## About This Guide

### Purpose

This document is a unified collection of API reference documentation covering EmberZNet PRO Stack.

Silicon Labs recommends that you use this document as a searchable reference. It includes all of the information contained in the html version of these materials that are provided as an online reference for developers of EmberZNet-based ZigBee wireless applications. There are three key advantages that this document provides over the online html versions:

- Everything is contained in this single document.
- This document is fully searchable using the Adobe Acrobat search engine that is part of the free Acrobat Reader (available from [www.adobe.com](http://www.adobe.com)).
- This document can be easily printed.

### Audience

This document is intended for use by programmers and designers developing ZigBee wireless networking products based on the EmberZNet PRO Stack Software. This document assumes that the reader has a solid understanding of embedded systems design and programming in the C language. Experience with networking and radio frequency systems is useful but not expected.

### Getting Help

Development kit customers are eligible for training and technical support. You can use the Silicon Labs web site [www.silabs.com/zigbee](http://www.silabs.com/zigbee) to obtain information about all Ember products and services.

You can also contact customer support at [www.silabs.com/zigbee-support.html](http://www.silabs.com/zigbee-support.html).

# Chapter 1

## Introduction

The Ember Application Framework V2 Reference documentation includes the following sections:

- [Ember Application Framework API Reference](#)
- [Ember Application Framework Command Line Interface \(CLI\)](#)
- [Application Framework Callback Interface](#)

## Chapter 2

### Deprecated List

Global [EMBER\\_AF\\_OK\\_TO\\_HIBERNATE](#)

Global [EMBER\\_AF\\_OK\\_TO\\_NAP](#)

Global [emberAfRf4ceZrc20ActionMappingClientLookUpActionMapping](#) (uint8\_t pairingIndex,  
EmberAfRf4ceDeviceType actionDeviceType, EmberAfRf4ceZrcActionBank actionBank,  
EmberAfRf4ceZrcActionCode actionCode, [EmberAfRf4ceZrcActionMapping](#) \*actionMapping)  
This function is deprecated and will be removed in a future release. Customers should use [emberAfRf4ceZrc20ActionMappingClientGetActionMapping](#) instead.

# Chapter 3

## Module Index

### 3.1 Modules

Here is a list of all modules:

Ember Application Framework API Reference . . . . .	22
General Application Framework Interface . . . . .	23
Application Framework Types . . . . .	68
Application Framework Callback Interface . . . . .	96
Framework Callbacks . . . . .	1589
Button Callbacks . . . . .	1590
Debug Basic Library Callbacks . . . . .	1591
ZigBee PRO Core Security Library EZSP Command Handlers Callbacks . . . . .	1592
ZigBee PRO Library EZSP Command Handlers Callbacks . . . . .	1593
HAL Library Callbacks . . . . .	1594
Microphone Codec MSADPCM Callbacks . . . . .	1595
Microphone IMAADPCM Callbacks . . . . .	1596
Multi-Network Stub Library Callbacks . . . . .	1597
STM32F103RET Library Callbacks . . . . .	1598
XNCP Library Callbacks . . . . .	1599
ZigBee PRO Stack Library Callbacks . . . . .	1602
main API Callbacks . . . . .	1604
ncp API Callbacks . . . . .	1605
sim-eeprom API Callbacks . . . . .	1606
stack API Callbacks . . . . .	1608
Application Framework Command Buffer Loading Interface . . . . .	659
Application Framework V2 Enums Reference . . . . .	870
Ember Application Framework Command Line Interface (CLI) . . . . .	1079
Attribute Management . . . . .	1247
Building and Sending Messages . . . . .	1248
Endpoint Manipulation . . . . .	1251
General . . . . .	1252
Global ZCL . . . . .	1254
Informational . . . . .	1258
Network . . . . .	1262
Security . . . . .	1268
Test Harness . . . . .	1272
ZigBee Device Object Commands (ZDO) . . . . .	1273

Cluster Commands: BACnet Protocol Tunnel . . . . .	1279
Cluster Commands: Basic . . . . .	1280
Cluster Commands: Calendar . . . . .	1281
Cluster Commands: Color Control . . . . .	1283
Cluster Commands: Demand Response and Load Control . . . . .	1289
Cluster Commands: Device Management . . . . .	1291
Cluster Commands: Door Lock . . . . .	1295
Cluster Commands: Events . . . . .	1296
Cluster Commands: Generic Tunnel . . . . .	1297
Cluster Commands: Groups . . . . .	1298
Cluster Commands: IAS ACE . . . . .	1300
Cluster Commands: IAS Zone . . . . .	1302
Cluster Commands: Identify . . . . .	1303
Cluster Commands: Level Control . . . . .	1305
Cluster Commands: Messaging . . . . .	1308
Cluster Commands: On/off . . . . .	1311
Cluster Commands: Poll Control . . . . .	1316
Cluster Commands: Power Profile . . . . .	1317
Cluster Commands: Prepayment . . . . .	1319
Cluster Commands: Price . . . . .	1325
Cluster Commands: Scenes . . . . .	1338
Cluster Commands: Simple Metering . . . . .	1341
Cluster Commands: Thermostat . . . . .	1350
Cluster Commands: Tunneling . . . . .	1351
Cluster Commands: Window Covering . . . . .	1353
Plugin Commands: Address Table . . . . .	1355
Plugin Commands: Button Joining . . . . .	1357
Plugin Commands: Calendar Client . . . . .	1358
Plugin Commands: Calendar Common . . . . .	1359
Plugin Commands: Calendar Server . . . . .	1366
Plugin Commands: Comms Hub Function . . . . .	1369
Plugin Commands: Concentrator . . . . .	1372
Plugin Commands: Connection Manager . . . . .	1374
Plugin Commands: Counters . . . . .	1375
Plugin Commands: Demand Response and Load Control . . . . .	1378
Plugin Commands: Demand Response and Load Control Server . . . . .	1380
Plugin Commands: Device Database . . . . .	1382
Plugin Commands: Device Management Client . . . . .	1384
Plugin Commands: Device Management Server . . . . .	1385
Plugin Commands: Device Query Service . . . . .	1390
Plugin Commands: EEPROM . . . . .	1391
Plugin Commands: EZ-Mode Commissioning . . . . .	1392
Plugin Commands: End Device Support . . . . .	1393
Plugin Commands: Events Server . . . . .	1394
Plugin Commands: Find and Bind Initiator . . . . .	1397
Plugin Commands: Find and Bind Target . . . . .	1398
Plugin Commands: Fragmentation . . . . .	1399
Plugin Commands: GBCS Device Log . . . . .	1400
Plugin Commands: GBCS Gas Meter . . . . .	1403
Plugin Commands: Gas Proxy Function . . . . .	1404
Plugin Commands: Generic Device Profile . . . . .	1406
Plugin Commands: Generic Device Profile Identification Client . . . . .	1408
Plugin Commands: Generic Device Profile Identification Server . . . . .	1409
Plugin Commands: Green Power Client . . . . .	1410

Plugin Commands: Green Power Server . . . . .	1413
Plugin Commands: Green Power Test Device . . . . .	1415
Plugin Commands: Groups Server . . . . .	1418
Plugin Commands: IAS Zone Client . . . . .	1419
Plugin Commands: IAS Zone Server . . . . .	1420
Plugin Commands: Identify . . . . .	1421
Plugin Commands: Idle/Sleep . . . . .	1422
Plugin Commands: Infrared LED . . . . .	1423
Plugin Commands: Interpan . . . . .	1426
Plugin Commands: Key Establishment . . . . .	1428
Plugin Commands: LED Dim PWM . . . . .	1429
Plugin Commands: Low Voltage Shutdown . . . . .	1430
Plugin Commands: Manufacturing Library . . . . .	1432
Plugin Commands: Messaging Client . . . . .	1437
Plugin Commands: Messaging Server . . . . .	1438
Plugin Commands: Meter Mirror . . . . .	1444
Plugin Commands: Meter Snapshot Server . . . . .	1445
Plugin Commands: Multi-Network Price Passthrough . . . . .	1446
Plugin Commands: Network Creator . . . . .	1448
Plugin Commands: Network Creator Security . . . . .	1450
Plugin Commands: Network Steering . . . . .	1452
Plugin Commands: OTA Bootload . . . . .	1454
Plugin Commands: OTA Client . . . . .	1455
Plugin Commands: OTA Server . . . . .	1458
Plugin Commands: OTA Simple Storage EEPROM . . . . .	1462
Plugin Commands: OTA Storage Common . . . . .	1463
Plugin Commands: Partner Link Key Exchange . . . . .	1465
Plugin Commands: Poll Control Client . . . . .	1466
Plugin Commands: Prepayment Server . . . . .	1468
Plugin Commands: Price Client . . . . .	1472
Plugin Commands: Price Common . . . . .	1478
Plugin Commands: Price Server . . . . .	1479
Plugin Commands: RF4CE Multiple System Operators IR-RF Database Originator . . . . .	1496
Plugin Commands: RF4CE Multiple System Operators IR-RF Database Recipient . . . . .	1499
Plugin Commands: RF4CE Multiple System Operators Profile . . . . .	1502
Plugin Commands: RF4CE Profile . . . . .	1505
Plugin Commands: RGB control for PWM . . . . .	1509
Plugin Commands: Relay Control Server . . . . .	1510
Plugin Commands: Reporting . . . . .	1511
Plugin Commands: SB1 Gesture Sensor . . . . .	1513
Plugin Commands: Scenes Server . . . . .	1514
Plugin Commands: Simple Metering Client . . . . .	1515
Plugin Commands: Simple Metering Server . . . . .	1517
Plugin Commands: Sleepy Message Queue . . . . .	1518
Plugin Commands: Smart Energy Registration . . . . .	1521
Plugin Commands: Stack Diagnostics . . . . .	1522
Plugin Commands: Standalone Bootloader Client . . . . .	1524
Plugin Commands: Standalone Bootloader Server . . . . .	1525
Plugin Commands: Temperature Measurement Server commands . . . . .	1527
Plugin Commands: Test Harness . . . . .	1528
Plugin Commands: Throughput . . . . .	1540
Plugin Commands: Trust Center Backup . . . . .	1542
Plugin Commands: Tunneling Client . . . . .	1544
Plugin Commands: Tunneling Server . . . . .	1546

Plugin Commands: ZigBee 3.0 Test Harness . . . . .	1547
Plugin Commands: ZigBee Light Link (ZLL) Commissioning . . . . .	1567
Plugin Commands: ZigBee Remote Control 1.1 Profile . . . . .	1572
Plugin Commands: ZigBee Remote Control 2.0 Action Mapping Client . . . . .	1574
Plugin Commands: ZigBee Remote Control 2.0 Action Mapping Server . . . . .	1577
Plugin Commands: ZigBee Remote Control 2.0 HA Server . . . . .	1580
Plugin Commands: ZigBee Remote Control 2.0 Profile . . . . .	1583
Ember ZigBee RF4CE Application Framework API Reference . . . . .	1082
Generic Device Profile . . . . .	1083
Generic Device Profile Identification Client . . . . .	1094
Generic Device Profile Identification Server . . . . .	1095
RF4CE Multiple System Operators Profile . . . . .	1096
RF4CE Multiple System Operators IR-RF Database Originator . . . . .	1104
RF4CE Multiple System Operators IR-RF Database Recipient . . . . .	1106
RF4CE Profile Support . . . . .	1108
ZigBee Remote Control 1.1 Profile . . . . .	1121
ZigBee Remote Control 2.0 Profile . . . . .	1125
ZigBee Remote Control 2.0 Action Mapping Client . . . . .	1131
ZigBee Remote Control 2.0 Action Mapping Server . . . . .	1135
ZigBee Remote Control 2.0 Home Automation Client . . . . .	1137
ZigBee Remote Control 2.0 Home Automation Server . . . . .	1156
Ember NCP API Reference . . . . .	1173
Extensible Network Co-processor (xNCP) . . . . .	1174
Status Codes . . . . .	1175
Ember Common Data Types . . . . .	1198
Plugin Commands: RGB control for PWM . . . . .	1585
Scan Dispatch . . . . .	1586

## Chapter 4

# Data Structure Index

### 4.1 Data Structures

Here are the data structures with brief descriptions:

CryptoTimingInfo . . . . .	1610
DestStruct . . . . .	1611
EmAfBindingInfo . . . . .	1611
EmAfDiscoveryOrPairRequestData . . . . .	1612
EmAfGbzPayloadHeader . . . . .	1613
EmAfGbzUseCaseSpecificComponent . . . . .	1613
EmAfGdpPairingCandidat e . . . . .	1614
EmAfMsoPairingCandidat e . . . . .	1616
EmAfOtaStorageLinuxConfig . . . . .	1617
EmAfPartialWriteStruct . . . . .	1618
EmAfPluginNetworkCreatorChannelComposite . . . . .	1619
EmAfPluginReportVolatileData . . . . .	1619
EmAfPollingState . . . . .	1620
EmAfRf4ceGdpAttributeDescriptor . . . . .	1620
EmAfRf4ceGdpAttributes . . . . .	1621
EmAfRf4ceMsoAttributeDescriptor . . . . .	1622
EmAfRf4ceMsoPeripheralIdEntry . . . . .	1623
EmAfRf4ceMsoRibAttributes . . . . .	1624
EmAfRf4cePowerSavingState . . . . .	1625
EmAfRf4ceZrcAttributeDescriptor . . . . .	1626
EmAfRf4ceZrcAttributes . . . . .	1626
EmAfZrcArrayedBitmask . . . . .	1627
EmAfZrcBitmask . . . . .	1628
EmberAesMmoHashContext This data structure contains the context data when calculating an AES MMO hash (message digest) . . . . .	1629
EmberAfAllowedInterPanMessage This structure is used define an interpan message that will be accepted by the interpan filters . . . . .	1629
EmberAfAttributeMetadata Each attribute has it's metadata stored in such struct . . . . .	1630
EmberAfAttributeMinMaxValue Type describing the attribute default, min and max values . . . . .	1631

<b>EmberAfAttributeSearchRecord</b>	Struct used to find an attribute in storage. Together the elements in this search record constitute the "primary key" used to identify a unique attribute value in attribute storage	1632
<b>EmberAfCalendar</b>	.....	1633
<b>EmberAfCalendarDayProfile</b>	.....	1635
<b>EmberAfCalendarDayScheduleEntryStruct</b>	.....	1636
<b>EmberAfCalendarDayStruct</b>	.....	1637
<b>EmberAfCalendarScheduleEntry</b>	.....	1637
<b>EmberAfCalendarSeason</b>	.....	1639
<b>EmberAfCalendarSeasonStruct</b>	.....	1639
<b>EmberAfCalendarSpecialDayEntry</b>	.....	1640
<b>EmberAfCalendarSpecialDayProfile</b>	.....	1640
<b>EmberAfCalendarSpecialDayStruct</b>	.....	1641
<b>EmberAfCalendarStruct</b>	.....	1642
<b>EmberAfCalendarWeekProfile</b>	.....	1644
<b>EmberAfCalendarWeekStruct</b>	.....	1646
<b>EmberAfCluster</b>	Struct describing cluster	1646
<b>EmberAfClusterCommand</b>	The EmberAFClusterCommand is a struct wrapper for all the data pertaining to a command which comes in over the air. This enables struct is used to encapsulate a command in a single place on the stack and pass a pointer to that location around during command processing	1648
<b>EmberAfClusterInfo</b>	.....	1649
<b>EmberAfClusterList</b>	A list of clusters received during a service discovery attempt. This will be returned for a simple descriptor request	1650
<b>EmberAfCommandMetadata</b>	A data struct used to keep track of incoming and outgoing commands for command discovery	1651
<b>EmberAfDate</b>	A data structure used to describe the ZCL Date data type	1652
<b>EmberAfDefaultAttributeValue</b>	Type for default values	1653
<b>EmberAfDefaultOrMinMaxAttributeValue</b>	Union describing the attribute default/min/max values	1653
<b>EmberAfDefinedEndpoint</b>	Struct that maps actual endpoint type, onto a specific endpoint	1654
<b>EmberAfDeviceDatabaseIterator</b>	.....	1656
<b>EmberAfDeviceInfo</b>	A struct containing endpoint information about a device	1656
<b>EmberAfDeviceManagementAttributeRange</b>	.....	1657
<b>EmberAfDeviceManagementAttributeTable</b>	.....	1658
<b>EmberAfDeviceManagementCIN</b>	.....	1658
<b>EmberAfDeviceManagementInfo</b>	.....	1659
<b>EmberAfDeviceManagementPassword</b>	.....	1661
<b>EmberAfDeviceManagementSiteId</b>	.....	1662
<b>EmberAfDeviceManagementSupplier</b>	.....	1663
<b>EmberAfDeviceManagementSupply</b>	.....	1664
<b>EmberAfDeviceManagementSupplyStatus</b>	.....	1664
<b>EmberAfDeviceManagementSupplyStatusFlags</b>	.....	1665
<b>EmberAfDeviceManagementTenancy</b>	.....	1666
<b>EmberAfDeviceManagementUncontrolledFlowThreshold</b>	.....	1667
<b>EmberAfDoorLockScheduleEntry</b>	.....	1668

<a href="#">EmberAfDoorLockUser</a>	1669
<a href="#">EmberAfEndpointInfoStruct</a>	
A struct containing basic information about an endpoint	1670
<a href="#">EmberAfEndpointList</a>	
A list of endpoints received during a service discovery attempt. This will be returned for a match descriptor request and a active endpoint request	1670
<a href="#">EmberAfEndpointType</a>	
Endpoint type struct describes clusters that are on the endpoint	1671
<a href="#">EmberAfEvent</a>	1672
<a href="#">EmberAfEventContext</a>	
Structure used to keep track of cluster related events and their sleep control values. The cluster code will not know at runtime all of the events that it has access to in the event table This structure is stored by the application framework in an event context table which allong with helper functions allows the cluster code to schedule and deactivate its associated events	1673
<a href="#">EmberAfFileDescriptorDispatchStruct</a>	1674
<a href="#">EmberAfGBCSDeviceLogInfo</a>	1675
<a href="#">EmberAfGbzMessageCreatorResult</a>	1675
<a href="#">EmberAfGbzMessageCreatorState</a>	1676
<a href="#">EmberAfGbzMessageData</a>	1678
<a href="#">EmberAfGbzMessageParserState</a>	1679
<a href="#">EmberAfGbzZclCommand</a>	1680
<a href="#">EmberAfGpfMessage</a>	1682
<a href="#">EmberAfGreenPowerClientCommissioningState</a>	1683
<a href="#">EmberAfGreenPowerDuplicateFilter</a>	1684
<a href="#">EmberAfGreenPowerServerCommissioningState</a>	1685
<a href="#">EmberAfGreenPowerServerGpdCommandTranslation</a>	1686
<a href="#">EmberAfImageBlockRequestCallbackStruct</a>	
This is the data structure that is passed to the emberAfImageBlockRequestCallback() to let the application decide what to do	1687
<a href="#">EmberAfIncomingMessage</a>	
Struct containing the superset of values passed to both emberIncomingMessageHandler on the SOC and ezspIncomingMessageHandler on the host	1688
<a href="#">EmberAfInterpanHeader</a>	
Interpan header used for sending and receiving interpan messages	1690
<a href="#">EmberAfJoiningDevice</a>	1692
<a href="#">EmberAfLinkKeyBackupData</a>	
A data struct for a link key backup	1692
<a href="#">EmberAfLoadControlEvent</a>	
Struct that describes a load control event	1693
<a href="#">EmberAfManufacturerCodeEntry</a>	1695
<a href="#">EmberAfMessageStruct</a>	
The <a href="#">EmberAfMessageStruct</a> is a struct wrapper that contains all the data about a low-level mesage to be sent (it may be ZCL or may be some other protocol)	1696
<a href="#">EmberAfOtaHeader</a>	
This structure is an in-memory representation of the Over-the-air header data that resides on disk. It is not a byte-for-byte copy	1697
<a href="#">EmberAfOtaImageId</a>	
This is a unique identifier for referencing ZigBee Over-the-air upgrade images. It is used by the OTA plugins when passing around information about an upgrade file	1699
<a href="#">EmberAfPluginEsiManagementEsiEntry</a>	1700
<a href="#">EmberAfPluginMessagingClientMessage</a>	1701
<a href="#">EmberAfPluginMessagingServerMessage</a>	
The message and metadata used by the Messaging server plugin	1702

<a href="#">EmberAfPluginPriceClientPrice</a>	1703
<a href="#">EmberAfPluginReportingEntry</a>	
A structure used to store reporting configurations. If endpoint field is <code>EMBER_AF_PLUGIN_REPORTING_UNUSED_ENDPOINT_ID</code> , the entry is unused	1706
<a href="#">EmberAfPluginScanDispatchScanData</a>	
A structure containing data for scheduling a scan	1709
<a href="#">EmberAfPluginScanDispatchScanResults</a>	
Information regarding scan results	1710
<a href="#">EmberAfPrepaymentSnapshotPayload</a>	1711
<a href="#">EmberAfPrepaymentSnapshotSchedulePayload</a>	1712
<a href="#">EmberAfPriceBillingPeriod</a>	1713
<a href="#">EmberAfPriceBillingPeriodTable</a>	1714
<a href="#">EmberAfPriceBlockPeriod</a>	
The price and metadata used by the Price server plugin	1715
<a href="#">EmberAfPriceBlockPeriodTable</a>	1716
<a href="#">EmberAfPriceCalorificValue</a>	1717
<a href="#">EmberAfPriceCalorificValueTable</a>	1718
<a href="#">EmberAfPriceCancelTariff</a>	1718
<a href="#">EmberAfPriceCancelTariffTable</a>	1719
<a href="#">EmberAfPriceClientBillingPeriod</a>	1720
<a href="#">EmberAfPriceClientBillingPeriodTable</a>	1721
<a href="#">EmberAfPriceClientBlockPeriod</a>	1721
<a href="#">EmberAfPriceClientBlockPeriodTable</a>	1722
<a href="#">EmberAfPriceClientBlockThreshold</a>	1723
<a href="#">EmberAfPriceClientBlockThresholdTable</a>	1724
<a href="#">EmberAfPriceClientCalorificValue</a>	1725
<a href="#">EmberAfPriceClientCalorificValueTable</a>	1725
<a href="#">EmberAfPriceClientCo2Value</a>	1726
<a href="#">EmberAfPriceClientCo2ValueTable</a>	1727
<a href="#">EmberAfPriceClientCommonInfo</a>	1727
<a href="#">EmberAfPriceClientConversionFactor</a>	1728
<a href="#">EmberAfPriceClientConversionFactorTable</a>	1729
<a href="#">EmberAfPriceClientCppEvent</a>	1730
<a href="#">EmberAfPriceClientCppEventTable</a>	1730
<a href="#">EmberAfPriceClientCreditPayment</a>	1731
<a href="#">EmberAfPriceClientCreditPaymentTable</a>	1732
<a href="#">EmberAfPriceClientCurrencyConversion</a>	1733
<a href="#">EmberAfPriceClientCurrencyConversionTable</a>	1734
<a href="#">EmberAfPriceClientInfo</a>	1734
<a href="#">EmberAfPriceClientTierLabels</a>	1736
<a href="#">EmberAfPriceClientTierLabelsTable</a>	1737
<a href="#">EmberAfPriceCO2Table</a>	1737
<a href="#">EmberAfPriceCo2Value</a>	1738
<a href="#">EmberAfPriceCommonInfo</a>	1739
<a href="#">EmberAfPriceConsolidatedBills</a>	1740
<a href="#">EmberAfPriceConsolidatedBillsTable</a>	1741
<a href="#">EmberAfPriceConversionFactor</a>	1742
<a href="#">EmberAfPriceConversionFactorTable</a>	1743
<a href="#">EmberAfPriceCppEvent</a>	1743
<a href="#">EmberAfPriceCppTable</a>	1744
<a href="#">EmberAfPriceCreditPayment</a>	1745
<a href="#">EmberAfPriceCreditPaymentTable</a>	1746
<a href="#">EmberAfPriceCurrencyConversion</a>	1747
<a href="#">EmberAfPriceCurrencyConversionTable</a>	1748

<a href="#">EmberAfPriceServerInfo</a>	1748
<a href="#">EmberAfPriceTierLabelTable</a>	1750
<a href="#">EmberAfPriceTierLabelValue</a>	1751
<a href="#">EmberAfRemoteBindingStruct</a>	
Zigbee Internet Client/Server Remote Binding struct	1752
<a href="#">EmberAfRemoteClusterStruct</a>	
Zigbee Internet Client/Server remote cluster struct	1753
<a href="#">EmberAfRf4ceGdpAttributeIdentificationRecord</a>	
RF4CE GDP attribute identification record for Get Attributes and Pull Attributes messages	1754
<a href="#">EmberAfRf4ceGdpAttributeRecord</a>	
RF4CE GDP attribute identification record for Set Attributes and Push Attributes messages	1755
<a href="#">EmberAfRf4ceGdpAttributeStatusRecord</a>	
RF4CE GDP attribute identification record for Get Attributes Response and Pull Attributes Response messages	1755
<a href="#">EmberAfRf4ceGdpRand</a>	
This data structure contains the GDP random byte string that is passed into various other functions	1756
<a href="#">EmberAfRf4ceGdpTag</a>	
This data structure contains the GDP tag value that is passed into various other functions	1757
<a href="#">EmberAfRf4ceMsoIrRfDatabaseEntry</a>	
RF4CE MSO IR-RF database entry	1757
<a href="#">EmberAfRf4ceMsoIrRfDatabaseIrDescriptor</a>	
RF4CE MSO IR-RF database IR descriptor	1758
<a href="#">EmberAfRf4ceMsoIrRfDatabaseRfDescriptor</a>	
RF4CE MSO IR-RF database RF descriptor	1759
<a href="#">EmberAfRf4ceMsoUserControlRecord</a>	
This data structure contains the MSO user control record	1760
<a href="#">EmberAfRf4ceZrcActionMapping</a>	
RF4CE ZRC Action Mapping	1761
<a href="#">EmberAfRf4ceZrcActionRecord</a>	
This data structure contains the ZRC action record	1762
<a href="#">EmberAfRf4ceZrcCommandsSupported</a>	
This data structure contains the ZRC 1.x command discovery data	1764
<a href="#">EmberAfRf4ceZrcHomeAutomationAttribute</a>	
RF4CE ZRC Home Automation attribute	1764
<a href="#">EmberAfRf4ceZrcHomeAutomationSupported</a>	
RF4CE ZRC Home Automation supported	1765
<a href="#">EmberAfRf4ceZrcMappableAction</a>	
RF4CE ZRC Mappable Action	1766
<a href="#">EmberAfRf4ceZrcUserControlRecord</a>	
This data structure contains the ZRC 1.x user control record	1766
<a href="#">EmberAfSceneTableEntry</a>	
A structure used to store scene table entries in RAM or in tokens, depending on a plugin setting. If endpoint field is <code>EMBER_AF_SCENE_TABLE_UNUSED_ENDPOINT_ID</code> , the entry is unused	1767
<a href="#">EmberAfScheduledBlockThresholds</a>	1768
<a href="#">EmberAfScheduledBlockThresholdsTable</a>	1769
<a href="#">EmberAfScheduledPrice</a>	
The price and metadata used by the MnPricePassthrough plugin	1770
<a href="#">EmberAfScheduledPriceMatrix</a>	1772
<a href="#">EmberAfScheduledPriceMatrixTable</a>	1773
<a href="#">EmberAfScheduledTariff</a>	1774

<a href="#">EmberAfScheduledTariffTable</a>	.....	<a href="#">1776</a>
<a href="#">EmberAfSecurityProfileData</a>	.....	<a href="#">1777</a>
<a href="#">EmberAfServiceDiscoveryResult</a>		
A structure containing general information about the service discovery	.....	<a href="#">1778</a>
<a href="#">EmberAfSleepyMessage</a>	.....	<a href="#">1779</a>
<a href="#">EmberAfSnapshotPayload</a>	.....	<a href="#">1780</a>
<a href="#">EmberAfSnapshotSchedulePayload</a>	.....	<a href="#">1782</a>
<a href="#">EmberAfStandaloneBootloaderQueryResponseData</a>		
A data struct for the information retrieved during a response to an Ember Bootloader over-the-air query	.....	<a href="#">1783</a>
<a href="#">EmberAfTagData</a>		
This structure contains information about a tag that resides within an Over-the-air bootload file	.....	<a href="#">1785</a>
<a href="#">EmberAfTimeStruct</a>		
A data structure used to describe the time in a human understandable format (as opposed to 32-bit UTC)	.....	<a href="#">1785</a>
<a href="#">EmberAfTrustCenterBackupData</a>		
A data struct for all the trust center backup data	.....	<a href="#">1786</a>
<a href="#">EmberApsFrame</a>		
An in-memory representation of a ZigBee APS frame of an incoming or outgoing message	.....	<a href="#">1787</a>
<a href="#">EmberBindingTableEntry</a>		
Defines an entry in the binding table	.....	<a href="#">1788</a>
<a href="#">EmberCertificate283k1Data</a>		
This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography	.....	<a href="#">1790</a>
<a href="#">EmberCertificateData</a>		
This data structure contains the certificate data that is used for Certificate Based Key Exchange (CBKE)	.....	<a href="#">1790</a>
<a href="#">EmberCurrentSecurityState</a>		
This describes the security features used by the stack for a joined device	.....	<a href="#">1791</a>
<a href="#">EmberEventControl</a>		
Control structure for events	.....	<a href="#">1792</a>
<a href="#">EmberEventData_S</a>		
Complete events with a control and a handler procedure	.....	<a href="#">1792</a>
<a href="#">EmberInitialSecurityState</a>		
This describes the Initial Security features and requirements that will be used when forming or joining the network	.....	<a href="#">1793</a>
<a href="#">EmberKeyData</a>		
This data structure contains the key data that is passed into various other functions	.....	<a href="#">1794</a>
<a href="#">EmberKeyStruct</a>		
This describes a one of several different types of keys and its associated data	.....	<a href="#">1795</a>
<a href="#">EmberMacFilterMatchStruct</a>		
This structure indicates a matching raw MAC message has been received by the application configured MAC filters	.....	<a href="#">1796</a>
<a href="#">EmberMessageDigest</a>		
This data structure contains an AES-MMO Hash (the message digest)	.....	<a href="#">1797</a>
<a href="#">EmberMfgSecurityStruct</a>		
This structure is used to get/set the security config that is stored in manufacturing tokens	.....	<a href="#">1798</a>
<a href="#">EmberMulticastTableEntry</a>		
Defines an entry in the multicast table	.....	<a href="#">1798</a>
<a href="#">EmberNeighborTableEntry</a>		
Defines an entry in the neighbor table	.....	<a href="#">1799</a>

<a href="#">EmberNetworkInitStruct</a>	Defines the network initialization configuration that should be used when ::emberNetworkInitExtended() is called by the application . . . . .	1800
<a href="#">EmberNetworkParameters</a>	Holds network parameters . . . . .	1801
<a href="#">EmberPrivateKey283k1Data</a>	This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography . . . . .	1803
<a href="#">EmberPrivateKeyData</a>	This data structure contains the private key data that is used for Certificate Based Key Exchange (CBKE) . . . . .	1803
<a href="#">EmberPublicKey283k1Data</a>	This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE) in SECT283k1 Elliptical Cryptography . . . . .	1804
<a href="#">EmberPublicKeyData</a>	This data structure contains the public key data that is used for Certificate Based Key Exchange (CBKE) . . . . .	1804
<a href="#">EmberReleaseTypeStruct</a>	A structure relating version types to human readable strings . . . . .	1805
<a href="#">EmberRouteTableEntry</a>	Defines an entry in the route table . . . . .	1805
<a href="#">EmberSignature283k1Data</a>	This data structure contains a DSA signature used in SECT283k1 Elliptical Cryptography. It is the bit concatenation of the 'r' and 's' components of the signature . . . . .	1806
<a href="#">EmberSignatureData</a>	This data structure contains a DSA signature. It is the bit concatenation of the 'r' and 's' components of the signature . . . . .	1807
<a href="#">EmberSmacData</a>	This data structure contains the Shared Message Authentication Code (SMAC) data that is used for Certificate Based Key Exchange (CBKE) . . . . .	1807
<a href="#">EmberTaskControl</a>	Control structure for tasks . . . . .	1808
<a href="#">EmberVersion</a>	Version struct containing all version information . . . . .	1809
<a href="#">EmberZigbeeNetwork</a>	Defines a ZigBee network and the associated parameters . . . . .	1810
<a href="#">emDebtScheduleEntry</a>	. . . . .	1811
<a href="#">HaAttributesInfo</a>	. . . . .	1812
<a href="#">IasZoneDevice</a>	. . . . .	1812
<a href="#">rxFragmentedPacket</a>	. . . . .	1813
<a href="#">txFragmentedPacket</a>	. . . . .	1815

# Chapter 5

## File Index

### 5.1 File List

Here is a list of all files with brief descriptions:

11073-tunnel.h . . . . .	1818
_AF_API.top . . . . .	1818
address-table.h . . . . .	1819
aes-cmac.h . . . . .	1821
af-types.h . . . . .	
The include file for all the types for Ember ApplicationFramework . . . . .	1829
af.h . . . . .	
The master include file for the Ember ApplicationFramework API . . . . .	1854
bootloader-protocol.h . . . . .	1873
bulb-config.h . . . . .	1887
bulb-ui-tokens.h . . . . .	1890
button-joining.h . . . . .	1890
calendar-client.h . . . . .	1892
calendar-common.h . . . . .	1897
calendar-server.h . . . . .	1902
client-api.h . . . . .	
API for generating command buffer . . . . .	2016
comms-hub-function.h . . . . .	2042
comms-hub-tunnel-endpoints.h . . . . .	2044
concentrator-support.h . . . . .	2046
connection-manager-test.h . . . . .	2048
connection-manager-tokens.h . . . . .	2048
connection-manager.h . . . . .	2050
core-cli.h . . . . .	2051
counters-cli.h . . . . .	2052
counters-ota.h . . . . .	2055
counters.h . . . . .	2057
custom-cli.h . . . . .	2057
custom-ezsp.h . . . . .	2058
demand-response-load-control.h . . . . .	2059
device-database.h . . . . .	2061
device-management-client.h . . . . .	2062
device-management-common.h . . . . .	2063

device-management-server.h . . . . .	2065
device-query-service.h . . . . .	2067
diagnostic-server.h . . . . .	2067
door-lock-server.h . . . . .	2068
drlc-server.h . . . . .	2069
eeprom.h . . . . .	2072
ember-types.h . . . . .	
Ember data type definitions . . . . .	2087
end-device-support.h . . . . .	2107
error-def.h . . . . .	
Return-code definitions for EmberZNet stack API functions . . . . .	2167
esi-management.h . . . . .	2183
events-server.h . . . . .	2187
ez-mode.h . . . . .	2189
file-descriptor-dispatch.h . . . . .	2191
find-and-bind-initiator.h . . . . .	2192
find-and-bind-target.h . . . . .	2193
fragmentation.h . . . . .	2196
gas-proxy-function.h . . . . .	2200
gateway-support-cli.h . . . . .	2202
gateway-support.h . . . . .	2204
gbcs-device-log.h . . . . .	2209
gbcs-gas-meter.h . . . . .	2211
gbz-message-controller.h . . . . .	2218
gpf-structured-data.h . . . . .	2223
green-power-client.h . . . . .	2224
green-power-common.h . . . . .	2229
green-power-crypto.h . . . . .	2235
green-power-server.h . . . . .	2237
green-power-test-device.h . . . . .	2238
ias-zone-client.h . . . . .	2240
ias-zone-server-test.h . . . . .	2241
ias-zone-server.h . . . . .	2242
idle-sleep.h . . . . .	2243
illuminance-measurement-server-tokens.h . . . . .	2244
illuminance-measurement-server.h . . . . .	2245
interpan.h . . . . .	
Plugin for receiving InterPAN messages. See message for documentation . . . . .	2250
key-establishment-storage.h . . . . .	2253
key-establishment.h . . . . .	2258
led-dim-pwm-transform.h . . . . .	2260
led-dim-pwm.h . . . . .	2264
led-rgb-pwm.h . . . . .	2264
led-temp-pwm.h . . . . .	2265
level-control.h . . . . .	2265
load-control-event-table.h . . . . .	2269
lv-shutdown.h . . . . .	2271
manufacturing-library-cli-plugin.h . . . . .	2272
manufacturing-library-cli-tokens.h . . . . .	2272
messaging-client.h . . . . .	2274
messaging-server.h . . . . .	2277
meter-mirror.h . . . . .	2279
meter-snapshot-storage.h . . . . .	2280
mn-price-passthrough.h . . . . .	2282

network-cli.h . . . . .	2283
network-creator-composite.h . . . . .	2284
network-creator-security.h . . . . .	2286

## Chapter 6

# Module Documentation

## 6.1 Ember Application Framework API Reference

### Modules

- [General Application Framework Interface](#)
- [Application Framework Types](#)
- [Application Framework Callback Interface](#)
- [Application Framework Command Buffer Loading Interface](#)
- [Application Framework V2 Enums Reference](#)

### 6.1.1 Detailed Description

## 6.2 General Application Framework Interface

### Macros

- #define CONFIGURATION\_HEADER

### Attribute Storage

- enum { EMBER\_AF\_DATA\_TYPE\_ANALOG, EMBER\_AF\_DATA\_TYPE\_DISCRETE, EMBER\_AF\_DATA\_TYPE\_NONE }
- EmberAfDefinedEndpoint emAfEndpoints []
- PGM EmAfNetworkType emAfNetworkTypes []
- PGM EmAfNetworkType \* emAfCurrentNetworkType
- PGM EmAfZigbeeProNetwork emAfZigbeeProNetworks []
- PGM EmAfZigbeeProNetwork \* emAfCurrentZigbeeProNetwork
- EmberAfAttributeMetadata \* emberAfLocateAttributeMetadata (uint8\_t endpoint, EmberAfClusterId cluster, EmberAfAttributeId attribute, uint8\_t mask, uint16\_t manufacturerCode)
- bool emberAfContainsAttribute (uint8\_t endpoint, EmberAfClusterId clusterId, EmberAfAttributeId attributeId, uint8\_t mask, uint16\_t manufacturerCode)
- bool emberAfContainsCluster (uint8\_t endpoint, EmberAfClusterId clusterId)
- bool emberAfContainsServer (uint8\_t endpoint, EmberAfClusterId clusterId)
- bool emberAfContainsClient (uint8\_t endpoint, EmberAfClusterId clusterId)
- EmberAfStatus emberAfWriteAttribute (uint8\_t endpoint, EmberAfClusterId cluster, EmberAfAttributeId attributeID, uint8\_t mask, uint8\_t \*dataPtr, uint8\_t dataType)
- EmberAfStatus emberAfWriteServerAttribute (uint8\_t endpoint, EmberAfClusterId cluster, EmberAfAttributeId attributeID, uint8\_t \*dataPtr, uint8\_t dataType)
- EmberAfStatus emberAfWriteClientAttribute (uint8\_t endpoint, EmberAfClusterId cluster, EmberAfAttributeId attributeID, uint8\_t \*dataPtr, uint8\_t dataType)
- EmberAfStatus emberAfWriteManufacturerSpecificServerAttribute (uint8\_t endpoint, EmberAfClusterId cluster, EmberAfAttributeId attributeID, uint16\_t manufacturerCode, uint8\_t \*dataPtr, uint8\_t dataType)
- EmberAfStatus emberAfWriteManufacturerSpecificClientAttribute (uint8\_t endpoint, EmberAfClusterId cluster, EmberAfAttributeId attributeID, uint16\_t manufacturerCode, uint8\_t \*dataPtr, uint8\_t dataType)

### 6.2.1 Detailed Description

This documentation describes the application programming interface (API) for the Ember Application Framework V2. The file `af.h` is the master include file for the Application Framework V2 modules.

### 6.2.2 Macro Definition Documentation

#### 6.2.2.1 #define CONFIGURATION\_HEADER

Definition at line 24 of file `af.h`.

**6.2.2.2 #define emberAfClusterIsManufacturerSpecific( *cluster* )**

macro that returns true if the cluster is in the manufacturer specific range

**Parameters**

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

Definition at line [354](#) of file [af.h](#).

**6.2.2.3 #define emberAfAttributeIsReadOnly( *metadata* )**

macro that returns true if attribute is read only.

**Parameters**

<i>metadata</i>	EmberAfAttributeMetadata* to consider.
-----------------	--

Definition at line [362](#) of file [af.h](#).

**6.2.2.4 #define emberAfAttributeIsClient( *metadata* )**

macro that returns true if this is a client attribute, and false if it is server

**Parameters**

<i>metadata</i>	EmberAfAttributeMetadata* to consider.
-----------------	--

Definition at line [369](#) of file [af.h](#).

**6.2.2.5 #define emberAfAttributeIsTokenized( *metadata* )**

macro that returns true if attribute is saved to token.

**Parameters**

<i>metadata</i>	EmberAfAttributeMetadata* to consider.
-----------------	--

Definition at line [376](#) of file [af.h](#).

**6.2.2.6 #define emberAfAttributeIsExternal( *metadata* )**

macro that returns true if attribute is saved in external storage.

**Parameters**

<i>metadata</i>	EmberAfAttributeMetadata* to consider.
-----------------	--

Definition at line [383](#) of file [af.h](#).

**6.2.2.7 #define emberAfAttributeIsSingleton( *metadata* )**

macro that returns true if attribute is a singleton

**Parameters**

<i>metadata</i>	EmberAfAttributeMetadata* to consider.
-----------------	--

Definition at line 390 of file [af.h](#).

**6.2.2.8 #define emberAfAttributeIsManufacturerSpecific( *metadata* )**

macro that returns true if attribute is manufacturer specific

**Parameters**

<i>metadata</i>	EmberAfAttributeMetadata* to consider.
-----------------	--

Definition at line 397 of file [af.h](#).

**6.2.2.9 #define emberAfAttributeSize( *metadata* )**

macro that returns size of attribute in bytes.

**Parameters**

<i>metadata</i>	EmberAfAttributeMetadata* to consider.
-----------------	--

Definition at line 405 of file [af.h](#).

**6.2.2.10 #define emAfIsCurrentNetwork( )**

macro that returns true if the cluster is in the manufacturer specific range

**Parameters**

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

Definition at line 423 of file [af.h](#).

**6.2.2.11 #define emberAfProfileIdFromIndex( *index* )**

Macro that takes index of endpoint, and returns profile Id for it.

Definition at line 453 of file [af.h](#).

**6.2.2.12 #define emberAfDeviceIdFromIndex( *index* )**

Macro that takes index of endpoint, and returns device Id for it.

Definition at line 458 of file [af.h](#).

**6.2.2.13 #define emberAfDeviceVersionFromIndex( *index* )**

Macro that takes index of endpoint, and returns device version for it.

Definition at line [463](#) of file [af.h](#).

**6.2.2.14 #define emberAfNetworkIndexFromEndpointIndex( *index* )**

Macro that takes index of endpoint, and returns network index for it.

Definition at line [468](#) of file [af.h](#).

**6.2.2.15 #define emberAfPrimaryProfileId( )**

Macro that returns primary profile ID.

Primary profile is the profile of a primary endpoint as defined in AppBuilder.

Definition at line [479](#) of file [af.h](#).

**6.2.2.16 #define emberAfPrimaryEndpoint( )**

Macro that returns the primary endpoint.

Definition at line [484](#) of file [af.h](#).

**6.2.2.17 #define emberAfGetInt8u( *message*, *currentIndex*, *msgLen* )**

Macro for consistency, that extracts single byte out of the message.

Definition at line [547](#) of file [af.h](#).

**6.2.2.18 #define emberAfCopyInt8u( *data*, *index*, *x* )**

Macro for consistency that copies an uint8\_t from variable into buffer.

Definition at line [552](#) of file [af.h](#).

**6.2.2.19 #define EMBER\_AF\_NEW\_IMAGE\_VERIFICATION**

This indicates a new image verification is taking place.

Definition at line [644](#) of file [af.h](#).

**6.2.2.20 #define EMBER\_AF\_CONTINUE\_IMAGE\_VERIFY**

This indicates the continuation of an image verification already in progress.

Definition at line [650](#) of file [af.h](#).

**6.2.2.21 #define EMBER\_AF\_ZCL\_SEQUENCE\_MASK**

The mask applied by [emberAfNextSequence](#) when generating ZCL sequence numbers.

Definition at line [684](#) of file [af.h](#).

**6.2.2.22 #define EMBER\_AF\_MESSAGE\_TAG\_MASK**

The mask applied to generated message tags used by the framework when sending messages via EZSP. Customers who call `ezspSend` functions directly must use message tags outside this mask.

Definition at line [690](#) of file [af.h](#).

**6.2.2.23 #define EMBER\_AF\_REJOIN\_DUE\_TO\_END\_DEVICE\_MOVE**

An App. Framework defined rejoin reason.

Definition at line [794](#) of file [af.h](#).

**6.2.2.24 #define EMBER\_AF\_REJOIN\_DUE\_TO\_TC\_KEEPALIVE\_FAILURE**

This indicates a new image verification is taking place.

Definition at line [795](#) of file [af.h](#).

**6.2.2.25 #define EMBER\_AF\_REJOIN\_DUE\_TO\_CLI\_COMMAND**

This indicates a new image verification is taking place.

Definition at line [796](#) of file [af.h](#).

**6.2.2.26 #define EMBER\_AF\_REJOIN\_FIRST\_REASON**

This indicates a new image verification is taking place.

Definition at line [798](#) of file [af.h](#).

**6.2.2.27 #define EMBER\_AF\_REJOIN\_LAST\_REASON**

This indicates a new image verification is taking place.

Definition at line [799](#) of file [af.h](#).

**6.2.2.28 #define emberAfGuaranteedPrint( ... )**

Print that can't be turned off.

Definition at line [845](#) of file [af.h](#).

**6.2.2.29 #define emberAfGuaranteedPrintln( ... )**

Println that can't be turned off.

Definition at line [850](#) of file `af.h`.

#### **6.2.2.30 #define emberAfGuaranteedPrintBuffer( *buffer*, *len*, *withSpace* )**

Buffer print that can't be turned off.

Definition at line [855](#) of file `af.h`.

#### **6.2.2.31 #define emberAfGuaranteedPrintString( *buffer* )**

String print that can't be turned off.

Definition at line [860](#) of file `af.h`.

#### **6.2.2.32 #define emberAfGuaranteedPrintLongString( *buffer* )**

Long string print that can't be turned off.

Definition at line [865](#) of file `af.h`.

#### **6.2.2.33 #define emberAfGuaranteedFlush( )**

Buffer flush for `emberAfGuaranteedPrint()`, `emberAfGuaranteedPrintln()`, `emberAfGuaranteedPrintBuffer()`, and `emberAfGuaranteedPrintString()`.

Definition at line [871](#) of file `af.h`.

#### **6.2.2.34 #define emberAfAddToCurrentAppTasks( *x* )**

A function used to add a task to the task register.

Definition at line [969](#) of file `af.h`.

#### **6.2.2.35 #define emberAfRemoveFromCurrentAppTasks( *x* )**

A function used to remove a task from the task register.

Definition at line [975](#) of file `af.h`.

#### **6.2.2.36 #define emberAfCurrentAppTasks( )**

A macro used to retrieve the bitmask of all application frameowrk tasks currently in progress. This can be useful for debugging if some task is holding the device out of hibernation.

Definition at line [983](#) of file `af.h`.

#### **6.2.2.37 #define EMBER\_AF\_CLIENT\_CLUSTER\_TICK**

Friendly define for use in the scheduling or canceling client events with `emberAfScheduleClusterTick()` and `emberAfDeactivateClusterTick()`.

Definition at line [997](#) of file `af.h`.

### 6.2.2.38 #define EMBER\_AF\_SERVER\_CLUSTER\_TICK

Friendly define for use in the scheduling or canceling server events with [emberAfScheduleClusterTick\(\)](#) and [emberAfDeactivateClusterTick\(\)](#).

Definition at line 1003 of file [af.h](#).

### 6.2.2.39 #define emberAfQSToNextEvent( maxQS )

A function used to retrieve the number of quarter seconds until the next event scheduled in the application framework's event mechanism. This function will round down and will return 0 if the next event must fire within a quarter second.

#### Parameters

<i>maxQS</i> , the	maximum number of quarter seconds until the next event.
--------------------	---

#### Returns

The number of quarter seconds until the next event or maxQS if no event is scheduled before then.

Definition at line 1364 of file [af.h](#).

### 6.2.2.40 #define emberAfGetCurrentSleepControl( )

A function for retrieving the most restrictive sleep control value for all scheduled events. This function is used by [emberAfOkToNap](#) and [emberAfOkToHibernate](#) to makes sure that there are no events scheduled which will keep the device from hibernating or napping.

#### Returns

The most restrictive sleep control value for all scheduled events or the value returned by [emberAfGetDefaultSleepControl\(\)](#) if no events are currently scheduled. The default sleep control value is initialized to EMBER\_AF\_OK\_TO\_HIBERNATE but can be changed at any time using the [emberAfSetDefaultSleepControl\(\)](#) function.

Definition at line 1382 of file [af.h](#).

### 6.2.2.41 #define emberAfSetDefaultSleepControl( x )

A function for setting the default sleep control value against which all scheduled event sleep control values will be evaluated. This can be used to keep a device awake for an extended period of time by setting the default to EMBER\_AF\_STAY\_AWAKE and then resetting the value to EMBER\_AF\_OK\_TO\_HIBERNATE once the wake period is complete.

Definition at line 1394 of file [af.h](#).

### 6.2.2.42 #define emberAfGetDefaultSleepControl( )

A function used to retrive the default sleep control against which all event sleep control values are evaluated. The default sleep control value is initialized to EMBER\_AF\_OK\_TO\_HIBERNATE but can be changed by the application at any time using the [emberAfSetDefaultSleepControl\(\)](#) function.

**Returns**

The current default sleep control value.

Definition at line [1405](#) of file `af.h`.

**6.2.2.43 #define EMBER\_AF\_CLIENT\_CLUSTER\_DISCOVERY**

Friendly define for use in discovering client clusters with `emberAfFindDevicesByProfileAndCluster()`.

Definition at line [1722](#) of file `af.h`.

**6.2.2.44 #define EMBER\_AF\_SERVER\_CLUSTER\_DISCOVERY**

Friendly define for use in discovering server clusters with `emberAfFindDevicesByProfileAndCluster()`.

Definition at line [1728](#) of file `af.h`.

**6.2.2.45 #define emberAfCurrentCommand( )**

Use this macro to retrieve the current command. This macro may only be used within the command parsing context. For instance Any of the command handling callbacks may use this macro. If this macro is used outside the command context, the returned `EmberAfClusterCommand` pointer will be null.

Definition at line [1868](#) of file `af.h`.

**6.2.2.46 #define emberAfCurrentEndpoint( )**

returns the current endpoint that is being served.

The purpose of this macro is mostly to access endpoint that is being served in the command callbacks.

Definition at line [1877](#) of file `af.h`.

**6.2.2.47 #define ZCL\_FRAME\_CONTROL\_FRAME\_TYPE\_MASK**

Definition at line [1946](#) of file `af.h`.

**6.2.2.48 #define ZCL\_CLUSTER\_SPECIFIC\_COMMAND**

Definition at line [1947](#) of file `af.h`.

**6.2.2.49 #define ZCL\_PROFILE\_WIDE\_COMMAND**

Definition at line [1948](#) of file `af.h`.

**6.2.2.50 #define ZCL\_GLOBAL\_COMMAND**

Definition at line [1949](#) of file `af.h`.

**6.2.2.51 #define ZCL\_MANUFACTURER\_SPECIFIC\_MASK**

Definition at line 1951 of file af.h.

**6.2.2.52 #define ZCL\_FRAME\_CONTROL\_DIRECTION\_MASK**

Definition at line 1953 of file af.h.

**6.2.2.53 #define ZCL\_FRAME\_CONTROL\_SERVER\_TO\_CLIENT**

Definition at line 1954 of file af.h.

**6.2.2.54 #define ZCL\_FRAME\_CONTROL\_CLIENT\_TO\_SERVER**

Definition at line 1955 of file af.h.

**6.2.2.55 #define ZCL\_DISABLE\_DEFAULT\_RESPONSE\_MASK**

Definition at line 1957 of file af.h.

**6.2.2.56 #define ZCL\_DIRECTION\_CLIENT\_TO\_SERVER**

Definition at line 1960 of file af.h.

**6.2.2.57 #define ZCL\_DIRECTION\_SERVER\_TO\_CLIENT**

Definition at line 1961 of file af.h.

**6.2.2.58 #define EMBER\_AF\_ZCL\_OVERHEAD**

Definition at line 1967 of file af.h.

**6.2.2.59 #define EMBER\_AF\_ZCL\_MANUFACTURER\_SPECIFIC\_OVERHEAD**

Definition at line 1968 of file af.h.

**6.2.3 Enumeration Type Documentation****6.2.3.1 anonymous enum**

Data types are either analog or discrete. This makes a difference for some of the ZCL global commands

**Enumerator:**

*EMBER\_AF\_DATA\_TYPE\_ANALOG*

*EMBER\_AF\_DATA\_TYPE\_DISCRETE*

*EMBER\_AF\_DATA\_TYPE\_NONE*

Definition at line 501 of file [af.h](#).

## 6.2.4 Function Documentation

**6.2.4.1 EmberAfAttributeMetadata\* emberAfLocateAttributeMetadata ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attribute*, *uint8\_t mask*, *uint16\_t manufacturerCode* )**

locate attribute metadata

Function returns pointer to the attribute metadata structure, or NULL if attribute was not found.

### Parameters

<i>endpoint</i>	Zigbee endpoint number.
<i>cluster</i>	Cluster ID of the sought cluster.
<i>attribute</i>	Attribute ID of the sought attribute.
<i>mask</i>	CLUSTER_MASK_SERVER or CLUSTER_MASK_CLIENT

### Returns

Returns pointer to the attribute metadata location.

**6.2.4.2 bool emberAfContainsAttribute ( *uint8\_t endpoint*, *EmberAfClusterId clusterId*, *EmberAfAttributeId attributelD*, *uint8\_t mask*, *uint16\_t manufacturerCode* )**

Returns true if the attribute exists.

**6.2.4.3 bool emberAfContainsCluster ( *uint8\_t endpoint*, *EmberAfClusterId clusterId* )**

Returns true If endpoint contains cluster.

This function returns true regardless of whether the endpoint contains server, client or both.

**6.2.4.4 bool emberAfContainsServer ( *uint8\_t endpoint*, *EmberAfClusterId clusterId* )**

Returns true If endpoint contains cluster server.

This function returns true if the endpoint contains server of a given cluster.

**6.2.4.5 bool emberAfContainsClient ( *uint8\_t endpoint*, *EmberAfClusterId clusterId* )**

Returns true If endpoint contains cluster client.

This function returns true if the endpoint contains client of a given cluster.

**6.2.4.6 EmberAfStatus emberAfWriteAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint8\_t mask*, *uint8\_t \* dataPtr*, *uint8\_t dataType* )**

write an attribute, performing all the checks.

This function will attempt to write the attribute value from the provided pointer. This function will only check that the attribute exists. If it does it will write the value into the attribute table for the given attribute.

This function will not check to see if the attribute is writable since the read only / writable characteristic of an attribute only pertains to external devices writing over the air. Because this function is being called locally it assumes that the device knows what it is doing and has permission to perform the given operation.

#### 6.2.4.7 EmberAfStatus emberAfWriteServerAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint8\_t \* dataPtr*, *uint8\_t dataType* )

write a cluster server attribute.

This function is the same as `emberAfWriteAttribute` except that it saves having to pass the cluster mask. this is useful for code savings since write attribute is used frequently throughout the framework

#### See Also

[emberAfWriteClientAttribute](#), [emberAfWriteManufacturerSpecificClientAttribute](#), [emberAfWriteManufacturerSpecificServerAttribute](#)

#### 6.2.4.8 EmberAfStatus emberAfWriteClientAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint8\_t \* dataPtr*, *uint8\_t dataType* )

write an cluster client attribute.

This function is the same as `emberAfWriteAttribute` except that it saves having to pass the cluster mask. this is useful for code savings since write attribute is used frequently throughout the framework

#### See Also

[emberAfWriteServerAttribute](#), [emberAfWriteManufacturerSpecificClientAttribute](#), [emberAfWriteManufacturerSpecificServerAttribute](#)

#### 6.2.4.9 EmberAfStatus emberAfWriteManufacturerSpecificServerAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint16\_t manufacturerCode*, *uint8\_t \* dataPtr*, *uint8\_t dataType* )

write an manufacturer specific server attribute.

This function is the same as `emberAfWriteAttribute` except that it saves having to pass the cluster mask. this is useful for code savings since write attribute is used frequently throughout the framework

#### See Also

[emberAfWriteClientAttribute](#), [emberAfWriteServerAttribute](#), [emberAfWriteManufacturerSpecificClientAttribute](#)

**6.2.4.10 EmberAfStatus emberAfWriteManufacturerSpecificClientAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint16\_t manufacturerCode*, *uint8\_t \* dataPtr*, *uint8\_t dataType* )**

write an manufacturer specific client attribute.

This function is the same as `emberAfWriteAttribute` except that it saves having to pass the cluster mask. this is useful for code savings since write attribute is used frequently throughout the framework

#### See Also

[emberAfWriteClientAttribute](#), [emberAfWriteServerAttribute](#), [emberAfWriteManufacturerSpecificServerAttribute](#)

**6.2.4.11 EmberAfStatus emberAfVerifyAttributeWrite ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint8\_t mask*, *uint16\_t manufacturerCode*, *uint8\_t \* buffer*, *uint8\_t dataType* )**

Function that test the success of attribute write.

This function returns success if attribute write would be succesfull. It does not actuall write anything, just validates for read-only and data-type.

#### Parameters

<i>endpoint</i>	Zigbee endpoint number
<i>cluster</i>	Cluster ID of the sought cluster.
<i>attribute</i>	Attribute ID of the sought attribute.
<i>mask</i>	CLUSTER_MASK_SERVER or CLUSTER_MASK_CLIENT
<i>buffer</i>	Location where attribute will be written from.
<i>dataType</i>	ZCL attribute type.

**6.2.4.12 EmberAfStatus emberAfReadAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint8\_t mask*, *uint8\_t \* dataPtr*, *uint8\_t readLength*, *uint8\_t \* dataType* )**

Read the attribute value, performing all the checks.

This function will attempt to read the attribute and store it into the pointer. It will also read the data type. Both dataPtr and dataType may be NULL, signifying that either value or type is not desired.

#### See Also

[emberAfReadClientAttribute](#), [emberAfReadServerAttribute](#), [emberAfReadManufacturerSpecificClientAttribute](#), [emberAfReadManufacturerSpecificServerAttribute](#)

**6.2.4.13 EmberAfStatus emberAfReadServerAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint8\_t \* dataPtr*, *uint8\_t readLength* )**

Read the server attribute value, performing all the checks.

This function will attempt to read the attribute and store it into the pointer. It will also read the data type. Both dataPtr and dataType may be NULL, signifying that either value or type is not desired.

**See Also**

[emberAfReadClientAttribute](#), [emberAfReadManufacturerSpecificClientAttribute](#), [emberAfReadManufacturerSpecificServerAttribute](#)

#### 6.2.4.14 EmberAfStatus emberAfReadClientAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint8\_t \* dataPtr*, *uint8\_t readLength* )

Read the client attribute value, performing all the checks.

This function will attempt to read the attribute and store it into the pointer. It will also read the data type. Both dataPtr and dataType may be NULL, signifying that either value or type is not desired.

**See Also**

[emberAfReadServerAttribute](#), [emberAfReadManufacturerSpecificClientAttribute](#), [emberAfReadManufacturerSpecificServerAttribute](#)

#### 6.2.4.15 EmberAfStatus emberAfReadManufacturerSpecificServerAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint16\_t manufacturerCode*, *uint8\_t \* dataPtr*, *uint8\_t readLength* )

Read the server attribute value, performing all the checks.

This function will attempt to read the attribute and store it into the pointer. It will also read the data type. Both dataPtr and dataType may be NULL, signifying that either value or type is not desired.

**See Also**

[emberAfReadClientAttribute](#), [emberAfReadServerAttribute](#), [emberAfReadManufacturerSpecificClientAttribute](#)

#### 6.2.4.16 EmberAfStatus emberAfReadManufacturerSpecificClientAttribute ( *uint8\_t endpoint*, *EmberAfClusterId cluster*, *EmberAfAttributeId attributeID*, *uint16\_t manufacturerCode*, *uint8\_t \* dataPtr*, *uint8\_t readLength* )

Read the client attribute value, performing all the checks.

This function will attempt to read the attribute and store it into the pointer. It will also read the data type. Both dataPtr and dataType may be NULL, signifying that either value or type is not desired.

**See Also**

[emberAfReadClientAttribute](#), [emberAfReadServerAttribute](#), [emberAfReadManufacturerSpecificServerAttribute](#)

#### 6.2.4.17 uint8\_t emberAfGetDataSize ( *uint8\_t dataType* )

this function returns the size of the ZCL data in bytes.

**Parameters**

<i>dataType</i>	Zcl data type
-----------------	---------------

**Returns**

size in bytes or 0 if invalid data type

**6.2.4.18 `uint8_t emberAfEndpointFromIndex ( uint8_t index )`**

Macro that takes index of endpoint, and returns Zigbee endpoint.

**6.2.4.19 `uint8_t emberAfIndexFromEndpoint ( uint8_t endpoint )`**

Returns the index of a given endpoint

**6.2.4.20 `uint8_t emberAfIndexFromEndpointIncludingDisabledEndpoints ( uint8_t endpoint )`**

Returns the index of a given endpoint; Does not ignore disabled endpoints

**6.2.4.21 `uint8_t emberAfFindClusterClientEndpointIndex ( uint8_t endpoint, EmberAfClusterId clusterId )`**

Returns the endpoint index within a given cluster (Client-side)

**6.2.4.22 `uint8_t emberAfFindClusterServerEndpointIndex ( uint8_t endpoint, EmberAfClusterId clusterId )`**

Returns the endpoint index within a given cluster (Server-side)

**6.2.4.23 `uint8_t emberAfNetworkIndexFromEndpoint ( uint8_t endpoint )`**

Returns the network index of a given endpoint.

**6.2.4.24 `uint8_t emberAfEndpointCount ( void )`**

Returns the total number of endpoints (dynamic and pre-compiled).

**6.2.4.25 `uint8_t emberAfFixedEndpointCount ( void )`**

Returns the number of pre-compiled endpoints.

**6.2.4.26 `uint8_t emberAfGetAttributeAnalogOrDiscreteType ( uint8_t dataType )`**

Returns the type of the attribute, either ANALOG, DISCRETE or NONE.

#### 6.2.4.27 `bool emberAfIsTypeSigned ( uint8_t dataType )`

Returns true if type is signed, false otherwise.

#### 6.2.4.28 `uint32_t emberAfGetInt32u ( const uint8_t * message, uint16_t currentIndex, uint16_t msgLen )`

Function that extracts a 32-bit integer from the message buffer.

#### 6.2.4.29 `uint32_t emberAfGetInt24u ( const uint8_t * message, uint16_t currentIndex, uint16_t msgLen )`

Function that extracts a 24-bit integer from the message buffer.

#### 6.2.4.30 `uint16_t emberAfGetInt16u ( const uint8_t * message, uint16_t currentIndex, uint16_t msgLen )`

Function that extracts a 16-bit integer from the message buffer.

#### 6.2.4.31 `uint8_t* emberAfGetString ( uint8_t * message, uint16_t currentIndex, uint16_t msgLen )`

Function that extracts a ZCL string from the message buffer.

#### 6.2.4.32 `uint8_t* emberAfGetLongString ( uint8_t * message, uint16_t currentIndex, uint16_t msgLen )`

Function that extracts a ZCL long string from the message buffer.

#### 6.2.4.33 `uint8_t emberAfGetDate ( uint8_t * message, uint16_t currentIndex, uint16_t msgLen, EmberAfDate * dest )`

macro that returns true if the cluster is in the manufacturer specific range

##### Parameters

<code>cluster</code>	EmberAfCluster* to consider
----------------------	-----------------------------

#### 6.2.4.34 `void emberAfCopyInt16u ( uint8_t * data, uint16_t index, uint16_t x )`

function that copies an in16u value into a buffer

#### 6.2.4.35 `void emberAfCopyInt24u ( uint8_t * data, uint16_t index, uint32_t x )`

function that copies an in24u value into a buffer

#### 6.2.4.36 `void emberAfCopyInt32u ( uint8_t * data, uint16_t index, uint32_t x )`

function that copies an in32u value into a buffer

#### 6.2.4.37 void emberAfCopyString ( *uint8\_t \* dest, uint8\_t \* src, uint8\_t size* )

macro that returns true if the cluster is in the manufacturer specific range

##### Parameters

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

#### 6.2.4.38 void emberAfCopyLongString ( *uint8\_t \* dest, uint8\_t \* src, uint16\_t size* )

macro that returns true if the cluster is in the manufacturer specific range

##### Parameters

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

#### 6.2.4.39 uint8\_t emberAfStringLength ( *const uint8\_t \* buffer* )

macro that returns true if the cluster is in the manufacturer specific range

##### Parameters

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

#### 6.2.4.40 uint16\_t emberAfLongStringLength ( *const uint8\_t \* buffer* )

macro that returns true if the cluster is in the manufacturer specific range

##### Parameters

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

#### 6.2.4.41 bool emberAfIsDeviceEnabled ( *uint8\_t endpoint* )

Function that checks if endpoint is enabled.

This function returns true if device at a given endpoint is enabled. At startup all endpoints are enabled.

##### Parameters

<i>endpoint</i>	Zigbee endpoint number
-----------------	------------------------

#### 6.2.4.42 bool emberAfIsDeviceIdentifying ( *uint8\_t endpoint* )

Function that checks if endpoint is identifying.

This function returns true if device at a given endpoint is identifying.

**Parameters**

<i>endpoint</i>	Zigbee endpoint number
-----------------	------------------------

**6.2.4.43 void emberAfSetDeviceEnabled ( uint8\_t *endpoint*, bool *enabled* )**

Function that enables or disables an endpoint.

By calling this function, you turn off all processing of incoming traffic for a given endpoint.

**Parameters**

<i>endpoint</i>	Zigbee endpoint number
-----------------	------------------------

**6.2.4.44 bool emberAfEndpointEnableDisable ( uint8\_t *endpoint*, bool *enable* )**

Enable/disable endpoints.

**6.2.4.45 bool emberAfEndpointIndexIsEnabled ( uint8\_t *index* )**

Determine if an endpoint at the specified index is enabled or disabled.

**6.2.4.46 bool emberAfIsThisDataTypeAStringType ( uint8\_t *dataType* )**

Returns true if a given ZCL data type is a string type.

You should use this function if you need to perform a different memory operation on a certain attribute because it is a string type. Since ZCL strings carry length as the first byte(s), it is often required to treat them differently than regular data types.

**Returns**

true if data type is a string.

**6.2.4.47 bool emberAfIsStringAttributeType ( EmberAfAttributeType *attributeType* )**

Returns true if the given attribute type is a string.

**6.2.4.48 bool emberAfIsLongStringAttributeType ( EmberAfAttributeType *attributeType* )**

Returns true if the given attribute type is a long string.

**6.2.4.49 uint8\_t emberAfNextSequence ( void )**

Increments the ZCL sequence number and returns the value.

ZCL messages have sequence numbers so that they can be matched up with other messages in the transaction. To avoid conflicts with sequence numbers generated independently by the application, this API returns sequence numbers with the high bit clear. If the application generates its own sequence numbers, it should use numbers with the high bit set.

**Returns**

The next ZCL sequence number.

**6.2.4.50 uint8\_t emberAfGetLastSequenceNumber ( void )**

Retreives the last sequence number that was used.

**6.2.4.51 int8\_t emberAfCompareValues ( uint8\_t \* val1, uint8\_t \* val2, uint8\_t len, bool signedNumber )**

Simple integer comparison function. Compares two values of a known length as integers. Signed integer comparison are supported for numbers with length of 4 (bytes) or less. The integers are in native endianess.

**Returns**

-1, if val1 is smaller 0, if they are the same or if two negative numbers with length greater than 4 is being compared 1, if val2 is smaller.

**6.2.4.52 void emberAfGetEui64 ( EmberEUI64 returnEui64 )**

populates the eui64 with the local eui64.

**6.2.4.53 EmberNodeId emberAfGetNodeId ( void )**

Returns the node ID of the local node.

**6.2.4.54 EmberStatus emberAfGenerateRandomKey ( EmberKeyData \* result )**

Generates a random key (link, network, or master).

**6.2.4.55 EmberPanId emberAfGetPanId ( void )**

Returns the PAN ID of the local node.

**6.2.4.56 uint8\_t emberAfGetChannel ( void )**

Returns the radioChannel of the current network.

**6.2.4.57 uint8\_t emberAfGetBindingIndex ( void )**

This indicates a new image verification is taking place.

**6.2.4.58 uint8\_t emberAfGetAddressIndex ( void )**

This indicates a new image verification is taking place.

#### 6.2.4.59 EmberNetworkStatus emberAfNetworkState ( void )

Returns the current network state. This call caches the results on the host to prevent frequent EZSP transactions.

#### 6.2.4.60 EmberStatus emberAfGetNetworkParameters ( EmberNodeType \* *nodeType*, EmberNetworkParameters \* *parameters* )

Returns the current network parameters.

#### 6.2.4.61 EmberStatus emberAfGetNodeType ( EmberNodeType \* *nodeType* )

Returns the current node type.

