \*tenancy)
- void `emberAfPluginDeviceManagementClientEnactChangeOfSupplierCallback` (uint8\_t endpoint, `EmberAfDeviceManagementSupplier` \*supplier)
- `EmberStatus` `emberAfPluginDeviceManagementClientEnactChangeSupplyCallback` (uint8\_t endpoint, `EmberAfDeviceManagementSupply` \*supply)
- void `emberAfPluginDeviceManagementClientSetSupplyStatusCallback` (uint8\_t endpoint, `EmberAfDeviceManagementSupplyStatusFlags` \*supplyStatus)
- void `emberAfPluginDeviceManagementClientEnactUpdateUncontrolledFlowThresholdCallback` (uint8\_t endpoint, `EmberAfDeviceManagementUncontrolledFlowThreshold` \*supplier)

## Device Management Server Plugin Callbacks

- void `emberAfPluginDeviceManagementServerGetPasswordCallback` (`EmberNodeId` senderNodeId, `EmberAfDeviceManagementPasswordType` passwordType, `EmberAfDeviceManagementPassword` passwordInfo)

## Door Lock Server Cluster Plugin Callbacks

- bool `emberAfPluginDoorLockServerActivateDoorLockCallback` (bool activate)

## Demand Response Load Control Cluster Client Plugin Callbacks

- bool `emberAfPluginDrlcEventActionCallback` (`EmberAfLoadControlEvent` \*loadControlEvent, `EmberAfAmiEventStatus` eventStatus, uint8\_t sequenceNumber)

## End Device Support Plugin Callbacks

- void `emberAfPluginEndDeviceSupportPollCompletedCallback` (`EmberStatus` status)

## Events Server Plugin Callbacks

- bool `emberAfPluginEventsServerOkToClearLogCallback` (`EmberAfEventLogId` logId)
- void `emberAfPluginEventsServerLogDataUpdatedCallback` (const `EmberAfClusterCommand` \*cmd)

## EZ-Mode Commissioning Plugin Callbacks

- void `emberAfPluginEzmodeCommissioningClientCompleteCallback` (uint8\_t bindingIndex)

## Find and Bind Initiator Plugin Callbacks

- bool `emberAfPluginFindAndBindInitiatorBindTargetCallback` (`EmberNodeId` nodeId, `EmberBindingTableEntry` \*bindingEntry, uint8\_t \*groupName)
- void `emberAfPluginFindAndBindInitiatorCompleteCallback` (`EmberStatus` status)

## Form and Join Library Plugin Callbacks

- void `emberAfPluginFormAndJoinNetworkFoundCallback` (`EmberZigbeeNetwork` \*networkFound, `uint8_t` lqi, `int8_t` rssi)
- void `emberAfPluginFormAndJoinUnusedPanIdFoundCallback` (`EmberPanId` panId, `uint8_t` channel)

## Gas Proxy Function (GPF) Plugin Callbacks

- void `emberAfPluginGasProxyFunctionNonTapOffMessageHandlerCompletedCallback` (`uint8_t` \*gbzCommandsResponse, `uint16_t` gbzCommandsResponseLength)
- void `emberAfPluginGasProxyFunctionAlertWANCallback` (`uint16_t` alertCode, `uint8_t` \*gbzAlert, `uint16_t` gbzAlertLength)
- void `emberAfPluginGasProxyFunctionTapOffMessageFutureCommandIgnoredCallback` (`const EmberAfGpfMessage` \*gpfMessage, `const EmberAfClusterCommand` \*zclClusterCommand)
- bool `emberAfPluginGasProxyFunctionDataLogAccessRequestCallback` (`const EmberAfGpfMessage` \*gpfMessage, `const EmberAfClusterCommand` \*zclClusterCommand)
- `EmberAfGpfZclCommandPermission` `emberAfPluginGasProxyFunctionValidateIncomingZclCommandCallback` (`const EmberAfClusterCommand` \*cmd, `uint16_t` messageCode)
- void `emberAfPluginGasProxyFunctionUnknownSeasonWeekIdCallback` (`uint32_t` issuerCalendarId, `uint8_t` \*seasonEntries, `uint8_t` seasonEntriesLength, `uint8_t` unknownWeekIdSeasonsMask)
- void `emberAfPluginGasProxyFunctionUnknownSpecialDaysDayIdCallback` (`uint32_t` issuerCalendarId, `uint8_t` \*specialDayEntries, `uint8_t` specialDayEntriesLength, `uint8_t` unknownDayIdMask)

## GBCS Device Log Plugin Callbacks

- void `emberAfPluginGbcsDeviceLogDeviceRemovedCallback` (`EmberEUI64` deviceId)

## GBZ Message Controller Plugin Callbacks

- void `emberAfPluginGbzMessagControllerDecryptDataCallback` (`EmberAfGbzMessaageData` \*data)
- void `emberAfPluginGbzMessagControllerEncryptDataCallback` (`EmberAfGbzMessaageData` \*data)

## Green Power Server Plugin Callbacks

- bool `emberAfPluginGreenPowerServerGpdCommissioningCallback` (`EmberGpApplicationInfo` \*app-Info)

## Groups Server Cluster Plugin Callbacks

- void `emberAfPluginGroupsServerGetGroupNameCallback` (`uint8_t` endpoint, `uint16_t` groupId, `uint8_t` \*groupName)
- void `emberAfPluginGroupsServerSetGroupNameCallback` (`uint8_t` endpoint, `uint16_t` groupId, `uint8_t` \*groupName)
- bool `emberAfPluginGroupsServerGroupNamesSupportedCallback` (`uint8_t` endpoint)

## Identify Cluster Plugin Callbacks

- void `emberAfPluginIdentifyStartFeedbackCallback` (`uint8_t` endpoint, `uint16_t` identifyTime)
- void `emberAfPluginIdentifyStopFeedbackCallback` (`uint8_t` endpoint)

## Interpan Plugin Callbacks

- bool `emberAfPluginInterpanPreMessageReceivedCallback` (const `EmberAfInterpanHeader` \*header, `uint8_t` msgLen, `uint8_t` \*message)
- void `emberAfPluginInterpanMessageReceivedOverFragmentsCallback` (const `EmberAfInterpanHeader` \*header, `uint8_t` msgLen, `uint8_t` \*message)
- void `emberAfPluginInterpanFragmentTransmissionFailedCallback` (`uint8_t` interpanFragmentationStatus, `uint8_t` fragmentNum)

## Messaging Client Cluster Plugin Callbacks

- bool `emberAfPluginMessagingClientPreDisplayMessageCallback` (`uint32_t` messageId, `uint8_t` messageControl, `uint32_t` startTime, `uint16_t` durationInMinutes, `uint8_t` \*message, `uint8_t` optionalExtendedMessageControl)
- void `emberAfPluginMessagingClientDisplayMessageCallback` (`EmberAfPluginMessagingClientMessage` \*message)
- void `emberAfPluginMessagingClientCancelMessageCallback` (`EmberAfPluginMessagingClientMessage` \*message)

## Meter Mirror Plugin Callbacks

- void `emberAfPluginMeterMirrorMirrorAddedCallback` (const `EmberEUI64` requestingDeviceIeeeAddress, `uint8_t` endpoint)
- void `emberAfPluginMeterMirrorMirrorRemovedCallback` (const `EmberEUI64` requestingDeviceIeeeAddress, `uint8_t` endpoint)
- void `emberAfPluginMeterMirrorReportingCompleteCallback` (`uint8_t` endpoint)

## Meter Snapshot Server Plugin Callbacks

- void `emberAfPluginMeterSnapshotServerScheduleSnapshotCallback` (`uint8_t` srcEndpoint, `uint8_t` dstEndpoint, `EmberNodeId` dest, `uint8_t` \*snapshotPayload, `uint8_t` \*responsePayload)
- `uint32_t` `emberAfPluginMeterSnapshotServerTakeSnapshotCallback` (`uint8_t` endpoint, `uint32_t` snapshotCause, `uint8_t` \*snapshotConfirmation)
- void `emberAfPluginMeterSnapshotServerGetSnapshotCallback` (`uint8_t` srcEndpoint, `uint8_t` dstEndpoint, `EmberNodeId` dest, `uint8_t` \*snapshotCriteria)

## Network Creator Plugin Callbacks

- void `emberAfPluginNetworkCreatorCompleteCallback` (const `EmberNetworkParameters` \*network, `bool` usedSecondaryChannels)
- `EmberPanId` `emberAfPluginNetworkCreatorGetPanIdCallback` (`void`)

## Network Find Plugin Callbacks

- void `emberAfPluginNetworkFindFinishedCallback` (`EmberStatus` status)
- `int8_t` `emberAfPluginNetworkFindGetRadioPowerForChannelCallback` (`uint8_t` channel)
- `bool` `emberAfPluginNetworkFindJoinCallback` (`EmberZigbeeNetwork` \*networkFound, `uint8_t` lqi, `int8_t` rssi)

## Network Steering Plugin Callbacks

- void `emberAfPluginNetworkSteeringCompleteCallback` (`EmberStatus` status, `uint8_t` totalBeacons, `uint8_t` joinAttempts, `uint8_t` finalState)
- `int8_t emberAfPluginNetworkSteeringGetPowerForRadioChannelCallback` (`uint8_t` channel)
- `EmberNodeType emberAfPluginNetworkSteeringGetNodeTypeCallback` (`EmberAfPluginNetworkSteeringJoiningState` state)

## OTA Simple Storage EEPROM Driver Plugin Callbacks

- void `emberAfPluginOtaStorageSimpleEepromEraseCompleteCallback` (`bool` success)

## Prepayment Server Plugin Callbacks

- `bool emberAfPluginPrepaymentServerConsumerTopUpCallback` (`uint8_t` originatingDevice, `uint8_t` \*topUpCode)

## Price Client Plugin Callbacks

- void `emberAfPluginPriceClientPriceStartedCallback` (`EmberAfPluginPriceClientPrice` \*price)
- void `emberAfPluginPriceClientPriceExpiredCallback` (`EmberAfPluginPriceClientPrice` \*price)
- `uint8_t emberAfPluginPriceClientPendingCppEventCallback` (`uint8_t` cppAuth)

## Price Server Plugin Callbacks

- void `emberAfPluginPriceServerNewActivePriceMatrixCallback` (`const EmberAfPriceCommonInfo` \*priceCommonInfo, `const EmberAfScheduledPriceMatrix` \*priceMatrix)
- void `emberAfPluginPriceServerNewActiveTariffInformationCallback` (`const EmberAfPriceCommonInfo` \*priceCommonInfo, `const EmberAfScheduledTariff` \*priceTariffInfo)
- void `emberAfPluginPriceServerNewActiveBlockThresholdsInformationCallback` (`const EmberAfPriceCommonInfo` \*priceCommonInfo, `const EmberAfScheduledBlockThresholds` \*priceBlockThresholds)
- void `emberAfPluginPriceServerNewActiveBlockPeriodInformationCallback` (`const EmberAfPriceCommonInfo` \*priceCommonInfo, `const EmberAfPriceBlockPeriod` \*priceBlockPeriods)

## Reporting Plugin Callbacks

- `EmberAfStatus emberAfPluginReportingConfiguredCallback` (`const EmberAfPluginReportingEntry` \*entry)

## Generic Device Profile Plugin Callbacks

- `bool emberAfPluginRf4ceGdpZrc20StartConfigurationCallback` (`bool` isOriginator, `uint8_t` pairingIndex)
- void `emberAfPluginRf4ceGdpZrc20BindingCompleteCallback` (`EmberAfRf4ceGdpBindingStatus` status, `uint8_t` pairingIndex)
- void `emberAfPluginRf4ceGdpStartValidationCallback` (`uint8_t` pairingIndex)
- void `emberAfPluginRf4ceGdpBindingCompleteCallback` (`EmberAfRf4ceGdpBindingStatus` status, `uint8_t` pairingIndex)

- bool `emberAfPluginRf4ceGdpIncomingBindProxyCallback` (const `EmberEUI64` ieeeAddr)
- void `emberAfPluginRf4ceGdpHeartbeatPollingEstablishedCallback` (uint8\_t pairingIndex, `EmberAfRf4ceGdpPollingTrigger` triggers)
- void `emberAfPluginRf4ceGdpIdentifyCallback` (`EmberAfRf4ceGdpClientNotificationIdentifyFlags` flags, uint16\_t timeS)
- void `emberAfPluginRf4ceGdpIdentifyClientFoundCallback` (`EmberAfRf4ceGdpClientNotificationIdentifyFlags` flags)
- void `emberAfPluginRf4ceGdpKeyExchangeCompleteCallback` (`EmberStatus` status)
- bool `emberAfPluginRf4ceGdpVendorSpecificKeyExchangeCallback` (uint8\_t initiatorVendorSpecificParam, uint8\_t \*responderVendorSpecificParam, uint8\_t \*sharedSecret)

## RF4CE Multiple System Operators Profile Plugin Callbacks

- void `emberAfPluginRf4ceMsoStartValidationCallback` (uint8\_t pairingIndex)
- void `emberAfPluginRf4ceMsoBindingCompleteCallback` (`EmberAfRf4ceMsoBindingStatus` status, uint8\_t pairingIndex)
- void `emberAfPluginRf4ceMsoUserControlCallback` (const `EmberAfRf4ceMsoUserControlRecord` \*record)
- `EmberAfRf4ceStatus` `emberAfPluginRf4ceMsoGetIrRfDatabaseAttributeCallback` (uint8\_t pairingIndex, uint8\_t entryIndex, uint8\_t \*valueLength, uint8\_t \*value)
- bool `emberAfPluginRf4ceMsoHaveIrRfDatabaseAttributeCallback` (uint8\_t pairingIndex, uint8\_t entryIndex)
- void `emberAfPluginRf4ceMsoIncomingIrRfDatabaseAttributeCallback` (uint8\_t pairingIndex, uint8\_t entryIndex, uint8\_t valueLength, const uint8\_t \*value)
- `EmberStatus` `emberAfPluginRf4ceMsoGetIrRfDatabaseEntryCallback` (`EmberAfRf4ceMsoKeyCode` keyCode, `EmberAfRf4ceMsoIrRfDatabaseEntry` \*entry)

## RF4CE Profile Support Plugin Callbacks

- bool `emberAfPluginRf4ceProfileGdpMessageSentCallback` (uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, uint8\_t messageTag, const uint8\_t \*message, uint8\_t messageLength, `EmberStatus` status)
- void `emberAfPluginRf4ceProfileRemoteControl11MessageSentCallback` (uint8\_t pairingIndex, uint16\_t vendorId, uint8\_t messageTag, const uint8\_t \*message, uint8\_t messageLength, `EmberStatus` status)
- void `emberAfPluginRf4ceProfileZrc20MessageSentCallback` (uint8\_t pairingIndex, uint16\_t vendorId, uint8\_t messageTag, const uint8\_t \*message, uint8\_t messageLength, `EmberStatus` status)
- void `emberAfPluginRf4ceProfileMsoMessageSentCallback` (uint8\_t pairingIndex, uint16\_t vendorId, uint8\_t messageTag, const uint8\_t \*message, uint8\_t messageLength, `EmberStatus` status)
- void `emberAfPluginRf4ceProfileMessageSentCallback` (uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, uint8\_t messageTag, const uint8\_t \*message, uint8\_t messageLength, `EmberStatus` status)
- bool `emberAfPluginRf4ceProfileGdpIncomingMessageCallback` (uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, `EmberRf4ceTxOption` txOptions, const uint8\_t \*message, uint8\_t messageLength)
- void `emberAfPluginRf4ceProfileRemoteControl11IncomingMessageCallback` (uint8\_t pairingIndex, uint16\_t vendorId, `EmberRf4ceTxOption` txOptions, const uint8\_t \*message, uint8\_t messageLength)
- void `emberAfPluginRf4ceProfileZrc20IncomingMessageCallback` (uint8\_t pairingIndex, uint16\_t vendorId, `EmberRf4ceTxOption` txOptions, const uint8\_t \*message, uint8\_t messageLength)
- void `emberAfPluginRf4ceProfileMsoIncomingMessageCallback` (uint8\_t pairingIndex, uint16\_t vendorId, `EmberRf4ceTxOption` txOptions, const uint8\_t \*message, uint8\_t messageLength)

- void `emberAfPluginRf4ceProfileIncomingMessageCallback` (uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, EmberRf4ceTxOption txOptions, const uint8\_t \*message, uint8\_t messageLength)
- bool `emberAfPluginRf4ceProfileGdpDiscoveryRequestCallback` (const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t searchDevType, uint8\_t rxLinkQuality)
- bool `emberAfPluginRf4ceProfileRemoteControl11DiscoveryRequestCallback` (const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t searchDevType, uint8\_t rxLinkQuality)
- bool `emberAfPluginRf4ceProfileZrc20DiscoveryRequestCallback` (const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t searchDevType, uint8\_t rxLinkQuality)
- bool `emberAfPluginRf4ceProfileMsoDiscoveryRequestCallback` (const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t searchDevType, uint8\_t rxLinkQuality)
- bool `emberAfPluginRf4ceProfileGdpDiscoveryResponseCallback` (bool atCapacity, uint8\_t channel, `EmberPanId` panId, const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t rxLinkQuality, uint8\_t discRequestLqi)
- bool `emberAfPluginRf4ceProfileRemoteControl11DiscoveryResponseCallback` (bool atCapacity, uint8\_t channel, `EmberPanId` panId, const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t rxLinkQuality, uint8\_t discRequestLqi)
- bool `emberAfPluginRf4ceProfileZrc20DiscoveryResponseCallback` (bool atCapacity, uint8\_t channel, `EmberPanId` panId, const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t rxLinkQuality, uint8\_t discRequestLqi)
- bool `emberAfPluginRf4ceProfileMsoDiscoveryResponseCallback` (bool atCapacity, uint8\_t channel, `EmberPanId` panId, const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t rxLinkQuality, uint8\_t discRequestLqi)
- void `emberAfPluginRf4ceProfileGdpDiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileRemoteControl11DiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileZrc20DiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileMsoDiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileGdpAutoDiscoveryResponseCompleteCallback` (`EmberStatus` status, const `EmberEUI64` srcIeeeAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*appInfo, uint8\_t searchDevType)