#### 6.2.4.62 EmberStatus emberAfPermitJoin ( uint8\_t *duration*, bool *broadcastMgmtPermitJoin* )

Enables local permit join and optionally broadcasts the ZDO Mgmt\_Permit\_Join\_req message. This API can be called from any device type and still return EMBER\_SUCCESS. If the API is called from an end device, the permit association bit will just be left off.

##### Parameters

<i>duration</i>	the duration that the permit join bit will remain on and other devices will be able to join the current network.
<i>broadcast-MgmtPermit-Join</i>	whether or not to broadcast the ZDO Mgmt_Permit_Join_req message.

##### Returns

status of whether or not permit join was enabled.

#### 6.2.4.63 EmberStatus emberAfBroadcastPermitJoin ( uint8\_t *duration* )

Enables local permit join and broadcasts the ZDO Mgmt\_Permit\_Join\_req message. This API can be called from any device type and still return EMBER\_SUCCESS. If the API is called from an end device, the permit association bit will just be left off.

##### Parameters

<i>duration</i>	the duration that the permit join bit will remain on and other devices will be able to join the current network.
-----------------	--

**Returns**

status of whether or not permit join was enabled.

**6.2.4.64 bool emberAfPrintEnabled ( uint16\_t *functionality* )**

returns true if certain debug area is enabled.

**6.2.4.65 void emberAfPrintBuffer ( uint16\_t *area*, const uint8\_t \* *buffer*, uint16\_t *bufferLen*, bool *withSpaces* )**

Useful function to print a buffer.

**6.2.4.66 void emberAfPrintString ( uint16\_t *area*, const uint8\_t \* *buffer* )**

Useful function to print character strings. The first byte of the buffer specifies the length of the string.

**6.2.4.67 void emberAfPrintLongString ( uint16\_t *area*, const uint8\_t \* *buffer* )**

Useful function to print long character strings. The first two bytes of the buffer specify the length of the string.

**6.2.4.68 void emberAfPrint ( uint16\_t *functionality*, PGM\_P *formatString*, ... )**

prints the specified text if certain debug are is enabled

**Parameters**

<i>functionality</i> .:	one of the EMBER_AF_PRINT_xxx macros as defined by AppBuilder
<i>formatString</i> .:	formatString for varargs

**6.2.4.69 void emberAfPrintln ( uint16\_t *functionality*, PGM\_P *formatString*, ... )**

prints the specified text if certain debug are is enabled. Print-out will include the newline character at the end.

**Parameters**

<i>functionality</i> .:	one of the EMBER_AF_PRINT_xxx macros as defined by AppBuilder
<i>formatString</i> .:	formatString for varargs

**6.2.4.70 void emberAfFlush ( uint16\_t *functionality* )**

buffer flush

**6.2.4.71 void emberAfPrintOn ( uint16\_t *functionality* )**

turns on debugging for certain functional area

**6.2.4.72 void emberAfPrintOff ( uint16\_t *functionality* )**

turns off debugging for certain functional area

**6.2.4.73 void emberAfPrintAllOn ( void )**

turns on debugging for all functional areas

**6.2.4.74 void emberAfPrintAllOff ( void )**

turns off debugging for all functional areas

**6.2.4.75 void emberAfPrintStatus ( void )**

prints current status of functional areas

**6.2.4.76 void emberAfPrintLittleEndianEui64 ( const EmberEUI64 *eui64* )**

prints eui64 stored in little endian format

**6.2.4.77 void emberAfPrintBigEndianEui64 ( const EmberEUI64 *eui64* )**

prints eui64 stored in big endian format

**6.2.4.78 void emberAfPrintMessageData ( uint8\_t \* *data*, uint16\_t *length* )**

prints all message data in message format

**6.2.4.79 void emberAfRunEvents ( void )**

a function used to run the application framework's event mechanism. This function passes the application framework's event tables to the ember stack's event processing code.

**6.2.4.80 EmberStatus emberAfScheduleTickExtended ( uint8\_t *endpoint*, EmberAfClusterId *clusterId*, bool *isClient*, uint32\_t *delayMs*, EmberAfEventPollControl *pollControl*, EmberAfEventSleepControl *sleepControl* )**

This function is used to schedule a cluster-related event inside the application framework's event mechanism. This function provides a wrapper for the Ember stack event mechanism which allows the cluster code to access its events by their endpoint, cluster id, and client/server identity. The passed poll and sleep controls allow the cluster to indicate whether it needs to long or short poll and whether it needs to stay awake or if it can sleep.

#### Parameters

<i>endpoint</i>	the endpoint of the event to be scheduled.
<i>clusterId</i>	the cluster id of the event to be scheduled.
<i>isClient</i>	<a href="#">EMBER_AF_CLIENT_CLUSTER_TICK</a> if the event to be scheduled is associated with a client cluster or <a href="#">EMBER_AF_SERVER_CLUSTER_TICK</a> otherwise.
<i>delayMs</i>	the number of milliseconds until the event should be called.
<i>pollControl</i>	<a href="#">EMBER_AF_SHORT_POLL</a> if the cluster needs to short poll or <a href="#">EMBER_AF_LONG_POLL</a> otherwise.
<i>sleepControl</i>	<a href="#">EMBER_AF_STAY_AWAKE</a> if the cluster needs to stay awake or <a href="#">EMBER_AF_OK_TO_SLEEP</a> otherwise.

#### Returns

`EMBER_SUCCESS` if the event was scheduled or an error otherwise.

#### 6.2.4.81 `EmberStatus emberAfScheduleClusterTick ( uint8_t endpoint, EmberAfClusterId clusterId, bool isClient, uint32_t delayMs, EmberAfEventSleepControl sleepControl )`

This function is used to schedule a cluster-related event inside the This function is a wrapper for [emberAfScheduleTickExtended](#). The cluster on the given endpoint will be set to long poll if sleepControl is set to [EMBER\\_AF\\_OK\\_TO\\_HIBERNATE](#) or will be set to short poll otherwise. It will stay awake if sleepControl is [EMBER\\_AF\\_STAY\\_AWAKE](#) and will sleep otherwise.

#### Parameters

<i>endpoint</i>	the endpoint of the event to be scheduled.
<i>clusterId</i>	the cluster id of the event to be scheduled.
<i>isClient</i>	<a href="#">EMBER_AF_CLIENT_CLUSTER_TICK</a> if the event to be scheduled is associated with a client cluster or <a href="#">EMBER_AF_SERVER_CLUSTER_TICK</a> otherwise.
<i>delayMs</i>	the number of milliseconds until the event should be called.
<i>sleepControl</i>	the priority of the event, what the processor should be allowed to do in terms of sleeping while the event is active.

#### Returns

`EMBER_SUCCESS` if the event was scheduled or an error otherwise.

#### 6.2.4.82 `EmberStatus emberAfScheduleClientTickExtended ( uint8_t endpoint, EmberAfClusterId clusterId, uint32_t delayMs, EmberAfEventPollControl pollControl, EmberAfEventSleepControl sleepControl )`

A function used to schedule a cluster client event. This function is a wrapper for [emberAfScheduleTickExtended](#).

#### Parameters

<i>endpoint</i>	the endpoint of the event to be scheduled
<i>clusterId</i>	the cluster id of the event to be scheduled
<i>delayMs</i>	the number of milliseconds until the event should be called.
<i>pollControl</i>	<a href="#">EMBER_AF_SHORT_POLL</a> if the cluster needs to short poll or <a href="#">EMBER_AF_LONG_POLL</a> otherwise.

<i>sleepControl</i>	<a href="#">EMBER_AF_STAY_AWAKE</a> if the cluster needs to stay awake or <a href="#">EMBER_AF_OFF_TO_SLEEP</a> otherwise.
---------------------	--

**Returns**

[EMBER\\_SUCCESS](#) if the event was scheduled or an error otherwise.

#### 6.2.4.83 EmberStatus [emberAfScheduleClientTick](#) ( *uint8\_t endpoint*, *EmberAfClusterId clusterId*, *uint32\_t delayMs* )

A function used to schedule a cluster client event. This function is a wrapper for [emberAfScheduleClientTickExtended](#). It indicates that the cluster client on the given endpoint can long poll and can sleep.

**Parameters**

<i>endpoint</i>	the endpoint of the event to be scheduled.
<i>clusterId</i>	the cluster id of the event to be scheduled.
<i>delayMs</i>	the number of milliseconds until the event should be called.

**Returns**

[EMBER\\_SUCCESS](#) if the event was scheduled or an error otherwise.

#### 6.2.4.84 EmberStatus [emberAfScheduleServerTickExtended](#) ( *uint8\_t endpoint*, *EmberAfClusterId clusterId*, *uint32\_t delayMs*, *EmberAfEventPollControl pollControl*, *EmberAfEventSleepControl sleepControl* )

A function used to schedule a cluster server event. This function is a wrapper for [emberAfScheduleTickExtended](#).

**Parameters**

<i>endpoint</i>	the endpoint of the event to be scheduled.
<i>clusterId</i>	the cluster id of the event to be scheduled.
<i>delayMs</i>	the number of milliseconds until the event should be called.
<i>pollControl</i>	<a href="#">EMBER_AF_SHORT_POLL</a> if the cluster needs to short poll or <a href="#">EMBER_AF_LONG_POLL</a> otherwise.
<i>sleepControl</i>	<a href="#">EMBER_AF_STAY_AWAKE</a> if the cluster needs to stay awake or <a href="#">EMBER_AF_OFF_TO_SLEEP</a> otherwise.

**Returns**

[EMBER\\_SUCCESS](#) if the event was scheduled or an error otherwise.

#### 6.2.4.85 EmberStatus [emberAfScheduleServerTick](#) ( *uint8\_t endpoint*, *EmberAfClusterId clusterId*, *uint32\_t delayMs* )

A function used to schedule a cluster server event. This function is a wrapper for [emberAfScheduleServerTickExtended](#). It indicates that the cluster server on the given endpoint can long poll and can sleep.

**Parameters**

<i>endpoint</i>	the endpoint of the event to be scheduled
<i>clusterId</i>	the cluster id of the event to be scheduled.
<i>delayMs</i>	the number of milliseconds until the event should be called.

**Returns**

EMBER\_SUCCESS if the event was scheduled or an error otherwise.

**6.2.4.86 EmberStatus emberAfDeactivateClusterTick ( *uint8\_t endpoint*, *EmberAfClusterId clusterId*, *bool isClient* )**

A function used to deactivate a cluster-related event. This function provides a wrapper for the Ember stack's event mechanism which allows an event to be accessed by its endpoint, cluster id, and client/server identity.

**Parameters**

<i>endpoint</i>	the endpoint of the event to be deactivated.
<i>clusterId</i>	the cluster id of the event to be deactivated.
<i>isClient</i>	<a href="#">EMBER_AF_CLIENT_CLUSTER_TICK</a> if the event to be deactivated is a client cluster <a href="#">EMBER_AF_SERVER_CLUSTER_TICK</a> otherwise.

**Returns**

EMBER\_SUCCESS if the event was deactivated or an error otherwise.

**6.2.4.87 EmberStatus emberAfDeactivateClientTick ( *uint8\_t endpoint*, *EmberAfClusterId clusterId* )**

A function used to deactivate a cluster client event. This function is a wrapper for [emberAfDeactivateClusterTick](#).

**Parameters**

<i>endpoint</i>	the endpoint of the event to be deactivated.
<i>clusterId</i>	the cluster id of the event to be deactivated.

**Returns**

EMBER\_SUCCESS if the event was deactivated or an error otherwise.

**6.2.4.88 EmberStatus emberAfDeactivateServerTick ( *uint8\_t endpoint*, *EmberAfClusterId clusterId* )**

A function used to deactivate a cluster server event. This function is a wrapper for [emberAfDeactivateClusterTick](#).

**Parameters**

<i>endpoint</i>	the endpoint of the event to be deactivated.
<i>clusterId</i>	the cluster id of the event to be deactivated.

### Returns

`EMBER_SUCCESS` if the event was deactivated or an error otherwise.

#### 6.2.4.89 `EmberStatus emberAfEventControlSetDelayMS ( EmberEventControl * control, uint32_t delayMs )`

Sets the `EmberEventControl` to run "delayMs" milliseconds in the future. This function first verifies that the delay is within the acceptable range before scheduling the event.

### Parameters

<code>control</code>	a pointer to the event control.
<code>delayMs</code>	the number of milliseconds until the next event.

### Returns

If `delayMs` is less than or equal to `::EMBER_MAX_EVENT_CONTROL_DELAY_MS`, this function will schedule the event and return `EMBER_SUCCESS`. Otherwise it will return `EMBER_BAD_ARGUMENT`.

#### 6.2.4.90 `EmberStatus emberAfEventControlSetDelay ( EmberEventControl * eventControl, uint32_t delayMs )`

Sets the `EmberEventControl` to run "delayMs" milliseconds in the future. See `emberAfEventControlSetDelayMS`.

#### 6.2.4.91 `EmberStatus emberAfEventControlSetDelayQS ( EmberEventControl * control, uint32_t delayQs )`

Sets the `EmberEventControl` to run "delayQs" quarter seconds in the future. The 'quarter seconds' are actually 256 milliseconds long. This function first verifies that the delay is within the acceptable range before scheduling the event.

### Parameters

<code>control</code>	a pointer to the event control.
<code>delayQs</code>	the number of quarter seconds until the next event.

### Returns

If delayQs is less than or equal to ::EMBER\_MAX\_EVENT\_CONTROL\_DELAY\_QS, this function will schedule the event and return [EMBER\\_SUCCESS](#). Otherwise it will return [EMBER\\_BAD\\_ARGUMENT](#).

#### **6.2.4.92 EmberStatus emberAfEventControlSetDelayMinutes ( EmberEventControl \* control, uint16\_t delayM )**

Sets the [EmberEventControl](#) to run "delayM" minutes in the future. The 'minutes' are actually 65536 (0x10000) milliseconds long. This function first verifies that the delay is within the acceptable range before scheduling the event.

### Parameters

<i>control</i>	a pointer to the event control.
<i>delayM</i>	the number of minutes until the next event.

### Returns

If delayM is less than or equal to ::EMBER\_MAX\_EVENT\_CONTROL\_DELAY\_MINUTES, this function will schedule the event and return [EMBER\\_SUCCESS](#). Otherwise it will return [EMBER\\_BAD\\_ARGUMENT](#).

#### **6.2.4.93 void emberAfNetworkEventControlSetInactive ( EmberEventControl \* controls )**

Sets the [EmberEventControl](#) for the current network, and only the current network, as inactive. See - ::emberEventControlSetInactive.

#### **6.2.4.94 bool emberAfNetworkEventControlGetActive ( EmberEventControl \* controls )**

Returns true if the event for the current network, and only the current network, is active. See ::emberEventControlGetActive.

#### **6.2.4.95 void emberAfNetworkEventControlSetActive ( EmberEventControl \* controls )**

Sets the [EmberEventControl](#) for the current network, and only current network, to run at the next available opportunity. See ::emberEventControlSetActive.

#### **6.2.4.96 EmberStatus emberAfNetworkEventControlSetDelayMS ( EmberEventControl \* controls, uint32\_t delayMs )**

Sets the [EmberEventControl](#) for the current network, and only the current network, to run "delayMs" milliseconds in the future. See [emberAfEventControlSetDelayMS](#).

#### **6.2.4.97 EmberStatus emberAfNetworkEventControlSetDelay ( EmberEventControl \* controls, uint32\_t delayMs )**

Sets the [EmberEventControl](#) for the current network, and only the current network, to run "delayMs" milliseconds in the future. See [emberAfEventControlSetDelayMS](#).

**6.2.4.98 EmberStatus emberAfNetworkEventControlSetDelayQS ( `EmberEventControl * controls,`  
`uint32_t delayQs` )**

Sets the [EmberEventControl](#) for the current network, and only the current network, to run "delayQs" quarter seconds in the future. See [emberAfEventControlSetDelayQS](#).

**6.2.4.99 EmberStatus emberAfNetworkEventControlSetDelayMinutes ( `EmberEventControl * controls,`  
`uint16_t delayM` )**

Sets the [EmberEventControl](#) for the current network, and only the current network, to run "delayM" minutes in the future. See [emberAfEventControlSetDelayMinutes](#).

**6.2.4.100 EmberStatus emberAfEndpointEventControlSetInactive ( `EmberEventControl * controls,`  
`uint8_t endpoint` )**

Sets the [EmberEventControl](#) for the specified endpoint as inactive. See [::emberEventControlSetInactive](#).

**6.2.4.101 bool emberAfEndpointEventControlGetActive ( `EmberEventControl * controls,` `uint8_t endpoint` )**

Returns true if the event for the current number is active. See [::emberEventControlGetActive](#).

**6.2.4.102 EmberStatus emberAfEndpointEventControlSetActive ( `EmberEventControl * controls,`  
`uint8_t endpoint` )**

Sets the [EmberEventControl](#) for the specified endpoint to run at the next available opportunity. See [::emberEventControlSetActive](#).

**6.2.4.103 EmberStatus emberAfEndpointEventControlSetDelayMS ( `EmberEventControl * controls,`  
`uint8_t endpoint, uint32_t delayMs` )**

Sets the [EmberEventControl](#) for the specified endpoint to run "delayMs" milliseconds in the future. See [emberAfEventControlSetDelayMS](#).

**6.2.4.104 EmberStatus emberAfEndpointEventControlSetDelay ( `EmberEventControl * controls,`  
`uint8_t endpoint, uint32_t delayMs` )**

Sets the [EmberEventControl](#) for the specified endpoint to run "delayMs" milliseconds in the future. See [emberAfEventControlSetDelayMS](#).

**6.2.4.105 EmberStatus emberAfEndpointEventControlSetDelayQS ( `EmberEventControl * controls,`  
`uint8_t endpoint, uint32_t delayQs` )**

Sets the [EmberEventControl](#) for the specified endpoint to run "delayQs" quarter seconds in the future. See [emberAfEventControlSetDelayQS](#).

**6.2.4.106 EmberStatus emberAfEndpointEventControlSetDelayMinutes ( EmberEventControl \* *controls*, uint8\_t *endpoint*, uint16\_t *delayM* )**

Sets the [EmberEventControl](#) for the specified endpoint to run "delayM" minutes in the future. See [emberAfEventControlSetDelayMinutes](#).

**6.2.4.107 uint32\_t emberAfMsToNextEvent ( uint32\_t *maxMs* )**

A function used to retrieve the number of milliseconds until the next event scheduled in the application framework's event mechanism.

**Parameters**

<i>maxMs</i> , the	maximum number of milliseconds until the next event.
--------------------	--

**Returns**

The number of milliseconds until the next event or maxMs if no event is scheduled before then.

**6.2.4.108 uint32\_t emberAfMsToNextEventExtended ( uint32\_t *maxMs*, uint8\_t \* *returnIndex* )**

This is the same as the function [emberAfMsToNextEvent\(\)](#) with the following addition. If returnIndex is non-NULL it returns the index of the event that is ready to fire next.

**6.2.4.109 EmberStatus emberAfSendResponse ( void )**

This function sends a ZCL response, based on the information that is currently in the outgoing buffer. It is expected that a complete ZCL message is present, including header. The application may use this method directly from within the message handling function and associated callbacks. However this will result in the response being sent before the APS Ack is sent which is not ideal.

NOTE: This will overwrite the ZCL sequence number of the message to use the LAST received sequence number.

**6.2.4.110 EmberStatus emberAfSendResponseWithCallback ( EmberAfMessageSentFunction *callback* )**

Send ZCL response with attached message sent callback.

**6.2.4.111 EmberStatus emberAfSendMulticast ( EmberMulticastId *multicastId*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message* )**

Sends multicast.

**6.2.4.112 EmberStatus emberAfSendMulticastWithAliasWithCallback ( EmberMulticastId *multicastId*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message*, EmberNodeId *alias*, uint8\_t *sequence*, EmberAfMessageSentFunction *callback* )**

Sends Multicast with alias with attached message sent callback.

**6.2.4.113 EmberStatus emberAfSendMulticastWithCallback ( EmberMulticastId *multicastId*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message*, EmberAfMessageSentFunction *callback* )**

Sends multicast with attached message sent callback.

**6.2.4.114 EmberStatus emberAfSendBroadcast ( EmberNodeId *destination*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message* )**

Sends broadcast.

**6.2.4.115 EmberStatus emberAfSendBroadcastWithCallback ( EmberNodeId *destination*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message*, EmberAfMessageSentFunction *callback* )**

Sends broadcast with attached message sent callback.

**6.2.4.116 EmberStatus emberAfSendBroadcastWithAliasWithCallback ( EmberNodeId *destination*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message*, EmberNodeId *alias*, uint8\_t *sequence*, EmberAfMessageSentFunction *callback* )**

Sends broadcast with alias with attached message sent callback.

**6.2.4.117 EmberStatus emberAfSendUnicast ( EmberOutgoingMessageType *type*, uint16\_t *indexOrDestination*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message* )**

Sends unicast.

**6.2.4.118 EmberStatus emberAfSendUnicastWithCallback ( EmberOutgoingMessageType *type*, uint16\_t *indexOrDestination*, EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message*, EmberAfMessageSentFunction *callback* )**

Sends unicast with attached message sent callback.

**6.2.4.119 EmberStatus emberAfSendUnicastToBindings ( EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message* )**

Unicasts the message to each remote node in the binding table that matches the cluster and source endpoint in the APS frame. Note: if the binding table contains many matching entries, calling this API cause a significant amount of network traffic.

**6.2.4.120 EmberStatus emberAfSendUnicastToBindingsWithCallback ( EmberApsFrame \* *apsFrame*, uint16\_t *messageLength*, uint8\_t \* *message*, EmberAfMessageSentFunction *callback* )**

emberAfSendUnicastToBindings with attached message sent callback.

**6.2.4.121 EmberStatus emberAfSendInterPan ( EmberPanId *panId*, const EmberEUI64 *destinationLongId*, EmberNodeId *destinationShortId*, EmberMulticastId *multicastId*, EmberAfClusterId *clusterId*, EmberAfProfileId *profileId*, uint16\_t *messageLength*, uint8\_t \* *messageBytes* )**

Sends interpan message.

**6.2.4.122 EmberStatus emberAfSendEndDeviceBind ( uint8\_t *endpoint* )**

Sends end device binding request.

**6.2.4.123 EmberStatus emberAfSendCommandUnicastToBindings ( void )**

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API. It will be sent as unicast to each remote node in the binding table that matches the cluster and source endpoint in the APS frame. Note: if the binding table contains many matching entries, calling this API cause a significant amount of network traffic.

**6.2.4.124 EmberStatus emberAfSendCommandUnicastToBindingsWithCallback ( EmberAfMessageSentFunction *callback* )**

emberAfSendCommandUnicastToBindings with attached message sent callback.

**6.2.4.125 EmberStatus emberAfSendCommandMulticast ( EmberMulticastId *multicastId* )**

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API. It will be sent as multicast.

**6.2.4.126 EmberStatus emberAfSendCommandMulticastWithAlias ( EmberMulticastId *multicastId*, EmberNodeId *alias*, uint8\_t *sequence* )**

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API. It will be sent as multicast.

**6.2.4.127 EmberStatus emberAfSendCommandMulticastWithCallback ( EmberMulticastId *multicastId*, EmberAfMessageSentFunction *callback* )**

emberAfSendCommandMulticast with attached message sent callback.

**6.2.4.128 EmberStatus emberAfSendCommandUnicast ( EmberOutgoingMessageType *type*, uint16\_t *indexOrDestination* )**

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API. It will be sent as unicast.

**6.2.4.129 EmberStatus emberAfSendCommandUnicastWithCallback ( EmberOutgoingMessageType *type*, uint16\_t *indexOrDestination*, EmberAfMessageSentFunction *callback* )**

emberAfSendCommandUnicast with attached message sent callback.

**6.2.4.130 EmberStatus emberAfSendCommandBroadcast ( EmberNodeId *destination* )**

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API.

**6.2.4.131 EmberStatus emberAfSendCommandBroadcastWithCallback ( EmberNodeId *destination*, EmberAfMessageSentFunction *callback* )**

emberAfSendCommandBroadcast with attached message sent callback.

**6.2.4.132 EmberStatus emberAfSendCommandBroadcastWithAliasWithCallback ( EmberNodeId *destination*, EmberNodeId *alias*, uint8\_t *sequence*, EmberAfMessageSentFunction *callback* )**

emberAfSendCommandBroadcast from alias with attached message sent callback.

**6.2.4.133 EmberStatus emberAfSendCommandBroadcastWithAlias ( EmberNodeId *destination*, EmberNodeId *alias*, uint8\_t *sequence* )**

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API.

**6.2.4.134 EmberStatus emberAfSendCommandInterPan ( EmberPanId *panId*, const EmberEUI64 *destinationLongId*, EmberNodeId *destinationShortId*, EmberMulticastId *multicastId*, EmberAfProfileId *profileId* )**

Sends the command prepared with emberAfFill.... macro.

This function is used to send a command that was previously prepared using the emberAfFill... macros from the client command API. It will be sent via inter-PAN. If destinationLongId is not NULL, the message will be sent to that long address using long addressing mode; otherwise, the message will be sent to destinationShortId using short address mode. IF multicastId is not zero, the message will be sent using multicast mode.

**6.2.4.135 EmberStatus emberAfSendDefaultResponse ( const EmberAfClusterCommand \* *cmd*, EmberAfStatus *status* )**

Sends a default response to a cluster command.

This function is used to prepare and send a default response to a cluster command.

#### Parameters

<i>cmd</i>	The cluster command to which to respond.
<i>status</i>	Status code for the default response command.

#### Returns

An [EmberStatus](#) value that indicates the success or failure of sending the response.

### 6.2.4.136 EmberStatus **emberAfSendDefaultResponseWithCallback** ( const EmberAfClusterCommand \* *cmd*, EmberAfStatus *status*, EmberAfMessageSentFunction *callback* )

emberAfSendDefaultResponse with attached message sent callback.

### 6.2.4.137 EmberStatus **emberAfSendImmediateDefaultResponse** ( EmberAfStatus *status* )

Sends a default response to a cluster command using the current command.

This function is used to prepare and send a default response to a cluster command.

#### Parameters

<i>status</i>	Status code for the default response command.
---------------	---

#### Returns

An [EmberStatus](#) value that indicates the success or failure of sending the response.

### 6.2.4.138 EmberStatus **emberAfSendImmediateDefaultResponseWithCallback** ( EmberAfStatus *status*, EmberAfMessageSentFunction *callback* )

emberAfSendImmediateDefaultResponse with attached message sent callback.

### 6.2.4.139 uint8\_t **emberAfMaximumApsPayloadLength** ( EmberOutgoingMessageType *type*, uint16\_t *indexOrDestination*, EmberApsFrame \* *apsFrame* )

Returns the maximum size of the payload that the Application Support sub-layer will accept for the given message type, destination, and APS frame.

The size depends on multiple factors, including the security level in use and additional information added to the message to support the various options.

#### Parameters

<i>type</i>	The outgoing message type.
<i>indexOrDestination</i>	Depending on the message type, this is either the EmberNodeId of the destination, an index into the address table, an index into the binding table, the multicast identifier, or a broadcast address.
<i>apsFrame</i>	The APS frame for the message.

## Returns

The maximum APS payload length for the given message.

### 6.2.4.140 EmberApsFrame\* emberAfGetCommandApsFrame ( void )

Access to client API aps frame.

### 6.2.4.141 void emberAfSetCommandEndpoints ( uint8\_t *sourceEndpoint*, uint8\_t *destinationEndpoint* )

Set the source and destination endpoints in the client API APS frame.

### 6.2.4.142 EmberStatus emberAfFindDevicesByProfileAndCluster ( EmberNodeId *target*, EmberAfProfileId *profileId*, EmberAfClusterId *clusterId*, bool *serverCluster*, EmberAfServiceDiscoveryCallback \* *callback* )

Use this function to find devices in the network with endpoints matching a given profile ID and cluster ID in their descriptors. Target may either be a specific device, or the broadcast address EMBER\_RX\_ON\_WHEN\_IDLE\_BROADCAST\_ADDRESS.

With this function a service discovery is initiated and received responses are returned by executing the callback function passed in. For unicast discoveries, the callback will be executed only once. Either the target will return a result or a timeout will occur. For broadcast discoveries, the callback may be called multiple times and after a period of time the discovery will be finished with a final call to the callback.

## Parameters

<i>target</i>	The destination node ID for the discovery; either a specific node's ID or EMBER_RX_ON_WHEN_IDLE_BROADCAST_ADDRESS.
<i>profileId</i>	The application profile for the cluster being discovered.
<i>clusterId</i>	The cluster being discovered.
<i>serverCluster</i>	EMBER_AF_SERVER_CLUSTER_DISCOVERY (true) if discovering servers for the target cluster; EMBER_AF_CLIENT_CLUSTER_DISCOVERY (false) if discovering clients for that cluster.
<i>callback</i>	Function pointer for the callback function triggered when a match is discovered. (For broadcast discoveries, this is called once per matching node, even if a node has multiple matching endpoints.)

### 6.2.4.143 EmberStatus emberAfFindClustersByDeviceAndEndpoint ( EmberNodeId *target*, uint8\_t *targetEndpoint*, EmberAfServiceDiscoveryCallback \* *callback* )

Use this function to find all of the given in and out clusters implemented on a devices given endpoint. Target should only be the short address of a specific device.

With this function a single service discovery is initiated and the response is passed back to the passed callback.

## Parameters

<i>target</i>	The destination node ID for the discovery. This should be a specific node's ID and should not be a broadcast address.
<i>targetEndpoint</i>	The endpoint to target with the discovery process.
<i>callback</i>	Function pointer for the callback function triggered when the discovery is returned.

#### 6.2.4.144 EmberStatus emberAfFindLeeeAddress ( EmberNodeId *shortAddress*, EmberAfServiceDiscoveryCallback \* *callback* )

Use this function to initiate a discovery for the IEEE address of the specified node id. This will send a unicast sent to the target node ID.

#### 6.2.4.145 EmberStatus emberAfFindNodeId ( EmberEUI64 *longAddress*, EmberAfServiceDiscoveryCallback \* *callback* )

Use this function to initiate a discovery for the short ID of the specified long address. This will send a broadcast to all rx-on-when-idle devices (non-sleepies).

#### 6.2.4.146 EmberStatus emberAfFindActiveEndpoints ( EmberNodeId *target*, EmberAfServiceDiscoveryCallback \* *callback* )

Initiate an Active Endpoint request ZDO message to the target node ID.

#### 6.2.4.147 uint8\_t emberAfAddAddressTableEntry ( EmberEUI64 *longId*, EmberNodeId *shortId* )

Use this function to add an entry for a remote device to the address table.

If the EUI64 already exists in the address table, the index of the existing entry will be returned. Otherwise, a new entry will be created and the new new index will be returned. The framework will remember how many times the the returned index has been referenced. When the address table entry is no longer needed, the application should remove its reference by calling [emberAfRemoveAddressTableEntry](#).

##### Parameters

<i>longId</i>	The EUI64 of the remote device.
<i>shortId</i>	The node id of the remote device or <a href="#">EMBER_UNKNOWN_NODE_ID</a> if the node id is currently unknown.

##### Returns

The index of the address table entry for this remove device or [EMBER\\_NULL\\_ADDRESS\\_TABLE\\_INDEX](#) if an error occurred (e.g., the address table is full).

#### 6.2.4.148 EmberStatus emberAfSetAddressTableEntry ( uint8\_t *index*, EmberEUI64 *longId*, EmberNodeId *shortId* )

Use this function to add an entry for a remote device to the address table at a specific location.

The framework will remember how many times an address table index has been referenced through [emberAfAddAddressTableEntry](#). If the reference count for the index passed to this function is not zero, the entry will be not changed. When the address table entry is no longer needed, the application should remove its reference by calling [emberAfRemoveAddressTableEntry](#).

##### Parameters

<i>index</i>	The index of the address table entry.
<i>longId</i>	The EUI64 of the remote device.
<i>shortId</i>	The node id of the remote device or <a href="#">EMBER_UNKNOWN_NODE_ID</a> if the node id is currently unknown.

### Returns

`EMBER_SUCCESS` if the address table entry was successfully set, `EMBER_ADDRESS_TABLE_ENTRY_IS_ACTIVE` if any messages are being sent using the existing entry at that index or the entry is still referenced in the framework, or `EMBER_ADDRESS_TABLE_INDEX_OUT_OF_RANGE` if the index is out of range.

#### 6.2.4.149 EmberStatus emberAfRemoveAddressTableEntry ( `uint8_t index` )

Use this function to remove a specific entry from the address table.

The framework will remember how many times an address table index has been referenced through `emberAfAddAddressTableEntry` and `emberAfSetAddressTableEntry`. The address table entry at this index will not actually be removed until its reference count reaches zero.

### Parameters

<code>index</code>	The index of the address table entry.
--------------------	---------------------------------------

### Returns

`EMBER_SUCCESS` if the address table entry was successfully removed or `EMBER_ADDRESS_TABLE_INDEX_OUT_OF_RANGE` if the index is out of range.

#### 6.2.4.150 EmberStatus emberAfInitiateKeyEstablishment ( `EmberNodeId nodeId, uint8_t endpoint` )

Use this function to initiate key establishment with a remote node. `emberAfKeyEstablishmentCallback` will be called as events occur and when key establishment completes.

### Parameters

<code>nodeId</code>	The node id of the remote device.
<code>endpoint</code>	The endpoint on the remote device.

### Returns

`EMBER_SUCCESS` if key establishment was initiated successfully

#### 6.2.4.151 EmberStatus emberAfInitiateInterPanKeyEstablishment ( `EmberPanId panId, const EmberEUI64 eui64` )

Use this function to initiate key establishment with a remote node on a different PAN. `emberAfInterPanKeyEstablishmentCallback` will be called as events occur and when key establishment completes.

### Parameters

<code>panId</code>	The PAN id of the remote device.
<code>eui64</code>	The EUI64 of the remote device.

**Returns**

[EMBER\\_SUCCESS](#) if key establishment was initiated successfully

**6.2.4.152 bool emberAfPerformingKeyEstablishment ( void )**

Use this function to tell if the device is in the process of performing key establishment.

**Returns**

::true if key establishment is in progress.

**6.2.4.153 EmberStatus emberAfInitiatePartnerLinkKeyExchange ( EmberNodeId *target*, uint8\_t *endpoint*, EmberAfPartnerLinkKeyExchangeCallback \* *callback* )**

Use this function to initiate partner link key exchange with a remote node.

**Parameters**

<i>target</i>	The node id of the remote device.
<i>endpoint</i>	The key establishment endpoint of the remote device.
<i>callback</i>	The callback that should be called when the partner link key exchange completes.

**Returns**

[EMBER\\_SUCCESS](#) if the partner link key exchange was initiated successfully.

**6.2.4.154 bool emberAfIsCurrentSecurityProfileSmartEnergy ( void )**

Use this function to determine if the security profile of the current network was set to Smart Energy. The security profile is configured in AppBuilder. @ return true if the security profile is Smart Energy or false otherwise.

**6.2.4.155 EmberStatus emberAfFormNetwork ( EmberNetworkParameters \* *parameters* )**

Use this function to form a new network using the specified network parameters.

**Parameters**

<i>parameters</i>	Specification of the new network.
-------------------	-----------------------------------

**Returns**

An [EmberStatus](#) value that indicates either the successful formation of the new network or the reason that the network formation failed.

**6.2.4.156 EmberStatus emberAfJoinNetwork ( EmberNetworkParameters \* *parameters* )**

Use this function to associate with the network using the specified network parameters.

**Parameters**

<i>parameters</i>	Specification of the network with which the node should associate.
-------------------	--

**Returns**

An [EmberStatus](#) value that indicates either that the association process began successfully or the reason for failure.

**6.2.4.157 EmberStatus emberAfFindUnusedPanIdAndForm ( void )**

Use this function to find an unused PAN id and form a new network.

**Returns**

An [EmberStatus](#) value that indicates either the process begin successfully or the reason for failure.

**6.2.4.158 EmberStatus emberAfStartSearchForJoinableNetwork ( void )**

Use this function to find a joinable network and join it.

**Returns**

An [EmberStatus](#) value that indicates either the process begin successfully or the reason for failure.

**6.2.4.159 EmberStatus emberAfPushNetworkIndex ( uint8\_t *networkIndex* )**

Sets the current network to that of the given index and adds it to the stack of networks maintained by the framework. Every call to this API must be paired with a subsequent call to [emberAfPopNetworkIndex](#).

**6.2.4.160 EmberStatus emberAfPushCallbackNetworkIndex ( void )**

Sets the current network to the callback network and adds it to the stack of networks maintained by the framework. Every call to this API must be paired with a subsequent call to [emberAfPopNetworkIndex](#).

**6.2.4.161 EmberStatus emberAfPushEndpointNetworkIndex ( uint8\_t *endpoint* )**

Sets the current network to that of the given endpoint and adds it to the stack of networks maintained by the framework. Every call to this API must be paired with a subsequent call to [emberAfPopNetworkIndex](#).

**6.2.4.162 EmberStatus emberAfPopNetworkIndex ( void )**

Removes the topmost network from the stack of networks maintained by the framework and sets the current network to the new topmost network. Every call to this API must be paired with a prior call to [emberAfPushNetworkIndex](#), [emberAfPushCallbackNetworkIndex](#), or [emberAfPushEndpointNetworkIndex](#).

**6.2.4.163 uint8\_t emberAfPrimaryEndpointForNetworkIndex ( uint8\_t *networkIndex* )**

Returns the primary endpoint of the given network index or 0xFF if no endpoints belong to the network.

#### 6.2.4.164 `uint8_t emberAfPrimaryEndpointForCurrentNetworkIndex ( void )`

Returns the primary endpoint of the current network index or 0xFF if no endpoints belong to the current network.

#### 6.2.4.165 `EmberStatus emAfInitializeNetworkIndexStack ( void )`

Use this function to form a new network using the specified network parameters.

##### Parameters

<code>parameters</code>	Specification of the new network.
-------------------------	-----------------------------------

##### Returns

An [EmberStatus](#) value that indicates either the successful formation of the new network or the reason that the network formation failed.

#### 6.2.4.166 `void emAfAssertNetworkIndexStackIsEmpty ( void )`

Use this function to form a new network using the specified network parameters.

##### Parameters

<code>parameters</code>	Specification of the new network.
-------------------------	-----------------------------------

##### Returns

An [EmberStatus](#) value that indicates either the successful formation of the new network or the reason that the network formation failed.

#### 6.2.4.167 `int emberAfMain ( MAIN_FUNCTION_PARAMETERS )`

This function effectively serves as the application main.

## 6.2.5 Variable Documentation

### 6.2.5.1 EmberAfDefinedEndpoint `emAfEndpoints[]`

macro that returns true if the cluster is in the manufacturer specific range

##### Parameters

<code>cluster</code>	EmberAfCluster* to consider
----------------------	-----------------------------

### 6.2.5.2 PGM EmAfNetworkType `emAfNetworkTypes[]`

macro that returns true if the cluster is in the manufacturer specific range

**Parameters**

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

**6.2.5.3 PGM EmAfNetworkType\* emAfCurrentNetworkType**

macro that returns true if the cluster is in the manufacturer specific range

**Parameters**

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

**6.2.5.4 PGM EmAfZigbeeProNetwork emAfZigbeeProNetworks[]**

macro that returns true if the cluster is in the manufacturer specific range

**Parameters**

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

**6.2.5.5 PGM EmAfZigbeeProNetwork\* emAfCurrentZigbeeProNetwork**

macro that returns true if the cluster is in the manufacturer specific range

**Parameters**

<i>cluster</i>	EmberAfCluster* to consider
----------------	-----------------------------

**6.2.5.6 PGM EmberAfOtaImageId emberAfInvalidImageId**

This variable defines an invalid image id. It is used to determine if a returned [EmberAfOtaImageId](#) is valid or not. This is done by passing the data to the function [emberAfIsOtaImageIdValid\(\)](#).

**6.2.5.7 EmberAfClusterCommand\* emAfCurrentCommand**

Friendly define for use in discovering client clusters with [emberAfFindDevicesByProfileAndCluster\(\)](#).

## 6.3 Application Framework Types

### Data Structures

- union [EmberAfDefaultAttributeValue](#)  
*Type for default values.*
- struct [EmberAfAttributeMinMaxValue](#)  
*Type describing the attribute default, min and max values.*
- union [EmberAfDefaultOrMinMaxAttributeValue](#)  
*Union describing the attribute default/min/max values.*
- struct [EmberAfAttributeMetadata](#)  
*Each attribute has it's metadata stored in such struct.*
- struct [EmberAfCluster](#)  
*Struct describing cluster.*
- struct [EmberAfAttributeSearchRecord](#)  
*Struct used to find an attribute in storage. Together the elements in this search record constitute the "primary key" used to identify a unique attribute value in attribute storage.*
- struct [EmberAfManufacturerCodeEntry](#)
- struct [EmberAfIncomingMessage](#)  
*a struct containing the superset of values passed to both emberIncomingMessageHandler on the SOC and ezspIncomingMessageHandler on the host.*
- struct [EmberAfInterpanHeader](#)  
*Interpan header used for sending and receiving interpan messages.*
- struct [EmberAfAllowedInterPanMessage](#)  
*This structure is used define an interpan message that will be accepted by the interpan filters.*
- struct [EmberAfClusterCommand](#)  
*The EmberAFClusterCommand is a struct wrapper for all the data pertaining to a command which comes in over the air. This enables struct is used to encapsulate a command in a single place on the stack and pass a pointer to that location around during command processing.*
- struct [EmberAfEndpointType](#)  
*Endpoint type struct describes clusters that are on the endpoint.*
- struct [EmberAfSecurityProfileData](#)
- struct [EmberAfDefinedEndpoint](#)  
*Struct that maps actual endpoint type, onto a specific endpoint.*
- struct [EmberAfLoadControlEvent](#)  
*Struct that describes a load control event.*
- struct [EmberAfServiceDiscoveryResult](#)  
*A structure containing general information about the service discovery.*
- struct [EmberAfEndpointList](#)  
*A list of endpoints received during a service discovery attempt. This will be returned for a match descriptor request and a active endpoint request.*
- struct [EmberAfClusterList](#)  
*A list of clusters received during a service discovery attempt. This will be returned for a simple descriptor request.*
- struct [EmberAfEventContext](#)  
*a structure used to keep track of cluster related events and their sleep control values. The cluster code will not know at runtime all of the events that it has access to in the event table. This structure is stored by the application framework in an event context table which along with helper functions allows the cluster code to schedule and deactivate its associated events.*

- struct [EmberAfSceneTableEntry](#)  
*A structure used to store scene table entries in RAM or in tokens, depending on a plugin setting. If endpoint field is `EMBER_AF_SCENE_TABLE_UNUSED_ENDPOINT_ID`, the entry is unused.*
- struct [EmberAfPluginMessagingClientMessage](#)
- struct [EmberAfPluginPriceClientPrice](#)
- struct [EmberAfPluginReportingEntry](#)  
*A structure used to store reporting configurations. If endpoint field is `EMBER_AF_PLUGIN_REPORTING_UNUSED_ENDPOINT_ID`, the entry is unused.*
- struct [EmberAfOtaImageId](#)  
*This is a unique identifier for referencing ZigBee Over-the-air upgrade images. It is used by the OTA plugins when passing around information about an upgrade file.*
- struct [EmberAfImageBlockRequestCallbackStruct](#)  
*This is the data structure that is passed to the `emberAfImageBlockRequestCallback()` to let the application decide what to do.*
- struct [EmberAfOtaHeader](#)  
*This structure is an in-memory representation of the Over-the-air header data that resides on disk. It is not a byte-for-byte copy.*
- struct [EmberAfTagData](#)  
*This structure contains information about a tag that resides within an Over-the-air bootload file.*
- struct [EmberAfMessageStruct](#)  
*The `EmberAfMessageStruct` is a struct wrapper that contains all the data about a low-level message to be sent (it may be ZCL or may be some other protocol).*
- struct [EmberAfLinkKeyBackupData](#)  
*A data struct for a link key backup.*
- struct [EmberAfTrustCenterBackupData](#)  
*A data struct for all the trust center backup data.*
- struct [EmberAfStandaloneBootloaderQueryResponseData](#)  
*A data struct for the information retrieved during a response to an Ember Bootloader over-the-air query.*
- struct [EmberAfCommandMetadata](#)  
*A data struct used to keep track of incoming and outgoing commands for command discovery.*
- struct [EmberAfTimeStruct](#)  
*A data structure used to describe the time in a human understandable format (as opposed to 32-bit UTC)*
- struct [EmberAfDate](#)  
*A data structure used to describe the ZCL Date data type.*
- struct [EmberAfDeviceManagementTenancy](#)
- struct [EmberAfDeviceManagementSupplier](#)
- struct [EmberAfDeviceManagementSupply](#)
- struct [EmberAfDeviceManagementSiteId](#)
- struct [EmberAfDeviceManagementCIN](#)
- struct [EmberAfDeviceManagementSupplyStatusFlags](#)
- struct [EmberAfDeviceManagementUncontrolledFlowThreshold](#)
- struct [EmberAfDeviceManagementSupplyStatus](#)
- struct [EmberAfDeviceManagementPassword](#)
- struct [EmberAfDeviceManagementInfo](#)
- struct [EmberAfDeviceManagementAttributeRange](#)
- struct [EmberAfDeviceManagementAttributeTable](#)
- struct [EmberAfGbzMessageData](#)
- struct [EmberAfGpfMessage](#)
- struct [EmberAfRemoteClusterStruct](#)

- struct [EmberAfRemoteBindingStruct](#)
  - Zigbee Internet Client/Server remote cluster struct.*
- struct [EmberAfClusterInfo](#)
  - Zigbee Internet Client/Server Remote Binding struct.*
- struct [EmberAfEndpointInfoStruct](#)
  - A struct containing basic information about an endpoint.*
- struct [EmberAfDeviceInfo](#)
  - A struct containing endpoint information about a device.*
- struct [EmberAfDeviceDatabaseIterator](#)
  -
- struct [EmberAfJoiningDevice](#)
  -

### 6.3.1 Detailed Description

This documentation describes the types used by the Ember Application Framework V2.

### 6.3.2 Macro Definition Documentation

#### 6.3.2.1 `#define EMBER_AF_NULL_MANUFACTURER_CODE`

A distinguished manufacturer code that is used to indicate the absence of a manufacturer-specific profile, cluster, command, or attribute.

Definition at line [62](#) of file `af-types.h`.

#### 6.3.2.2 `#define EMBER_AF_INVALID_PROFILE_ID`

An invalid profile ID This is a reserved profileId.

Definition at line [68](#) of file `af-types.h`.

#### 6.3.2.3 `#define EMBER_AF_INTER_PAN_UNICAST`

Definition at line [311](#) of file `af-types.h`.

#### 6.3.2.4 `#define EMBER_AF_INTER_PAN_BROADCAST`

Definition at line [312](#) of file `af-types.h`.

#### 6.3.2.5 `#define EMBER_AF_INTER_PAN_MULTICAST`

Definition at line [313](#) of file `af-types.h`.

#### 6.3.2.6 `#define INTER_PAN_UNICAST`

Definition at line [316](#) of file `af-types.h`.

#### 6.3.2.7 `#define INTER_PAN_BROADCAST`

Definition at line [317](#) of file `af-types.h`.

**6.3.2.8 #define INTER\_PAN\_MULTICAST**

Definition at line 318 of file [af-types.h](#).

**6.3.2.9 #define EMBER\_AF\_INTERPAN\_OPTION\_NONE**

Definition at line 321 of file [af-types.h](#).

**6.3.2.10 #define EMBER\_AF\_INTERPAN\_OPTION\_APSS\_ENCRYPT**

Definition at line 322 of file [af-types.h](#).

**6.3.2.11 #define EMBER\_AF\_INTERPAN\_OPTION\_MAC\_HAS\_LONG\_ADDRESS**

Definition at line 323 of file [af-types.h](#).

**6.3.2.12 #define InterPanHeader**

Definition at line 360 of file [af-types.h](#).

**6.3.2.13 #define EMBER\_AF\_INTERPAN\_DIRECTION\_CLIENT\_TO\_SERVER**

Definition at line 367 of file [af-types.h](#).

**6.3.2.14 #define EMBER\_AF\_INTERPAN\_DIRECTION\_SERVER\_TO\_CLIENT**

Definition at line 368 of file [af-types.h](#).

**6.3.2.15 #define EMBER\_AF\_INTERPAN\_DIRECTION\_BOTH**

Definition at line 369 of file [af-types.h](#).

**6.3.2.16 #define EMBER\_AF\_INTERPAN\_GLOBAL\_COMMAND**

Definition at line 370 of file [af-types.h](#).

**6.3.2.17 #define EMBER\_AF\_INTERPAN\_MANUFACTURER\_SPECIFIC**

Definition at line 371 of file [af-types.h](#).

**6.3.2.18 #define EMBER\_AF\_ALLOW\_TC\_KEY\_REQUESTS**

Definition at line 440 of file [af-types.h](#).

**6.3.2.19 #define EMBER\_AF\_DENY\_TC\_KEY\_REQUESTS**

Definition at line [441](#) of file [af-types.h](#).

**6.3.2.20 #define EMBER\_AF\_ALLOW\_APP\_KEY\_REQUESTS**

Definition at line [442](#) of file [af-types.h](#).

**6.3.2.21 #define EMBER\_AF\_DENY\_APP\_KEY\_REQUESTS**

Definition at line [443](#) of file [af-types.h](#).

**6.3.2.22 #define EM\_AF\_DISCOVERY\_RESPONSE\_MASK**

Definition at line [605](#) of file [af-types.h](#).

**6.3.2.23 #define emberAfHaveDiscoveryResponseStatus( *status* )**

A simple way to determine if the service discovery callback has a response.

Definition at line [611](#) of file [af-types.h](#).

**6.3.2.24 #define EMBER\_AF\_SCENE\_TABLE\_NULL\_INDEX**

Indicates the absence of a Scene table entry.

Definition at line [857](#) of file [af-types.h](#).

**6.3.2.25 #define EMBER\_AF\_SCENE\_TABLE\_UNUSED\_ENDPOINT\_ID**

Value used when setting or getting the endpoint in a Scene table entry. It indicates that the entry is not in use.

Definition at line [862](#) of file [af-types.h](#).

**6.3.2.26 #define ZCL\_SCENES\_CLUSTER\_MAXIMUM\_NAME\_LENGTH**

Maximum length of Scene names, not including the length byte.

Definition at line [866](#) of file [af-types.h](#).

**6.3.2.27 #define ZCL\_SCENES\_GLOBAL\_SCENE\_GROUP\_ID**

The group identifier for the global scene.

Definition at line [870](#) of file [af-types.h](#).

**6.3.2.28 #define ZCL\_SCENES\_GLOBAL\_SCENE\_SCENE\_ID**

The scene identifier for the global scene.

Definition at line [874](#) of file `af-types.h`.

**6.3.2.29 #define EMBER\_AF\_PLUGIN\_MESSAGING\_CLIENT\_MESSAGE\_SIZE**

Definition at line [937](#) of file `af-types.h`.

**6.3.2.30 #define ZCL\_PRICE\_CLUSTER\_MAXIMUM\_RATE\_LABEL\_LENGTH**

Definition at line [953](#) of file `af-types.h`.

**6.3.2.31 #define EMBER\_AF\_PLUGIN\_REPORTING\_UNUSED\_ENDPOINT\_ID**

Value used when setting or getting the endpoint in a report table entry. It indicates that the entry is not in use.

Definition at line [1003](#) of file `af-types.h`.

**6.3.2.32 #define EMBER\_AF\_OTA\_MAX\_HEADER\_STRING\_LENGTH**

The maximum size of the string that is present in the header of the ZigBee Over-the-air file format.

Definition at line [1194](#) of file `af-types.h`.

**6.3.2.33 #define APP\_NOTIFY\_ERROR\_CODE\_START**

Definition at line [1295](#) of file `af-types.h`.

**6.3.2.34 #define APP\_NOTIFY\_MESSAGE\_TEXT**

Definition at line [1296](#) of file `af-types.h`.

**6.3.2.35 #define EMBER\_AF\_STANDALONE\_BOOTLOADER\_HARDWARE\_TAG\_LENGTH**

The length of the hardware tag in the Ember Bootloader Query Response.

Definition at line [1462](#) of file `af-types.h`.

**6.3.2.36 #define EMBER\_AF\_PLUGIN\_SIMPLE\_METERING\_SERVER\_ELECTRIC\_METER**

Definition at line [1517](#) of file `af-types.h`.

**6.3.2.37 #define EMBER\_AF\_PLUGIN\_SIMPLE\_METERING\_SERVER\_GAS\_METER**

Definition at line [1518](#) of file `af-types.h`.

**6.3.2.38 #define EMBER\_AF\_METERING\_FNF\_NEW\_OTA\_FIRMWARE**

Definition at line 1521 of file [af-types.h](#).

**6.3.2.39 #define EMBER\_AF\_METERING\_FNF\_CBKE\_UPDATE\_REQUEST**

Definition at line 1522 of file [af-types.h](#).

**6.3.2.40 #define EMBER\_AF\_METERING\_FNF\_TIME\_SYNC**

Definition at line 1523 of file [af-types.h](#).

**6.3.2.41 #define EMBER\_AF\_METERING\_FNF\_STAY\_AWAKE\_REQUEST\_HAN**

Permit join times.

Definition at line [1866](#) of file [af-types.h](#).

**6.3.2.114 #define EMBER\_AF\_PERMIT\_JOIN\_MAX\_TIMEOUT**

Definition at line [1867](#) of file [af-types.h](#).

**6.3.2.115 #define EMBER\_AF\_ZDO\_RESPONSE\_OVERHEAD**

The overhead of the ZDO response. 1 byte for the sequence and 1 byte for the status code.

Definition at line [1874](#) of file [af-types.h](#).

### **6.3.3 Typedef Documentation**

**6.3.3.1 typedef uint16\_t EmberAfProfileId**

Type for referring to ZigBee application profile id.

Definition at line [23](#) of file [af-types.h](#).

**6.3.3.2 typedef uint16\_t EmberAfAttributeId**

Type for referring to ZCL attribute id.

Definition at line [28](#) of file [af-types.h](#).

**6.3.3.3 typedef uint16\_t EmberAfClusterId**

Type for referring to ZCL cluster id.

Definition at line [33](#) of file [af-types.h](#).

**6.3.3.4 typedef uint8\_t EmberAfAttributeType**

Type for referring to ZCL attribute type.

Definition at line [38](#) of file [af-types.h](#).

**6.3.3.5 typedef uint8\_t EmberAfClusterMask**

Type for the cluster mask.

Definition at line [43](#) of file [af-types.h](#).

**6.3.3.6 typedef uint8\_t EmberAfAttributeMask**

Type for the attribute mask.

Definition at line [48](#) of file [af-types.h](#).

**6.3.3.7 typedef void(\* EmberAfGenericClusterFunction)(void)**

Generic function type, used for either of the cluster function.

This type is used for the array of the cluster functions, and should always be cast into one of the specific functions before being called.

Definition at line [56](#) of file [af-types.h](#).

**6.3.3.8 `typedef uint8_t EmberAfInterpanMessageType`**

Interpan Message type: unicast, broadcast, or multicast.

Definition at line [310](#) of file `af-types.h`.

**6.3.3.9 `typedef uint16_t EmberAfInterpanOptions`**

The options for sending/receiving interpan messages.

Definition at line [328](#) of file `af-types.h`.

**6.3.3.10 `typedef uint8_t EmberAfAllowedInterpanOptions`**

The options for what interpan messages are allowed.

Definition at line [365](#) of file `af-types.h`.

**6.3.3.11 `typedef EmberLinkKeyRequestPolicy EmberAfLinkKeyRequestPolicy`**

Definition at line [439](#) of file `af-types.h`.

**6.3.3.12 `typedef uint8_t EmberAfPluginEsiManagementBitmask`**

Bitmask data type for storing one bit of information for each ESI in the ESI table.

Definition at line [541](#) of file `af-types.h`.

**6.3.3.13 `typedef void( EmberAfServiceDiscoveryCallback)(const EmberAfServiceDiscoveryResult *result)`**

This defines a callback where a code element or cluster can be informed as to the result of a service discovery they have requested. For each match, the callback is fired with all the resulting matches from that source. If the discovery was unicast to a specific device, then the callback will only be fired once with either MATCH\_FOUND or COMPLETE (no matches found). If the discovery is broadcast then multiple callbacks may be fired with ::EMBER\_AF\_SERVICE\_DISCOVERY\_RESPONSE\_RECEIVED. After a couple seconds the callback will then be fired with ::EMBER\_AF\_SERVICE\_DISCOVERY\_COMPLETE as the result.

Definition at line [685](#) of file `af-types.h`.

**6.3.3.14 `typedef void( EmberAfPartnerLinkKeyExchangeCallback)(bool success)`**

This defines a callback where a code element or cluster can be informed as to the result of a request to initiate a partner link key exchange. The callback will be triggered with success equal to true if the exchange completed successfully.

Definition at line [693](#) of file `af-types.h`.

**6.3.3.15 `typedef void(* EmberAfNetworkEventHandler)(void)`**

Type for referring to the handler for network events.

Definition at line 818 of file [af-types.h](#).

### **6.3.3.16 `typedef void(* EmberAfEndpointEventHandler)(uint8_t endpoint)`**

Type for referring to the handler for endpoint events.

Definition at line 823 of file [af-types.h](#).

### **6.3.3.17 `typedef uint8_t EmberAfImageBlockRequestOptions`**

Definition at line 1145 of file [af-types.h](#).

### **6.3.3.18 `typedef uint8_t EmberAfOtaDownloadResult`**

Definition at line 1188 of file [af-types.h](#).

### **6.3.3.19 `typedef void(* EmberAfTickFunction)(uint8_t endpoint)`**

Type for referring to the tick callback for cluster.

Tick function will be called once for each tick for each endpoint in the cluster. The rate of tick is determined by the metadata of the cluster.

Definition at line 1350 of file [af-types.h](#).

### **6.3.3.20 `typedef void(* EmberAfInitFunction)(uint8_t endpoint)`**

Type for referring to the init callback for cluster.

Init function is called when the application starts up, once for each cluster/endpoint combination.

Definition at line 1359 of file [af-types.h](#).

### **6.3.3.21 `typedef void(* EmberAfClusterAttributeChangedCallback)(uint8_t endpoint, EmberAfAttributeId attributeld)`**

Type for referring to the attribute changed callback function.

This function is called just after an attribute changes.

Definition at line 1366 of file [af-types.h](#).

### **6.3.3.22 `typedef void(* EmberAfManufacturerSpecificClusterAttributeChangedCallback)(uint8_t endpoint, EmberAfAttributeId attributeld, uint16_t manufacturerCode)`**

Type for referring to the manufacturer specific attribute changed callback function.

This function is called just after a manufacturer specific attribute changes.

Definition at line 1375 of file [af-types.h](#).

**6.3.3.23 `typedef EmberAfStatus(* EmberAfClusterPreAttributeChangedCallback)(uint8_t endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, uint8_t size, uint8_t *value)`**

Type for referring to the pre-attribute changed callback function.

This function is called before an attribute changes.

Definition at line [1384](#) of file `af-types.h`.

**6.3.3.24 `typedef void(* EmberAfDefaultResponseFunction)(uint8_t endpoint, uint8_t commandId, EmberAfStatus status)`**

Type for referring to the default response callback function.

This function is called when default response is received, before the global callback. Global callback is called immediately afterwards.

Definition at line [1396](#) of file `af-types.h`.

**6.3.3.25 `typedef void(* EmberAfMessageSentFunction)(EmberOutgoingMessageType type, uint16_t indexOrDestination, EmberApsFrame *apsFrame, uint16_t msgLen, uint8_t *message, EmberStatus status)`**

Type for referring to the message sent callback function.

This function is called when a message is sent.

Definition at line [1405](#) of file `af-types.h`.

**6.3.3.26 `typedef uint16_t EmberAfRemoteClusterType`**

Zigbee Internet Client/Server Remote Cluster Types.

Definition at line [1767](#) of file `af-types.h`.

## 6.3.4 Enumeration Type Documentation

**6.3.4.1 `enum EmberAfSecurityProfile`**

Enumerator:

- `EMBER_AF_SECURITY_PROFILE_NONE`**
- `EMBER_AF_SECURITY_PROFILE_HA`**
- `EMBER_AF_SECURITY_PROFILE_HA12`**
- `EMBER_AF_SECURITY_PROFILE_SE_TEST`**
- `EMBER_AF_SECURITY_PROFILE_SE_FULL`**
- `EMBER_AF_SECURITY_PROFILE_Z3`**
- `EMBER_AF_SECURITY_PROFILE_CUSTOM`**

Definition at line [447](#) of file `af-types.h`.

#### 6.3.4.2 enum EmberAfServiceDiscoveryStatus

This is an enum used to indicate the result of the service discovery. Unicast discoveries are completed as soon as a response is received. Broadcast discoveries wait a period of time for multiple responses to be received.

Enumerator:

```
EMBER_AF_BROADCAST_SERVICE_DISCOVERY_COMPLETE
EMBER_AF_BROADCAST_SERVICE_DISCOVERY_RESPONSE RECEIVED
EMBER_AF_UNICAST_SERVICE_DISCOVERY_TIMEOUT
EMBER_AF_UNICAST_SERVICE_DISCOVERY_COMPLETE WITH RESPONSE
EMBER_AF_BROADCAST_SERVICE_DISCOVERY_COMPLETE WITH RESPONSE
```

Definition at line 597 of file af-types.h.

#### 6.3.4.3 enum EmberAfEventPollControl

This is an enum used to control how the device will poll for a given active cluster-related event. When the event is scheduled, the application can pass a poll control value which will be stored along with the event. The processor is only allowed to poll according to the most restrictive value for all active event. For instance, if two events are active, one with EMBER\_AF\_LONG\_POLL and the other with EMBER\_AF\_SHORT\_POLL, then the processor will short poll until the second event is deactivated.

Enumerator:

```
EMBER_AF_LONG_POLL
EMBER_AF_SHORT_POLL
```

Definition at line 704 of file af-types.h.

#### 6.3.4.4 enum EmberAfEventSleepControl

This is an enum used to control how the device will sleep for a given active cluster related event. When the event is scheduled, the scheduling code can pass a sleep control value which will be stored along with the event. The processor is only allowed to sleep according to the most restrictive sleep control value for any active event. For instance, if two events are active, one with EMBER\_AF\_OK\_TO\_HIBERNATE and the other with EMBER\_AF\_OK\_TO\_NAP, then the processor will only be allowed to nap until the second event is deactivated.

Enumerator:

```
EMBER_AF_OK_TO_SLEEP
EMBER_AF_OK_TO_HIBERNATE Deprecated .
EMBER_AF_OK_TO_NAP Deprecated .
EMBER_AF_STAY_AWAKE
```

Definition at line 722 of file af-types.h.

#### 6.3.4.5 enum EmberAfApplicationTask

An enum used to track the tasks that the Application framework cares about. These are intended to be tasks that should keep the device out of hibernation like an application level request / response. If the response does not come in as a data ack, then the application will need to stay out of hibernation to wait and poll for it.

Of course some tasks do not necessarily have a response. For instance, a ZDO request may or may not have a response. In this case, the application framework cannot rely on the fact that a response will come in to end the wake cycle, so the Application framework must timeout the wake cycle if no expected response is received or no other event can be relied upon to end the wake cycle.

Tasks of this type should be added to the wake timeout mask by calling [emberAfSetWakeTimeoutBitmaskCallback](#) so that they can be governed by a timeout instead of a request / response

the current tasks bitmask is an uint32\_t bitmask used to track which tasks are active at any given time. The bottom 16 bits, values 0x01 - 0x8000 are reserved for Ember's use. The top 16 bits are reserved for the customer, values 0x10000 - 0x80000000

Enumerator:

```
EMBER_AF_WAITING_FOR_DATA_ACK
EMBER_AF_LAST_POLL_GOT_DATA
EMBER_AF_WAITING_FOR_SERVICE_DISCOVERY
EMBER_AF_WAITING_FOR_ZDO_RESPONSE
EMBER_AF_WAITING_FOR_ZCL_RESPONSE
EMBER_AF_WAITING_FOR_REGISTRATION
EMBER_AF_WAITING_FOR_PARTNER_LINK_KEY_EXCHANGE
EMBER_AF_FORCE_SHORT_POLL
EMBER_AF_FRAGMENTATION_IN_PROGRESS
```

Definition at line [758](#) of file [af-types.h](#).

#### 6.3.4.6 enum EmberAfPluginPriceCppAuth

Specifies CPP Authorization values.

Enumerator:

```
EMBER_AF_PLUGIN_PRICE_CPP_AUTH_PENDING
EMBER_AF_PLUGIN_PRICE_CPP_AUTH_ACCEPTED
EMBER_AF_PLUGIN_PRICE_CPP_AUTH_REJECTED
EMBER_AF_PLUGIN_PRICE_CPP_AUTH_FORCED
EMBER_AF_PLUGIN_PRICE_CPP_AUTH_RESERVED
```

Definition at line [985](#) of file [af-types.h](#).

#### 6.3.4.7 enum EmberAfPluginTunnelingClientStatus

Enumerator:

```
EMBER_AF_PLUGIN_TUNNELING_CLIENT_SUCCESS
```

```
EMBER_AF_PLUGIN_TUNNELING_CLIENT_BUSY
EMBER_AF_PLUGIN_TUNNELING_CLIENT_NO_MORE_TUNNEL_IDS
EMBER_AF_PLUGIN_TUNNELING_CLIENT_PROTOCOL_NOT_SUPPORTED
EMBER_AF_PLUGIN_TUNNELING_CLIENT_FLOW_CONTROL_NOT_SUPPORTED
EMBER_AF_PLUGIN_TUNNELING_CLIENT_IEEE_ADDRESS_REQUEST_FAILED
EMBER_AF_PLUGIN_TUNNELING_CLIENT_IEEE_ADDRESS_NOT_FOUND
EMBER_AF_PLUGIN_TUNNELING_CLIENT_ADDRESS_TABLE_FULL
EMBER_AF_PLUGIN_TUNNELING_CLIENT_LINK_KEY_EXCHANGE_REQUEST_FAILED

EMBER_AF_PLUGIN_TUNNELING_CLIENT_LINK_KEY_EXCHANGE_FAILED
EMBER_AF_PLUGIN_TUNNELING_CLIENT_REQUEST_TUNNEL_FAILED
EMBER_AF_PLUGIN_TUNNELING_CLIENT_REQUEST_TUNNEL_TIMEOUT
```

Definition at line 1057 of file af-types.h.

#### 6.3.4.8 anonymous enum

The list of options possible for the image block request/response.

Enumerator:

```
EMBER_AF_IMAGE_BLOCK_REQUEST_OPTIONS_NONE
EMBER_AF_IMAGE_BLOCK_REQUEST_MIN_BLOCK_REQUEST_SUPPORTED_BY_CLIENT

EMBER_AF_IMAGE_BLOCK_REQUEST_MIN_BLOCK_REQUEST_SUPPORTED_BY_SERVER
```

Definition at line 1140 of file af-types.h.

#### 6.3.4.9 enum EmberAfOtaStorageStatus

This status contains the success or error code of an OTA storage device operation.

Enumerator:

```
EMBER_AF_OTA_STORAGE_SUCCESS
EMBER_AF_OTA_STORAGE_ERROR
EMBER_AF_OTA_STORAGE_RETURN_DATA_TOO_LONG
EMBER_AF_OTA_STORAGE_PARTIAL_FILE_FOUND
EMBER_AF_OTA_STORAGE_OPERATION_IN_PROGRESS
```

Definition at line 1168 of file af-types.h.

#### 6.3.4.10 anonymous enum

This status contains the success or error code of an OTA download operation.

Enumerator:

```
EMBER_AF_OTA_DOWNLOAD_AND_VERIFY_SUCCESS
EMBER_AF_OTA_DOWNLOAD_TIME_OUT
EMBER_AF_OTA_VERIFY_FAILED
EMBER_AF_OTA_SERVER_ABORTED
EMBER_AF_OTA_CLIENT_ABORTED
EMBER_AF_OTA_ERASE_FAILED
```

Definition at line 1180 of file [af-types.h](#).

#### 6.3.4.11 enum EmberAfKeyEstablishmentNotifyMessage

Enumerator:

```
NO_APP_MESSAGE
RECEIVED_PARTNER_CERTIFICATE
GENERATING_EPHEMERAL_KEYS
GENERATING_SHARED_SECRET
KEY_GENERATION_DONE
GENERATE_SHARED_SECRET_DONE
LINK_KEY_ESTABLISHED LINK_KEY_ESTABLISHED indicates Success, key establishment done.
NO_LOCAL_RESOURCES Error codes: Transient failures where Key Establishment could be re-tried
PARTNER_NO_RESOURCES
TIMEOUT_OCCURRED
INVALID_APP_COMMAND
MESSAGE_SEND_FAILURE
PARTNER_SENT_TERMINATE
INVALID_PARTNER_MESSAGE
PARTNER_SENT_DEFAULT_RESPONSE_ERROR
BAD_CERTIFICATE_ISSUER Fatal Errors: These results are not worth retrying because the outcome will not change
KEY_CONFIRM_FAILURE
BAD_KEY_ESTABLISHMENT_SUITE
KEY_TABLE_FULL
NO_ESTABLISHMENT_ALLOWED Neither initiator nor responder is an ESP/TC so the key establishment is not allowed per the spec.
INVALID_CERTIFICATE_KEY_USAGE
```

Definition at line 1245 of file [af-types.h](#).

#### 6.3.4.12 enum EmberAfImageVerifyStatus

This enumeration is used to indicate the state of an OTA bootload image undergoing verification. This is used both for cryptographic verification and manufacturer specific verification.

Enumerator:

- EMBER\_AF\_IMAGE\_GOOD*

- void `emberAfBinaryInputBasicClusterServerTickCallback` (int8u endpoint)

## Commissioning Cluster Callbacks

- void `emberAfCommissioningClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfCommissioningClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfCommissioningClusterClientInitCallback` (int8u endpoint)
- void `emberAfCommissioningClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)

- void `emberAfCommissioningClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfCommissioningClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfCommissioningClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfCommissioningClusterResetStartupParametersCallback` (int8u options, int8u index)
- boolean `emberAfCommissioningClusterResetStartupParametersResponseCallback` (int8u status)
- boolean `emberAfCommissioningClusterRestartDeviceCallback` (int8u options, int8u delay, int8u jitter)
- boolean `emberAfCommissioningClusterRestartDeviceResponseCallback` (int8u status)
- boolean `emberAfCommissioningClusterRestoreStartupParametersCallback` (int8u options, int8u index)
- boolean `emberAfCommissioningClusterRestoreStartupParametersResponseCallback` (int8u status)
- boolean `emberAfCommissioningClusterSaveStartupParametersCallback` (int8u options, int8u index)
- boolean `emberAfCommissioningClusterSaveStartupParametersResponseCallback` (int8u status)
- void `emberAfCommissioningClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfCommissioningClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfCommissioningClusterServerInitCallback` (int8u endpoint)
- void `emberAfCommissioningClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfCommissioningClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfCommissioningClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfCommissioningClusterServerTickCallback` (int8u endpoint)

## Partition Cluster Callbacks

- void `emberAfPartitionClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPartitionClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPartitionClusterClientInitCallback` (int8u endpoint)
- void `emberAfPartitionClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPartitionClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfPartitionClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPartitionClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfPartitionClusterMultipleAckCallback` (int8u ackOptions, int8u \*firstFrameIdAndNackList)
- boolean `emberAfPartitionClusterReadHandshakeParamCallback` (int16u partitionedClusterId, int8u \*attributeList)

- boolean `emberAfPartitionClusterReadHandshakeParamResponseCallback` (int16u partitionedClusterId, int8u \*readAttributeStatusRecords)
- void `emberAfPartitionClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPartitionClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPartitionClusterServerInitCallback` (int8u endpoint)
- void `emberAfPartitionClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPartitionClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfPartitionClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPartitionClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfPartitionClusterTransferPartitionedFrameCallback` (int8u fragmentationOptions, int8u \*partitionedIndicatorAndFrame)
- boolean `emberAfPartitionClusterWriteHandshakeParamCallback` (int16u partitionedClusterId, int8u \*writeAttributeRecords)

## Over the Air Bootloading Cluster Callbacks

- void `emberAfOtaBootloadClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfOtaBootloadClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfOtaBootloadClusterClientInitCallback` (int8u endpoint)
- void `emberAfOtaBootloadClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfOtaBootloadClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfOtaBootloadClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfOtaBootloadClusterClientTickCallback` (int8u endpoint)
- void `emberAfOtaBootloadClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfOtaBootloadClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfOtaBootloadClusterServerInitCallback` (int8u endpoint)
- void `emberAfOtaBootloadClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfOtaBootloadClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfOtaBootloadClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfOtaBootloadClusterServerTickCallback` (int8u endpoint)

## Power Profile Cluster Callbacks

- void `emberAfPowerProfileClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPowerProfileClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)

## Events Cluster Callbacks

- boolean `emberAfEventsClusterClearEventLogRequestCallback` (int8u logId)
- boolean `emberAfEventsClusterClearEventLogResponseCallback` (int8u clearedEventsLogs)
- void `emberAfEventsClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfEventsClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfEventsClusterClientInitCallback` (int8u endpoint)
- void `emberAfEventsClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfEventsClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfEventsClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfEventsClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfEventsClusterGetEventLogCallback` (int8u eventControlLogId, int16u eventId, int32u startTime, int32u endTime, int8u numberOfEvents, int16u eventOffset)
- boolean `emberAfEventsClusterPublishEventCallback` (int8u logId, int16u eventId, int32u eventTime, int8u eventControl, int8u \*EventData)
- boolean `emberAfEventsClusterPublishEventLogCallback` (int16u totalNumberOfEvents, int8u commandIndex, int8u totalCommands, int8u logPayloadControl, int8u \*logPayload)

- void `emberAfEventsClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfEventsClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfEventsClusterServerInitCallback` (int8u endpoint)
- void `emberAfEventsClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfEventsClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfEventsClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfEventsClusterServerTickCallback` (int8u endpoint)

## MDU Pairing Cluster Callbacks

- void `emberAfMduPairingClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfMduPairingClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfMduPairingClusterClientInitCallback` (int8u endpoint)
- void `emberAfMduPairingClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfMduPairingClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfMduPairingClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfMduPairingClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfMduPairingClusterPairingRequestCallback` (int32u localPairingInformationVersion, int8u \*eui64OfRequestingDevice)
- boolean `emberAfMduPairingClusterPairingResponseCallback` (int32u pairingInformationVersion, int8u totalNumberOfDevices, int8u commandIndex, int8u totalNumberOfCommands, int8u \*eui64s)
- void `emberAfMduPairingClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfMduPairingClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfMduPairingClusterServerInitCallback` (int8u endpoint)
- void `emberAfMduPairingClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfMduPairingClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfMduPairingClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfMduPairingClusterServerTickCallback` (int8u endpoint)

## Key Establishment Cluster Callbacks

- boolean `emberAfKeyEstablishmentClusterClientCommandReceivedCallback` (`EmberAfClusterCommand *cmd`)
- void `emberAfKeyEstablishmentClusterClientAttributeChangedCallback` (`int8u endpoint, EmberAfAttributeId attributeId`)
- void `emberAfKeyEstablishmentClusterClientDefaultResponseCallback` (`int8u endpoint, int8u commandId, EmberAfStatus status`)
- void `emberAfKeyEstablishmentClusterClientInitCallback` (`int8u endpoint`)
- void `emberAfKeyEstablishmentClusterClientManufacturerSpecificAttributeChangedCallback` (`int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode`)
- void `emberAfKeyEstablishmentClusterClientMessageSentCallback` (`EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame *apsFrame, int16u msgLen, int8u *message, EmberStatus status`)
- `EmberAfStatus emberAfKeyEstablishmentClusterClientPreAttributeChangedCallback` (`int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u *value`)
- void `emberAfKeyEstablishmentClusterClientTickCallback` (`int8u endpoint`)
- boolean `emberAfKeyEstablishmentClusterConfirmKeyDataRequestCallback` (`int8u *secureMessageAuthenticationCode`)
- boolean `emberAfKeyEstablishmentClusterConfirmKeyDataResponseCallback` (`int8u *secureMessageAuthenticationCode`)
- boolean `emberAfKeyEstablishmentClusterEphemeralDataRequestCallback` (`int8u *ephemeralData`)
- boolean `emberAfKeyEstablishmentClusterEphemeralDataResponseCallback` (`int8u *ephemeralData`)
- boolean `emberAfKeyEstablishmentClusterInitiateKeyEstablishmentRequestCallback` (`int16u keyEstablishmentSuite, int8u ephemeralDataGenerateTime, int8u confirmKeyGenerateTime, int8u *identity`)
- boolean `emberAfKeyEstablishmentClusterInitiateKeyEstablishmentResponseCallback` (`int16u requestedKeyEstablishmentSuite, int8u ephemeralDataGenerateTime, int8u confirmKeyGenerateTime, int8u *identity`)
- void `emberAfKeyEstablishmentClusterServerAttributeChangedCallback` (`int8u endpoint, EmberAfAttributeId attributeId`)
- void `emberAfKeyEstablishmentClusterServerDefaultResponseCallback` (`int8u endpoint, int8u commandId, EmberAfStatus status`)
- void `emberAfKeyEstablishmentClusterServerInitCallback` (`int8u endpoint`)
- void `emberAfKeyEstablishmentClusterServerManufacturerSpecificAttributeChangedCallback` (`int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode`)
- void `emberAfKeyEstablishmentClusterServerMessageSentCallback` (`EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame *apsFrame, int16u msgLen, int8u *message, EmberStatus status`)
- `EmberAfStatus emberAfKeyEstablishmentClusterServerPreAttributeChangedCallback` (`int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u *value`)
- void `emberAfKeyEstablishmentClusterServerTickCallback` (`int8u endpoint`)
- boolean `emberAfKeyEstablishmentClusterTerminateKeyEstablishmentCallback` (`int8u statusCode, int8u waitTime, int16u keyEstablishmentSuite`)
- boolean `emberAfKeyEstablishmentClusterServerCommandReceivedCallback` (`EmberAfClusterCommand *cmd`)

## Information Cluster Callbacks

- void `emberAfInformationClusterClientAttributeChangedCallback` (`int8u endpoint, EmberAfAttributeId attributeId`)
- void `emberAfInformationClusterClientDefaultResponseCallback` (`int8u endpoint, int8u commandId, EmberAfStatus status`)

- void `emberAfInformationClusterClientInitCallback` (int8u endpoint)
- void `emberAfInformationClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfInformationClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfInformationClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfInformationClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfInformationClusterConfigureDeliveryEnableCallback` (int8u enable)
- boolean `emberAfInformationClusterConfigureNodeDescriptionCallback` (int8u \*description)
- boolean `emberAfInformationClusterConfigurePushInformationTimerCallback` (int32u timer)
- boolean `emberAfInformationClusterConfigureSetRootIdCallback` (int16u rootId)
- boolean `emberAfInformationClusterDeleteCallback` (int8u deletionOptions, int8u \*contentIds)
- boolean `emberAfInformationClusterDeleteResponseCallback` (int8u \*notificationList)
- boolean `emberAfInformationClusterPushInformationCallback` (int8u \*contents)
- boolean `emberAfInformationClusterPushInformationResponseCallback` (int8u \*notificationList)
- boolean `emberAfInformationClusterRequestInformationCallback` (int8u inquiryId, int8u dataTypeId, int8u \*requestInformationPayload)
- boolean `emberAfInformationClusterRequestInformationResponseCallback` (int8u number, int8u \*buffer)
- boolean `emberAfInformationClusterRequestPreferenceConfirmationCallback` (int8u \*statusFeedbackList)
- boolean `emberAfInformationClusterRequestPreferenceResponseCallback` (int8u statusFeedback, int16u preferenceType, int8u \*preferencePayload)
- boolean `emberAfInformationClusterSendPreferenceCallback` (int16u preferenceType, int8u \*preferencePayload)
- boolean `emberAfInformationClusterSendPreferenceResponseCallback` (int8u \*statusFeedbackList)
- void `emberAfInformationClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfInformationClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfInformationClusterServerInitCallback` (int8u endpoint)
- void `emberAfInformationClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfInformationClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfInformationClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- boolean `emberAfInformationClusterServerRequestPreferenceCallback` (void)
- void `emberAfInformationClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfInformationClusterUpdateCallback` (int8u accessControl, int8u option, int8u \*contents)
- boolean `emberAfInformationClusterUpdateResponseCallback` (int8u \*notificationList)

## Data Sharing Cluster Callbacks

- void `emberAfDataSharingClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDataSharingClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDataSharingClusterClientInitCallback` (int8u endpoint)

- void `emberAfDataSharingClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDataSharingClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfDataSharingClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDataSharingClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfDataSharingClusterFileTransmissionCallback` (int8u transmitOptions, int8u \*buffer)
- boolean `emberAfDataSharingClusterModifyFileRequestCallback` (int16u fileIndex, int32u fileStartPosition, int32u octetCount)
- boolean `emberAfDataSharingClusterModifyRecordRequestCallback` (int16u fileIndex, int16u fileStartRecord, int16u recordCount)
- boolean `emberAfDataSharingClusterReadFileRequestCallback` (int16u fileIndex, int8u \*fileStartPositionAndRequestedOctetCount)
- boolean `emberAfDataSharingClusterReadRecordRequestCallback` (int16u fileIndex, int8u \*fileStartRecordAndRequestedRecordCount)
- boolean `emberAfDataSharingClusterRecordTransmissionCallback` (int8u transmitOptions, int8u \*buffer)
- void `emberAfDataSharingClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDataSharingClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDataSharingClusterServerInitCallback` (int8u endpoint)
- void `emberAfDataSharingClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDataSharingClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfDataSharingClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDataSharingClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfDataSharingClusterWriteFileRequestCallback` (int8u writeOptions, int8u \*fileSize)
- boolean `emberAfDataSharingClusterWriteFileResponseCallback` (int8u status, int8u \*fileIndex)

## Gaming Cluster Callbacks

- boolean `emberAfGamingClusterActionControlCallback` (int32u actions)
- void `emberAfGamingClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfGamingClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfGamingClusterClientInitCallback` (int8u endpoint)
- void `emberAfGamingClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfGamingClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfGamingClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfGamingClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfGamingClusterDownloadGameCallback` (void)

- boolean `emberAfGamingClusterEndGameCallback` (void)
- boolean `emberAfGamingClusterGameAnnouncementCallback` (int16u gameId, int8u gameMaster, int8u \*listOfGame)
- boolean `emberAfGamingClusterGeneralResponseCallback` (int8u commandId, int8u status, int8u \*message)
- boolean `emberAfGamingClusterJoinGameCallback` (int16u gameId, int8u joinAsMaster, int8u \*nameOfGame)
- boolean `emberAfGamingClusterPauseGameCallback` (void)
- boolean `emberAfGamingClusterQuitGameCallback` (void)
- boolean `emberAfGamingClusterResumeGameCallback` (void)
- boolean `emberAfGamingClusterSearchGameCallback` (int8u specificGame, int16u gameId)
- void `emberAfGamingClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfGamingClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfGamingClusterServerInitCallback` (int8u endpoint)
- void `emberAfGamingClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfGamingClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfGamingClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfGamingClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfGamingClusterStartGameCallback` (void)
- boolean `emberAfGamingClusterStartOverCallback` (void)

## Data Rate Control Cluster Callbacks

- void `emberAfDataRateControlClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDataRateControlClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDataRateControlClusterClientInitCallback` (int8u endpoint)
- void `emberAfDataRateControlClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDataRateControlClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDataRateControlClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDataRateControlClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfDataRateControlClusterDataRateControlCallback` (int16u originatorAddress, int16u destinationAddress, int8u dataRate)
- boolean `emberAfDataRateControlClusterDataRateNotificationCallback` (int16u originatorAddress, int16u destinationAddress, int8u dataRate)
- boolean `emberAfDataRateControlClusterPathCreationCallback` (int16u originatorAddress, int16u destinationAddress, int8u dataRate)
- boolean `emberAfDataRateControlClusterPathDeletionCallback` (int16u originatorAddress, int16u destinationAddress)

- void `emberAfDataRateControlClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDataRateControlClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDataRateControlClusterServerInitCallback` (int8u endpoint)
- void `emberAfDataRateControlClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDataRateControlClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDataRateControlClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDataRateControlClusterServerTickCallback` (int8u endpoint)

## Voice over ZigBee Cluster Callbacks

- void `emberAfVoiceOverZigbeeClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfVoiceOverZigbeeClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfVoiceOverZigbeeClusterClientInitCallback` (int8u endpoint)
- void `emberAfVoiceOverZigbeeClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfVoiceOverZigbeeClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfVoiceOverZigbeeClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfVoiceOverZigbeeClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfVoiceOverZigbeeClusterControlCallback` (int8u controlType)
- boolean `emberAfVoiceOverZigbeeClusterControlResponseCallback` (int8u ackNack)
- boolean `emberAfVoiceOverZigbeeClusterEstablishmentRequestCallback` (int8u flag, int8u codecType, int8u sampFreq, int8u codecRate, int8u serviceType, int8u \*buffer)
- boolean `emberAfVoiceOverZigbeeClusterEstablishmentResponseCallback` (int8u ackNack, int8u codecType)
- void `emberAfVoiceOverZigbeeClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfVoiceOverZigbeeClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfVoiceOverZigbeeClusterServerInitCallback` (int8u endpoint)
- void `emberAfVoiceOverZigbeeClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfVoiceOverZigbeeClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfVoiceOverZigbeeClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfVoiceOverZigbeeClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfVoiceOverZigbeeClusterVoiceTransmissionCallback` (int8u \*voiceData)
- boolean `emberAfVoiceOverZigbeeClusterVoiceTransmissionCompletionCallback` (void)
- boolean `emberAfVoiceOverZigbeeClusterVoiceTransmissionResponseCallback` (int8u sequenceNumber, int8u errorFlag)

## Chatting Cluster Callbacks

- boolean `emberAfChattingClusterChatMessageCallback` (int16u destinationUid, int16u sourceUid, int16u cid, int8u \*nickname, int8u \*message)
- void `emberAfChattingClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfChattingClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfChattingClusterClientInitCallback` (int8u endpoint)
- void `emberAfChattingClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfChattingClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfChattingClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfChattingClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfChattingClusterGetNodeInformationRequestCallback` (int16u cid, int16u uid)
- boolean `emberAfChattingClusterGetNodeInformationResponseCallback` (int8u status, int16u cid, int16u uid, int8u \*addressEndpointAndNickname)
- boolean `emberAfChattingClusterJoinChatRequestCallback` (int16u uid, int8u \*nickname, int16u cid)
- boolean `emberAfChattingClusterJoinChatResponseCallback` (int8u status, int16u cid, int8u \*chatParticipantList)
- boolean `emberAfChattingClusterLeaveChatRequestCallback` (int16u cid, int16u uid)
- boolean `emberAfChattingClusterSearchChatRequestCallback` (void)
- boolean `emberAfChattingClusterSearchChatResponseCallback` (int8u options, int8u \*chatRoomList)
- void `emberAfChattingClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfChattingClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfChattingClusterServerInitCallback` (int8u endpoint)
- void `emberAfChattingClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfChattingClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfChattingClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfChattingClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfChattingClusterStartChatRequestCallback` (int8u \*name, int16u uid, int8u \*nickname)
- boolean `emberAfChattingClusterStartChatResponseCallback` (int8u status, int16u cid)
- boolean `emberAfChattingClusterSwitchChairmanConfirmCallback` (int16u cid, int8u \*nodeInformationList)
- boolean `emberAfChattingClusterSwitchChairmanNotificationCallback` (int16u cid, int16u uid, int16u address, int8u endpoint)
- boolean `emberAfChattingClusterSwitchChairmanRequestCallback` (int16u cid)
- boolean `emberAfChattingClusterSwitchChairmanResponseCallback` (int16u cid, int16u uid)
- boolean `emberAfChattingClusterUserJoinedCallback` (int16u cid, int16u uid, int8u \*nickname)
- boolean `emberAfChattingClusterUserLeftCallback` (int16u cid, int16u uid, int8u \*nickname)

## Payment Cluster Callbacks

- boolean `emberAfPaymentClusterAcceptPaymentCallback` (int8u \*userId, int16u userType, int16u serviceId, int8u \*goodId)
- boolean `emberAfPaymentClusterBuyConfirmCallback` (int8u \*serialNumber, int32u currency, int8u priceTrailingDigit, int32u price, int8u \*timestamp, int16u transId, int8u transStatus)
- boolean `emberAfPaymentClusterBuyRequestCallback` (int8u \*userId, int16u userType, int16u serviceId, int8u \*goodId)
- void `emberAfPaymentClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPaymentClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPaymentClusterClientInitCallback` (int8u endpoint)
- void `emberAfPaymentClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPaymentClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfPaymentClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPaymentClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfPaymentClusterPaymentConfirmCallback` (int8u \*serialNumber, int16u transId, int8u transStatus)
- boolean `emberAfPaymentClusterReceiptDeliveryCallback` (int8u \*serialNumber, int32u currency, int8u priceTrailingDigit, int32u price, int8u \*timestamp)
- void `emberAfPaymentClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfPaymentClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfPaymentClusterServerInitCallback` (int8u endpoint)
- void `emberAfPaymentClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfPaymentClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfPaymentClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfPaymentClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfPaymentClusterTransactionEndCallback` (int8u \*serialNumber, int8u status)

## Billing Cluster Callbacks

- boolean `emberAfBillingClusterBillStatusNotificationCallback` (int8u \*userId, int8u status)
- boolean `emberAfBillingClusterCheckBillStatusCallback` (int8u \*userId, int16u serviceId, int16u serviceProviderId)
- void `emberAfBillingClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfBillingClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfBillingClusterClientInitCallback` (int8u endpoint)
- void `emberAfBillingClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)

- void `emberAfBillingClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfBillingClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfBillingClusterClientTickCallback` (int8u endpoint)

- void `emberAfMeterIdentificationClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfMeterIdentificationClusterServerInitCallback` (int8u endpoint)
- void `emberAfMeterIdentificationClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfMeterIdentificationClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfMeterIdentificationClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfMeterIdentificationClusterServerTickCallback` (int8u endpoint)

## Appliance Events and Alert Cluster Callbacks

- boolean `emberAfApplianceEventsAndAlertClusterAlertsNotificationCallback` (int8u alertsCount, int8u \*alertStructures)
- void `emberAfApplianceEventsAndAlertClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfApplianceEventsAndAlertClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfApplianceEventsAndAlertClusterClientInitCallback` (int8u endpoint)
- void `emberAfApplianceEventsAndAlertClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)

- void `emberAfApplianceEventsAndAlertClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfApplianceEventsAndAlertClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfApplianceEventsAndAlertClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfApplianceEventsAndAlertClusterEventsNotificationCallback` (int8u eventHeader, int8u eventId)
- boolean `emberAfApplianceEventsAndAlertClusterGetAlertsCallback` (void)
- boolean `emberAfApplianceEventsAndAlertClusterGetAlertsResponseCallback` (int8u alertsCount, int8u \*alertStructures)
- void `emberAfApplianceEventsAndAlertClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfApplianceEventsAndAlertClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfApplianceEventsAndAlertClusterServerInitCallback` (int8u endpoint)
- void `emberAfApplianceEventsAndAlertClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfApplianceEventsAndAlertClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfApplianceEventsAndAlertClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfApplianceEventsAndAlertClusterServerTickCallback` (int8u endpoint)

## Appliance Statistics Cluster Callbacks

- void `emberAfApplianceStatisticsClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfApplianceStatisticsClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfApplianceStatisticsClusterClientInitCallback` (int8u endpoint)
- void `emberAfApplianceStatisticsClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfApplianceStatisticsClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus emberAfApplianceStatisticsClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfApplianceStatisticsClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfApplianceStatisticsClusterLogNotificationCallback` (int32u timeStamp, int32u logId, int32u logLength, int8u \*logPayload)
- boolean `emberAfApplianceStatisticsClusterLogQueueRequestCallback` (void)
- boolean `emberAfApplianceStatisticsClusterLogQueueResponseCallback` (int8u logQueueSize, int8u \*logIds)
- boolean `emberAfApplianceStatisticsClusterLogRequestCallback` (int32u logId)
- boolean `emberAfApplianceStatisticsClusterLogResponseCallback` (int32u timeStamp, int32u logId, int32u logLength, int8u \*logPayload)

- void `emberAfApplianceStatisticsClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfApplianceStatisticsClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfApplianceStatisticsClusterServerInitCallback` (int8u endpoint)
- void `emberAfApplianceStatisticsClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfApplianceStatisticsClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfApplianceStatisticsClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfApplianceStatisticsClusterServerTickCallback` (int8u endpoint)
- boolean `emberAfApplianceStatisticsClusterStatisticsAvailableCallback` (int8u logQueueSize, int8u \*logIds)

## Electrical Measurement Cluster Callbacks

- void `emberAfElectricalMeasurementClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfElectricalMeasurementClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfElectricalMeasurementClusterClientInitCallback` (int8u endpoint)
- void `emberAfElectricalMeasurementClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfElectricalMeasurementClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfElectricalMeasurementClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfElectricalMeasurementClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfElectricalMeasurementClusterGetMeasurementProfileCommandCallback` (int16u attributeId, int32u startTime, int8u numberOfIntervals)
- boolean `emberAfElectricalMeasurementClusterGetMeasurementProfileResponseCommandCallback` (int32u startTime, int8u status, int8u profileIntervalPeriod, int8u numberOfIntervalsDelivered, int16u attributeId, int8u \*intervals)
- boolean `emberAfElectricalMeasurementClusterGetProfileInfoCommandCallback` (void)
- boolean `emberAfElectricalMeasurementClusterGetProfileInfoResponseCommandCallback` (int8u profileCount, int8u profileIntervalPeriod, int8u maxNumberOfIntervals, int8u \*listOfAttributes)
- void `emberAfElectricalMeasurementClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfElectricalMeasurementClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfElectricalMeasurementClusterServerInitCallback` (int8u endpoint)
- void `emberAfElectricalMeasurementClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfElectricalMeasurementClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfElectricalMeasurementClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfElectricalMeasurementClusterServerTickCallback` (int8u endpoint)

## Diagnostics Cluster Callbacks

- void `emberAfDiagnosticsClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDiagnosticsClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDiagnosticsClusterClientInitCallback` (int8u endpoint)
- void `emberAfDiagnosticsClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDiagnosticsClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDiagnosticsClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDiagnosticsClusterClientTickCallback` (int8u endpoint)
- void `emberAfDiagnosticsClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfDiagnosticsClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfDiagnosticsClusterServerInitCallback` (int8u endpoint)
- void `emberAfDiagnosticsClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfDiagnosticsClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfDiagnosticsClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfDiagnosticsClusterServerTickCallback` (int8u endpoint)

## ZLL Commissioning Cluster Callbacks

- void `emberAfZllCommissioningClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfZllCommissioningClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfZllCommissioningClusterClientInitCallback` (int8u endpoint)
- void `emberAfZllCommissioningClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfZllCommissioningClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfZllCommissioningClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfZllCommissioningClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfZllCommissioningClusterDeviceInformationRequestCallback` (int32u transaction, int8u startIndex)
- boolean `emberAfZllCommissioningClusterDeviceInformationResponseCallback` (int32u transaction, int8u numberofSubDevices, int8u startIndex, int8u deviceInformationRecordCount, int8u \*deviceInformationRecordList)
- boolean `emberAfZllCommissioningClusterEndpointInformationCallback` (int8u \*ieeeAddress, int16u networkAddress, int8u endpointId, int16u profileId, int16u deviceId, int8u version)

- boolean `emberAfZllCommissioningClusterGetEndpointListRequestCallback` (int8u startIndex)
- boolean `emberAfZllCommissioningClusterGetEndpointListResponseCallback` (int8u total, int8u startIndex, int8u count, int8u \*endpointInformationRecordList)
- boolean `emberAfZllCommissioningClusterGetGroupIdentifiersRequestCallback` (int8u startIndex)
- boolean `emberAfZllCommissioningClusterGetGroupIdentifiersResponseCallback` (int8u total, int8u startIndex, int8u count, int8u \*groupInformationRecordList)
- boolean `emberAfZllCommissioningClusterIdentifyRequestCallback` (int32u transaction, int16u identifyDuration)
- boolean `emberAfZllCommissioningClusterNetworkJoinEndDeviceRequestCallback` (int32u transaction, int8u \*extendedPanId, int8u keyIndex, int8u \*encryptedNetworkKey, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress, int16u groupIdentifiersBegin, int16u groupIdentifiersEnd, int16u freeNetworkAddressRangeBegin, int16u freeNetworkAddressRangeEnd, int16u freeGroupIdentifierRangeBegin, int16u freeGroupIdentifierRangeEnd)
- boolean `emberAfZllCommissioningClusterNetworkJoinEndDeviceResponseCallback` (int32u transaction, int8u status)

- boolean `emberAfZllCommissioningClusterScanRequestCallback` (int32u transaction, int8u zigbeeInformation, int8u zllInformation)
- boolean `emberAfZllCommissioningClusterScanResponseCallback` (int32u transaction, int8u rssiCorrection, int8u zigbeeInformation, int8u zllInformation, int16u keyBitmask, int32u responseId, int8u \*extendedPanId, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress, int8u numberOfSubDevices, int8u totalGroupIds, int8u endpointId, int16u profileId, int16u deviceId, int8u version, int8u groupIdCount)
- void `emberAfZllCommissioningClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfZllCommissioningClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfZllCommissioningClusterServerInitCallback` (int8u endpoint)
- void `emberAfZllCommissioningClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfZllCommissioningClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfZllCommissioningClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfZllCommissioningClusterServerTickCallback` (int8u endpoint)

## Sample Mfg Specific Cluster Cluster Callbacks

- void `emberAfSampleMfgSpecificClusterClientAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfSampleMfgSpecificClusterClientDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfSampleMfgSpecificClusterClientInitCallback` (int8u endpoint)
- void `emberAfSampleMfgSpecificClusterClientManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfSampleMfgSpecificClusterClientMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfSampleMfgSpecificClusterClientPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfSampleMfgSpecificClusterClientTickCallback` (int8u endpoint)
- boolean `emberAfSampleMfgSpecificClusterCommandOneCallback` (int8u argOne)
- void `emberAfSampleMfgSpecificClusterServerAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId)
- void `emberAfSampleMfgSpecificClusterServerDefaultResponseCallback` (int8u endpoint, int8u commandId, `EmberAfStatus` status)
- void `emberAfSampleMfgSpecificClusterServerInitCallback` (int8u endpoint)
- void `emberAfSampleMfgSpecificClusterServerManufacturerSpecificAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, int16u manufacturerCode)
- void `emberAfSampleMfgSpecificClusterServerMessageSentCallback` (`EmberOutgoingMessageType` type, int16u indexOrDestination, `EmberApsFrame` \*apsFrame, int16u msgLen, int8u \*message, `EmberStatus` status)
- `EmberAfStatus` `emberAfSampleMfgSpecificClusterServerPreAttributeChangedCallback` (int8u endpoint, `EmberAfAttributeId` attributeId, `EmberAfAttributeType` attributeType, int8u size, int8u \*value)
- void `emberAfSampleMfgSpecificClusterServerTickCallback` (int8u endpoint)

## Basic Server Cluster Plugin Callbacks

- void `emberAfPluginBasicResetToFactoryDefaultsCallback` (uint8\_t endpoint)

## Bulb PWM Configuration Plugin Callbacks

- void `emberAfPluginBulbPwmConfigurationBlinkStopCallback` (uint8\_t endpoint)

## Bulb user interface Plugin Callbacks

- void `emberAfPluginBulbUiFinishedCallback` (`EmberStatus` status)

## Button Form/Join Code Plugin Callbacks

- void `emberAfPluginButtonJoiningButtonEventCallback` (uint8\_t buttonNumber, uint32\_t buttonPressDurationMs)

## Calendar Server Plugin Callbacks

- void `emberAfPluginCalendarServerPublishInfoCallback` (uint8\_t publishCommandId, EmberNodeId clientNodeId, uint8\_t clientEndpoint, uint8\_t totalCommands)

## Color Control Cluster Plugin Callbacks

- bool `emberAfPluginColorControlsColorSupportedCallback` (uint8\_t hue, uint8\_t saturation)

## Comms Hub Function (CHF) Plugin Callbacks

- void `emberAfPluginCommsHubFunctionSendCallback` (uint8\_t status, EmberEUI64 destinationDeviceId, uint16\_t dataLen, uint8\_t \*data)
- void `emberAfPluginCommsHubFunctionReceivedCallback` (EmberEUI64 senderDeviceId, uint16\_t dataLen, uint8\_t \*data)
- void `emberAfPluginCommsHubFunctionAlertWANCallback` (uint16\_t alertCode, uint8\_t \*gbzAlert, uint16\_t gbzAlertLength)
- void `emberAfPluginCommsHubFunctionTunnelOpenedCallback` (EmberEUI64 remoteDeviceId)

## Concentrator Support Plugin Callbacks

- void `emberAfPluginConcentratorBroadcastSentCallback` (void)

## Counters Plugin Callbacks

- void `emberAfPluginCountersRolloverCallback` (EmberCounterType type)

## Device Database Plugin Callbacks

- void `emberAfPluginDeviceDatabaseDiscoveryCompleteCallback` (const EmberAfDeviceInfo \*device)

## Device Management Client Plugin Callbacks

- void `emberAfPluginDeviceManagementClientEnactChangeOfTenancyCallback` (uint8\_t endpoint, EmberAfDeviceManagementTenancy \*tenancy)
- void `emberAfPluginDeviceManagementClientEnactChangeOfSupplierCallback` (uint8\_t endpoint, EmberAfDeviceManagementSupplier \*supplier)
- EmberStatus `emberAfPluginDeviceManagementClientEnactChangeSupplyCallback` (uint8\_t endpoint, EmberAfDeviceManagementSupply \*supply)
- void `emberAfPluginDeviceManagementClientSetSupplyStatusCallback` (uint8\_t endpoint, EmberAfDeviceManagementSupplyStatusFlags \*supplyStatus)
- void `emberAfPluginDeviceManagementClientEnactUpdateUncontrolledFlowThresholdCallback` (uint8\_t endpoint, EmberAfDeviceManagementUncontrolledFlowThreshold \*supplier)

## Device Management Server Plugin Callbacks

- void `emberAfPluginDeviceManagementServerGetPasswordCallback` (EmberNodeId senderNodeId, EmberAfDeviceManagementPasswordType passwordType, EmberAfDeviceManagementPassword passwordInfo)

## Door Lock Server Cluster Plugin Callbacks

- bool `emberAfPluginDoorLockServerActivateDoorLockCallback` (bool activate)

## Demand Response Load Control Cluster Client Plugin Callbacks

- bool `emberAfPluginDrlcEventActionCallback` (`EmberAfLoadControlEvent` \*loadControlEvent, `EmberAfAmiEventStatus` eventStatus, `uint8_t` sequenceNumber)

## End Device Support Plugin Callbacks

- void `emberAfPluginEndDeviceSupportPollCompletedCallback` (`EmberStatus` status)

## Events Server Plugin Callbacks

- bool `emberAfPluginEventsServerOkToClearLogCallback` (`EmberAfEventLogId` logId)
- void `emberAfPluginEventsServerLogDataUpdatedCallback` (`const EmberAfClusterCommand` \*cmd)

## EZ-Mode Commissioning Plugin Callbacks

- void `emberAfPluginEzmodeCommissioningClientCompleteCallback` (`uint8_t` bindingIndex)

## Find and Bind Initiator Plugin Callbacks

- bool `emberAfPluginFindAndBindInitiatorBindTargetCallback` (`EmberNodeId` nodeId, `EmberBindingTableEntry` \*bindingEntry, `uint8_t` \*groupName)
- void `emberAfPluginFindAndBindInitiatorCompleteCallback` (`EmberStatus` status)

## Form and Join Library Plugin Callbacks

- void `emberAfPluginFormAndJoinNetworkFoundCallback` (`EmberZigbeeNetwork` \*networkFound, `uint8_t` lqi, `int8_t` rssi)
- void `emberAfPluginFormAndJoinUnusedPanIdFoundCallback` (`EmberPanId` panId, `uint8_t` channel)

## Gas Proxy Function (GPF) Plugin Callbacks

- void `emberAfPluginGasProxyFunctionNonTapOffMessageHandlerCompletedCallback` (`uint8_t` \*gbzCommandsResponse, `uint16_t` gbzCommandsResponseLength)
- void `emberAfPluginGasProxyFunctionAlertWANCallback` (`uint16_t` alertCode, `uint8_t` \*gbzAlert, `uint16_t` gbzAlertLength)
- void `emberAfPluginGasProxyFunctionTapOffMessageFutureCommandIgnoredCallback` (`const EmberAfGpfMessage` \*gpfMessage, `const EmberAfClusterCommand` \*zclClusterCommand)
- bool `emberAfPluginGasProxyFunctionDataLogAccessRequestCallback` (`const EmberAfGpfMessage` \*gpfMessage, `const EmberAfClusterCommand` \*zclClusterCommand)
- `EmberAfGpfZclCommandPermission` `emberAfPluginGasProxyFunctionValidateIncomingZclCommandCallback` (`const EmberAfClusterCommand` \*cmd, `uint16_t` messageCode)

- void `emberAfPluginGasProxyFunctionUnknownSeasonWeekIdCallback` (uint32\_t issuerCalendarId, uint8\_t \*seasonEntries, uint8\_t seasonEntriesLength, uint8\_t unknownWeekIdSeasonsMask)
- void `emberAfPluginGasProxyFunctionUnknownSpecialDaysDayIdCallback` (uint32\_t issuerCalendarId, uint8\_t \*specialDayEntries, uint8\_t specialDayEntriesLength, uint8\_t unknownDayIdMask)

## GBCS Device Log Plugin Callbacks

- void `emberAfPluginGbcDeviceLogDeviceRemovedCallback` (EmberEUI64 deviceId)

## GBZ Message Controller Plugin Callbacks

- void `emberAfPluginGbzMessagControllerDecryptDataCallback` (EmberAfGbzMessaageData \*data)
- void `emberAfPluginGbzMessagControllerEncryptDataCallback` (EmberAfGbzMessaageData \*data)

## Green Power Server Plugin Callbacks

- bool `emberAfPluginGreenPowerServerGpdCommissioningCallback` (EmberGpApplicationInfo \*appInfo)

## Groups Server Cluster Plugin Callbacks

- void `emberAfPluginGroupsServerGetGroupNameCallback` (uint8\_t endpoint, uint16\_t groupId, uint8\_t \*groupName)
- void `emberAfPluginGroupsServerSetGroupNameCallback` (uint8\_t endpoint, uint16\_t groupId, uint8\_t \*groupName)
- bool `emberAfPluginGroupsServerGroupNamesSupportedCallback` (uint8\_t endpoint)

## Identify Cluster Plugin Callbacks

- void `emberAfPluginIdentifyStartFeedbackCallback` (uint8\_t endpoint, uint16\_t identifyTime)
- void `emberAfPluginIdentifyStopFeedbackCallback` (uint8\_t endpoint)

## Interpan Plugin Callbacks

- bool `emberAfPluginInterpanPreMessageReceivedCallback` (const EmberAfInterpanHeader \*header, uint8\_t msgLen, uint8\_t \*message)
- void `emberAfPluginInterpanMessageReceivedOverFragmentsCallback` (const EmberAfInterpanHeader \*header, uint8\_t msgLen, uint8\_t \*message)
- void `emberAfPluginInterpanFragmentTransmissionFailedCallback` (uint8\_t interpanFragmentationStatus, uint8\_t fragmentNum)

## Messaging Client Cluster Plugin Callbacks

- bool `emberAfPluginMessagingClientPreDisplayMessageCallback` (uint32\_t messageId, uint8\_t messageControl, uint32\_t startTime, uint16\_t durationInMinutes, uint8\_t \*message, uint8\_t optionalExtendedMessageControl)
- void `emberAfPluginMessagingClientDisplayMessageCallback` (EmberAfPluginMessagingClientMessage \*message)

- void `emberAfPluginMessagingClientCancelMessageCallback` (`EmberAfPluginMessagingClientMessage *message`)

## Meter Mirror Plugin Callbacks

- void `emberAfPluginMeterMirrorAddedCallback` (`const EmberEUI64 requestingDeviceIeeeAddress, uint8_t endpoint`)
- void `emberAfPluginMeterMirrorRemovedCallback` (`const EmberEUI64 requestingDeviceIeeeAddress, uint8_t endpoint`)
- void `emberAfPluginMeterMirrorReportingCompleteCallback` (`uint8_t endpoint`)

## Meter Snapshot Server Plugin Callbacks

- void `emberAfPluginMeterSnapshotServerScheduleSnapshotCallback` (`uint8_t srcEndpoint, uint8_t dstEndpoint, EmberNodeId dest, uint8_t *snapshotPayload, uint8_t *responsePayload`)
- `uint32_t emberAfPluginMeterSnapshotServerTakeSnapshotCallback` (`uint8_t endpoint, uint32_t snapshotCause, uint8_t *snapshotConfirmation`)
- void `emberAfPluginMeterSnapshotServerGetSnapshotCallback` (`uint8_t srcEndpoint, uint8_t dstEndpoint, EmberNodeId dest, uint8_t *snapshotCriteria`)

## Network Creator Plugin Callbacks

- void `emberAfPluginNetworkCreatorCompleteCallback` (`const EmberNetworkParameters *network, bool usedSecondaryChannels`)
- `EmberPanId emberAfPluginNetworkCreatorGetPanIdCallback` (`void`)

## Network Find Plugin Callbacks

- void `emberAfPluginNetworkFindFinishedCallback` (`EmberStatus status`)
- `int8_t emberAfPluginNetworkFindGetRadioPowerForChannelCallback` (`uint8_t channel`)
- `bool emberAfPluginNetworkFindJoinCallback` (`EmberZigbeeNetwork *networkFound, uint8_t lqi, int8_t rssi`)

## Network Steering Plugin Callbacks

- void `emberAfPluginNetworkSteeringCompleteCallback` (`EmberStatus status, uint8_t totalBeacons, uint8_t joinAttempts, uint8_t finalState`)
- `int8_t emberAfPluginNetworkSteeringGetPowerForRadioChannelCallback` (`uint8_t channel`)
- `EmberNodeType emberAfPluginNetworkSteeringGetNodeTypeCallback` (`EmberAfPluginNetworkSteeringJoiningState state`)

## OTA Simple Storage EEPROM Driver Plugin Callbacks

- void `emberAfPluginOtaStorageSimpleEepromEraseCompleteCallback` (`bool success`)

## Prepayment Server Plugin Callbacks

- `bool emberAfPluginPrepaymentServerConsumerTopUpCallback` (`uint8_t originatingDevice, uint8_t *topUpCode`)

## Price Client Plugin Callbacks

- void `emberAfPluginPriceClientPriceStartedCallback` (`EmberAfPluginPriceClientPrice` \*price)
- void `emberAfPluginPriceClientPriceExpiredCallback` (`EmberAfPluginPriceClientPrice` \*price)
- uint8\_t `emberAfPluginPriceClientPendingCppEventCallback` (uint8\_t cppAuth)

## Price Server Plugin Callbacks

- void `emberAfPluginPriceServerNewActivePriceMatrixCallback` (const `EmberAfPriceCommonInfo` \*priceCommonInfo, const `EmberAfScheduledPriceMatrix` \*priceMatrix)
- void `emberAfPluginPriceServerNewActiveTariffInformationCallback` (const `EmberAfPriceCommonInfo` \*priceCommonInfo, const `EmberAfScheduledTariff` \*priceTariffInfo)
- void `emberAfPluginPriceServerNewActiveBlockThresholdsInformationCallback` (const `EmberAfPriceCommonInfo` \*priceCommonInfo, const `EmberAfScheduledBlockThresholds` \*priceBlockThresholds)
- void `emberAfPluginPriceServerNewActiveBlockPeriodInformationCallback` (const `EmberAfPriceCommonInfo` \*priceCommonInfo, const `EmberAfPriceBlockPeriod` \*priceBlockPeriods)

## Reporting Plugin Callbacks

- `EmberAfStatus emberAfPluginReportingConfiguredCallback` (const `EmberAfPluginReportingEntry` \*entry)

## Generic Device Profile Plugin Callbacks

- bool `emberAfPluginRf4ceGdpZrc20StartConfigurationCallback` (bool isOriginator, uint8\_t pairingIndex)
- void `emberAfPluginRf4ceGdpZrc20BindingCompleteCallback` (`EmberAfRf4ceGdpBindingStatus` status, uint8\_t pairingIndex)
- void `emberAfPluginRf4ceGdpStartValidationCallback` (uint8\_t pairingIndex)
- void `emberAfPluginRf4ceGdpBindingCompleteCallback` (`EmberAfRf4ceGdpBindingStatus` status, uint8\_t pairingIndex)
- bool `emberAfPluginRf4ceGdpIncomingBindProxyCallback` (const `EmberEUI64` ieeeAddr)
- void `emberAfPluginRf4ceGdpHeartbeatPollingEstablishedCallback` (uint8\_t pairingIndex, `EmberAfRf4ceGdpPollingTrigger` triggers)
- void `emberAfPluginRf4ceGdpIdentifyCallback` (`EmberAfRf4ceGdpClientNotificationIdentifyFlags` flags, uint16\_t timeS)
- void `emberAfPluginRf4ceGdpIdentifyClientFoundCallback` (`EmberAfRf4ceGdpClientNotificationIdentifyFlags` flags)
- void `emberAfPluginRf4ceGdpKeyExchangeCompleteCallback` (`EmberStatus` status)
- bool `emberAfPluginRf4ceGdpVendorSpecificKeyExchangeCallback` (uint8\_t initiatorVendorSpecificParam, uint8\_t \*responderVendorSpecificParam, uint8\_t \*sharedSecret)

## RF4CE Multiple System Operators Profile Plugin Callbacks

- void `emberAfPluginRf4ceMsoStartValidationCallback` (uint8\_t pairingIndex)
- void `emberAfPluginRf4ceMsoBindingCompleteCallback` (`EmberAfRf4ceMsoBindingStatus` status, uint8\_t pairingIndex)
- void `emberAfPluginRf4ceMsoUserControlCallback` (const `EmberAfRf4ceMsoUserControlRecord` \*record)

- `EmberAfRf4ceStatus emberAfPluginRf4ceMsoGetIrRfDatabaseAttributeCallback (uint8_t pairingIndex, uint8_t entryIndex, uint8_t *valueLength, uint8_t *value)`
- `bool emberAfPluginRf4ceMsoHaveIrRfDatabaseAttributeCallback (uint8_t pairingIndex, uint8_t entryIndex)`
- `void emberAfPluginRf4ceMsoIncomingIrRfDatabaseAttributeCallback (uint8_t pairingIndex, uint8_t entryIndex, uint8_t valueLength, const uint8_t *value)`
- `EmberStatus emberAfPluginRf4ceMsoGetIrRfDatabaseEntryCallback (EmberAfRf4ceMsoKeyCode keyCode, EmberAfRf4ceMsoIrRfDatabaseEntry *entry)`

## RF4CE Profile Support Plugin Callbacks

- `bool emberAfPluginRf4ceProfileGdpMessageSentCallback (uint8_t pairingIndex, uint8_t profileId, uint16_t vendorId, uint8_t messageTag, const uint8_t *message, uint8_t messageLength, EmberStatus status)`
- `void emberAfPluginRf4ceProfileRemoteControl11MessageSentCallback (uint8_t pairingIndex, uint16_t vendorId, uint8_t messageTag, const uint8_t *message, uint8_t messageLength, EmberStatus status)`
- `void emberAfPluginRf4ceProfileZrc20MessageSentCallback (uint8_t pairingIndex, uint16_t vendorId, uint8_t messageTag, const uint8_t *message, uint8_t messageLength, EmberStatus status)`
- `void emberAfPluginRf4ceProfileMsoMessageSentCallback (uint8_t pairingIndex, uint16_t vendorId, uint8_t messageTag, const uint8_t *message, uint8_t messageLength, EmberStatus status)`
- `void emberAfPluginRf4ceProfileMessageSentCallback (uint8_t pairingIndex, uint8_t profileId, uint16_t vendorId, uint8_t messageTag, const uint8_t *message, uint8_t messageLength, EmberStatus status)`
- `bool emberAfPluginRf4ceProfileGdpIncomingMessageCallback (uint8_t pairingIndex, uint8_t profileId, uint16_t vendorId, EmberRf4ceTxOption txOptions, const uint8_t *message, uint8_t messageLength)`
- `void emberAfPluginRf4ceProfileRemoteControl11IncomingMessageCallback (uint8_t pairingIndex, uint16_t vendorId, EmberRf4ceTxOption txOptions, const uint8_t *message, uint8_t messageLength)`
- `void emberAfPluginRf4ceProfileZrc20IncomingMessageCallback (uint8_t pairingIndex, uint16_t vendorId, EmberRf4ceTxOption txOptions, const uint8_t *message, uint8_t messageLength)`
- `void emberAfPluginRf4ceProfileMsoIncomingMessageCallback (uint8_t pairingIndex, uint16_t vendorId, EmberRf4ceTxOption txOptions, const uint8_t *message, uint8_t messageLength)`
- `void emberAfPluginRf4ceProfileIncomingMessageCallback (uint8_t pairingIndex, uint8_t profileId, uint16_t vendorId, EmberRf4ceTxOption txOptions, const uint8_t *message, uint8_t messageLength)`
- `bool emberAfPluginRf4ceProfileGdpDiscoveryRequestCallback (const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo *vendorInfo, const EmberRf4ceApplicationInfo *appInfo, uint8_t searchDevType, uint8_t rxLinkQuality)`
- `bool emberAfPluginRf4ceProfileRemoteControl11DiscoveryRequestCallback (const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo *vendorInfo, const EmberRf4ceApplicationInfo *appInfo, uint8_t searchDevType, uint8_t rxLinkQuality)`
- `bool emberAfPluginRf4ceProfileZrc20DiscoveryRequestCallback (const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo *vendorInfo, const EmberRf4ceApplicationInfo *appInfo, uint8_t searchDevType, uint8_t rxLinkQuality)`
- `bool emberAfPluginRf4ceProfileMsoDiscoveryRequestCallback (const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo *vendorInfo, const EmberRf4ceApplicationInfo *appInfo, uint8_t searchDevType, uint8_t rxLinkQuality)`
- `bool emberAfPluginRf4ceProfileGdpDiscoveryResponseCallback (bool atCapacity, uint8_t channel, EmberPanId panId, const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo *vendorInfo, const EmberRf4ceApplicationInfo *appInfo, uint8_t rxLinkQuality, uint8_t discRequestLqi)`

- bool `emberAfPluginRf4ceProfileRemoteControl11DiscoveryResponseCallback` (bool atCapacity, uint8\_t channel, `EmberPanId` panId, const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t rxLinkQuality, uint8\_t discRequestLqi)
- bool `emberAfPluginRf4ceProfileZrc20DiscoveryResponseCallback` (bool atCapacity, uint8\_t channel, `EmberPanId` panId, const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t rxLinkQuality, uint8\_t discRequestLqi)
- bool `emberAfPluginRf4ceProfileMsoDiscoveryResponseCallback` (bool atCapacity, uint8\_t channel, `EmberPanId` panId, const `EmberEUI64` ieeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t rxLinkQuality, uint8\_t discRequestLqi)
- void `emberAfPluginRf4ceProfileGdpDiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileRemoteControl11DiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileZrc20DiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileMsoDiscoveryCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceProfileGdpAutoDiscoveryResponseCompleteCallback` (`EmberStatus` status, const `EmberEUI64` srcIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t searchDevType)
- void `emberAfPluginRf4ceProfileRemoteControl11AutoDiscoveryResponseCompleteCallback` (`EmberStatus` status, const `EmberEUI64` srcIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t searchDevType)
- void `emberAfPluginRf4ceProfileZrc20AutoDiscoveryResponseCompleteCallback` (`EmberStatus` status, const `EmberEUI64` srcIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t searchDevType)
- void `emberAfPluginRf4ceProfileMsoAutoDiscoveryResponseCompleteCallback` (`EmberStatus` status, const `EmberEUI64` srcIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t searchDevType)
- bool `emberAfPluginRf4ceProfileGdpPairRequestCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberEUI64` sourceIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t keyExchangeTransferCount)
- bool `emberAfPluginRf4ceProfileRemoteControl11PairRequestCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberEUI64` sourceIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t keyExchangeTransferCount)
- bool `emberAfPluginRf4ceProfileZrc20PairRequestCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberEUI64` sourceIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t keyExchangeTransferCount)
- bool `emberAfPluginRf4ceProfileMsoPairRequestCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberEUI64` sourceIeeeAddr, uint8\_t nodeCapabilities, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo, uint8\_t keyExchangeTransferCount)
- void `emberAfPluginRf4ceProfileGdpPairCompleteCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo)
- void `emberAfPluginRf4ceProfileRemoteControl11PairCompleteCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo)
- void `emberAfPluginRf4ceProfileZrc20PairCompleteCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo)
- void `emberAfPluginRf4ceProfileMsoPairCompleteCallback` (`EmberStatus` status, uint8\_t pairingIndex, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*appInfo)

## ZigBee Remote Control 1.1 Profile Plugin Callbacks

- void `emberAfPluginRf4ceZrc11PairingCompleteCallback` (`EmberStatus` status, `uint8_t` pairingIndex, const `EmberEUI64` eui64, const `EmberRf4ceVendorInfo` \*vendorInfo, const `EmberRf4ceApplicationInfo` \*applicationInfo)
- void `emberAfPluginRf4ceZrc11UserControlCallback` (const `EmberAfRf4ceZrcUserControlRecord` \*record)
- void `emberAfPluginRf4ceZrc11CommandDiscoveryResponseCallback` (`EmberStatus` status, const `EmberAfRf4ceZrcCommandsSupported` \*commandsSupported)

## ZigBee Remote Control 2.0 Profile Plugin Callbacks

- void `emberAfPluginRf4ceZrc20ActionCallback` (const `EmberAfRf4ceZrcActionRecord` \*record)
- void `emberAfPluginRf4ceZrc20HaActionCallback` (const `EmberAfRf4ceZrcActionRecord` \*record)
- void `emberAfPluginRf4ceZrc20LegacyCommandDiscoveryCompleteCallback` (`EmberStatus` status, const `EmberAfRf4ceZrcCommandsSupported` \*commandsSupported)
- void `emberAfPluginRf4ceZrc20ActionMappingsNegotiationCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceZrc20IncomingMappableActionCallback` (`uint8_t` pairingIndex, `uint16_t` entryIndex, `EmberAfRf4ceZrcMappableAction` \*mappableAction)
- `EmberStatus` `emberAfPluginRf4ceZrc20GetMappableActionCallback` (`uint8_t` pairingIndex, `uint16_t` entryIndex, `EmberAfRf4ceZrcMappableAction` \*mappableAction)
- `uint16_t` `emberAfPluginRf4ceZrc20GetMappableActionCountCallback` (`uint8_t` pairingIndex)
- void `emberAfPluginRf4ceZrc20IncomingActionMappingCallback` (`uint8_t` pairingIndex, `uint16_t` entryIndex, `EmberAfRf4ceZrcActionMapping` \*actionMapping)
- `EmberStatus` `emberAfPluginRf4ceZrc20GetActionMappingCallback` (`uint8_t` pairingIndex, `uint16_t` entryIndex, `EmberAfRf4ceZrcActionMapping` \*actionMapping)
- `EmberStatus` `emberAfPluginRf4ceZrc20SetActionMappingCallback` (`uint8_t` pairingIndex, `uint16_t` entryIndex, `EmberAfRf4ceZrcActionMapping` \*actionMapping)
- void `emberAfPluginRf4ceZrc20HomeAutomationSupportedAnnouncementCompleteCallback` (`EmberStatus` status)
- void `emberAfPluginRf4ceZrc20IncomingHomeAutomationSupportedCallback` (`uint8_t` pairingIndex, `uint8_t` haInstanceId, `EmberAfRf4ceZrcHomeAutomationSupported` \*haSupported)
- `EmberStatus` `emberAfPluginRf4ceZrc20GetHomeAutomationSupportedCallback` (`uint8_t` pairingIndex, `uint8_t` haInstanceId, `EmberAfRf4ceZrcHomeAutomationSupported` \*haSupported)
- `EmberAfRf4ceGdpAttributeStatus` `emberAfPluginRf4ceZrc20GetHomeAutomationAttributeCallback` (`uint8_t` pairingIndex, `uint8_t` haInstanceId, `uint8_t` haAttributeId, `EmberAfRf4ceZrcHomeAutomationAttribute` \*haAttribute)
- void `emberAfPluginRf4ceZrc20PullHomeAutomationAttributeCompleteCallback` (`EmberAfRf4ceGdpAttributeStatus` responseStatus, `EmberAfRf4ceZrcHomeAutomationAttribute` \*haAttribute)

## ZigBee Remote Control 2.0 Home Automation Server Plugin Callbacks

- void `emberAfPluginRf4ceZrc20HaServerHaActionSentCallback` (`EmberOutgoingMessageType` type, `uint16_t` indexOrDestination, `EmberApsFrame` \*apsFrame, `uint16_t` msgLen, `uint8_t` \*message, `EmberStatus` status)

## Simple Metering Client Plugin Callbacks

- `uint16_t` `emberAfPluginSimpleMeteringClientRequestMirrorCallback` (`EmberEUI64` requestingDeviceIeeeAddress)
- `uint16_t` `emberAfPluginSimpleMeteringClientRemoveMirrorCallback` (`EmberEUI64` requestingDeviceIeeeAddress)

## Simple Metering Server Plugin Callbacks

- void `emberAfPluginSimpleMeteringServerProcessNotificationFlagsCallback` (uint16\_t attributeId, uint32\_t attributeValue)

## Sleepy Message Queue Plugin Callbacks

- void `emberAfPluginSleepyMessageQueueMessageTimedOutCallback` (uint8\_t sleepyMsgId)

## Standalone Bootloader Client Plugin Callbacks

- bool `emberAfPluginStandaloneBootloaderClientAllowIncomingMessageCallback` (EmberEUI64 sourceEui64, uint8\_t command)
- bool `emberAfPluginStandaloneBootloaderClientAllowBootloadLaunchCallback` (EmberEUI64 sourceEui64)

## Standalone Bootloader Common Plugin Callbacks

- bool `emberAfPluginStandaloneBootloaderCommonIncomingMessageCallback` (EmberEUI64 longId, uint8\_t length, uint8\_t \*message)

## Standalone Bootloader Server Plugin Callbacks

- void `emberAfPluginStandaloneBootloaderServerQueryResponseCallback` (bool queryWasBroadcast, const `EmberAfStandaloneBootloaderQueryResponseData` \*queryData)
- void `emberAfPluginStandaloneBootloaderServerFinishedCallback` (bool success)

## Tunneling Client Cluster Plugin Callbacks

- void `emberAfPluginTunnelingClientTunnelOpenedCallback` (uint8\_t tunnelIndex, `EmberAfPluginTunnelingClientStatus` tunnelStatus, uint16\_t maximumIncomingTransferSize)
- void `emberAfPluginTunnelingClientDataReceivedCallback` (uint8\_t tunnelIndex, uint8\_t \*data, uint16\_t dataLen)
- void `emberAfPluginTunnelingClientDataErrorCallback` (uint8\_t tunnelIndex, `EmberAfTunnelingTransferDataStatus` transferDataStatus)
- void `emberAfPluginTunnelingClientTunnelClosedCallback` (uint8\_t tunnelIndex)
- void `emberAfPluginTunnelingClientTransferDataFailureCallback` (uint16\_t indexOfDestination, `EmberApsFrame` \*apsFrame, uint16\_t msgLen, uint8\_t \*message, `EmberStatus` status)

## Tunneling Server Cluster Plugin Callbacks

- bool `emberAfPluginTunnelingServerIsProtocolSupportedCallback` (uint8\_t protocolId, uint16\_t manufacturerCode)
- void `emberAfPluginTunnelingServerTunnelOpenedCallback` (uint16\_t tunnelIndex, uint8\_t protocolId, uint16\_t manufacturerCode, bool flowControlSupport, uint16\_t maximumIncomingTransferSize)
- void `emberAfPluginTunnelingServerDataReceivedCallback` (uint16\_t tunnelIndex, uint8\_t \*data, uint16\_t dataLen)
- void `emberAfPluginTunnelingServerDataErrorCallback` (uint16\_t tunnelIndex, `EmberAfTunnelingTransferDataStatus` transferDataStatus)
- void `emberAfPluginTunnelingServerTunnelClosedCallback` (uint16\_t tunnelIndex, bool clientInitiated)

## Update TC Link Key Plugin Callbacks

- bool `emberAfPluginUpdateTcLinkKeyStatusCallback` (EmberKeyStatus keyStatus)

## ZLL Commissioning Plugin Callbacks

- void `emberAfPluginZllCommissioningInitialSecurityStateCallback` (EmberZllInitialSecurityState \*securityState)
- void `emberAfPluginZllCommissioningTouchLinkCompleteCallback` (const EmberZllNetwork \*networkInfo, uint8\_t deviceInformationRecordCount, const EmberZllDeviceInfoRecord \*deviceInformationRecordList)
- void `emberAfPluginZllCommissioningTouchLinkFailedCallback` (EmberAfZllCommissioningStatus status)
- uint8\_t `emberAfPluginZllCommissioningGroupIdentifierCountCallback` (uint8\_t endpoint)
- bool `emberAfPluginZllCommissioningGroupIdentifierCallback` (uint8\_t endpoint, uint8\_t index, EmberAfPluginZllCommissioningGroupInformationRecord \*record)
- uint8\_t `emberAfPluginZllCommissioningEndpointInformationCountCallback` (uint8\_t endpoint)
- bool `emberAfPluginZllCommissioningEndpointInformationCallback` (uint8\_t endpoint, uint8\_t index, EmberAfPluginZllCommissioningEndpointInformationRecord \*record)
- void `emberAfPluginZllCommissioningIdentifyCallback` (uint16\_t durationS)
- void `emberAfPluginZllCommissioningResetToFactoryNewCallback` (void)
- bool `emberAfPluginZllCommissioningJoinCallback` (EmberZigbeeNetwork \*networkFound, uint8\_t lqi, int8\_t rssi)

## ZLL On/Off Server Cluster Enhancements Plugin Callbacks

- EmberAfStatus `emberAfPluginZllOnOffServerOffWithEffectCallback` (uint8\_t endpoint, uint8\_t effectId, uint8\_t effectVariant)

## Connection Manager Plugin Callbacks

- void `emberAfPluginConnectionManagerFinishedCallback` (EmberStatus status)
- void `emberAfPluginConnectionManagerStartNetworkSearchCallback` (void)
- void `emberAfPluginConnectionManagerLeaveNetworkCallback` (void)

## Idle/Sleep Plugin Callbacks

- bool `emberAfPluginIdleSleepOkToSleepCallback` (uint32\_t durationMs)
- void `emberAfPluginIdleSleepWakeUpCallback` (uint32\_t durationMs)
- bool `emberAfPluginIdleSleepOkToIdleCallback` (void)
- void `emberAfPluginIdleSleepActiveCallback` (void)

## Low Voltage Shutdown Plugin Callbacks

- bool `emberAfPluginLowVoltageShutdownOkToShutdownCallback` (uint16\_t shutdownVoltage)
- void `emberAfPluginLowVoltageShutdownPreShutdownCallback` (uint16\_t shutdownVoltage)

## Battery Monitor Plugin Callbacks

- void `emberAfPluginBatteryMonitorDataReadyCallback` (uint16\_t batteryVoltageMilliV)

## Button Interface Plugin Callbacks

- void `emberAfPluginButtonInterfaceButton0PressedShortCallback` (uint16\_t timePressedMs)
- void `emberAfPluginButtonInterfaceButton1PressedShortCallback` (uint16\_t timePressedMs)
- void `emberAfPluginButtonInterfaceButton0PressedLongCallback` (uint16\_t timePressedMs, bool pressedAtReset)
- void `emberAfPluginButtonInterfaceButton1PressedLongCallback` (uint16\_t timePressedMs, bool pressedAtReset)
- void `emberAfPluginButtonInterfaceButton0PressingCallback` (void)
- void `emberAfPluginButtonInterfaceButton1PressingCallback` (void)
- void `emberAfPluginButtonInterfaceButton0LowCallback` (void)
- void `emberAfPluginButtonInterfaceButton0HighCallback` (void)
- void `emberAfPluginButtonInterfaceButton1LowCallback` (void)
- void `emberAfPluginButtonInterfaceButton1HighCallback` (void)

## GPIO Sensor Interface Plugin Callbacks

- void `emberAfPluginGpioSensorStateChangedCallback` (uint8\_t newSensorState)

## SB1 Gesture Sensor Plugin Callbacks

- void `emberAfPluginSb1GestureSensorGestureReceivedCallback` (uint8\_t gestureReceived, uint8\_t switchNumber)

## Tamper Switch Interface Plugin Callbacks

- void `emberAfPluginTamperSwitchTamperActiveCallback` (void)
- void `emberAfPluginTamperSwitchTamperAlarmCallback` (void)

### 6.4.1 Detailed Description

This header provides callback function prototypes to interface the developer's application code with the Ember Application Framework.

### 6.4.2 Function Documentation

#### 6.4.2.1 void `emberAfAddToCurrentAppTasksCallback` ( EmberAfApplicationTask tasks )

Add To Current App Tasks.

This function is only useful to sleepy end devices. This function will note the passed item as part of a set of tasks the application has outstanding (e.g. message sent requiring APS acknowledgement). This will affect how the application behaves with regard to sleeping and polling. Until the outstanding task is completed, the device may poll more frequently and sleep less often.

### Parameters

<i>tasks</i>	Ver.: always
--------------	--------------

**6.4.2.2 EmberAfAttributeWritePermission emberAfAllowNetworkWriteAttributeCallback ( int8u *endpoint*, EmberAfClusterId *clusterId*, EmberAfAttributeId *attributeld*, int8u *mask*, int16u *manufacturerCode*, int8u \* *value*, int8u *type* )**

Allow Network Write Attribute.

This function is called by the application framework before it writes an attribute in response to a write attribute request from an external device. The value passed into this callback is the value to which the attribute is to be set by the framework. Example: In mirroring simple metering data on an Energy Services Interface (ESI) (formerly called Energy Service Portal (ESP) in SE 1.0.), a mirrored simple meter needs to write read-only attributes on its mirror. The-meter-mirror sample application, located in app/framework/sample-apps, uses this callback to allow the mirrored device to write simple metering attributes on the mirror regardless of the fact that most simple metering attributes are defined as read-only by the ZigBee specification. Note: The ZCL specification does not (as of this writing) specify any permission-level security for writing writeable attributes. As far as the ZCL specification is concerned, if an attribute is writeable, any device that has a link key for the device should be able to write that attribute. Furthermore if an attribute is read only, it should not be written over the air. Thus, if you implement permissions for writing attributes as a feature, you MAY be operating outside the specification. This is unlikely to be a problem for writing read-only attributes, but it may be a problem for attributes that are writeable according to the specification but restricted by the application implementing this callback.

### Parameters

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>attributeId</i>	Ver.: always
<i>mask</i>	Ver.: always
<i>manufacturerCode</i>	Ver.: always
<i>value</i>	Ver.: always
<i>type</i>	Ver.: always

**6.4.2.3 boolean emberAfAttributeReadAccessCallback ( int8u *endpoint*, EmberAfClusterId *clusterId*, int16u *manufacturerCode*, int16u *attributeld* )**

Attribute Read Access.

This function is called whenever the Application Framework needs to check access permission for an attribute read.

### Parameters

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>manufacturerCode</i>	Ver.: always
<i>attributeId</i>	Ver.: always

#### 6.4.2.4 boolean emberAfAttributeWriteAccessCallback ( int8u *endpoint*, EmberAfClusterId *clusterId*, int16u *manufacturerCode*, int16u *attributeId* )

Attribute Write Access.

This function is called whenever the Application Framework needs to check access permission for an attribute write.

##### Parameters

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>manufacturer-Code</i>	Ver.: always
<i>attributeId</i>	Ver.: always

#### 6.4.2.5 EmberStatus emberAfClearReportTableCallback ( void )

Clear Report Table.

This function is called by the framework when the application should clear the report table.

#### 6.4.2.6 void emberAfClusterInitCallback ( int8u *endpoint*, EmberAfClusterId *clusterId* )

Cluster Init.

This function is called when a specific cluster is initialized. It gives the application an opportunity to take care of cluster initialization procedures. It is called exactly once for each endpoint where cluster is present.

##### Parameters

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always

#### 6.4.2.7 boolean emberAfClusterSecurityCustomCallback ( EmberAfProfileId *profileId*, EmberAfClusterId *clusterId*, boolean *incoming*, int8u *commandId* )

Cluster Security Custom.

This callback is fired when determining if APS encryption is required for a cluster outside of the specification's required clusters. In other words, for the Smart Energy profile this would be a cluster beyond the list that normally requires APS encryption.

##### Parameters

<i>profileId</i>	The profile ID Ver.: always
<i>clusterId</i>	The cluster ID Ver.: always
<i>incoming</i>	Whether this is an incoming or outgoing message. Ver.: always
<i>commandId</i>	The ZCL command ID being sent/received. Ver.: always

#### 6.4.2.8 boolean emberAfConfigureReportingCommandCallback ( const EmberAfClusterCommand \* *cmd* )

Configure Reporting Command.

This function is called by the application framework when a Configure Reporting command is received from an external device. The Configure Reporting command contains a series of attribute reporting configuration records. The application should return true if the message was processed or false if it was not.

##### Parameters

<i>cmd</i>	Ver.: always
------------	--------------

#### 6.4.2.9 boolean emberAfConfigureReportingResponseCallback ( EmberAfClusterId *clusterId*, int8u \* *buffer*, int16u *bufLen* )

Configure Reporting Response.

This function is called by the application framework when a Configure Reporting Response command is received from an external device. The application should return true if the message was processed or false if it was not.

##### Parameters

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>buffer</i>	Buffer containing the list of attribute status records. Ver.: always
<i>bufLen</i>	The length in bytes of the list. Ver.: always

#### 6.4.2.10 boolean emberAfDefaultResponseCallback ( EmberAfClusterId *clusterId*, int8u *commandId*, EmberAfStatus *status* )

Default Response.

This function is called by the application framework when a Default Response command is received from an external device. The application should return true if the message was processed or false if it was not.