- `EmberStatus emberAfPluginRf4ceZrc20GetHomeAutomationSupportedCallback` (uint8\_t pairingIndex, uint8\_t haInstanceId, `EmberAfRf4ceZrcHomeAutomationSupported` \*haSupported)
- `EmberAfRf4ceGdpAttributeStatus emberAfPluginRf4ceZrc20GetHomeAutomationAttributeCallback` (uint8\_t pairingIndex, uint8\_t haInstanceId, uint8\_t haAttributeId, `EmberAfRf4ceZrcHomeAutomationAttribute` \*haAttribute)
- void `emberAfPluginRf4ceZrc20PullHomeAutomationAttributeCompleteCallback` (`EmberAfRf4ceGdpAttributeStatus` responseStatus, `EmberAfRf4ceZrcHomeAutomationAttribute` \*haAttribute)

## ZigBee Remote Control 2.0 Home Automation Server Plugin Callbacks

- void `emberAfPluginRf4ceZrc20HaServerHaActionSentCallback` (`EmberOutgoingMessageType` type, uint16\_t indexOrDestination, `EmberApsFrame` \*apsFrame, uint16\_t msgLen, uint8\_t \*message, `EmberStatus` status)

## Simple Metering Client Plugin Callbacks

- uint16\_t `emberAfPluginSimpleMeteringClientRequestMirrorCallback` (`EmberEUI64` requestingDeviceIeeeAddress)
- uint16\_t `emberAfPluginSimpleMeteringClientRemoveMirrorCallback` (`EmberEUI64` requestingDeviceIeeeAddress)

## Simple Metering Server Plugin Callbacks

- void `emberAfPluginSimpleMeteringServerProcessNotificationFlagsCallback` (uint16\_t attributeId, uint32\_t attributeValue)

## Sleepy Message Queue Plugin Callbacks

- void `emberAfPluginSleepyMessageQueueMessageTimedOutCallback` (uint8\_t sleepyMsgId)

## Standalone Bootloader Client Plugin Callbacks

- bool `emberAfPluginStandaloneBootloaderClientAllowIncomingMessageCallback` (`EmberEUI64` sourceEui64, uint8\_t command)
- bool `emberAfPluginStandaloneBootloaderClientAllowBootloadLaunchCallback` (`EmberEUI64` sourceEui64)

## Standalone Bootloader Common Plugin Callbacks

- bool `emberAfPluginStandaloneBootloaderCommonIncomingMessageCallback` (`EmberEUI64` longId, uint8\_t length, uint8\_t \*message)

## Standalone Bootloader Server Plugin Callbacks

- void `emberAfPluginStandaloneBootloaderServerQueryResponseCallback` (bool queryWasBroadcast, const `EmberAfStandaloneBootloaderQueryresponseData` \*queryData)
- void `emberAfPluginStandaloneBootloaderServerFinishedCallback` (bool success)

## Tunneling Client Cluster Plugin Callbacks

- void `emberAfPluginTunnelingClientTunnelOpenedCallback` (uint8\_t tunnelIndex, `EmberAfPluginTunnelingClientStatus` tunnelStatus, uint16\_t maximumIncomingTransferSize)
- void `emberAfPluginTunnelingClientDataReceivedCallback` (uint8\_t tunnelIndex, uint8\_t \*data, uint16\_t dataLen)
- void `emberAfPluginTunnelingClientDataErrorCallback` (uint8\_t tunnelIndex, `EmberAfTunnelingTransferDataStatus` transferDataStatus)
- void `emberAfPluginTunnelingClientTunnelClosedCallback` (uint8\_t tunnelIndex)
- void `emberAfPluginTunnelingClientTransferDataFailureCallback` (uint16\_t indexOfDestination, `EmberApsFrame` \*apsFrame, uint16\_t msgLen, uint8\_t \*message, `EmberStatus` status)

## Tunneling Server Cluster Plugin Callbacks

- bool `emberAfPluginTunnelingServerIsProtocolSupportedCallback` (uint8\_t protocolId, uint16\_t manufacturerCode)
- void `emberAfPluginTunnelingServerTunnelOpenedCallback` (uint16\_t tunnelIndex, uint8\_t protocolId, uint16\_t manufacturerCode, bool flowControlSupport, uint16\_t maximumIncomingTransferSize)
- void `emberAfPluginTunnelingServerDataReceivedCallback` (uint16\_t tunnelIndex, uint8\_t \*data, uint16\_t dataLen)
- void `emberAfPluginTunnelingServerDataErrorCallback` (uint16\_t tunnelIndex, `EmberAfTunnelingTransferDataStatus` transferDataStatus)
- void `emberAfPluginTunnelingServerTunnelClosedCallback` (uint16\_t tunnelIndex, bool clientInitiated)

## Update TC Link Key Plugin Callbacks

- bool `emberAfPluginUpdateTcLinkKeyStatusCallback` (`EmberKeyStatus` keyStatus)

## ZLL Commissioning Plugin Callbacks

- void `emberAfPluginZllCommissioningInitialSecurityStateCallback` (`EmberZllInitialSecurityState` \*securityState)
- void `emberAfPluginZllCommissioningTouchLinkCompleteCallback` (const `EmberZllNetwork` \*networkInfo, uint8\_t deviceInformationRecordCount, const `EmberZllDeviceInfoRecord` \*deviceInformationRecordList)
- void `emberAfPluginZllCommissioningTouchLinkFailedCallback` (`EmberAfZllCommissioningStatus` status)
- uint8\_t `emberAfPluginZllCommissioningGroupIdentifierCountCallback` (uint8\_t endpoint)
- bool `emberAfPluginZllCommissioningGroupIdentifierCallback` (uint8\_t endpoint, uint8\_t index, `EmberAfPluginZllCommissioningGroupInformationRecord` \*record)
- uint8\_t `emberAfPluginZllCommissioningEndpointInformationCountCallback` (uint8\_t endpoint)
- bool `emberAfPluginZllCommissioningEndpointInformationCallback` (uint8\_t endpoint, uint8\_t index, `EmberAfPluginZllCommissioningEndpointInformationRecord` \*record)
- void `emberAfPluginZllCommissioningIdentifyCallback` (uint16\_t durationS)
- void `emberAfPluginZllCommissioningResetToFactoryNewCallback` (void)
- bool `emberAfPluginZllCommissioningJoinCallback` (`EmberZigbeeNetwork` \*networkFound, uint8\_t lqi, int8\_t rssi)

## ZLL On/Off Server Cluster Enhancements Plugin Callbacks

- `EmberAfStatus emberAfPluginZllOnOffServerOffWithEffectCallback (uint8_t endpoint, uint8_t effectId, uint8_t effectVariant)`

## Connection Manager Plugin Callbacks

- void `emberAfPluginConnectionManagerFinishedCallback (EmberStatus status)`
- void `emberAfPluginConnectionManagerStartNetworkSearchCallback (void)`
- void `emberAfPluginConnectionManagerLeaveNetworkCallback (void)`

## Idle/Sleep Plugin Callbacks

- bool `emberAfPluginIdleSleepOkToSleepCallback (uint32_t durationMs)`
- void `emberAfPluginIdleSleepWakeUpCallback (uint32_t durationMs)`
- bool `emberAfPluginIdleSleepOkToIdleCallback (void)`
- void `emberAfPluginIdleSleepActiveCallback (void)`

## Low Voltage Shutdown Plugin Callbacks

- bool `emberAfPluginLowVoltageShutdownOkToShutdownCallback (uint16_t shutdownVoltage)`
- void `emberAfPluginLowVoltageShutdownPreShutdownCallback (uint16_t shutdownVoltage)`

## Battery Monitor Plugin Callbacks

- void `emberAfPluginBatteryMonitorDataReadyCallback (uint16_t batteryVoltageMilliV)`

## Button Interface Plugin Callbacks

- void `emberAfPluginButtonInterfaceButton0PressedShortCallback (uint16_t timePressedMs)`
- void `emberAfPluginButtonInterfaceButton1PressedShortCallback (uint16_t timePressedMs)`
- void `emberAfPluginButtonInterfaceButton0PressedLongCallback (uint16_t timePressedMs, bool pressedAtReset)`
- void `emberAfPluginButtonInterfaceButton1PressedLongCallback (uint16_t timePressedMs, bool pressedAtReset)`
- void `emberAfPluginButtonInterfaceButton0PressingCallback (void)`
- void `emberAfPluginButtonInterfaceButton1PressingCallback (void)`
- void `emberAfPluginButtonInterfaceButton0LowCallback (void)`
- void `emberAfPluginButtonInterfaceButton0HighCallback (void)`
- void `emberAfPluginButtonInterfaceButton1LowCallback (void)`
- void `emberAfPluginButtonInterfaceButton1HighCallback (void)`

## GPIO Sensor Interface Plugin Callbacks

- void `emberAfPluginGpioSensorStateChangedCallback (uint8_t newSensorState)`

## SB1 Gesture Sensor Plugin Callbacks

- void `emberAfPluginSb1GestureSensorGestureReceivedCallback` (uint8\_t gestureReceived, uint8\_t switchNumber)

## Tamper Switch Interface Plugin Callbacks

- void `emberAfPluginTamperSwitchTamperActiveCallback` (void)
- void `emberAfPluginTamperSwitchTamperAlarmCallback` (void)

### 8.27.1 Macro Definition Documentation

#### 8.27.1.1 `#define __EMBER_AF_CALLBACK_PROTOTYPES__`

Definition at line 7 of file [framework/test/headers/callback.doc](#).

### 8.30.1 Detailed Description

API for generating command buffer.

Definition in file [client-api.h](#).

### 8.30.2 Macro Definition Documentation

#### 8.30.2.1 `#define emberAfAppendToExternalBuffer( ... )`

Function that fills in the buffer with command.

Fills the outgoing zcl buffer and returns the number of bytes used in a buffer. The buffers used are the ones that were previously set with `emberAfSetExternalBuffer`.

##### Parameters

<code>frameControl</code>	byte used for frame control
<code>clusterId</code>	cluster id of message
<code>commandId</code>	command id of message
<code>format</code>	<p>String format for further arguments to the function. Format values are:</p> <ul style="list-style-type: none"> <li>• '0' – '9' and 'A' – 'G': Pointer to a buffer contain 0–16 raw bytes. The data is copied as is to the destination buffer.</li> <li>• 'u': <code>uint8_t</code>.</li> <li>• 'v': <code>uint16_t</code>. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'x': <code>int24u</code>. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'w': <code>uint32_t</code>. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'l': Pointer to a buffer containing a ZigBee long string, with the first two bytes of the buffer specifying the length of the string data in little-endian format. The length bytes and the string itself are both included as is in the destination buffer.</li> <li>• 's': Pointer to a buffer containing a ZigBee string, with the first byte of the buffer specifying the length of the string data. The length byte and the string itself are both included as is in the destination buffer.</li> <li>• 'L': Pointer to a buffer containing a long string followed by an <code>uint16_t</code> specifying the length of the string data. The length bytes in little-endian format will precede the string itself in the destination buffer.</li> <li>• 'S': Pointer to a buffer containing a string followed by an <code>uint8_t</code> specifying the length of the string data. The length byte will precede the string itself in the destination buffer.</li> <li>• 'b': Pointer to a buffer containing a sequence of raw bytes followed by an <code>uint16_t</code> specifying the length of the data. The data is copied as is to the destination buffer. The length is not included.</li> </ul>

Definition at line 148 of file [client-api.h](#).

### 8.30.3 Function Documentation

### 8.30.3.1 `uint16_t emberAfFillExternalBuffer ( uint8_t frameControl, EmberAfClusterId clusterId, uint8_t commandId, PGM_P format, ... )`

Function that fills in the buffer with command.

Fills the outgoing zcl buffer and returns the number of bytes used in a buffer. The buffers used are the ones that were previously set with emberAfSetExternalBuffer.

#### Parameters

<code>frameControl</code>	byte used for frame control
<code>clusterId</code>	cluster id of message
<code>commandId</code>	command id of message
<code>format</code>	<p>String format for further arguments to the function. Format values are:</p> <ul style="list-style-type: none"> <li>• '0' – '9' and 'A' – 'G': Pointer to a buffer contain 0–16 raw bytes. The data is copied as is to the destination buffer.</li> <li>• 'u': <code>uint8_t</code>.</li> <li>• 'v': <code>uint16_t</code>. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'x': <code>int24u</code>. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'w': <code>uint32_t</code>. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'l': Pointer to a buffer containing a ZigBee long string, with the first two bytes of the buffer specifying the length of the string data in little-endian format. The length bytes and the string itself are both included as is in the destination buffer.</li> <li>• 's': Pointer to a buffer containing a ZigBee string, with the first byte of the buffer specifying the length of the string data. The length byte and the string itself are both included as is in the destination buffer.</li> <li>• 'L': Pointer to a buffer containing a long string followed by an <code>uint16_t</code> specifying the length of the string data. The length bytes in little-endian format will precede the string itself in the destination buffer.</li> <li>• 'S': Pointer to a buffer containing a string followed by an <code>uint8_t</code> specifying the length of the string data. The length byte will precede the string itself in the destination buffer.</li> <li>• 'b': Pointer to a buffer containing a sequence of raw bytes followed by an <code>uint16_t</code> specifying the length of the data. The data is copied as is to the destination buffer. The length is not included.</li> </ul>

### 8.30.3.2 `uint16_t emberAfFillExternalManufacturerSpecificBuffer ( uint8_t frameControl, EmberAfClusterId clusterId, uint16_t manufacturerCode, uint8_t commandId, PGM_P format, ... )`

Function that fills in the buffer with manufacturer-specific command.

Fills the outgoing zcl buffer and returns the number of bytes used in a buffer. The buffers used are the ones that were previously set with emberAfSetExternalBuffer.

#### Parameters

<code>frameControl</code>	byte used for frame control
<code>clusterId</code>	cluster id of message

<i>manufacturerCode</i>	manufacturer code of message
<i>commandId</i>	command id of message
<i>format</i>	<p>String format for further arguments to the function. Format values are:</p> <ul style="list-style-type: none"> <li>• '0' – '9' and 'A' – 'G': Pointer to a buffer contain 0–16 raw bytes. The data is copied as is to the destination buffer.</li> <li>• 'u': uint8_t.</li> <li>• 'v': uint16_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'x': int24u. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'w': uint32_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'l': Pointer to a buffer containing a ZigBee long string, with the first two bytes of the buffer specifying the length of the string data in little-endian format. The length bytes and the string itself are both included as is in the destination buffer.</li> <li>• 's': Pointer to a buffer containing a ZigBee string, with the first byte of the buffer specifying the length of the string data. The length byte and the string itself are both included as is in the destination buffer.</li> <li>• 'L': Pointer to a buffer containing a long string followed by an uint16_t specifying the length of the string data. The length bytes in little-endian format will precede the string itself in the destination buffer.</li> <li>• 'S': Pointer to a buffer containing a string followed by an uint8_t specifying the length of the string data. The length byte will precede the string itself in the destination buffer.</li> <li>• 'b': Pointer to a buffer containing a sequence of raw bytes followed by an uint16_t specifying the length of the data. The data is copied as is to the destination buffer. The length is not included.</li> </ul>

### 8.30.3.3 void emberAfSetExternalBuffer ( *uint8\_t \* buffer*, *uint16\_t bufferLen*, *uint16\_t \* responseLengthPtr*, *EmberApsFrame \* apsFramePtr* )

Function that registers the buffer to use with the fill function. Registers the buffer for use with the emberAfFillExternalBuffer function.

#### Parameters

<i>buffer</i>	Main buffer for constructing message.
<i>bufferLen</i>	Available length of buffer.
<i>responseLengthPtr</i>	location where length of message will be written into.
<i>apsFramePtr</i>	location where APS frame data will be written.

### 8.30.3.4 uint16\_t emberAfFillBuffer ( *uint8\_t \* buffer*, *uint16\_t bufferLen*, *uint8\_t frameControl*, *uint8\_t commandId*, *PGM\_P format*, ... )

Stateless function that fills the passed buffer with command data.

Stateless method, that fill the passed buffer. This method is used internally by emberAfFillExternalBuffer, but can be used for generic buffer filling.

#### 8.30.4 Variable Documentation

##### 8.30.4.1 uint8\_t\* emAfZclBuffer

Function that fills in the buffer with command.

Fills the outgoing zcl buffer and returns the number of bytes used in a buffer. The buffers used are the ones that were previously set with emberAfSetExternalBuffer.

###### Parameters

<i>frameControl</i>	byte used for frame control
<i>clusterId</i>	cluster id of message
<i>commandId</i>	command id of message
<i>format</i>	<p>String format for further arguments to the function. Format values are:</p> <ul style="list-style-type: none"> <li>• '0' – '9' and 'A' – 'G': Pointer to a buffer contain 0–16 raw bytes. The data is copied as is to the destination buffer.</li> <li>• 'u': uint8_t.</li> <li>• 'v': uint16_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'x': int24u. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'w': uint32_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'l': Pointer to a buffer containing a ZigBee long string, with the first two bytes of the buffer specifying the length of the string data in little-endian format. The length bytes and the string itself are both included as is in the destination buffer.</li> <li>• 's': Pointer to a buffer containing a ZigBee string, with the first byte of the buffer specifying the length of the string data. The length byte and the string itself are both included as is in the destination buffer.</li> <li>• 'L': Pointer to a buffer containing a long string followed by an uint16_t specifying the length of the string data. The length bytes in little-endian format will precede the string itself in the destination buffer.</li> <li>• 'S': Pointer to a buffer containing a string followed by an uint8_t specifying the length of the string data. The length byte will precede the string itself in the destination buffer.</li> <li>• 'b': Pointer to a buffer containing a sequence of raw bytes followed by an uint16_t specifying the length of the data. The data is copied as is to the destination buffer. The length is not included.</li> </ul>

##### 8.30.4.2 uint16\_t emAfZclBufferLen

Function that fills in the buffer with command.