##### Parameters

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>commandId</i>	The command identifier to which this is a response. Ver.: always
<i>status</i>	Specifies either SUCCESS or the nature of the error that was detected in the received command. Ver.: always

#### 6.4.2.11 boolean emberAfDiscoverAttributesResponseCallback ( EmberAfClusterId *clusterId*, boolean *discoveryComplete*, int8u \* *buffer*, int16u *bufLen*, boolean *extended* )

Discover Attributes Response.

This function is called by the application framework when a Discover Attributes Response or Discover Attributes Extended Response command is received from an external device. The Discover Attributes Response command contains a bool indicating if discovery is complete and a list of zero or more attribute identifier/type records. The final argument indicates whether the response is in the extended format or not. The application should return true if the message was processed or false if it was not.

#### Parameters

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>discoveryComplete</i>	Indicates whether there are more attributes to be discovered. true if there are no more attributes to be discovered. Ver.: always
<i>buffer</i>	Buffer containing the list of attribute identifier/type records. Ver.: always
<i>bufLen</i>	The length in bytes of the list. Ver.: always
<i>extended</i>	Indicates whether the response is in the extended format or not. Ver.: always

**6.4.2.12 boolean emberAfDiscoverCommandsGeneratedResponseCallback ( EmberAfClusterId *clusterId*, int16u *manufacturerCode*, boolean *discoveryComplete*, int8u \* *commandIds*, int16u *commandIdCount* )**

Discover Commands Generated Response.

This function is called by the framework when Discover Commands Generated Response is received.

#### Parameters

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>manufacturerCode</i>	Manufacturer code Ver.: always
<i>discoveryComplete</i>	Indicates whether there are more commands to be discovered. Ver.: always
<i>commandIds</i>	Buffer containing the list of command identifiers. Ver.: always
<i>commandIdCount</i>	The length of bytes of the list, which is the same as the number of identifiers. Ver.: always

**6.4.2.13 boolean emberAfDiscoverCommandsReceivedResponseCallback ( EmberAfClusterId *clusterId*, int16u *manufacturerCode*, boolean *discoveryComplete*, int8u \* *commandIds*, int16u *commandIdCount* )**

Discover Commands Received Response.

This function is called by the framework when Discover Commands Received Response is received.

#### Parameters

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>manufacturerCode</i>	Manufacturer code Ver.: always
<i>discoveryComplete</i>	Indicates whether there are more commands to be discovered. Ver.: always
<i>commandIds</i>	Buffer containing the list of command identifiers. Ver.: always
<i>commandIdCount</i>	The length of bytes of the list, which is the same as the number of identifiers. Ver.: always

#### 6.4.2.14 void emberAfEepromInitCallback ( void )

Eeprom Init.

Tells the system to initialize the EEPROM if it is not already initialized.

#### 6.4.2.15 void emberAfEepromNoteInitializedStateCallback ( boolean state )

Eeprom Note Initialized State.

Records the state of the EEPROM so that an intelligent driver (like the EEPROM plugin) can re-initialize the driver prior to any calls to it.

##### Parameters

<i>state</i>	The state of the EEPROM, false=re-initialization needed, true=no-re-init needed Ver.: always
--------------	--

#### 6.4.2.16 void emberAfEepromShutdownCallback ( void )

Eeprom Shutdown.

Tells the system to shutdown the EEPROM if it is not already shutdown.

#### 6.4.2.17 void emberAfEnergyScanResultCallback ( int8u channel, int8s rssi )

Energy Scan Result.

This is called by the low-level stack code when an 802.15.4 energy scan completes.

##### Parameters

<i>channel</i>	The channel where the energy scan took place. Ver.: always
<i>rssi</i>	The receive signal strength indicator for the channel. Ver.: always

#### 6.4.2.18 EmberAfStatus emberAfExternalAttributeReadCallback ( int8u endpoint, EmberAfClusterId clusterId, EmberAfAttributeMetadata \* attributeMetadata, int16u manufacturerCode, int8u \* buffer )

External Attribute Read.

Like `emberAfExternalAttributeWriteCallback` above, this function is called when the framework needs to read an attribute that is not stored within the Application Framework's data structures. All of the important information about the attribute itself is passed as a pointer to an `EmberAfAttributeMetadata` struct, which is stored within the application and used to manage the attribute. A complete description of the `EmberAfAttributeMetadata` struct is provided in [app/framework/include/af-types.h](#). This function assumes that the application is able to read the attribute, write it into the passed buffer, and return immediately. Any attributes that require a state machine for reading and writing are not really candidates for externalization at the present time. The Application Framework does not currently include a state machine for reading or writing attributes that must take place across a series of application ticks. Attributes that cannot be read in a timely manner should be stored within the Application Framework and updated occasionally by the application code from within the `emberAfMainTickCallback`. If the application was successfully able to read the attribute and write it into the passed buffer, it should return a value of `EMBER_ZCL_STATUS_SUCCESS`. Any other return value indicates the application was not able to read the attribute.

#### Parameters

<code>endpoint</code>	Ver.: always
<code>clusterId</code>	Ver.: always
<code>attribute-Metadata</code>	Ver.: always
<code>manufacturer-Code</code>	Ver.: always
<code>buffer</code>	Ver.: always

#### 6.4.2.19 `EmberAfStatus emberAfExternalAttributeWriteCallback ( int8u endpoint, EmberAfClusterId clusterId, EmberAfAttributeMetadata * attributeMetadata, int16u manufacturerCode, int8u * buffer )`

External Attribute Write.

This function is called whenever the Application Framework needs to write an attribute which is not stored within the data structures of the Application Framework itself. One of the new features in Version 2 is the ability to store attributes outside the Framework. This is particularly useful for attributes that do not need to be stored because they can be read off the hardware when they are needed, or are stored in some central location used by many modules within the system. In this case, you can indicate that the attribute is stored externally. When the framework needs to write an external attribute, it makes a call to this callback. This callback is very useful for host micros which need to store attributes in persistent memory. Because each host micro (used with an Ember NCP) has its own type of persistent memory storage, the Application Framework does not include the ability to mark attributes as stored in flash the way that it does for Ember SoCs like the EM35x. On a host micro, any attributes that need to be stored in persistent memory should be marked as external and accessed through the external read and write callbacks. Any host code associated with the persistent storage should be implemented within this callback. All of the important information about the attribute itself is passed as a pointer to an `EmberAfAttributeMetadata` struct, which is stored within the application and used to manage the attribute. A complete description of the `EmberAfAttributeMetadata` struct is provided in [app/framework/include/af-types.h](#). This function assumes that the application is able to write the attribute and return immediately. Any attributes that require a state machine for reading and writing are not candidates for externalization at the present time. The Application Framework does not currently include a state machine for reading or writing attributes that must take place across a series of application ticks. Attributes that cannot be written immediately should be stored within the Application Framework and updated occasionally by the application code from within the `emberAfMainTickCallback`. If the application was successfully able to write the attribute, it returns a value of `EMBER_ZCL_STATUS_SUCCESS`. Any other return value indicates the application was not able to write the attribute.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>attribute-Metadata</i>	Ver.: always
<i>manufacturer-Code</i>	Ver.: always
<i>buffer</i>	Ver.: always

**6.4.2.20 EmberStatus emberAfFindUnusedPanIdAndFormCallback ( void )**

Find Unused Pan Id And Form.

This function is called by the framework to search for an unused PAN id and form a new network. The application should return EMBER\_SUCCESS if the operation was initiated successfully.

**6.4.2.21 EmberAfApplicationTask emberAfGetCurrentAppTasksCallback ( void )**

Get Current App Tasks.

This function is only useful to sleepy end devices. This function will return the set of tasks the application has outstanding. These tasks affect how the application behaves with regard to sleeping and polling.

**6.4.2.22 EmberAfEventPollControl emberAfGetCurrentPollControlCallback ( void )**

Get Current Poll Control.

This function will retrieve the current poll control that the system is using for the current network. This is determined by examining all the scheduled events and obtaining the most restrictive poll control context across all events. The most restrictive poll control is EMBER\_AF\_SHORT\_POLL followed by EMBER\_AF\_LONG\_POLL.

**6.4.2.23 int32u emberAfGetCurrentPollIntervalMsCallback ( void )**

Get Current Poll Interval Ms.

This function is only useful to end devices. This function will return the current poll interval (in milliseconds) for the current network. This interval is the maximum amount of time a child is currently waiting between polls of its parent.

**6.4.2.24 int32u emberAfGetCurrentPollIntervalQsCallback ( void )**

Get Current Poll Interval Qs.

This function is only useful to end devices. This function will return the current poll interval (in quarter seconds) for the current network. This interval is the maximum amount of time a child is currently waiting between polls of its parent.

**6.4.2.25 EmberAfEventSleepControl emberAfGetCurrentSleepControlCallback ( void )**

Get Current Sleep Control.

This function will retrieve the current sleep control that the system is using. This is determined by examining all the scheduled events and obtaining the most restrictive sleep control context across all events. The most restrictive sleep control is EMBER\_AF\_STAY\_AWAKE followed by EMBER\_AF\_OK\_TO\_SLEEP.

#### **6.4.2.26 int32u emberAfGetCurrentTimeCallback ( void )**

Get Current Time.

This callback is called when device attempts to get current time from the hardware. If this device has means to retrieve exact time, then this method should implement it. If the callback can't provide the exact time it should return 0 to indicate failure. Default action is to return 0, which indicates that device does not have access to real time.

#### **6.4.2.27 EmberAfEventPollControl emberAfGetDefaultPollControlCallback ( void )**

Get Default Poll Control.

This function will retrieve the default poll control for the current network as previously set by [emberAfSetDefaultPollControlCallback\(\)](#). The default poll control will limit whether the network can long poll.

#### **6.4.2.28 EmberAfEventSleepControl emberAfGetDefaultSleepControlCallback ( void )**

Get Default Sleep Control.

This function will retrieve the default sleep control the system is using as previously set by [emberAfSetDefaultSleepControlCallback\(\)](#). The default sleep control will limit whether the device can sleep.

#### **6.4.2.29 boolean emberAfGetEndpointByIndexCallback ( int8u index, int8u \* endpointReturn )**

Get Endpoint By Index.

Get the endpoint number based on the passed index. By default the framework handles this by managing endpoints based on the precompiled configuration defined in AppBuilder. This callback can override this behavior at runtime and provide additional endpoints or different data than the compiled values. If the index is overridden than the callback shall return true and set the endpointReturn parameter accordingly. A value of 0xFF means the endpoint doesn't exist at that index. Otherwise false must be returned by the callback and the default framework behavior will be executed. This is only applicable to the SOC devices.

#### **Parameters**

<i>index</i>	The index of the endpoint. Ver.: always
<i>endpointReturn</i>	The value of endpoint. Ver.: always

#### **6.4.2.30 boolean emberAfGetEndpointDescriptionCallback ( int8u endpoint, EmberEndpointDescription \* result )**

Get Endpoint Description.

This callback is called by the framework whenever it receives a ZDO request to enumerate the details about an endpoint. By default the framework provides the information based on the precompiled endpoint information as defined in AppBuilder. This callback can override that behavior at runtime and return different information. If the endpoint information is being overridden then the callback must return true. Otherwise it should return false, which allows the framework to perform its default behavior. This is only applicable to SOC devices.

#### Parameters

<i>endpoint</i>	The endpoint number that is being queried. Ver.: always
<i>result</i>	This is a pointer to a data structure where the endpoint information is written if the callback is providing the information. Ver.: always

#### 6.4.2.31 boolean emberAfGetEndpointInfoCallback ( int8u *endpoint*, int8u \* *returnNetworkIndex*, EmberAfEndpointInfoStruct \* *returnEndpointInfo* )

Get Endpoint Info.

This function is a callback to an application implemented endpoint that operates outside the normal application framework. When the framework wishes to perform operations with that endpoint it uses this callback to retrieve the endpoint's information. If the endpoint exists and the application can provide data then true shall be returned. Otherwise the callback must return false.

#### Parameters

<i>endpoint</i>	The endpoint to retrieve data for. Ver.: always
<i>returnNetwork-Index</i>	The index corresponding to the ZigBee network the endpoint belongs to. If not using a multi-network device, 0 must be returned. Otherwise on a multi-network device the stack will switch to this network before sending the message. Ver.: always
<i>return-EndpointInfo</i>	A pointer to a data struct that will be written with information about the endpoint. Ver.: always

#### 6.4.2.32 void emberAfGetFormAndJoinExtendedPanIdCallback ( int8u \* *resultLocation* )

Get Form And Join Extended Pan Id.

This callback is called by the framework to get the extended PAN ID used by the current network for forming and joining. The extended PAN ID used for forming and joining is not necessarily the same extended PAN ID actually in use on the network.

#### Parameters

<i>resultLocation</i>	Ver.: always
-----------------------	--------------

#### 6.4.2.33 int32u emberAfGetLongPollIntervalMsCallback ( void )

Get Long Poll Interval Ms.

This function is only useful to end devices. This function will return the long poll interval (in milliseconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is not expecting data.

#### **6.4.2.34 int32u emberAfGetLongPollIntervalQsCallback ( void )**

Get Long Poll Interval Qs.

This function is only useful to end devices. This function will return the long poll interval (in quarter seconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is not expecting data.

#### **6.4.2.35 int16u emberAfGetShortPollIntervalMsCallback ( void )**

Get Short Poll Interval Ms.

This function is only useful to sleepy end devices. This function will return the short poll interval (in milliseconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is expecting data.

#### **6.4.2.36 int16u emberAfGetShortPollIntervalQsCallback ( void )**

Get Short Poll Interval Qs.

This function is only useful to sleepy end devices. This function will return the short poll interval (in quarter seconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is expecting data.

#### **6.4.2.37 int8u emberAfGetSourceRouteOverheadCallback ( EmberNodeId *destination* )**

Get Source Route Overhead.

This function is called by the framework to determine the overhead required in the network frame for source routing to a particular destination.

##### **Parameters**

<i>destination</i>	The node id of the destination Ver.: always
--------------------	---

#### **6.4.2.38 EmberAfApplicationTask emberAfGetWakeTimeoutBitmaskCallback ( void )**

Get Wake Timeout Bitmask.

This function is only useful to sleepy end devices. This function will return the wake timeout bitmask for the current network. The bitmask determines which tasks will timeout automatically and which tasks require manual removal from the task list.

#### **6.4.2.39 int16u emberAfGetWakeTimeoutMsCallback ( void )**

Get Wake Timeout Ms.

This function is only useful to sleepy end devices. This function will return the wake timeout (in milliseconds) for the current network. This timeout is the maximum amount of time a child will wait for a task in the wake bitmask to finish. While waiting, the device will short poll.

#### 6.4.2.40 int16u emberAfGetWakeTimeoutQsCallback ( void )

Get Wake Timeout Qs.

This function is only useful to sleepy end devices. This function will return the wake timeout (in quarter seconds) for the current network. This timeout is the maximum amount of time a child will wait for a task in the wake bitmask to finish. While waiting, the device will short poll.

#### 6.4.2.41 void emberAfHalButtonIsrCallback ( int8u button, int8u state )

Hal Button Isr.

This callback is called by the framework whenever a button is pressed on the device. This callback is called within ISR context.

##### Parameters

<i>button</i>	The button which has changed state, either BUTTON0 or BUTTON1 as defined in the appropriate BOARD_HEADER. Ver.: always
<i>state</i>	The new state of the button referenced by the button parameter, either ::BUTTON_PRESSED if the button has been pressed or ::BUTTON_RELEASED if the button has been released. Ver.: always

#### 6.4.2.42 EmberStatus emberAfInitiateInterPanKeyEstablishmentCallback ( EmberPanId *panId*, const EmberEUI64 *eui64* )

Initiate Inter Pan Key Establishment.

This function is called by the framework to initiate key establishment with a remote device on a different PAN. The application should return EMBER\_SUCCESS if key establishment was initiated successfully. The application should call [emberAfInterPanKeyEstablishmentCallback](#) as events occur.

##### Parameters

<i>panId</i>	The PAN id of the remote device. Ver.: always
<i>eui64</i>	The EUI64 of the remote device. Ver.: always

#### 6.4.2.43 EmberStatus emberAfInitiateKeyEstablishmentCallback ( EmberNodeId *nodeId*, int8u *endpoint* )

Initiate Key Establishment.

This function is called by the framework to initiate key establishment with a remote device. The application should return EMBER\_SUCCESS if key establishment was initiated successfully. The application should call [emberAfKeyEstablishmentCallback](#) as events occur.

##### Parameters

<i>nodeId</i>	The node id of the remote device. Ver.: always
<i>endpoint</i>	The endpoint on the remote device. Ver.: always

#### 6.4.2.44 EmberStatus emberAfInitiatePartnerLinkKeyExchangeCallback ( EmberNodeId *target*, int8u *endpoint*, EmberAfPartnerLinkKeyExchangeCallback \* *callback* )

Initiate Partner Link Key Exchange.

This function is called by the framework to initiate a partner link key exchange with a remote device. The application should return EMBER\_SUCCESS if the partner link key exchange was initiated successfully. When the partner link key exchange completes, the application should call the given callback.

##### Parameters

<i>target</i>	The node id of the remote device. Ver.: always
<i>endpoint</i>	The key establishment endpoint of the remote device. Ver.: always
<i>callback</i>	The callback that should be called when the partner link key exchange complets. Ver.: always

#### 6.4.2.45 boolean emberAfInterPanKeyEstablishmentCallback ( EmberAfKeyEstablishmentNotify-Message *status*, boolean *amInitiator*, EmberPanId *panId*, const EmberEUI64 *eui64*, int8u *delayInSeconds* )

Inter Pan Key Establishment.

A callback by the key-establishment code to indicate an event has occurred. For error codes this is purely a notification. For non-error status codes (besides LINK\_KEY\_ESTABLISHED), it is the application's chance to allow or disallow the operation. If the application returns true then the key establishment is allowed to proceed. If it returns false, then key establishment is aborted. LINK\_KEY\_ESTABLISHED is a notification of success.

##### Parameters

<i>status</i>	Ver.: always
<i>amInitiator</i>	Ver.: always
<i>panId</i>	Ver.: always
<i>eui64</i>	Ver.: always
<i>delayInSeconds</i>	Ver.: always

#### 6.4.2.46 EmberStatus emberAfInterpanSendMessageCallback ( EmberAfInterpanHeader \* *header*, int16u *messageLength*, int8u \* *message* )

Interpan Send Message.

This function will send a raw MAC message with interpan frame format using the passed parameters.

##### Parameters

<i>header</i>	Interpan header info Ver.: always
<i>messageLength</i>	The length of the message received or to send Ver.: always
<i>message</i>	The message data received or to send. Ver.: always

#### 6.4.2.47 boolean emberAfKeyEstablishmentCallback ( EmberAfKeyEstablishmentNotifyMessage status, boolean amInitiator, EmberNodeId partnerShortId, int8u delayInSeconds )

Key Establishment.

A callback by the key-establishment code to indicate an event has occurred. For error codes this is purely a notification. For non-error status codes (besides LINK\_KEY\_ESTABLISHED), it is the application's chance to allow or disallow the operation. If the application returns true then the key establishment is allowed to proceed. If it returns false, then key establishment is aborted. LINK\_KEY\_ESTABLISHED is a notification of success.

##### Parameters

<i>status</i>	Ver.: always
<i>amInitiator</i>	Ver.: always
<i>partnerShortId</i>	Ver.: always
<i>delayInSeconds</i>	Ver.: always

#### 6.4.2.48 void emberAfMainInitCallback ( void )

Main Init.

This function is called from the application's main function. It gives the application a chance to do any initialization required at system startup. Any code that you would normally put into the top of the application's [main\(\)](#) routine should be put into this function. This is called before the clusters, plugins, and the network are initialized so some functionality is not yet available. Note: No callback in the Application Framework is associated with resource cleanup. If you are implementing your application on a Unix host where resource cleanup is a consideration, we expect that you will use the standard Posix system calls, including the use of atexit() and handlers for signals such as SIGTERM, SIGINT, SIGCHLD, SIGPIPE and so on. If you use the signal() function to register your signal handler, please mind the returned value which may be an Application Framework function. If the return value is non-null, please make sure that you call the returned function from your handler to avoid negating the resource cleanup of the Application Framework itself.

This function is called when the application starts and can be used to perform any additional initialization required at system startup.

Definition at line [490](#) of file [ncp/doc/callback.doc](#).

#### 6.4.2.49 boolean emberAfMainStartCallback ( int \* returnCode, int argc, char \*\* argv )

Main Start.

This function is called at the start of main after the HAL has been initialized. The standard main function arguments of argc and argv are passed in. However not all platforms have support for [main\(\)](#) function arguments. Those that do not are passed NULL for argv, therefore argv should be checked for NULL before using it. If the callback determines that the program must exit, it should return true. The value returned by [main\(\)](#) will be the value written to the returnCode pointer. Otherwise the callback should return false to let normal execution continue.

##### Parameters

<i>returnCode</i>	Ver.: always
<i>argc</i>	Ver.: always
<i>argv</i>	Ver.: always

#### 6.4.2.50 void emberAfMainTickCallback ( void )

Main Tick.

Whenever main application tick is called, this callback will be called at the end of the main tick execution. This function is called in each iteration of the main application loop and can be used to perform periodic functions. The frequency with which this function is called depends on how quickly the main loop runs. If the application blocks at any time during the main loop, this function will not be called until execution resumes.

Definition at line 502 of file [ncp/doc/callback.doc](#).

#### 6.4.2.51 boolean emberAfMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Message Sent.

This function is called by the application framework from the message sent handler, when it is informed by the stack regarding the message sent status. All of the values passed to the emberMessageSentHandler are passed on to this callback. This provides an opportunity for the application to verify that its message has been sent successfully and take the appropriate action. This callback should return a bool value of true or false. A value of true indicates that the message sent notification has been handled and should not be handled by the application framework.

##### Parameters

<i>type</i>	Ver.: always
<i>indexOrDestination</i>	Ver.: always
<i>apsFrame</i>	Ver.: always
<i>msgLen</i>	Ver.: always
<i>message</i>	Ver.: always
<i>status</i>	Ver.: always

#### 6.4.2.52 void emberAfNcpInitCallback ( boolean *memoryAllocation* )

Ncp Init.

This function is called when the network coprocessor is being initialized, either at startup or upon reset. It provides applications an opportunity to perform additional configuration of the NCP. The function is always called twice when the NCP is initialized. In the first invocation, *memoryAllocation* will be true and the application should only issue EZSP commands that affect memory allocation on the NCP. For example, tables on the NCP can be resized in the first call. In the second invocation, *memoryAllocation* will be false and the application should only issue EZSP commands that do not affect memory allocation. For example, tables on the NCP can be populated in the second call. This callback is not called on SoCs.

##### Parameters

<i>memoryAllocation</i>	Ver.: always
-------------------------	--------------

#### 6.4.2.53 void emberAfNcpIsAwakeIsrCallback ( void )

Ncp Is Awake Isr.

This function is called IN ISR CONTEXT. It notes that the NCP is awake after sleeping. Care should be taken to do minimal processing in this ISR handler function.

#### 6.4.2.54 void emberAfNetworkFoundCallback ( EmberZigbeeNetwork \* *networkFound*, int8u *lqi*, int8s *rssi* )

Network Found.

This callback is generated when an active scan finds a 802.15.4 network.

##### Parameters

<i>networkFound</i>	A struct containing information about the network found. Ver.: always
<i>lqi</i>	The link quality indication of the network found. Ver.: always
<i>rssi</i>	The received signal strength indication of the network found. Ver.: always

#### 6.4.2.55 void emberAfNetworkKeyUpdateCompleteCallback ( EmberStatus *status* )

Network Key Update Complete.

This is called by the framework when a network key update operation started by the trust center is complete.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.56 int8u emberAfOtaBootloadCallback ( const EmberAfOtaImageId \* *id*, int16u *ncpUpgradeTagId* )

Ota Bootload.

The platform specific routine to bootload the device from a ZigBee over-the-air upgrade file.

##### Parameters

<i>id</i>	A pointer to the structure that contains the information about what OTA image to bootload. Ver.: always
<i>ncpUpgradeTagId</i>	The tag ID of the upgrade data that will be used to bootload the device. Ver.: always

#### 6.4.2.57 void emberAfOtaClientBootloadCallback ( const EmberAfOtaImageId \* *id* )

Ota Client Bootload.

This callback is fired when the OTA Client receives a command to bootload the newly downloaded OTA image. This callback will perform the platform specific to bootload their device.

**Parameters**

<i>id</i>	This is the identifier relating to the image that has been downloaded and is ready for bootload. Ver.: always
-----------	---

**6.4.2.58** `boolean emberAfImageVerifyStatus emberAfOtaClientCustomVerifyCallback ( boolean newVerification, const EmberAfOtaImageId * id )`

Ota Client Custom Verify.

This callback is executed by the OTA client after the signature verification has successfully completed. It allows the device to do its own custom verification of the image (such as verifying that the EBL is intact).

**Parameters**

<i>newVerification</i>	This indicates if a new verification should be started. Ver.: always
<i>id</i>	This is ID of the image to be verified. Ver.: always

**6.4.2.59** `boolean emberAfOtaClientDownloadCompleteCallback ( EmberAfOtaDownloadResult success, const EmberAfOtaImageId * id )`

Ota Client Download Complete.

This callback indicates that the OTA client has completed the download of a file. If the file has been completely downloaded and cryptographic checks have been turned on, then those will be performed prior to this callback and that outcome included in the 'success' result. On failure, this callback is merely informative, and the return type is ignored. On successful download, this callback allows the client to perform any additional verification of the downloaded image and return that result to the OTA server.

**Parameters**

<i>success</i>	This indicates the success or failure of the download and cryptographic verification process (if applicable). Ver.: always
<i>id</i>	This is the image identifier information that corresponds to the download result. Ver.: always

**6.4.2.60** `boolean emberAfOtaClientIncomingMessageRawCallback ( EmberAfClusterCommand * message )`

Ota Client Incoming Message Raw.

This callback is for processing incoming messages for the Over-the-air bootload cluster client. ZCL will not process the message and instead hand the raw over the air data to the callback for its own processing.

**Parameters**

<i>message</i>	A pointer to the structure containing the message buffer and other information about it. Ver.: always
----------------	---

#### 6.4.2.61 void emberAfOtaClientStartCallback ( void )

Ota Client Start.

This callback should be called when the profile specific registration has completed successfully. It will start the client's state machine that will find the OTA server, query it for the next image, download the image, wait for the bootload message, and kick off the bootload.

#### 6.4.2.62 void emberAfOtaClientVersionInfoCallback ( EmberAfOtaImageId \* *currentImageInfo*, int16u \* *hardwareVersion* )

Ota Client Version Info.

This function is called by the OTA client when a new query will occur to the server asking what the next version of firmware is. The client can inform the cluster software as to what information to use in the query (and subsequent download).

##### Parameters

<i>currentImage-Info</i>	This is the information to use in the next query by the client cluster code. It contains the manufacturer ID, image type ID, and the firmware version to be specified in the query message sent to the server. Ver.: always
<i>hardware-Version</i>	This is a pointer to the hardware version to use in the query. If no hardware version should be used, then EMBER_AF_INVALID_HARDWARE_VERSION should be used. Ver.: always

#### 6.4.2.63 int8u emberAfOtaPageRequestServerPolicyCallback ( void )

Ota Page Request Server Policy.

This callback is called by the OTA server page request code when it wants to determine if it is allowed for an OTA client to make a page request. It is only called if page request support has been enabled on the server. It should return EMBER\_ZCL\_STATUS\_SUCCESS if it allows the page request, and EMBER\_ZCL\_STATUS\_UNSUP\_CLUSTER\_COMMAND if it does not want to allow it.

#### 6.4.2.64 int8u emberAfOtaServerBlockSizeCallback ( EmberNodeId *clientNodeId* )

Ota Server Block Size.

This function provides a way for the server to adjust the block size of its response to an Image block request by a client.

##### Parameters

<i>clientNodeId</i>	The node Id of OTA client making an image block request. Ver.: always
---------------------	---

#### 6.4.2.65 int8u emberAfOtaServerImageBlockRequestCallback ( EmberAfImageBlockRequestCallback-Struct \* *data* )

Ota Server Image Block Request.

This function is called when the server application receives an image block request by a client.

**Parameters**

<i>data</i>	A struct containing the details of the image block response and values that can be returned by the application to effect the behavior of the server's response. Ver.: always
-------------	--

**6.4.2.66 boolean emberAfOtaServerIncomingMessageRawCallback ( EmberAfClusterCommand \* message )**

Ota Server Incoming Message Raw.

This callback is for processing incoming messages for the Over-the-air bootload cluster server. ZCL will not process the message and instead hand the raw over the air data to the callback for its own processing.

**Parameters**

<i>message</i>	A pointer to the structure containing the message buffer and other information about it. Ver.: always
----------------	---

**6.4.2.67 int8u emberAfOtaServerQueryCallback ( const EmberAfOtaImageId \* currentImageId, int16u \* hardwareVersion, EmberAfOtaImageId \* nextUpgradeImageId )**

Ota Server Query.

This callback is fired when the OTA server receives a query request by the client. The callback lets the server application indicate to the client what the 'next' version of software is for the device, or if there is not one available.

**Parameters**

<i>currentImageId</i>	This is the current software image that the client has. Ver.: always
<i>hardware-Version</i>	If this value is non-NULL, it indicates the hardware version of the client device. If NULL, the client did not specify a hardware version. Ver.: always
<i>nextUpgrade-ImageId</i>	This is a pointer to a data structure containing the 'next' software version for the client to download. Ver.: always

**6.4.2.68 boolean emberAfOtaServerSendImageNotifyCallback ( EmberNodeId dest, int8u endpoint, int8u payloadType, int8u queryJitter, const EmberAfOtaImageId \* id )**

Ota Server Send Image Notify.

This callback is an indication to the OTA server that it should send out notification about an OTA file that is available for download.

**Parameters**

<i>dest</i>	The destination of the image notify message. May be a broadcast address. Ver.: always
<i>endpoint</i>	The destination endpoint of the image notify message. May be a broadcast endpoint. Ver.: always
<i>payloadType</i>	The type of data the image notify message will contain. 0 = no data. 1 = Manufacturer ID. 2 = Manufacturer ID and the image type ID. 3 = Manufacturer ID, image type ID, and firmware version. Ver.: always
<i>queryJitter</i>	The percentage of nodes that should respond to this message, from 1-100. On receipt of this message, each recipient will randomly choose a percentage and only query the server if their percentage is below this value. Ver.: always

<i>id</i>	The image information that will be put in the message. The data within this struct that will be appended to the message is determined by the previous 'payloadType' argument. Ver.: always
-----------	--

#### 6.4.2.69 boolean emberAfOtaServerUpgradeEndRequestCallback ( EmberNodeId *source*, int8u *status*, int32u \* *returnValue*, const EmberAfOtaImageId \* *imageId* )

Ota Server Upgrade End Request.

This function is called when the OTA server receives a request an upgrade end request. If the request indicated a successful download by the client, the server must tell the client when and if to upgrade to the downloaded image.

##### Parameters

<i>source</i>	The node ID of the device that sent the upgrade end request. Ver.: always
<i>status</i>	This is the ZCL status sent by the client indicating the result of its attempt to download the new upgrade image. If the status is not EMBER_ZCL_STATUS_SUCCESS then this callback is merely informative and no response mesasge will be generated by the server. Ver.: always
<i>returnValue</i>	If the server returns true indicating that the client should apply the upgrade, this time value indicates when in the future the client should apply the upgrade. Ver.: always
<i>imageId</i>	This variable indicates the software version that the client successfully downloaded and is asking to upgrade to. Ver.: always

#### 6.4.2.70 EmberAfOtaStorageStatus emberAfOtaStorageCheckTempDataCallback ( int32u \* *currentOffset*, int32u \* *totalImageSize*, EmberAfOtaImageId \* *newFileInfo* )

Ota Storage Check Temp Data.

This callback will validate temporary data in the storage device to determine whether it is a complete file, a partially downloaded file, or there is no file present. When a complete or partial file is found it will return EMBER\_AF\_OTA\_STORAGE\_SUCCESS or EMBER\_AF\_OTA\_STORAGE\_PARTIAL\_FILE\_FOUND, respectively. In that case, the currentOffset, totalImageSize, and newFileInfo will be populated with data. When EMBER\_AF\_OTA\_STORAGE\_ERROR is returned, no temporary data is present.

##### Parameters

<i>currentOffset</i>	A pointer to a value that will be written with the offset within the total file size that has been successfully stored in the storage device. This will indicate how much data has been currently dowloaded. Ver.: always
<i>totalImageSize</i>	A pointer to a value that will be written with the total image size of the OTA file when a download has completed. This does not indicate how much data has actually been downloaded currently. Ver.: always
<i>newFileInfo</i>	This is the image id of the temporary file data stored in the storage device. Ver.: always

#### 6.4.2.71 EmberAfOtaStorageStatus emberAfOtaStorageClearTempDataCallback ( void )

Ota Storage Clear Temp Data.

This function clears any existing temp data that was downloaded. It is used immediately prior to downloading a raw image over the air.

#### **6.4.2.72 void emberAfOtaStorageCloseCallback ( void )**

Ota Storage Close.

This callback shuts down the ZigBee Over-the-air storage module.

#### **6.4.2.73 void emberAfOtaStorageDriverDownloadFinishCallback ( int32u offset )**

Ota Storage Driver Download Finish.

This callback defines the low-level means by which a device records the final offset value of the download image.

##### **Parameters**

<i>offset</i>	The value of the final offset of the image download. Ver.: always
---------------	---

#### **6.4.2.74 boolean emberAfOtaStorageDriverInitCallback ( void )**

Ota Storage Driver Init.

The initialization code for the OTA storage driver.

#### **6.4.2.75 EmberAfOtaStorageStatus emberAfOtaStorageDriverInvalidateImageCallback ( void )**

Ota Storage Driver Invalidate Image.

This callback invalidates the image stored on disk so that it will not be booted, and it will not be a valid image that is in the middle of downloading.

#### **6.4.2.76 EmberAfOtaStorageStatus emberAfOtaStorageDriverPrepareToResumeDownloadCallback ( void )**

Ota Storage Driver Prepare To Resume Download.

This callback allows the underlying storage driver to prepare to resume the OTA file download. For example, the driver may execute a page erase to insure the next page is ready to be written to.

#### **6.4.2.77 boolean emberAfOtaStorageDriverReadCallback ( int32u offset, int32u length, int8u \* returnData )**

Ota Storage Driver Read.

This callback defines the low-level means by which a device reads from the OTA storage device.

##### **Parameters**

<i>offset</i>	The address offset from the start of the storage device where data is to be read. Ver.: always
<i>length</i>	The length of the data to be read from the storage device. Ver.: always
<i>returnData</i>	A pointer where the data read from the device should be written to. Ver.: always

#### 6.4.2.78 int32u emberAfOtaStorageDriverRetrieveLastStoredOffsetCallback ( void )

Ota Storage Driver Retrieve Last Stored Offset.

This callback defines the low-level means by which a device retrieves the last persistently recorded download offset. This may be different than last actual download offset.

#### 6.4.2.79 boolean emberAfOtaStorageDriverWriteCallback ( const int8u \* *dataToWrite*, int32u *offset*, int32u *length* )

Ota Storage Driver Write.

This callback defines the low-level means by which a device reads from the OTA storage device.

##### Parameters

<i>dataToWrite</i>	A pointer to the data that will be written to the storage device. Ver.: always
<i>offset</i>	The address offset from the start of the storage device where data will be written. Ver.: always
<i>length</i>	The length of the data to be written to the storage device. Ver.: always

#### 6.4.2.80 EmberAfOtaStorageStatus emberAfOtaStorageFinishDownloadCallback ( int32u *offset* )

Ota Storage Finish Download.

This function indicates to the storage module that the download has finished.

##### Parameters

<i>offset</i>	The final offset of the downloaded file (i.e. the total size) Ver.: always
---------------	--

#### 6.4.2.81 int8u emberAfOtaStorageGetCountCallback ( void )

Ota Storage Get Count.

This callback returns the total number of ZigBee Over-the-air upgrade images stored in the storage module.

#### 6.4.2.82 EmberAfOtaStorageStatus emberAfOtaStorageGetFullHeaderCallback ( const EmberAfOtaImageId \* *id*, EmberAfOtaHeader \* *returnData* )

Ota Storage Get Full Header.

This callback populates the [EmberAfOtaHeader](#) structure pointed to by the returnData with data about the OTA file stored in the storage module.

##### Parameters

<i>id</i>	This is a pointer to the image id for the OTA file to retrieve information about. Ver.: always
<i>returnData</i>	This is a pointer to the location of the structure that will be populated with data. Ver.: always

#### 6.4.2.83 int32u emberAfOtaStorageGetTotalImageSizeCallback ( const EmberAfOtaImageId \* *id* )

Ota Storage Get Total Image Size.

This function returns the total size of the ZigBee Over-the-air file with the passed parameters. If no file is found with those parameters, 0 is returned.

##### Parameters

<i>id</i>	A pointer to the image identifier for the OTA file to retrieve information for. Ver.: always
-----------	--

#### 6.4.2.84 EmberAfOtaStorageStatus emberAfOtaStorageInitCallback ( void )

Ota Storage Init.

This callback initializes the ZigBee Over-the-air storage module.

#### 6.4.2.85 EmberAfOtaImageId emberAfOtaStorageIteratorFirstCallback ( void )

Ota Storage Iterator First.

This callback lets you walk through the list of all OTA files by jumping to the first file in the list maintained by the storage module. If there is no file then emberAfOtaInvalidImageId is returned.

#### 6.4.2.86 EmberAfOtaImageId emberAfOtaStorageIteratorNextCallback ( void )

Ota Storage Iterator Next.

This callback lets you walk through the list of all OTA files by jumping to the next file in the list maintained by the storage module. If there is no next file then emberAfOtaInvalidImageId is returned.

#### 6.4.2.87 EmberAfOtaStorageStatus emberAfOtaStorageReadImageDataCallback ( const EmberAfOtaImageId \* *id*, int32u *offset*, int32u *length*, int8u \* *returnData*, int32u \* *returnedLength* )

Ota Storage Read Image Data.

This callback reads data from the specified OTA file and returns that data to the caller.

##### Parameters

<i>id</i>	This is a pointer to the image id for the OTA file to retrieve data from. Ver.: always
<i>offset</i>	This is the offset relative to the start of the image where the data should be read from. Ver.: always
<i>length</i>	This is the length of data that will be read. Ver.: always
<i>returnData</i>	This is a pointer to where the data read out of the file will be written to Ver.: always
<i>returnedLength</i>	This is a pointer to a variable where the actual length of data read will be written to. A short read may occur if the end of file was reached. Ver.: always

#### 6.4.2.88 EmberAfOtaImageId emberAfOtaStorageSearchCallback ( int16u *manufacturerId*, int16u *imageTypeId*, const int16u \* *hardwareVersion* )

Ota Storage Search.

This callback searches through the list of all images for one that matches the passed parameters. On success an image identifier is returned with a matching image. On failure emberAfInvalidImageId is returned.

##### Parameters

<i>manufacturerId</i>	The ZigBee assigned identifier of the manufacturer contained in the OTA image being searched for. Ver.: always
<i>imageTypeId</i>	The image type identifier contained in the OTA image being searched for. Ver.: always
<i>hardwareVersion</i>	This is a pointer to the hardware version that will be used in the search. If the pointer is NULL, hardware version will not be considered when searching for matching images. If it points to a value, the search will only consider images where that value falls between the minimum and maximum hardware version specified in the OTA file. If no hardware version is present in an OTA file but the other parameters match, the file will be considered a match Ver.: always

#### 6.4.2.89 EmberAfOtaStorageStatus emberAfOtaStorageWriteTempDataCallback ( int32u *offset*, int32u *length*, const int8u \* *data* )

Ota Storage Write Temp Data.

This function writes to the temporary data in the storage device at the specified offset. It is used when downloading a raw image over the air.

##### Parameters

<i>offset</i>	The location within the download image file where to write the data. Ver.: always
<i>length</i>	The length of data to write. Ver.: always
<i>data</i>	A pointer to the temporary data that will be written to the storage device. Ver.: always

#### 6.4.2.90 EmberStatus emberAfPartnerLinkKeyExchangeRequestCallback ( EmberEUI64 *partner* )

Partner Link Key Exchange Request.

This function is called by the framework on SOC platforms when a remote node requests a partner link key exchange. The application should return EMBER\_SUCCESS to accept the request or any other status to reject it. On network coprocessor platforms, this function will not be called because the NCP handles partner link key exchange requests based on the binding policy.

##### Parameters

<i>partner</i>	The EUI of the remote node. Ver.: always
----------------	--

#### 6.4.2.91 void emberAfPartnerLinkKeyExchangeResponseCallback ( EmberNodeId *sender*, EmberZdoStatus *status* )

Partner Link Key Exchange Response.

This function is called by the framework when a remote node requests a partner link key exchange. The application should return true to accept the request or false to reject it. On network coprocessor platforms, this function will not be called because the NCP handles partner link key exchange requests based on the binding policy.

#### Parameters

<i>sender</i>	The EUI of the remote node. Ver.: always
<i>status</i>	The ZDO response status. Ver.: always

#### 6.4.2.92 boolean emberAfPerformingKeyEstablishmentCallback ( void )

Performing Key Establishment.

This function is called by the framework to determine if the device is performing key establishment. The application should return true if key establishment is in progress.

#### 6.4.2.93 void emberAfPostAttributeChangeCallback ( int8u *endpoint*, EmberAfClusterId *clusterId*, EmberAfAttributeId *attributeId*, int8u *mask*, int16u *manufacturerCode*, int8u *type*, int8u *size*, int8u \* *value* )

Post Attribute Change.

This function is called by the application framework after it changes an attribute value. The value passed into this callback is the value to which the attribute was set by the framework.

#### Parameters

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>attributeId</i>	Ver.: always
<i>mask</i>	Ver.: always
<i>manufacturerCode</i>	Ver.: always
<i>type</i>	Ver.: always
<i>size</i>	Ver.: always
<i>value</i>	Ver.: always

#### 6.4.2.94 EmberAfStatus emberAfPreAttributeChangeCallback ( int8u *endpoint*, EmberAfClusterId *clusterId*, EmberAfAttributeId *attributeId*, int8u *mask*, int16u *manufacturerCode*, int8u *type*, int8u *size*, int8u \* *value* )

Pre Attribute Change.

This function is called by the application framework before it changes an attribute value. The value passed into this callback is the value to which the attribute is to be set by the framework. The application should return [EMBER\\_ZCL\\_STATUS\\_SUCCESS](#) to permit the change or any other [EmberAfStatus](#) to reject it.

#### Parameters

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always

<i>attributeId</i>	Ver.: always
<i>mask</i>	Ver.: always
<i>manufacturer-Code</i>	Ver.: always
<i>type</i>	Ver.: always
<i>size</i>	Ver.: always
<i>value</i>	Ver.: always

#### 6.4.2.95 boolean emberAfPreCliSendCallback ( EmberApsFrame \* *apsFrame*, EmberNodeId *source*, EmberNodeId *destination*, int8u \* *message*, int16u *messageLength* )

Pre Cli Send.

This function is called by the framework when it is about to pass a message constructed over CLI to the stack primitives for sending. If the function returns true it is assumed that the callback has consumed and processed the message. The framework will not do any further processing on the message.

If the function returns false then it is assumed that the callback has

not processed the message and the framework will continue to process accordingly.

##### Parameters

<i>apsFrame</i>	The structure containing the APS frame Ver.: always
<i>source</i>	Source Node Id Ver.: always
<i>destination</i>	Destintion Node Id Ver.: always
<i>message</i>	Pointer to the message payload Ver.: always
<i>messageLength</i>	Length of the message payload Ver.: always

#### 6.4.2.96 boolean emberAfPreCommandReceivedCallback ( EmberAfClusterCommand \* *cmd* )

Pre Command Received.

This callback is the second in the Application Framework's message processing chain. At this point in the processing of incoming over-the-air messages, the application has determined that the incoming message is a ZCL command. It parses enough of the message to populate an [EmberAfClusterCommand](#) struct. The Application Framework defines this struct value in a local scope to the command processing but also makes it available through a global pointer called `emberAfCurrentCommand`, in `app/framework/util/util.c`. When command processing is complete, this pointer is cleared.

##### Parameters

<i>cmd</i>	Ver.: always
------------	--------------

#### 6.4.2.97 boolean emberAfPreMessageReceivedCallback ( EmberAfIncomingMessage \* *incomingMessage* )

Pre Message Received.

This callback is the first in the Application Framework's message processing chain. The Application Framework calls it when a message has been received over the air but has not yet been parsed by the ZCL command-handling code. If you wish to parse some messages that are completely outside the ZCL specification or are not handled by the Application Framework's command handling code, you should intercept them for parsing in this callback.

This callback returns a Boolean value indicating whether or not the message has been handled. If the callback returns a value of true, then the Application Framework assumes that the message has been handled and it does nothing else with it. If the callback returns a value of false, then the application framework continues to process the message as it would with any incoming message. Note: This callback receives a pointer to an incoming message struct. This struct allows the application framework to provide a unified interface between both Host devices, which receive their message through the ezspIncomingMessageHandler, and SoC devices, which receive their message through emberIncomingMessageHandler.

#### Parameters

<i>incoming-Message</i>	Ver.: always
-------------------------	--------------

#### 6.4.2.98 boolean emberAfPreMessageSendCallback ( EmberAfMessageStruct \* *messageStruct*, EmberStatus \* *status* )

Pre Message Send.

This function is called by the framework when it is about to pass a message to the stack primitives for sending. This message may or may not be ZCL, ZDO, or some other protocol. This is called prior to any ZigBee fragmentation that may be done. If the function returns true it is assumed the callback has consumed and processed the message. The callback must also set the EmberStatus status code to be passed back to the caller. The framework will do no further processing on the message. If the function returns false then it is assumed that the callback has not processed the mesasge and the framework will continue to process accordingly.

#### Parameters

<i>messageStruct</i>	The structure containing the parameters of the APS message to be sent. Ver.: always
<i>status</i>	A pointer to the status code value that will be returned to the caller. Ver.: always

#### 6.4.2.99 void emberAfPreNcpResetCallback ( void )

Pre Ncp Reset.

This function will be called prior to the reset of the NCP by the host.

#### 6.4.2.100 boolean emberAfPreZDOMessageReceivedCallback ( EmberNodeId *emberNodeId*, EmberApsFrame \* *apsFrame*, int8u \* *message*, int16u *length* )

Pre ZDO Message Received.

This function passes the application an incoming ZDO message and gives the application the opportunity to handle it. By default, this callback returns false indicating that the incoming ZDO message has not been handled and should be handled by the Application Framework.

**Parameters**

<i>emberNodeId</i>	Ver.: always
<i>apsFrame</i>	Ver.: always
<i>message</i>	Ver.: always
<i>length</i>	Ver.: always

**6.4.2.101 boolean emberAfReadAttributesResponseCallback ( EmberAfClusterId *clusterId*, int8u \* *buffer*, int16u *bufLen* )**

Read Attributes Response.

This function is called by the application framework when a Read Attributes Response command is received from an external device. The application should return true if the message was processed or false if it was not.

**Parameters**

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>buffer</i>	Buffer containing the list of read attribute status records. Ver.: always
<i>bufLen</i>	The length in bytes of the list. Ver.: always

**6.4.2.102 boolean emberAfReadReportingConfigurationCommandCallback ( const EmberAfClusterCommand \* *cmd* )**

Read Reporting Configuration Command.

This function is called by the application framework when a Read Reporting Configuration command is received from an external device. The application should return true if the message was processed or false if it was not.

**Parameters**

<i>cmd</i>	Ver.: always
------------	--------------

**6.4.2.103 boolean emberAfReadReportingConfigurationResponseCallback ( EmberAfClusterId *clusterId*, int8u \* *buffer*, int16u *bufLen* )**

Read Reporting Configuration Response.

This function is called by the application framework when a Read Reporting Configuration Response command is received from an external device. The application should return true if the message was processed or false if it was not.

**Parameters**

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>buffer</i>	Buffer containing the list of attribute reporting configuration records. Ver.: always
<i>bufLen</i>	The length in bytes of the list. Ver.: always

#### 6.4.2.104 void emberAfRegistrationAbortCallback ( void )

Registration Abort.

This callback is called when the device should abort the registration process.

#### 6.4.2.105 void emberAfRegistrationCallback ( boolean success )

Registration.

This callback is called when the device joins a network and the process of registration is complete. This callback provides a success value of true if the registration process was successful and a value of false if registration failed.

##### Parameters

<i>success</i>	true if registration succeeded, false otherwise. Ver.: always
----------------	---

#### 6.4.2.106 EmberStatus emberAfRegistrationStartCallback ( void )

Registration Start.

This callback is called when the device joins a network and the registration process should begin. The application should return EMBER\_SUCCESS if the registration process started successfully. When registration is complete, the application should call emberAfRegistrationCallback with an indication of success or failure.

#### 6.4.2.107 EmberStatus emberAfRemoteDeleteBindingPermissionCallback ( int8u index )

Remote Delete Binding Permission.

This function is called by the framework to request permission to service the remote delete binding request. Return EMBER\_SUCCESS to allow request, anything else to disallow request.

##### Parameters

<i>index</i>	index to an Ember binding table entry Ver.: always
--------------	--

#### 6.4.2.108 EmberStatus emberAfRemoteSetBindingPermissionCallback ( const EmberBindingTableEntry \* entry )

Remote Set Binding Permission.

This function is called by the framework to request permission to service the remote set binding request. Return EMBER\_SUCCESS to allow request, anything else to disallow request.

##### Parameters

<i>entry</i>	Ember Binding Table Entry Ver.: always
--------------	--

#### 6.4.2.109 void emberAfRemoveFromCurrentAppTasksCallback ( EmberAfApplicationTask *tasks* )

Remove From Current App Tasks.

This function is only useful to sleepy end devices. This function will remove the passed item from the set of tasks the application has outstanding (e.g. message sent requiring APS acknowledgement). This will affect how the application behaves with regard to sleeping and polling. Removing the item from the list of outstanding tasks may allow the device to sleep longer and poll less frequently. If there are other outstanding tasks the system may still have to stay awake and poll more often.

##### Parameters

<i>tasks</i>	Ver.: always
--------------	--------------

#### 6.4.2.110 boolean emberAfReportAttributesCallback ( EmberAfClusterId *clusterId*, int8u \* *buffer*, int16u *bufLen* )

Report Attributes.

This function is called by the application framework when a Report Attributes command is received from an external device. The application should return true if the message was processed or false if it was not.

##### Parameters

<i>clusterId</i>	The cluster identifier of this command. Ver.: always
<i>buffer</i>	Buffer containing the list of attribute report records. Ver.: always
<i>bufLen</i>	The length in bytes of the list. Ver.: always

#### 6.4.2.111 void emberAfReportingAttributeChangeCallback ( int8u *endpoint*, EmberAfClusterId *clusterId*, EmberAfAttributeId *attributeId*, int8u *mask*, int16u *manufacturerCode*, EmberAfAttributeType *type*, int8u \* *data* )

Reporting Attribute Change.

This function is called by the framework when an attribute managed by the framework changes. The application should call this function when an externally-managed attribute changes. The application should use the change notification to inform its reporting decisions.

##### Parameters

<i>endpoint</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>attributeId</i>	Ver.: always
<i>mask</i>	Ver.: always
<i>manufacturer-Code</i>	Ver.: always
<i>type</i>	Ver.: always
<i>data</i>	Ver.: always

#### 6.4.2.112 void emberAfScanCompleteCallback ( int8u *channel*, EmberStatus *status* )

Scan Complete.

This is called by the low-level stack code when an 802.15.4 active scan completes.

#### Parameters

<i>channel</i>	If the status indicates an error, the channel on which the error occurred. Otherwise it is undefined for EMBER_SUCCESS. Ver.: always
<i>status</i>	The status of the scan. Ver.: always

#### 6.4.2.113 void emberAfScanErrorCallback ( EmberStatus *status* )

Scan Error.

This is called by the framework on behalf of the form-and-join library to notify the application if an error occurs while scanning. See form-and-join documentation for more information.

#### Parameters

<i>status</i>	The status of the scan. Ver.: always
---------------	--------------------------------------

#### 6.4.2.114 void emberAfSecurityInitCallback ( EmberInitialSecurityState \* *state*, EmberExtendedSecurityBitmask \* *extended*, boolean *trustCenter* )

Security Init.

This callback is called by the framework to give the application a chance to modify the security settings of the node during network initialization. Depending on the context when this callback is called, the pointer to the initial security state may be NULL, which means the initial security state can no longer be modified as the node is already operating on the network.

#### Parameters

<i>state</i>	Ver.: always
<i>extended</i>	Ver.: always
<i>trustCenter</i>	Ver.: always

#### 6.4.2.115 void emberAfSetDefaultPollControlCallback ( EmberAfEventPollControl *control* )

Set Default Poll Control.

This function will set the default poll control for the current network to control whether or not it can long poll.

#### Parameters

<i>control</i>	Ver.: always
----------------	--------------

#### 6.4.2.116 void emberAfSetDefaultSleepControlCallback ( EmberAfEventSleepControl *control* )

Set Default Sleep Control.

This function will set the default behavior of a sleeping device to control whether or not it must stay awake. A device that stays awake does not sleep at all. Otherwise, the device can sleep between events when appropriate.

#### Parameters

<i>control</i>	Ver.: always
----------------	--------------

### 6.4.2.117 void emberAfSetFormAndJoinExtendedPanIdCallback ( const int8u \* *extendedPanId* )

Set Form And Join Extended Pan Id.

This callback is called by the framework to set the extended PAN ID used by the current network for forming and joining. The extended PAN ID used for forming and joining is not necessarily the same extended PAN ID actually in use on the network.

#### Parameters

<i>extendedPanId</i>	Ver.: always
----------------------	--------------

### 6.4.2.118 void emberAfSetLongPollIntervalMsCallback ( int32u *longPollIntervalMs* )

Set Long Poll Interval Ms.

This function is only useful to end devices. This function will set the long poll interval (in milliseconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is not expecting data.

#### Parameters

<i>longPoll- IntervalMs</i>	Ver.: always
---------------------------------	--------------

### 6.4.2.119 void emberAfSetLongPollIntervalQsCallback ( int32u *longPollIntervalQs* )

Set Long Poll Interval Qs.

This function is only useful to end devices. This function will set the long poll interval (in quarter seconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is not expecting data.

#### Parameters

<i>longPoll- IntervalQs</i>	Ver.: always
---------------------------------	--------------

### 6.4.2.120 void emberAfSetShortPollIntervalMsCallback ( int16u *shortPollIntervalMs* )

Set Short Poll Interval Ms.

This function is only useful to sleepy end devices. This function will set the short poll interval (in milliseconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is expecting data.

#### Parameters

<i>shortPoll-IntervalMs</i>	Ver.: always
-----------------------------	--------------

#### 6.4.2.121 void emberAfSetShortPollIntervalQsCallback ( int16u *shortPollIntervalQs* )

Set Short Poll Interval Qs.

This function is only useful to sleepy end devices. This function will set the short poll interval (in quarter seconds) for the current network. This interval is the maximum amount of time a child will wait between polls of its parent when it is expecting data.

#### Parameters

<i>shortPoll-IntervalQs</i>	Ver.: always
-----------------------------	--------------

#### 6.4.2.122 void emberAfSetSourceRouteOverheadCallback ( EmberNodeId *destination*, int8u *overhead* )

Set Source Route Overhead.

This function is called by the framework when it has information about the source route overhead to a particular destination. The application may use this information to cache the source route overhead.

#### Parameters

<i>destination</i>	The node id of the destination Ver.: always
<i>overhead</i>	The overhead in bytes Ver.: always

#### 6.4.2.123 void emberAfSetTimeCallback ( int32u *utcTime* )

Set Time.

This callback should be implemented, if the device has access to real time clock, and has an ability to update that clock. The application framework expects to be passed the utcTime which is the number of seconds since the year 2000. Default implementation does nothing. Note: This function used to take time in year, month, day, hour, min, sec. We have changed this to utcTime in order to conserve code space.

#### Parameters

<i>utcTime</i>	Ver.: always
----------------	--------------

#### 6.4.2.124 void emberAfSetWakeTimeoutBitmaskCallback ( EmberAfApplicationTask *tasks* )

Set Wake Timeout Bitmask.

This function is only useful to sleepy end devices. This function will set the wake timeout bitmask for the current network. The bitmask determines which tasks will timeout automatically and which tasks require manual removal from the task list.

#### Parameters

<i>tasks</i>	Ver.: always
--------------	--------------

#### 6.4.2.125 void emberAfSetWakeTimeoutMsCallback ( int16u *wakeTimeoutMs* )

Set Wake Timeout Ms.

This function is only useful to sleepy end devices. This function will set the wake timeout (in milliseconds) for the current network. This timeout is the maximum amount of time a child will wait for a task in the wake bitmask to finish. While waiting, the device will short poll.

#### Parameters

<i>wakeTimeout-</i> <i>Ms</i>	Ver.: always
----------------------------------	--------------

#### 6.4.2.126 void emberAfSetWakeTimeoutQsCallback ( int16u *wakeTimeoutQs* )

Set Wake Timeout Qs.

This function is only useful to sleepy end devices. This function will set the wake timeout (in quarter seconds) for the current network. This timeout is the maximum amount of time a child will wait for a task in the wake bitmask to finish. While waiting, the device will short poll.

#### Parameters

<i>wakeTimeout-</i> <i>Qs</i>	Ver.: always
----------------------------------	--------------

#### 6.4.2.127 boolean emberAfStackStatusCallback ( EmberStatus *status* )

Stack Status.

This function is called by the application framework from the stack status handler. This callbacks provides applications an opportunity to be notified of changes to the stack status and take appropriate action. The return code from this callback is ignored by the framework. The framework will always process the stack status after the callback returns.

#### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.128 boolean emberAfStartMoveCallback ( void )

Start Move.

This function is called to initiate the process for a device to move (rejoin) to a new parent.

#### 6.4.2.129 EmberStatus emberAfStartSearchForJoinableNetworkCallback ( void )

Start Search For Joinable Network.

This function is called by the framework to search for joinable networks and join a network. The application should return EMBER\_SUCCESS if the operation was initiated successfully.

#### 6.4.2.130 void emberAfStopMoveCallback ( void )

Stop Move.

This function is called to cancel a previously scheduled move (rejoin) to a new parent.

#### 6.4.2.131 void emberAfTrustCenterJoinCallback ( EmberNodeId *newNodeId*, EmberEUI64 *newNodeEui64*, EmberNodeId *parentOfNewNode*, EmberDeviceUpdate *status*, EmberJoinDecision *decision* )

Trust Center Join.

This callback is called from within the application framework's implementation of emberTrustCenterJoinHandler or ezspTrustCenterJoinHandler. This callback provides the same arguments passed to the TrustCenterJoinHandler. For more information about the TrustCenterJoinHandler please see documentation included in stack/include/trust-center.h.

##### Parameters

<i>newNodeId</i>	Ver.: always
<i>newNodeEui64</i>	Ver.: always
<i>parentOfNew- Node</i>	Ver.: always
<i>status</i>	Ver.: always
<i>decision</i>	Ver.: always

#### 6.4.2.132 void emberAfTrustCenterKeepaliveAbortCallback ( void )

Trust Center Keepalive Abort.

This callback is called when the device should abort the trust center keepalive process.

#### 6.4.2.133 void emberAfTrustCenterKeepaliveUpdateCallback ( boolean *registrationComplete* )

Trust Center Keepalive Update.

This callback is called when the device finishes registration (successfully or otherwise) and the trust center keepalive process must be updated. If the keepalive process has not been started, then it is started. Otherwise if the keepalive is in the process of searching for the TC, it will process the result of that Trust Center search operation.

##### Parameters

<i>registration- Complete</i>	Ver.: always
-----------------------------------	--------------

#### 6.4.2.134 void emberAfUnusedPanIdFoundCallback ( EmberPanId *panId*, int8u *channel* )

Unused Pan Id Found.

This is called by the framework on behalf of the form-and-join library to notify the application of the PAN id and channel found following a call to ::emberScanForUnusedPanId(). See form-and-join documentation for more information.

##### Parameters

<i>panId</i>	Ver.: always
<i>channel</i>	Ver.: always

#### 6.4.2.135 boolean emberAfWriteAttributesResponseCallback ( EmberAfClusterId *clusterId*, int8u \* *buffer*, int16u *bufLen* )

Write Attributes Response.

This function is called by the application framework when a Write Attributes Response command is received from an external device. The application should return true if the message was processed or false if it was not.

##### Parameters

<i>clusterId</i>	The cluster identifier of this response. Ver.: always
<i>buffer</i>	Buffer containing the list of write attribute status records. Ver.: always
<i>bufLen</i>	The length in bytes of the list. Ver.: always

#### 6.4.2.136 void emberAfBasicClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Basic Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.137 void emberAfBasicClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Basic Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.138 void emberAfBasicClusterClientInitCallback ( int8u *endpoint* )

Basic Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.139 void emberAfBasicClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, int16u *manufacturerCode* )

Basic Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributelid</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.140 void emberAfBasicClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Basic Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.141 EmberAfStatus emberAfBasicClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Basic Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.142 void emberAfBasicClusterClientTickCallback ( int8u *endpoint* )**

Basic Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.143 boolean emberAfBasicClusterResetToFactoryDefaultsCallback ( void )**

Basic Cluster Reset To Factory Defaults.

**6.4.2.144 void emberAfBasicClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Basic Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.145 void emberAfBasicClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Basic Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.146 void emberAfBasicClusterServerInitCallback ( int8u *endpoint* )**

Basic Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.147 void emberAfBasicClusterServerManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode )**

Basic Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.148 void emberAfBasicClusterServerMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

Basic Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.149 EmberAfStatus emberAfBasicClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Basic Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.150 void emberAfBasicClusterServerTickCallback ( int8u *endpoint* )

Basic Cluster Server Tick.

Server Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.151 void emberAfPowerConfigClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )

Power Configuration Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.152 void emberAfPowerConfigClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Power Configuration Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.153 void emberAfPowerConfigClusterClientInitCallback ( int8u *endpoint* )

Power Configuration Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.154 void emberAfPowerConfigClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Power Configuration Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.155 void emberAfPowerConfigClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Power Configuration Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.156 EmberAfStatus emberAfPowerConfigClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Power Configuration Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.157 void emberAfPowerConfigClusterClientTickCallback ( int8u *endpoint* )**

Power Configuration Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.158 void emberAfPowerConfigClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Power Configuration Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.159 void emberAfPowerConfigClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Power Configuration Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.160 void emberAfPowerConfigClusterServerInitCallback ( int8u *endpoint* )**

Power Configuration Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.161 void emberAfPowerConfigClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Power Configuration Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.162 void emberAfPowerConfigClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Power Configuration Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.163 EmberAfStatus emberAfPowerConfigClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Power Configuration Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.164 void emberAfPowerConfigClusterServerTickCallback ( int8u *endpoint* )**

Power Configuration Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.165 void emberAfDeviceTempClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Device Temperature Configuration Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.166 void emberAfDeviceTempClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Device Temperature Configuration Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.167 void emberAfDeviceTempClusterClientInitCallback ( int8u *endpoint* )**

Device Temperature Configuration Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.168 void emberAfDeviceTempClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Device Temperature Configuration Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.169 void emberAfDeviceTempClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Device Temperature Configuration Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.170 EmberAfStatus emberAfDeviceTempClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Device Temperature Configuration Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.171 void emberAfDeviceTempClusterClientTickCallback ( int8u endpoint )**

Device Temperature Configuration Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.172 void emberAfDeviceTempClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Device Temperature Configuration Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.173 void emberAfDeviceTempClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Device Temperature Configuration Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.174 void emberAfDeviceTempClusterServerInitCallback ( int8u *endpoint* )**

Device Temperature Configuration Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.175 void emberAfDeviceTempClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Device Temperature Configuration Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.176 void emberAfDeviceTempClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Device Temperature Configuration Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.177 EmberAfStatus emberAfDeviceTempClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Device Temperature Configuration Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.178 void emberAfDeviceTempClusterServerTickCallback ( int8u *endpoint* )**

Device Temperature Configuration Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.179 void emberAfIdentifyClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Identify Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.180 void emberAfIdentifyClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Identify Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.181 void emberAfIdentifyClusterClientInitCallback ( int8u *endpoint* )**

Identify Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.182 void emberAfIdentifyClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Identify Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.183 void emberAfIdentifyClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Identify Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.184 EmberAfStatus emberAfIdentifyClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Identify Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.185 void emberAfIdentifyClusterClientTickCallback ( int8u *endpoint* )**

Identify Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.186 boolean emberAfIdentifyClusterEZModeInvokeCallback ( int8u *action* )**

Identify Cluster E Z Mode Invoke.

**Parameters**

<i>action</i>	Ver.: always
---------------	--------------

**6.4.2.187 boolean emberAfIdentifyClusterIdentifyCallback ( int16u *identifyTime* )**

Identify Cluster Identify.

**Parameters**

<i>identifyTime</i>	Ver.: always
---------------------	--------------

**6.4.2.188 boolean emberAfIdentifyClusterIdentifyQueryCallback ( void )**

Identify Cluster Identify Query.

**6.4.2.189 boolean emberAfIdentifyClusterIdentifyQueryResponseCallback ( int16u *timeout* )**

Identify Cluster Identify Query Response.

**Parameters**

<i>timeout</i>	Ver.: always
----------------	--------------

**6.4.2.190 void emberAfIdentifyClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Identify Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.191 void emberAfIdentifyClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Identify Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.192 void emberAfIdentifyClusterServerInitCallback ( int8u *endpoint* )**

Identify Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.193 void emberAfIdentifyClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Identify Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.194 void emberAfIdentifyClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Identify Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.195 EmberAfStatus emberAfIdentifyClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Identify Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.196 void emberAfIdentifyClusterServerTickCallback ( int8u *endpoint* )**

Identify Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.197 boolean emberAfIdentifyClusterTriggerEffectCallback ( int8u *effectId*, int8u *effectVariant* )**

Identify Cluster Trigger Effect.

#### Parameters

<i>effectId</i>	Ver.: always
<i>effectVariant</i>	Ver.: always

**6.4.2.198 boolean emberAfIdentifyClusterUpdateCommissionStateCallback ( int8u *action*, int8u *commissionStateMask* )**

Identify Cluster Update Commission State.

**Parameters**

<i>action</i>	Ver.: always
<i>commission-StateMask</i>	Ver.: always

**6.4.2.199 void emberAfGroupsClusterClearGroupTableCallback ( int8u *endpoint* )**

Groups Cluster Clear Group Table.

This function is called by the framework when the application should clear the group table.

**Parameters**

<i>endpoint</i>	The endpoint. Ver.: always
-----------------	----------------------------

**6.4.2.200 boolean emberAfGroupsClusterEndpointInGroupCallback ( int8u *endpoint*, int16u *groupId* )**

Groups Cluster Endpoint In Group.

This function is called by the framework when it needs to determine if an endpoint is a member of a group. The application should return true if the endpoint is a member of the group and false otherwise.

**Parameters**

<i>endpoint</i>	The endpoint. Ver.: always
<i>groupId</i>	The group identifier. Ver.: always

**6.4.2.201 boolean emberAfGroupsClusterAddGroupCallback ( int16u *groupId*, int8u \* *groupName* )**

Groups Cluster Add Group.

**Parameters**

<i>groupId</i>	Ver.: always
<i>groupName</i>	Ver.: always

**6.4.2.202 boolean emberAfGroupsClusterAddGroupIfIdentifyingCallback ( int16u *groupId*, int8u \* *groupName* )**

Groups Cluster Add Group If Identifying.

**Parameters**

<i>groupId</i>	Ver.: always
<i>groupName</i>	Ver.: always

#### 6.4.2.203 boolean emberAfGroupsClusterAddGroupResponseCallback ( int8u *status*, int16u *groupId* )

Groups Cluster Add Group Response.

##### Parameters

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always

#### 6.4.2.204 void emberAfGroupsClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Groups Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.205 void emberAfGroupsClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Groups Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.206 void emberAfGroupsClusterClientInitCallback ( int8u *endpoint* )

Groups Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.207 void emberAfGroupsClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Groups Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.208 void emberAfGroupsClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Groups Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.209 EmberAfStatus emberAfGroupsClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Groups Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.210 void emberAfGroupsClusterClientTickCallback ( int8u *endpoint* )**

Groups Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.211 boolean emberAfGroupsClusterGetGroupMembershipCallback ( int8u *groupCount*, int8u \* *groupList* )**

Groups Cluster Get Group Membership.

**Parameters**

<i>groupCount</i>	Ver.: always
<i>groupList</i>	Ver.: always

**6.4.2.212 boolean emberAfGroupsClusterGetGroupMembershipResponseCallback ( int8u *capacity*, int8u *groupCount*, int8u \* *groupList* )**

Groups Cluster Get Group Membership Response.

**Parameters**

<i>capacity</i>	Ver.: always
<i>groupCount</i>	Ver.: always
<i>groupList</i>	Ver.: always

**6.4.2.213 boolean emberAfGroupsClusterRemoveAllGroupsCallback ( void )**

Groups Cluster Remove All Groups.

**6.4.2.214 boolean emberAfGroupsClusterRemoveGroupCallback ( int16u *groupId* )**

Groups Cluster Remove Group.

**Parameters**

<i>groupId</i>	Ver.: always
----------------	--------------

**6.4.2.215 boolean emberAfGroupsClusterRemoveGroupResponseCallback ( int8u *status*, int16u *groupId* )**

Groups Cluster Remove Group Response.