Fills the outgoing zcl buffer and returns the number of bytes used in a buffer. The buffers used are the ones that were previously set with emberAfSetExternalBuffer.

**Parameters**

<i>frameControl</i>	byte used for frame control
<i>clusterId</i>	cluster id of message
<i>commandId</i>	command id of message
<i>format</i>	<p>String format for further arguments to the function. Format values are:</p> <ul style="list-style-type: none"> <li>• '0' – '9' and 'A' – 'G': Pointer to a buffer contain 0–16 raw bytes. The data is copied as is to the destination buffer.</li> <li>• 'u': uint8_t.</li> <li>• 'v': uint16_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'x': int24u. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'w': uint32_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'l': Pointer to a buffer containing a ZigBee long string, with the first two bytes of the buffer specifying the length of the string data in little-endian format. The length bytes and the string itself are both included as is in the destination buffer.</li> <li>• 's': Pointer to a buffer containing a ZigBee string, with the first byte of the buffer specifying the length of the string data. The length byte and the string itself are both included as is in the destination buffer.</li> <li>• 'L': Pointer to a buffer containing a long string followed by an uint16_t specifying the length of the string data. The length bytes in little-endian format will precede the string itself in the destination buffer.</li> <li>• 'S': Pointer to a buffer containing a string followed by an uint8_t specifying the length of the string data. The length byte will precede the string itself in the destination buffer.</li> <li>• 'b': Pointer to a buffer containing a sequence of raw bytes followed by an uint16_t specifying the length of the data. The data is copied as is to the destination buffer. The length is not included.</li> </ul>

**8.30.4.3 uint16\_t\* emAfResponseLengthPtr**

Function that fills in the buffer with command.

Fills the outgoing zcl buffer and returns the number of bytes used in a buffer. The buffers used are the ones that were previously set with emberAfSetExternalBuffer.

**Parameters**

<i>frameControl</i>	byte used for frame control
<i>clusterId</i>	cluster id of message
<i>commandId</i>	command id of message
<i>format</i>	<p>String format for further arguments to the function. Format values are:</p> <ul style="list-style-type: none"> <li>• '0' – '9' and 'A' – 'G': Pointer to a buffer contain 0–16 raw bytes. The data is copied as is to the destination buffer.</li> <li>• 'u': uint8_t.</li> <li>• 'v': uint16_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'x': int24u. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'w': uint32_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'l': Pointer to a buffer containing a ZigBee long string, with the first two bytes of the buffer specifying the length of the string data in little-endian format. The length bytes and the string itself are both included as is in the destination buffer.</li> <li>• 's': Pointer to a buffer containing a ZigBee string, with the first byte of the buffer specifying the length of the string data. The length byte and the string itself are both included as is in the destination buffer.</li> <li>• 'L': Pointer to a buffer containing a long string followed by an uint16_t specifying the length of the string data. The length bytes in little-endian format will precede the string itself in the destination buffer.</li> <li>• 'S': Pointer to a buffer containing a string followed by an uint8_t specifying the length of the string data. The length byte will precede the string itself in the destination buffer.</li> <li>• 'b': Pointer to a buffer containing a sequence of raw bytes followed by an uint16_t specifying the length of the data. The data is copied as is to the destination buffer. The length is not included.</li> </ul>

**8.30.4.4 EmberApsFrame\* emAfCommandApsFrame**

Function that fills in the buffer with command.

Fills the outgoing zcl buffer and returns the number of bytes used in a buffer. The buffers used are the ones that were previously set with emberAfSetExternalBuffer.

**Parameters**

<i>frameControl</i>	byte used for frame control
<i>clusterId</i>	cluster id of message
<i>commandId</i>	command id of message
<i>format</i>	<p>String format for further arguments to the function. Format values are:</p> <ul style="list-style-type: none"> <li>• '0' – '9' and 'A' – 'G': Pointer to a buffer contain 0–16 raw bytes. The data is copied as is to the destination buffer.</li> <li>• 'u': uint8_t.</li> <li>• 'v': uint16_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'x': int24u. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'w': uint32_t. The bytes are copied in little-endian format to the destination buffer.</li> <li>• 'l': Pointer to a buffer containing a ZigBee long string, with the first two bytes of the buffer specifying the length of the string data in little-endian format. The length bytes and the string itself are both included as is in the destination buffer.</li> <li>• 's': Pointer to a buffer containing a ZigBee string, with the first byte of the buffer specifying the length of the string data. The length byte and the string itself are both included as is in the destination buffer.</li> <li>• 'L': Pointer to a buffer containing a long string followed by an uint16_t specifying the length of the string data. The length bytes in little-endian format will precede the string itself in the destination buffer.</li> <li>• 'S': Pointer to a buffer containing a string followed by an uint8_t specifying the length of the string data. The length byte will precede the string itself in the destination buffer.</li> <li>• 'b': Pointer to a buffer containing a sequence of raw bytes followed by an uint16_t specifying the length of the data. The data is copied as is to the destination buffer. The length is not included.</li> </ul>

## Basic Commands

- #define `emberAfFillCommandBasicClusterResetToFactoryDefaults()`

## Identify Commands

- #define `emberAfFillCommandIdentifyClusterIdentify`(identifyTime)
- #define `emberAfFillCommandIdentifyClusterIdentifyQuery()`
- #define `emberAfFillCommandIdentifyClusterEZModeInvoke`(action)
- #define `emberAfFillCommandIdentifyClusterUpdateCommissionState`(action, commissionStateMask)
- #define `emberAfFillCommandIdentifyClusterIdentifyQueryResponse`(timeout)
- #define `emberAfFillCommandIdentifyClusterTriggerEffect`(effectId, effectVariant)

## Groups Commands

- #define `emberAfFillCommandGroupsClusterAddGroup`(groupId, groupName)
- #define `emberAfFillCommandGroupsClusterViewGroup`(groupId)
- #define `emberAfFillCommandGroupsClusterGetGroupMembership`(groupCount, groupList, group-  
ListLen)
- #define `emberAfFillCommandGroupsClusterRemoveGroup`(groupId)
- #define `emberAfFillCommandGroupsClusterRemoveAllGroups()`
- #define `emberAfFillCommandGroupsClusterAddGroupIfIdentifying`(groupId, groupName)
- #define `emberAfFillCommandGroupsClusterAddGroupResponse`(status, groupId)
- #define `emberAfFillCommandGroupsClusterViewGroupResponse`(status, groupId, groupName)
- #define `emberAfFillCommandGroupsClusterGetGroupMembershipResponse`(capacity, groupCount,  
groupList, groupListLen)
- #define `emberAfFillCommandGroupsClusterRemoveGroupResponse`(status, groupId)

## Scenes Commands

- #define `emberAfFillCommandScenesClusterAddScene`(groupId, sceneId, transitionTime, sceneName,  
extensionFieldSets, extensionFieldSetsLen)
- #define `emberAfFillCommandScenesClusterViewScene`(groupId, sceneId)
- #define `emberAfFillCommandScenesClusterRemoveScene`(groupId, sceneId)
- #define `emberAfFillCommandScenesClusterRemoveAllScenes`(groupId)
- #define `emberAfFillCommandScenesClusterStoreScene`(groupId, sceneId)
- #define `emberAfFillCommandScenesClusterRecallScene`(groupId, sceneId)
- #define `emberAfFillCommandScenesClusterGetSceneMembership`(groupId)
- #define `emberAfFillCommandScenesClusterAddSceneResponse`(status, groupId, sceneId)

- #define `emberAfFillCommandScenesClusterViewSceneResponse`(status, groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen)
- #define `emberAfFillCommandScenesClusterRemoveSceneResponse`(status, groupId, sceneId)
- #define `emberAfFillCommandScenesClusterRemoveAllScenesResponse`(status, groupId)
- #define `emberAfFillCommandScenesClusterStoreSceneResponse`(status, groupId, sceneId)
- #define `emberAfFillCommandScenesClusterGetSceneMembershipResponse`(status, capacity, groupId, sceneCount, sceneList, sceneListLen)
- #define `emberAfFillCommandScenesClusterEnhancedAddScene`(groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen)
- #define `emberAfFillCommandScenesClusterEnhancedViewScene`(groupId, sceneId)
- #define `emberAfFillCommandScenesClusterCopyScene`(mode, groupIdFrom, sceneIdFrom, groupIdTo, sceneIdTo)
- #define `emberAfFillCommandScenesClusterEnhancedAddSceneResponse`(status, groupId, sceneId)
- #define `emberAfFillCommandScenesClusterEnhancedViewSceneResponse`(status, groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen)
- #define `emberAfFillCommandScenesClusterCopySceneResponse`(status, groupIdFrom, sceneIdFrom)

## On/off Commands

- #define `emberAfFillCommandOnOffClusterOff()`
- #define `emberAfFillCommandOnOffClusterOn()`
- #define `emberAfFillCommandOnOffClusterToggle()`
- #define `emberAfFillCommandOnOffClusterOffWithEffect`(effectId, effectVariant)
- #define `emberAfFillCommandOnOffClusterOnWithRecallGlobalScene()`
- #define `emberAfFillCommandOnOffClusterOnWithTimedOff`(onOffControl, onTime, offWaitTime)
- #define `emberAfFillCommandOnOffClusterSampleMfgSpecificOffWithTransition()`
- #define `emberAfFillCommandOnOffClusterSampleMfgSpecificOnWithTransition()`
- #define `emberAfFillCommandOnOffClusterSampleMfgSpecificToggleWithTransition()`

## Level Control Commands

- #define `emberAfFillCommandLevelControlClusterMoveToLevel`(level, transitionTime)
- #define `emberAfFillCommandLevelControlClusterMove`(moveMode, rate)
- #define `emberAfFillCommandLevelControlClusterStep`(stepMode, stepSize, transitionTime)
- #define `emberAfFillCommandLevelControlClusterStop()`
- #define `emberAfFillCommandLevelControlClusterMoveToLevelWithOnOff`(level, transitionTime)
- #define `emberAfFillCommandLevelControlClusterMoveWithOnOff`(moveMode, rate)
- #define `emberAfFillCommandLevelControlClusterStepWithOnOff`(stepMode, stepSize, transitionTime)
- #define `emberAfFillCommandLevelControlClusterStopWithOnOff()`

## Alarms Commands

- #define `emberAfFillCommandAlarmClusterResetAlarm`(alarmCode, clusterId)
- #define `emberAfFillCommandAlarmClusterResetAllAlarms()`
- #define `emberAfFillCommandAlarmClusterGetAlarm()`
- #define `emberAfFillCommandAlarmClusterResetAlarmLog()`
- #define `emberAfFillCommandAlarmClusterAlarm`(alarmCode, clusterId)
- #define `emberAfFillCommandAlarmClusterGetAlarmResponse`(status, alarmCode, clusterId, timeStamp)

## RSSI Location Commands

- #define `emberAfFillCommandRssiLocationClusterSetAbsoluteLocation`(coordinate1, coordinate2, coordinate3, power, pathLossExponent)
- #define `emberAfFillCommandRssiLocationClusterSetDeviceConfiguration`(power, pathLossExponent, calculationPeriod, numberRssiMeasurements, reportingPeriod)
- #define `emberAfFillCommandRssiLocationClusterGetDeviceConfiguration`(targetAddress)
- #define `emberAfFillCommandRssiLocationClusterGetLocationData`(flags, numberResponses, targetAddress)
- #define `emberAfFillCommandRssiLocationClusterRssiResponse`(replyingDevice, coordinate1, coordinate2, coordinate3, rssi, numberRssiMeasurements)
- #define `emberAfFillCommandRssiLocationClusterSendPings`(targetAddress, numberRssiMeasurements, calculationPeriod)
- #define `emberAfFillCommandRssiLocationClusterAnchorNodeAnnounce`(anchorNodeIeeeAddress, coordinate1, coordinate2, coordinate3)
- #define `emberAfFillCommandRssiLocationClusterDeviceConfigurationResponse`(status, power, pathLossExponent, calculationPeriod, numberRssiMeasurements, reportingPeriod)
- #define `emberAfFillCommandRssiLocationClusterLocationDataResponse`(status, locationType, coordinate1, coordinate2, coordinate3, power, pathLossExponent, locationMethod, qualityMeasure, locationAge)
- #define `emberAfFillCommandRssiLocationClusterLocationDataNotification`(locationType, coordinate1, coordinate2, coordinate3, power, pathLossExponent, locationMethod, qualityMeasure, locationAge)
- #define `emberAfFillCommandRssiLocationClusterCompactLocationDataNotification`(locationType, coordinate1, coordinate2, coordinate3, qualityMeasure, locationAge)
- #define `emberAfFillCommandRssiLocationClusterRssiPing`(locationType)
- #define `emberAfFillCommandRssiLocationClusterRssiRequest`()
- #define `emberAfFillCommandRssiLocationClusterReportRssiMeasurements`(measuringDevice, neighbors, neighborsInfo, neighborsInfoLen)
- #define `emberAfFillCommandRssiLocationClusterRequestOwnLocation`(blindNode)

## Commissioning Commands

- #define `emberAfFillCommandCommissioningClusterRestartDevice`(options, delay, jitter)
- #define `emberAfFillCommandCommissioningClusterSaveStartupParameters`(options, index)
- #define `emberAfFillCommandCommissioningClusterRestoreStartupParameters`(options, index)
- #define `emberAfFillCommandCommissioningClusterResetStartupParameters`(options, index)
- #define `emberAfFillCommandCommissioningClusterRestartDeviceResponse`(status)
- #define `emberAfFillCommandCommissioningClusterSaveStartupParametersResponse`(status)
- #define `emberAfFillCommandCommissioningClusterRestoreStartupParametersResponse`(status)
- #define `emberAfFillCommandCommissioningClusterResetStartupParametersResponse`(status)

## Partition Commands

- #define `emberAfFillCommandPartitionClusterTransferPartitionedFrame`(fragmentationOptions, partitionedIndicatorAndFrame, partitionedIndicatorAndFrameLen)
- #define `emberAfFillCommandPartitionClusterReadHandshakeParam`(partitionedClusterId, attributeList, attributeListLen)
- #define `emberAfFillCommandPartitionClusterWriteHandshakeParam`(partitionedClusterId, writeAttributeRecords, writeAttributeRecordsLen)

- #define `emberAfFillCommandPartitionClusterMultipleAck`(ackOptions, firstFrameIdAndNackList, firstFrameIdAndNackListLen)
- #define `emberAfFillCommandPartitionClusterReadHandshakeParamResponse`(partitionedClusterId, readAttributeStatusRecords, readAttributeStatusRecordsLen)

## Over the Air Bootloading Commands

- #define `emberAfFillCommandOtaBootloadClusterImageNotify`(payloadType, queryJitter, manufacturerId, imageType, newFileVersion)
- #define `emberAfFillCommandOtaBootloadClusterQueryNextImageRequest`(fieldControl, manufacturerId, imageType, currentFileVersion, hardwareVersion)
- #define `emberAfFillCommandOtaBootloadClusterQueryNextImageResponse`(status, manufacturerId, imageType, fileVersion, imageSize)
- #define `emberAfFillCommandOtaBootloadClusterImageBlockRequest`(fieldControl, manufacturerId, imageType, fileVersion, fileOffset, maxDataSize, requestNodeAddress)
- #define `emberAfFillCommandOtaBootloadClusterImagePageRequest`(fieldControl, manufacturerId, imageType, fileVersion, fileOffset, maxDataSize, pageSize, responseSpacing, requestNodeAddress)
- #define `emberAfFillCommandOtaBootloadClusterImageBlockResponse`(status, manufacturerId, imageType, fileVersion, fileOffset, dataSize, imageData, imageDataLen)
- #define `emberAfFillCommandOtaBootloadClusterUpgradeEndRequest`(status, manufacturerId, imageType, fileVersion)
- #define `emberAfFillCommandOtaBootloadClusterUpgradeEndResponse`(manufacturerId, imageType, fileVersion, currentTime, upgradeTime)
- #define `emberAfFillCommandOtaBootloadClusterQuerySpecificFileRequest`(requestNodeAddress, manufacturerId, imageType, fileVersion, currentZigbeeStackVersion)
- #define `emberAfFillCommandOtaBootloadClusterQuerySpecificFileResponse`(status, manufacturerId, imageType, fileVersion, imageSize)

## Power Profile Commands

- #define `emberAfFillCommandPowerProfileClusterPowerProfileRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileStateRequest()`
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePriceResponse`(powerProfileId, currency, price, priceTrailingDigit)
- #define `emberAfFillCommandPowerProfileClusterGetOverallSchedulePriceResponse`(currency, price, priceTrailingDigit)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleNotification`(powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleResponse`(powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePriceExtendedResponse`(powerProfileId, currency, price, priceTrailingDigit)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileNotification`(totalProfileNum, powerProfileId, numOfTransferredPhases, transferredPhases, transferredPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileResponse`(totalProfileNum, powerProfileId, numOfTransferredPhases, transferredPhases, transferredPhasesLen)

- #define `emberAfFillCommandPowerProfileClusterPowerProfileStateResponse`(powerProfileCount, powerProfileRecords, powerProfileRecordsLen)
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePrice`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterPowerProfilesStateNotification`(powerProfileCount, powerProfileRecords, powerProfileRecordsLen)
- #define `emberAfFillCommandPowerProfileClusterGetOverallSchedulePrice()`
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateResponse`(powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateNotification`(powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsNotification`(powerProfileId, startAfter, stopBefore)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsResponse`(powerProfileId, startAfter, stopBefore)
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePriceExtended`(options, powerProfileId, powerProfileStartTime)

## Appliance Control Commands

- #define `emberAfFillCommandApplianceControlClusterExecutionOfACommand`(commandId)
- #define `emberAfFillCommandApplianceControlClusterSignalState()`
- #define `emberAfFillCommandApplianceControlClusterWriteFunctions`(functionId, functionDataType, functionData, functionDataLen)
- #define `emberAfFillCommandApplianceControlClusterOverloadPauseResume()`
- #define `emberAfFillCommandApplianceControlClusterOverloadPause()`
- #define `emberAfFillCommandApplianceControlClusterOverloadWarning`(warningEvent)
- #define `emberAfFillCommandApplianceControlClusterSignalStateResponse`(applianceStatus, remoteEnableFlagsAndDeviceStatus2, applianceStatus2)
- #define `emberAfFillCommandApplianceControlClusterSignalStateNotification`(applianceStatus, remoteEnableFlagsAndDeviceStatus2, applianceStatus2)

## Poll Control Commands

- #define `emberAfFillCommandPollControlClusterCheckIn()`
- #define `emberAfFillCommandPollControlClusterCheckInResponse`(startFastPolling, fastPollTimeout)
- #define `emberAfFillCommandPollControlClusterFastPollStop()`
- #define `emberAfFillCommandPollControlClusterSetLongPollInterval`(newLongPollInterval)
- #define `emberAfFillCommandPollControlClusterSetShortPollInterval`(newShortPollInterval)

## Green Power Commands

- #define `emberAfFillCommandGreenPowerClusterGpNotification`(options, gpdSrcId, gpdIeee, gpdEndpoint, gpdSecurityFrameCounter, gpdCommandId, gpdCommandPayload, gppShortAddress, gppDistance)
- #define `emberAfFillCommandGreenPowerClusterGpPairingSearch`(options, gpdSrcId, gpdIeee, endpoint)
- #define `emberAfFillCommandGreenPowerClusterGpTunnelingStop`(options, gpdSrcId, gpdIeee, endpoint, gpdSecurityFrameCounter, gppShortAddress, gppDistance)

- #define `emberAfFillCommandGreenPowerClusterGpCommissioningNotification`(options, gpdSrcId, gpdIeee, endpoint, gpdSecurityFrameCounter, gpdCommandId, gpdCommandPayload, gppShortAddress, gppLink, mic)
- #define `emberAfFillCommandGreenPowerClusterGpSinkCommissioningMode`(options, gpmAddrForSecurity, gpmAddrForPairing, sinkEndpoint)
- #define `emberAfFillCommandGreenPowerClusterGpTranslationTableUpdate`(options, gpdSrcId, gpdIeee, endpoint, translations, translationsLen)
- #define `emberAfFillCommandGreenPowerClusterGpTranslationTableRequest`(startIndex)
- #define `emberAfFillCommandGreenPowerClusterGpPairingConfiguration`(actions, options, gpdSrcId, gpdIeee, endpoint, deviceId, groupListCount, groupList, groupListLen, gpdAssignedAlias, forwardingRadius, securityOptions, gpdSecurityFrameCounter, gpdSecurityKey, numberOfPairedEndpoints, pairedEndpoints, pairedEndpointsLen, applicationInformation, manufacturerId, modeId, number\_of\_GpdCommands, gpdCommandIdList, gpdCommandIdListLen, clusterIdListCount, clusterListServer, clusterListServerLen, clusterListClient, clusterListClientLen)
- #define `emberAfFillCommandGreenPowerClusterGpSinkTableRequest`(options, gpdSrcId, gpdIeee, endpoint, index)
- #define `emberAfFillCommandGreenPowerClusterGpProxyTableResponse`(status, totalNumberOfNonEmptyProxyTableEntries, startIndex, entriesCount, proxyTableEntries, proxyTableEntriesLen)
- #define `emberAfFillCommandGreenPowerClusterGpNotificationResponse`(options, gpdSrcId, gpdIeee, gpdSecurityFrameCounter)
- #define `emberAfFillCommandGreenPowerClusterGpPairing`(options, gpdSrcId, gpdIeee, endpoint, sinkIeeeAddress, sinkNwkAddress, sinkGroupId, deviceId, gpdSecurityFrameCounter, gpdKey, assignedAlias, forwardingRadius)
- #define `emberAfFillCommandGreenPowerClusterGpProxyCommissioningMode`(options, commissioningWindow, channel)
- #define `emberAfFillCommandGreenPowerClusterGpResponse`(options, tempMasterShortAddress, tempMasterTxChannel, gpdSrcId, gpdIeee, endpoint, gpdCommandId, gpdCommandPayload, gpdCommandPayloadLen)
- #define `emberAfFillCommandGreenPowerClusterGpSinkTableResponse`(status, totalNumberOfNonEmptySinkTableEntries, startIndex, sinkTableEntriesCount, sinkTableEntries, sinkTableEntriesLen)
- #define `emberAfFillCommandGreenPowerClusterGpProxyTableRequest`(options, gpdSrcId, gpdIeee, endpoint, index)

## Door Lock Commands

- #define `emberAfFillCommandDoorLockClusterLockDoor`(PIN)
- #define `emberAfFillCommandDoorLockClusterUnlockDoor`(PIN)
- #define `emberAfFillCommandDoorLockClusterToggle`(pin)
- #define `emberAfFillCommandDoorLockClusterUnlockWithTimeout`(timeoutInSeconds, pin)
- #define `emberAfFillCommandDoorLockClusterGetLogRecord`(logIndex)
- #define `emberAfFillCommandDoorLockClusterSetPin`(userId, userStatus, userType, pin)
- #define `emberAfFillCommandDoorLockClusterGetPin`(userId)
- #define `emberAfFillCommandDoorLockClusterClearPin`(userId)
- #define `emberAfFillCommandDoorLockClusterClearAllPins`()
- #define `emberAfFillCommandDoorLockClusterSetUserStatus`(userId, userStatus)
- #define `emberAfFillCommandDoorLockCluster GetUserStatus`(userId)
- #define `emberAfFillCommandDoorLockClusterSetWeekdaySchedule`(scheduleId, userId, daysMask, startHour, startMinute, endHour, endMinute)
- #define `emberAfFillCommandDoorLockClusterGetWeekdaySchedule`(scheduleId, userId)
- #define `emberAfFillCommandDoorLockClusterClearWeekdaySchedule`(scheduleId, userId)

- #define `emberAfFillCommandDoorLockClusterSetYeardaySchedule(scheduleId, userId, localStartTime, localEndTime)`
- #define `emberAfFillCommandDoorLockClusterGetYeardaySchedule(scheduleId, userId)`
- #define `emberAfFillCommandDoorLockClusterClearYeardaySchedule(scheduleId, userId)`
- #define `emberAfFillCommandDoorLockClusterSetHolidaySchedule(scheduleId, localStartTime, localEndTime, operatingModeDuringHoliday)`
- #define `emberAfFillCommandDoorLockClusterGetHolidaySchedule(scheduleId)`
- #define `emberAfFillCommandDoorLockClusterClearHolidaySchedule(scheduleId)`
- #define `emberAfFillCommandDoorLockClusterSetUserType(userId, userType)`
- #define `emberAfFillCommandDoorLockCluster GetUserType(userId)`
- #define `emberAfFillCommandDoorLockClusterSetRfid(userId, userStatus, userType, id)`
- #define `emberAfFillCommandDoorLockClusterGetRfid(userId)`
- #define `emberAfFillCommandDoorLockClusterClearRfid(userId)`
- #define `emberAfFillCommandDoorLockClusterClearAllRfids()`
- #define `emberAfFillCommandDoorLockClusterLockDoorResponse(status)`
- #define `emberAfFillCommandDoorLockClusterUnlockDoorResponse(status)`
- #define `emberAfFillCommandDoorLockClusterToggleResponse(status)`
- #define `emberAfFillCommandDoorLockClusterUnlockWithTimeoutResponse(status)`
- #define `emberAfFillCommandDoorLockClusterGetLogRecordResponse(logEntryId, timestamp, event-Type, source, eventIdOrAlarmCode, userId, pin)`
- #define `emberAfFillCommandDoorLockClusterSetPinResponse(status)`
- #define `emberAfFillCommandDoorLockClusterGetPinResponse(userId, userStatus, userType, pin)`
- #define `emberAfFillCommandDoorLockClusterClearPinResponse(status)`
- #define `emberAfFillCommandDoorLockClusterClearAllPinsResponse(status)`
- #define `emberAfFillCommandDoorLockClusterSetUserStatusResponse(status)`
- #define `emberAfFillCommandDoorLockCluster GetUserStatusResponse(userId, status)`
- #define `emberAfFillCommandDoorLockClusterSetWeekdayScheduleResponse(status)`
- #define `emberAfFillCommandDoorLockClusterGetWeekdayScheduleResponse(scheduleId, userId, status, daysMask, startHour, startMinute, endHour, endMinute)`
- #define `emberAfFillCommandDoorLockClusterClearWeekdayScheduleResponse(status)`
- #define `emberAfFillCommandDoorLockClusterSetYeardayScheduleResponse(status)`
- #define `emberAfFillCommandDoorLockClusterGetYeardayScheduleResponse(scheduleId, userId, status, localStartTime, localEndTime)`
- #define `emberAfFillCommandDoorLockClusterClearYeardayScheduleResponse(status)`
- #define `emberAfFillCommandDoorLockClusterSetHolidayScheduleResponse(status)`

- #define `emberAfFillCommandDoorLockClusterClearHolidayScheduleResponse(status)`
- #define `emberAfFillCommandDoorLockClusterSetUserTypeResponse(status)`
- #define `emberAfFillCommandDoorLockCluster GetUserTypeResponse(userId, userType)`
- #define `emberAfFillCommandDoorLockClusterSetRfidResponse(status)`
- #define `emberAfFillCommandDoorLockClusterGetRfidResponse(userId, userStatus, userType, rfid)`
- #define `emberAfFillCommandDoorLockClusterClearRfidResponse(status)`
- #define `emberAfFillCommandDoorLockClusterClearAllRfidsResponse(status)`
- #define `emberAfFillCommandDoorLockClusterOperationEventNotification(source, eventCode, userId, pin, timeStamp, data)`
- #define `emberAfFillCommandDoorLockClusterProgrammingEventNotification(source, eventCode, userId, pin, userType, userStatus, timeStamp, data)`

## Window Covering Commands

- #define `emberAfFillCommandWindowCoveringClusterWindowCoveringUpOpen()`
- #define `emberAfFillCommandWindowCoveringClusterWindowCoveringDownClose()`
- #define `emberAfFillCommandWindowCoveringClusterWindowCoveringStop()`
- #define `emberAfFillCommandWindowCoveringClusterWindowCoveringGoToLiftValue(liftValue)`
- #define `emberAfFillCommandWindowCoveringClusterWindowCoveringGoToLiftPercentage(percentageLiftValue)`
- #define `emberAfFillCommandWindowCoveringClusterWindowCoveringGoToTiltValue(tiltValue)`
- #define `emberAfFillCommandWindowCoveringClusterWindowCoveringGoToTiltPercentage(percentageTiltValue)`

## Thermostat Commands

- #define `emberAfFillCommandThermostatClusterSetpointRaiseLower(mode, amount)`
- #define `emberAfFillCommandThermostatClusterSetWeeklySchedule(numberOfTransitionsForSequence, dayOfWeekForSequence, modeForSequence, payload, payloadLen)`
- #define `emberAfFillCommandThermostatClusterGetWeeklySchedule(daysToReturn, modeToReturn)`
- #define `emberAfFillCommandThermostatClusterClearWeeklySchedule()`
- #define `emberAfFillCommandThermostatClusterGetRelayStatusLog()`
- #define `emberAfFillCommandThermostatClusterGetCurrentWeeklySchedule(numberOfTransitionsForSequence, dayOfWeekForSequence, modeForSequence, payload, payloadLen)`
- #define `emberAfFillCommandThermostatClusterRelayStatusLog(timeOfDay, relayStatus, localTemperature, humidityInPercentage, setpoint, unreadEntries)`

## Color Control Commands

- #define `emberAfFillCommandColorControlClusterMoveToHue(hue, direction, transitionTime)`
- #define `emberAfFillCommandColorControlClusterMoveHue(moveMode, rate)`
- #define `emberAfFillCommandColorControlClusterStepHue(stepMode, stepSize, transitionTime)`
- #define `emberAfFillCommandColorControlClusterMoveToSaturation(saturation, transitionTime)`
- #define `emberAfFillCommandColorControlClusterMoveSaturation(moveMode, rate)`
- #define `emberAfFillCommandColorControlClusterStepSaturation(stepMode, stepSize, transitionTime)`
- #define `emberAfFillCommandColorControlClusterMoveToHueAndSaturation(hue, saturation, transitionTime)`
- #define `emberAfFillCommandColorControlClusterMoveToColor(colorX, colorY, transitionTime)`
- #define `emberAfFillCommandColorControlClusterMoveColor(rateX, rateY)`
- #define `emberAfFillCommandColorControlClusterStepColor(stepX, stepY, transitionTime)`
- #define `emberAfFillCommandColorControlClusterMoveToColorTemperature(colorTemperature, transitionTime)`
- #define `emberAfFillCommandColorControlClusterEnhancedMoveToHue(enhancedHue, direction, transitionTime)`
- #define `emberAfFillCommandColorControlClusterEnhancedMoveHue(moveMode, rate)`
- #define `emberAfFillCommandColorControlClusterEnhancedStepHue(stepMode, stepSize, transitionTime)`
- #define `emberAfFillCommandColorControlClusterEnhancedMoveToHueAndSaturation(enhancedHue, saturation, transitionTime)`
- #define `emberAfFillCommandColorControlClusterColorLoopSet(updateFlags, action, direction, time, startHue)`
- #define `emberAfFillCommandColorControlClusterStopMoveStep()`

- #define `emberAfFillCommandColorControlClusterMoveColorTemperature`(moveMode, rate, colorTemperatureMinimum, colorTemperatureMaximum)
- #define `emberAfFillCommandColorControlClusterStepColorTemperature`(stepMode, stepSize, transitionTime, colorTemperatureMinimum, colorTemperatureMaximum)

## IAS Zone Commands

- #define `emberAfFillCommandIasZoneClusterZoneEnrollResponse`(enrollResponseCode, zoneId)
- #define `emberAfFillCommandIasZoneClusterInitiateNormalOperationMode()`
- #define `emberAfFillCommandIasZoneClusterInitiateTestMode`(testModeDuration, currentZoneSensitivityLevel)
- #define `emberAfFillCommandIasZoneClusterZoneStatusChangeNotification`(zoneStatus, extendedStatus, zoneId, delay)
- #define `emberAfFillCommandIasZoneClusterZoneEnrollRequest`(zoneType, manufacturerCode)
- #define `emberAfFillCommandIasZoneClusterInitiateNormalOperationModeResponse()`
- #define `emberAfFillCommandIasZoneClusterInitiateTestModeResponse()`

## IAS ACE Commands

- #define `emberAfFillCommandIasAceClusterArm`(armMode, armDisarmCode, zoneId)
- #define `emberAfFillCommandIasAceClusterBypass`(numberOfZones, zoneIds, zoneIdsLen, armDisarmCode)
- #define `emberAfFillCommandIasAceClusterEmergency()`
- #define `emberAfFillCommandIasAceClusterFire()`
- #define `emberAfFillCommandIasAceClusterPanic()`
- #define `emberAfFillCommandIasAceClusterGetZoneIdMap()`
- #define `emberAfFillCommandIasAceClusterGetZoneInformation`(zoneId)
- #define `emberAfFillCommandIasAceClusterGetPanelStatus()`
- #define `emberAfFillCommandIasAceClusterGetBypassedZoneList()`
- #define `emberAfFillCommandIasAceClusterGetZoneStatus`(startingZoneId, maxNumberOfZoneIds, zoneStatusMaskFlag, zoneStatusMask)
- #define `emberAfFillCommandIasAceClusterArmResponse`(armNotification)
- #define `emberAfFillCommandIasAceClusterGetZoneIdMapResponse`(section0, section1, section2, section3, section4, section5, section6, section7, section8, section9, section10, section11, section12, section13, section14, section15)
- #define `emberAfFillCommandIasAceClusterGetZoneInformationResponse`(zoneId, zoneType, ieeeAddress, zoneLabel)
- #define `emberAfFillCommandIasAceClusterZoneStatusChanged`(zoneId, zoneStatus, audibleNotification, zoneLabel)
- #define `emberAfFillCommandIasAceClusterPanelStatusChanged`(panelStatus, secondsRemaining, audibleNotification, alarmStatus)
- #define `emberAfFillCommandIasAceClusterGetPanelStatusResponse`(panelStatus, secondsRemaining, audibleNotification, alarmStatus)
- #define `emberAfFillCommandIasAceClusterSetBypassedZoneList`(numberOfZones, zoneIds, zoneIdsLen)
- #define `emberAfFillCommandIasAceClusterBypassResponse`(numberOfZones, bypassResult, bypassResultLen)
- #define `emberAfFillCommandIasAceClusterGetZoneStatusResponse`(zoneStatusComplete, numberOfZones, zoneStatusResult, zoneStatusResultLen)

## IAS WD Commands

- #define `emberAfFillCommandIasWdClusterStartWarning`(warningInfo, warningDuration, strobeDutyCycle, strobeLevel)
- #define `emberAfFillCommandIasWdClusterSquawk`(squawkInfo)

## Generic Tunnel Commands

- #define `emberAfFillCommandGenericTunnelClusterMatchProtocolAddress`(protocolAddress)
- #define `emberAfFillCommandGenericTunnelClusterMatchProtocolAddressResponse`(deviceIeeeAddress, protocolAddress)
- #define `emberAfFillCommandGenericTunnelClusterAdvertiseProtocolAddress`(protocolAddress)

## BACnet Protocol Tunnel Commands

- #define `emberAfFillCommandBacnetProtocolTunnelClusterTransferNpdu`(npdu, npduLen)