**Parameters**

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always

**6.4.2.216 void emberAfGroupsClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Groups Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.217 void emberAfGroupsClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Groups Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.218 void emberAfGroupsClusterServerInitCallback ( int8u *endpoint* )**

Groups Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.219 void emberAfGroupsClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Groups Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.220 void emberAfGroupsClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Groups Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.221 EmberAfStatus emberAfGroupsClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Groups Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.222 void emberAfGroupsClusterServerTickCallback ( int8u *endpoint* )**

Groups Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.223 boolean emberAfGroupsClusterViewGroupCallback ( int16u *groupId* )**

Groups Cluster View Group.

**Parameters**

<i>groupId</i>	Ver.: always
----------------	--------------

**6.4.2.224 boolean emberAfGroupsClusterViewGroupResponseCallback ( int8u *status*, int16u *groupId*, int8u \* *groupName* )**

Groups Cluster View Group Response.

**Parameters**

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>groupName</i>	Ver.: always

**6.4.2.225 void emberAfScenesClusterClearSceneTableCallback ( int8u endpoint )**

Scenes Cluster ClearSceneTable.

This function is called by the framework when the application should clear the scene table.

**Parameters**

<i>endpoint</i>	The endpoint. Ver.: always
-----------------	----------------------------

**6.4.2.226 EmberAfStatus emberAfScenesClusterMakeInvalidCallback ( int8u endpoint )**

Scenes Cluster Make Invalid.

This function is called to invalidate the valid attribute in the Scenes cluster.

**Parameters**

<i>endpoint</i>	Ver.: always
-----------------	--------------

**6.4.2.227 EmberAfStatus emberAfScenesClusterRecallSavedSceneCallback ( int8u endpoint, int16u groupId, int8u sceneId )**

Scenes Cluster Recall Saved Scene.

This function is called by the framework when the application should recall a saved scene.

**Parameters**

<i>endpoint</i>	The endpoint. Ver.: always
<i>groupId</i>	The group identifier. Ver.: always
<i>sceneId</i>	The scene identifier. Ver.: always

**6.4.2.228 void emberAfScenesClusterRemoveScenesInGroupCallback ( int8u endpoint, int16u groupId )**

Scenes Cluster Remove Scenes In Group.

This function removes the scenes from a specified group.

**Parameters**

<i>endpoint</i>	Endpoint Ver.: always
<i>groupId</i>	Group ID Ver.: always

**6.4.2.229 boolean emberAfScenesClusterAddSceneCallback ( int16u *groupId*, int8u *sceneId*, int16u *transitionTime*, int8u \* *sceneName*, int8u \* *extensionFieldSets* )**

Scenes Cluster Add Scene.

#### Parameters

<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always
<i>transitionTime</i>	Ver.: always
<i>sceneName</i>	Ver.: always
<i>extensionFieldSets</i>	Ver.: always

**6.4.2.230 boolean emberAfScenesClusterAddSceneResponseCallback ( int8u *status*, int16u *groupId*, int8u *sceneId* )**

Scenes Cluster Add Scene Response.

#### Parameters

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

**6.4.2.231 void emberAfScenesClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Scenes Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.232 void emberAfScenesClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Scenes Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.233 void emberAfScenesClusterClientInitCallback ( int8u *endpoint* )

Scenes Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.234 void emberAfScenesClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Scenes Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.235 void emberAfScenesClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Scenes Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.236 EmberAfStatus emberAfScenesClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Scenes Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.237 void emberAfScenesClusterClientTickCallback ( int8u endpoint )**

Scenes Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.238 boolean emberAfScenesClusterCopySceneCallback ( int8u mode, int16u groupIdFrom, int8u scenIdFrom, int16u groupIdTo, int8u scenIdTo )**

Scenes Cluster Copy Scene.

**Parameters**

<i>mode</i>	Ver.: always
<i>groupIdFrom</i>	Ver.: always
<i>scenIdFrom</i>	Ver.: always
<i>groupIdTo</i>	Ver.: always
<i>scenIdTo</i>	Ver.: always

**6.4.2.239 boolean emberAfScenesClusterCopySceneResponseCallback ( int8u status, int16u groupIdFrom, int8u scenIdFrom )**

Scenes Cluster Copy Scene Response.

**Parameters**

<i>status</i>	Ver.: always
<i>groupIdFrom</i>	Ver.: always
<i>scenIdFrom</i>	Ver.: always

**6.4.2.240 boolean emberAfScenesClusterEnhancedAddSceneCallback ( int16u groupId, int8u scenId, int16u transitionTime, int8u \* sceneName, int8u \* extensionFieldSets )**

Scenes Cluster Enhanced Add Scene.

**Parameters**

<i>groupId</i>	Ver.: always
----------------	--------------

<i>sceneId</i>	Ver.: always
<i>transitionTime</i>	Ver.: always
<i>sceneName</i>	Ver.: always
<i>extensionFieldSets</i>	Ver.: always

#### 6.4.2.241 boolean emberAfScenesClusterEnhancedAddSceneResponseCallback ( int8u *status*, int16u *groupId*, int8u *sceneId* )

Scenes Cluster Enhanced Add Scene Response.

##### Parameters

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

#### 6.4.2.242 boolean emberAfScenesClusterEnhancedViewSceneCallback ( int16u *groupId*, int8u *sceneId* )

Scenes Cluster Enhanced View Scene.

##### Parameters

<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

#### 6.4.2.243 boolean emberAfScenesClusterEnhancedViewSceneResponseCallback ( int8u *status*, int16u *groupId*, int8u *sceneId*, int16u *transitionTime*, int8u \* *sceneName*, int8u \* *extensionFieldSets* )

Scenes Cluster Enhanced View Scene Response.

##### Parameters

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always
<i>transitionTime</i>	Ver.: always
<i>sceneName</i>	Ver.: always
<i>extensionFieldSets</i>	Ver.: always

#### 6.4.2.244 boolean emberAfScenesClusterGetSceneMembershipCallback ( int16u *groupId* )

Scenes Cluster Get Scene Membership.

**Parameters**

<i>groupId</i>	Ver.: always
----------------	--------------

**6.4.2.245 boolean emberAfScenesClusterGetSceneMembershipResponseCallback ( int8u *status*, int8u *capacity*, int16u *groupId*, int8u *sceneCount*, int8u \* *sceneList* )**

Scenes Cluster Get Scene Membership Response.

**Parameters**

<i>status</i>	Ver.: always
<i>capacity</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>sceneCount</i>	Ver.: always
<i>sceneList</i>	Ver.: always

**6.4.2.246 boolean emberAfScenesClusterRecallSceneCallback ( int16u *groupId*, int8u *sceneId* )**

Scenes Cluster Recall Scene.

**Parameters**

<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

**6.4.2.247 boolean emberAfScenesClusterRemoveAllScenesCallback ( int16u *groupId* )**

Scenes Cluster Remove All Scenes.

**Parameters**

<i>groupId</i>	Ver.: always
----------------	--------------

**6.4.2.248 boolean emberAfScenesClusterRemoveAllScenesResponseCallback ( int8u *status*, int16u *groupId* )**

Scenes Cluster Remove All Scenes Response.

**Parameters**

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always

**6.4.2.249 boolean emberAfScenesClusterRemoveSceneCallback ( int16u *groupId*, int8u *sceneId* )**

Scenes Cluster Remove Scene.

**Parameters**

<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

**6.4.2.250 boolean emberAfScenesClusterRemoveSceneResponseCallback ( int8u *status*, int16u *groupId*, int8u *sceneId* )**

Scenes Cluster Remove Scene Response.

**Parameters**

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

**6.4.2.251 void emberAfScenesClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Scenes Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.252 void emberAfScenesClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Scenes Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.253 void emberAfScenesClusterServerInitCallback ( int8u *endpoint* )**

Scenes Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.254 void emberAfScenesClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Scenes Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.255 void emberAfScenesClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Scenes Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.256 EmberAfStatus emberAfScenesClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Scenes Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.257 void emberAfScenesClusterServerTickCallback ( int8u *endpoint* )**

Scenes Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.258 boolean emberAfScenesClusterStoreSceneCallback ( int16u *groupId*, int8u *sceneId* )

Scenes Cluster Store Scene.

**Parameters**

<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

#### 6.4.2.259 boolean emberAfScenesClusterStoreSceneResponseCallback ( int8u *status*, int16u *groupId*, int8u *sceneId* )

Scenes Cluster Store Scene Response.

**Parameters**

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

#### 6.4.2.260 boolean emberAfScenesClusterViewSceneCallback ( int16u *groupId*, int8u *sceneId* )

Scenes Cluster View Scene.

**Parameters**

<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always

#### 6.4.2.261 boolean emberAfScenesClusterViewSceneResponseCallback ( int8u *status*, int16u *groupId*, int8u *sceneId*, int16u *transitionTime*, int8u \* *sceneName*, int8u \* *extensionFieldSets* )

Scenes Cluster View Scene Response.

**Parameters**

<i>status</i>	Ver.: always
<i>groupId</i>	Ver.: always
<i>sceneId</i>	Ver.: always
<i>transitionTime</i>	Ver.: always
<i>sceneName</i>	Ver.: always
<i>extensionFieldSets</i>	Ver.: always

#### 6.4.2.262 EmberAfStatus emberAfScenesClusterStoreCurrentSceneCallback ( int8u *endpoint*, int16u *groupId*, int8u *sceneId* )

Scenes Cluster Store Current Scene.

This function is called by the framework when the application should store the current scene. If an entry already exists in the scene table with the same scene and group ids, the application should update the entry with the current scene. Otherwise, a new entry should be added to the scene table, if possible.

##### Parameters

<i>endpoint</i>	The endpoint. Ver.: always
<i>groupId</i>	The group identifier. Ver.: always
<i>sceneId</i>	The scene identifier. Ver.: always

#### 6.4.2.263 void emberAfOnOffClusterLevelControlEffectCallback ( int8u *endpoint*, boolean *newValue* )

On/off Cluster Level Control Effect.

This is called by the framework when the on/off cluster initiates a command that must effect a level control change. The implementation assumes that the client will handle any effect on the On/Off Cluster.

##### Parameters

<i>endpoint</i>	Ver.: always
<i>newValue</i>	Ver.: always

#### 6.4.2.264 void emberAfOnOffClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

On/off Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.265 void emberAfOnOffClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

On/off Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.266 void emberAfOnOffClusterClientInitCallback ( int8u *endpoint* )

On/off Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.267 void emberAfOnOffClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, int16u *manufacturerCode* )

On/off Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributelid</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.268 void emberAfOnOffClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

On/off Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.269 EmberAfStatus emberAfOnOffClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

On/off Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.270 void emberAfOnOffClusterClientTickCallback ( int8u endpoint )**

On/off Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.271 boolean emberAfOnOffClusterOffCallback ( void )**

On/off Cluster Off.

**6.4.2.272 boolean emberAfOnOffClusterOffWithEffectCallback ( int8u effectId, int8u effectVariant )**

On/off Cluster Off With Effect.

**Parameters**

<i>effectId</i>	Ver.: always
<i>effectVariant</i>	Ver.: always

**6.4.2.273 boolean emberAfOnOffClusterOnCallback ( void )**

On/off Cluster On.

**6.4.2.274 boolean emberAfOnOffClusterOnWithRecallGlobalSceneCallback ( void )**

On/off Cluster On With Recall Global Scene.

**6.4.2.275 boolean emberAfOnOffClusterOnWithTimedOffCallback ( int8u onOffControl, int16u onTime, int16u offWaitTime )**

On/off Cluster On With Timed Off.

**Parameters**

<i>onOffControl</i>	Ver.: always
<i>onTime</i>	Ver.: always
<i>offWaitTime</i>	Ver.: always

**6.4.2.276 boolean emberAfOnOffClusterSampleMfgSpecificOffWithTransitionCallback ( void )**

On/off Cluster Sample Mfg Specific Off With Transition.

**6.4.2.277 boolean emberAfOnOffClusterSampleMfgSpecificOnWithTransitionCallback ( void )**

On/off Cluster Sample Mfg Specific On With Transition.

**6.4.2.278 boolean emberAfOnOffClusterSampleMfgSpecificToggleWithTransitionCallback ( void )**

On/off Cluster Sample Mfg Specific Toggle With Transition.

**6.4.2.279 void emberAfOnOffClusterServerAttributeChangedCallback ( int8u endpoint,  
EmberAfAttributeId attributeId )**

On/off Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.280 void emberAfOnOffClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId,  
EmberAfStatus status )**

On/off Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.281 void emberAfOnOffClusterServerInitCallback ( int8u endpoint )**

On/off Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.282 void emberAfOnOffClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

On/off Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.283 void emberAfOnOffClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

On/off Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.284 EmberAfStatus emberAfOnOffClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

On/off Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.285 void emberAfOnOffClusterServerTickCallback ( int8u *endpoint* )**

On/off Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.286 boolean emberAfOnOffClusterToggleCallback ( void )**

On/off Cluster Toggle.

**6.4.2.287 EmberAfStatus emberAfOnOffClusterSetValueCallback ( int8u *endpoint*, int8u *command*, boolean *initiatedByLevelChange* )**

On/off Cluster Set Value.

This function is called when the on/off value needs to be set, either through normal channels or as a result of a level change.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>command</i>	Ver.: always
<i>initiatedByLevelChange</i>	Ver.: always

**6.4.2.288 void emberAfOnOffSwitchConfigClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

On/off Switch Configuration Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.289 void emberAfOnOffSwitchConfigClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

On/off Switch Configuration Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.290 void emberAfOnOffSwitchConfigClusterClientInitCallback ( int8u endpoint )

On/off Switch Configuration Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.291 void emberAfOnOffSwitchConfigClusterClientManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, int16u manufacturerCode )

On/off Switch Configuration Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.292 void emberAfOnOffSwitchConfigClusterClientMessageSentCallback ( EmberOutgoing-MessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )

On/off Switch Configuration Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.293 EmberAfStatus emberAfOnOffSwitchConfigClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, EmberAfAttributeType attributeType, int8u size, int8u \* value )

On/off Switch Configuration Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.294 void emberAfOnOffSwitchConfigClusterClientTickCallback ( int8u endpoint )**

On/off Switch Configuration Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.295 void emberAfOnOffSwitchConfigClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

On/off Switch Configuration Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.296 void emberAfOnOffSwitchConfigClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

On/off Switch Configuration Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.297 void emberAfOnOffSwitchConfigClusterServerInitCallback ( int8u endpoint )**

On/off Switch Configuration Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.298 void emberAfOnOffSwitchConfigClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

On/off Switch Configuration Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.299 void emberAfOnOffSwitchConfigClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

On/off Switch Configuration Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.300 EmberAfStatus emberAfOnOffSwitchConfigClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

On/off Switch Configuration Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.301 void emberAfOnOffSwitchConfigClusterServerTickCallback ( int8u *endpoint* )

On/off Switch Configuration Cluster Server Tick.

Server Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.302 void emberAfLevelControlClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )

Level Control Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.303 void emberAfLevelControlClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Level Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.304 void emberAfLevelControlClusterClientInitCallback ( int8u *endpoint* )

Level Control Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.305 void emberAfLevelControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Level Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.306 void emberAfLevelControlClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Level Control Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.307 EmberAfStatus emberAfLevelControlClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Level Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.308 void emberAfLevelControlClusterClientTickCallback ( int8u *endpoint* )**

Level Control Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.309 boolean emberAfLevelControlClusterMoveCallback ( int8u *moveMode*, int8u *rate* )

Level Control Cluster Move.

##### Parameters

<i>moveMode</i>	Ver.: always
<i>rate</i>	Ver.: always

#### 6.4.2.310 boolean emberAfLevelControlClusterMoveToLevelCallback ( int8u *level*, int16u *transitionTime* )

Level Control Cluster Move To Level.

##### Parameters

<i>level</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

#### 6.4.2.311 boolean emberAfLevelControlClusterMoveToLevelWithOnOffCallback ( int8u *level*, int16u *transitionTime* )

Level Control Cluster Move To Level With On Off.

##### Parameters

<i>level</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

#### 6.4.2.312 boolean emberAfLevelControlClusterMoveWithOnOffCallback ( int8u *moveMode*, int8u *rate* )

Level Control Cluster Move With On Off.

##### Parameters

<i>moveMode</i>	Ver.: always
<i>rate</i>	Ver.: always

#### 6.4.2.313 void emberAfLevelControlClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Level Control Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.314 void emberAfLevelControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Level Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.315 void emberAfLevelControlClusterServerInitCallback ( int8u *endpoint* )**

Level Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.316 void emberAfLevelControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Level Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.317 void emberAfLevelControlClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Level Control Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.318 EmberAfStatus emberAfLevelControlClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Level Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.319 void emberAfLevelControlClusterServerTickCallback ( int8u *endpoint* )**

Level Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.320 boolean emberAfLevelControlClusterStepCallback ( int8u *stepMode*, int8u *stepSize*, int16u *transitionTime* )**

Level Control Cluster Step.

#### Parameters

<i>stepMode</i>	Ver.: always
<i>stepSize</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.321 boolean emberAfLevelControlClusterStepWithOnOffCallback ( int8u *stepMode*, int8u *stepSize*, int16u *transitionTime* )**

Level Control Cluster Step With On Off.

#### Parameters

<i>stepMode</i>	Ver.: always
<i>stepSize</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

#### 6.4.2.322 boolean emberAfLevelControlClusterStopCallback ( void )

Level Control Cluster Stop.

#### 6.4.2.323 boolean emberAfLevelControlClusterStopWithOnOffCallback ( void )

Level Control Cluster Stop With On Off.

#### 6.4.2.324 boolean emberAfAlarmClusterAlarmCallback ( int8u *alarmCode*, int16u *clusterId* )

Alarms Cluster Alarm.

##### Parameters

<i>alarmCode</i>	Ver.: always
<i>clusterId</i>	Ver.: always

#### 6.4.2.325 void emberAfAlarmClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Alarms Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.326 void emberAfAlarmClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Alarms Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.327 void emberAfAlarmClusterClientInitCallback ( int8u *endpoint* )

Alarms Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.328 void emberAfAlarmClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, int16u *manufacturerCode* )**

Alarms Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.329 void emberAfAlarmClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Alarms Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.330 EmberAfStatus emberAfAlarmClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Alarms Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.331 void emberAfAlarmClusterClientTickCallback ( int8u *endpoint* )

Alarms Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.332 boolean emberAfAlarmClusterGetAlarmCallback ( void )

Alarms Cluster Get Alarm.

#### 6.4.2.333 boolean emberAfAlarmClusterGetAlarmResponseCallback ( int8u *status*, int8u *alarmCode*, int16u *clusterId*, int32u *timeStamp* )

Alarms Cluster Get Alarm Response.

##### Parameters

<i>status</i>	Ver.: always
<i>alarmCode</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>timeStamp</i>	Ver.: always

#### 6.4.2.334 boolean emberAfAlarmClusterResetAlarmCallback ( int8u *alarmCode*, int16u *clusterId* )

Alarms Cluster Reset Alarm.

##### Parameters

<i>alarmCode</i>	Ver.: always
<i>clusterId</i>	Ver.: always

#### 6.4.2.335 boolean emberAfAlarmClusterResetAlarmLogCallback ( void )

Alarms Cluster Reset Alarm Log.

#### 6.4.2.336 boolean emberAfAlarmClusterResetAllAlarmsCallback ( void )

Alarms Cluster Reset All Alarms.

#### 6.4.2.337 void emberAfAlarmClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Alarms Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.338 void emberAfAlarmClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Alarms Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.339 void emberAfAlarmClusterServerInitCallback ( int8u *endpoint* )**

Alarms Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.340 void emberAfAlarmClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Alarms Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.341 void emberAfAlarmClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Alarms Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.342 EmberAfStatus emberAfAlarmClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Alarms Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.343 void emberAfAlarmClusterServerTickCallback ( int8u *endpoint* )**

Alarms Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.344 void emberAfTimeClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Time Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.345 void emberAfTimeClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Time Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.346 void emberAfTimeClusterClientInitCallback ( int8u *endpoint* )**

Time Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.347 void emberAfTimeClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Time Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.348 void emberAfTimeClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Time Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.349 EmberAfStatus emberAfTimeClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Time Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.350 void emberAfTimeClusterClientTickCallback ( int8u *endpoint* )**

Time Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.351 void emberAfTimeClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Time Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.352 void emberAfTimeClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Time Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.353 void emberAfTimeClusterServerInitCallback ( int8u *endpoint* )**

Time Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.354 void emberAfTimeClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Time Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.355 void emberAfTimeClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Time Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.356 EmberAfStatus emberAfTimeClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Time Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.357 void emberAfTimeClusterServerTickCallback ( int8u *endpoint* )**

Time Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.358 boolean emberAfRssiLocationClusterAnchorNodeAnnounceCallback ( int8u \* *anchorNodeIeeeAddress*, int16s *coordinate1*, int16s *coordinate2*, int16s *coordinate3* )**

RSSI Location Cluster Anchor Node Announce.

**Parameters**

<i>anchorNode-IeeeAddress</i>	Ver.: always
<i>coordinate1</i>	Ver.: always
<i>coordinate2</i>	Ver.: always
<i>coordinate3</i>	Ver.: always

**6.4.2.359 void emberAfRssiLocationClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

RSSI Location Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.360 void emberAfRssiLocationClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

RSSI Location Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.361 void emberAfRssiLocationClusterClientInitCallback ( int8u *endpoint* )**

RSSI Location Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.362 void emberAfRssiLocationClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

RSSI Location Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.363 void emberAfRssiLocationClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

RSSI Location Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.364 EmberAfStatus emberAfRssiLocationClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

RSSI Location Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.365 void emberAfRssiLocationClusterClientTickCallback ( int8u *endpoint* )**

RSSI Location Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.366 boolean emberAfRssiLocationClusterCompactLocationDataNotificationCallback ( int8u *locationType*, int16s *coordinate1*, int16s *coordinate2*, int16s *coordinate3*, int8u *qualityMeasure*, int16u *locationAge* )**

RSSI Location Cluster Compact Location Data Notification.

#### Parameters

<i>locationType</i>	Ver.: always
<i>coordinate1</i>	Ver.: always
<i>coordinate2</i>	Ver.: always
<i>coordinate3</i>	Ver.: always
<i>qualityMeasure</i>	Ver.: always
<i>locationAge</i>	Ver.: always

**6.4.2.367 boolean emberAfRssiLocationClusterDeviceConfigurationResponseCallback ( int8u *status*, int16s *power*, int16u *pathLossExponent*, int16u *calculationPeriod*, int8u *numberRssiMeasurements*, int16u *reportingPeriod* )**

RSSI Location Cluster Device Configuration Response.

**Parameters**

<i>status</i>	Ver.: always
<i>power</i>	Ver.: always
<i>pathLoss-Exponent</i>	Ver.: always
<i>calculation-Period</i>	Ver.: always
<i>numberRssi-Measurements</i>	Ver.: always
<i>reporting-Period</i>	Ver.: always

**6.4.2.368 boolean emberAfRssiLocationClusterGetDeviceConfigurationCallback ( int8u \* *targetAddress* )**

RSSI Location Cluster Get Device Configuration.

**Parameters**

<i>targetAddress</i>	Ver.: always
----------------------	--------------

**6.4.2.369 boolean emberAfRssiLocationClusterGetLocationDataCallback ( int8u *flags*, int8u *numberResponses*, int8u \* *targetAddress* )**

RSSI Location Cluster Get Location Data.

**Parameters**

<i>flags</i>	Ver.: always
<i>number-Responses</i>	Ver.: always
<i>targetAddress</i>	Ver.: always

**6.4.2.370 boolean emberAfRssiLocationClusterLocationDataNotificationCallback ( int8u *locationType*, int16s *coordinate1*, int16s *coordinate2*, int16s *coordinate3*, int16s *power*, int16u *pathLossExponent*, int8u *locationMethod*, int8u *qualityMeasure*, int16u *locationAge* )**

RSSI Location Cluster Location Data Notification.

**Parameters**

<i>locationType</i>	Ver.: always
<i>coordinate1</i>	Ver.: always
<i>coordinate2</i>	Ver.: always
<i>coordinate3</i>	Ver.: always
<i>power</i>	Ver.: always
<i>pathLoss-Exponent</i>	Ver.: always
<i>locationMethod</i>	Ver.: always
<i>qualityMeasure</i>	Ver.: always
<i>locationAge</i>	Ver.: always

**6.4.2.371 boolean emberAfRssiLocationClusterLocationDataResponseCallback ( int8u *status*, int8u *locationType*, int16s *coordinate1*, int16s *coordinate2*, int16s *coordinate3*, int16s *power*, int16u *pathLossExponent*, int8u *locationMethod*, int8u *qualityMeasure*, int16u *locationAge* )**

RSSI Location Cluster Location Data Response.

#### Parameters

<i>status</i>	Ver.: always
<i>locationType</i>	Ver.: always
<i>coordinate1</i>	Ver.: always
<i>coordinate2</i>	Ver.: always
<i>coordinate3</i>	Ver.: always
<i>power</i>	Ver.: always
<i>pathLoss-Exponent</i>	Ver.: always
<i>locationMethod</i>	Ver.: always
<i>qualityMeasure</i>	Ver.: always
<i>locationAge</i>	Ver.: always

**6.4.2.372 boolean emberAfRssiLocationClusterReportRssiMeasurementsCallback ( int8u \* *measuringDevice*, int8u *neighbors*, int8u \* *neighborsInfo* )**

RSSI Location Cluster Report Rssi Measurements.

#### Parameters

<i>measuring-Device</i>	Ver.: always
<i>neighbors</i>	Ver.: always
<i>neighborsInfo</i>	Ver.: always

**6.4.2.373 boolean emberAfRssiLocationClusterRequestOwnLocationCallback ( int8u \* *blindNode* )**

RSSI Location Cluster Request Own Location.

#### Parameters

<i>blindNode</i>	Ver.: always
------------------	--------------

**6.4.2.374 boolean emberAfRssiLocationClusterRssiPingCallback ( int8u *locationType* )**

RSSI Location Cluster Rssi Ping.

#### Parameters

<i>locationType</i>	Ver.: always
---------------------	--------------

#### 6.4.2.375 boolean emberAfRssiLocationClusterRssiRequestCallback ( void )

RSSI Location Cluster Rssi Request.

#### 6.4.2.376 boolean emberAfRssiLocationClusterRssiResponseCallback ( int8u \* *replyingDevice*, int16s *coordinate1*, int16s *coordinate2*, int16s *coordinate3*, int8s *rssi*, int8u *numberRssiMeasurements* )

RSSI Location Cluster Rssi Response.

##### Parameters

<i>replyingDevice</i>	Ver.: always
<i>coordinate1</i>	Ver.: always
<i>coordinate2</i>	Ver.: always
<i>coordinate3</i>	Ver.: always
<i>rssi</i>	Ver.: always
<i>numberRssiMeasurements</i>	Ver.: always

#### 6.4.2.377 boolean emberAfRssiLocationClusterSendPingsCallback ( int8u \* *targetAddress*, int8u *numberRssiMeasurements*, int16u *calculationPeriod* )

RSSI Location Cluster Send Pings.

##### Parameters

<i>targetAddress</i>	Ver.: always
<i>numberRssiMeasurements</i>	Ver.: always
<i>calculationPeriod</i>	Ver.: always

#### 6.4.2.378 void emberAfRssiLocationClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

RSSI Location Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.379 void emberAfRssiLocationClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

RSSI Location Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.380 void emberAfRssiLocationClusterServerInitCallback ( int8u *endpoint* )

RSSI Location Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.381 void emberAfRssiLocationClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

RSSI Location Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.382 void emberAfRssiLocationClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

RSSI Location Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.383 EmberAfStatus emberAfRssiLocationClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

RSSI Location Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.384 void emberAfRssiLocationClusterServerTickCallback ( int8u *endpoint* )**

RSSI Location Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.385 boolean emberAfRssiLocationClusterSetAbsoluteLocationCallback ( int16s *coordinate1*, int16s *coordinate2*, int16s *coordinate3*, int16s *power*, int16u *pathLossExponent* )**

RSSI Location Cluster Set Absolute Location.

#### Parameters

<i>coordinate1</i>	Ver.: always
<i>coordinate2</i>	Ver.: always
<i>coordinate3</i>	Ver.: always
<i>power</i>	Ver.: always
<i>pathLoss-Exponent</i>	Ver.: always

**6.4.2.386 boolean emberAfRssiLocationClusterSetDeviceConfigurationCallback ( int16s *power*, int16u *pathLossExponent*, int16u *calculationPeriod*, int8u *numberRssiMeasurements*, int16u *reportingPeriod* )**

RSSI Location Cluster Set Device Configuration.

#### Parameters

<i>power</i>	Ver.: always
<i>pathLoss-Exponent</i>	Ver.: always

<i>calculation-Period</i>	Ver.: always
<i>numberRssi-Measurements</i>	Ver.: always
<i>reporting-Period</i>	Ver.: always

**6.4.2.387 void emberAfBinaryInputBasicClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Binary Input (Basic) Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.388 void emberAfBinaryInputBasicClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Binary Input (Basic) Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.389 void emberAfBinaryInputBasicClusterClientInitCallback ( int8u *endpoint* )**

Binary Input (Basic) Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.390 void emberAfBinaryInputBasicClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Binary Input (Basic) Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.391 void emberAfBinaryInputBasicClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Binary Input (Basic) Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.392 EmberAfStatus emberAfBinaryInputBasicClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Binary Input (Basic) Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributelid</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.393 void emberAfBinaryInputBasicClusterClientTickCallback ( int8u *endpoint* )**

Binary Input (Basic) Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.394 void emberAfBinaryInputBasicClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Binary Input (Basic) Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.395 void emberAfBinaryInputBasicClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Binary Input (Basic) Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.396 void emberAfBinaryInputBasicClusterServerInitCallback ( int8u *endpoint* )**

Binary Input (Basic) Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.397 void emberAfBinaryInputBasicClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Binary Input (Basic) Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.398 void emberAfBinaryInputBasicClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Binary Input (Basic) Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.399 EmberAfStatus emberAfBinaryInputBasicClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Binary Input (Basic) Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.400 void emberAfBinaryInputBasicClusterServerTickCallback ( int8u *endpoint* )**

Binary Input (Basic) Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.401 void emberAfCommissioningClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Commissioning Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.402 void emberAfCommissioningClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Commissioning Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.403 void emberAfCommissioningClusterClientInitCallback ( int8u *endpoint* )**

Commissioning Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.404 void emberAfCommissioningClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Commissioning Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.405 void emberAfCommissioningClusterClientMessageSentCallback ( EmberOutgoingMessage-Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Commissioning Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.406 EmberAfStatus emberAfCommissioningClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Commissioning Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.407 void emberAfCommissioningClusterClientTickCallback ( int8u endpoint )**

Commissioning Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.408 boolean emberAfCommissioningClusterResetStartupParametersCallback ( int8u options, int8u index )**

Commissioning Cluster Reset Startup Parameters.

**Parameters**

<i>options</i>	Ver.: always
<i>index</i>	Ver.: always

**6.4.2.409 boolean emberAfCommissioningClusterResetStartupParametersResponseCallback ( int8u status )**

Commissioning Cluster Reset Startup Parameters Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.410 boolean emberAfCommissioningClusterRestartDeviceCallback ( int8u *options*, int8u *delay*, int8u *jitter* )**

Commissioning Cluster Restart Device.

**Parameters**

<i>options</i>	Ver.: always
<i>delay</i>	Ver.: always
<i>jitter</i>	Ver.: always

**6.4.2.411 boolean emberAfCommissioningClusterRestartDeviceResponseCallback ( int8u *status* )**

Commissioning Cluster Restart Device Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.412 boolean emberAfCommissioningClusterRestoreStartupParametersCallback ( int8u *options*, int8u *index* )**

Commissioning Cluster Restore Startup Parameters.

**Parameters**

<i>options</i>	Ver.: always
<i>index</i>	Ver.: always

**6.4.2.413 boolean emberAfCommissioningClusterRestoreStartupParametersResponseCallback ( int8u *status* )**

Commissioning Cluster Restore Startup Parameters Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.414 boolean emberAfCommissioningClusterSaveStartupParametersCallback ( int8u *options*, int8u *index* )**

Commissioning Cluster Save Startup Parameters.

**Parameters**

<i>options</i>	Ver.: always
<i>index</i>	Ver.: always

**6.4.2.415 boolean emberAfCommissioningClusterSaveStartupParametersResponseCallback ( int8u *status* )**

Commissioning Cluster Save Startup Parameters Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.416 void emberAfCommissioningClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Commissioning Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.417 void emberAfCommissioningClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Commissioning Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.418 void emberAfCommissioningClusterServerInitCallback ( int8u *endpoint* )**

Commissioning Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.419 void emberAfCommissioningClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Commissioning Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.420 void emberAfCommissioningClusterServerMessageSentCallback ( EmberOutgoingMessage-Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Commissioning Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.421 EmberAfStatus emberAfCommissioningClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Commissioning Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.422 void emberAfCommissioningClusterServerTickCallback ( int8u *endpoint* )**

Commissioning Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.423 void emberAfPartitionClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Partition Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.424 void emberAfPartitionClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Partition Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.425 void emberAfPartitionClusterClientInitCallback ( int8u *endpoint* )**

Partition Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.426 void emberAfPartitionClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Partition Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always
--------------------------	--

**6.4.2.427 void emberAfPartitionClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Partition Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.428 EmberAfStatus emberAfPartitionClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Partition Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.429 void emberAfPartitionClusterClientTickCallback ( int8u *endpoint* )**

Partition Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.430 boolean emberAfPartitionClusterMultipleAckCallback ( int8u *ackOptions*, int8u \* *firstFrameIdAndNackList* )**

Partition Cluster Multiple Ack.

**Parameters**

<i>ackOptions</i>	Ver.: always
<i>firstFrameId-AndNackList</i>	Ver.: always

**6.4.2.431 boolean emberAfPartitionClusterReadHandshakeParamCallback ( int16u *partitionedClusterId*, int8u \* *attributeList* )**

Partition Cluster Read Handshake Param.

**Parameters**

<i>partitioned-ClusterId</i>	Ver.: always
<i>attributeList</i>	Ver.: always

**6.4.2.432 boolean emberAfPartitionClusterReadHandshakeParamResponseCallback ( int16u *partitionedClusterId*, int8u \* *readAttributeStatusRecords* )**

Partition Cluster Read Handshake Param Response.

**Parameters**

<i>partitioned-ClusterId</i>	Ver.: always
<i>readAttribute-StatusRecords</i>	Ver.: always

**6.4.2.433 void emberAfPartitionClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Partition Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.434 void emberAfPartitionClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Partition Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.435 void emberAfPartitionClusterServerInitCallback ( int8u *endpoint* )

Partition Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.436 void emberAfPartitionClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Partition Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.437 void emberAfPartitionClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Partition Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.438 EmberAfStatus emberAfPartitionClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Partition Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.439 void emberAfPartitionClusterServerTickCallback ( int8u *endpoint* )**

Partition Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.440 boolean emberAfPartitionClusterTransferPartitionedFrameCallback ( int8u *fragmentationOptions*, int8u \* *partitionedIndicatorAndFrame* )**

Partition Cluster Transfer Partitioned Frame.

**Parameters**

<i>fragmentation-Options</i>	Ver.: always
<i>partitioned-IndicatorAnd-Frame</i>	Ver.: always

**6.4.2.441 boolean emberAfPartitionClusterWriteHandshakeParamCallback ( int16u *partitionedClusterId*, int8u \* *writeAttributeRecords* )**

Partition Cluster Write Handshake Param.

**Parameters**

<i>partitioned-ClusterId</i>	Ver.: always
<i>writeAttribute-Records</i>	Ver.: always

**6.4.2.442 void emberAfOtaBootloadClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Over the Air Bootloading Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.443 void emberAfOtaBootloadClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Over the Air Bootloading Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.444 void emberAfOtaBootloadClusterClientInitCallback ( int8u *endpoint* )**

Over the Air Bootloading Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.445 void emberAfOtaBootloadClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Over the Air Bootloading Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.446 void emberAfOtaBootloadClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Over the Air Bootloading Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.447 EmberAfStatus emberAfOtaBootloadClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Over the Air Bootloading Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.448 void emberAfOtaBootloadClusterClientTickCallback ( int8u *endpoint* )**

Over the Air Bootloading Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.449 void emberAfOtaBootloadClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Over the Air Bootloading Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.450 void emberAfOtaBootloadClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Over the Air Bootloading Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.451 void emberAfOtaBootloadClusterServerInitCallback ( int8u *endpoint* )**

Over the Air Bootloading Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.452 void emberAfOtaBootloadClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Over the Air Bootloading Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.453 void emberAfOtaBootloadClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Over the Air Bootloading Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.454 EmberAfStatus emberAfOtaBootloadClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Over the Air Bootloading Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.455 void emberAfOtaBootloadClusterServerTickCallback ( int8u endpoint )**

Over the Air Bootloading Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.456 void emberAfPowerProfileClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Power Profile Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.457 void emberAfPowerProfileClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Power Profile Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.458 void emberAfPowerProfileClusterClientInitCallback ( int8u *endpoint* )**

Power Profile Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.459 void emberAfPowerProfileClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Power Profile Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.460 void emberAfPowerProfileClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Power Profile Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.461 EmberAfStatus emberAfPowerProfileClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Power Profile Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.462 void emberAfPowerProfileClusterClientTickCallback ( int8u *endpoint* )**

Power Profile Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.463 boolean emberAfPowerProfileClusterEnergyPhasesScheduleNotificationCallback ( int8u *powerProfileId*, int8u *numOfScheduledPhases*, int8u \* *scheduledPhases* )**

Power Profile Cluster Energy Phases Schedule Notification.

#### Parameters

<i>powerProfileId</i>	Ver.: always
<i>numOfScheduledPhases</i>	Ver.: always
<i>scheduledPhases</i>	Ver.: always

**6.4.2.464 boolean emberAfPowerProfileClusterEnergyPhasesScheduleRequestCallback ( int8u *powerProfileId* )**

Power Profile Cluster Energy Phases Schedule Request.

**Parameters**

<i>powerProfileId</i>	Ver.: always
-----------------------	--------------

**6.4.2.465 boolean emberAfPowerProfileClusterEnergyPhasesScheduleResponseCallback ( int8u powerProfileId, int8u numOfScheduledPhases, int8u \* scheduledPhases )**

Power Profile Cluster Energy Phases Schedule Response.

**Parameters**

<i>powerProfileId</i>	Ver.: always
<i>numOfScheduledPhases</i>	Ver.: always
<i>scheduledPhases</i>	Ver.: always

**6.4.2.466 boolean emberAfPowerProfileClusterEnergyPhasesScheduleStateNotificationCallback ( int8u powerProfileId, int8u numOfScheduledPhases, int8u \* scheduledPhases )**

Power Profile Cluster Energy Phases Schedule State Notification.

**Parameters**

<i>powerProfileId</i>	Ver.: always
<i>numOfScheduledPhases</i>	Ver.: always
<i>scheduledPhases</i>	Ver.: always

**6.4.2.467 boolean emberAfPowerProfileClusterEnergyPhasesScheduleStateRequestCallback ( int8u powerProfileId )**

Power Profile Cluster Energy Phases Schedule State Request.

**Parameters**

<i>powerProfileId</i>	Ver.: always
-----------------------	--------------

**6.4.2.468 boolean emberAfPowerProfileClusterEnergyPhasesScheduleStateResponseCallback ( int8u powerProfileId, int8u numOfScheduledPhases, int8u \* scheduledPhases )**

Power Profile Cluster Energy Phases Schedule State Response.

**Parameters**

<i>powerProfileId</i>	Ver.: always
-----------------------	--------------

<i>numOf-Scheduled-Phases</i>	Ver.: always
<i>scheduled-Phases</i>	Ver.: always

#### 6.4.2.469 boolean emberAfPowerProfileClusterGetOverallSchedulePriceCallback ( void )

Power Profile Cluster Get Overall Schedule Price.

#### 6.4.2.470 boolean emberAfPowerProfileClusterGetOverallSchedulePriceResponseCallback ( int16u currency, int32u price, int8u priceTrailingDigit )

Power Profile Cluster Get Overall Schedule Price Response.

##### Parameters

<i>currency</i>	Ver.: always
<i>price</i>	Ver.: always
<i>priceTrailing-Digit</i>	Ver.: always

#### 6.4.2.471 boolean emberAfPowerProfileClusterGetPowerProfilePriceCallback ( int8u powerProfileId )

Power Profile Cluster Get Power Profile Price.

##### Parameters

<i>powerProfileId</i>	Ver.: always
-----------------------	--------------

#### 6.4.2.472 boolean emberAfPowerProfileClusterGetPowerProfilePriceExtendedCallback ( int8u options, int8u powerProfileId, int16u powerProfileStartTime )

Power Profile Cluster Get Power Profile Price Extended.

##### Parameters

<i>options</i>	Ver.: always
<i>powerProfileId</i>	Ver.: always
<i>powerProfile-StartTime</i>	Ver.: always

#### 6.4.2.473 boolean emberAfPowerProfileClusterGetPowerProfilePriceExtendedResponseCallback ( int8u powerProfileId, int16u currency, int32u price, int8u priceTrailingDigit )

Power Profile Cluster Get Power Profile Price Extended Response.

**Parameters**

<i>powerProfileId</i>	Ver.: always
<i>currency</i>	Ver.: always
<i>price</i>	Ver.: always
<i>priceTrailing-Digit</i>	Ver.: always

**6.4.2.474 boolean emberAfPowerProfileClusterGetPowerProfilePriceResponseCallback ( int8u powerProfileId, int16u currency, int32u price, int8u priceTrailingDigit )**

Power Profile Cluster Get Power Profile Price Response.

**Parameters**

<i>powerProfileId</i>	Ver.: always
<i>currency</i>	Ver.: always
<i>price</i>	Ver.: always
<i>priceTrailing-Digit</i>	Ver.: always

**6.4.2.475 boolean emberAfPowerProfileClusterPowerProfileNotificationCallback ( int8u totalProfileNum, int8u powerProfileId, int8u numOfTransferredPhases, int8u \* transferredPhases )**

Power Profile Cluster Power Profile Notification.

**Parameters**

<i>totalProfile-Num</i>	Ver.: always
<i>powerProfileId</i>	Ver.: always
<i>numOf-Transferred-Phases</i>	Ver.: always
<i>transferred-Phases</i>	Ver.: always

**6.4.2.476 boolean emberAfPowerProfileClusterPowerProfileRequestCallback ( int8u powerProfileId )**

Power Profile Cluster Power Profile Request.

**Parameters**

<i>powerProfileId</i>	Ver.: always
-----------------------	--------------

**6.4.2.477 boolean emberAfPowerProfileClusterPowerProfileResponseCallback ( int8u totalProfileNum, int8u powerProfileId, int8u numOfTransferredPhases, int8u \* transferredPhases )**

Power Profile Cluster Power Profile Response.

**Parameters**

<i>totalProfile-Num</i>	Ver.: always
<i>powerProfileId</i>	Ver.: always
<i>numOf-Transferred-Phases</i>	Ver.: always
<i>transferred-Phases</i>	Ver.: always

**6.4.2.478 boolean emberAfPowerProfileClusterPowerProfileScheduleConstraintsNotificationCallback ( int8u *powerProfileId*, int16u *startAfter*, int16u *stopBefore* )**

Power Profile Cluster Power Profile Schedule Constraints Notification.

**Parameters**

<i>powerProfileId</i>	Ver.: always
<i>startAfter</i>	Ver.: always
<i>stopBefore</i>	Ver.: always

**6.4.2.479 boolean emberAfPowerProfileClusterPowerProfileScheduleConstraintsRequestCallback ( int8u *powerProfileId* )**

Power Profile Cluster Power Profile Schedule Constraints Request.

**Parameters**

<i>powerProfileId</i>	Ver.: always
-----------------------	--------------

**6.4.2.480 boolean emberAfPowerProfileClusterPowerProfileScheduleConstraintsResponseCallback ( int8u *powerProfileId*, int16u *startAfter*, int16u *stopBefore* )**

Power Profile Cluster Power Profile Schedule Constraints Response.

**Parameters**

<i>powerProfileId</i>	Ver.: always
<i>startAfter</i>	Ver.: always
<i>stopBefore</i>	Ver.: always

**6.4.2.481 boolean emberAfPowerProfileClusterPowerProfileStateRequestCallback ( void )**

Power Profile Cluster Power Profile State Request.

**6.4.2.482 boolean emberAfPowerProfileClusterPowerProfileStateResponseCallback ( int8u powerProfileCount, int8u \* powerProfileRecords )**

Power Profile Cluster Power Profile State Response.

**Parameters**

<i>powerProfile-Count</i>	Ver.: always
<i>powerProfile-Records</i>	Ver.: always

**6.4.2.483 boolean emberAfPowerProfileClusterPowerProfilesStateNotificationCallback ( int8u powerProfileCount, int8u \* powerProfileRecords )**

Power Profile Cluster Power Profiles State Notification.

**Parameters**

<i>powerProfile-Count</i>	Ver.: always
<i>powerProfile-Records</i>	Ver.: always

**6.4.2.484 void emberAfPowerProfileClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Power Profile Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.485 void emberAfPowerProfileClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Power Profile Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.486 void emberAfPowerProfileClusterServerInitCallback ( int8u *endpoint* )

Power Profile Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.487 void emberAfPowerProfileClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Power Profile Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.488 void emberAfPowerProfileClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Power Profile Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.489 EmberAfStatus emberAfPowerProfileClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Power Profile Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.490 void emberAfPowerProfileClusterServerTickCallback ( int8u endpoint )**

Power Profile Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.491 void emberAfApplianceControlClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Appliance Control Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.492 void emberAfApplianceControlClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Appliance Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.493 void emberAfApplianceControlClusterClientInitCallback ( int8u endpoint )**

Appliance Control Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.494 void emberAfApplianceControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Appliance Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.495 void emberAfApplianceControlClusterClientMessageSentCallback ( EmberOutgoingMessage- Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Appliance Control Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.496 EmberAfStatus emberAfApplianceControlClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Appliance Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.497 void emberAfApplianceControlClusterClientTickCallback ( int8u *endpoint* )

Appliance Control Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.498 boolean emberAfApplianceControlClusterExecutionOfACommandCallback ( int8u *commandId* )

Appliance Control Cluster Execution Of A Command.

##### Parameters

<i>commandId</i>	Ver.: always
------------------	--------------

#### 6.4.2.499 boolean emberAfApplianceControlClusterOverloadPauseCallback ( void )

Appliance Control Cluster Overload Pause.

#### 6.4.2.500 boolean emberAfApplianceControlClusterOverloadPauseResumeCallback ( void )

Appliance Control Cluster Overload Pause Resume.

#### 6.4.2.501 boolean emberAfApplianceControlClusterOverloadWarningCallback ( int8u *warningEvent* )

Appliance Control Cluster Overload Warning.

##### Parameters

<i>warningEvent</i>	Ver.: always
---------------------	--------------

#### 6.4.2.502 void emberAfApplianceControlClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Appliance Control Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.503 void emberAfApplianceControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Appliance Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.504 void emberAfApplianceControlClusterServerInitCallback ( int8u *endpoint* )**

Appliance Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.505 void emberAfApplianceControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Appliance Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.506 void emberAfApplianceControlClusterServerMessageSentCallback ( EmberOutgoingMessage-  
Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \*  
*message*, EmberStatus *status* )**

Appliance Control Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.507 EmberAfStatus emberAfApplianceControlClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Appliance Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.508 void emberAfApplianceControlClusterServerTickCallback ( int8u endpoint )**

Appliance Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.509 boolean emberAfApplianceControlClusterSignalStateCallback ( void )**

Appliance Control Cluster Signal State.

**6.4.2.510 boolean emberAfApplianceControlClusterSignalStateNotificationCallback ( int8u applianceStatus, int8u remoteEnableFlagsAndDeviceStatus2, int32u applianceStatus2 )**

Appliance Control Cluster Signal State Notification.

#### Parameters

<i>appliance-Status</i>	Ver.: always
<i>remoteEnable-FlagsAnd-DeviceStatus2</i>	Ver.: always
<i>appliance-Status2</i>	Ver.: always

**6.4.2.511 boolean emberAfApplianceControlClusterSignalStateResponseCallback ( int8u *applianceStatus*, int8u *remoteEnableFlagsAndDeviceStatus2*, int32u *applianceStatus2* )**

Appliance Control Cluster Signal State Response.

**Parameters**

<i>appliance-Status</i>	Ver.: always
<i>remoteEnable-FlagsAnd-DeviceStatus2</i>	Ver.: always
<i>appliance-Status2</i>	Ver.: always

**6.4.2.512 boolean emberAfApplianceControlClusterWriteFunctionsCallback ( int16u *functionId*, int8u *functionDataType*, int8u \* *functionData* )**

Appliance Control Cluster Write Functions.

**Parameters**

<i>functionId</i>	Ver.: always
<i>functionData-Type</i>	Ver.: always
<i>functionData</i>	Ver.: always

**6.4.2.513 boolean emberAfPollControlClusterCheckInCallback ( void )**

Poll Control Cluster Check In.

**6.4.2.514 boolean emberAfPollControlClusterCheckInResponseCallback ( int8u *startFastPolling*, int16u *fastPollTimeout* )**

Poll Control Cluster Check In Response.

**Parameters**

<i>startFast-Polling</i>	Ver.: always
<i>fastPollTimeout</i>	Ver.: always

**6.4.2.515 void emberAfPollControlClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Poll Control Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.516 void emberAfPollControlClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Poll Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.517 void emberAfPollControlClusterClientInitCallback ( int8u *endpoint* )**

Poll Control Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.518 void emberAfPollControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Poll Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.519 void emberAfPollControlClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Poll Control Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.520 EmberAfStatus emberAfPollControlClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Poll Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.521 void emberAfPollControlClusterClientTickCallback ( int8u *endpoint* )**

Poll Control Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.522 boolean emberAfPollControlClusterFastPollStopCallback ( void )**

Poll Control Cluster Fast Poll Stop.

**6.4.2.523 void emberAfPollControlClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Poll Control Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.524 void emberAfPollControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Poll Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.525 void emberAfPollControlClusterServerInitCallback ( int8u *endpoint* )**

Poll Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.526 void emberAfPollControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Poll Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.527 void emberAfPollControlClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Poll Control Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.528 EmberAfStatus emberAfPollControlClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Poll Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.529 void emberAfPollControlClusterServerTickCallback ( int8u *endpoint* )**

Poll Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.530 boolean emberAfPollControlClusterSetLongPollIntervalCallback ( int32u *newLongPollInterval* )**

Poll Control Cluster Set Long Poll Interval.

#### Parameters

<i>newLongPoll- Interval</i>	Ver.: always
----------------------------------	--------------

**6.4.2.531 boolean emberAfPollControlClusterSetShortPollIntervalCallback ( int16u *newShortPollInterval* )**

Poll Control Cluster Set Short Poll Interval.

#### Parameters

<i>newShortPoll- Interval</i>	Ver.: always
-----------------------------------	--------------

**6.4.2.532 void emberAfGreenPowerClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Green Power Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.533 void emberAfGreenPowerClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Green Power Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.534 void emberAfGreenPowerClusterClientInitCallback ( int8u *endpoint* )**

Green Power Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.535 void emberAfGreenPowerClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Green Power Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.536 void emberAfGreenPowerClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Green Power Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.537 EmberAfStatus emberAfGreenPowerClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Green Power Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.538 void emberAfGreenPowerClusterClientTickCallback ( int8u *endpoint* )**

Green Power Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.539 boolean emberAfGreenPowerClusterGpCommissioningNotificationCallback ( int16u *options*, int32u *gpdSrcId*, int8u \* *gpdIEEE*, int8u *endpoint*, int32u *gpdSecurityFrameCounter*, int8u *gpdCommandId*, int8u \* *gpdCommandPayload*, int16u *gppShortAddress*, int8u *gppLink*, int32u *mic* )**

Green Power Cluster Gp Commissioning Notification.

**Parameters**

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>endpoint</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSecurityFrameCounter</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdCommandId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdCommandPayload</i>	Ver.: since gp-1.0-09-5499-24
<i>gppShortAddress</i>	Ver.: since gp-1.0-09-5499-24
<i>gppLink</i>	Ver.: since gp-1.0-09-5499-24
<i>mic</i>	Ver.: since gp-1.0-09-5499-24

**6.4.2.540 boolean emberAfGreenPowerClusterGpNotificationCallback ( int16u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *gpdEndpoint*, int32u *gpdSecurityFrameCounter*, int8u *gpdCommandId*, int8u \* *gpdCommandPayload*, int16u *gppShortAddress*, int8u *gppDistance* )**

Green Power Cluster Gp Notification.

**Parameters**

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdEndpoint</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSecurityFrameCounter</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdCommandId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdCommandPayload</i>	Ver.: since gp-1.0-09-5499-24
<i>gppShortAddress</i>	Ver.: since gp-1.0-09-5499-24
<i>gppDistance</i>	Ver.: since gp-1.0-09-5499-24

**6.4.2.541 boolean emberAfGreenPowerClusterGpNotificationResponseCallback ( int8u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int32u *gpdSecurityFrameCounter* )**

Green Power Cluster Gp Notification Response.

**Parameters**

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSecurityFrameCounter</i>	Ver.: since gp-1.0-09-5499-24

**6.4.2.542 boolean emberAfGreenPowerClusterGpPairingCallback ( int32u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint*, int8u \* *sinkIeeeAddress*, int16u *sinkNwkAddress*, int16u *sinkGroupId*, int8u *deviceId*, int32u *gpdSecurityFrameCounter*, int8u \* *gpdKey*, int16u *assignedAlias*, int8u *forwardingRadius* )**

Green Power Cluster Gp Pairing.

#### Parameters

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>endpoint</i>	Ver.: since gp-1.0-09-5499-24
<i>sinkIeee-Address</i>	Ver.: since gp-1.0-09-5499-24
<i>sinkNwk-Address</i>	Ver.: since gp-1.0-09-5499-24
<i>sinkGroupId</i>	Ver.: since gp-1.0-09-5499-24
<i>deviceId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSecurity-FrameCounter</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdKey</i>	Ver.: since gp-1.0-09-5499-24
<i>assignedAlias</i>	Ver.: since gp-1.0-09-5499-24
<i>forwarding-Radius</i>	Ver.: since gp-1.0-09-5499-24

**6.4.2.543 boolean emberAfGreenPowerClusterGpPairingConfigurationCallback ( int8u *actions*, int16u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint*, int8u *deviceId*, int8u *groupListCount*, int8u \* *groupList*, int16u *gpdAssignedAlias*, int8u *forwardingRadius*, int8u *securityOptions*, int32u *gpdSecurityFrameCounter*, int8u \* *gpdSecurityKey*, int8u *numberOfPairedEndpoints*, int8u \* *pairedEndpoints*, int8u *applicationInformation*, int16u *manufacturerId*, int16u *modelId*, int8u *numberOfGpdCommands*, int8u \* *gpdCommandIdList*, int8u *clusterIdListCount*, int8u \* *clusterListServer*, int8u \* *clusterListClient* )**

Green Power Cluster Gp Pairing Configuration.

#### Parameters

<i>actions</i>	Ver.: since gp-1.0-09-5499-24
<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>endpoint</i>	Ver.: since gp-1.0-09-5499-24
<i>deviceId</i>	Ver.: since gp-1.0-09-5499-24
<i>groupListCount</i>	Ver.: since gp-1.0-09-5499-24
<i>groupList</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdAssigned-Alias</i>	Ver.: since gp-1.0-09-5499-24
<i>forwarding-Radius</i>	Ver.: since gp-1.0-09-5499-24
<i>securityOptions</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSecurity-FrameCounter</i>	Ver.: since gp-1.0-09-5499-24

<i>gpdSecurityKey</i>	Ver.: since gp-1.0-09-5499-24
<i>numberOfPairedEndpoints</i>	Ver.: since gp-1.0-09-5499-24
<i>pairedEndpoints</i>	Ver.: since gp-1.0-09-5499-24
<i>applicationInformation</i>	Ver.: always
<i>manufacturerId</i>	Ver.: always
<i>modeId</i>	Ver.: always
<i>numberOfGpdCommands</i>	Ver.: always
<i>gpdCommandIdList</i>	Ver.: always
<i>clusterIdListCount</i>	Ver.: always
<i>clusterListServer</i>	Ver.: always
<i>clusterListClient</i>	Ver.: always

**6.4.2.544 boolean emberAfGreenPowerClusterGpPairingSearchCallback ( int16u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint* )**

Green Power Cluster Gp Pairing Search.

#### Parameters

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>endpoint</i>	Ver.: always

**6.4.2.545 boolean emberAfGreenPowerClusterGpProxyCommissioningModeCallback ( int8u *options*, int16u *commissioningWindow*, int8u *channel* )**

Green Power Cluster Gp Proxy Commissioning Mode.

#### Parameters

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>commissioningWindow</i>	Ver.: since gp-1.0-09-5499-24
<i>channel</i>	Ver.: since gp-1.0-09-5499-24

**6.4.2.546 boolean emberAfGreenPowerClusterGpProxyTableRequestCallback ( int8u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint*, int8u *index* )**

Green Power Cluster Gp Proxy Table Request.

**Parameters**

<i>options</i>	Ver.: always
<i>gpdSrcId</i>	Ver.: always
<i>gpdIeee</i>	Ver.: always
<i>endpoint</i>	Ver.: always
<i>index</i>	Ver.: always

**6.4.2.547 boolean emberAfGreenPowerClusterGpProxyTableResponseCallback ( int8u *status*, int8u *totalNumberOfNonEmptyProxyTableEntries*, int8u *startIndex*, int8u *entriesCount*, int8u \* *proxyTableEntries* )**

Green Power Cluster Gp Proxy Table Response.

**Parameters**

<i>status</i>	Ver.: always
<i>totalNumberOfNonEmptyProxyTableEntries</i>	Ver.: always
<i>startIndex</i>	Ver.: always
<i>entriesCount</i>	Ver.: always
<i>proxyTableEntries</i>	Ver.: always

**6.4.2.548 boolean emberAfGreenPowerClusterGpResponseCallback ( int8u *options*, int16u *tempMasterShortAddress*, int8u *tempMasterTxChannel*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint*, int8u *gpdCommandId*, int8u \* *gpdCommandPayload* )**

Green Power Cluster Gp Response.

**Parameters**

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>tempMasterShortAddress</i>	Ver.: since gp-1.0-09-5499-24
<i>tempMasterTxChannel</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>endpoint</i>	Ver.: always
<i>gpdCommandId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdCommandPayload</i>	Ver.: always

**6.4.2.549 boolean emberAfGreenPowerClusterGpSinkCommissioningModeCallback ( int8u *options*, int16u *gpmAddrForSecurity*, int16u *gpmAddrForPairing*, int8u *sinkEndpoint* )**

Green Power Cluster Gp Sink Commissioning Mode.

#### Parameters

<i>options</i>	Ver.: always
<i>gpmAddrForSecurity</i>	Ver.: always
<i>gpmAddrForPairing</i>	Ver.: always
<i>sinkEndpoint</i>	Ver.: always

**6.4.2.550 boolean emberAfGreenPowerClusterGpSinkTableRequestCallback ( int8u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint*, int8u *index* )**

Green Power Cluster Gp Sink Table Request.

#### Parameters

<i>options</i>	Ver.: always
<i>gpdSrcId</i>	Ver.: always
<i>gpdIeee</i>	Ver.: always
<i>endpoint</i>	Ver.: always
<i>index</i>	Ver.: always

**6.4.2.551 boolean emberAfGreenPowerClusterGpSinkTableResponseCallback ( int8u *status*, int8u *totalNumberOfNonEmptySinkTableEntries*, int8u *startIndex*, int8u *sinkTableEntriesCount*, int8u \* *sinkTableEntries* )**

Green Power Cluster Gp Sink Table Response.

#### Parameters

<i>status</i>	Ver.: always
<i>totalNumberOfNonEmptySinkTableEntries</i>	Ver.: always
<i>startIndex</i>	Ver.: always
<i>sinkTableEntriesCount</i>	Ver.: always
<i>sinkTableEntries</i>	Ver.: always

**6.4.2.552 boolean emberAfGreenPowerClusterGpTranslationTableRequestCallback ( int8u *startIndex* )**

Green Power Cluster Gp Translation Table Request.

**Parameters**

<i>startIndex</i>	Ver.: since gp-1.0-09-5499-24
-------------------	-------------------------------

**6.4.2.553 boolean emberAfGreenPowerClusterGpTranslationTableUpdateCallback ( int16u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint*, int8u \* *translations* )**

Green Power Cluster Gp Translation Table Update.

**Parameters**

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>endpoint</i>	Ver.: since gp-1.0-09-5499-24
<i>translations</i>	Ver.: since gp-1.0-09-5499-24

**6.4.2.554 boolean emberAfGreenPowerClusterGpTunnelingStopCallback ( int8u *options*, int32u *gpdSrcId*, int8u \* *gpdIeee*, int8u *endpoint*, int32u *gpdSecurityFrameCounter*, int16u *gppShortAddress*, int8s *gppDistance* )**

Green Power Cluster Gp Tunneling Stop.

**Parameters**

<i>options</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSrcId</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdIeee</i>	Ver.: since gp-1.0-09-5499-24
<i>endpoint</i>	Ver.: since gp-1.0-09-5499-24
<i>gpdSecurity-FrameCounter</i>	Ver.: since gp-1.0-09-5499-24
<i>gppShort-Address</i>	Ver.: since gp-1.0-09-5499-24
<i>gppDistance</i>	Ver.: since gp-1.0-09-5499-24

**6.4.2.555 void emberAfGreenPowerClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Green Power Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.556 void emberAfGreenPowerClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Green Power Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.557 void emberAfGreenPowerClusterServerInitCallback ( int8u *endpoint* )**

Green Power Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.558 void emberAfGreenPowerClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Green Power Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.559 void emberAfGreenPowerClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Green Power Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.560 EmberAfStatus emberAfGreenPowerClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Green Power Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.561 void emberAfGreenPowerClusterServerTickCallback ( int8u endpoint )**

Green Power Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.562 void emberAfKeepaliveClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Keep-Alive Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.563 void emberAfKeepaliveClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Keep-Alive Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.564 void emberAfKeepaliveClusterClientInitCallback ( int8u *endpoint* )**

Keep-Alive Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.565 void emberAfKeepaliveClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Keep-Alive Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.566 void emberAfKeepaliveClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Keep-Alive Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.567 EmberAfStatus emberAfKeepaliveClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Keep-Alive Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.568 void emberAfKeepaliveClusterClientTickCallback ( int8u *endpoint* )**

Keep-Alive Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.569 void emberAfKeepaliveClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Keep-Alive Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.570 void emberAfKeepaliveClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Keep-Alive Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.571 void emberAfKeepaliveClusterServerInitCallback ( int8u *endpoint* )

Keep-Alive Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.572 void emberAfKeepaliveClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Keep-Alive Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.573 void emberAfKeepaliveClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Keep-Alive Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.574 EmberAfStatus emberAfKeepaliveClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u \* *size*, int8u \* *value* )

Keep-Alive Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.575 void emberAfKeepaliveClusterServerTickCallback ( int8u endpoint )**

Keep-Alive Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.576 void emberAfShadeConfigClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Shade Configuration Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.577 void emberAfShadeConfigClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Shade Configuration Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.578 void emberAfShadeConfigClusterClientInitCallback ( int8u endpoint )**

Shade Configuration Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.579 void emberAfShadeConfigClusterClientManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode )**

Shade Configuration Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.580 void emberAfShadeConfigClusterClientMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

Shade Configuration Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.581 EmberAfStatus emberAfShadeConfigClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Shade Configuration Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.582 void emberAfShadeConfigClusterClientTickCallback ( int8u *endpoint* )

Shade Configuration Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.583 void emberAfShadeConfigClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )

Shade Configuration Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.584 void emberAfShadeConfigClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Shade Configuration Cluster Server Default Response.

This function is called when the server receives the default response from the client.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.585 void emberAfShadeConfigClusterServerInitCallback ( int8u *endpoint* )

Shade Configuration Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.586 void emberAfShadeConfigClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Shade Configuration Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.587 void emberAfShadeConfigClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Shade Configuration Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.588 EmberAfStatus emberAfShadeConfigClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Shade Configuration Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributelid</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.589 void emberAfShadeConfigClusterServerTickCallback ( int8u *endpoint* )**

Shade Configuration Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.590 boolean emberAfDoorLockClusterClearAllPinsCallback ( void )

Door Lock Cluster Clear All Pins.

#### 6.4.2.591 boolean emberAfDoorLockClusterClearAllPinsResponseCallback ( int8u status )

Door Lock Cluster Clear All Pins Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.592 boolean emberAfDoorLockClusterClearAllRfidsCallback ( void )

Door Lock Cluster Clear All Rfids.

#### 6.4.2.593 boolean emberAfDoorLockClusterClearAllRfidsResponseCallback ( int8u status )

Door Lock Cluster Clear All Rfids Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.594 boolean emberAfDoorLockClusterClearHolidayScheduleCallback ( int8u scheduleId )

Door Lock Cluster Clear Holiday Schedule.

##### Parameters

<i>scheduleId</i>	Ver.: always
-------------------	--------------

#### 6.4.2.595 boolean emberAfDoorLockClusterClearHolidayScheduleResponseCallback ( int8u status )

Door Lock Cluster Clear Holiday Schedule Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.596 boolean emberAfDoorLockClusterClearPinCallback ( int16u userId )

Door Lock Cluster Clear Pin.

##### Parameters

<i>userId</i>	Ver.: always
---------------	--------------

#### 6.4.2.597 boolean emberAfDoorLockClusterClearPinResponseCallback ( int8u *status* )

Door Lock Cluster Clear Pin Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.598 boolean emberAfDoorLockClusterClearRfidCallback ( int16u *userId* )

Door Lock Cluster Clear Rfid.

##### Parameters

<i>userId</i>	Ver.: always
---------------	--------------

#### 6.4.2.599 boolean emberAfDoorLockClusterClearRfidResponseCallback ( int8u *status* )

Door Lock Cluster Clear Rfid Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.600 boolean emberAfDoorLockClusterClearWeekdayScheduleCallback ( int8u *scheduleId*, int16u *userId* )

Door Lock Cluster Clear Weekday Schedule.

##### Parameters

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always

#### 6.4.2.601 boolean emberAfDoorLockClusterClearWeekdayScheduleResponseCallback ( int8u *status* )

Door Lock Cluster Clear Weekday Schedule Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.602 boolean emberAfDoorLockClusterClearYeardayScheduleCallback ( int8u *scheduleId*, int16u *userId* )

Door Lock Cluster Clear Yearday Schedule.

**Parameters**

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always

**6.4.2.603 boolean emberAfDoorLockClusterClearYeardayScheduleResponseCallback ( int8u status )**

Door Lock Cluster Clear Yearday Schedule Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.604 void emberAfDoorLockClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Door Lock Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.605 void emberAfDoorLockClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Door Lock Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.606 void emberAfDoorLockClusterClientInitCallback ( int8u endpoint )**

Door Lock Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.607 void emberAfDoorLockClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Door Lock Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.608 void emberAfDoorLockClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Door Lock Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.609 EmberAfStatus emberAfDoorLockClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Door Lock Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.610 void emberAfDoorLockClusterClientTickCallback ( int8u *endpoint* )**

Door Lock Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.611 boolean emberAfDoorLockClusterGetHolidayScheduleCallback ( int8u *scheduleId* )

Door Lock Cluster Get Holiday Schedule.

**Parameters**

<i>scheduleId</i>	Ver.: always
-------------------	--------------

#### 6.4.2.612 boolean emberAfDoorLockClusterGetHolidayScheduleResponseCallback ( int8u *scheduleId*, int8u *status*, int32u *localStartTime*, int32u *localEndTime*, int8u *operatingModeDuringHoliday* )

Door Lock Cluster Get Holiday Schedule Response.

**Parameters**

<i>scheduleId</i>	Ver.: always
<i>status</i>	Ver.: always
<i>localStartTime</i>	Ver.: since ha-1.2-05-3520-29
<i>localEndTime</i>	Ver.: since ha-1.2-05-3520-29
<i>operating- ModeDuring- Holiday</i>	Ver.: since ha-1.2-05-3520-29

#### 6.4.2.613 boolean emberAfDoorLockClusterGetLogRecordCallback ( int16u *logIndex* )

Door Lock Cluster Get Log Record.

**Parameters**

<i>logIndex</i>	Ver.: always
-----------------	--------------

#### 6.4.2.614 boolean emberAfDoorLockClusterGetLogRecordResponseCallback ( int16u *logEntryId*, int32u *timestamp*, int8u *eventType*, int8u *source*, int8u *eventIdOrAlarmCode*, int16u *userId*, int8u \* *pin* )

Door Lock Cluster Get Log Record Response.

**Parameters**

<i>logEntryId</i>	Ver.: always
<i>timestamp</i>	Ver.: always
<i>eventType</i>	Ver.: always
<i>source</i>	Ver.: always

<i>eventIdOrAlarmCode</i>	Ver.: always
<i>userId</i>	Ver.: always
<i>pin</i>	Ver.: always

#### 6.4.2.615 boolean emberAfDoorLockClusterGetPinCallback ( int16u *userId* )

Door Lock Cluster Get Pin.

##### Parameters

<i>userId</i>	Ver.: always
---------------	--------------

#### 6.4.2.616 boolean emberAfDoorLockClusterGetPinResponseCallback ( int16u *userId*, int8u *userStatus*, int8u *userType*, int8u \* *pin* )

Door Lock Cluster Get Pin Response.

##### Parameters

<i>userId</i>	Ver.: always
<i>userStatus</i>	Ver.: always
<i>userType</i>	Ver.: always
<i>pin</i>	Ver.: always

#### 6.4.2.617 boolean emberAfDoorLockClusterGetRfidCallback ( int16u *userId* )

Door Lock Cluster Get Rfid.

##### Parameters

<i>userId</i>	Ver.: always
---------------	--------------

#### 6.4.2.618 boolean emberAfDoorLockClusterGetRfidResponseCallback ( int16u *userId*, int8u *userStatus*, int8u *userType*, int8u \* *rfid* )

Door Lock Cluster Get Rfid Response.

##### Parameters

<i>userId</i>	Ver.: always
<i>userStatus</i>	Ver.: always
<i>userType</i>	Ver.: always
<i>rfid</i>	Ver.: always

#### 6.4.2.619 boolean emberAfDoorLockCluster GetUserStatusCallback ( int16u *userId* )

Door Lock Cluster Get User Status.

##### Parameters

<i>userId</i>	Ver.: always
---------------	--------------

#### 6.4.2.620 boolean emberAfDoorLockCluster GetUserStatusResponseCallback ( int16u *userId*, int8u *status* )

Door Lock Cluster Get User Status Response.

##### Parameters

<i>userId</i>	Ver.: always
<i>status</i>	Ver.: always

#### 6.4.2.621 boolean emberAfDoorLockCluster GetUserTypeCallback ( int16u *userId* )

Door Lock Cluster Get User Type.

##### Parameters

<i>userId</i>	Ver.: always
---------------	--------------

#### 6.4.2.622 boolean emberAfDoorLockCluster GetUserTypeResponseCallback ( int16u *userId*, int8u *userType* )

Door Lock Cluster Get User Type Response.

##### Parameters

<i>userId</i>	Ver.: always
<i>userType</i>	Ver.: always

#### 6.4.2.623 boolean emberAfDoorLockCluster GetWeekdayScheduleCallback ( int8u *scheduleId*, int16u *userId* )

Door Lock Cluster Get Weekday Schedule.

##### Parameters

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always

**6.4.2.624 boolean emberAfDoorLockClusterGetWeekdayScheduleResponseCallback ( int8u *scheduleId*, int16u *userId*, int8u *status*, int8u *daysMask*, int8u *startHour*, int8u *startMinute*, int8u *endHour*, int8u *endMinute* )**

Door Lock Cluster Get Weekday Schedule Response.

#### Parameters

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always
<i>status</i>	Ver.: always
<i>daysMask</i>	Ver.: since ha-1.2-05-3520-29
<i>startHour</i>	Ver.: since ha-1.2-05-3520-29
<i>startMinute</i>	Ver.: since ha-1.2-05-3520-29
<i>endHour</i>	Ver.: since ha-1.2-05-3520-29
<i>endMinute</i>	Ver.: since ha-1.2-05-3520-29

**6.4.2.625 boolean emberAfDoorLockClusterGetYearDayScheduleCallback ( int8u *scheduleId*, int16u *userId* )**

Door Lock Cluster Get Yearday Schedule.

#### Parameters

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always

**6.4.2.626 boolean emberAfDoorLockClusterGetYearDayScheduleResponseCallback ( int8u *scheduleId*, int16u *userId*, int8u *status*, int32u *localStartTime*, int32u *localEndTime* )**

Door Lock Cluster Get Yearday Schedule Response.

#### Parameters

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always
<i>status</i>	Ver.: always
<i>localStartTime</i>	Ver.: since ha-1.2-05-3520-29
<i>localEndTime</i>	Ver.: since ha-1.2-05-3520-29

**6.4.2.627 boolean emberAfDoorLockClusterLockDoorCallback ( int8u \* *PIN* )**

Door Lock Cluster Lock Door.

#### Parameters

<i>PIN</i>	Ver.: since ha-1.2-05-3520-29
------------	-------------------------------

#### 6.4.2.628 boolean emberAfDoorLockClusterLockDoorResponseCallback ( int8u *status* )

Door Lock Cluster Lock Door Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.629 boolean emberAfDoorLockClusterOperationEventNotificationCallback ( int8u *source*, int8u *eventCode*, int16u *userId*, int8u \* *pin*, int32u *timeStamp*, int8u \* *data* )

Door Lock Cluster Operation Event Notification.

##### Parameters

<i>source</i>	Ver.: always
<i>eventCode</i>	Ver.: always
<i>userId</i>	Ver.: always
<i>pin</i>	Ver.: always
<i>timeStamp</i>	Ver.: always
<i>data</i>	Ver.: since ha-1.2-05-3520-29

#### 6.4.2.630 boolean emberAfDoorLockClusterProgrammingEventNotificationCallback ( int8u *source*, int8u *eventCode*, int16u *userId*, int8u \* *pin*, int8u *userType*, int8u *userStatus*, int32u *timeStamp*, int8u \* *data* )

Door Lock Cluster Programming Event Notification.

##### Parameters

<i>source</i>	Ver.: always
<i>eventCode</i>	Ver.: always
<i>userId</i>	Ver.: always
<i>pin</i>	Ver.: always
<i>userType</i>	Ver.: always
<i>userStatus</i>	Ver.: always
<i>timeStamp</i>	Ver.: always
<i>data</i>	Ver.: since ha-1.2-05-3520-29

#### 6.4.2.631 void emberAfDoorLockClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Door Lock Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.632 void emberAfDoorLockClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Door Lock Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.633 void emberAfDoorLockClusterServerInitCallback ( int8u *endpoint* )**

Door Lock Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.634 void emberAfDoorLockClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Door Lock Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.635 void emberAfDoorLockClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Door Lock Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.636 EmberAfStatus emberAfDoorLockClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Door Lock Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.637 void emberAfDoorLockClusterServerTickCallback ( int8u *endpoint* )**

Door Lock Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.638 boolean emberAfDoorLockClusterSetHolidayScheduleCallback ( int8u *scheduleId*, int32u *localStartTime*, int32u *localEndTime*, int8u *operatingModeDuringHoliday* )**

Door Lock Cluster Set Holiday Schedule.

#### Parameters

<i>scheduleId</i>	Ver.: always
<i>localStartTime</i>	Ver.: always
<i>localEndTime</i>	Ver.: always
<i>operating- ModeDuring- Holiday</i>	Ver.: always

**6.4.2.639 boolean emberAfDoorLockClusterSetHolidayScheduleResponseCallback ( int8u *status* )**

Door Lock Cluster Set Holiday Schedule Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.640 boolean emberAfDoorLockClusterSetPinCallback ( int16u *userId*, int8u *userStatus*, int8u *userType*, int8u \* *pin* )**

Door Lock Cluster Set Pin.

**Parameters**

<i>userId</i>	Ver.: always
<i>userStatus</i>	Ver.: always
<i>userType</i>	Ver.: always
<i>pin</i>	Ver.: always

**6.4.2.641 boolean emberAfDoorLockClusterSetPinResponseCallback ( int8u *status* )**

Door Lock Cluster Set Pin Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.642 boolean emberAfDoorLockClusterSetRfidCallback ( int16u *userId*, int8u *userStatus*, int8u *userType*, int8u \* *id* )**

Door Lock Cluster Set Rfid.

**Parameters**

<i>userId</i>	Ver.: always
<i>userStatus</i>	Ver.: always
<i>userType</i>	Ver.: always
<i>id</i>	Ver.: always

**6.4.2.643 boolean emberAfDoorLockClusterSetRfidResponseCallback ( int8u *status* )**

Door Lock Cluster Set Rfid Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.644 boolean emberAfDoorLockClusterSetUserStatusCallback ( int16u *userId*, int8u *userStatus* )**

Door Lock Cluster Set User Status.

**Parameters**

<i>userId</i>	Ver.: always
<i>userStatus</i>	Ver.: always

**6.4.2.645 boolean emberAfDoorLockClusterSetUserStatusResponseCallback ( int8u status )**

Door Lock Cluster Set User Status Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.646 boolean emberAfDoorLockClusterSetUserTypeCallback ( int16u userId, int8u userType )**

Door Lock Cluster Set User Type.

**Parameters**

<i>userId</i>	Ver.: always
<i>userType</i>	Ver.: always

**6.4.2.647 boolean emberAfDoorLockClusterSetUserTypeResponseCallback ( int8u status )**

Door Lock Cluster Set User Type Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.648 boolean emberAfDoorLockClusterSetWeekdayScheduleCallback ( int8u scheduleId, int16u userId, int8u daysMask, int8u startHour, int8u startMinute, int8u endHour, int8u endMinute )**

Door Lock Cluster Set Weekday Schedule.

**Parameters**

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always
<i>daysMask</i>	Ver.: always
<i>startHour</i>	Ver.: always
<i>startMinute</i>	Ver.: always
<i>endHour</i>	Ver.: always
<i>endMinute</i>	Ver.: always

**6.4.2.649 boolean emberAfDoorLockClusterSetWeekdayScheduleResponseCallback ( int8u status )**

Door Lock Cluster Set Weekday Schedule Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.650 boolean emberAfDoorLockClusterSetYeardayScheduleCallback ( int8u *scheduleId*, int16u *userId*, int32u *localStartTime*, int32u *localEndTime* )**

Door Lock Cluster Set Yearday Schedule.

**Parameters**

<i>scheduleId</i>	Ver.: always
<i>userId</i>	Ver.: always
<i>localStartTime</i>	Ver.: always
<i>localEndTime</i>	Ver.: always

**6.4.2.651 boolean emberAfDoorLockClusterSetYeardayScheduleResponseCallback ( int8u *status* )**

Door Lock Cluster Set Yearday Schedule Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.652 boolean emberAfDoorLockClusterToggleCallback ( int8u \* *pin* )**

Door Lock Cluster Toggle.

**Parameters**

<i>pin</i>	Ver.: since ha-1.2-05-3520-29
------------	-------------------------------

**6.4.2.653 boolean emberAfDoorLockClusterToggleResponseCallback ( int8u *status* )**

Door Lock Cluster Toggle Response.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.654 boolean emberAfDoorLockClusterUnlockDoorCallback ( int8u \* *PIN* )**

Door Lock Cluster Unlock Door.

**Parameters**

<i>PIN</i>	Ver.: since ha-1.2-05-3520-29
------------	-------------------------------

#### 6.4.2.655 boolean emberAfDoorLockClusterUnlockDoorResponseCallback ( int8u *status* )

Door Lock Cluster Unlock Door Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.656 boolean emberAfDoorLockClusterUnlockWithTimeoutCallback ( int16u *timeoutInSeconds*, int8u \* *pin* )

Door Lock Cluster Unlock With Timeout.

##### Parameters

<i>timeoutIn-Seconds</i>	Ver.: always
<i>pin</i>	Ver.: since ha-1.2-05-3520-29

#### 6.4.2.657 boolean emberAfDoorLockClusterUnlockWithTimeoutResponseCallback ( int8u *status* )

Door Lock Cluster Unlock With Timeout Response.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.658 void emberAfWindowCoveringClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Window Covering Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.659 void emberAfWindowCoveringClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Window Covering Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.660 void emberAfWindowCoveringClusterClientInitCallback ( int8u *endpoint* )

Window Covering Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.661 void emberAfWindowCoveringClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Window Covering Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.662 void emberAfWindowCoveringClusterClientMessageSentCallback ( EmberOutgoingMessage- Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Window Covering Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.663 EmberAfStatus emberAfWindowCoveringClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Window Covering Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.664 void emberAfWindowCoveringClusterClientTickCallback ( int8u endpoint )**

Window Covering Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.665 void emberAfWindowCoveringClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Window Covering Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.666 void emberAfWindowCoveringClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Window Covering Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.667 void emberAfWindowCoveringClusterServerInitCallback ( int8u endpoint )**

Window Covering Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.668 void emberAfWindowCoveringClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Window Covering Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.669 void emberAfWindowCoveringClusterServerMessageSentCallback ( EmberOutgoingMessage- Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Window Covering Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.670 EmberAfStatus emberAfWindowCoveringClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Window Covering Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.671 void emberAfWindowCoveringClusterServerTickCallback ( int8u *endpoint* )

Window Covering Cluster Server Tick.

Server Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.672 boolean emberAfWindowCoveringClusterWindowCoveringDownCloseCallback ( void )

Window Covering Cluster Window Covering Down Close.

#### 6.4.2.673 boolean emberAfWindowCoveringClusterWindowCoveringGoToLiftPercentageCallback ( int8u *percentageLiftValue* )

Window Covering Cluster Window Covering Go To Lift Percentage.

##### Parameters

<i>percentageLiftValue</i>	Ver.: always
----------------------------	--------------

#### 6.4.2.674 boolean emberAfWindowCoveringClusterWindowCoveringGoToLiftValueCallback ( int16u *liftValue* )

Window Covering Cluster Window Covering Go To Lift Value.

##### Parameters

<i>liftValue</i>	Ver.: always
------------------	--------------

#### 6.4.2.675 boolean emberAfWindowCoveringClusterWindowCoveringGoToTiltPercentageCallback ( int8u *percentageTiltValue* )

Window Covering Cluster Window Covering Go To Tilt Percentage.

##### Parameters

<i>percentageTiltValue</i>	Ver.: always
----------------------------	--------------

#### 6.4.2.676 boolean emberAfWindowCoveringClusterWindowCoveringGoToTiltValueCallback ( int16u *tiltValue* )

Window Covering Cluster Window Covering Go To Tilt Value.

**Parameters**

<i>tiltValue</i>	Ver.: always
------------------	--------------

**6.4.2.677 boolean emberAfWindowCoveringClusterWindowCoveringStopCallback ( void )**

Window Covering Cluster Window Covering Stop.

**6.4.2.678 boolean emberAfWindowCoveringClusterWindowCoveringUpOpenCallback ( void )**

Window Covering Cluster Window Covering Up Open.

**6.4.2.679 void emberAfPumpConfigControlClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Pump Configuration and Control Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.680 void emberAfPumpConfigControlClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Pump Configuration and Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.681 void emberAfPumpConfigControlClusterClientInitCallback ( int8u *endpoint* )**

Pump Configuration and Control Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.682 void emberAfPumpConfigControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Pump Configuration and Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.683 void emberAfPumpConfigControlClusterClientMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Pump Configuration and Control Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.684 EmberAfStatus emberAfPumpConfigControlClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Pump Configuration and Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.685 void emberAfPumpConfigControlClusterClientTickCallback ( int8u *endpoint* )**

Pump Configuration and Control Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.686 void emberAfPumpConfigControlClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Pump Configuration and Control Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.687 void emberAfPumpConfigControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Pump Configuration and Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.688 void emberAfPumpConfigControlClusterServerInitCallback ( int8u *endpoint* )**

Pump Configuration and Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.689 void emberAfPumpConfigControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Pump Configuration and Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always
--------------------------	--

**6.4.2.690 void emberAfPumpConfigControlClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Pump Configuration and Control Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.691 EmberAfStatus emberAfPumpConfigControlClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Pump Configuration and Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.692 void emberAfPumpConfigControlClusterServerTickCallback ( int8u *endpoint* )**

Pump Configuration and Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.693 boolean emberAfThermostatClusterClearWeeklyScheduleCallback ( void )

Thermostat Cluster Clear Weekly Schedule.

#### 6.4.2.694 void emberAfThermostatClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )

Thermostat Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

#### 6.4.2.695 void emberAfThermostatClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Thermostat Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.696 void emberAfThermostatClusterClientInitCallback ( int8u *endpoint* )

Thermostat Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.697 void emberAfThermostatClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Thermostat Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.698 void emberAfThermostatClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Thermostat Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.699 EmberAfStatus emberAfThermostatClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Thermostat Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.700 void emberAfThermostatClusterClientTickCallback ( int8u *endpoint* )**

Thermostat Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.701 boolean emberAfThermostatClusterCurrentWeeklyScheduleCallback ( int8u *numberOfTransitionsForSequence*, int8u *dayOfWeekForSequence*, int8u *modeForSequence*, int8u \* *payload* )**

Thermostat Cluster Current Weekly Schedule.

**Parameters**

<i>numberOfTransitionsForSequence</i>	Ver.: always
<i>dayOfWeekForSequence</i>	Ver.: always
<i>modeForSequence</i>	Ver.: always
<i>payload</i>	Ver.: always

**6.4.2.702 boolean emberAfThermostatClusterGetRelayStatusLogCallback ( void )**

Thermostat Cluster Get Relay Status Log.

**6.4.2.703 boolean emberAfThermostatClusterGetWeeklyScheduleCallback ( int8u daysToReturn, int8u modeToReturn )**

Thermostat Cluster Get Weekly Schedule.

**Parameters**

<i>daysToReturn</i>	Ver.: always
<i>modeToReturn</i>	Ver.: always

**6.4.2.704 boolean emberAfThermostatClusterRelayStatusLogCallback ( int16u timeOfDay, int16u relayStatus, int16s localTemperature, int8u humidityInPercentage, int16s setpoint, int16u unreadEntries )**

Thermostat Cluster Relay Status Log.

**Parameters**

<i>timeOfDay</i>	Ver.: always
<i>relayStatus</i>	Ver.: always
<i>localTemperature</i>	Ver.: always
<i>humidityInPercentage</i>	Ver.: always
<i>setpoint</i>	Ver.: always
<i>unreadEntries</i>	Ver.: always

**6.4.2.705 void emberAfThermostatClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Thermostat Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.706 void emberAfThermostatClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Thermostat Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.707 void emberAfThermostatClusterServerInitCallback ( int8u *endpoint* )**

Thermostat Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.708 void emberAfThermostatClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Thermostat Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.709 void emberAfThermostatClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Thermostat Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.710 EmberAfStatus emberAfThermostatClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Thermostat Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.711 void emberAfThermostatClusterServerTickCallback ( int8u endpoint )**

Thermostat Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.712 boolean emberAfThermostatClusterSetWeeklyScheduleCallback ( int8u number\_of\_transitions\_for\_sequence, int8u day\_of\_week\_for\_sequence, int8u mode\_for\_sequence, int8u \* payload )**

Thermostat Cluster Set Weekly Schedule.

**Parameters**

<i>number_of_transitions_for_sequence</i>	Ver.: always
<i>day_of_week_for_sequence</i>	Ver.: always
<i>mode_for_sequence</i>	Ver.: always
<i>payload</i>	Ver.: always

#### 6.4.2.713 boolean emberAfThermostatClusterSetpointRaiseLowerCallback ( int8u mode, int8s amount )

Thermostat Cluster Setpoint Raise Lower.

##### Parameters

<i>mode</i>	Ver.: always
<i>amount</i>	Ver.: always

#### 6.4.2.714 void emberAfFanControlClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )

Fan Control Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.715 void emberAfFanControlClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )

Fan Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.716 void emberAfFanControlClusterClientInitCallback ( int8u endpoint )

Fan Control Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.717 void emberAfFanControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, int16u manufacturerCode )

Fan Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.718 void emberAfFanControlClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Fan Control Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.719 EmberAfStatus emberAfFanControlClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Fan Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.720 void emberAfFanControlClusterClientTickCallback ( int8u *endpoint* )**

Fan Control Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.721 void emberAfFanControlClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Fan Control Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.722 void emberAfFanControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Fan Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.723 void emberAfFanControlClusterServerInitCallback ( int8u *endpoint* )**

Fan Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.724 void emberAfFanControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Fan Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.725 void emberAfFanControlClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Fan Control Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.726 EmberAfStatus emberAfFanControlClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Fan Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.727 void emberAfFanControlClusterServerTickCallback ( int8u *endpoint* )**

Fan Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.728 void emberAfDehumidControlClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Dehumidification Control Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.729 void emberAfDehumidControlClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Dehumidification Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.730 void emberAfDehumidControlClusterClientInitCallback ( int8u *endpoint* )**

Dehumidification Control Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.731 void emberAfDehumidControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributId*, int16u *manufacturerCode* )**

Dehumidification Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.732 void emberAfDehumidControlClusterClientMessageSentCallback ( EmberOutgoingMessage-Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Dehumidification Control Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.733 EmberAfStatus emberAfDehumidControlClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Dehumidification Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.734 void emberAfDehumidControlClusterClientTickCallback ( int8u endpoint )**

Dehumidification Control Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.735 void emberAfDehumidControlClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Dehumidification Control Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.736 void emberAfDehumidControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Dehumidification Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.737 void emberAfDehumidControlClusterServerInitCallback ( int8u *endpoint* )**

Dehumidification Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.738 void emberAfDehumidControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Dehumidification Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.739 void emberAfDehumidControlClusterServerMessageSentCallback ( EmberOutgoingMessage-Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Dehumidification Control Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.740 EmberAfStatus emberAfDehumidControlClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Dehumidification Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.741 void emberAfDehumidControlClusterServerTickCallback ( int8u *endpoint* )**

Dehumidification Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.742 void emberAfThermostatUiConfigClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Thermostat User Interface Configuration Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.743 void emberAfThermostatUiConfigClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Thermostat User Interface Configuration Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.744 void emberAfThermostatUiConfigClusterClientInitCallback ( int8u *endpoint* )**

Thermostat User Interface Configuration Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.745 void emberAfThermostatUiConfigClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Thermostat User Interface Configuration Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.746 void emberAfThermostatUiConfigClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Thermostat User Interface Configuration Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.747 EmberAfStatus emberAfThermostatUiConfigClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Thermostat User Interface Configuration Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.748 void emberAfThermostatUiConfigClusterClientTickCallback ( int8u *endpoint* )**

Thermostat User Interface Configuration Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.749 void emberAfThermostatUiConfigClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Thermostat User Interface Configuration Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.750 void emberAfThermostatUiConfigClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Thermostat User Interface Configuration Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.751 void emberAfThermostatUiConfigClusterServerInitCallback ( int8u *endpoint* )

Thermostat User Interface Configuration Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.752 void emberAfThermostatUiConfigClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Thermostat User Interface Configuration Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.753 void emberAfThermostatUiConfigClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Thermostat User Interface Configuration Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.754 EmberAfStatus emberAfThermostatUiConfigClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Thermostat User Interface Configuration Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.755 void emberAfThermostatUiConfigClusterServerTickCallback ( int8u endpoint )**

Thermostat User Interface Configuration Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.756 void emberAfColorControlClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Color Control Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.757 void emberAfColorControlClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Color Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.758 void emberAfColorControlClusterClientInitCallback ( int8u endpoint )**

Color Control Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.759 void emberAfColorControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode )**

Color Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.760 void emberAfColorControlClusterClientMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

Color Control Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.761 EmberAfStatus emberAfColorControlClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Color Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.762 void emberAfColorControlClusterClientTickCallback ( int8u *endpoint* )

Color Control Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.763 boolean emberAfColorControlClusterColorLoopSetCallback ( int8u *updateFlags*, int8u *action*, int8u *direction*, int16u *time*, int16u *startHue* )

Color Control Cluster Color Loop Set.

##### Parameters

<i>updateFlags</i>	Ver.: always
<i>action</i>	Ver.: always
<i>direction</i>	Ver.: always
<i>time</i>	Ver.: always
<i>startHue</i>	Ver.: always

#### 6.4.2.764 boolean emberAfColorControlClusterEnhancedMoveHueCallback ( int8u *moveMode*, int16u *rate* )

Color Control Cluster Enhanced Move Hue.

##### Parameters

<i>moveMode</i>	Ver.: always
<i>rate</i>	Ver.: always

#### 6.4.2.765 boolean emberAfColorControlClusterEnhancedMoveToHueAndSaturationCallback ( int16u *enhancedHue*, int8u *saturation*, int16u *transitionTime* )

Color Control Cluster Enhanced Move To Hue And Saturation.

##### Parameters

<i>enhancedHue</i>	Ver.: always
<i>saturation</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

#### 6.4.2.766 boolean emberAfColorControlClusterEnhancedMoveToHueCallback ( int16u *enhancedHue*, int8u *direction*, int16u *transitionTime* )

Color Control Cluster Enhanced Move To Hue.

**Parameters**

<i>enhancedHue</i>	Ver.: always
<i>direction</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.767 boolean emberAfColorControlClusterEnhancedStepHueCallback ( int8u *stepMode*, int16u *stepSize*, int16u *transitionTime* )**

Color Control Cluster Enhanced Step Hue.

**Parameters**

<i>stepMode</i>	Ver.: always
<i>stepSize</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.768 boolean emberAfColorControlClusterMoveColorCallback ( int16s *rateX*, int16s *rateY* )**

Color Control Cluster Move Color.

**Parameters**

<i>rateX</i>	Ver.: always
<i>rateY</i>	Ver.: always

**6.4.2.769 boolean emberAfColorControlClusterMoveColorTemperatureCallback ( int8u *moveMode*, int16u *rate*, int16u *colorTemperatureMinimum*, int16u *colorTemperatureMaximum* )**

Color Control Cluster Move Color Temperature.

**Parameters**

<i>moveMode</i>	Ver.: always
<i>rate</i>	Ver.: always
<i>colorTemperatureMinimum</i>	Ver.: always
<i>colorTemperatureMaximum</i>	Ver.: always

**6.4.2.770 boolean emberAfColorControlClusterMoveHueCallback ( int8u *moveMode*, int8u *rate* )**

Color Control Cluster Move Hue.

**Parameters**

<i>moveMode</i>	Ver.: always
<i>rate</i>	Ver.: always

#### 6.4.2.771 boolean emberAfColorControlClusterMoveSaturationCallback ( int8u *moveMode*, int8u *rate* )

Color Control Cluster Move Saturation.

##### Parameters

<i>moveMode</i>	Ver.: always
<i>rate</i>	Ver.: always

#### 6.4.2.772 boolean emberAfColorControlClusterMoveToColorCallback ( int16u *colorX*, int16u *colorY*, int16u *transitionTime* )

Color Control Cluster Move To Color.

##### Parameters

<i>colorX</i>	Ver.: always
<i>colorY</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

#### 6.4.2.773 boolean emberAfColorControlClusterMoveToColorTemperatureCallback ( int16u *colorTemperature*, int16u *transitionTime* )

Color Control Cluster Move To Color Temperature.

##### Parameters

<i>colorTemperature</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

#### 6.4.2.774 boolean emberAfColorControlClusterMoveToHueAndSaturationCallback ( int8u *hue*, int8u *saturation*, int16u *transitionTime* )

Color Control Cluster Move To Hue And Saturation.

##### Parameters

<i>hue</i>	Ver.: always
<i>saturation</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

#### 6.4.2.775 boolean emberAfColorControlClusterMoveToHueCallback ( int8u *hue*, int8u *direction*, int16u *transitionTime* )

Color Control Cluster Move To Hue.

**Parameters**

<i>hue</i>	Ver.: always
<i>direction</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.776 boolean emberAfColorControlClusterMoveToSaturationCallback ( int8u *saturation*, int16u *transitionTime* )**

Color Control Cluster Move To Saturation.

**Parameters**

<i>saturation</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.777 void emberAfColorControlClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Color Control Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.778 void emberAfColorControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Color Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.779 void emberAfColorControlClusterServerInitCallback ( int8u *endpoint* )**

Color Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.780 void emberAfColorControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Color Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.781 void emberAfColorControlClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Color Control Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.782 EmberAfStatus emberAfColorControlClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Color Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.783 void emberAfColorControlClusterServerTickCallback ( int8u *endpoint* )**

Color Control Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.784 boolean emberAfColorControlClusterStepColorCallback ( int16s *stepX*, int16s *stepY*, int16u *transitionTime* )**

Color Control Cluster Step Color.

**Parameters**

<i>stepX</i>	Ver.: always
<i>stepY</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.785 boolean emberAfColorControlClusterStepColorTemperatureCallback ( int8u *stepMode*, int16u *stepSize*, int16u *transitionTime*, int16u *colorTemperatureMinimum*, int16u *colorTemperatureMaximum* )**

Color Control Cluster Step Color Temperature.

**Parameters**

<i>stepMode</i>	Ver.: always
<i>stepSize</i>	Ver.: always
<i>transitionTime</i>	Ver.: always
<i>color-Temperature-Minimum</i>	Ver.: always
<i>color-Temperature-Maximum</i>	Ver.: always

**6.4.2.786 boolean emberAfColorControlClusterStepHueCallback ( int8u *stepMode*, int8u *stepSize*, int8u *transitionTime* )**

Color Control Cluster Step Hue.

**Parameters**

<i>stepMode</i>	Ver.: always
<i>stepSize</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.787 boolean emberAfColorControlClusterStepSaturationCallback ( int8u *stepMode*, int8u *stepSize*, int8u *transitionTime* )**

Color Control Cluster Step Saturation.

**Parameters**

<i>stepMode</i>	Ver.: always
<i>stepSize</i>	Ver.: always
<i>transitionTime</i>	Ver.: always

**6.4.2.788 boolean emberAfColorControlClusterStopMoveStepCallback ( void )**

Color Control Cluster Stop Move Step.

**6.4.2.789 void emberAfBallastConfigurationClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Ballast Configuration Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.790 void emberAfBallastConfigurationClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Ballast Configuration Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.791 void emberAfBallastConfigurationClusterClientInitCallback ( int8u *endpoint* )**

Ballast Configuration Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.792 void emberAfBallastConfigurationClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Ballast Configuration Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.793 void emberAfBallastConfigurationClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Ballast Configuration Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.794 EmberAfStatus emberAfBallastConfigurationClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Ballast Configuration Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.795 void emberAfBallastConfigurationClusterClientTickCallback ( int8u *endpoint* )**

Ballast Configuration Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.796 void emberAfBallastConfigurationClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Ballast Configuration Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.797 void emberAfBallastConfigurationClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Ballast Configuration Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.798 void emberAfBallastConfigurationClusterServerInitCallback ( int8u *endpoint* )**

Ballast Configuration Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.799 void emberAfBallastConfigurationClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Ballast Configuration Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always
--------------------------	--

**6.4.2.800 void emberAfBallastConfigurationClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Ballast Configuration Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.801 EmberAfStatus emberAfBallastConfigurationClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Ballast Configuration Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.802 void emberAfBallastConfigurationClusterServerTickCallback ( int8u *endpoint* )**

Ballast Configuration Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.803 void emberAfIllumMeasurementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Illuminance Measurement Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.804 void emberAfIllumMeasurementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Illuminance Measurement Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.805 void emberAfIllumMeasurementClusterClientInitCallback ( int8u *endpoint* )**

Illuminance Measurement Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.806 void emberAfIllumMeasurementClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Illuminance Measurement Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.807 void emberAfIllumMeasurementClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Illuminance Measurement Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.808 EmberAfStatus emberAfIllumMeasurementClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Illuminance Measurement Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.809 void emberAfIllumMeasurementClusterClientTickCallback ( int8u *endpoint* )**

Illuminance Measurement Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.810 void emberAfIllumMeasurementClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Illuminance Measurement Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.811 void emberAfIllumMeasurementClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Illuminance Measurement Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.812 void emberAfIllumMeasurementClusterServerInitCallback ( int8u *endpoint* )**

Illuminance Measurement Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.813 void emberAfIllumMeasurementClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributId*, int16u *manufacturerCode* )**

Illuminance Measurement Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.814 void emberAfIllumMeasurementClusterServerMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Illuminance Measurement Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.815 EmberAfStatus emberAfIllumMeasurementClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Illuminance Measurement Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.816 void emberAfIllumMeasurementClusterServerTickCallback ( int8u *endpoint* )**

Illuminance Measurement Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.817 void emberAfIllumLevelSensingClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Illuminance Level Sensing Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.818 void emberAfIllumLevelSensingClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Illuminance Level Sensing Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.819 void emberAfIllumLevelSensingClusterClientInitCallback ( int8u *endpoint* )**

Illuminance Level Sensing Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.820 void emberAfIllumLevelSensingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Illuminance Level Sensing Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.821 void emberAfIllumLevelSensingClusterClientMessageSentCallback ( EmberOutgoingMessage-  
Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \*  
*message*, EmberStatus *status* )**

Illuminance Level Sensing Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.822 EmberAfStatus emberAfIllumLevelSensingClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Illuminance Level Sensing Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.823 void emberAfIllumLevelSensingClusterClientTickCallback ( int8u endpoint )**

Illuminance Level Sensing Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.824 void emberAfIllumLevelSensingClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Illuminance Level Sensing Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.825 void emberAfIllumLevelSensingClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Illuminance Level Sensing Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.826 void emberAfIllumLevelSensingClusterServerInitCallback ( int8u *endpoint* )**

Illuminance Level Sensing Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.827 void emberAfIllumLevelSensingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Illuminance Level Sensing Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.828 void emberAfIllumLevelSensingClusterServerMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Illuminance Level Sensing Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.829 EmberAfStatus emberAfIllumLevelSensingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Illuminance Level Sensing Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.830 void emberAfIllumLevelSensingClusterServerTickCallback ( int8u *endpoint* )**

Illuminance Level Sensing Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.831 void emberAfTempMeasurementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Temperature Measurement Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.832 void emberAfTempMeasurementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Temperature Measurement Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.833 void emberAfTempMeasurementClusterClientInitCallback ( int8u *endpoint* )

Temperature Measurement Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.834 void emberAfTempMeasurementClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Temperature Measurement Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.835 void emberAfTempMeasurementClusterClientMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Temperature Measurement Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.836 EmberAfStatus emberAfTempMeasurementClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Temperature Measurement Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.837 void emberAfTempMeasurementClusterClientTickCallback ( int8u endpoint )**

Temperature Measurement Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.838 void emberAfTempMeasurementClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Temperature Measurement Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.839 void emberAfTempMeasurementClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Temperature Measurement Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.840 void emberAfTempMeasurementClusterServerInitCallback ( int8u endpoint )**

Temperature Measurement Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.841 void emberAfTempMeasurementClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Temperature Measurement Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.842 void emberAfTempMeasurementClusterServerMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Temperature Measurement Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.843 EmberAfStatus emberAfTempMeasurementClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Temperature Measurement Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.844 void emberAfTempMeasurementClusterServerTickCallback ( int8u *endpoint* )

Temperature Measurement Cluster Server Tick.

Server Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.845 void emberAfPressureMeasurementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )

Pressure Measurement Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.846 void emberAfPressureMeasurementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Pressure Measurement Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.847 void emberAfPressureMeasurementClusterClientInitCallback ( int8u *endpoint* )

Pressure Measurement Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.848 void emberAfPressureMeasurementClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Pressure Measurement Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.849 void emberAfPressureMeasurementClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Pressure Measurement Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.850 EmberAfStatus emberAfPressureMeasurementClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Pressure Measurement Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.851 void emberAfPressureMeasurementClusterClientTickCallback ( int8u *endpoint* )**

Pressure Measurement Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.852 void emberAfPressureMeasurementClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Pressure Measurement Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.853 void emberAfPressureMeasurementClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Pressure Measurement Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.854 void emberAfPressureMeasurementClusterServerInitCallback ( int8u *endpoint* )**

Pressure Measurement Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.855 void emberAfPressureMeasurementClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Pressure Measurement Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.856 void emberAfPressureMeasurementClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Pressure Measurement Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.857 EmberAfStatus emberAfPressureMeasurementClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Pressure Measurement Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.858 void emberAfPressureMeasurementClusterServerTickCallback ( int8u *endpoint* )**

Pressure Measurement Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.859 void emberAfFlowMeasurementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Flow Measurement Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.860 void emberAfFlowMeasurementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Flow Measurement Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.861 void emberAfFlowMeasurementClusterClientInitCallback ( int8u *endpoint* )**

Flow Measurement Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.862 void emberAfFlowMeasurementClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributId*, int16u *manufacturerCode* )**

Flow Measurement Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.863 void emberAfFlowMeasurementClusterClientMessageSentCallback ( EmberOutgoingMessage-Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Flow Measurement Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.864 EmberAfStatus emberAfFlowMeasurementClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Flow Measurement Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.865 void emberAfFlowMeasurementClusterClientTickCallback ( int8u endpoint )**

Flow Measurement Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.866 void emberAfFlowMeasurementClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Flow Measurement Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.867 void emberAfFlowMeasurementClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Flow Measurement Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.868 void emberAfFlowMeasurementClusterServerInitCallback ( int8u *endpoint* )**

Flow Measurement Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.869 void emberAfFlowMeasurementClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Flow Measurement Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.870 void emberAfFlowMeasurementClusterServerMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Flow Measurement Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.871 EmberAfStatus emberAfFlowMeasurementClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Flow Measurement Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.872 void emberAfFlowMeasurementClusterServerTickCallback ( int8u *endpoint* )**

Flow Measurement Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.873 void emberAfRelativeHumidityMeasurementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Relative Humidity Measurement Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.874 void emberAfRelativeHumidityMeasurementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Relative Humidity Measurement Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.875 void emberAfRelativeHumidityMeasurementClusterClientInitCallback ( int8u *endpoint* )**

Relative Humidity Measurement Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.876 void emberAfRelativeHumidityMeasurementClusterClientManufacturerSpecificAttributeChanged-Callback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Relative Humidity Measurement Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.877 void emberAfRelativeHumidityMeasurementClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Relative Humidity Measurement Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.878 EmberAfStatus emberAfRelativeHumidityMeasurementClusterClientPreAttributeChanged-Callback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Relative Humidity Measurement Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.879 void emberAfRelativeHumidityMeasurementClusterClientTickCallback ( int8u *endpoint* )**

Relative Humidity Measurement Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.880 void emberAfRelativeHumidityMeasurementClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Relative Humidity Measurement Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.881 void emberAfRelativeHumidityMeasurementClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Relative Humidity Measurement Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.882 void emberAfRelativeHumidityMeasurementClusterServerInitCallback ( int8u *endpoint* )

Relative Humidity Measurement Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.883 void emberAfRelativeHumidityMeasurementClusterServerManufacturerSpecificAttribute-ChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Relative Humidity Measurement Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.884 void emberAfRelativeHumidityMeasurementClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Relative Humidity Measurement Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.885 EmberAfStatus emberAfRelativeHumidityMeasurementClusterServerPreAttributeChanged-Callback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Relative Humidity Measurement Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.886 void emberAfRelativeHumidityMeasurementClusterServerTickCallback ( int8u endpoint )**

Relative Humidity Measurement Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.887 void emberAfOccupancySensingClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Occupancy Sensing Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.888 void emberAfOccupancySensingClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Occupancy Sensing Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.889 void emberAfOccupancySensingClusterClientInitCallback ( int8u endpoint )**

Occupancy Sensing Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.890 void emberAfOccupancySensingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Occupancy Sensing Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.891 void emberAfOccupancySensingClusterClientMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Occupancy Sensing Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.892 EmberAfStatus emberAfOccupancySensingClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Occupancy Sensing Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.893 void emberAfOccupancySensingClusterClientTickCallback ( int8u *endpoint* )

Occupancy Sensing Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.894 void emberAfOccupancySensingClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )

Occupancy Sensing Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.895 void emberAfOccupancySensingClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Occupancy Sensing Cluster Server Default Response.

This function is called when the server receives the default response from the client.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.896 void emberAfOccupancySensingClusterServerInitCallback ( int8u *endpoint* )

Occupancy Sensing Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.897 void emberAfOccupancySensingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )

Occupancy Sensing Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.898 void emberAfOccupancySensingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Occupancy Sensing Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.899 EmberAfStatus emberAfOccupancySensingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Occupancy Sensing Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributelId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.900 void emberAfOccupancySensingClusterServerTickCallback ( int8u *endpoint* )**

Occupancy Sensing Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.901 void emberAfIasZoneClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

IAS Zone Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.902 void emberAfIasZoneClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

IAS Zone Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.903 void emberAfIasZoneClusterClientInitCallback ( int8u *endpoint* )**

IAS Zone Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.904 void emberAfIasZoneClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

IAS Zone Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.905 void emberAflasZoneClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

IAS Zone Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.906 EmberAfStatus emberAflasZoneClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

IAS Zone Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.907 void emberAflasZoneClusterClientTickCallback ( int8u *endpoint* )**

IAS Zone Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.908 boolean emberAflasZoneClusterInitiateNormalOperationModeCallback ( void )**

IAS Zone Cluster Initiate Normal Operation Mode.

**6.4.2.909 boolean emberAflasZoneClusterInitiateNormalOperationModeResponseCallback ( void )**

IAS Zone Cluster Initiate Normal Operation Mode Response.

**6.4.2.910 boolean emberAfIasZoneClusterInitiateTestModeCallback ( int8u testModeDuration, int8u currentZoneSensitivityLevel )**

IAS Zone Cluster Initiate Test Mode.

**Parameters**

<i>testModeDuration</i>	Ver.: always
<i>currentZoneSensitivityLevel</i>	Ver.: always

**6.4.2.911 boolean emberAfIasZoneClusterInitiateTestModeResponseCallback ( void )**

IAS Zone Cluster Initiate Test Mode Response.

**6.4.2.912 void emberAfIasZoneClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

IAS Zone Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.913 void emberAfIasZoneClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

IAS Zone Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.914 void emberAfIasZoneClusterServerInitCallback ( int8u endpoint )**

IAS Zone Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.915 void emberAfIasZoneClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

IAS Zone Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.916 void emberAfIasZoneClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

IAS Zone Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.917 EmberAfStatus emberAfIasZoneClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

IAS Zone Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.918 void emberAfIasZoneClusterServerTickCallback ( int8u *endpoint* )**

IAS Zone Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.919 boolean emberAfIasZoneClusterZoneEnrollRequestCallback ( int16u zoneType, int16u manufacturerCode )**

IAS Zone Cluster Zone Enroll Request.

**Parameters**

<i>zoneType</i>	Ver.: always
<i>manufacturerCode</i>	Ver.: always

**6.4.2.920 boolean emberAfIasZoneClusterZoneEnrollResponseCallback ( int8u enrollResponseCode, int8u zoneId )**

IAS Zone Cluster Zone Enroll Response.

**Parameters**

<i>enroll-ResponseCode</i>	Ver.: always
<i>zoneId</i>	Ver.: always

**6.4.2.921 boolean emberAfIasZoneClusterZoneStatusChangeNotificationCallback ( int16u zoneStatus, int8u extendedStatus, int8u zoneId, int16u delay )**

IAS Zone Cluster Zone Status Change Notification.

**Parameters**

<i>zoneStatus</i>	Ver.: always
<i>extendedStatus</i>	Ver.: always
<i>zoneId</i>	Ver.: since ha-1.2-05-3520-29
<i>delay</i>	Ver.: since ha-1.2-05-3520-29

**6.4.2.922 boolean emberAfIasAceClusterArmCallback ( int8u armMode, int8u \* armDisarmCode, int8u zoneId )**

IAS ACE Cluster Arm.

**Parameters**

<i>armMode</i>	Ver.: always
<i>armDisarmCode</i>	Ver.: since ha-1.2-05-3520-29

<i>zoneId</i>	Ver.: since ha-1.2-05-3520-29
---------------	-------------------------------

#### 6.4.2.923 boolean emberAflasAceClusterArmResponseCallback ( int8u *armNotification* )

IAS ACE Cluster Arm Response.

##### Parameters

<i>armNotification</i>	Ver.: always
------------------------	--------------

#### 6.4.2.924 boolean emberAflasAceClusterBypassCallback ( int8u *numberOfZones*, int8u \* *zoneIds*, int8u \* *armDisarmCode* )

IAS ACE Cluster Bypass.

##### Parameters

<i>numberOfZones</i>	Ver.: always
<i>zoneIds</i>	Ver.: always
<i>armDisarmCode</i>	Ver.: since ha-1.2.1-05-3520-30

#### 6.4.2.925 boolean emberAflasAceClusterBypassResponseCallback ( int8u *numberOfZones*, int8u \* *bypassResult* )

IAS ACE Cluster Bypass Response.

##### Parameters

<i>numberOfZones</i>	Ver.: always
<i>bypassResult</i>	Ver.: always

#### 6.4.2.926 void emberAflasAceClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

IAS ACE Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.927 void emberAflasAceClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

IAS ACE Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.928 void emberAflasAceClusterClientInitCallback ( int8u *endpoint* )**

IAS ACE Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.929 void emberAflasAceClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

IAS ACE Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.930 void emberAflasAceClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

IAS ACE Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.931 EmberAfStatus emberAfIasAceClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

IAS ACE Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.932 void emberAfIasAceClusterClientTickCallback ( int8u *endpoint* )**

IAS ACE Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.933 boolean emberAfIasAceClusterEmergencyCallback ( void )**

IAS ACE Cluster Emergency.

**6.4.2.934 boolean emberAfIasAceClusterFireCallback ( void )**

IAS ACE Cluster Fire.

**6.4.2.935 boolean emberAfIasAceClusterGetBypassedZoneListCallback ( void )**

IAS ACE Cluster Get Bypassed Zone List.

**6.4.2.936 boolean emberAfIasAceClusterGetPanelStatusCallback ( void )**

IAS ACE Cluster Get Panel Status.

**6.4.2.937 boolean emberAfIasAceClusterGetPanelStatusResponseCallback ( int8u *panelStatus*, int8u *secondsRemaining*, int8u *audibleNotification*, int8u *alarmStatus* )**

IAS ACE Cluster Get Panel Status Response.

#### Parameters

<i>panelStatus</i>	Ver.: always
<i>seconds-Remaining</i>	Ver.: always
<i>audible-Notification</i>	Ver.: always
<i>alarmStatus</i>	Ver.: always

**6.4.2.938 boolean emberAfIasAceClusterGetZoneIdMapCallback ( void )**

IAS ACE Cluster Get Zone Id Map.

**6.4.2.939 boolean emberAfIasAceClusterGetZoneIdMapResponseCallback ( int16u *section0*, int16u *section1*, int16u *section2*, int16u *section3*, int16u *section4*, int16u *section5*, int16u *section6*, int16u *section7*, int16u *section8*, int16u *section9*, int16u *section10*, int16u *section11*, int16u *section12*, int16u *section13*, int16u *section14*, int16u *section15* )**

IAS ACE Cluster Get Zone Id Map Response.

#### Parameters

<i>section0</i>	Ver.: always
<i>section1</i>	Ver.: always
<i>section2</i>	Ver.: always
<i>section3</i>	Ver.: always
<i>section4</i>	Ver.: always
<i>section5</i>	Ver.: always
<i>section6</i>	Ver.: always
<i>section7</i>	Ver.: always
<i>section8</i>	Ver.: always
<i>section9</i>	Ver.: always
<i>section10</i>	Ver.: always
<i>section11</i>	Ver.: always
<i>section12</i>	Ver.: always
<i>section13</i>	Ver.: always
<i>section14</i>	Ver.: always
<i>section15</i>	Ver.: always

**6.4.2.940 boolean emberAfIasAceClusterGetZoneInformationCallback ( int8u *zoneId* )**

IAS ACE Cluster Get Zone Information.

**Parameters**

<i>zoneId</i>	Ver.: always
---------------	--------------

**6.4.2.941 boolean emberAfIasAceClusterGetZoneInformationResponseCallback ( int8u *zoneId*, int16u *zoneType*, int8u \* *ieeeAddress*, int8u \* *zoneLabel* )**

IAS ACE Cluster Get Zone Information Response.

**Parameters**

<i>zoneId</i>	Ver.: always
<i>zoneType</i>	Ver.: always
<i>ieeeAddress</i>	Ver.: always
<i>zoneLabel</i>	Ver.: since ha-1.2.1-05-3520-30

**6.4.2.942 boolean emberAfIasAceClusterGetZoneStatusCallback ( int8u *startingZoneId*, int8u *maxNumberOfZoneIds*, int8u *zoneStatusMaskFlag*, int16u *zoneStatusMask* )**

IAS ACE Cluster Get Zone Status.

**Parameters**

<i>startingZoneId</i>	Ver.: always
<i>maxNumberOfZoneIds</i>	Ver.: always
<i>zoneStatus-MaskFlag</i>	Ver.: always
<i>zoneStatus-Mask</i>	Ver.: always

**6.4.2.943 boolean emberAfIasAceClusterGetZoneStatusResponseCallback ( int8u *zoneStatusComplete*, int8u *numberOfZones*, int8u \* *zoneStatusResult* )**

IAS ACE Cluster Get Zone Status Response.

**Parameters**

<i>zoneStatus-Complete</i>	Ver.: always
<i>numberOfZones</i>	Ver.: always
<i>zoneStatus-Result</i>	Ver.: always

**6.4.2.944 boolean emberAfIasAceClusterPanelStatusChangedCallback ( int8u *panelStatus*, int8u *secondsRemaining*, int8u *audibleNotification*, int8u *alarmStatus* )**

IAS ACE Cluster Panel Status Changed.

**Parameters**

<i>panelStatus</i>	Ver.: always
<i>seconds-Remaining</i>	Ver.: always
<i>audible-Notification</i>	Ver.: since ha-1.2.1-05-3520-30
<i>alarmStatus</i>	Ver.: since ha-1.2.1-05-3520-30

**6.4.2.945 boolean emberAflasAceClusterPanicCallback ( void )**

IAS ACE Cluster Panic.

**6.4.2.946 void emberAflasAceClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

IAS ACE Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.947 void emberAflasAceClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

IAS ACE Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.948 void emberAflasAceClusterServerInitCallback ( int8u *endpoint* )**

IAS ACE Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.949 void emberAfIasAceClusterServerManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode )**

IAS ACE Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.950 void emberAfIasAceClusterServerMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

IAS ACE Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.951 EmberAfStatus emberAfIasAceClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

IAS ACE Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.952 void emberAfIasAceClusterServerTickCallback ( int8u endpoint )**

IAS ACE Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.953 boolean emberAfIasAceClusterSetBypassedZoneListCallback ( int8u *numberOfZones*, int8u \* *zoneIds* )**

IAS ACE Cluster Set Bypassed Zone List.

**Parameters**

<i>numberOfZones</i>	Ver.: always
<i>zoneIds</i>	Ver.: always

**6.4.2.954 boolean emberAfIasAceClusterZoneStatusChangedCallback ( int8u *zoneId*, int16u *zoneStatus*, int8u *audibleNotification*, int8u \* *zoneLabel* )**

IAS ACE Cluster Zone Status Changed.

**Parameters**

<i>zoneId</i>	Ver.: always
<i>zoneStatus</i>	Ver.: always
<i>audibleNotification</i>	Ver.: since ha-1.2.1-05-3520-30
<i>zoneLabel</i>	Ver.: since ha-1.2.1-05-3520-30

**6.4.2.955 void emberAfIasWdClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

IAS WD Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.956 void emberAfIasWdClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

IAS WD Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.957 void emberAflasWdClusterClientInitCallback ( int8u *endpoint* )**

IAS WD Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.958 void emberAflasWdClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

IAS WD Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.959 void emberAflasWdClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

IAS WD Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.960 EmberAfStatus emberAflasWdClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

IAS WD Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.961 void emberAflasWdClusterClientTickCallback ( int8u *endpoint* )**

IAS WD Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.962 void emberAflasWdClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

IAS WD Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.963 void emberAflasWdClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

IAS WD Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.964 void emberAfIasWdClusterServerInitCallback ( int8u *endpoint* )

IAS WD Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.965 void emberAfIasWdClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

IAS WD Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.966 void emberAfIasWdClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

IAS WD Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.967 EmberAfStatus emberAfIasWdClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

IAS WD Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.968 void emberAfIasWdClusterServerTickCallback ( int8u endpoint )**

IAS WD Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.969 boolean emberAfIasWdClusterSquawkCallback ( int8u squawkInfo )**

IAS WD Cluster Squawk.

**Parameters**

<i>squawkInfo</i>	Ver.: always
-------------------	--------------

**6.4.2.970 boolean emberAfIasWdClusterStartWarningCallback ( int8u warningInfo, int16u warningDuration, int8u strobeDutyCycle, int8u strobeLevel )**

IAS WD Cluster Start Warning.

**Parameters**

<i>warningInfo</i>	Ver.: always
<i>warningDuration</i>	Ver.: always
<i>strobeDutyCycle</i>	Ver.: since ha-1.2-05-3520-29
<i>strobeLevel</i>	Ver.: since ha-1.2-05-3520-29

**6.4.2.971 boolean emberAfGenericTunnelClusterAdvertiseProtocolAddressCallback ( int8u \* protocolAddress )**

Generic Tunnel Cluster Advertise Protocol Address.

**Parameters**

<i>protocolAddress</i>	Ver.: always
------------------------	--------------

**6.4.2.972 void emberAfGenericTunnelClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Generic Tunnel Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.973 void emberAfGenericTunnelClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Generic Tunnel Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.974 void emberAfGenericTunnelClusterClientInitCallback ( int8u *endpoint* )**

Generic Tunnel Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.975 void emberAfGenericTunnelClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Generic Tunnel Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.976 void emberAfGenericTunnelClusterClientMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

Generic Tunnel Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.977 EmberAfStatus emberAfGenericTunnelClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Generic Tunnel Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.978 void emberAfGenericTunnelClusterClientTickCallback ( int8u endpoint )**

Generic Tunnel Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.979 boolean emberAfGenericTunnelClusterMatchProtocolAddressCallback ( int8u \* protocolAddress )**

Generic Tunnel Cluster Match Protocol Address.

**Parameters**

<i>protocol-Address</i>	Ver.: always
-------------------------	--------------

**6.4.2.980 boolean emberAfGenericTunnelClusterMatchProtocolAddressResponseCallback ( int8u \* deviceIeeeAddress, int8u \* protocolAddress )**

Generic Tunnel Cluster Match Protocol Address Response.

**Parameters**

<i>deviceIeee-Address</i>	Ver.: always
<i>protocol-Address</i>	Ver.: always

**6.4.2.981 void emberAfGenericTunnelClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Generic Tunnel Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.982 void emberAfGenericTunnelClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Generic Tunnel Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.983 void emberAfGenericTunnelClusterServerInitCallback ( int8u endpoint )**

Generic Tunnel Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.984 void emberAfGenericTunnelClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Generic Tunnel Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.985 void emberAfGenericTunnelClusterServerMessageSentCallback ( EmberOutgoingMessage-Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Generic Tunnel Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.986 EmberAfStatus emberAfGenericTunnelClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Generic Tunnel Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.987 void emberAfGenericTunnelClusterServerTickCallback ( int8u *endpoint* )**

Generic Tunnel Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.988 void emberAfBacnetProtocolTunnelClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

BACnet Protocol Tunnel Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.989 void emberAfBacnetProtocolTunnelClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

BACnet Protocol Tunnel Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.990 void emberAfBacnetProtocolTunnelClusterClientInitCallback ( int8u *endpoint* )**

BACnet Protocol Tunnel Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.991 void emberAfBacnetProtocolTunnelClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

BACnet Protocol Tunnel Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always
--------------------------	--

**6.4.2.992 void emberAfBacnetProtocolTunnelClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

BACnet Protocol Tunnel Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.993 EmberAfStatus emberAfBacnetProtocolTunnelClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

BACnet Protocol Tunnel Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.994 void emberAfBacnetProtocolTunnelClusterClientTickCallback ( int8u *endpoint* )**

BACnet Protocol Tunnel Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.995 void emberAfBacnetProtocolTunnelClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

BACnet Protocol Tunnel Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.996 void emberAfBacnetProtocolTunnelClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

BACnet Protocol Tunnel Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.997 void emberAfBacnetProtocolTunnelClusterServerInitCallback ( int8u *endpoint* )**

BACnet Protocol Tunnel Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.998 void emberAfBacnetProtocolTunnelClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

BACnet Protocol Tunnel Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.999 void emberAfBacnetProtocolTunnelClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

BACnet Protocol Tunnel Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1000 EmberAfStatus emberAfBacnetProtocolTunnelClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

BACnet Protocol Tunnel Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1001 void emberAfBacnetProtocolTunnelClusterServerTickCallback ( int8u *endpoint* )**

BACnet Protocol Tunnel Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1002 boolean emberAfBacnetProtocolTunnelClusterTransferNpduCallback ( int8u \* *npdu* )**

BACnet Protocol Tunnel Cluster Transfer Npdu.

#### Parameters

<i>npdu</i>	Ver.: always
-------------	--------------

**6.4.2.1003 void emberAf11073ProtocolTunnelClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

11073 Protocol Tunnel Cluster Client Attribute Changed

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.1004 void emberAf11073ProtocolTunnelClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

11073 Protocol Tunnel Cluster Client Default Response

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1005 void emberAf11073ProtocolTunnelClusterClientInitCallback ( int8u *endpoint* )**

11073 Protocol Tunnel Cluster Client Init

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1006 void emberAf11073ProtocolTunnelClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

11073 Protocol Tunnel Cluster Client Manufacturer Specific Attribute Changed

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1007 void emberAf11073ProtocolTunnelClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

11073 Protocol Tunnel Cluster Client Message Sent

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1008 EmberAfStatus emberAf11073ProtocolTunnelClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

11073 Protocol Tunnel Cluster Client Pre Attribute Changed

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1009 void emberAf11073ProtocolTunnelClusterClientTickCallback ( int8u *endpoint* )**

11073 Protocol Tunnel Cluster Client Tick

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1010 boolean emberAf11073ProtocolTunnelClusterConnectRequestCallback ( int8u *connectControl*, int16u *idleTimeout*, int8u \* *managerTarget*, int8u *managerEndpoint* )**

11073 Protocol Tunnel Cluster Connect Request

**Parameters**

<i>connectControl</i>	Ver.: always
<i>idleTimeout</i>	Ver.: always
<i>managerTarget</i>	Ver.: always
<i>manager-Endpoint</i>	Ver.: always

**6.4.2.1011 boolean emberAf11073ProtocolTunnelClusterConnectStatusNotificationCallback ( int8u connectStatus )**

11073 Protocol Tunnel Cluster Connect Status Notification

**Parameters**

<i>connectStatus</i>	Ver.: always
----------------------	--------------

**6.4.2.1012 boolean emberAf11073ProtocolTunnelClusterDisconnectRequestCallback ( int8u \* managerIEEEAddress )**

11073 Protocol Tunnel Cluster Disconnect Request

**Parameters**

<i>managerIEEE-Address</i>	Ver.: always
----------------------------	--------------

**6.4.2.1013 void emberAf11073ProtocolTunnelClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

11073 Protocol Tunnel Cluster Server Attribute Changed

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1014 void emberAf11073ProtocolTunnelClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

11073 Protocol Tunnel Cluster Server Default Response

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1015 void emberAf11073ProtocolTunnelClusterServerInitCallback ( int8u *endpoint* )

11073 Protocol Tunnel Cluster Server Init

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1016 void emberAf11073ProtocolTunnelClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, int16u *manufacturerCode* )

11073 Protocol Tunnel Cluster Server Manufacturer Specific Attribute Changed

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributelid</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1017 void emberAf11073ProtocolTunnelClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

11073 Protocol Tunnel Cluster Server Message Sent

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1018 EmberAfStatus emberAf11073ProtocolTunnelClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

11073 Protocol Tunnel Cluster Server Pre Attribute Changed

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1019 void emberAf11073ProtocolTunnelClusterServerTickCallback ( int8u endpoint )**

11073 Protocol Tunnel Cluster Server Tick  
Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1020 boolean emberAf11073ProtocolTunnelClusterTransferAPDUCallback ( int8u \* apdu )**

11073 Protocol Tunnel Cluster Transfer A P D U

**Parameters**

<i>apdu</i>	Ver.: always
-------------	--------------

**6.4.2.1021 void emberAfIso7816ProtocolTunnelClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

ISO 7816 Protocol Tunnel Cluster Client Attribute Changed.  
Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1022 void emberAfIso7816ProtocolTunnelClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

ISO 7816 Protocol Tunnel Cluster Client Default Response.  
This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1023 void emberAfIso7816ProtocolTunnelClusterClientInitCallback ( int8u *endpoint* )

ISO 7816 Protocol Tunnel Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1024 void emberAfIso7816ProtocolTunnelClusterClientManufacturerSpecificAttributeChanged-Callback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

ISO 7816 Protocol Tunnel Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1025 void emberAfIso7816ProtocolTunnelClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

ISO 7816 Protocol Tunnel Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1026 EmberAfStatus emberAfIso7816ProtocolTunnelClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

ISO 7816 Protocol Tunnel Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1027 void emberAfIso7816ProtocolTunnelClusterClientTickCallback ( int8u endpoint )**

ISO 7816 Protocol Tunnel Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1028 boolean emberAfIso7816ProtocolTunnelClusterExtractSmartCardCallback ( void )**

ISO 7816 Protocol Tunnel Cluster Extract Smart Card.

**6.4.2.1029 boolean emberAfIso7816ProtocolTunnelClusterInsertSmartCardCallback ( void )**

ISO 7816 Protocol Tunnel Cluster Insert Smart Card.

**6.4.2.1030 void emberAfIso7816ProtocolTunnelClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

ISO 7816 Protocol Tunnel Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1031 void emberAfIso7816ProtocolTunnelClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

ISO 7816 Protocol Tunnel Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1032 void emberAfIso7816ProtocolTunnelClusterServerInitCallback ( int8u *endpoint* )

ISO 7816 Protocol Tunnel Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1033 void emberAfIso7816ProtocolTunnelClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

ISO 7816 Protocol Tunnel Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1034 void emberAfIso7816ProtocolTunnelClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

ISO 7816 Protocol Tunnel Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1035 EmberAfStatus emberAfIso7816ProtocolTunnelClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

ISO 7816 Protocol Tunnel Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1036 void emberAfIso7816ProtocolTunnelClusterServerTickCallback ( int8u endpoint )**

ISO 7816 Protocol Tunnel Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1037 boolean emberAfIso7816ProtocolTunnelClusterTransferApduCallback ( int8u \* apdu )**

ISO 7816 Protocol Tunnel Cluster Transfer Apdu.

**Parameters**

<i>apdu</i>	Ver.: always
-------------	--------------

**6.4.2.1038 boolean emberAfPriceClusterCancelTariffCallback ( int32u providerId, int32u issuerTariffId, int8u tariffType )**

Price Cluster Cancel Tariff.

**Parameters**

<i>providerId</i>	Ver.: always
<i>issuerTariffId</i>	Ver.: always
<i>tariffType</i>	Ver.: always

**6.4.2.1039 void emberAfPriceClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Price Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1040 void emberAfPriceClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Price Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1041 void emberAfPriceClusterClientInitCallback ( int8u *endpoint* )**

Price Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1042 void emberAfPriceClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Price Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1043 void emberAfPriceClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Price Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1044 EmberAfStatus emberAfPriceClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Price Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1045 void emberAfPriceClusterClientTickCallback ( int8u *endpoint* )**

Price Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1046 boolean emberAfPriceClusterCppEventResponseCallback ( int32u *issuerEventId*, int8u *cppAuth* )**

Price Cluster Cpp Event Response.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>cppAuth</i>	Ver.: always

**6.4.2.1047 boolean emberAfPriceClusterGetBillingPeriodCallback ( int32u *earliestStartTime*, int32u *minIssuerEventId*, int8u *numberOfCommands*, int8u *tariffType* )**

Price Cluster Get Billing Period.

#### Parameters

<i>earliestStartTime</i>	Ver.: always
<i>minIssuerEventId</i>	Ver.: always

<i>numberOfCommands</i>	Ver.: always
<i>tariffType</i>	Ver.: always

6.4.2.1048 boolean emberAfPriceClusterGetBlockPeriodsCallback ( int32u *startTime*, int8u *numberOfEvents*, int8u *tariffType* )

Price Cluster Get Block Periods.

#### Parameters

<i>startTime</i>	Ver.: always
<i>numberOfEvents</i>	Ver.: always
<i>tariffType</i>	Ver.: always

6.4.2.1049 boolean emberAfPriceClusterGetBlockThresholdsCallback ( int32u *issuerTariffId* )

Price Cluster Get Block Thresholds.

#### Parameters

<i>issuerTariffId</i>	Ver.: always
-----------------------	--------------

6.4.2.1050 boolean emberAfPriceClusterGetCO2ValueCallback ( int32u *earliestStartTime*, int32u *minIssuerEventId*, int8u *numberOfCommands*, int8u *tariffType* )

Price Cluster Get C O2 Value.

#### Parameters

<i>earliestStartTime</i>	Ver.: always
<i>minIssuerEventId</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always
<i>tariffType</i>	Ver.: always

6.4.2.1051 boolean emberAfPriceClusterGetCalorificValueCallback ( int32u *earliestStartTime*, int32u *minIssuerEventId*, int8u *numberOfCommands* )

Price Cluster Get Calorific Value.

#### Parameters

<i>earliestStartTime</i>	Ver.: always
--------------------------	--------------

<i>minIssuer-EventId</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always

6.4.2.1052 boolean **emberAfPriceClusterGetConsolidatedBillCallback** ( int32u *earliestStartTime*, int32u *minIssuerEventId*, int8u *numberOfCommands*, int8u *tariffType* )

Price Cluster Get Consolidated Bill.

#### Parameters

<i>earliestStartTime</i>	Ver.: always
<i>minIssuerEventId</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always
<i>tariffType</i>	Ver.: always

6.4.2.1053 boolean **emberAfPriceClusterGetConversionFactorCallback** ( int32u *earliestStartTime*, int32u *minIssuerEventId*, int8u *numberOfCommands* )

Price Cluster Get Conversion Factor.

#### Parameters

<i>earliestStartTime</i>	Ver.: always
<i>minIssuerEventId</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always

6.4.2.1054 boolean **emberAfPriceClusterGetCreditPaymentCallback** ( int32u *latestEndTime*, int8u *numberOfRecords* )

Price Cluster Get Credit Payment.

#### Parameters

<i>latestEndTime</i>	Ver.: always
<i>numberOfRecords</i>	Ver.: always

6.4.2.1055 boolean **emberAfPriceClusterGetCurrencyConversionCommandCallback** ( void )

Price Cluster Get Currency Conversion Command.

#### 6.4.2.1056 boolean emberAfPriceClusterGetCurrentPriceCallback ( int8u *commandOptions* )

Price Cluster Get Current Price.

##### Parameters

<i>command- Options</i>	Ver.: always
-----------------------------	--------------

#### 6.4.2.1057 boolean emberAfPriceClusterGetPriceMatrixCallback ( int32u *issuerTariffId* )

Price Cluster Get Price Matrix.

##### Parameters

<i>issuerTariffId</i>	Ver.: always
-----------------------	--------------

#### 6.4.2.1058 boolean emberAfPriceClusterGetScheduledPricesCallback ( int32u *startTime*, int8u *numberOfEvents* )

Price Cluster Get Scheduled Prices.

##### Parameters

<i>startTime</i>	Ver.: always
<i>numberOf- Events</i>	Ver.: always

#### 6.4.2.1059 boolean emberAfPriceClusterGetTariffCancellationCallback ( void )

Price Cluster Get Tariff Cancellation.

#### 6.4.2.1060 boolean emberAfPriceClusterGetTariffInformationCallback ( int32u *earliestStartTime*, int32u *minIssuerEventId*, int8u *numberOfCommands*, int8u *tariffType* )

Price Cluster Get Tariff Information.

##### Parameters

<i>earliestStart- Time</i>	Ver.: always
<i>minIssuer- EventId</i>	Ver.: always
<i>numberOf- Commands</i>	Ver.: always
<i>tariffType</i>	Ver.: always

#### 6.4.2.1061 boolean emberAfPriceClusterGetTierLabelsCallback ( int32u *issuerTariffId* )

Price Cluster Get Tier Labels.

##### Parameters

<i>issuerTariffId</i>	Ver.: always
-----------------------	--------------

#### 6.4.2.1062 boolean emberAfPriceClusterPriceAcknowledgementCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *priceAckTime*, int8u *control* )

Price Cluster Price Acknowledgement.

##### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>priceAckTime</i>	Ver.: always
<i>control</i>	Ver.: always

#### 6.4.2.1063 boolean emberAfPriceClusterPublishBillingPeriodCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *billingPeriodStartTime*, int32u *billingPeriodDuration*, int8u *billingPeriodDurationType*, int8u *tariffType* )

Price Cluster Publish Billing Period.

##### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>billingPeriodStartTime</i>	Ver.: always
<i>billingPeriodDuration</i>	Ver.: always
<i>billingPeriodDurationType</i>	Ver.: always
<i>tariffType</i>	Ver.: always

#### 6.4.2.1064 boolean emberAfPriceClusterPublishBlockPeriodCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *blockPeriodStartTime*, int32u *blockPeriodDuration*, int8u *blockPeriodControl*, int8u *blockPeriodDurationType*, int8u *tariffType*, int8u *tariffResolutionPeriod* )

Price Cluster Publish Block Period.

##### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>blockPeriodStartTime</i>	Ver.: always

<i>blockPeriod-Duration</i>	Ver.: always
<i>blockPeriod-Control</i>	Ver.: always
<i>blockPeriod-DurationType</i>	Ver.: since se-1.2a-07-5356-19
<i>tariffType</i>	Ver.: since se-1.2a-07-5356-19
<i>tariff-Resolution-Period</i>	Ver.: since se-1.2a-07-5356-19

6.4.2.1065 boolean *emberAfPriceClusterPublishBlockThresholdsCallback* ( int32u *providerId*, int32u *issuerEventId*, int32u *startTime*, int32u *issuerTariffId*, int8u *commandIndex*, int8u *numberOfCommands*, int8u *subPayloadControl*, int8u \* *payload* )

Price Cluster Publish Block Thresholds.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>issuerTariffId</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always
<i>subPayloadControl</i>	Ver.: always
<i>payload</i>	Ver.: always

6.4.2.1066 boolean *emberAfPriceClusterPublishCO2ValueCallback* ( int32u *providerId*, int32u *issuerEventId*, int32u *startTime*, int8u *tariffType*, int32u *cO2Value*, int8u *cO2ValueUnit*, int8u *cO2ValueTrailingDigit* )

Price Cluster Publish C O2 Value.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>tariffType</i>	Ver.: always
<i>cO2Value</i>	Ver.: always
<i>cO2ValueUnit</i>	Ver.: always
<i>cO2Value-TrailingDigit</i>	Ver.: always

**6.4.2.1067 boolean emberAfPriceClusterPublishCalorificValueCallback ( int32u *issuerEventId*, int32u *startTime*, int32u *calorificValue*, int8u *calorificValueUnit*, int8u *calorificValueTrailingDigit* )**

Price Cluster Publish Calorific Value.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>calorificValue</i>	Ver.: always
<i>calorificValueUnit</i>	Ver.: always
<i>calorificValueTrailingDigit</i>	Ver.: always

**6.4.2.1068 boolean emberAfPriceClusterPublishConsolidatedBillCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *billingPeriodStartTime*, int32u *billingPeriodDuration*, int8u *billingPeriodDurationType*, int8u *tariffType*, int32u *consolidatedBill*, int16u *currency*, int8u *billTrailingDigit* )**

Price Cluster Publish Consolidated Bill.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>billingPeriodStartTime</i>	Ver.: always
<i>billingPeriodDuration</i>	Ver.: always
<i>billingPeriodDurationType</i>	Ver.: always
<i>tariffType</i>	Ver.: always
<i>consolidatedBill</i>	Ver.: always
<i>currency</i>	Ver.: always
<i>billTrailingDigit</i>	Ver.: always

**6.4.2.1069 boolean emberAfPriceClusterPublishConversionFactorCallback ( int32u *issuerEventId*, int32u *startTime*, int32u *conversionFactor*, int8u *conversionFactorTrailingDigit* )**

Price Cluster Publish Conversion Factor.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>conversionFactor</i>	Ver.: always
<i>conversionFactorTrailingDigit</i>	Ver.: always

**6.4.2.1070 boolean emberAfPriceClusterPublishCppEventCallback ( int32u providerId, int32u issuerEventId, int32u startTime, int16u durationInMinutes, int8u tariffType, int8u cppPriceTier, int8u cppAuth )**

Price Cluster Publish Cpp Event.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>durationInMinutes</i>	Ver.: always
<i>tariffType</i>	Ver.: always
<i>cppPriceTier</i>	Ver.: always
<i>cppAuth</i>	Ver.: always

**6.4.2.1071 boolean emberAfPriceClusterPublishCreditPaymentCallback ( int32u providerId, int32u issuerEventId, int32u creditPaymentDueDate, int32u creditPaymentOverDueAmount, int8u creditPaymentStatus, int32u creditPayment, int32u creditPaymentDate, int8u \* creditPaymentRef )**

Price Cluster Publish Credit Payment.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>creditPayment-DueDate</i>	Ver.: always
<i>creditPayment-OverDue-Amount</i>	Ver.: always
<i>creditPayment-Status</i>	Ver.: always
<i>creditPayment</i>	Ver.: always
<i>creditPayment-Date</i>	Ver.: always
<i>creditPayment-Ref</i>	Ver.: always

**6.4.2.1072 boolean emberAfPriceClusterPublishCurrencyConversionCallback ( int32u providerId, int32u issuerEventId, int32u startTime, int16u oldCurrency, int16u newCurrency, int32u conversionFactor, int8u conversionFactorTrailingDigit, int32u currencyChangeControlFlags )**

Price Cluster Publish Currency Conversion.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always

<i>startTime</i>	Ver.: always
<i>oldCurrency</i>	Ver.: always
<i>newCurrency</i>	Ver.: always
<i>conversionFactor</i>	Ver.: always
<i>conversionFactorTrailingDigit</i>	Ver.: always
<i>currencyChangeControlFlags</i>	Ver.: always

6.4.2.1073 boolean emberAfPriceClusterPublishPriceCallback ( int32u *providerId*, int8u \* *rateLabel*, int32u *issuerEventId*, int32u *currentTime*, int8u *unitOfMeasure*, int16u *currency*, int8u *priceTrailingDigitAndPriceTier*, int8u *numberOfPriceTiersAndRegisterTier*, int32u *startTime*, int16u *durationInMinutes*, int32u *price*, int8u *priceRatio*, int32u *generationPrice*, int8u *generationPriceRatio*, int32u *alternateCostDelivered*, int8u *alternateCostUnit*, int8u *alternateCostTrailingDigit*, int8u *numberOfBlockThresholds*, int8u *priceControl*, int8u *numberOfGenerationTiers*, int8u *generationTier*, int8u *extendedNumberOfPriceTiers*, int8u *extendedPriceTier*, int8u *extendedRegisterTier* )

Price Cluster Publish Price.

#### Parameters

<i>providerId</i>	Ver.: always
<i>rateLabel</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>currentTime</i>	Ver.: always
<i>unitOfMeasure</i>	Ver.: always
<i>currency</i>	Ver.: always
<i>priceTrailingDigitAndPriceTier</i>	Ver.: always
<i>numberOfPriceTiersAndRegisterTier</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>durationInMinutes</i>	Ver.: always
<i>price</i>	Ver.: always
<i>priceRatio</i>	Ver.: always
<i>generationPrice</i>	Ver.: always
<i>generationPriceRatio</i>	Ver.: always
<i>alternateCostDelivered</i>	Ver.: since se-1.0-07-5356-15
<i>alternateCostUnit</i>	Ver.: since se-1.0-07-5356-15
<i>alternateCostTrailingDigit</i>	Ver.: since se-1.0-07-5356-15

<i>numberOfBlockThresholds</i>	Ver.: since se-1.1-07-5356-16
<i>priceControl</i>	Ver.: since se-1.1-07-5356-16
<i>numberOfGenerationTiers</i>	Ver.: since se-1.2a-07-5356-19
<i>generationTier</i>	Ver.: since se-1.2a-07-5356-19
<i>extendedNumberOfPriceTiers</i>	Ver.: since se-1.2a-07-5356-19
<i>extendedPriceTier</i>	Ver.: since se-1.2a-07-5356-19
<i>extendedRegisterTier</i>	Ver.: since se-1.2a-07-5356-19

**6.4.2.1074 boolean emberAfPriceClusterPublishPriceMatrixCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *startTime*, int32u *issuerTariffId*, int8u *commandIndex*, int8u *numberOfCommands*, int8u \* *subPayloadControl*, int8u \* *payload* )**

Price Cluster Publish Price Matrix.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>issuerTariffId</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always
<i>subPayloadControl</i>	Ver.: always
<i>payload</i>	Ver.: always

**6.4.2.1075 boolean emberAfPriceClusterPublishTariffInformationCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *issuerTariffId*, int32u *startTime*, int8u *tariffTypeChargingScheme*, int8u \* *tariffLabel*, int8u *numberOfPriceTiersInUse*, int8u *numberOfBlockThresholdsInUse*, int8u *unitOfMeasure*, int16u *currency*, int8u *priceTrailingDigit*, int32u *standingCharge*, int8u *tierBlockMode*, int32u *blockThresholdMultiplier*, int32u *blockThresholdDivisor* )**

Price Cluster Publish Tariff Information.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>issuerTariffId</i>	Ver.: always
<i>startTime</i>	Ver.: always

<i>tariffType-Charging-Scheme</i>	Ver.: always
<i>tariffLabel</i>	Ver.: always
<i>numberOfPriceTiersIn-Use</i>	Ver.: always
<i>numberOfBlock-ThresholdsIn-Use</i>	Ver.: always
<i>unitOfMeasure</i>	Ver.: always
<i>currency</i>	Ver.: always
<i>priceTrailing-Digit</i>	Ver.: always
<i>standing-Charge</i>	Ver.: always
<i>tierBlockMode</i>	Ver.: always
<i>block-Threshold-Multiplier</i>	Ver.: always
<i>block-Threshold-Divisor</i>	Ver.: always

6.4.2.1076 boolean emberAfPriceClusterPublishTierLabelsCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *issuerTariffId*, int8u *commandIndex*, int8u *numberOfCommands*, int8u *numberOfLabels*, int8u \* *tierLabelsPayload* )

Price Cluster Publish Tier Labels.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>issuerTariffId</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always
<i>numberOfLabels</i>	Ver.: always
<i>tierLabels-Payload</i>	Ver.: always

6.4.2.1077 void emberAfPriceClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Price Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1078 void emberAfPriceClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Price Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1079 void emberAfPriceClusterServerInitCallback ( int8u *endpoint* )**

Price Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1080 void emberAfPriceClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Price Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1081 void emberAfPriceClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Price Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1082 EmberAfStatus emberAfPriceClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Price Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1083 void emberAfPriceClusterServerTickCallback ( int8u *endpoint* )**

Price Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1084 boolean emberAfDemandResponseLoadControlClusterCancelAllLoadControlEventsCallback ( int8u *cancelControl* )**

Demand Response and Load Control Cluster Cancel All Load Control Events.

**Parameters**

<i>cancelControl</i>	Ver.: always
----------------------	--------------

**6.4.2.1085 boolean emberAfDemandResponseLoadControlClusterCancelLoadControlEventCallback ( int32u *issuerEventId*, int16u *deviceClass*, int8u *utilityEnrollmentGroup*, int8u *cancelControl*, int32u *effectiveTime* )**

Demand Response and Load Control Cluster Cancel Load Control Event.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>deviceClass</i>	Ver.: always
<i>utility- Enrollment- Group</i>	Ver.: always
<i>cancelControl</i>	Ver.: always
<i>effectiveTime</i>	Ver.: always

**6.4.2.1086 void emberAfDemandResponseLoadControlClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Demand Response and Load Control Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1087 void emberAfDemandResponseLoadControlClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Demand Response and Load Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1088 void emberAfDemandResponseLoadControlClusterClientInitCallback ( int8u endpoint )**

Demand Response and Load Control Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1089 void emberAfDemandResponseLoadControlClusterClientManufacturerSpecificAttribute-  
ChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, int16u manufacturerCode )**

Demand Response and Load Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1090 void emberAfDemandResponseLoadControlClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Demand Response and Load Control Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1091 EmberAfStatus emberAfDemandResponseLoadControlClusterClientPreAttributeChanged-Callback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Demand Response and Load Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1092 void emberAfDemandResponseLoadControlClusterClientTickCallback ( int8u *endpoint* )**

Demand Response and Load Control Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1093 boolean emberAfDemandResponseLoadControlClusterGetScheduledEventsCallback ( int32u startTime, int8u numberOfEvents, int32u issuerEventId )**

Demand Response and Load Control Cluster Get Scheduled Events.

#### Parameters

<i>startTime</i>	Ver.: always
<i>numberOfEvents</i>	Ver.: always
<i>issuerEventId</i>	Ver.: since se-1.2b-15-0131-02

**6.4.2.1094 boolean emberAfDemandResponseLoadControlClusterLoadControlEventCallback ( int32u issuerEventId, int16u deviceClass, int8u utilityEnrollmentGroup, int32u startTime, int16u durationInMinutes, int8u criticalityLevel, int8u coolingTemperatureOffset, int8u heatingTemperatureOffset, int16s coolingTemperatureSetPoint, int16s heatingTemperatureSetPoint, int8s averageLoadAdjustmentPercentage, int8u dutyCycle, int8u eventControl )**

Demand Response and Load Control Cluster Load Control Event.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>deviceClass</i>	Ver.: always
<i>utility- Enrollment- Group</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>durationIn- Minutes</i>	Ver.: always
<i>criticalityLevel</i>	Ver.: always
<i>cooling- Temperature- Offset</i>	Ver.: always
<i>heating- Temperature- Offset</i>	Ver.: always
<i>cooling- Temperature- SetPoint</i>	Ver.: always
<i>heating- Temperature- SetPoint</i>	Ver.: always
<i>averageLoad- Adjustment- Percentage</i>	Ver.: always
<i>dutyCycle</i>	Ver.: always
<i>eventControl</i>	Ver.: always

**6.4.2.1095** boolean `emberAfDemandResponseLoadControlClusterReportEventStatusCallback ( int32u issuerEventId, int8u eventStatus, int32u eventStatusTime, int8u criticalityLevelApplied, int16u coolingTemperatureSetPointApplied, int16u heatingTemperatureSetPointApplied, int8s averageLoadAdjustmentPercentageApplied, int8u dutyCycleApplied, int8u eventControl, int8u signatureType, int8u * signature )`

Demand Response and Load Control Cluster Report Event Status.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>eventStatus</i>	Ver.: always
<i>eventStatusTime</i>	Ver.: always
<i>criticalityLevelApplied</i>	Ver.: always
<i>coolingTemperatureSetPointApplied</i>	Ver.: always
<i>heatingTemperatureSetPointApplied</i>	Ver.: always
<i>averageLoadAdjustmentPercentageApplied</i>	Ver.: always
<i>dutyCycleApplied</i>	Ver.: always
<i>eventControl</i>	Ver.: always
<i>signatureType</i>	Ver.: always
<i>signature</i>	Ver.: always

**6.4.2.1096** void `emberAfDemandResponseLoadControlClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )`

Demand Response and Load Control Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1097** void `emberAfDemandResponseLoadControlClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )`

Demand Response and Load Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1098 void emberAfDemandResponseLoadControlClusterServerInitCallback ( int8u *endpoint* )**

Demand Response and Load Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1099 void emberAfDemandResponseLoadControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Demand Response and Load Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1100 void emberAfDemandResponseLoadControlClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Demand Response and Load Control Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1101 EmberAfStatus emberAfDemandResponseLoadControlClusterServerPreAttributeChanged-Callback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Demand Response and Load Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1102 void emberAfDemandResponseLoadControlClusterServerTickCallback ( int8u *endpoint* )**

Demand Response and Load Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1103 boolean emberAfSimpleMeteringClusterChangeSupplyCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *requestDateTime*, int32u *implementationDateTime*, int8u *proposedSupplyStatus*, int8u *supplyControlBits* )**

Simple Metering Cluster Change Supply.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>requestDate-Time</i>	Ver.: always
<i>implementation-DateTime</i>	Ver.: always
<i>proposed-SupplyStatus</i>	Ver.: always
<i>supplyControl-Bits</i>	Ver.: always

**6.4.2.1104 void emberAfSimpleMeteringClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Simple Metering Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1105 void emberAfSimpleMeteringClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Simple Metering Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1106 void emberAfSimpleMeteringClusterClientInitCallback ( int8u *endpoint* )**

Simple Metering Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1107 void emberAfSimpleMeteringClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributId*, int16u *manufacturerCode* )**

Simple Metering Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1108 void emberAfSimpleMeteringClusterClientMessageSentCallback ( EmberOutgoingMessage-Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Simple Metering Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1109 EmberAfStatus emberAfSimpleMeteringClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Simple Metering Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1110 void emberAfSimpleMeteringClusterClientTickCallback ( int8u *endpoint* )**

Simple Metering Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1111 boolean emberAfSimpleMeteringClusterConfigureMirrorCallback ( int32u *issuerEventId*, int32u *reportingInterval*, int8u *mirrorNotificationReporting*, int8u *notificationScheme* )**

Simple Metering Cluster Configure Mirror.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>reporting-Interval</i>	Ver.: always
<i>mirror-Notification-Reporting</i>	Ver.: always
<i>notification-Scheme</i>	Ver.: always

**6.4.2.1112 boolean emberAfSimpleMeteringClusterConfigureNotificationFlagsCallback ( int32u *issuerEventId*, int8u *notificationScheme*, int16u *notificationFlagAttributeId*, int16u *clusterId*, int16u *manufacturerCode*, int8u *numberOfCommands*, int8u \* *commandIds* )**

Simple Metering Cluster Configure Notification Flags.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>notification-Scheme</i>	Ver.: always
<i>notification-FlagAttributeId</i>	Ver.: always
<i>clusterId</i>	Ver.: always
<i>manufacturer-Code</i>	Ver.: always
<i>numberOfCommands</i>	Ver.: always
<i>commandIds</i>	Ver.: always

**6.4.2.1113 boolean emberAfSimpleMeteringClusterConfigureNotificationSchemeCallback ( int32u *issuerEventId*, int8u *notificationScheme*, int32u *notificationFlagOrder* )**

Simple Metering Cluster Configure Notification Scheme.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>notification-Scheme</i>	Ver.: always
<i>notification-FlagOrder</i>	Ver.: always

**6.4.2.1114 boolean emberAfSimpleMeteringClusterGetNotifiedMessageCallback ( int8u *notificationScheme*, int16u *notificationFlagAttributeId*, int32u *notificationFlagsN* )**

Simple Metering Cluster Get Notified Message.

#### Parameters

<i>notification-Scheme</i>	Ver.: always
<i>notification-FlagAttributeId</i>	Ver.: always
<i>notification-FlagsN</i>	Ver.: always

**6.4.2.1115 boolean emberAfSimpleMeteringClusterGetProfileCallback ( int8u *intervalChannel*, int32u *endTime*, int8u *numberOfPeriods* )**

Simple Metering Cluster Get Profile.

#### Parameters

<i>interval- Channel</i>	Ver.: always
<i>endTime</i>	Ver.: always
<i>numberOf- Periods</i>	Ver.: always

**6.4.2.1116 boolean emberAfSimpleMeteringClusterGetProfileResponseCallback ( int32u *endTime*, int8u *status*, int8u *profileIntervalPeriod*, int8u *numberOfPeriodsDelivered*, int8u \* *intervals* )**

Simple Metering Cluster Get Profile Response.

#### Parameters

<i>endTime</i>	Ver.: always
<i>status</i>	Ver.: always
<i>profileInterval- Period</i>	Ver.: always
<i>numberOf- Periods- Delivered</i>	Ver.: always
<i>intervals</i>	Ver.: always

**6.4.2.1117 boolean emberAfSimpleMeteringClusterGetSampledDataCallback ( int16u *sampleId*, int32u *earliestSampleTime*, int8u *sampleType*, int16u *numberOfSamples* )**

Simple Metering Cluster Get Sampled Data.

#### Parameters

<i>sampleId</i>	Ver.: always
<i>earliestSample- Time</i>	Ver.: always
<i>sampleType</i>	Ver.: always
<i>numberOf- Samples</i>	Ver.: always

**6.4.2.1118 boolean emberAfSimpleMeteringClusterGetSampledDataResponseCallback ( int16u *sampleId*, int32u *sampleStartTime*, int8u *sampleType*, int16u *sampleRequestInterval*, int16u *numberOfSamples*, int8u \* *samples* )**

Simple Metering Cluster Get Sampled Data Response.

**Parameters**

<i>sampleId</i>	Ver.: always
<i>sampleStart-Time</i>	Ver.: always
<i>sampleType</i>	Ver.: always
<i>sampleRequest-Interval</i>	Ver.: always
<i>numberOfSamples</i>	Ver.: always
<i>samples</i>	Ver.: always

**6.4.2.1119 boolean emberAfSimpleMeteringClusterGetSnapshotCallback ( int32u earliestStartTime, int32u latestEndTime, int8u snapshotOffset, int32u snapshotCause )**

Simple Metering Cluster Get Snapshot.

**Parameters**

<i>earliestStartTime</i>	Ver.: always
<i>latestEndTime</i>	Ver.: always
<i>snapshotOffset</i>	Ver.: always
<i>snapshotCause</i>	Ver.: always

**6.4.2.1120 boolean emberAfSimpleMeteringClusterLocalChangeSupplyCallback ( int8u proposedSupplyStatus )**

Simple Metering Cluster Local Change Supply.

**Parameters**

<i>proposed-SupplyStatus</i>	Ver.: always
------------------------------	--------------

**6.4.2.1121 boolean emberAfSimpleMeteringClusterMirrorRemovedCallback ( int16u endpointId )**

Simple Metering Cluster Mirror Removed.

**Parameters**

<i>endpointId</i>	Ver.: always
-------------------	--------------

**6.4.2.1122 boolean emberAfSimpleMeteringClusterMirrorReportAttributeResponseCallback ( int8u notificationScheme, int8u \* notificationFlags )**

Simple Metering Cluster Mirror Report Attribute Response.

**Parameters**

<i>notification-Scheme</i>	Ver.: always
<i>notification-Flags</i>	Ver.: always

**6.4.2.1123 boolean emberAfSimpleMeteringClusterPublishSnapshotCallback ( int32u *snapshotId*, int32u *snapshotTime*, int8u *totalSnapshotsFound*, int8u *commandIndex*, int8u *totalCommands*, int32u *snapshotCause*, int8u *snapshotPayloadType*, int8u \* *snapshotPayload* )**

Simple Metering Cluster Publish Snapshot.

**Parameters**

<i>snapshotId</i>	Ver.: always
<i>snapshotTime</i>	Ver.: always
<i>totalSnapshots-Found</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>totalCommands</i>	Ver.: always
<i>snapshotCause</i>	Ver.: always
<i>snapshot-PayloadType</i>	Ver.: always
<i>snapshot-Payload</i>	Ver.: always

**6.4.2.1124 boolean emberAfSimpleMeteringClusterRemoveMirrorCallback ( void )**

Simple Metering Cluster Remove Mirror.

**6.4.2.1125 boolean emberAfSimpleMeteringClusterRequestFastPollModeCallback ( int8u *fastPollUpdatePeriod*, int8u *duration* )**

Simple Metering Cluster Request Fast Poll Mode.

**Parameters**

<i>fastPollUpdate-Period</i>	Ver.: always
<i>duration</i>	Ver.: always

**6.4.2.1126 boolean emberAfSimpleMeteringClusterRequestFastPollModeResponseCallback ( int8u *appliedUpdatePeriod*, int32u *fastPollModeEndtime* )**

Simple Metering Cluster Request Fast Poll Mode Response.

**Parameters**

<i>appliedUpdate-Period</i>	Ver.: always
<i>fastPollMode-Endtime</i>	Ver.: always

**6.4.2.1127 boolean emberAfSimpleMeteringClusterRequestMirrorCallback ( void )**

Simple Metering Cluster Request Mirror.

**6.4.2.1128 boolean emberAfSimpleMeteringClusterRequestMirrorResponseCallback ( int16u endpointId )**

Simple Metering Cluster Request Mirror Response.

**Parameters**

<i>endpointId</i>	Ver.: always
-------------------	--------------

**6.4.2.1129 boolean emberAfSimpleMeteringClusterResetLoadLimitCounterCallback ( int32u providerId, int32u issuerEventId )**

Simple Metering Cluster Reset Load Limit Counter.

**Parameters**

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always

**6.4.2.1130 boolean emberAfSimpleMeteringClusterScheduleSnapshotCallback ( int32u issuerEventId, int8u commandIndex, int8u commandCount, int8u \* snapshotSchedulePayload )**

Simple Metering Cluster Schedule Snapshot.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>commandCount</i>	Ver.: always
<i>snapshot-Schedule-Payload</i>	Ver.: always

**6.4.2.1131 boolean emberAfSimpleMeteringClusterScheduleSnapshotResponseCallback ( int32u issuerEventId, int8u \* snapshotResponsePayload )**

Simple Metering Cluster Schedule Snapshot Response.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>snapshot-Response-Payload</i>	Ver.: always

**6.4.2.1132 void emberAfSimpleMeteringClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Simple Metering Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1133 void emberAfSimpleMeteringClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Simple Metering Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1134 void emberAfSimpleMeteringClusterServerInitCallback ( int8u *endpoint* )**

Simple Metering Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1135 void emberAfSimpleMeteringClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Simple Metering Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1136 void emberAfSimpleMeteringClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Simple Metering Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1137 EmberAfStatus emberAfSimpleMeteringClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Simple Metering Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1138 void emberAfSimpleMeteringClusterServerTickCallback ( int8u *endpoint* )**

Simple Metering Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1139 boolean emberAfSimpleMeteringClusterSetSupplyStatusCallback ( int32u *issuerEventId*, int8u *supplyTamperState*, int8u *supplyDepletionState*, int8u *supplyUncontrolledFlowState*, int8u *loadLimitSupplyState* )**

Simple Metering Cluster Set Supply Status.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>supplyTamperState</i>	Ver.: always
<i>supplyDepletionState</i>	Ver.: always
<i>supplyUncontrolledFlowState</i>	Ver.: always
<i>loadLimitSupplyState</i>	Ver.: always

**6.4.2.1140 boolean emberAfSimpleMeteringClusterSetUncontrolledFlowThresholdCallback ( int32u *providerId*, int32u *issuerEventId*, int16u *uncontrolledFlowThreshold*, int8u *unitOfMeasure*, int16u *multiplier*, int16u *divisor*, int8u *stabilisationPeriod*, int16u *measurementPeriod* )**

Simple Metering Cluster Set Uncontrolled Flow Threshold.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>uncontrolledFlowThreshold</i>	Ver.: always
<i>unitOfMeasure</i>	Ver.: always
<i>multiplier</i>	Ver.: always
<i>divisor</i>	Ver.: always
<i>stabilisationPeriod</i>	Ver.: always
<i>measurementPeriod</i>	Ver.: always

**6.4.2.1141 boolean emberAfSimpleMeteringClusterStartSamplingCallback ( int32u *issuerEventId*, int32u *startSamplingTime*, int8u *sampleType*, int16u *sampleRequestInterval*, int16u *maxNumberOfSamples* )**

Simple Metering Cluster Start Sampling.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>startSamplingTime</i>	Ver.: always
<i>sampleType</i>	Ver.: always

<i>sampleRequest-Interval</i>	Ver.: always
<i>maxNumberOfSamples</i>	Ver.: always

#### 6.4.2.1142 boolean emberAfSimpleMeteringClusterStartSamplingResponseCallback ( int16u *sampleId* )

Simple Metering Cluster Start Sampling Response.

##### Parameters

<i>sampleId</i>	Ver.: always
-----------------	--------------

#### 6.4.2.1143 boolean emberAfSimpleMeteringClusterSupplyStatusResponseCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *implementationDateTime*, int8u *supplyStatus* )

Simple Metering Cluster Supply Status Response.

##### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>implementation-DateTime</i>	Ver.: always
<i>supplyStatus</i>	Ver.: always

#### 6.4.2.1144 boolean emberAfSimpleMeteringClusterTakeSnapshotCallback ( int32u *snapshotCause* )

Simple Metering Cluster Take Snapshot.

##### Parameters

<i>snapshotCause</i>	Ver.: always
----------------------	--------------

#### 6.4.2.1145 boolean emberAfSimpleMeteringClusterTakeSnapshotResponseCallback ( int32u *snapshotId*, int8u *snapshotConfirmation* )

Simple Metering Cluster Take Snapshot Response.

##### Parameters

<i>snapshotId</i>	Ver.: always
<i>snapshot-Confirmation</i>	Ver.: always

**6.4.2.1146 boolean emberAfMessagingClusterCancelAllMessagesCallback ( int32u *implementationDateTime* )**

Messaging Cluster Cancel All Messages.

#### Parameters

<i>implementation- DateTime</i>	Ver.: always
-------------------------------------	--------------

**6.4.2.1147 boolean emberAfMessagingClusterCancelMessageCallback ( int32u *messageId*, int8u *messageControl* )**

Messaging Cluster Cancel Message.

#### Parameters

<i>messageId</i>	Ver.: always
<i>message- Control</i>	Ver.: always

**6.4.2.1148 void emberAfMessagingClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Messaging Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1149 void emberAfMessagingClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Messaging Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1150 void emberAfMessagingClusterClientInitCallback ( int8u *endpoint* )**

Messaging Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1151 void emberAfMessagingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode )**

Messaging Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1152 void emberAfMessagingClusterClientMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

Messaging Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1153 EmberAfStatus emberAfMessagingClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Messaging Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.1154 void emberAfMessagingClusterClientTickCallback ( int8u *endpoint* )

Messaging Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.1155 boolean emberAfMessagingClusterDisplayMessageCallback ( int32u *messageId*, int8u *messageControl*, int32u *startTime*, int16u *durationInMinutes*, int8u \* *message*, int8u *optionalExtendedMessageControl* )

Messaging Cluster Display Message.

##### Parameters

<i>messageId</i>	Ver.: always
<i>message-</i> <i>Control</i>	Ver.: always
<i>start</i> <i>Time</i>	Ver.: always
<i>durationIn-</i> <i>Minutes</i>	Ver.: always
<i>message</i>	Ver.: always
<i>optional-</i> <i>Extended-</i> <i>Message-</i> <i>Control</i>	Ver.: since se-1.2a-07-5356-19

#### 6.4.2.1156 boolean emberAfMessagingClusterDisplayProtectedMessageCallback ( int32u *messageId*, int8u *messageControl*, int32u *startTime*, int16u *durationInMinutes*, int8u \* *message*, int8u *optionalExtendedMessageControl* )

Messaging Cluster Display Protected Message.

##### Parameters

<i>messageId</i>	Ver.: always
<i>message-</i> <i>Control</i>	Ver.: always
<i>start</i> <i>Time</i>	Ver.: always
<i>durationIn-</i> <i>Minutes</i>	Ver.: always
<i>message</i>	Ver.: always
<i>optional-</i> <i>Extended-</i> <i>Message-</i> <i>Control</i>	Ver.: always

#### 6.4.2.1157 boolean emberAfMessagingClusterGetLastMessageCallback ( void )

Messaging Cluster Get Last Message.

#### 6.4.2.1158 boolean emberAfMessagingClusterGetMessageCancellationCallback ( int32u earliestImplementationTime )

Messaging Cluster Get Message Cancellation.

##### Parameters

<i>earliest- Implementation- Time</i>	Ver.: always
---	--------------

#### 6.4.2.1159 boolean emberAfMessagingClusterMessageConfirmationCallback ( int32u messageId, int32u confirmationTime, int8u messageConfirmationControl, int8u \* messageResponse )

Messaging Cluster Message Confirmation.

##### Parameters

<i>messageId</i>	Ver.: always
<i>confirmation- Time</i>	Ver.: always
<i>message- Confirmation- Control</i>	Ver.: since se-1.2a-07-5356-19
<i>message- Response</i>	Ver.: since se-1.2a-07-5356-19

#### 6.4.2.1160 void emberAfMessagingClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )

Messaging Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.1161 void emberAfMessagingClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )

Messaging Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1162 void emberAfMessagingClusterServerInitCallback ( int8u *endpoint* )**

Messaging Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1163 void emberAfMessagingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Messaging Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1164 void emberAfMessagingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Messaging Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1165 EmberAfStatus emberAfMessagingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Messaging Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1166 void emberAfMessagingClusterServerTickCallback ( int8u *endpoint* )**

Messaging Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1167 boolean emberAfTunnelingClusterAckTransferDataClientToServerCallback ( int16u *tunnelId*, int16u *numberOfBytesLeft* )**

Tunneling Cluster Ack Transfer Data Client To Server.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>numberOfBytesLeft</i>	Ver.: always

**6.4.2.1168 boolean emberAfTunnelingClusterAckTransferDataServerToClientCallback ( int16u *tunnelId*, int16u *numberOfBytesLeft* )**

Tunneling Cluster Ack Transfer Data Server To Client.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>numberOfBytesLeft</i>	Ver.: always

**6.4.2.1169 void emberAfTunnelingClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Tunneling Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1170 void emberAfTunnelingClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Tunneling Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1171 void emberAfTunnelingClusterClientInitCallback ( int8u *endpoint* )**

Tunneling Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1172 void emberAfTunnelingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Tunneling Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1173 void emberAfTunnelingClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Tunneling Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1174 EmberAfStatus emberAfTunnelingClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Tunneling Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1175 void emberAfTunnelingClusterClientTickCallback ( int8u *endpoint* )**

Tunneling Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1176 boolean emberAfTunnelingClusterCloseTunnelCallback ( int16u *tunnelId* )**

Tunneling Cluster Close Tunnel.

#### Parameters

<i>tunnelId</i>	Ver.: always
-----------------	--------------

**6.4.2.1177 boolean emberAfTunnelingClusterGetSupportedTunnelProtocolsCallback ( int8u protocolOffset )**

Tunneling Cluster Get Supported Tunnel Protocols.

**Parameters**

<i>protocolOffset</i>	Ver.: always
-----------------------	--------------

**6.4.2.1178 boolean emberAfTunnelingClusterReadyDataClientToServerCallback ( int16u tunnelId, int16u numberOfOctetsLeft )**

Tunneling Cluster Ready Data Client To Server.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>numberOfOctetsLeft</i>	Ver.: always

**6.4.2.1179 boolean emberAfTunnelingClusterReadyDataServerToClientCallback ( int16u tunnelId, int16u numberOfOctetsLeft )**

Tunneling Cluster Ready Data Server To Client.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>numberOfOctetsLeft</i>	Ver.: always

**6.4.2.1180 boolean emberAfTunnelingClusterRequestTunnelCallback ( int8u protocolId, int16u manufacturerCode, int8u flowControlSupport, int16u maximumIncomingTransferSize )**

Tunneling Cluster Request Tunnel.

**Parameters**

<i>protocolId</i>	Ver.: always
<i>manufacturerCode</i>	Ver.: always
<i>flowControlSupport</i>	Ver.: always
<i>maximumIncomingTransferSize</i>	Ver.: since se-1.1a-07-5356-17

**6.4.2.1181 boolean emberAfTunnelingClusterRequestTunnelResponseCallback ( int16u *tunnelId*, int8u *tunnelStatus*, int16u *maximumIncomingTransferSize* )**

Tunneling Cluster Request Tunnel Response.

#### Parameters

<i>tunnelId</i>	Ver.: always
<i>tunnelStatus</i>	Ver.: always
<i>maximum-Incoming-TransferSize</i>	Ver.: since se-1.1a-07-5356-17

**6.4.2.1182 void emberAfTunnelingClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Tunneling Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1183 void emberAfTunnelingClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Tunneling Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1184 void emberAfTunnelingClusterServerInitCallback ( int8u *endpoint* )**

Tunneling Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1185 void emberAfTunnelingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Tunneling Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1186 void emberAfTunnelingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Tunneling Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1187 EmberAfStatus emberAfTunnelingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Tunneling Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1188 void emberAfTunnelingClusterServerTickCallback ( int8u *endpoint* )**

Tunneling Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1189 boolean emberAfTunnelingClusterSupportedTunnelProtocolsResponseCallback ( int8u protocolListComplete, int8u protocolCount, int8u \* protocolList )**

Tunneling Cluster Supported Tunnel Protocols Response.

**Parameters**

<i>protocolList-Complete</i>	Ver.: always
<i>protocolCount</i>	Ver.: always
<i>protocolList</i>	Ver.: always

**6.4.2.1190 boolean emberAfTunnelingClusterTransferDataClientToServerCallback ( int16u tunnelId, int8u \* data )**

Tunneling Cluster Transfer Data Client To Server.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>data</i>	Ver.: always

**6.4.2.1191 boolean emberAfTunnelingClusterTransferDataErrorClientToServerCallback ( int16u tunnelId, int8u transferDataStatus )**

Tunneling Cluster Transfer Data Error Client To Server.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>transferData-Status</i>	Ver.: always

**6.4.2.1192 boolean emberAfTunnelingClusterTransferDataErrorServerToClientCallback ( int16u tunnelId, int8u transferDataStatus )**

Tunneling Cluster Transfer Data Error Server To Client.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>transferData-Status</i>	Ver.: always

**6.4.2.1193 boolean emberAfTunnelingClusterTransferDataServerToClientCallback ( int16u *tunnelId*, int8u \* *data* )**

Tunneling Cluster Transfer Data Server To Client.

**Parameters**

<i>tunnelId</i>	Ver.: always
<i>data</i>	Ver.: always

**6.4.2.1194 boolean emberAfTunnelingClusterTunnelClosureNotificationCallback ( int16u *tunnelId* )**

Tunneling Cluster Tunnel Closure Notification.

**Parameters**

<i>tunnelId</i>	Ver.: always
-----------------	--------------

**6.4.2.1195 boolean emberAfPrepaymentClusterChangeDebtCallback ( int32u *issuerEventId*, int8u \* *debtLabel*, int32u *debtAmount*, int8u *debtRecoveryMethod*, int8u *debtAmountType*, int32u *debtRecoveryStartTime*, int16u *debtRecoveryCollectionTime*, int8u *debtRecoveryFrequency*, int32u *debtRecoveryAmount*, int16u *debtRecoveryBalancePercentage* )**

Prepayment Cluster Change Debt.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>debtLabel</i>	Ver.: always
<i>debtAmount</i>	Ver.: always
<i>debtRecovery- Method</i>	Ver.: always
<i>debtAmount- Type</i>	Ver.: always
<i>debtRecovery- StartTime</i>	Ver.: always
<i>debtRecovery- CollectionTime</i>	Ver.: always
<i>debtRecovery- Frequency</i>	Ver.: always
<i>debtRecovery- Amount</i>	Ver.: always
<i>debtRecovery- Balance- Percentage</i>	Ver.: always

**6.4.2.1196 boolean emberAfPrepaymentClusterChangePaymentModeCallback ( int32u providerId, int32u issuerEventId, int32u implementationDateTime, int16u proposedPaymentControlConfiguration, int32u cutOffValue )**

Prepayment Cluster Change Payment Mode.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>implementation- DateTime</i>	Ver.: always
<i>proposed- Payment- Control- Configuration</i>	Ver.: always
<i>cutOffValue</i>	Ver.: always

**6.4.2.1197 boolean emberAfPrepaymentClusterChangePaymentModeResponseCallback ( int8u friendlyCredit, int32u friendlyCreditCalendarId, int32u emergencyCreditLimit, int32u emergencyCreditThreshold )**

Prepayment Cluster Change Payment Mode Response.

#### Parameters

<i>friendlyCredit</i>	Ver.: always
<i>friendlyCredit- CalendarId</i>	Ver.: always
<i>emergency- CreditLimit</i>	Ver.: always
<i>emergency- Credit- Threshold</i>	Ver.: always

**6.4.2.1198 void emberAfPrepaymentClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Prepayment Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1199 void emberAfPrepaymentClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Prepayment Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1200 void emberAfPrepaymentClusterClientInitCallback ( int8u *endpoint* )**

Prepayment Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1201 void emberAfPrepaymentClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Prepayment Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1202 void emberAfPrepaymentClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Prepayment Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1203 EmberAfStatus emberAfPrepaymentClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Prepayment Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1204 void emberAfPrepaymentClusterClientTickCallback ( int8u *endpoint* )**

Prepayment Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1205 boolean emberAfPrepaymentClusterConsumerTopUpCallback ( int8u *originatingDevice*, int8u \* *topUpCode* )**

Prepayment Cluster Consumer Top Up.

#### Parameters

<i>originating-Device</i>	Ver.: always
<i>topUpCode</i>	Ver.: always

**6.4.2.1206 boolean emberAfPrepaymentClusterConsumerTopUpResponseCallback ( int8u *resultType*, int32u *topUpValue*, int8u *sourceOfTopUp*, int32u *creditRemaining* )**

Prepayment Cluster Consumer Top Up Response.

#### Parameters

<i>resultType</i>	Ver.: always
<i>topUpValue</i>	Ver.: always
<i>sourceOfTopUp</i>	Ver.: always

<i>credit- Remaining</i>	Ver.: always
------------------------------	--------------

6.4.2.1207 boolean emberAfPrepaymentClusterCreditAdjustmentCallback ( int32u *issuerEventId*, int32u *startTime*, int8u *creditAdjustmentType*, int32u *creditAdjustmentValue* )

Prepayment Cluster Credit Adjustment.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>credit- Adjustment- Type</i>	Ver.: always
<i>credit- Adjustment- Value</i>	Ver.: always

6.4.2.1208 boolean emberAfPrepaymentClusterEmergencyCreditSetupCallback ( int32u *issuerEventId*, int32u *startTime*, int32u *emergencyCreditLimit*, int32u *emergencyCreditThreshold* )

Prepayment Cluster Emergency Credit Setup.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>emergency- CreditLimit</i>	Ver.: always
<i>emergency- Credit- Threshold</i>	Ver.: always

6.4.2.1209 boolean emberAfPrepaymentClusterGetDebtRepaymentLogCallback ( int32u *latestEndTime*, int8u *numberOfDebts*, int8u *debtType* )

Prepayment Cluster Get Debt Repayment Log.

#### Parameters

<i>latestEndTime</i>	Ver.: always
<i>numberOf- Debts</i>	Ver.: always
<i>debtType</i>	Ver.: always

**6.4.2.1210 boolean emberAfPrepaymentClusterGetPrepaySnapshotCallback ( int32u *earliestStartTime*, int32u *latestEndTime*, int8u *snapshotOffset*, int32u *snapshotCause* )**

Prepayment Cluster Get Prepay Snapshot.

**Parameters**

<i>earliestStartTime</i>	Ver.: always
<i>latestEndTime</i>	Ver.: always
<i>snapshotOffset</i>	Ver.: always
<i>snapshotCause</i>	Ver.: always

**6.4.2.1211 boolean emberAfPrepaymentClusterGetTopUpLogCallback ( int32u *latestEndTime*, int8u *numberOfRecords* )**

Prepayment Cluster Get Top Up Log.

**Parameters**

<i>latestEndTime</i>	Ver.: always
<i>numberOfRecords</i>	Ver.: always

**6.4.2.1212 boolean emberAfPrepaymentClusterPublishDebtLogCallback ( int8u *commandIndex*, int8u *totalNumberOfCommands*, int8u \* *debtPayload* )**

Prepayment Cluster Publish Debt Log.

**Parameters**

<i>commandIndex</i>	Ver.: always
<i>totalNumberOfCommands</i>	Ver.: always
<i>debtPayload</i>	Ver.: always

**6.4.2.1213 boolean emberAfPrepaymentClusterPublishPrepaySnapshotCallback ( int32u *snapshotId*, int32u *snapshotTime*, int8u *totalSnapshotsFound*, int8u *commandIndex*, int8u *totalNumberOfCommands*, int32u *snapshotCause*, int8u *snapshotPayloadType*, int8u \* *snapshotPayload* )**

Prepayment Cluster Publish Prepay Snapshot.

**Parameters**

<i>snapshotId</i>	Ver.: always
<i>snapshotTime</i>	Ver.: always
<i>totalSnapshotsFound</i>	Ver.: always
<i>commandIndex</i>	Ver.: always

<i>totalNumber-OfCommands</i>	Ver.: always
<i>snapshotCause</i>	Ver.: always
<i>snapshot-PayloadType</i>	Ver.: always
<i>snapshot-Payload</i>	Ver.: always

**6.4.2.1214 boolean emberAfPrepaymentClusterPublishTopUpLogCallback ( int8u *commandIndex*, int8u *totalNumberOfCommands*, int8u \* *topUpPayload* )**

Prepayment Cluster Publish Top Up Log.

#### Parameters

<i>commandIndex</i>	Ver.: always
<i>totalNumberOfCommands</i>	Ver.: always
<i>topUpPayload</i>	Ver.: always

**6.4.2.1215 boolean emberAfPrepaymentClusterSelectAvailableEmergencyCreditCallback ( int32u *commandIssueDateTime*, int8u *originatingDevice* )**

Prepayment Cluster Select Available Emergency Credit.

#### Parameters

<i>commandIssue-DateTime</i>	Ver.: always
<i>originating-Device</i>	Ver.: always

**6.4.2.1216 void emberAfPrepaymentClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Prepayment Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1217 void emberAfPrepaymentClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Prepayment Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1218 void emberAfPrepaymentClusterServerInitCallback ( int8u *endpoint* )

Prepayment Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1219 void emberAfPrepaymentClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Prepayment Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1220 void emberAfPrepaymentClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Prepayment Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1221 EmberAfStatus emberAfPrepaymentClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Prepayment Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1222 void emberAfPrepaymentClusterServerTickCallback ( int8u *endpoint* )**

Prepayment Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1223 boolean emberAfPrepaymentClusterSetLowCreditWarningLevelCallback ( int32u *lowCreditWarningLevel* )**

Prepayment Cluster Set Low Credit Warning Level.

#### Parameters

<i>lowCreditWarningLevel</i>	Ver.: always
------------------------------	--------------

**6.4.2.1224 boolean emberAfPrepaymentClusterSetMaximumCreditLimitCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *implementationDateTime*, int32u *maximumCreditLevel*, int32u *maximumCreditPerTopUp* )**

Prepayment Cluster Set Maximum Credit Limit.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>implementationDateTime</i>	Ver.: always
<i>maximumCreditLevel</i>	Ver.: always

<i>maximum-CreditPerTop-Up</i>	Ver.: always
--------------------------------	--------------

**6.4.2.1225 boolean emberAfPrepaymentClusterSetOverallDebtCapCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *implementationDateTime*, int32u *overallDebtCap* )**

Prepayment Cluster Set Overall Debt Cap.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>implementation-DateTime</i>	Ver.: always
<i>overallDebt-Cap</i>	Ver.: always

**6.4.2.1226 void emberAfEnergyManagementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Energy Management Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1227 void emberAfEnergyManagementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Energy Management Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1228 void emberAfEnergyManagementClusterClientInitCallback ( int8u *endpoint* )**

Energy Management Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1229 void emberAfEnergyManagementClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Energy Management Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1230 void emberAfEnergyManagementClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Energy Management Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1231 EmberAfStatus emberAfEnergyManagementClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Energy Management Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.1232 void emberAfEnergyManagementClusterClientTickCallback ( int8u *endpoint* )

Energy Management Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.1233 boolean emberAfEnergyManagementClusterManageEventCallback ( int32u *issuerEventId*, int16u *deviceClass*, int8u *utilityEnrollmentGroup*, int8u *actionRequired* )

Energy Management Cluster Manage Event.

##### Parameters

<i>issuerEventId</i>	Ver.: always
<i>deviceClass</i>	Ver.: always
<i>utility- Enrollment- Group</i>	Ver.: always
<i>actionRequired</i>	Ver.: always

#### 6.4.2.1234 boolean emberAfEnergyManagementClusterReportEventStatusCallback ( int32u *issuerEventId*, int8u *eventStatus*, int32u *eventStatusTime*, int8u *criticalityLevelApplied*, int16u *coolingTemperatureSetPointApplied*, int16u *heatingTemperatureSetPointApplied*, int8s *averageLoadAdjustmentPercentageApplied*, int8u *dutyCycleApplied*, int8u *eventControl* )

Energy Management Cluster Report Event Status.

##### Parameters

<i>issuerEventId</i>	Ver.: always
<i>eventStatus</i>	Ver.: always
<i>eventStatus- Time</i>	Ver.: always
<i>criticality- LevelApplied</i>	Ver.: always
<i>cooling- Temperature- SetPoint- Applied</i>	Ver.: always
<i>heating- Temperature- SetPoint- Applied</i>	Ver.: always
<i>averageLoad- Adjustment- Percentage- Applied</i>	Ver.: always
<i>dutyCycle- Applied</i>	Ver.: always

<i>eventControl</i>	Ver.: always
---------------------	--------------

**6.4.2.1235 void emberAfEnergyManagementClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Energy Management Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1236 void emberAfEnergyManagementClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Energy Management Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1237 void emberAfEnergyManagementClusterServerInitCallback ( int8u *endpoint* )**

Energy Management Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1238 void emberAfEnergyManagementClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Energy Management Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1239 void emberAfEnergyManagementClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Energy Management Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1240 EmberAfStatus emberAfEnergyManagementClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Energy Management Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1241 void emberAfEnergyManagementClusterServerTickCallback ( int8u *endpoint* )**

Energy Management Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1242 boolean emberAfCalendarClusterCancelCalendarCallback ( int32u *providerId*, int32u *issuerCalendarId*, int8u *calendarType* )**

Calendar Cluster Cancel Calendar.

**Parameters**

<i>providerId</i>	Ver.: always
<i>issuer- CalendarId</i>	Ver.: always
<i>calendarType</i>	Ver.: always

**6.4.2.1243 void emberAfCalendarClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Calendar Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1244 void emberAfCalendarClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Calendar Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1245 void emberAfCalendarClusterClientInitCallback ( int8u *endpoint* )**

Calendar Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1246 void emberAfCalendarClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Calendar Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1247 void emberAfCalendarClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Calendar Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1248 EmberAfStatus emberAfCalendarClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Calendar Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1249 void emberAfCalendarClusterClientTickCallback ( int8u *endpoint* )**

Calendar Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1250 boolean emberAfCalendarClusterGetCalendarCallback ( int32u *earliestStartTime*, int32u *minIssuerEventId*, int8u *numberOfCalendars*, int8u *calendarType*, int32u *providerId* )**

Calendar Cluster Get Calendar.

#### Parameters

<i>earliestStartTime</i>	Ver.: always
<i>minIssuerEventId</i>	Ver.: always
<i>numberOfCalendars</i>	Ver.: always
<i>calendarType</i>	Ver.: always
<i>providerId</i>	Ver.: always

**6.4.2.1251 boolean emberAfCalendarClusterGetCalendarCancellationCallback ( void )**

Calendar Cluster Get Calendar Cancellation.

**6.4.2.1252 boolean emberAfCalendarClusterGetDayProfilesCallback ( int32u *providerId*, int32u *issuerCalendarId*, int8u *startDayId*, int8u *numberOfDays* )**

Calendar Cluster Get Day Profiles.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerCalendarId</i>	Ver.: always
<i>startDayId</i>	Ver.: always
<i>numberOfDays</i>	Ver.: always

**6.4.2.1253 boolean emberAfCalendarClusterGetSeasonsCallback ( int32u *providerId*, int32u *issuerCalendarId* )**

Calendar Cluster Get Seasons.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerCalendarId</i>	Ver.: always

**6.4.2.1254 boolean emberAfCalendarClusterGetSpecialDaysCallback ( int32u *startTime*, int8u *numberOfEvents*, int8u *calendarType*, int32u *providerId*, int32u *issuerCalendarId* )**

Calendar Cluster Get Special Days.

**Parameters**

<i>startTime</i>	Ver.: always
<i>numberOfEvents</i>	Ver.: always
<i>calendarType</i>	Ver.: always
<i>providerId</i>	Ver.: always
<i>issuerCalendarId</i>	Ver.: always

6.4.2.1255 boolean emberAfCalendarClusterGetWeekProfilesCallback ( int32u *providerId*, int32u *issuerCalendarId*, int8u *startWeekId*, int8u *numberOfWeeks* )

Calendar Cluster Get Week Profiles.

**Parameters**

<i>providerId</i>	Ver.: always
<i>issuerCalendarId</i>	Ver.: always
<i>startWeekId</i>	Ver.: always
<i>numberOfWeeks</i>	Ver.: always

6.4.2.1256 boolean emberAfCalendarClusterPublishCalendarCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *issuerCalendarId*, int32u *startTime*, int8u *calendarType*, int8u *calendarTimeReference*, int8u \* *calendarName*, int8u *numberOfSeasons*, int8u *numberOfWeekProfiles*, int8u *numberOfDayProfiles* )

Calendar Cluster Publish Calendar.

**Parameters**

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>issuerCalendarId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>calendarType</i>	Ver.: always
<i>calendarTimeReference</i>	Ver.: always
<i>calendarName</i>	Ver.: always
<i>numberOfSeasons</i>	Ver.: always
<i>numberOfWeekProfiles</i>	Ver.: always
<i>numberOfDayProfiles</i>	Ver.: always

**6.4.2.1257 boolean emberAfCalendarClusterPublishDayProfileCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *issuerCalendarId*, int8u *dayId*, int8u *totalNumberOfScheduleEntries*, int8u *commandIndex*, int8u *totalNumberOfCommands*, int8u *calendarType*, int8u \* *dayScheduleEntries* )**

Calendar Cluster Publish Day Profile.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>issuerCalendarId</i>	Ver.: always
<i>dayId</i>	Ver.: always
<i>totalNumberOfScheduleEntries</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>totalNumberOfCommands</i>	Ver.: always
<i>calendarType</i>	Ver.: always
<i>dayScheduleEntries</i>	Ver.: always

**6.4.2.1258 boolean emberAfCalendarClusterPublishSeasonsCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *issuerCalendarId*, int8u *commandIndex*, int8u *totalNumberOfCommands*, int8u \* *seasonEntries* )**

Calendar Cluster Publish Seasons.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>issuerCalendarId</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>totalNumberOfCommands</i>	Ver.: always
<i>seasonEntries</i>	Ver.: always

**6.4.2.1259 boolean emberAfCalendarClusterPublishSpecialDaysCallback ( int32u *providerId*, int32u *issuerEventId*, int32u *issuerCalendarId*, int32u *startTime*, int8u *calendarType*, int8u *totalNumberOfSpecialDays*, int8u *commandIndex*, int8u *totalNumberOfCommands*, int8u \* *specialDayEntries* )**

Calendar Cluster Publish Special Days.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always

<i>issuer- CalendarId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>calendarType</i>	Ver.: always
<i>totalNumber- OfSpecialDays</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>totalNumber- OfCommands</i>	Ver.: always
<i>specialDay- Entries</i>	Ver.: always

6.4.2.1260 boolean **emberAfCalendarClusterPublishWeekProfileCallback** ( int32u *providerId*, int32u *issuerEventId*, int32u *issuerCalendarId*, int8u *weekId*, int8u *dayIdRefMonday*, int8u *dayIdRefTuesday*, int8u *dayIdRefWednesday*, int8u *dayIdRefThursday*, int8u *dayIdRefFriday*, int8u *dayIdRefSaturday*, int8u *dayIdRefSunday* )

Calendar Cluster Publish Week Profile.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>issuer- CalendarId</i>	Ver.: always
<i>weekId</i>	Ver.: always
<i>dayIdRef- Monday</i>	Ver.: always
<i>dayIdRef- Tuesday</i>	Ver.: always
<i>dayIdRef- Wednesday</i>	Ver.: always
<i>dayIdRef- Thursday</i>	Ver.: always
<i>dayIdRefFriday</i>	Ver.: always
<i>dayIdRef- Saturday</i>	Ver.: always
<i>dayIdRef- Sunday</i>	Ver.: always

6.4.2.1261 void **emberAfCalendarClusterServerAttributeChangedCallback** ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Calendar Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1262 void emberAfCalendarClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Calendar Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1263 void emberAfCalendarClusterServerInitCallback ( int8u *endpoint* )**

Calendar Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1264 void emberAfCalendarClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Calendar Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1265 void emberAfCalendarClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Calendar Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1266 EmberAfStatus emberAfCalendarClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Calendar Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1267 void emberAfCalendarClusterServerTickCallback ( int8u *endpoint* )**

Calendar Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1268 void emberAfDeviceManagementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Device Management Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1269 void emberAfDeviceManagementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Device Management Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1270 void emberAfDeviceManagementClusterClientInitCallback ( int8u *endpoint* )**

Device Management Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1271 void emberAfDeviceManagementClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Device Management Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1272 void emberAfDeviceManagementClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Device Management Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1273 EmberAfStatus emberAfDeviceManagementClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Device Management Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1274 void emberAfDeviceManagementClusterClientTickCallback ( int8u *endpoint* )**

Device Management Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1275 boolean emberAfDeviceManagementClusterGetCINCallback ( void )**

Device Management Cluster Get C I N.

**6.4.2.1276 boolean emberAfDeviceManagementClusterGetChangeOfSupplierCallback ( void )**

Device Management Cluster Get Change Of Supplier.

**6.4.2.1277 boolean emberAfDeviceManagementClusterGetChangeOfTenancyCallback ( void )**

Device Management Cluster Get Change Of Tenancy.

**6.4.2.1278 boolean emberAfDeviceManagementClusterGetEventConfigurationCallback ( int16u *eventId* )**

Device Management Cluster Get Event Configuration.

**Parameters**

<i>eventId</i>	Ver.: always
----------------	--------------

**6.4.2.1279 boolean emberAfDeviceManagementClusterGetSiteIdCallback ( void )**

Device Management Cluster Get Site Id.

**6.4.2.1280 boolean emberAfDeviceManagementClusterPublishChangeOfSupplierCallback ( int32u *currentProviderId*, int32u *issuerEventId*, int8u *tariffType*, int32u *proposedProviderId*, int32u *providerChangeImplementationTime*, int32u *providerChangeControl*, int8u \* *proposedProviderName*, int8u \* *proposedProviderContactDetails* )**

Device Management Cluster Publish Change Of Supplier.

#### Parameters

<i>current-ProviderId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>tariffType</i>	Ver.: always
<i>proposed-ProviderId</i>	Ver.: always
<i>provider-Change-Implementation-Time</i>	Ver.: always
<i>provider-ChangeControl</i>	Ver.: always
<i>proposed-ProviderName</i>	Ver.: always
<i>proposed-Provider-ContactDetails</i>	Ver.: always

**6.4.2.1281 boolean emberAfDeviceManagementClusterPublishChangeOfTenancyCallback ( int32u *providerId*, int32u *issuerEventId*, int8u *tariffType*, int32u *implementationDateTime*, int32u *proposedTenancyChangeControl* )**

Device Management Cluster Publish Change Of Tenancy.

#### Parameters

<i>providerId</i>	Ver.: always
<i>issuerEventId</i>	Ver.: always
<i>tariffType</i>	Ver.: always
<i>implementation-DateTime</i>	Ver.: always
<i>proposed-Tenancy-ChangeControl</i>	Ver.: always

**6.4.2.1282 boolean emberAfDeviceManagementClusterReportEventConfigurationCallback ( int8u *commandIndex*, int8u *totalCommands*, int8u \* *eventConfigurationPayload* )**

Device Management Cluster Report Event Configuration.

**Parameters**

<i>commandIndex</i>	Ver.: always
<i>totalCommands</i>	Ver.: always
<i>event-Configuration-Payload</i>	Ver.: always

**6.4.2.1283 boolean emberAfDeviceManagementClusterRequestNewPasswordCallback ( int8u passwordType )**

Device Management Cluster Request New Password.

**Parameters**

<i>passwordType</i>	Ver.: always
---------------------	--------------

**6.4.2.1284 boolean emberAfDeviceManagementClusterRequestNewPasswordResponseCallback ( int32u issuerEventId, int32u implementationDateTime, int16u durationInMinutes, int8u passwordType, int8u \* password )**

Device Management Cluster Request New Password Response.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>implementation-DateTime</i>	Ver.: always
<i>durationIn-Minutes</i>	Ver.: always
<i>passwordType</i>	Ver.: always
<i>password</i>	Ver.: always

**6.4.2.1285 void emberAfDeviceManagementClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Device Management Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1286 void emberAfDeviceManagementClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Device Management Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1287 void emberAfDeviceManagementClusterServerInitCallback ( int8u *endpoint* )

Device Management Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1288 void emberAfDeviceManagementClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Device Management Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1289 void emberAfDeviceManagementClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Device Management Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1290 EmberAfStatus emberAfDeviceManagementClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Device Management Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1291 void emberAfDeviceManagementClusterServerTickCallback ( int8u *endpoint* )**

Device Management Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1292 boolean emberAfDeviceManagementClusterSetEventConfigurationCallback ( int32u *issuerEventId*, int32u *startDateTime*, int8u *eventConfiguration*, int8u *configurationControl*, int8u \* *eventConfigurationPayload* )**

Device Management Cluster Set Event Configuration.

#### Parameters

<i>issuerEventId</i>	Ver.: always
<i>startDateTime</i>	Ver.: always
<i>event-Configuration</i>	Ver.: always
<i>configuration-Control</i>	Ver.: always
<i>event-Configuration-Payload</i>	Ver.: always

**6.4.2.1293 boolean emberAfDeviceManagementClusterUpdateCINCallback ( int32u *issuerEventId*, int32u *implementationTime*, int32u *providerId*, int8u \* *customerIdNumber* )**

Device Management Cluster Update C I N.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>implementation-Time</i>	Ver.: always
<i>providerId</i>	Ver.: always
<i>customerId-Number</i>	Ver.: always

**6.4.2.1294 boolean emberAfDeviceManagementClusterUpdateSiteIdCallback ( int32u *issuerEventId*, int32u *siteIdTime*, int32u *providerId*, int8u \* *siteId* )**

Device Management Cluster Update Site Id.

**Parameters**

<i>issuerEventId</i>	Ver.: always
<i>siteIdTime</i>	Ver.: always
<i>providerId</i>	Ver.: always
<i>siteId</i>	Ver.: always

**6.4.2.1295 boolean emberAfEventsClusterClearEventLogRequestCallback ( int8u *logId* )**

Events Cluster Clear Event Log Request.

**Parameters**

<i>logId</i>	Ver.: always
--------------	--------------

**6.4.2.1296 boolean emberAfEventsClusterClearEventLogResponseCallback ( int8u *clearedEventsLogs* )**

Events Cluster Clear Event Log Response.

**Parameters**

<i>clearedEvents-Logs</i>	Ver.: always
---------------------------	--------------

**6.4.2.1297 void emberAfEventsClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Events Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1298 void emberAfEventsClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Events Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1299 void emberAfEventsClusterClientInitCallback ( int8u *endpoint* )**

Events Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1300 void emberAfEventsClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Events Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1301 void emberAfEventsClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Events Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1302 EmberAfStatus emberAfEventsClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Events Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1303 void emberAfEventsClusterClientTickCallback ( int8u *endpoint* )**

Events Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1304 boolean emberAfEventsClusterGetEventLogCallback ( int8u *eventControlLogId*, int16u *eventId*, int32u *startTime*, int32u *endTime*, int8u *numberOfEvents*, int16u *eventOffset* )**

Events Cluster Get Event Log.

#### Parameters

<i>eventControl- LogId</i>	Ver.: always
<i>eventId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>endTime</i>	Ver.: always
<i>numberOf- Events</i>	Ver.: always
<i>eventOffset</i>	Ver.: always

**6.4.2.1305 boolean emberAfEventsClusterPublishEventCallback ( int8u *logId*, int16u *eventId*, int32u *eventTime*, int8u *eventControl*, int8u \* *eventData* )**

Events Cluster Publish Event.

**Parameters**

<i>logId</i>	Ver.: always
<i>eventId</i>	Ver.: always
<i>eventTime</i>	Ver.: always
<i>eventControl</i>	Ver.: always
<i>EventData</i>	Ver.: always

**6.4.2.1306 boolean emberAfEventsClusterPublishEventLogCallback ( int16u *totalNumberOfEvents*, int8u *commandIndex*, int8u *totalCommands*, int8u *logPayloadControl*, int8u \* *logPayload* )**

Events Cluster Publish Event Log.

**Parameters**

<i>totalNumberOfEvents</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>totalCommands</i>	Ver.: always
<i>logPayloadControl</i>	Ver.: always
<i>logPayload</i>	Ver.: always

**6.4.2.1307 void emberAfEventsClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Events Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1308 void emberAfEventsClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Events Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1309 void emberAfEventsClusterServerInitCallback ( int8u *endpoint* )

Events Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1310 void emberAfEventsClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Events Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1311 void emberAfEventsClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Events Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1312 EmberAfStatus emberAfEventsClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Events Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1313 void emberAfEventsClusterServerTickCallback ( int8u endpoint )**

Events Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1314 void emberAfMduPairingClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

MDU Pairing Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1315 void emberAfMduPairingClusterClientDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

MDU Pairing Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1316 void emberAfMduPairingClusterClientInitCallback ( int8u endpoint )**

MDU Pairing Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1317 void emberAfMduPairingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, int16u manufacturerCode )**

MDU Pairing Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1318 void emberAfMduPairingClusterClientMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

MDU Pairing Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1319 EmberAfStatus emberAfMduPairingClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

MDU Pairing Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.1320 void emberAfMduPairingClusterClientTickCallback ( int8u *endpoint* )

MDU Pairing Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.1321 boolean emberAfMduPairingClusterPairingRequestCallback ( int32u *localPairingInformationVersion*, int8u \* *eui64OfRequestingDevice* )

MDU Pairing Cluster Pairing Request.

##### Parameters

<i>localPairingInformationVersion</i>	Ver.: always
<i>eui64OfRequestingDevice</i>	Ver.: always

#### 6.4.2.1322 boolean emberAfMduPairingClusterPairingResponseCallback ( int32u *pairingInformationVersion*, int8u *totalNumberOfDevices*, int8u *commandIndex*, int8u *totalNumberOfCommands*, int8u \* *eui64s* )

MDU Pairing Cluster Pairing Response.

##### Parameters

<i>pairingInformationVersion</i>	Ver.: always
<i>totalNumberOfDevices</i>	Ver.: always
<i>commandIndex</i>	Ver.: always
<i>totalNumberOfCommands</i>	Ver.: always
<i>eui64s</i>	Ver.: always

#### 6.4.2.1323 void emberAfMduPairingClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

MDU Pairing Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1324 void emberAfMduPairingClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

MDU Pairing Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1325 void emberAfMduPairingClusterServerInitCallback ( int8u *endpoint* )**

MDU Pairing Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1326 void emberAfMduPairingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

MDU Pairing Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1327 void emberAfMduPairingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

MDU Pairing Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1328 EmberAfStatus emberAfMduPairingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

MDU Pairing Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1329 void emberAfMduPairingClusterServerTickCallback ( int8u *endpoint* )**

MDU Pairing Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1330 boolean emberAfKeyEstablishmentClusterClientCommandReceivedCallback ( EmberAfClusterCommand \* *cmd* )**

Key Establishment Cluster Client Command Received.

This function is called by the application framework when a server-to-client key establishment command is received but has yet to be handled by the framework code. This function should return a bool value indicating whether the command has been handled by the application code and should not be further processed by the framework.

**Parameters**

<i>cmd</i>	Ver.: always
------------	--------------

**6.4.2.1331 void emberAfKeyEstablishmentClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Key Establishment Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1332 void emberAfKeyEstablishmentClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Key Establishment Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1333 void emberAfKeyEstablishmentClusterClientInitCallback ( int8u *endpoint* )**

Key Establishment Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1334 void emberAfKeyEstablishmentClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Key Establishment Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1335 void emberAfKeyEstablishmentClusterClientMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Key Establishment Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1336 EmberAfStatus emberAfKeyEstablishmentClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Key Establishment Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1337 void emberAfKeyEstablishmentClusterClientTickCallback ( int8u *endpoint* )**

Key Establishment Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1338 boolean emberAfKeyEstablishmentClusterConfirmKeyDataRequestCallback ( int8u \* *secureMessageAuthenticationCode* )**

Key Establishment Cluster Confirm Key Data Request.

**Parameters**

<i>secure-Message-Authentication-Code</i>	Ver.: always
---	--------------

6.4.2.1339 boolean **emberAfKeyEstablishmentClusterConfirmKeyDataResponseCallback** ( int8u \* *secureMessageAuthenticationCode* )

Key Establishment Cluster Confirm Key Data Response.

**Parameters**

<i>secure-Message-Authentication-Code</i>	Ver.: always
---	--------------

6.4.2.1340 boolean **emberAfKeyEstablishmentClusterEphemeralDataRequestCallback** ( int8u \* *ephemeralData* )

Key Establishment Cluster Ephemeral Data Request.

**Parameters**

<i>ephemeralData</i>	Ver.: always
----------------------	--------------

6.4.2.1341 boolean **emberAfKeyEstablishmentClusterEphemeralDataResponseCallback** ( int8u \* *ephemeralData* )

Key Establishment Cluster Ephemeral Data Response.

**Parameters**

<i>ephemeralData</i>	Ver.: always
----------------------	--------------

6.4.2.1342 boolean **emberAfKeyEstablishmentClusterInitiateKeyEstablishmentRequestCallback** ( int16u *keyEstablishmentSuite*, int8u *ephemeralDataGenerateTime*, int8u *confirmKeyGenerateTime*, int8u \* *identity* )

Key Establishment Cluster Initiate Key Establishment Request.

**Parameters**

<i>key-Establishment-Suite</i>	Ver.: always
<i>ephemeral-DataGenerate-Time</i>	Ver.: always

<i>confirmKey-GenerateTime</i>	Ver.: always
<i>identity</i>	Ver.: always

**6.4.2.1343 boolean emberAfKeyEstablishmentClusterInitiateKeyEstablishmentResponseCallback ( int16u requestedKeyEstablishmentSuite, int8u ephemeralDataGenerateTime, int8u confirmKeyGenerateTime, int8u \* identity )**

Key Establishment Cluster Initiate Key Establishment Response.

#### Parameters

<i>requestedKey-Establishment-Suite</i>	Ver.: always
<i>ephemeral-DataGenerate-Time</i>	Ver.: always
<i>confirmKey-GenerateTime</i>	Ver.: always
<i>identity</i>	Ver.: always

**6.4.2.1344 void emberAfKeyEstablishmentClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Key Establishment Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1345 void emberAfKeyEstablishmentClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Key Establishment Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1346 void emberAfKeyEstablishmentClusterServerInitCallback ( int8u *endpoint* )

Key Establishment Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1347 void emberAfKeyEstablishmentClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Key Establishment Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1348 void emberAfKeyEstablishmentClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Key Establishment Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1349 EmberAfStatus emberAfKeyEstablishmentClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Key Establishment Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1350 void emberAfKeyEstablishmentClusterServerTickCallback ( int8u endpoint )**

Key Establishment Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1351 boolean emberAfKeyEstablishmentClusterTerminateKeyEstablishmentCallback ( int8u statusCode, int8u waitTime, int16u keyEstablishmentSuite )**

Key Establishment Cluster Terminate Key Establishment.

**Parameters**

<i>statusCode</i>	Ver.: always
<i>waitTime</i>	Ver.: always
<i>keyEstablishmentSuite</i>	Ver.: always

**6.4.2.1352 boolean emberAfKeyEstablishmentClusterServerCommandReceivedCallback ( EmberAfClusterCommand \* cmd )**

Key Establishment Cluster Server Command Received.

This function is called by the application framework when a client-to-server key establishment command is received but has yet to be handled by the framework code. This function should return a bool value indicating whether the command has been handled by the application code and should not be further processed by the framework.

**Parameters**

<i>cmd</i>	Ver.: always
------------	--------------

**6.4.2.1353 void emberAfInformationClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Information Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1354 void emberAfInformationClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Information Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1355 void emberAfInformationClusterClientInitCallback ( int8u *endpoint* )**

Information Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1356 void emberAfInformationClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Information Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1357 void emberAfInformationClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Information Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1358 EmberAfStatus emberAfInformationClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Information Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1359 void emberAfInformationClusterClientTickCallback ( int8u *endpoint* )**

Information Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1360 boolean emberAfInformationClusterConfigureDeliveryEnableCallback ( int8u *enable* )**

Information Cluster Configure Delivery Enable.

**Parameters**

<i>enable</i>	Ver.: always
---------------	--------------

**6.4.2.1361 boolean emberAfInformationClusterConfigureNodeDescriptionCallback ( int8u \* *description* )**

Information Cluster Configure Node Description.

**Parameters**

<i>description</i>	Ver.: always
--------------------	--------------

**6.4.2.1362 boolean emberAfInformationClusterConfigurePushInformationTimerCallback ( int32u *timer* )**

Information Cluster Configure Push Information Timer.

**Parameters**

<i>timer</i>	Ver.: always
--------------	--------------

**6.4.2.1363 boolean emberAfInformationClusterConfigureSetRootIdCallback ( int16u *rootId* )**

Information Cluster Configure Set Root Id.

**Parameters**

<i>rootId</i>	Ver.: always
---------------	--------------

**6.4.2.1364 boolean emberAfInformationClusterDeleteCallback ( int8u *deletionOptions*, int8u \* *contentIds* )**

Information Cluster Delete.