## 11073 Protocol Tunnel Commands

- #define `emberAfFillCommand11073ProtocolTunnelClusterTransferAPDU`(apdu)
- #define `emberAfFillCommand11073ProtocolTunnelClusterConnectRequest`(connectControl, idleTimeout, managerTarget, managerEndpoint)
- #define `emberAfFillCommand11073ProtocolTunnelClusterDisconnectRequest`(managerIEEEAddress)
- #define `emberAfFillCommand11073ProtocolTunnelClusterConnectStatusNotification`(connectStatus)

## ISO 7816 Protocol Tunnel Commands

- #define `emberAfFillCommandIso7816ProtocolTunnelClusterServerToClientTransferApdu`(apdu)
- #define `emberAfFillCommandIso7816ProtocolTunnelClusterClientToServerTransferApdu`(apdu)
- #define `emberAfFillCommandIso7816ProtocolTunnelClusterInsertSmartCard`()
- #define `emberAfFillCommandIso7816ProtocolTunnelClusterExtractSmartCard`()

## Price Commands

- #define `emberAfFillCommandPriceClusterPublishPrice`(providerId, rateLabel, issuerEventId, currentTime, unitOfMeasure, currency, priceTrailingDigitAndPriceTier, numberOfPriceTiersAndRegisterTier, startTime, durationInMinutes, price, priceRatio, generationPrice, generationPriceRatio, alternateCostDelivered, alternateCostUnit, alternateCostTrailingDigit, numberOfBlockThresholds, priceControl, numberOfGenerationTiers, generationTier, extendedNumberOfPriceTiers, extendedPriceTier, extendedRegisterTier)
- #define `emberAfFillCommandPriceClusterPublishBlockPeriod`(providerId, issuerEventId, blockPeriodStartTime, blockPeriodDuration, blockPeriodControl, blockPeriodDurationType, tariffType, tariffResolutionPeriod)
- #define `emberAfFillCommandPriceClusterPublishConversionFactor`(issuerEventId, startTime, conversionFactor, conversionFactorTrailingDigit)
- #define `emberAfFillCommandPriceClusterPublishCalorificValue`(issuerEventId, startTime, calorificValue, calorificValueUnit, calorificValueTrailingDigit)

- #define `emberAfFillCommandPriceClusterPublishTariffInformation`(providerId, issuerEventId, issuerTariffId, startTime, tariffTypeChargingScheme, tariffLabel, numberPriceTiersInUse, numberBlockThresholdsInUse, unitOfMeasure, currency, priceTrailingDigit, standingCharge, tierBlockMode, blockThresholdMultiplier, blockThresholdDivisor)
- #define `emberAfFillCommandPriceClusterPublishPriceMatrix`(providerId, issuerEventId, startTime, issuerTariffId, commandIndex, numberCommands, subPayloadControl, payload, payloadLen)
- #define `emberAfFillCommandPriceClusterPublishBlockThresholds`(providerId, issuerEventId, startTime, issuerTariffId, commandIndex, numberCommands, subPayloadControl, payload, payloadLen)
- #define `emberAfFillCommandPriceClusterPublishCO2Value`(providerId, issuerEventId, startTime, tariffType, cO2Value, cO2ValueUnit, cO2ValueTrailingDigit)
- #define `emberAfFillCommandPriceClusterPublishTierLabels`(providerId, issuerEventId, issuerTariffId, commandIndex, numberCommands, numberLabels, tierLabelsPayload, tierLabelsPayloadLen)
- #define `emberAfFillCommandPriceClusterPublishBillingPeriod`(providerId, issuerEventId, billingPeriodStartTime, billingPeriodDuration, billingPeriodDurationType, tariffType)
- #define `emberAfFillCommandPriceClusterPublishConsolidatedBill`(providerId, issuerEventId, billingPeriodStartTime, billingPeriodDuration, billingPeriodDurationType, tariffType, consolidatedBill, currency, billTrailingDigit)
- #define `emberAfFillCommandPriceClusterPublishCppEvent`(providerId, issuerEventId, startTime, durationInMinutes, tariffType, cppPriceTier, cppAuth)
- #define `emberAfFillCommandPriceClusterPublishCreditPayment`(providerId, issuerEventId, creditPaymentDueDate, creditPaymentOverDueAmount, creditPaymentStatus, creditPayment, creditPaymentDate, creditPaymentRef)
- #define `emberAfFillCommandPriceClusterPublishCurrencyConversion`(providerId, issuerEventId, startTime, oldCurrency, newCurrency, conversionFactor, conversionFactorTrailingDigit, currencyChangeControlFlags)
- #define `emberAfFillCommandPriceClusterCancelTariff`(providerId, issuerTariffId, tariffType)
- #define `emberAfFillCommandPriceClusterGetCurrentPrice`(commandOptions)
- #define `emberAfFillCommandPriceClusterGetScheduledPrices`(startTime, numberEvents)
- #define `emberAfFillCommandPriceClusterPriceAcknowledgement`(providerId, issuerEventId, priceAckTime, control)
- #define `emberAfFillCommandPriceClusterGetBlockPeriods`(startTime, numberEvents, tariffType)
- #define `emberAfFillCommandPriceClusterGetConversionFactor`(earliestStartTime, minIssuerEventId, numberCommands)
- #define `emberAfFillCommandPriceClusterGetCalorificValue`(earliestStartTime, minIssuerEventId, numberCommands)
- #define `emberAfFillCommandPriceClusterGetTariffInformation`(earliestStartTime, minIssuerEventId, numberCommands, tariffType)
- #define `emberAfFillCommandPriceClusterGetPriceMatrix`(issuerTariffId)
- #define `emberAfFillCommandPriceClusterGetBlockThresholds`(issuerTariffId)
- #define `emberAfFillCommandPriceClusterGetCO2Value`(earliestStartTime, minIssuerEventId, numberCommands, tariffType)
- #define `emberAfFillCommandPriceClusterGetTierLabels`(issuerTariffId)
- #define `emberAfFillCommandPriceClusterGetBillingPeriod`(earliestStartTime, minIssuerEventId, numberCommands, tariffType)
- #define `emberAfFillCommandPriceClusterGetConsolidatedBill`(earliestStartTime, minIssuerEventId, numberCommands, tariffType)
- #define `emberAfFillCommandPriceClusterCppEventResponse`(issuerEventId, cppAuth)
- #define `emberAfFillCommandPriceClusterGetCreditPayment`(latestEndTime, numberRecords)
- #define `emberAfFillCommandPriceClusterGetCurrencyConversionCommand`()
- #define `emberAfFillCommandPriceClusterGetTariffCancellation`()

## Demand Response and Load Control Commands

- #define `emberAfFillCommandDemandResponseLoadControlClusterLoadControlEvent`(issuerEventId, deviceClass, utilityEnrollmentGroup, startTime, durationInMinutes, criticalityLevel, coolingTemperatureOffset, heatingTemperatureOffset, coolingTemperatureSetPoint, heatingTemperatureSetPoint, averageLoadAdjustmentPercentage, dutyCycle, eventControl)
- #define `emberAfFillCommandDemandResponseLoadControlClusterCancelLoadControlEvent`(issuerEventId, deviceClass, utilityEnrollmentGroup, cancelControl, effectiveTime)
- #define `emberAfFillCommandDemandResponseLoadControlClusterCancelAllLoadControlEvents`(cancelControl)
- #define `emberAfFillCommandDemandResponseLoadControlClusterReportEventStatus`(issuerEventId, eventStatus, eventStatusTime, criticalityLevelApplied, coolingTemperatureSetPointApplied, heatingTemperatureSetPointApplied, averageLoadAdjustmentPercentageApplied, dutyCycleApplied, eventControl, signatureType, signature)
- #define `emberAfFillCommandDemandResponseLoadControlClusterGetScheduledEvents`(startTime, numberEvents, issuerEventId)

## Simple Metering Commands

- #define `emberAfFillCommandSimpleMeteringClusterGetProfileResponse`(endTime, status, profileIntervalPeriod, numberOfPeriodsDelivered, intervals, intervalsLen)
- #define `emberAfFillCommandSimpleMeteringClusterRequestMirror()`
- #define `emberAfFillCommandSimpleMeteringClusterRemoveMirror()`
- #define `emberAfFillCommandSimpleMeteringClusterRequestFastPollModeResponse`(appliedUpdatePeriod, fastPollModeEndtime)
- #define `emberAfFillCommandSimpleMeteringClusterScheduleSnapshotResponse`(issuerEventId, snapshotResponsePayload, snapshotResponsePayloadLen)
- #define `emberAfFillCommandSimpleMeteringClusterTakeSnapshotResponse`(snapshotId, snapshotConfirmation)
- #define `emberAfFillCommandSimpleMeteringClusterPublishSnapshot`(snapshotId, snapshotTime, totalSnapshotsFound, commandIndex, totalCommands, snapshotCause, snapshotPayloadType, snapshotPayload, snapshotPayloadLen)
- #define `emberAfFillCommandSimpleMeteringClusterGetSampledDataResponse`(sampleId, sampleStartTime, sampleType, sampleRequestInterval, numberOfSamples, samples, samplesLen)
- #define `emberAfFillCommandSimpleMeteringClusterConfigureMirror`(issuerEventId, reportingInterval, mirrorNotificationReporting, notificationScheme)
- #define `emberAfFillCommandSimpleMeteringClusterConfigureNotificationScheme`(issuerEventId, notificationScheme, notificationFlagOrder)
- #define `emberAfFillCommandSimpleMeteringClusterConfigureNotificationFlags`(issuerEventId, notificationScheme, notificationFlagAttributeId, clusterId, manufacturerCode, numberOfCommands, commandIds, commandIdsLen)
- #define `emberAfFillCommandSimpleMeteringClusterGetNotifiedMessage`(notificationScheme, notificationFlagAttributeId, notificationFlagsN)
- #define `emberAfFillCommandSimpleMeteringClusterSupplyStatusResponse`(providerId, issuerEventId, implementationDate, supplyStatus)
- #define `emberAfFillCommandSimpleMeteringClusterStartSamplingResponse`(sampleId)
- #define `emberAfFillCommandSimpleMeteringClusterGetProfile`(intervalChannel, endTime, numberOfPeriods)
- #define `emberAfFillCommandSimpleMeteringClusterRequestMirrorResponse`(endpointId)
- #define `emberAfFillCommandSimpleMeteringClusterMirrorRemoved`(endpointId)
- #define `emberAfFillCommandSimpleMeteringClusterRequestFastPollMode`(fastPollUpdatePeriod, duration)

- #define `emberAfFillCommandSimpleMeteringClusterScheduleSnapshot`(issuerEventId, commandIndex, commandCount, snapshotSchedulePayload, snapshotSchedulePayloadLen)
- #define `emberAfFillCommandSimpleMeteringClusterTakeSnapshot`(snapshotCause)
- #define `emberAfFillCommandSimpleMeteringClusterGetSnapshot`(earliestStartTime, latestEndTime, snapshotOffset, snapshotCause)
- #define `emberAfFillCommandSimpleMeteringClusterStartSampling`(issuerEventId, startSamplingTime, sampleType, sampleRequestInterval, maxNumberOfSamples)
- #define `emberAfFillCommandSimpleMeteringClusterGetSampledData`(sampleId, earliestSampleTime, sampleType, numberOfWorks)
- #define `emberAfFillCommandSimpleMeteringClusterMirrorReportAttributeResponse`(notificationScheme, notificationFlags, notificationFlagsLen)
- #define `emberAfFillCommandSimpleMeteringClusterResetLoadLimitCounter`(providerId, issuerEventId)
- #define `emberAfFillCommandSimpleMeteringClusterChangeSupply`(providerId, issuerEventId, requestDateTime, implementationDateTime, proposedSupplyStatus, supplyControlBits)
- #define `emberAfFillCommandSimpleMeteringClusterLocalChangeSupply`(proposedSupplyStatus)
- #define `emberAfFillCommandSimpleMeteringClusterSetSupplyStatus`(issuerEventId, supplyTamperState, supplyDepletionState, supplyUncontrolledFlowState, loadLimitSupplyState)
- #define `emberAfFillCommandSimpleMeteringClusterSetUncontrolledFlowThreshold`(providerId, issuerEventId, uncontrolledFlowThreshold, unitOfMeasure, multiplier, divisor, stabilisationPeriod, measurementPeriod)

## Messaging Commands

- #define `emberAfFillCommandMessagingClusterDisplayMessage`(messageId, messageControl, startTime, durationInMinutes, message, optionalExtendedMessageControl)
- #define `emberAfFillCommandMessagingClusterCancelMessage`(messageId, messageControl)
- #define `emberAfFillCommandMessagingClusterDisplayProtectedMessage`(messageId, messageControl, startTime, durationInMinutes, message, optionalExtendedMessageControl)
- #define `emberAfFillCommandMessagingClusterCancelAllMessages`(implementationDateTime)
- #define `emberAfFillCommandMessagingClusterGetLastMessage`()
- #define `emberAfFillCommandMessagingClusterMessageConfirmation`(messageId, confirmationTime, messageConfirmationControl, messageResponse)
- #define `emberAfFillCommandMessagingClusterGetMessageCancellation`(earliestImplementationTime)

## Tunneling Commands

- #define `emberAfFillCommandTunnelingClusterRequestTunnel`(protocolId, manufacturerCode, flowControlSupport, maximumIncomingTransferSize)
- #define `emberAfFillCommandTunnelingClusterCloseTunnel`(tunnelId)
- #define `emberAfFillCommandTunnelingClusterTransferDataClientToServer`(tunnelId, data, dataLen)
- #define `emberAfFillCommandTunnelingClusterTransferDataErrorClientToServer`(tunnelId, transferDataStatus)
- #define `emberAfFillCommandTunnelingClusterAckTransferDataClientToServer`(tunnelId, numberOfWorksLeft)
- #define `emberAfFillCommandTunnelingClusterReadyDataClientToServer`(tunnelId, numberOfWorksLeft)
- #define `emberAfFillCommandTunnelingClusterGetSupportedTunnelProtocols`(protocolOffset)
- #define `emberAfFillCommandTunnelingClusterRequestTunnelResponse`(tunnelId, tunnelStatus, maximumIncomingTransferSize)

- #define `emberAfFillCommandTunnelingClusterTransferDataServerToClient`(tunnelId, data, dataLen)
- #define `emberAfFillCommandTunnelingClusterTransferDataErrorServerToClient`(tunnelId, transferDataStatus)
- #define `emberAfFillCommandTunnelingClusterAckTransferDataServerToClient`(tunnelId, numberOfBytesLeft)
- #define `emberAfFillCommandTunnelingClusterReadyDataServerToClient`(tunnelId, numberOfOctetsLeft)
- #define `emberAfFillCommandTunnelingClusterSupportedTunnelProtocolsResponse`(protocolListComplete, protocolCount, protocolList, protocolListLen)
- #define `emberAfFillCommandTunnelingClusterTunnelClosureNotification`(tunnelId)

## Prepayment Commands

- #define `emberAfFillCommandPrepaymentClusterSelectAvailableEmergencyCredit`(commandIssueDateTime, originatingDevice)
- #define `emberAfFillCommandPrepaymentClusterChangeDebt`(issuerEventId, debtLabel, debtAmount, debtRecoveryMethod, debtAmountType, debtRecoveryStartTime, debtRecoveryCollectionTime, debtRecoveryFrequency, debtRecoveryAmount, debtRecoveryBalancePercentage)
- #define `emberAfFillCommandPrepaymentClusterEmergencyCreditSetup`(issuerEventId, startTime, emergencyCreditLimit, emergencyCreditThreshold)
- #define `emberAfFillCommandPrepaymentClusterConsumerTopUp`(originatingDevice, topUpCode)
- #define `emberAfFillCommandPrepaymentClusterCreditAdjustment`(issuerEventId, startTime, creditAdjustmentType, creditAdjustmentValue)
- #define `emberAfFillCommandPrepaymentClusterChangePaymentMode`(providerId, issuerEventId, implementationDateTime, proposedPaymentControlConfiguration, cutOffValue)
- #define `emberAfFillCommandPrepaymentClusterGetPrepaySnapshot`(earliestStartTime, latestEndTime, snapshotOffset, snapshotCause)
- #define `emberAfFillCommandPrepaymentClusterGetTopUpLog`(latestEndTime, numberOfRecords)
- #define `emberAfFillCommandPrepaymentClusterSetLowCreditWarningLevel`(lowCreditWarningLevel)
- #define `emberAfFillCommandPrepaymentClusterGetDebtRepaymentLog`(latestEndTime, numberOfDebts, debtType)
- #define `emberAfFillCommandPrepaymentClusterSetMaximumCreditLimit`(providerId, issuerEventId, implementationDateTime, maximumCreditLevel, maximumCreditPerTopUp)
- #define `emberAfFillCommandPrepaymentClusterSetOverallDebtCap`(providerId, issuerEventId, implementationDateTime, overallDebtCap)
- #define `emberAfFillCommandPrepaymentClusterPublishPrepaySnapshot`(snapshotId, snapshotTime, totalSnapshotsFound, commandIndex, totalNumberOfCommands, snapshotCause, snapshotPayloadType, snapshotPayload, snapshotPayloadLen)
- #define `emberAfFillCommandPrepaymentClusterChangePaymentModeResponse`(friendlyCredit, friendlyCreditCalendarId, emergencyCreditLimit, emergencyCreditThreshold)
- #define `emberAfFillCommandPrepaymentClusterConsumerTopUpResponse`(resultType, topUpValue, sourceOfTopUp, creditRemaining)
- #define `emberAfFillCommandPrepaymentClusterPublishTopUpLog`(commandIndex, totalNumberOfCommands, topUpPayload, topUpPayloadLen)
- #define `emberAfFillCommandPrepaymentClusterPublishDebtLog`(commandIndex, totalNumberOfCommands, debtPayload, debtPayloadLen)

## Energy Management Commands

- #define `emberAfFillCommandEnergyManagementClusterReportEventStatus`(issuerEventId, eventStatus, eventStatusTime, criticalityLevelApplied, coolingTemperatureSetPointApplied, heatingTemperatureSetPointApplied, averageLoadAdjustmentPercentageApplied, dutyCycleApplied, eventControl)
- #define `emberAfFillCommandEnergyManagementClusterManageEvent`(issuerEventId, deviceClass, utilityEnrollmentGroup, actionRequired)

## Calendar Commands

- #define `emberAfFillCommandCalendarClusterPublishCalendar`(providerId, issuerEventId, issuerCalendarId, startTime, calendarType, calendarTimeReference, calendarName, numberOfSeasons, numberOfWeekProfiles, numberOfDayProfiles)
- #define `emberAfFillCommandCalendarClusterPublishDayProfile`(providerId, issuerEventId, issuerCalendarId, dayId, totalNumberOfScheduleEntries, commandIndex, totalNumberOfCommands, calendarType, dayScheduleEntries, dayScheduleEntriesLen)
- #define `emberAfFillCommandCalendarClusterPublishWeekProfile`(providerId, issuerEventId, issuerCalendarId, weekId, dayIdRefMonday, dayIdRefTuesday, dayIdRefWednesday, dayIdRefThursday, dayIdRefFriday, dayIdRefSaturday, dayIdRefSunday)
- #define `emberAfFillCommandCalendarClusterPublishSeasons`(providerId, issuerEventId, issuerCalendarId, commandIndex, totalNumberOfCommands, seasonEntries, seasonEntriesLen)
- #define `emberAfFillCommandCalendarClusterPublishSpecialDays`(providerId, issuerEventId, issuerCalendarId, startTime, calendarType, totalNumberOfSpecialDays, commandIndex, totalNumberOfCommands, specialDayEntries, specialDayEntriesLen)
- #define `emberAfFillCommandCalendarClusterCancelCalendar`(providerId, issuerCalendarId, calendarType)
- #define `emberAfFillCommandCalendarClusterGetCalendar`(earliestStartTime, minIssuerEventId, numberOfCalendars, calendarType, providerId)
- #define `emberAfFillCommandCalendarClusterGetDayProfiles`(providerId, issuerCalendarId, startDayId, numberOfDays)
- #define `emberAfFillCommandCalendarClusterGetWeekProfiles`(providerId, issuerCalendarId, startWeekId, numberOfWeeks)
- #define `emberAfFillCommandCalendarClusterGetSeasons`(providerId, issuerCalendarId)
- #define `emberAfFillCommandCalendarClusterGetSpecialDays`(startTime, numberOfEvents, calendarType, providerId, issuerCalendarId)
- #define `emberAfFillCommandCalendarClusterGetCalendarCancellation()`

## Device Management Commands

- #define `emberAfFillCommandDeviceManagementClusterGetChangeOfTenancy()`
- #define `emberAfFillCommandDeviceManagementClusterGetChangeOfSupplier()`
- #define `emberAfFillCommandDeviceManagementClusterRequestNewPassword`(passwordType)
- #define `emberAfFillCommandDeviceManagementClusterGetSiteId()`
- #define `emberAfFillCommandDeviceManagementClusterReportEventConfiguration`(commandIndex, totalCommands, eventConfigurationPayload, eventConfigurationPayloadLen)
- #define `emberAfFillCommandDeviceManagementClusterGetCIN()`
- #define `emberAfFillCommandDeviceManagementClusterPublishChangeOfTenancy`(providerId, issuerEventId, tariffType, implementationDateTime, proposedTenancyChangeControl)
- #define `emberAfFillCommandDeviceManagementClusterPublishChangeOfSupplier`(currentProviderId, issuerEventId, tariffType, proposedProviderId, providerChangeImplementationTime, providerChangeControl, proposedProviderName, proposedProviderContactDetails)

- #define `emberAfFillCommandDeviceManagementClusterRequestNewPasswordResponse`(issuerEventId, implementationDateTime, durationInMinutes, passwordType, password)
- #define `emberAfFillCommandDeviceManagementClusterUpdateSiteId`(issuerEventId, siteIdTime, providerId, siteId)
- #define `emberAfFillCommandDeviceManagementClusterSetEventConfiguration`(issuerEventId, startDateTime, eventConfiguration, configurationControl, eventConfigurationPayload, eventConfigurationPayloadLen)
- #define `emberAfFillCommandDeviceManagementClusterGetEventConfiguration`(eventId)
- #define `emberAfFillCommandDeviceManagementClusterUpdateCIN`(issuerEventId, implementationTime, providerId, customerIdNumber)

## Events Commands

- #define `emberAfFillCommandEventsClusterGetEventLog`(eventControlLogId, eventId, startTime, endTime, numberOfEvents, eventOffset)
- #define `emberAfFillCommandEventsClusterClearEventLogRequest`(logId)
- #define `emberAfFillCommandEventsClusterPublishEvent`(logId, eventId, eventTime, eventControl, eventData)
- #define `emberAfFillCommandEventsClusterPublishEventLog`(totalNumberOfEvents, commandIndex, totalCommands, logPayloadControl, logPayload, logPayloadLen)
- #define `emberAfFillCommandEventsClusterClearEventLogResponse`(clearedEventsLogs)

## MDU Pairing Commands

- #define `emberAfFillCommandMduPairingClusterPairingResponse`(pairingInformationVersion, totalNumberOfDevices, commandIndex, totalNumberOfCommands, eui64s, eui64sLen)
- #define `emberAfFillCommandMduPairingClusterPairingRequest`(localPairingInformationVersion, eui64OfRequestingDevice)

## Key Establishment Commands

- #define `emberAfFillCommandKeyEstablishmentClusterInitiateKeyEstablishmentRequest`(keyEstablishmentSuite, ephemeralDataGenerateTime, confirmKeyGenerateTime, identity)
- #define `emberAfFillCommandKeyEstablishmentClusterEphemeralDataRequest`(ephemeralData)
- #define `emberAfFillCommandKeyEstablishmentClusterConfirmKeyDataRequest`(secureMessageAuthenticationCode)
- #define `emberAfFillCommandKeyEstablishmentClusterServerToClientTerminateKeyEstablishment`(statusCode, waitTime, keyEstablishmentSuite)
- #define `emberAfFillCommandKeyEstablishmentClusterClientToServerTerminateKeyEstablishment`(statusCode, waitTime, keyEstablishmentSuite)
- #define `emberAfFillCommandKeyEstablishmentClusterInitiateKeyEstablishmentResponse`(requestedKeyEstablishmentSuite, ephemeralDataGenerateTime, confirmKeyGenerateTime, identity)
- #define `emberAfFillCommandKeyEstablishmentClusterEphemeralDataResponse`(ephemeralData)
- #define `emberAfFillCommandKeyEstablishmentClusterConfirmKeyDataResponse`(secureMessageAuthenticationCode)

## Information Commands

- #define `emberAfFillCommandInformationClusterRequestInformation`(inquiryId, dataTypeId, requestInformationPayload, requestInformationPayloadLen)
- #define `emberAfFillCommandInformationClusterPushInformationResponse`(notificationList, notificationListLen)
- #define `emberAfFillCommandInformationClusterSendPreference`(preferenceType, preferencePayload, preferencePayloadLen)
- #define `emberAfFillCommandInformationClusterRequestPreferenceResponse`(statusFeedback, preferenceType, preferencePayload, preferencePayloadLen)
- #define `emberAfFillCommandInformationClusterUpdate`(accessControl, option, contents, contentsLen)
- #define `emberAfFillCommandInformationClusterDelete`(deletionOptions, contentIds, contentIdsLen)
- #define `emberAfFillCommandInformationClusterConfigureNodeDescription`(description)
- #define `emberAfFillCommandInformationClusterConfigureDeliveryEnable`(enable)
- #define `emberAfFillCommandInformationClusterConfigurePushInformationTimer`(timer)
- #define `emberAfFillCommandInformationClusterConfigureSetRootId`(rootId)
- #define `emberAfFillCommandInformationClusterRequestInformationResponse`(number, buffer, bufferLen)
- #define `emberAfFillCommandInformationClusterPushInformation`(contents, contentsLen)
- #define `emberAfFillCommandInformationClusterSendPreferenceResponse`(statusFeedbackList, statusFeedbackListLen)
- #define `emberAfFillCommandInformationClusterServerRequestPreference`()
- #define `emberAfFillCommandInformationClusterRequestPreferenceConfirmation`(statusFeedbackList, statusFeedbackListLen)
- #define `emberAfFillCommandInformationClusterUpdateResponse`(notificationList, notificationListLen)
- #define `emberAfFillCommandInformationClusterDeleteResponse`(notificationList, notificationListLen)

## Data Sharing Commands

- #define `emberAfFillCommandDataSharingClusterReadFileRequest`(fileIndex, fileStartPositionAndRequestedOctetCount, fileStartPositionAndRequestedOctetCountLen)
- #define `emberAfFillCommandDataSharingClusterReadRecordRequest`(fileIndex, fileStartPositionAndRequestedRecordCount, fileStartPositionAndRequestedRecordCountLen)
- #define `emberAfFillCommandDataSharingClusterWriteFileResponse`(status, fileIndex, fileIndexLen)
- #define `emberAfFillCommandDataSharingClusterWriteFileRequest`(writeOptions, fileSize, fileSizeLen)
- #define `emberAfFillCommandDataSharingClusterModifyFileRequest`(fileIndex, fileStartPosition, octetCount)
- #define `emberAfFillCommandDataSharingClusterModifyRecordRequest`(fileIndex, fileStartPosition, recordCount)
- #define `emberAfFillCommandDataSharingClusterFileTransmission`(transmitOptions, buffer, bufferLen)
- #define `emberAfFillCommandDataSharingClusterRecordTransmission`(transmitOptions, buffer, bufferLen)

## Gaming Commands

- #define `emberAfFillCommandGamingClusterSearchGame`(specificGame, gameId)
- #define `emberAfFillCommandGamingClusterJoinGame`(gameId, joinAsMaster, nameOfGame)
- #define `emberAfFillCommandGamingClusterStartGame()`
- #define `emberAfFillCommandGamingClusterPauseGame()`
- #define `emberAfFillCommandGamingClusterResumeGame()`
- #define `emberAfFillCommandGamingClusterQuitGame()`
- #define `emberAfFillCommandGamingClusterEndGame()`
- #define `emberAfFillCommandGamingClusterStartOver()`
- #define `emberAfFillCommandGamingClusterActionControl`(actions)
- #define `emberAfFillCommandGamingClusterDownloadGame()`
- #define `emberAfFillCommandGamingClusterGameAnnouncement`(gameId, gameMaster, listOfGame)
- #define `emberAfFillCommandGamingClusterGeneralResponse`(commandId, status, message)

## Data Rate Control Commands

- #define `emberAfFillCommandDataRateControlClusterPathCreation`(originatorAddress, destinationAddress, dataRate)
- #define `emberAfFillCommandDataRateControlClusterDataRateNotification`(originatorAddress, destinationAddress, dataRate)
- #define `emberAfFillCommandDataRateControlClusterPathDeletion`(originatorAddress, destinationAddress)
- #define `emberAfFillCommandDataRateControlClusterDataRateControl`(originatorAddress, destinationAddress, dataRate)

## Voice over ZigBee Commands

- #define `emberAfFillCommandVoiceOverZigbeeClusterEstablishmentRequest`(flag, codecType, sampFreq, codecRate, serviceType, buffer, bufferLen)
- #define `emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmission`(voiceData, voiceDataLen)
- #define `emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmissionCompletion()`
- #define `emberAfFillCommandVoiceOverZigbeeClusterControlResponse`(ackNack)
- #define `emberAfFillCommandVoiceOverZigbeeClusterEstablishmentResponse`(ackNack, codecType)
- #define `emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmissionResponse`(sequenceNumber, errorFlag)
- #define `emberAfFillCommandVoiceOverZigbeeClusterControl`(controlType)

## Chatting Commands

- #define `emberAfFillCommandChattingClusterJoinChatRequest`(uid, nickname, cid)
- #define `emberAfFillCommandChattingClusterLeaveChatRequest`(cid, uid)
- #define `emberAfFillCommandChattingClusterSearchChatRequest()`
- #define `emberAfFillCommandChattingClusterSwitchChairmanResponse`(cid, uid)
- #define `emberAfFillCommandChattingClusterStartChatRequest`(name, uid, nickname)
- #define `emberAfFillCommandChattingClusterChatMessage`(destinationUid, sourceUid, cid, nickname, message)
- #define `emberAfFillCommandChattingClusterGetNodeInformationRequest`(cid, uid)
- #define `emberAfFillCommandChattingClusterStartChatResponse`(status, cid)

- #define `emberAfFillCommandChattingClusterJoinChatResponse`(status, cid, chatParticipantList, chatParticipantListLen)
- #define `emberAfFillCommandChattingClusterUserLeft`(cid, uid, nickname)
- #define `emberAfFillCommandChattingClusterUserJoined`(cid, uid, nickname)
- #define `emberAfFillCommandChattingClusterSearchChatResponse`(options, chatRoomList, chatRoomListLen)
- #define `emberAfFillCommandChattingClusterSwitchChairmanRequest`(cid)
- #define `emberAfFillCommandChattingClusterSwitchChairmanConfirm`(cid, nodeInformationList, nodeInformationListLen)
- #define `emberAfFillCommandChattingClusterSwitchChairmanNotification`(cid, uid, address, endpoint)
- #define `emberAfFillCommandChattingClusterGetNodeInformationResponse`(status, cid, uid, addressEndpointAndNickname, addressEndpointAndNicknameLen)

## Payment Commands

- #define `emberAfFillCommandPaymentClusterBuyRequest`(userId, userType, serviceId, goodId)
- #define `emberAfFillCommandPaymentClusterAcceptPayment`(userId, userType, serviceId, goodId)
- #define `emberAfFillCommandPaymentClusterPaymentConfirm`(serialNumber, transId, transStatus)
- #define `emberAfFillCommandPaymentClusterBuyConfirm`(serialNumber, currency, priceTrailingDigit, price, timestamp, transId, transStatus)
- #define `emberAfFillCommandPaymentClusterReceiptDelivery`(serialNumber, currency, priceTrailingDigit, price, timestamp)
- #define `emberAfFillCommandPaymentClusterTransactionEnd`(serialNumber, status)

## Billing Commands

- #define `emberAfFillCommandBillingClusterSubscribe`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterUnsubscribe`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterStartBillingSession`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterStopBillingSession`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterBillStatusNotification`(userId, status)
- #define `emberAfFillCommandBillingClusterSessionKeepAlive`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterCheckBillStatus`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterSendBillRecord`(userId, serviceId, serviceProviderId, timestamp, duration)

## Appliance Events and Alert Commands

- #define `emberAfFillCommandApplianceEventsAndAlertClusterGetAlerts`()
- #define `emberAfFillCommandApplianceEventsAndAlertClusterGetAlertsResponse`(alertsCount, alertStructures, alertStructuresLen)
- #define `emberAfFillCommandApplianceEventsAndAlertClusterAlertsNotification`(alertsCount, alertStructures, alertStructuresLen)
- #define `emberAfFillCommandApplianceEventsAndAlertClusterEventsNotification`(eventHeader, eventId)

## Appliance Statistics Commands

- #define `emberAfFillCommandApplianceStatisticsClusterLogNotification`(timeStamp, logId, logLength, logPayload, logPayloadLen)
- #define `emberAfFillCommandApplianceStatisticsClusterLogResponse`(timeStamp, logId, logLength, logPayload, logPayloadLen)
- #define `emberAfFillCommandApplianceStatisticsClusterLogQueueResponse`(logQueueSize, logIds, logIdsLen)
- #define `emberAfFillCommandApplianceStatisticsClusterStatisticsAvailable`(logQueueSize, logIds, logIdsLen)
- #define `emberAfFillCommandApplianceStatisticsClusterLogRequest`(logId)
- #define `emberAfFillCommandApplianceStatisticsClusterLogQueueRequest`()

## Electrical Measurement Commands

- #define `emberAfFillCommandElectricalMeasurementClusterGetProfileInfoResponseCommand`(profileCount, profileIntervalPeriod, maxNumberOfIntervals, listOfAttributes, listOfAttributesLen)
- #define `emberAfFillCommandElectricalMeasurementClusterGetMeasurementProfileResponseCommand`(startTime, status, profileIntervalPeriod, numberOfIntervalsDelivered, attributeId, intervals, intervalsLen)
- #define `emberAfFillCommandElectricalMeasurementClusterGetProfileInfoCommand`()
- #define `emberAfFillCommandElectricalMeasurementClusterGetMeasurementProfileCommand`(attributeId, startTime, numberOfIntervals)

## ZLL Commissioning Commands

- #define `emberAfFillCommandZllCommissioningClusterScanRequest`(transaction, zigbeeInformation, zllInformation)
- #define `emberAfFillCommandZllCommissioningClusterDeviceInformationRequest`(transaction, startIndex)
- #define `emberAfFillCommandZllCommissioningClusterIdentifyRequest`(transaction, identifyDuration)
- #define `emberAfFillCommandZllCommissioningClusterResetToFactoryNewRequest`(transaction)
- #define `emberAfFillCommandZllCommissioningClusterNetworkStartRequest`(transaction, extendedPanId, keyIndex, encryptedNetworkKey, logicalChannel, panId, networkAddress, groupIdentifiersBegin, groupIdentifiersEnd, freeNetworkAddressRangeBegin, freeNetworkAddressRangeEnd, freeGroupIdentifierRangeBegin, freeGroupIdentifierRangeEnd, initiatorIeeeAddress, initiatorNetworkAddress)
- #define `emberAfFillCommandZllCommissioningClusterNetworkJoinRouterRequest`(transaction, extendedPanId, keyIndex, encryptedNetworkKey, networkUpdateId, logicalChannel, panId, networkAddress, groupIdentifiersBegin, groupIdentifiersEnd, freeNetworkAddressRangeBegin, freeNetworkAddressRangeEnd, freeGroupIdentifierRangeBegin, freeGroupIdentifierRangeEnd)

Definition at line 12 of file `comms-hub-function.h`.

### 8.33.2 Enumeration Type Documentation

#### 8.33.2.1 enum `EmberAfPluginCommsHubFunctionStatus`

Enumerator:

```
EMBER_AF_CHF_STATUS_SUCCESS
EMBER_AF_CHF_STATUS_TOO_MANY_PEND_MESSAGES
EMBER_AF_CHF_STATUS_FNF_ATTR_FAILURE
EMBER_AF_CHF_STATUS_NO_MIRROR
EMBER_AF_CHF_STATUS_TUNNEL_FAILURE
EMBER_AF_CHF_STATUS_NO_ACCESS
EMBER_AF_CHF_STATUS_SEND_TIMEOUT
```

Definition at line 14 of file `comms-hub-function.h`.

### 8.33.3 Function Documentation

#### 8.33.3.1 `EmberAfPluginCommsHubFunctionStatus emberAfPluginCommsHubFunctionSend ( EmberEUI64 destinationDeviceId, uint16_t length, uint8_t * payload, uint16_t messageCode )`

Pass message to be tunneled over the HAN using either a sleepy buffer system (GSME) or direct to the device by initiating a tunnel (ESME, HCALCS, PPMID, TYPE2).

This function can be used to transfer data to a device on the HAN.

**Parameters**

<i>destination-DeviceId</i>	The EUI64 of the destination device.
<i>length</i>	The length in octets of the data.
<i>payload</i>	Buffer(memory location at WAN Message Handler) containing the raw octets of the message(GBCS Message)
<i>messageCode</i>	The GBCS Message Code for the data that is being sent.

**Returns**

`EMBER_AF_CHF_STATUS_SUCCESS` data was sent or has been queue to be sent  
`EMBER_AF_CHF_STATUS_NO_ACCESS` No entry in the GBCS Device Log for the specified device  
`EMBER_AF_CHF_STATUS_NO_MIRROR` Mirror endpoint for given device has not been configured  
`EMBER_AF_CHF_STATUS_FNF_ATTR_FAILURE` Unable to read or write the functional notification flags  
attribute `EMBER_AF_CHF_STATUS_TOO_MANY_PEND_MESSAGES` There are too many messages currently pending to be delivered  
`EMBER_AF_CHF_STATUS_TUNNEL_FAILURE` tunnel cannot be created to non sleepy devices

**8.33.3.2 bool emAfPluginCommsHubFunctionTunnelAcceptCallback ( EmberEUI64 deviceId )**

Tunnel Accept.

This callback is called by the tunnel manager when a tunnel is requested. The given device identifier should be checked against the Device Log to verify whether tunnels from the device should be accepted or not.

**Parameters**

<i>deviceId</i>	Identifier of the device from which a tunnel is requested
-----------------	---

**Returns**

true is the tunnel should be allowed, false otherwise

**8.33.3.3 void emAfPluginCommsHubFunctionTunnelDataReceivedCallback ( EmberEUI64 senderDeviceId, uint16\_t length, uint8\_t \* payload )**

Tunnel Data Received.

This callback is called by the tunnel manager when data is received over a tunnel. It is responsible for the implementation of the GET, GET\_RESPONSE, PUT protocol used when communicating with a sleepy device.

**Parameters**

<i>senderDeviceId</i>	Identifier of the device from which the data was received
<i>length</i>	The length of the data received
<i>payload</i>	The data received

### 8.33.3.4 void emAfPluginCommsHubFunctionSetDefaultTimeout ( uint32\_t timeout )

Set the default remote part message timeout.

This function can be used to set the default timeout for all messages destined for a sleepy device. If the device does not retrieve the message before this time then it will be discarded and a [EMBER\\_AF\\_CHF\\_STATUS\\_SEND\\_TIMEOUT](#) error will be return in [emberAfPluginCommsHubFunctionSendCallback\(\)](#).

#### Parameters

<i>timeout</i>	timeout in seconds
----------------	--------------------

## 8.35 comms-hub-tunnel-endpoints.h File Reference

### Macros

- #define INVALID\_TUNNELING\_ENDPOINT

### Functions

- void `emberAfPluginTunnelingEndpointInit` (void)
- void `emberAfPluginAddTunnelingEndpoint` (uint16\_t nodeId, uint8\_t \*endpointList, uint8\_t numEndpoints)
- uint8\_t `emberAfPluginGetDeviceTunnelingEndpoint` (uint16\_t nodeId)

#### 8.35.1 Macro Definition Documentation

##### 8.35.1.1 #define INVALID\_TUNNELING\_ENDPOINT

Definition at line 5 of file `comms-hub-tunnel-endpoints.h`.

#### 8.35.2 Function Documentation

##### 8.35.2.1 void `emberAfPluginTunnelingEndpointInit` ( void )

Tunneling Endpoint Init.

This function initializes the table of device tunnel endpoints.

##### 8.35.2.2 void `emberAfPluginAddTunnelingEndpoint` ( uint16\_t nodeId, uint8\_t \* endpointList, uint8\_t numEndpoints )

Add Tunneling Endpoint.

This function adds an address and tunnel endpoint into the table.

#### Parameters

<code>nodeId</code>	The address of the device that should be added to the table.
<code>endpointList</code>	The list of tunneling endpoints on the device.
<code>numEndpoints</code>	The number of tunneling endpoints on the device.

##### 8.35.2.3 uint8\_t `emberAfPluginGetDeviceTunnelingEndpoint` ( uint16\_t nodeId )

Get Tunneling Endpoint.

This function returns the tunneling endpoint for the specified nodeId. If an endpoint for the nodeId cannot be found, it returns INVALID\_TUNNELING\_ENDPOINT.

#### Returns

The tunneling endpoint for the nodeId, or INVALID\_TUNNELING\_ENDPOINT.

## 8.43 connection-manager.h File Reference

### Functions

- void `emberAfPluginConnectionManagerResetJoinAttempts` (void)
- void `emberAfPluginConnectionManagerLeaveNetworkAndStartSearchForNewOne` (void)
- void `emberAfPluginConnectionManagerStartSearchForJoinableNetwork` (void)
- void `emberAfPluginConnectionManagerFactoryReset` (void)
- void `emberAfPluginConnectionManagerSetNumberJoinBlink` (uint8\_t numBlinks)
- void `emberAfPluginConnectionManagerSetNumberLeaveBlink` (uint8\_t numBlinks)
- void `emberAfPluginConnectionManagerLedNetworkFoundBlink` (void)

#### 8.43.1 Function Documentation

##### 8.43.1.1 void `emberAfPluginConnectionManagerResetJoinAttempts` ( void )

Reset the join attempt counter.

This function will reset the internal counter that the connection manager plugin uses to track how many attempts it has made to join a network. This function can be used to delay the call to , which normally occurs (with a status of EMBER\_NOT\_JOINED) after 20 failed join attempts.

##### 8.43.1.2 void `emberAfPluginConnectionManagerLeaveNetworkAndStartSearchForNewOne` ( void )

Leave the current network and attempt to join a new one.

This function will cause the plugin to leave the current network and begin searching for a new network to join.

##### 8.43.1.3 void `emberAfPluginConnectionManagerStartSearchForJoinableNetwork` ( void )

Begin searching for a new network to join.

This function will attempt to join a new network. It tracks the number of network join attempts that have occurred, and will generate a call to with a status of EMBER\_NOT\_JOINED if a network can not be found within 20 join attempts. This function will also make sure that a new join attempt occurs 20 seconds after an unsuccessful join attempt occurs (until it encounters 20 failed join attempts).

##### 8.43.1.4 void `emberAfPluginConnectionManagerFactoryReset` ( void )

Perform a factory reset.

This function will clear all binding, scene, and group tables. It does not cause a change in network state.

##### 8.43.1.5 void `emberAfPluginConnectionManagerSetNumberJoinBlink` ( uint8\_t *numBlinks* )

Set the LED behavior for a network join event.

This function will configure the connection manager plugin to blink the network activity LED a user specified number of times when a successful network join event occurs.

**Parameters**

<i>numBlinks</i>	The number of times to blink the LED on network join
------------------	--

**8.43.1.6 void emberAfPluginConnectionManagerSetNumberLeaveBlink ( uint8\_t numBlinks )**

Set the LED behavior for a network leave event.

This function will configure the connection manager plugin to blink the network activity LED a user specified number of times when a network leave event occurs.

**Parameters**

<i>numBlinks</i>	The number of times to blink the LED on network leave
------------------	---

**8.43.1.7 void emberAfPluginConnectionManagerLedNetworkFoundBlink ( void )**

Blink the Network Found LED pattern.

This function will blink the network found LED pattern

### Macros

- `#define MAX_PAYLOAD_LENGTH`

### Functions

- `EmberStatus emberAfPluginCountersSendRequest (EmberNodeId destination, bool clearCounters)`
- `bool emberAfPluginCountersIsIncomingRequest (EmberApsFrame *apsFrame, EmberNodeId sender)`
- `bool emberAfPluginCountersIsIncomingResponse (EmberApsFrame *apsFrame)`

- bool `emberAfPluginCountersIsOutgoingResponse` (`EmberApsFrame` \*`apsFrame`, `EmberStatus` `status`)

### 8.49.1 Detailed Description

Description: A library for retrieving Ember stack counters over the air.

The library allows the application to request counters from a remote node. The request specifies whether the remote node should clear its counters after sending back the response. The library also handles and responds to incoming counter requests appropriately. A convenience method recognizes incoming responses.

Summary of requirements:

- Include `counters.c` and `counters-ota.c` in the build on an EmberZNet processor. Include only `counters-ota-host.c` in the build on an EZSP host processor.
- Call `::emberIsIncomingCountersRequest()` in the incoming message handler.
- Call `::emberIsIncomingCountersResponse()` in the incoming message handler.
- Call `::emberIsOutgoingCountersResponse()` in the message sent handler.

The request and response messages use profile id `EMBER_PRIVATE_PROFILE_ID`, and the following cluster ids:

- `EMBER_REPORT_COUNTERS_REQUEST`
- `EMBER_REPORT_AND_CLEAR_COUNTERS_REQUEST`
- `EMBER_REPORT_COUNTERS_RESPONSE`
- `EMBER_REPORT_AND_CLEAR_COUNTERS_RESPONSE`

The request has no payload. The payload of the response is a list of the non-zero counters. Each entry in the list consists of the one-byte counter id followed by a two-byte counter, low byte first. If all entries do not fit into a single payload, multiple response messages are sent.

Copyright 2008 by Ember Corporation. All rights reserved. 80

Definition in file [counters-ota.h](#).

### 8.49.2 Macro Definition Documentation

#### 8.49.2.1 `#define MAX_PAYLOAD_LENGTH`

To ensure the counters response does not exceed the maximum payload length, it is divided into separate messages if necessary. The maximum length of 48 leaves sufficient room for headers, all security modes, and source routing subframes if present. It should not be necessary to change this value, but if you do, make sure you know what you're doing.

Definition at line 42 of file [counters-ota.h](#).

### 8.49.3 Function Documentation

#### 8.49.3.1 EmberStatus emberAfPluginCountersSendRequest ( EmberNodeId *destination*, bool *clearCounters* )

Sends an request to the specified destination to send back a report of the non-zero counters.

##### Parameters

<i>destination</i>	the address of the node to send the request to.
<i>clearCounters</i>	whether or not the destination should reset its counters to zero after successfully reporting them back to the requestor. Note that due to technical constraints, counters are always cleared on a network coprocessor such as the EM260.

##### Returns

EMBER\_SUCCESS if the request was successfully submitted for sending. See ::emberSendUnicast() or ::ezspSendUnicast for possible failure statuses.

#### 8.49.3.2 bool emberAfPluginCountersIsIncomingRequest ( EmberApsFrame \* *apsFrame*, EmberNodeId *sender* )

The application must call this function at the beginning of the incoming message handler. It returns true if the incoming message was a counters request and should be ignored by the rest of the incoming message handler.

##### Parameters

<i>apsFrame</i>	the APS frame passed to the incoming message handler.
<i>sender</i>	the node id of the sender of the request.

##### Returns

true if the message was a counters request and should be ignored by the rest of the incoming message handler.

#### 8.49.3.3 bool emberAfPluginCountersIsIncomingResponse ( EmberApsFrame \* *apsFrame* )

The application may call this function within the incoming message handler to determine if the message is a counters response. If so, it is up to the application to decode the payload, whose format is described above.

##### Parameters

<i>apsFrame</i>	the APS frame passed to the incoming message handler.
-----------------	---

##### Returns

true if the message is a counters response.

#### 8.49.3.4 bool emberAfPluginCountersIsOutgoingResponse ( EmberApsFrame \* *apsFrame*, EmberStatus *status* )

The application must call this function at the begining of the message sent handler. It returns true if the message was a counters response and should be ignored by the rest of the handler.

##### Parameters

<i>apsFrame</i>	the APS frame passed to the message sent handler.
<i>status</i>	the status passed to the message sent handler.
<i>return</i>	true if the message was a counters response and should be ignored by the rest of the message sent handler.

## 8.50 counters-ota.h

```

00001
00042 #define MAX_PAYLOAD_LENGTH 48
00043
00056 EmberStatus emberAfPluginCountersSendRequest
    (EmberNodeId destination,
00057                                         bool
    clearCounters);
00058
00069 bool emberAfPluginCountersIsIncomingRequest
    (EmberApsFrame *apsFrame,

    (EmberApsFrame *apsFrame);
00081
00091 bool emberAfPluginCountersIsOutgoingResponse
    (EmberApsFrame *apsFrame,
00092                                         EmberStatus
    status);

```

## 8.51 counters.h File Reference

### Macros

- #define EMBER\_APPLICATION\_HAS\_COUNTER\_ROLLOVER\_HANDLER
- #define MULTI\_NETWORK\_COUNTER\_TYPE\_COUNT

### Functions

- void **emberAfPluginCountersClear** (void)
- void **emberAfPluginCountersResetThresholds** (void)
- void **emberAfPluginCountersSetThreshold** (EmberCounterType type, uint16\_t threshold)

### Variables

- uint16\_t **emberCounters** [EMBER\_COUNTER\_TYPE\_COUNT]
- uint16\_t **emberCountersThresholds** [EMBER\_COUNTER\_TYPE\_COUNT]
- uint16\_t **emberMultiNetworkCounters** [EMBER\_SUPPORTED\_NETWORKS][MULTI\_NETWORK\_COUNTER\_TYPE\_COUNT]

### 8.51.1 Detailed Description

A library to tally up Ember stack counter events.

The Ember stack tracks a number of events defined by [EmberCounterType](#) and reports them to the app via the [emberCounterHandler\(\)](#) callback. This library simply keeps a tally of the number of times each type of counter event occurred. The application must define ::EMBER\_APPLICATION\_HAS\_COUNTER\_HANDLER in its CONFIGURATION\_HEADER in order to use this library.

See [counters-ota.h](#) for the ability to retrieve stack counters from a remote node over the air.

Copyright 2007 by Ember Corporation. All rights reserved. 80

Definition in file [counters.h](#).

### 8.51.2 Macro Definition Documentation

#### 8.51.2.1 #define EMBER\_APPLICATION\_HAS\_COUNTER\_ROLLOVER\_HANDLER

Definition at line 19 of file [counters.h](#).

#### 8.51.2.2 #define MULTI\_NETWORK\_COUNTER\_TYPE\_COUNT

Definition at line 35 of file [counters.h](#).

### 8.51.3 Function Documentation

#### 8.51.3.1 void emberAfPluginCountersClear ( void )

Reset the counters to zero.

#### 8.51.3.2 void emberAfPluginCountersResetThresholds ( void )

Resets counter thresholds to 0xFFFF.

#### 8.51.3.3 void emberAfPluginCountersSetThreshold ( EmberCounterType *type*, uint16\_t *threshold* )

Set the threshold for a particular counter type

### 8.51.4 Variable Documentation

#### 8.51.4.1 uint16\_t emberCounters[EMBER\_COUNTER\_TYPE\_COUNT]

The *i*th entry in this array is the count of events of EmberCounterType *i*.

#### 8.51.4.2 uint16\_t emberCountersThresholds[EMBER\_COUNTER\_TYPE\_COUNT]

The *i*th entry in this array is the count of threshold values set for the corresponding *i*th event in emberCounters. The default value is set to 0xFFFF and can be changed by an application by calling emberSet

### 8.51.4.3 uint16\_t emberMultiNetworkCounters[EMBER\_SUPPORTED\_NETWORKS][MULTI\_NETWORK\_COUNTER\_TYPE\_COUNT]

The value at the position [n,i] in this matrix is the count of events of per-network EmberCounterType i for network n.

## 8.74 drlc-server.h

```
00001 // ****
```

```

0002 // * drlc-server.h
0003 //
0004 // * This is an implementation of a drlc server which is intended to
0005 // * be used for testing only. Generally it is expected that the drlc
0006 // * server will act as a passthrough for drlc events and will not maintain
0007 // * a list of scheduled events of its own. However for testing purposes
0008 // * it is highly useful to have the server store scheduled events so that
0009 // * - minus a backend - the ESP can respond to get scheduled events
0010 // * commands.
0011 //
0012 // * There are a couple things about
0013 // * this code that make it incomplete as an actual drlc server table
0014 //
0015 // * 1. Scheduled events are not stored in persistent memory, which they
0016 // * would have to be if this were intended for an ESP which for some
0017 // * reason were storing events.
0018 //
0019 // * Note: The EmberAfLoadControlEvent source field is used by the plugin as a
0020 // * status field. If the first byte is set to 0xFF, then the event is
0021 // * considered inactive. If it is set to 0x00, then the event is considered
0022 // * active. Other bytes are used internally.

### Data Structures

- struct [EmberReleaseTypeStruct](#)  
*A structure relating version types to human readable strings.*
- struct [EmberVersion](#)  
*Version struct containing all version information.*
- struct [EmberZigbeeNetwork](#)  
*Defines a ZigBee network and the associated parameters.*
- struct [EmberNetworkInitStruct](#)  
*Defines the network initialization configuration that should be used when ::emberNetworkInitExtended() is called by the application.*
- struct [EmberNetworkParameters](#)  
*Holds network parameters.*
- struct [EmberApsFrame](#)  
*An in-memory representation of a ZigBee APS frame of an incoming or outgoing message.*
- struct [EmberBindingTableEntry](#)  
*Defines an entry in the binding table.*
- struct [EmberNeighborTableEntry](#)  
*Defines an entry in the neighbor table.*
- struct [EmberRouteTableEntry](#)  
*Defines an entry in the route table.*
- struct [EmberMulticastTableEntry](#)  
*Defines an entry in the multicast table.*
- struct [EmberEventControl](#)  
*Control structure for events.*
- struct [EmberEventData\\_S](#)  
*Complete events with a control and a handler procedure.*
- struct [EmberTaskControl](#)  
*Control structure for tasks.*
- struct [EmberKeyData](#)  
*This data structure contains the key data that is passed into various other functions.*
- struct [EmberCertificateData](#)  
*This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE).*
- struct [EmberPublicKeyData](#)

*This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE).*

- struct [EmberPrivateKeyData](#)

*This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE).*

- struct [EmberSmacData](#)

*This data structure contains the Shared Message Authentication Code (SMAC) data that is used for Certificate Based Key Exchange (CBKE).*

- struct [EmberSignatureData](#)

*This data structure contains a DSA signature. It is the bit concatenation of the 'r' and 's' components of the signature.*

- struct [EmberMessageDigest](#)

*This data structure contains an AES-MMO Hash (the message digest).*

- struct [EmberAesMmoHashContext](#)

*This data structure contains the context data when calculating an AES MMO hash (message digest).*

- struct [EmberCertificate283k1Data](#)

*This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.*

- struct [EmberPublicKey283k1Data](#)

*This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.*

- struct [EmberPrivateKey283k1Data](#)

*This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography.*

- struct [EmberSignature283k1Data](#)

*This data structure contains a DSA signature used in SECT283k1 Elliptical Cryptography. It is the bit concatenation of the 'r' and 's' components of the signature.*

- struct [EmberInitialSecurityState](#)

*This describes the Initial Security features and requirements that will be used when forming or joining the network.*

- struct [EmberCurrentSecurityState](#)

*This describes the security features used by the stack for a joined device.*

- struct [EmberKeyStruct](#)

*This describes a one of several different types of keys and its associated data.*

- struct [EmberMfgSecurityStruct](#)

*This structure is used to get/set the security config that is stored in manufacturing tokens.*

- struct [EmberMacFilterMatchStruct](#)

*This structure indicates a matching raw MAC message has been received by the application configured MAC filters.*

## ZigBee Broadcast Addresses

ZigBee specifies three different broadcast addresses that reach different collections of nodes. Broadcasts are normally sent only to routers. Broadcasts can also be forwarded to end devices, either all of them or only those that do not sleep. Broadcasting to end devices is both significantly more resource-intensive and significantly less reliable than broadcasting to routers.

- #define EMBER\_BROADCAST\_ADDRESS
- #define EMBER\_RX\_ON\_WHEN\_IDLE\_BROADCAST\_ADDRESS
- #define EMBER\_SLEEPY\_BROADCAST\_ADDRESS

## Ember Concentrator Types

## ZDO response status.

Most responses to ZDO commands contain a status byte. The meaning of this byte is defined by the ZigBee Device Profile.

- enum EmberZdoStatus {
 EMBER\_ZDP\_SUCCESS, EMBER\_ZDP\_INVALID\_REQUEST\_TYPE, EMBER\_ZDP\_DEVICE\_NOT\_FOUND, EMBER\_ZDP\_INVALID\_ENDPOINT,
 EMBER\_ZDP\_NOT\_ACTIVE, EMBER\_ZDP\_NOT\_SUPPORTED, EMBER\_ZDP\_TIMEOUT, EMBER\_ZDP\_NO\_MATCH,
 EMBER\_ZDP\_NO\_ENTRY, EMBER\_ZDP\_NO\_DESCRIPTOR, EMBER\_ZDP\_INSUFFICIENT\_SPACE, EMBER\_ZDP\_NOT\_PERMITTED,
 EMBER\_ZDP\_TABLE\_FULL, EMBER\_ZDP\_NOT\_AUTHORIZED, EMBER\_NWK\_ALREADY\_PRESENT, EMBER\_NWK\_TABLE\_FULL,
 EMBER\_NWK\_UNKNOWN\_DEVICE }

## Network and IEEE Address Request/Response

Defines for ZigBee device profile cluster IDs follow. These include descriptions of the formats of the messages.

Note that each message starts with a 1-byte transaction sequence number. This sequence number is used to match a response command frame to the request frame that it is replying to. The application shall maintain a 1-byte counter that is copied into this field and incremented by one for each command sent. When a value of 0xff is reached, the next command shall re-start the counter with a value of 0x00

```
Network request: <transaction sequence number: 1>
                  <EUI64:8>  <type:1> <start index:1>
IEEE request:    <transaction sequence number: 1>
                  <node ID:2> <type:1> <start index:1>
                  <type> = 0x00 single address response, ignore the start index
                  = 0x01 extended response -> sends kid's IDs as well
Response:        <transaction sequence number: 1>
                  <status:1> <EUI64:8> <node ID:2>
                  <ID count:1> <start index:1> <child ID:2>*
```

- #define NETWORK\_ADDRESS\_REQUEST
- #define NETWORK\_ADDRESS\_RESPONSE
- #define IEEE\_ADDRESS\_REQUEST
- #define IEEE\_ADDRESS\_RESPONSE

## Node Descriptor Request/Response

```
<br>
@code
Request:  <transaction sequence number: 1> <node ID:2>
Response: <transaction sequence number: 1> <status:1> <node ID:2>

// <node descriptor: 13> // // Node Descriptor field is divided into subfields of bitmasks as follows: //
// (Note: All lengths below are given in bits rather than bytes.) // Logical Type: 3 // Complex Descriptor Available: 1 // User Descriptor Available: 1 // (reserved/unused): 3 // APS Flags: 3 // Frequency Band: 5 // MAC capability flags: 8 // Manufacturer Code: 16 // Maximum buffer size: 8 // Maximum incoming transfer size: 16 // Server mask: 16 // Maximum outgoing transfer size: 16 // Descriptor Capability Flags: 8 // See ZigBee document 053474, Section 2.3.2.3 for more details.
```

- #define NODE\_DESCRIPTOR\_REQUEST
- #define NODE\_DESCRIPTOR\_RESPONSE

## Power Descriptor Request / Response

```
<br>
@code
Request: <transaction sequence number: 1> <node ID:2>
Response: <transaction sequence number: 1> <status:1> <node ID:2>
           <current power mode, available power sources:1>
           <current power source, current power source level:1>
```

// See ZigBee document 053474, Section 2.3.2.4 for more details.

- #define **POWER\_DESCRIPTOR\_REQUEST**
- #define **POWER\_DESCRIPTOR\_RESPONSE**

## Simple Descriptor Request / Response

```
Request: <transaction sequence number: 1>
          <node ID:2> <endpoint:1>
Response: <transaction sequence number: 1>
          <status:1> <node ID:2> <length:1> <endpoint:1>
          <app profile ID:2> <app device ID:2>
          <app device version, app flags:1>
          <input cluster count:1> <input cluster:2>*
          <output cluster count:1> <output cluster:2>*
```

- #define **SIMPLE\_DESCRIPTOR\_REQUEST**
- #define **SIMPLE\_DESCRIPTOR\_RESPONSE**

## Active Endpoints Request / Response

```
Request: <transaction sequence number: 1> <node ID:2>
Response: <transaction sequence number: 1>
          <status:1> <node ID:2> <endpoint count:1> <endpoint:1>*
```

- #define **ACTIVE\_ENDPOINTS\_REQUEST**
- #define **ACTIVE\_ENDPOINTS\_RESPONSE**

## Match Descriptors Request / Response

```
Request: <transaction sequence number: 1>
          <node ID:2> <app profile ID:2>
          <input cluster count:1> <input cluster:2>*
          <output cluster count:1> <output cluster:2>*
Response: <transaction sequence number: 1>
          <status:1> <node ID:2> <endpoint count:1> <endpoint:1>*
```

- #define **MATCH\_DESCRIPTOR\_REQUEST**
- #define **MATCH\_DESCRIPTOR\_RESPONSE**

## Discovery Cache Request / Response

```
Request: <transaction sequence number: 1>
          <source node ID:2> <source EUI64:8>
Response: <transaction sequence number: 1>
          <status (== EMBER_ZDP_SUCCESS):1>
```

- #define **DISCOVERY\_CACHE\_REQUEST**
- #define **DISCOVERY\_CACHE\_RESPONSE**

## End Device Announce and End Device Announce Response

```
Request: <transaction sequence number: 1>
         <node ID:2> <EUI64:8> <capabilities:1>
No response is sent.
```

- #define END\_DEVICE\_ANNOUNCE
- #define END\_DEVICE\_ANNOUNCE\_RESPONSE

## System Server Discovery Request / Response

This is broadcast and only servers which have matching services respond. The response contains the request services that the recipient provides.

```
Request: <transaction sequence number: 1> <server mask:2>
Response: <transaction sequence number: 1>
           <status (== EMBER_ZDP_SUCCESS):1> <server mask:2>
```

- #define SYSTEM\_SERVER\_DISCOVERY\_REQUEST
- #define SYSTEM\_SERVER\_DISCOVERY\_RESPONSE

## Parent Announce and Parent Announce Response

This is broadcast and only servers which have matching children respond. The response contains the list of children that the recipient now holds.

```
Request: <transaction sequence number: 1>
         <number of children:1> <child EUI64:8> <child Age:4>*
Response: <transaction sequence number: 1>
           <number of children:1> <child EUI64:8> <child Age:4>*
```

- #define PARENT\_ANNOUNCE
- #define PARENT\_ANNOUNCE\_RESPONSE

## ZDO server mask bits

These are used in server discovery requests and responses.

- enum EmberZdoServerMask {
 EMBER\_ZDP\_PRIMARY\_TRUST\_CENTER, EMBER\_ZDP\_SECONDARY\_TRUST\_CENTER,
 EMBER\_ZDP\_PRIMARY\_BINDING\_TABLE\_CACHE, EMBER\_ZDP\_SECONDARY\_BINDING\_TABLE\_CACHE,
 EMBER\_ZDP\_PRIMARY\_DISCOVERY\_CACHE, EMBER\_ZDP\_SECONDARY\_DISCOVERY\_CACHE,
 EMBER\_ZDP\_NETWORK\_MANAGER }

## Find Node Cache Request / Response

This is broadcast and only discovery servers which have the information for the device of interest, or the device of interest itself, respond. The requesting device can then direct any service discovery requests to the responder.

```

Request: <transaction sequence number: 1>
<device of interest ID:2> <d-of-i EUI64:8>
Response: <transaction sequence number: 1>
<responder ID:2> <device of interest ID:2> <d-of-i EUI64:8>

```

- #define FIND\_NODE\_CACHE\_REQUEST
- #define FIND\_NODE\_CACHE\_RESPONSE

## End Device Bind Request / Response

```

Request: <transaction sequence number: 1>
<node ID:2> <EUI64:8> <endpoint:1> <app profile ID:2>
<input cluster count:1> <input cluster:2>*
<output cluster count:1> <output cluster:2>*
Response: <transaction sequence number: 1> <status:1>

```

- #define END\_DEVICE\_BIND\_REQUEST
- #define END\_DEVICE\_BIND\_RESPONSE

## Binding types and Request / Response

Bind and unbind have the same formats. There are two possible formats, depending on whether the destination is a group address or a device address. Device addresses include an endpoint, groups don't.

```

Request: <transaction sequence number: 1>
<source EUI64:8> <source endpoint:1>
<cluster ID:2> <destination address:3 or 10>
Destination address:
<0x01:1> <destination group:2>
Or:
<0x03:1> <destination EUI64:8> <destination endpoint:1>
Response: <transaction sequence number: 1> <status:1>

```

- #define UNICAST\_BINDING
- #define UNICAST\_MANY\_TO\_ONE\_BINDING
- #define MULTICAST\_BINDING
- #define BIND\_REQUEST
- #define BIND\_RESPONSE
- #define UNBIND\_REQUEST
- #define UNBIND\_RESPONSE

## LQI Table Request / Response

```

Request: <transaction sequence number: 1> <start index:1>
Response: <transaction sequence number: 1> <status:1>
<neighbor table entries:1> <start index:1>
<entry count:1> <entry:22>*
<entry> = <extended PAN ID:8> <EUI64:8> <node ID:2>
<device type, rx on when idle, relationship:1>
<permit joining:1> <depth:1> <LQI:1>

```

The device-type byte has the following fields:

Name	Mask	Values
device type	0x03	0x00 coordinator 0x01 router 0x02 end device 0x03 unknown

rx mode	0x0C	0x00 off when idle 0x04 on when idle 0x08 unknown
relationship	0x70	0x00 parent 0x10 child 0x20 sibling 0x30 other 0x40 previous child
reserved	0x10	

The permit-joining byte has the following fields

Name	Mask	Values
permit joining	0x03	0x00 not accepting join requests 0x01 accepting join requests 0x02 unknown
reserved	0xFC	

- #define [LQI\\_TABLE\\_REQUEST](#)
- #define [LQI\\_TABLE\\_RESPONSE](#)

## Routing Table Request / Response

```

Request: <transaction sequence number: 1> <start index:1>
Response: <transaction sequence number: 1> <status:1>
           <routing table entries:1> <start index:1>
           <entry count:1> <entry:5>*
           <entry> = <destination address:2>
                     <status:1>
                     <next hop:2>

```

The status byte has the following fields:

Name	Mask	Values
status	0x07	0x00 active 0x01 discovery underway 0x02 discovery failed 0x03 inactive 0x04 validation underway
flags	0x38	0x08 memory constrained 0x10 many-to-one 0x20 route record required
reserved	0xC0	

- #define [ROUTING\\_TABLE\\_REQUEST](#)
- #define [ROUTING\\_TABLE\\_RESPONSE](#)

## Binding Table Request / Response

```

Request: <transaction sequence number: 1> <start index:1>
Response: <transaction sequence number: 1>
           <status:1> <binding table entries:1> <start index:1>
           <entry count:1> <entry:14/21>*
           <entry> = <source EUI64:8> <source endpoint:1> <cluster ID:2>
                     <dest addr mode:1> <dest:2/8> <dest endpoint:0/1>

```

### Note

If Dest. Address Mode = 0x03, then the Long Dest. Address will be used and Dest. endpoint will be included. If Dest. Address Mode = 0x01, then the Short Dest. Address will be used and there will be no Dest. endpoint.

- #define **BINDING\_TABLE\_REQUEST**
- #define **BINDING\_TABLE\_RESPONSE**

## Leave Request / Response

```
Request: <transaction sequence number: 1> <EUI64:8> <flags:1>
          The flag bits are:
          0x40 remove children
          0x80 rejoin
Response: <transaction sequence number: 1> <status:1>
```

- #define **LEAVE\_REQUEST**
- #define **LEAVE\_RESPONSE**
- #define **LEAVE\_REQUEST\_REMOVE\_CHILDREN\_FLAG**
- #define **LEAVE\_REQUEST\_REJOIN\_FLAG**

## Permit Joining Request / Response

```
Request: <transaction sequence number: 1>
          <duration:1> <permit authentication:1>
Response: <transaction sequence number: 1> <status:1>
```

- #define **PERMIT\_JOINING\_REQUEST**
- #define **PERMIT\_JOINING\_RESPONSE**

## Network Update Request / Response

```
Request: <transaction sequence number: 1>
          <scan channels:4> <duration:1> <count:0/1> <manager:0/2>

If the duration is in 0x00 ... 0x05, then 'count' is present but
not 'manager'. Perform 'count' scans of the given duration on the
given channels.

If duration is 0xFE, then 'channels' should have a single channel
and 'count' and 'manager' are not present. Switch to the indicated
channel.

If duration is 0xFF, then 'count' is not present. Set the active
channels and the network manager ID to the values given.

Unicast requests always get a response, which is INVALID_REQUEST if the
duration is not a legal value.
```

```
Response: <transaction sequence number: 1> <status:1>
          <scanned channels:4> <transmissions:2> <failures:2>
          <energy count:1> <energy:1>*
```

- #define **NWK\_UPDATE\_REQUEST**
- #define **NWK\_UPDATE\_RESPONSE**

## Unsupported

Not mandatory and not supported.

- #define COMPLEX\_DESCRIPTOR\_REQUEST
- #define COMPLEX\_DESCRIPTOR\_RESPONSE
- #define USER\_DESCRIPTOR\_REQUEST
- #define USER\_DESCRIPTOR\_RESPONSE
- #define DISCOVERY\_REGISTER\_REQUEST
- #define DISCOVERY\_REGISTER\_RESPONSE

## ZDO configuration flags.

For controlling which ZDO requests are passed to the application. These are normally controlled via the following configuration definitions:

EMBER\_APPLICATION RECEIVES\_SUPPORTED\_ZDO\_REQUESTS EMBER\_APPLICATION\_HANDLES\_UNSUPPORTED\_ZDO\_REQUESTS EMBER\_APPLICATION\_HANDLES\_ENDPOINT\_ZDO\_REQUESTS EMBER\_APPLICATION\_HANDLES\_BINDING\_ZDO\_REQUESTS

See ember-configuration.h for more information.

- enum EmberZdoConfigurationFlags { EMBER\_APP RECEIVES\_SUPPORTED\_ZDO\_REQUESTS, EMBER\_APP\_HANDLES\_UNSUPPORTED\_ZDO\_REQUESTS, EMBER\_APP\_HANDLES\_ENDPOINT\_ZDO\_REQUESTS, EMBER\_APP\_HANDLES\_BINDING\_ZDO\_REQUESTS }

### 8.77.1 Detailed Description

Ember data type definitions. See [Ember Common Data Types](#) for details.

Definition in file `ember-types.h`.

## 8.78 ember-types.h