**Parameters**

<i>deletion- Options</i>	Ver.: always
<i>contentIds</i>	Ver.: always

**6.4.2.1365 boolean emberAfInformationClusterDeleteResponseCallback ( int8u \* *notificationList* )**

Information Cluster Delete Response.

**Parameters**

<i>notificationList</i>	Ver.: always
-------------------------	--------------

**6.4.2.1366 boolean emberAfInformationClusterPushInformationCallback ( int8u \* *contents* )**

Information Cluster Push Information.

**Parameters**

<i>contents</i>	Ver.: always
-----------------	--------------

6.4.2.1367 boolean emberAfInformationClusterPushInformationResponseCallback ( int8u \* *notificationList* )

Information Cluster Push Information Response.

**Parameters**

<i>notificationList</i>	Ver.: always
-------------------------	--------------

6.4.2.1368 boolean emberAfInformationClusterRequestInformationCallback ( int8u *inquiryId*, int8u *dataTypeId*, int8u \* *requestInformationPayload* )

Information Cluster Request Information.

**Parameters**

<i>inquiryId</i>	Ver.: always
<i>dataTypeId</i>	Ver.: always
<i>request-Information-Payload</i>	Ver.: always

6.4.2.1369 boolean emberAfInformationClusterRequestInformationResponseCallback ( int8u *number*, int8u \* *buffer* )

Information Cluster Request Information Response.

**Parameters**

<i>number</i>	Ver.: always
<i>buffer</i>	Ver.: always

6.4.2.1370 boolean emberAfInformationClusterRequestPreferenceConfirmationCallback ( int8u \* *statusFeedbackList* )

Information Cluster Request Preference Confirmation.

**Parameters**

<i>status-FeedbackList</i>	Ver.: always
----------------------------	--------------

6.4.2.1371 boolean emberAfInformationClusterRequestPreferenceResponseCallback ( int8u *statusFeedback*, int16u *preferenceType*, int8u \* *preferencePayload* )

Information Cluster Request Preference Response.

**Parameters**

<i>statusFeedback</i>	Ver.: always
<i>preferenceType</i>	Ver.: always
<i>preference-Payload</i>	Ver.: always

**6.4.2.1372 boolean emberAfInformationClusterSendPreferenceCallback ( int16u *preferenceType*, int8u \* *preferencePayload* )**

Information Cluster Send Preference.

**Parameters**

<i>preferenceType</i>	Ver.: always
<i>preference-Payload</i>	Ver.: always

**6.4.2.1373 boolean emberAfInformationClusterSendPreferenceResponseCallback ( int8u \* *statusFeedbackList* )**

Information Cluster Send Preference Response.

**Parameters**

<i>status-FeedbackList</i>	Ver.: always
----------------------------	--------------

**6.4.2.1374 void emberAfInformationClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Information Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1375 void emberAfInformationClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Information Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1376 void emberAfInformationClusterServerInitCallback ( int8u *endpoint* )

Information Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1377 void emberAfInformationClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Information Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1378 void emberAfInformationClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Information Cluster Server Message Sent.

Server Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1379 EmberAfStatus emberAfInformationClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Information Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1380 boolean emberAfInformationClusterServerRequestPreferenceCallback ( void )**

Information Cluster Server Request Preference.

**6.4.2.1381 void emberAfInformationClusterServerTickCallback ( int8u endpoint )**

Information Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1382 boolean emberAfInformationClusterUpdateCallback ( int8u accessControl, int8u option, int8u \* contents )**

Information Cluster Update.

**Parameters**

<i>accessControl</i>	Ver.: always
<i>option</i>	Ver.: always
<i>contents</i>	Ver.: always

**6.4.2.1383 boolean emberAfInformationClusterUpdateResponseCallback ( int8u \* notificationList )**

Information Cluster Update Response.

**Parameters**

<i>notificationList</i>	Ver.: always
-------------------------	--------------

**6.4.2.1384 void emberAfDataSharingClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Data Sharing Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1385 void emberAfDataSharingClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Data Sharing Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1386 void emberAfDataSharingClusterClientInitCallback ( int8u *endpoint* )**

Data Sharing Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1387 void emberAfDataSharingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Data Sharing Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1388 void emberAfDataSharingClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Data Sharing Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1389 EmberAfStatus emberAfDataSharingClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Data Sharing Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1390 void emberAfDataSharingClusterClientTickCallback ( int8u endpoint )**

Data Sharing Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1391 boolean emberAfDataSharingClusterFileTransmissionCallback ( int8u transmitOptions, int8u \* buffer )**

Data Sharing Cluster File Transmission.

**Parameters**

<i>transmit-Options</i>	Ver.: always
<i>buffer</i>	Ver.: always

**6.4.2.1392 boolean emberAfDataSharingClusterModifyFileRequestCallback ( int16u *fileIndex*, int32u *fileStartPosition*, int32u *octetCount* )**

Data Sharing Cluster Modify File Request.

**Parameters**

<i>fileIndex</i>	Ver.: always
<i>fileStartPosition</i>	Ver.: always
<i>octetCount</i>	Ver.: always

**6.4.2.1393 boolean emberAfDataSharingClusterModifyRecordRequestCallback ( int16u *fileIndex*, int16u *fileStartRecord*, int16u *recordCount* )**

Data Sharing Cluster Modify Record Request.

**Parameters**

<i>fileIndex</i>	Ver.: always
<i>fileStartRecord</i>	Ver.: always
<i>recordCount</i>	Ver.: always

**6.4.2.1394 boolean emberAfDataSharingClusterReadFileRequestCallback ( int16u *fileIndex*, int8u \* *fileStartPositionAndRequestedOctetCount* )**

Data Sharing Cluster Read File Request.

**Parameters**

<i>fileIndex</i>	Ver.: always
<i>fileStartPositionAndRequestedOctetCount</i>	Ver.: always

**6.4.2.1395 boolean emberAfDataSharingClusterReadRecordRequestCallback ( int16u *fileIndex*, int8u \* *fileStartPositionAndRequestedRecordCount* )**

Data Sharing Cluster Read Record Request.

**Parameters**

<i>fileIndex</i>	Ver.: always
<i>fileStartPositionAndRequestedRecordCount</i>	Ver.: always

**6.4.2.1396 boolean emberAfDataSharingClusterRecordTransmissionCallback ( int8u *transmitOptions*, int8u \* *buffer* )**

Data Sharing Cluster Record Transmission.

**Parameters**

<i>transmit-Options</i>	Ver.: always
<i>buffer</i>	Ver.: always

**6.4.2.1397 void emberAfDataSharingClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Data Sharing Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1398 void emberAfDataSharingClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Data Sharing Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1399 void emberAfDataSharingClusterServerInitCallback ( int8u *endpoint* )**

Data Sharing Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1400 void emberAfDataSharingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

Data Sharing Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1401 void emberAfDataSharingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Data Sharing Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1402 EmberAfStatus emberAfDataSharingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Data Sharing Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1403 void emberAfDataSharingClusterServerTickCallback ( int8u *endpoint* )**

Data Sharing Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1404 boolean emberAfDataSharingClusterWriteFileRequestCallback ( int8u *writeOptions*, int8u \* *fileSize* )**

Data Sharing Cluster Write File Request.

**Parameters**

<i>writeOptions</i>	Ver.: always
<i>fileSize</i>	Ver.: always

**6.4.2.1405 boolean emberAfDataSharingClusterWriteFileResponseCallback ( int8u *status*, int8u \* *fileIndex* )**

Data Sharing Cluster Write File Response.

**Parameters**

<i>status</i>	Ver.: always
<i>fileIndex</i>	Ver.: always

**6.4.2.1406 boolean emberAfGamingClusterActionControlCallback ( int32u *actions* )**

Gaming Cluster Action Control.

**Parameters**

<i>actions</i>	Ver.: always
----------------	--------------

**6.4.2.1407 void emberAfGamingClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Gaming Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1408 void emberAfGamingClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Gaming Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1409 void emberAfGamingClusterClientInitCallback ( int8u *endpoint* )

Gaming Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1410 void emberAfGamingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Gaming Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1411 void emberAfGamingClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Gaming Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1412 EmberAfStatus emberAfGamingClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Gaming Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1413 void emberAfGamingClusterClientTickCallback ( int8u *endpoint* )**

Gaming Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1414 boolean emberAfGamingClusterDownloadGameCallback ( void )**

Gaming Cluster Download Game.

**6.4.2.1415 boolean emberAfGamingClusterEndGameCallback ( void )**

Gaming Cluster End Game.

**6.4.2.1416 boolean emberAfGamingClusterGameAnnouncementCallback ( int16u *gameId*, int8u *gameMaster*, int8u \* *listOfGame* )**

Gaming Cluster Game Announcement.

**Parameters**

<i>gameId</i>	Ver.: always
<i>gameMaster</i>	Ver.: always
<i>listOfGame</i>	Ver.: always

**6.4.2.1417 boolean emberAfGamingClusterGeneralResponseCallback ( int8u *commandId*, int8u *status*, int8u \* *message* )**

Gaming Cluster General Response.

**Parameters**

<i>commandId</i>	Ver.: always
<i>status</i>	Ver.: always
<i>message</i>	Ver.: always

**6.4.2.1418 boolean emberAfGamingClusterJoinGameCallback ( int16u *gameId*, int8u *joinAsMaster*, int8u \* *nameOfGame* )**

Gaming Cluster Join Game.

**Parameters**

<i>gameId</i>	Ver.: always
<i>joinAsMaster</i>	Ver.: always
<i>nameOfGame</i>	Ver.: always

**6.4.2.1419 boolean emberAfGamingClusterPauseGameCallback ( void )**

Gaming Cluster Pause Game.

**6.4.2.1420 boolean emberAfGamingClusterQuitGameCallback ( void )**

Gaming Cluster Quit Game.

**6.4.2.1421 boolean emberAfGamingClusterResumeGameCallback ( void )**

Gaming Cluster Resume Game.

**6.4.2.1422 boolean emberAfGamingClusterSearchGameCallback ( int8u *specificGame*, int16u *gameId* )**

Gaming Cluster Search Game.

**Parameters**

<i>specificGame</i>	Ver.: always
<i>gameId</i>	Ver.: always

**6.4.2.1423 void emberAfGamingClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Gaming Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1424 void emberAfGamingClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Gaming Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1425 void emberAfGamingClusterServerInitCallback ( int8u *endpoint* )**

Gaming Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1426 void emberAfGamingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Gaming Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1427 void emberAfGamingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Gaming Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1428 EmberAfStatus emberAfGamingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Gaming Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1429 void emberAfGamingClusterServerTickCallback ( int8u *endpoint* )**

Gaming Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1430 boolean emberAfGamingClusterStartGameCallback ( void )**

Gaming Cluster Start Game.

**6.4.2.1431 boolean emberAfGamingClusterStartOverCallback ( void )**

Gaming Cluster Start Over.

**6.4.2.1432 void emberAfDataRateControlClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Data Rate Control Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1433 void emberAfDataRateControlClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Data Rate Control Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1434 void emberAfDataRateControlClusterClientInitCallback ( int8u *endpoint* )**

Data Rate Control Cluster Client Init.

Client Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1435 void emberAfDataRateControlClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Data Rate Control Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1436 void emberAfDataRateControlClusterClientMessageSentCallback ( EmberOutgoingMessage-  
Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \*  
*message*, EmberStatus *status* )**

Data Rate Control Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1437 EmberAfStatus emberAfDataRateControlClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Data Rate Control Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1438 void emberAfDataRateControlClusterClientTickCallback ( int8u *endpoint* )**

Data Rate Control Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1439 boolean emberAfDataRateControlClusterDataRateControlCallback ( int16u *originatorAddress*, int16u *destinationAddress*, int8u *dataRate* )**

Data Rate Control Cluster Data Rate Control.

#### Parameters

<i>originator-Address</i>	Ver.: always
<i>destination-Address</i>	Ver.: always
<i>dataRate</i>	Ver.: always

**6.4.2.1440 boolean emberAfDataRateControlClusterDataRateNotificationCallback ( int16u *originatorAddress*, int16u *destinationAddress*, int8u *dataRate* )**

Data Rate Control Cluster Data Rate Notification.

**Parameters**

<i>originator-Address</i>	Ver.: always
<i>destination-Address</i>	Ver.: always
<i>dataRate</i>	Ver.: always

**6.4.2.1441 boolean emberAfDataRateControlClusterPathCreationCallback ( int16u *originatorAddress*, int16u *destinationAddress*, int8u *dataRate* )**

Data Rate Control Cluster Path Creation.

**Parameters**

<i>originator-Address</i>	Ver.: always
<i>destination-Address</i>	Ver.: always
<i>dataRate</i>	Ver.: always

**6.4.2.1442 boolean emberAfDataRateControlClusterPathDeletionCallback ( int16u *originatorAddress*, int16u *destinationAddress* )**

Data Rate Control Cluster Path Deletion.

**Parameters**

<i>originator-Address</i>	Ver.: always
<i>destination-Address</i>	Ver.: always

**6.4.2.1443 void emberAfDataRateControlClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Data Rate Control Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1444 void emberAfDataRateControlClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Data Rate Control Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1445 void emberAfDataRateControlClusterServerInitCallback ( int8u *endpoint* )**

Data Rate Control Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1446 void emberAfDataRateControlClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Data Rate Control Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1447 void emberAfDataRateControlClusterServerMessageSentCallback ( EmberOutgoingMessage-  
Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \*  
*message*, EmberStatus *status* )**

Data Rate Control Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destinat</i> ion	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1448 EmberAfStatus emberAfDataRateControlClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Data Rate Control Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1449 void emberAfDataRateControlClusterServerTickCallback ( int8u *endpoint* )**

Data Rate Control Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1450 void emberAfVoiceOverZigbeeClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Voice over ZigBee Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1451 void emberAfVoiceOverZigbeeClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Voice over ZigBee Cluster Client Default Response.

This function is called when the client receives the default response from the server.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1452 void emberAfVoiceOverZigbeeClusterClientInitCallback ( int8u *endpoint* )

Voice over ZigBee Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1453 void emberAfVoiceOverZigbeeClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, int16u *manufacturerCode* )

Voice over ZigBee Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributelid</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1454 void emberAfVoiceOverZigbeeClusterClientMessageSentCallback ( EmberOutgoingMessage- Type *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Voice over ZigBee Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1455 EmberAfStatus emberAfVoiceOverZigbeeClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Voice over ZigBee Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1456 void emberAfVoiceOverZigbeeClusterClientTickCallback ( int8u endpoint )**

Voice over ZigBee Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1457 boolean emberAfVoiceOverZigbeeClusterControlCallback ( int8u controlType )**

Voice over ZigBee Cluster Control.

**Parameters**

<i>controlType</i>	Ver.: always
--------------------	--------------

**6.4.2.1458 boolean emberAfVoiceOverZigbeeClusterControlResponseCallback ( int8u ackNack )**

Voice over ZigBee Cluster Control Response.

**Parameters**

<i>ackNack</i>	Ver.: always
----------------	--------------

**6.4.2.1459 boolean emberAfVoiceOverZigbeeClusterEstablishmentRequestCallback ( int8u flag, int8u codecType, int8u sampFreq, int8u codecRate, int8u serviceType, int8u \* buffer )**

Voice over ZigBee Cluster Establishment Request.

**Parameters**

<i>flag</i>	Ver.: always
<i>codecType</i>	Ver.: always
<i>sampFreq</i>	Ver.: always
<i>codecRate</i>	Ver.: always
<i>serviceType</i>	Ver.: always
<i>buffer</i>	Ver.: always

**6.4.2.1460 boolean emberAfVoiceOverZigbeeClusterEstablishmentResponseCallback ( int8u ackNack, int8u codecType )**

Voice over ZigBee Cluster Establishment Response.

**Parameters**

<i>ackNack</i>	Ver.: always
<i>codecType</i>	Ver.: always

**6.4.2.1461 void emberAfVoiceOverZigbeeClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Voice over ZigBee Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.1462 void emberAfVoiceOverZigbeeClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )**

Voice over ZigBee Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1463 void emberAfVoiceOverZigbeeClusterServerInitCallback ( int8u endpoint )**

Voice over ZigBee Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1464 void emberAfVoiceOverZigbeeClusterServerManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, int16u manufacturerCode )**

Voice over ZigBee Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1465 void emberAfVoiceOverZigbeeClusterServerMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Voice over ZigBee Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1466 EmberAfStatus emberAfVoiceOverZigbeeClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Voice over ZigBee Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1467 void emberAfVoiceOverZigbeeClusterServerTickCallback ( int8u *endpoint* )**

Voice over ZigBee Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.1468 boolean emberAfVoiceOverZigbeeClusterVoiceTransmissionCallback ( int8u \* *voiceData* )

Voice over ZigBee Cluster Voice Transmission.

##### Parameters

<i>voiceData</i>	Ver.: always
------------------	--------------

#### 6.4.2.1469 boolean emberAfVoiceOverZigbeeClusterVoiceTransmissionCompletionCallback ( void )

Voice over ZigBee Cluster Voice Transmission Completion.

#### 6.4.2.1470 boolean emberAfVoiceOverZigbeeClusterVoiceTransmissionResponseCallback ( int8u *sequenceNumber*, int8u *errorFlag* )

Voice over ZigBee Cluster Voice Transmission Response.

##### Parameters

<i>sequence-Number</i>	Ver.: always
<i>errorFlag</i>	Ver.: always

#### 6.4.2.1471 boolean emberAfChattingClusterChatMessageCallback ( int16u *destinationUid*, int16u *sourceUid*, int16u *cid*, int8u \* *nickname*, int8u \* *message* )

Chatting Cluster Chat Message.

##### Parameters

<i>destinationUid</i>	Ver.: always
<i>sourceUid</i>	Ver.: always
<i>cid</i>	Ver.: always
<i>nickname</i>	Ver.: always
<i>message</i>	Ver.: always

#### 6.4.2.1472 void emberAfChattingClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )

Chatting Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1473 void emberAfChattingClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Chatting Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1474 void emberAfChattingClusterClientInitCallback ( int8u *endpoint* )**

Chatting Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1475 void emberAfChattingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Chatting Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1476 void emberAfChattingClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Chatting Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1477 EmberAfStatus emberAfChattingClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Chatting Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1478 void emberAfChattingClusterClientTickCallback ( int8u *endpoint* )**

Chatting Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1479 boolean emberAfChattingClusterGetNodeInformationRequestCallback ( int16u *cid*, int16u *uid* )**

Chatting Cluster Get Node Information Request.

#### Parameters

<i>cid</i>	Ver.: always
<i>uid</i>	Ver.: always

**6.4.2.1480 boolean emberAfChattingClusterGetNodeInformationResponseCallback ( int8u *status*, int16u *cid*, int16u *uid*, int8u \* *addressEndpointAndNickname* )**

Chatting Cluster Get Node Information Response.

#### Parameters

<i>status</i>	Ver.: always
<i>cid</i>	Ver.: always
<i>uid</i>	Ver.: always
<i>address-EndpointAnd-Nickname</i>	Ver.: always

**6.4.2.1481 boolean emberAfChattingClusterJoinChatRequestCallback ( int16u *uid*, int8u \* *nickname*, int16u *cid* )**

Chatting Cluster Join Chat Request.

**Parameters**

<i>uid</i>	Ver.: always
<i>nickname</i>	Ver.: always
<i>cid</i>	Ver.: always

**6.4.2.1482 boolean emberAfChattingClusterJoinChatResponseCallback ( int8u *status*, int16u *cid*, int8u \* *chatParticipantList* )**

Chatting Cluster Join Chat Response.

**Parameters**

<i>status</i>	Ver.: always
<i>cid</i>	Ver.: always
<i>chatParticipantList</i>	Ver.: always

**6.4.2.1483 boolean emberAfChattingClusterLeaveChatRequestCallback ( int16u *cid*, int16u *uid* )**

Chatting Cluster Leave Chat Request.

**Parameters**

<i>cid</i>	Ver.: always
<i>uid</i>	Ver.: always

**6.4.2.1484 boolean emberAfChattingClusterSearchChatRequestCallback ( void )**

Chatting Cluster Search Chat Request.

**6.4.2.1485 boolean emberAfChattingClusterSearchChatResponseCallback ( int8u *options*, int8u \* *chatRoomList* )**

Chatting Cluster Search Chat Response.

**Parameters**

<i>options</i>	Ver.: always
<i>chatRoomList</i>	Ver.: always

**6.4.2.1486 void emberAfChattingClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Chatting Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1487 void emberAfChattingClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Chatting Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1488 void emberAfChattingClusterServerInitCallback ( int8u *endpoint* )**

Chatting Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1489 void emberAfChattingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Chatting Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1490 void emberAfChattingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Chatting Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1491 EmberAfStatus emberAfChattingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Chatting Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1492 void emberAfChattingClusterServerTickCallback ( int8u *endpoint* )**

Chatting Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1493 boolean emberAfChattingClusterStartChatRequestCallback ( int8u \* *name*, int16u *uid*, int8u \* *nickname* )**

Chatting Cluster Start Chat Request.

**Parameters**

<i>name</i>	Ver.: always
<i>uid</i>	Ver.: always
<i>nickname</i>	Ver.: always

**6.4.2.1494 boolean emberAfChattingClusterStartChatResponseCallback ( int8u *status*, int16u *cid* )**

Chatting Cluster Start Chat Response.

**Parameters**

<i>status</i>	Ver.: always
<i>cid</i>	Ver.: always

**6.4.2.1495 boolean emberAfChattingClusterSwitchChairmanConfirmCallback ( int16u *cid*, int8u \* *nodeInformationList* )**

Chatting Cluster Switch Chairman Confirm.

**Parameters**

<i>cid</i>	Ver.: always
<i>node-InformationList</i>	Ver.: always

**6.4.2.1496 boolean emberAfChattingClusterSwitchChairmanNotificationCallback ( int16u *cid*, int16u *uid*, int16u *address*, int8u *endpoint* )**

Chatting Cluster Switch Chairman Notification.

**Parameters**

<i>cid</i>	Ver.: always
<i>uid</i>	Ver.: always
<i>address</i>	Ver.: always
<i>endpoint</i>	Ver.: always

**6.4.2.1497 boolean emberAfChattingClusterSwitchChairmanRequestCallback ( int16u *cid* )**

Chatting Cluster Switch Chairman Request.

**Parameters**

<i>cid</i>	Ver.: always
------------	--------------

#### 6.4.2.1498 boolean emberAfChattingClusterSwitchChairmanResponseCallback ( int16u *cid*, int16u *uid* )

Chatting Cluster Switch Chairman Response.

##### Parameters

<i>cid</i>	Ver.: always
<i>uid</i>	Ver.: always

#### 6.4.2.1499 boolean emberAfChattingClusterUserJoinedCallback ( int16u *cid*, int16u *uid*, int8u \* *nickname* )

Chatting Cluster User Joined.

##### Parameters

<i>cid</i>	Ver.: always
<i>uid</i>	Ver.: always
<i>nickname</i>	Ver.: always

#### 6.4.2.1500 boolean emberAfChattingClusterUserLeftCallback ( int16u *cid*, int16u *uid*, int8u \* *nickname* )

Chatting Cluster User Left.

##### Parameters

<i>cid</i>	Ver.: always
<i>uid</i>	Ver.: always
<i>nickname</i>	Ver.: always

#### 6.4.2.1501 boolean emberAfPaymentClusterAcceptPaymentCallback ( int8u \* *userId*, int16u *userType*, int16u *serviceId*, int8u \* *goodId* )

Payment Cluster Accept Payment.

##### Parameters

<i>userId</i>	Ver.: always
<i>userType</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>goodId</i>	Ver.: always

#### 6.4.2.1502 boolean emberAfPaymentClusterBuyConfirmCallback ( int8u \* *serialNumber*, int32u *currency*, int8u *priceTrailingDigit*, int32u *price*, int8u \* *timestamp*, int16u *transId*, int8u *transStatus* )

Payment Cluster Buy Confirm.

**Parameters**

<i>serialNumber</i>	Ver.: always
<i>currency</i>	Ver.: always
<i>priceTrailing-Digit</i>	Ver.: always
<i>price</i>	Ver.: always
<i>timestamp</i>	Ver.: always
<i>transId</i>	Ver.: always
<i>transStatus</i>	Ver.: always

**6.4.2.1503 boolean emberAfPaymentClusterBuyRequestCallback ( int8u \* *userId*, int16u *userType*, int16u *serviceId*, int8u \* *goodId* )**

Payment Cluster Buy Request.

**Parameters**

<i>userId</i>	Ver.: always
<i>userType</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>goodId</i>	Ver.: always

**6.4.2.1504 void emberAfPaymentClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Payment Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1505 void emberAfPaymentClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Payment Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1506 void emberAfPaymentClusterClientInitCallback ( int8u *endpoint* )

Payment Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1507 void emberAfPaymentClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )

Payment Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

#### 6.4.2.1508 void emberAfPaymentClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )

Payment Cluster Client Message Sent.

Client Message Sent

##### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

#### 6.4.2.1509 EmberAfStatus emberAfPaymentClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )

Payment Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1510 void emberAfPaymentClusterClientTickCallback ( int8u endpoint )**

Payment Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1511 boolean emberAfPaymentClusterPaymentConfirmCallback ( int8u \* serialNumber, int16u transId, int8u transStatus )**

Payment Cluster Payment Confirm.

**Parameters**

<i>serialNumber</i>	Ver.: always
<i>transId</i>	Ver.: always
<i>transStatus</i>	Ver.: always

**6.4.2.1512 boolean emberAfPaymentClusterReceiptDeliveryCallback ( int8u \* serialNumber, int32u currency, int8u priceTrailingDigit, int32u price, int8u \* timestamp )**

Payment Cluster Receipt Delivery.

**Parameters**

<i>serialNumber</i>	Ver.: always
<i>currency</i>	Ver.: always
<i>priceTrailing-Digit</i>	Ver.: always
<i>price</i>	Ver.: always
<i>timestamp</i>	Ver.: always

**6.4.2.1513 void emberAfPaymentClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributId )**

Payment Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1514 void emberAfPaymentClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Payment Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1515 void emberAfPaymentClusterServerInitCallback ( int8u *endpoint* )**

Payment Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1516 void emberAfPaymentClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Payment Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1517 void emberAfPaymentClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Payment Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1518 EmberAfStatus emberAfPaymentClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Payment Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1519 void emberAfPaymentClusterServerTickCallback ( int8u *endpoint* )**

Payment Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1520 boolean emberAfPaymentClusterTransactionEndCallback ( int8u \* *serialNumber*, int8u *status* )**

Payment Cluster Transaction End.

**Parameters**

<i>serialNumber</i>	Ver.: always
<i>status</i>	Ver.: always

**6.4.2.1521 boolean emberAfBillingClusterBillStatusNotificationCallback ( int8u \* *userId*, int8u *status* )**

Billing Cluster Bill Status Notification.

**Parameters**

<i>userId</i>	Ver.: always
<i>status</i>	Ver.: always

**6.4.2.1522 boolean emberAfBillingClusterCheckBillStatusCallback ( int8u \* *userId*, int16u *serviceId*, int16u *serviceProviderId* )**

Billing Cluster Check Bill Status.

**Parameters**

<i>userId</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>service- ProviderId</i>	Ver.: always

**6.4.2.1523 void emberAfBillingClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Billing Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1524 void emberAfBillingClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Billing Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1525 void emberAfBillingClusterClientInitCallback ( int8u *endpoint* )**

Billing Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1526 void emberAfBillingClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Billing Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1527 void emberAfBillingClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Billing Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1528 EmberAfStatus emberAfBillingClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Billing Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1529 void emberAfBillingClusterClientTickCallback ( int8u *endpoint* )**

Billing Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1530 boolean emberAfBillingClusterSendBillRecordCallback ( int8u \* *userId*, int16u *serviceId*, int16u *serviceProviderId*, int8u \* *timestamp*, int16u *duration* )**

Billing Cluster Send Bill Record.

**Parameters**

<i>userId</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>service-ProviderId</i>	Ver.: always
<i>timestamp</i>	Ver.: always
<i>duration</i>	Ver.: always

**6.4.2.1531 void emberAfBillingClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Billing Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1532 void emberAfBillingClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Billing Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1533 void emberAfBillingClusterServerInitCallback ( int8u *endpoint* )**

Billing Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1534 void emberAfBillingClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Billing Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1535 void emberAfBillingClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Billing Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1536 EmberAfStatus emberAfBillingClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Billing Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.1537 void emberAfBillingClusterServerTickCallback ( int8u *endpoint* )

Billing Cluster Server Tick.

Server Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.1538 boolean emberAfBillingClusterSessionKeepAliveCallback ( int8u \* *userId*, int16u *serviceId*, int16u *serviceProviderId* )

Billing Cluster Session Keep Alive.

##### Parameters

<i>userId</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>service- ProviderId</i>	Ver.: always

#### 6.4.2.1539 boolean emberAfBillingClusterStartBillingSessionCallback ( int8u \* *userId*, int16u *serviceId*, int16u *serviceProviderId* )

Billing Cluster Start Billing Session.

##### Parameters

<i>userId</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>service- ProviderId</i>	Ver.: always

#### 6.4.2.1540 boolean emberAfBillingClusterStopBillingSessionCallback ( int8u \* *userId*, int16u *serviceId*, int16u *serviceProviderId* )

Billing Cluster Stop Billing Session.

##### Parameters

<i>userId</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>service- ProviderId</i>	Ver.: always

#### 6.4.2.1541 boolean emberAfBillingClusterSubscribeCallback ( int8u \* *userId*, int16u *serviceId*, int16u *serviceProviderId* )

Billing Cluster Subscribe.

**Parameters**

<i>userId</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>serviceProviderId</i>	Ver.: always

**6.4.2.1542 boolean emberAfBillingClusterUnsubscribeCallback ( int8u \* *userId*, int16u *serviceId*, int16u *serviceProviderId* )**

Billing Cluster Unsubscribe.

**Parameters**

<i>userId</i>	Ver.: always
<i>serviceId</i>	Ver.: always
<i>serviceProviderId</i>	Ver.: always

**6.4.2.1543 void emberAfApplianceIdentificationClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Appliance Identification Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1544 void emberAfApplianceIdentificationClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Appliance Identification Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1545 void emberAfApplianceIdentificationClusterClientInitCallback ( int8u *endpoint* )**

Appliance Identification Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1546 void emberAfApplianceIdentificationClusterClientManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, int16u manufacturerCode )**

Appliance Identification Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1547 void emberAfApplianceIdentificationClusterClientMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

Appliance Identification Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1548 EmberAfStatus emberAfApplianceIdentificationClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Appliance Identification Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.1549 void emberAfApplianceIdentificationClusterClientTickCallback ( int8u endpoint )

Appliance Identification Cluster Client Tick.

Client Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.1550 void emberAfApplianceIdentificationClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )

Appliance Identification Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.1551 void emberAfApplianceIdentificationClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )

Appliance Identification Cluster Server Default Response.

This function is called when the server receives the default response from the client.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1552 void emberAfApplianceIdentificationClusterServerInitCallback ( int8u endpoint )

Appliance Identification Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1553 void emberAfApplianceIdentificationClusterServerManufacturerSpecificAttributeChanged-Callback ( int8u endpoint, EmberAfAttributeId attributeld, int16u manufacturerCode )

Appliance Identification Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1554 void emberAfApplianceIdentificationClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Appliance Identification Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1555 EmberAfStatus emberAfApplianceIdentificationClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Appliance Identification Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1556 void emberAfApplianceIdentificationClusterServerTickCallback ( int8u *endpoint* )**

Appliance Identification Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1557 void emberAfMeterIdentificationClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Meter Identification Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1558 void emberAfMeterIdentificationClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Meter Identification Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1559 void emberAfMeterIdentificationClusterClientInitCallback ( int8u *endpoint* )**

Meter Identification Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1560 void emberAfMeterIdentificationClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Meter Identification Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1561 void emberAfMeterIdentificationClusterClientMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Meter Identification Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr- Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1562 EmberAfStatus emberAfMeterIdentificationClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Meter Identification Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1563 void emberAfMeterIdentificationClusterClientTickCallback ( int8u *endpoint* )**

Meter Identification Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1564 void emberAfMeterIdentificationClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Meter Identification Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1565 void emberAfMeterIdentificationClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Meter Identification Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1566 void emberAfMeterIdentificationClusterServerInitCallback ( int8u *endpoint* )**

Meter Identification Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1567 void emberAfMeterIdentificationClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributId*, int16u *manufacturerCode* )**

Meter Identification Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1568 void emberAfMeterIdentificationClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Meter Identification Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1569 EmberAfStatus emberAfMeterIdentificationClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Meter Identification Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1570 void emberAfMeterIdentificationClusterServerTickCallback ( int8u endpoint )**

Meter Identification Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1571 boolean emberAfApplianceEventsAndAlertClusterAlertsNotificationCallback ( int8u alertsCount, int8u \* alertStructures )**

Appliance Events and Alert Cluster Alerts Notification.

**Parameters**

<i>alertsCount</i>	Ver.: always
<i>alertStructures</i>	Ver.: always

**6.4.2.1572 void emberAfApplianceEventsAndAlertClusterClientAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Appliance Events and Alert Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1573 void emberAfApplianceEventsAndAlertClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Appliance Events and Alert Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1574 void emberAfApplianceEventsAndAlertClusterClientInitCallback ( int8u *endpoint* )**

Appliance Events and Alert Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1575 void emberAfApplianceEventsAndAlertClusterClientManufacturerSpecificAttributeChanged-Callback ( int8u *endpoint*, EmberAfAttributeId *attributId*, int16u *manufacturerCode* )**

Appliance Events and Alert Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1576 void emberAfApplianceEventsAndAlertClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Appliance Events and Alert Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1577 EmberAfStatus emberAfApplianceEventsAndAlertClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Appliance Events and Alert Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1578 void emberAfApplianceEventsAndAlertClusterClientTickCallback ( int8u *endpoint* )**

Appliance Events and Alert Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1579 boolean emberAfApplianceEventsAndAlertClusterEventsNotificationCallback ( int8u *eventHeader*, int8u *eventId* )**

Appliance Events and Alert Cluster Events Notification.

#### Parameters

<i>eventHeader</i>	Ver.: always
<i>eventId</i>	Ver.: always

#### 6.4.2.1580 boolean emberAfApplianceEventsAndAlertClusterGetAlertsCallback ( void )

Appliance Events and Alert Cluster Get Alerts.

#### 6.4.2.1581 boolean emberAfApplianceEventsAndAlertClusterGetAlertsResponseCallback ( int8u alertsCount, int8u \* alertStructures )

Appliance Events and Alert Cluster Get Alerts Response.

##### Parameters

<i>alertsCount</i>	Ver.: always
<i>alertStructures</i>	Ver.: always

#### 6.4.2.1582 void emberAfApplianceEventsAndAlertClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )

Appliance Events and Alert Cluster Server Attribute Changed.

Server Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.1583 void emberAfApplianceEventsAndAlertClusterServerDefaultResponseCallback ( int8u endpoint, int8u commandId, EmberAfStatus status )

Appliance Events and Alert Cluster Server Default Response.

This function is called when the server receives the default response from the client.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1584 void emberAfApplianceEventsAndAlertClusterServerInitCallback ( int8u endpoint )

Appliance Events and Alert Cluster Server Init.

Server Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1585 void emberAfApplianceEventsAndAlertClusterServerManufacturerSpecificAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, int16u manufacturerCode )**

Appliance Events and Alert Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1586 void emberAfApplianceEventsAndAlertClusterServerMessageSentCallback ( EmberOutgoingMessageType type, int16u indexOrDestination, EmberApsFrame \* apsFrame, int16u msgLen, int8u \* message, EmberStatus status )**

Appliance Events and Alert Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1587 EmberAfStatus emberAfApplianceEventsAndAlertClusterServerPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Appliance Events and Alert Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

#### 6.4.2.1588 void emberAfApplianceEventsAndAlertClusterServerTickCallback ( int8u *endpoint* )

Appliance Events and Alert Cluster Server Tick.

Server Tick

##### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

#### 6.4.2.1589 void emberAfApplianceStatisticsClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid* )

Appliance Statistics Cluster Client Attribute Changed.

Client Attribute Changed

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

#### 6.4.2.1590 void emberAfApplianceStatisticsClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )

Appliance Statistics Cluster Client Default Response.

This function is called when the client receives the default response from the server.

##### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

#### 6.4.2.1591 void emberAfApplianceStatisticsClusterClientInitCallback ( int8u *endpoint* )

Appliance Statistics Cluster Client Init.

Client Init

##### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

#### 6.4.2.1592 void emberAfApplianceStatisticsClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributelid*, int16u *manufacturerCode* )

Appliance Statistics Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1593 void emberAfApplianceStatisticsClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Appliance Statistics Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1594 EmberAfStatus emberAfApplianceStatisticsClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Appliance Statistics Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1595 void emberAfApplianceStatisticsClusterClientTickCallback ( int8u *endpoint* )**

Appliance Statistics Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1596 boolean emberAfApplianceStatisticsClusterLogNotificationCallback ( int32u *timeStamp*, int32u *logId*, int32u *logLength*, int8u \* *logPayload* )**

Appliance Statistics Cluster Log Notification.

**Parameters**

<i>timeStamp</i>	Ver.: always
<i>logId</i>	Ver.: always
<i>logLength</i>	Ver.: always
<i>logPayload</i>	Ver.: always

**6.4.2.1597 boolean emberAfApplianceStatisticsClusterLogQueueRequestCallback ( void )**

Appliance Statistics Cluster Log Queue Request.

**6.4.2.1598 boolean emberAfApplianceStatisticsClusterLogQueueResponseCallback ( int8u *logQueueSize*, int8u \* *logIds* )**

Appliance Statistics Cluster Log Queue Response.

**Parameters**

<i>logQueueSize</i>	Ver.: always
<i>logIds</i>	Ver.: always

**6.4.2.1599 boolean emberAfApplianceStatisticsClusterLogRequestCallback ( int32u *logId* )**

Appliance Statistics Cluster Log Request.

**Parameters**

<i>logId</i>	Ver.: always
--------------	--------------

**6.4.2.1600 boolean emberAfApplianceStatisticsClusterLogResponseCallback ( int32u *timeStamp*, int32u *logId*, int32u *logLength*, int8u \* *logPayload* )**

Appliance Statistics Cluster Log Response.

**Parameters**

<i>timeStamp</i>	Ver.: always
<i>logId</i>	Ver.: always
<i>logLength</i>	Ver.: always
<i>logPayload</i>	Ver.: always

**6.4.2.1601 void emberAfApplianceStatisticsClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Appliance Statistics Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1602 void emberAfApplianceStatisticsClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Appliance Statistics Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1603 void emberAfApplianceStatisticsClusterServerInitCallback ( int8u *endpoint* )**

Appliance Statistics Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1604 void emberAfApplianceStatisticsClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Appliance Statistics Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1605 void emberAfApplianceStatisticsClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Appliance Statistics Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1606 EmberAfStatus emberAfApplianceStatisticsClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Appliance Statistics Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1607 void emberAfApplianceStatisticsClusterServerTickCallback ( int8u *endpoint* )**

Appliance Statistics Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1608 boolean emberAfApplianceStatisticsClusterStatisticsAvailableCallback ( int8u *logQueueSize*, int8u \* *logIds* )**

Appliance Statistics Cluster Statistics Available.

**Parameters**

<i>logQueueSize</i>	Ver.: always
<i>logIds</i>	Ver.: always

**6.4.2.1609 void emberAfElectricalMeasurementClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Electrical Measurement Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1610 void emberAfElectricalMeasurementClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Electrical Measurement Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1611 void emberAfElectricalMeasurementClusterClientInitCallback ( int8u *endpoint* )**

Electrical Measurement Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1612 void emberAfElectricalMeasurementClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Electrical Measurement Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always
--------------------------	--

**6.4.2.1613 void emberAfElectricalMeasurementClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Electrical Measurement Cluster Client Message Sent.

Client Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1614 EmberAfStatus emberAfElectricalMeasurementClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Electrical Measurement Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1615 void emberAfElectricalMeasurementClusterClientTickCallback ( int8u *endpoint* )**

Electrical Measurement Cluster Client Tick.

Client Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1616 boolean emberAfElectricalMeasurementClusterGetMeasurementProfileCommandCallback ( int16u attributeId, int32u startTime, int8u numberofIntervals )**

Electrical Measurement Cluster Get Measurement Profile Command.

**Parameters**

<i>attributeId</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>numberofIntervals</i>	Ver.: always

**6.4.2.1617 boolean emberAfElectricalMeasurementClusterGetMeasurementProfileResponse-CommandCallback ( int32u startTime, int8u status, int8u profileIntervalPeriod, int8u numberofIntervalsDelivered, int16u attributeId, int8u \* intervals )**

Electrical Measurement Cluster Get Measurement Profile Response Command.

**Parameters**

<i>startTime</i>	Ver.: always
<i>status</i>	Ver.: always
<i>profileInterval-Period</i>	Ver.: always
<i>numberof-Intervals-Delivered</i>	Ver.: always
<i>attributeId</i>	Ver.: always
<i>intervals</i>	Ver.: always

**6.4.2.1618 boolean emberAfElectricalMeasurementClusterGetProfileInfoCommandCallback ( void )**

Electrical Measurement Cluster Get Profile Info Command.

**6.4.2.1619 boolean emberAfElectricalMeasurementClusterGetProfileInfoResponseCommandCallback ( int8u profileCount, int8u profileIntervalPeriod, int8u maxNumberofIntervals, int8u \* listOfAttributes )**

Electrical Measurement Cluster Get Profile Info Response Command.

**Parameters**

<i>profileCount</i>	Ver.: always
<i>profileInterval-Period</i>	Ver.: always
<i>maxNumberof-Intervals</i>	Ver.: always
<i>listOfAttributes</i>	Ver.: always

**6.4.2.1620 void emberAfElectricalMeasurementClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Electrical Measurement Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1621 void emberAfElectricalMeasurementClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Electrical Measurement Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1622 void emberAfElectricalMeasurementClusterServerInitCallback ( int8u *endpoint* )**

Electrical Measurement Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1623 void emberAfElectricalMeasurementClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Electrical Measurement Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1624 void emberAfElectricalMeasurementClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Electrical Measurement Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1625 EmberAfStatus emberAfElectricalMeasurementClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Electrical Measurement Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1626 void emberAfElectricalMeasurementClusterServerTickCallback ( int8u *endpoint* )**

Electrical Measurement Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1627 void emberAfDiagnosticsClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

Diagnostics Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1628 void emberAfDiagnosticsClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Diagnostics Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1629 void emberAfDiagnosticsClusterClientInitCallback ( int8u *endpoint* )**

Diagnostics Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1630 void emberAfDiagnosticsClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Diagnostics Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1631 void emberAfDiagnosticsClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Diagnostics Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1632 EmberAfStatus emberAfDiagnosticsClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Diagnostics Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1633 void emberAfDiagnosticsClusterClientTickCallback ( int8u endpoint )**

Diagnostics Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1634 void emberAfDiagnosticsClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeld )**

Diagnostics Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeld</i>	Attribute that changed Ver.: always

**6.4.2.1635 void emberAfDiagnosticsClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Diagnostics Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1636 void emberAfDiagnosticsClusterServerInitCallback ( int8u *endpoint* )**

Diagnostics Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1637 void emberAfDiagnosticsClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Diagnostics Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1638 void emberAfDiagnosticsClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Diagnostics Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always

<i>status</i>	The status of the sent message Ver.: always
---------------	---

**6.4.2.1639 EmberAfStatus emberAfDiagnosticsClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Diagnostics Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1640 void emberAfDiagnosticsClusterServerTickCallback ( int8u *endpoint* )**

Diagnostics Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1641 void emberAfZllCommissioningClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

ZLL Commissioning Cluster Client Attribute Changed.

Client Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1642 void emberAfZllCommissioningClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

ZLL Commissioning Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1643 void emberAfZllCommissioningClusterClientInitCallback ( int8u *endpoint* )**

ZLL Commissioning Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1644 void emberAfZllCommissioningClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

ZLL Commissioning Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1645 void emberAfZllCommissioningClusterClientMessageSentCallback ( EmberOutgoing-MessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

ZLL Commissioning Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1646 EmberAfStatus emberAfZllCommissioningClusterClientPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

ZLL Commissioning Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1647 void emberAfZllCommissioningClusterClientTickCallback ( int8u *endpoint* )**

ZLL Commissioning Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1648 boolean emberAfZllCommissioningClusterDeviceInformationRequestCallback ( int32u *transaction*, int8u *startIndex* )**

ZLL Commissioning Cluster Device Information Request.

**Parameters**

<i>transaction</i>	Ver.: always
<i>startIndex</i>	Ver.: always

**6.4.2.1649 boolean emberAfZllCommissioningClusterDeviceInformationResponseCallback ( int32u *transaction*, int8u *numberOfSubDevices*, int8u *startIndex*, int8u *deviceInformationRecordCount*, int8u \* *deviceInformationRecordList* )**

ZLL Commissioning Cluster Device Information Response.

**Parameters**

<i>transaction</i>	Ver.: always
<i>numberOfSub- Devices</i>	Ver.: always
<i>startIndex</i>	Ver.: always
<i>device- Information- RecordCount</i>	Ver.: always

<i>device-Information-RecordList</i>	Ver.: always
--------------------------------------	--------------

6.4.2.1650 boolean **emberAfZllCommissioningClusterEndpointInformationCallback** ( int8u \* *ieeeAddress*, int16u *networkAddress*, int8u *endpointId*, int16u *profileId*, int16u *deviceId*, int8u *version* )

ZLL Commissioning Cluster Endpoint Information.

#### Parameters

<i>ieeeAddress</i>	Ver.: always
<i>network-Address</i>	Ver.: always
<i>endpointId</i>	Ver.: always
<i>profileId</i>	Ver.: always
<i>deviceId</i>	Ver.: always
<i>version</i>	Ver.: always

6.4.2.1651 boolean **emberAfZllCommissioningClusterGetEndpointListRequestCallback** ( int8u *startIndex* )

ZLL Commissioning Cluster Get Endpoint List Request.

#### Parameters

<i>startIndex</i>	Ver.: always
-------------------	--------------

6.4.2.1652 boolean **emberAfZllCommissioningClusterGetEndpointListResponseCallback** ( int8u *total*, int8u *startIndex*, int8u *count*, int8u \* *endpointInformationRecordList* )

ZLL Commissioning Cluster Get Endpoint List Response.

#### Parameters

<i>total</i>	Ver.: always
<i>startIndex</i>	Ver.: always
<i>count</i>	Ver.: always
<i>endpoint-Information-RecordList</i>	Ver.: always

6.4.2.1653 boolean **emberAfZllCommissioningClusterGetGroupIdentifiersRequestCallback** ( int8u *startIndex* )

ZLL Commissioning Cluster Get Group Identifiers Request.

**Parameters**

<i>startIndex</i>	Ver.: always
-------------------	--------------

**6.4.2.1654 boolean emberAfZllCommissioningClusterGetGroupIdentifiersResponseCallback ( int8u *total*, int8u *startIndex*, int8u *count*, int8u \* *groupInformationRecordList* )**

ZLL Commissioning Cluster Get Group Identifiers Response.

**Parameters**

<i>total</i>	Ver.: always
<i>startIndex</i>	Ver.: always
<i>count</i>	Ver.: always
<i>groupInformationRecordList</i>	Ver.: always

**6.4.2.1655 boolean emberAfZllCommissioningClusterIdentifyRequestCallback ( int32u *transaction*, int16u *identifyDuration* )**

ZLL Commissioning Cluster Identify Request.

**Parameters**

<i>transaction</i>	Ver.: always
<i>identifyDuration</i>	Ver.: always

**6.4.2.1656 boolean emberAfZllCommissioningClusterNetworkJoinEndDeviceRequestCallback ( int32u *transaction*, int8u \* *extendedPanId*, int8u *keyIndex*, int8u \* *encryptedNetworkKey*, int8u *networkUpdateId*, int8u *logicalChannel*, int16u *panId*, int16u *networkAddress*, int16u *groupIdentifiersBegin*, int16u *groupIdentifiersEnd*, int16u *freeNetworkAddressRangeBegin*, int16u *freeNetworkAddressRangeEnd*, int16u *freeGroupIdentifierRangeBegin*, int16u *freeGroupIdentifierRangeEnd* )**

ZLL Commissioning Cluster Network Join End Device Request.

**Parameters**

<i>transaction</i>	Ver.: always
<i>extendedPanId</i>	Ver.: always
<i>keyIndex</i>	Ver.: always
<i>encryptedNetworkKey</i>	Ver.: always
<i>networkUpdateId</i>	Ver.: always
<i>logicalChannel</i>	Ver.: always
<i>panId</i>	Ver.: always
<i>networkAddress</i>	Ver.: always

<i>group-IdentifiersBegin</i>	Ver.: always
<i>group-IdentifiersEnd</i>	Ver.: always
<i>freeNetwork-AddressRange-Begin</i>	Ver.: always
<i>freeNetwork-AddressRange-End</i>	Ver.: always
<i>freeGroup-Identifier-RangeBegin</i>	Ver.: always
<i>freeGroup-Identifier-RangeEnd</i>	Ver.: always

**6.4.2.1657 boolean emberAfZllCommissioningClusterNetworkJoinEndDeviceResponseCallback ( int32u transaction, int8u status )**

ZLL Commissioning Cluster Network Join End Device Response.

#### Parameters

<i>transaction</i>	Ver.: always
<i>status</i>	Ver.: always

**6.4.2.1658 boolean emberAfZllCommissioningClusterNetworkJoinRouterRequestCallback ( int32u transaction, int8u \* extendedPanId, int8u keyIndex, int8u \* encryptedNetworkKey, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress, int16u groupIdentifiersBegin, int16u groupIdentifiersEnd, int16u freeNetworkAddressRangeBegin, int16u freeNetworkAddressRangeEnd, int16u freeGroupIdentifierRangeBegin, int16u freeGroupIdentifierRangeEnd )**

ZLL Commissioning Cluster Network Join Router Request.

#### Parameters

<i>transaction</i>	Ver.: always
<i>extendedPanId</i>	Ver.: always
<i>keyIndex</i>	Ver.: always
<i>encrypted-NetworkKey</i>	Ver.: always
<i>network-UpdateId</i>	Ver.: always
<i>logicalChannel</i>	Ver.: always
<i>panId</i>	Ver.: always
<i>network-Address</i>	Ver.: always
<i>group-IdentifiersBegin</i>	Ver.: always

<i>group- IdentifiersEnd</i>	Ver.: always
<i>freeNetwork- AddressRange- Begin</i>	Ver.: always
<i>freeNetwork- AddressRange- End</i>	Ver.: always
<i>freeGroup- Identifier- RangeBegin</i>	Ver.: always
<i>freeGroup- Identifier- RangeEnd</i>	Ver.: always

**6.4.2.1659 boolean emberAfZllCommissioningClusterNetworkJoinRouterResponseCallback ( int32u transaction, int8u status )**

ZLL Commissioning Cluster Network Join Router Response.

#### Parameters

<i>transaction</i>	Ver.: always
<i>status</i>	Ver.: always

**6.4.2.1660 boolean emberAfZllCommissioningClusterNetworkStartRequestCallback ( int32u transaction, int8u \* extendedPanId, int8u keyIndex, int8u \* encryptedNetworkKey, int8u logicalChannel, int16u panId, int16u networkAddress, int16u groupIdentifiersBegin, int16u groupIdentifiersEnd, int16u freeNetworkAddressRangeBegin, int16u freeNetworkAddressRangeEnd, int16u freeGroupIdentifierRangeBegin, int16u freeGroupIdentifierRangeEnd, int8u \* initiatorIEEEAddress, int16u initiatorNetworkAddress )**

ZLL Commissioning Cluster Network Start Request.

#### Parameters

<i>transaction</i>	Ver.: always
<i>extendedPanId</i>	Ver.: always
<i>keyIndex</i>	Ver.: always
<i>encrypted- NetworkKey</i>	Ver.: always
<i>logicalChannel</i>	Ver.: always
<i>panId</i>	Ver.: always
<i>network- Address</i>	Ver.: always
<i>group- IdentifiersBegin</i>	Ver.: always
<i>group- IdentifiersEnd</i>	Ver.: always

<i>freeNetwork-AddressRange-Begin</i>	Ver.: always
<i>freeNetwork-AddressRange-End</i>	Ver.: always
<i>freeGroup-Identifier-RangeBegin</i>	Ver.: always
<i>freeGroup-Identifier-RangeEnd</i>	Ver.: always
<i>initiatorIeee-Address</i>	Ver.: always
<i>initiator-Network-Address</i>	Ver.: always

**6.4.2.1661 boolean emberAfZllCommissioningClusterNetworkStartResponseCallback ( int32u *transaction*, int8u *status*, int8u \* *extendedPanId*, int8u *networkUpdateId*, int8u *logicalChannel*, int16u *panId* )**

ZLL Commissioning Cluster Network Start Response.

#### Parameters

<i>transaction</i>	Ver.: always
<i>status</i>	Ver.: always
<i>extendedPanId</i>	Ver.: always
<i>network-UpdateId</i>	Ver.: always
<i>logicalChannel</i>	Ver.: always
<i>panId</i>	Ver.: always

**6.4.2.1662 boolean emberAfZllCommissioningClusterNetworkUpdateRequestCallback ( int32u *transaction*, int8u \* *extendedPanId*, int8u *networkUpdateId*, int8u *logicalChannel*, int16u *panId*, int16u *networkAddress* )**

ZLL Commissioning Cluster Network Update Request.

#### Parameters

<i>transaction</i>	Ver.: always
<i>extendedPanId</i>	Ver.: always
<i>network-UpdateId</i>	Ver.: always
<i>logicalChannel</i>	Ver.: always
<i>panId</i>	Ver.: always
<i>network-Address</i>	Ver.: always

**6.4.2.1663 boolean emberAfZllCommissioningClusterResetToFactoryNewRequestCallback ( int32u transaction )**

ZLL Commissioning Cluster Reset To Factory New Request.

**Parameters**

<i>transaction</i>	Ver.: always
--------------------	--------------

**6.4.2.1664 boolean emberAfZllCommissioningClusterScanRequestCallback ( int32u transaction, int8u zigbeeInformation, int8u zllInformation )**

ZLL Commissioning Cluster Scan Request.

**Parameters**

<i>transaction</i>	Ver.: always
<i>zigbeeInformation</i>	Ver.: always
<i>zllInformation</i>	Ver.: always

**6.4.2.1665 boolean emberAfZllCommissioningClusterScanResponseCallback ( int32u transaction, int8u rssiCorrection, int8u zigbeeInformation, int8u zllInformation, int16u keyBitmask, int32u responseId, int8u \* extendedPanId, int8u networkUpdateId, int8u logicalChannel, int16u panId, int16u networkAddress, int8u numberOfSubDevices, int8u totalGroupIds, int8u endpointId, int16u profileId, int16u deviceId, int8u version, int8u groupIdCount )**

ZLL Commissioning Cluster Scan Response.

**Parameters**

<i>transaction</i>	Ver.: always
<i>rssiCorrection</i>	Ver.: always
<i>zigbeeInformation</i>	Ver.: always
<i>zllInformation</i>	Ver.: always
<i>keyBitmask</i>	Ver.: always
<i>responseId</i>	Ver.: always
<i>extendedPanId</i>	Ver.: always
<i>networkUpdateId</i>	Ver.: always
<i>logicalChannel</i>	Ver.: always
<i>panId</i>	Ver.: always
<i>networkAddress</i>	Ver.: always
<i>numberOfSubDevices</i>	Ver.: always
<i>totalGroupIds</i>	Ver.: always
<i>endpointId</i>	Ver.: always
<i>profileId</i>	Ver.: always
<i>deviceId</i>	Ver.: always

<i>version</i>	Ver.: always
<i>groupIdCount</i>	Ver.: always

**6.4.2.1666 void emberAfZllCommissioningClusterServerAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld* )**

ZLL Commissioning Cluster Server Attribute Changed.

Server Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1667 void emberAfZllCommissioningClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

ZLL Commissioning Cluster Server Default Response.

This function is called when the server receives the default response from the client.

#### Parameters

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1668 void emberAfZllCommissioningClusterServerInitCallback ( int8u *endpoint* )**

ZLL Commissioning Cluster Server Init.

Server Init

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1669 void emberAfZllCommissioningClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeld*, int16u *manufacturerCode* )**

ZLL Commissioning Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturerCode</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1670 void emberAfZllCommissioningClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

ZLL Commissioning Cluster Server Message Sent.

Server Message Sent

#### Parameters

<i>type</i>	The type of message sent Ver.: always
<i>indexOrDestination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1671 EmberAfStatus emberAfZllCommissioningClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

ZLL Commissioning Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

#### Parameters

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1672 void emberAfZllCommissioningClusterServerTickCallback ( int8u *endpoint* )**

ZLL Commissioning Cluster Server Tick.

Server Tick

#### Parameters

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1673 void emberAfSampleMfgSpecificClusterClientAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId* )**

Sample Mfg Specific Cluster Cluster Client Attribute Changed.

Client Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1674 void emberAfSampleMfgSpecificClusterClientDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Sample Mfg Specific Cluster Cluster Client Default Response.

This function is called when the client receives the default response from the server.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1675 void emberAfSampleMfgSpecificClusterClientInitCallback ( int8u *endpoint* )**

Sample Mfg Specific Cluster Cluster Client Init.

Client Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1676 void emberAfSampleMfgSpecificClusterClientManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, int16u *manufacturerCode* )**

Sample Mfg Specific Cluster Cluster Client Manufacturer Specific Attribute Changed.

Client Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1677 void emberAfSampleMfgSpecificClusterClientMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Sample Mfg Specific Cluster Cluster Client Message Sent.

Client Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1678 EmberAfStatus emberAfSampleMfgSpecificClusterClientPreAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId, EmberAfAttributeType attributeType, int8u size, int8u \* value )**

Sample Mfg Specific Cluster Cluster Client Pre Attribute Changed.

Client Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1679 void emberAfSampleMfgSpecificClusterClientTickCallback ( int8u endpoint )**

Sample Mfg Specific Cluster Cluster Client Tick.

Client Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1680 boolean emberAfSampleMfgSpecificClusterCommandOneCallback ( int8u argOne )**

Sample Mfg Specific Cluster Cluster Command One.

**Parameters**

<i>argOne</i>	Ver.: always
---------------	--------------

**6.4.2.1681 void emberAfSampleMfgSpecificClusterServerAttributeChangedCallback ( int8u endpoint, EmberAfAttributeId attributeId )**

Sample Mfg Specific Cluster Cluster Server Attribute Changed.

Server Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute that changed Ver.: always

**6.4.2.1682 void emberAfSampleMfgSpecificClusterServerDefaultResponseCallback ( int8u *endpoint*, int8u *commandId*, EmberAfStatus *status* )**

Sample Mfg Specific Cluster Cluster Server Default Response.

This function is called when the server receives the default response from the client.

**Parameters**

<i>endpoint</i>	Destination endpoint Ver.: always
<i>commandId</i>	Command id Ver.: always
<i>status</i>	Status in default response Ver.: always

**6.4.2.1683 void emberAfSampleMfgSpecificClusterServerInitCallback ( int8u *endpoint* )**

Sample Mfg Specific Cluster Cluster Server Init.

Server Init

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
-----------------	---

**6.4.2.1684 void emberAfSampleMfgSpecificClusterServerManufacturerSpecificAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributId*, int16u *manufacturerCode* )**

Sample Mfg Specific Cluster Cluster Server Manufacturer Specific Attribute Changed.

Server Manufacturer Specific Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributId</i>	Attribute that changed Ver.: always
<i>manufacturer-Code</i>	Manufacturer Code of the attribute that changed Ver.: always

**6.4.2.1685 void emberAfSampleMfgSpecificClusterServerMessageSentCallback ( EmberOutgoingMessageType *type*, int16u *indexOrDestination*, EmberApsFrame \* *apsFrame*, int16u *msgLen*, int8u \* *message*, EmberStatus *status* )**

Sample Mfg Specific Cluster Cluster Server Message Sent.

Server Message Sent

**Parameters**

<i>type</i>	The type of message sent Ver.: always
<i>indexOr-Destination</i>	The destination or address to which the message was sent Ver.: always
<i>apsFrame</i>	The APS frame for the message Ver.: always
<i>msgLen</i>	The length of the message Ver.: always
<i>message</i>	The message that was sent Ver.: always
<i>status</i>	The status of the sent message Ver.: always

**6.4.2.1686 EmberAfStatus emberAfSampleMfgSpecificClusterServerPreAttributeChangedCallback ( int8u *endpoint*, EmberAfAttributeId *attributeId*, EmberAfAttributeType *attributeType*, int8u *size*, int8u \* *value* )**

Sample Mfg Specific Cluster Cluster Server Pre Attribute Changed.

Server Pre Attribute Changed

**Parameters**

<i>endpoint</i>	Endpoint that is being initialized Ver.: always
<i>attributeId</i>	Attribute to be changed Ver.: always
<i>attributeType</i>	Attribute type Ver.: always
<i>size</i>	Attribute size Ver.: always
<i>value</i>	Attribute value Ver.: always

**6.4.2.1687 void emberAfSampleMfgSpecificClusterServerTickCallback ( int8u *endpoint* )**

Sample Mfg Specific Cluster Cluster Server Tick.

Server Tick

**Parameters**

<i>endpoint</i>	Endpoint that is being served Ver.: always
-----------------	--

**6.4.2.1688 void emberAfPluginBasicResetToFactoryDefaultsCallback ( uint8\_t *endpoint* )**

Reset To Factory Defaults.

This function is called by the Basic server plugin when a request to reset to factory defaults is received. The plugin will reset attributes managed by the framework to their default values. The application should perform any other necessary reset-related operations in this callback, including resetting any externally-stored attributes.

**Parameters**

<i>endpoint</i>	Ver.: always
-----------------	--------------

#### 6.4.2.1689 void emberAfPluginBulbPwmConfigurationBlinkStopCallback ( uint8\_t *endpoint* )

BlinkStop.

This callback is called when it is time for the bulb to stop any blinking that may be underway.

##### Parameters

<i>endpoint</i>	Ver.: always
-----------------	--------------

#### 6.4.2.1690 void emberAfPluginBulbUiFinishedCallback ( EmberStatus *status* )

Finished.

This callback is fired when the bulb-ui plugin is finished with the forming or joining process. The result of the operation will be returned in the status parameter.

##### Parameters

<i>status</i>	Ver.: always
---------------	--------------

#### 6.4.2.1691 void emberAfPluginButtonJoiningButtonEventCallback ( uint8\_t *buttonNumber*, uint32\_t *buttonPressDurationMs* )

Button Event.

This allows another module to get notification when a button is pressed and released but the button joining plugin did not handle it. This callback is NOT called in ISR context so there are no restrictions on what code can execute.

##### Parameters

<i>buttonNumber</i>	The button number that was pressed. Ver.: always
<i>buttonPressDurationMs</i>	The length of time button was held down before it was released. Ver.: always

#### 6.4.2.1692 void emberAfPluginCalendarServerPublishInfoCallback ( uint8\_t *publishCommandId*, EmberNodeId *clientNodeId*, uint8\_t *clientEndpoint*, uint8\_t *totalCommands* )

Publish Info.

This function is called by the calendar-server plugin after receiving any of the following commands and just before it starts publishing the response: GetCalendar, GetDayProfiles, GetSeasons, GetSpecialDays, and GetWeekProfiles.

##### Parameters

<i>publishCommandId</i>	ZCL command to be published Ver.: always
<i>clientNodeId</i>	Destination nodeId Ver.: always
<i>clientEndpoint</i>	Destination endpoint Ver.: always
<i>totalCommands</i>	Total number of publish commands to be sent Ver.: always

#### 6.4.2.1693 bool emberAfPluginColorControlsColorSupportedCallback ( uint8\_t hue, uint8\_t saturation )

Is Color Supported.

This function will be called to determine whether a color is supported by a device. The color will be specified by hue and saturation.

##### Parameters

<i>hue</i>	Ver.: always
<i>saturation</i>	Ver.: always

#### 6.4.2.1694 void emberAfPluginCommsHubFunctionSendCallback ( uint8\_t status, EmberEUI64 destinationDeviceId, uint16\_t dataLen, uint8\_t \* data )

Send.

This callback is called by the Comms Hub Function (CHF) plugin to report the status of a message that was previously sent.

##### Parameters

<i>status</i>	The status of the message that was sent Ver.: always
<i>destinationDeviceId</i>	The EUI64 of the destination device to which the data was sent Ver.: always
<i>dataLen</i>	The length in octets of the data that was sent Ver.: always
<i>data</i>	Buffer containing the raw octets of the data that was sent Ver.: always

#### 6.4.2.1695 void emberAfPluginCommsHubFunctionReceivedCallback ( EmberEUI64 senderDeviceId, uint16\_t dataLen, uint8\_t \* data )

Received.

This callback is called by the Comms Hub Function (CHF) plugin whenever a message is received.

##### Parameters

<i>senderDeviceId</i>	The EUI64 of the sending device Ver.: always
<i>dataLen</i>	The length in octets of the data Ver.: always
<i>data</i>	Buffer containing the raw octets of the data Ver.: always

#### 6.4.2.1696 void emberAfPluginCommsHubFunctionAlertWANCallback ( uint16\_t alertCode, uint8\_t \* gbzAlert, uint16\_t gbzAlertLength )

Alert WAN.

Notify the application of an Alert that should be sent to the WAN. The second argument is a pointer to the gbz alert buffer. The application is responsible for freeing this buffer.

##### Parameters

<i>alertCode</i>	The 16 bit alert code as defined by GBCS Ver.: always
<i>gbzAlert</i>	Buffer containing the GBZ formatted Alert Ver.: always

<i>gbzAlertLength</i>	The length in octets of the GBZ formatted Alert Ver.: always
-----------------------	--

**6.4.2.1697 void emberAfPluginCommsHubFunctionTunnelOpenedCallback ( EmberEUI64 *remoteDeviceId* )**

Tunnel Opened.

This function is called by the Comms Hub Function (CHF) plugin when a tunnel is opened.

**Parameters**

<i>remoteDeviceId</i>	The EUI64 of the remote device for which a tunnel is opened Ver.: always
-----------------------	--

**6.4.2.1698 void emberAfPluginConcentratorBroadcastSentCallback ( void )**

Broadcast Sent.

This function is called when a new MTORR broadcast has been successfully sent by the concentrator plugin.

**6.4.2.1699 void emberAfPluginCountersRolloverCallback ( EmberCounterType *type* )**

Rollover.

This function is called every time a counter exceeds its threshold.

**Parameters**

<i>type</i>	The counter that rolled over Ver.: always
-------------	---

**6.4.2.1700 void emberAfPluginDeviceDatabaseDiscoveryCompleteCallback ( const EmberAfDeviceInfo \* *device* )**

Discovery Complete.

This function is called when a device in the database has been set to EMBER\_AF\_DEVICE\_DISCOVERY\_STATUS\_DONE.

**Parameters**

<i>device</i>	A pointer to the information struct about the device. Ver.: always
---------------	--

**6.4.2.1701 void emberAfPluginDeviceManagementClientEnactChangeOfTenancyCallback ( uint8\_t *endpoint*, EmberAfDeviceManagementTenancy \* *tenancy* )**

Enact Change Of Tenancy.

This callback will be implemented by a meter to enact a change of tenancy at the requested time of implementation.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>tenancy</i>	Ver.: always

**6.4.2.1702 void emberAfPluginDeviceManagementClientEnactChangeOfSupplierCallback ( uint8\_t *endpoint*, EmberAfDeviceManagementSupplier \* *supplier* )**

Enact Change Of Supplier.

This callback will be implemented by a meter to enact a change of supplier at the requested time of implementation.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>supplier</i>	Ver.: always

**6.4.2.1703 EmberStatus emberAfPluginDeviceManagementClientEnactChangeSupplyCallback ( uint8\_t *endpoint*, EmberAfDeviceManagementSupply \* *supply* )**

Enact Change Supply.

This callback will be implemented by a meter to enact a supply change at the requested time of implementation.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>supply</i>	Ver.: always

**6.4.2.1704 void emberAfPluginDeviceManagementClientSetSupplyStatusCallback ( uint8\_t *endpoint*, EmberAfDeviceManagementSupplyStatusFlags \* *supplyStatus* )**

Set Supply Status.

This callback will be implemented by a meter to appropriately set the supply status.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>supplyStatus</i>	Ver.: always

**6.4.2.1705 void emberAfPluginDeviceManagementClientEnactUpdateUncontrolledFlowThresholdCallback ( uint8\_t *endpoint*, EmberAfDeviceManagementUncontrolledFlowThreshold \* *supplier* )**

Enact Update Uncontrolled Flow Threshold.

This callback will be implemented by a meter to enact an update to the uncontrolled flow threshold as specified.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>supplier</i>	Ver.: always

**6.4.2.1706 void emberAfPluginDeviceManagementServerGetPasswordCallback ( EmberNodeId *senderNodeId*, EmberAfDeviceManagementPasswordType *passwordType*, EmberAfDeviceManagementPassword *passwordInfo* )**

Get Password.

This callback will be implemented by an esi to provide device specific password information.

**Parameters**

<i>senderNodeId</i>	Ver.: always
<i>passwordType</i>	Ver.: always
<i>passwordInfo</i>	Ver.: always

**6.4.2.1707 bool emberAfPluginDoorLockServerActivateDoorLockCallback ( bool *activate* )**

Activate Door Lock.

This function is provided by the door lock server plugin. It is

**Parameters**

<i>activate</i>	True if the lock should move to the locked position, false if it should move to the unlocked position Ver.: always
-----------------	---

**6.4.2.1708 bool emberAfPluginDrlcEventActionCallback ( EmberAfLoadControlEvent \* *loadControlEvent*, EmberAfAmiEventStatus *eventStatus*, uint8\_t *sequenceNumber* )**

Event Action.

This function is called by the demand response and load control client plugin whenever an event status changes within the DRLC event table. The list of possible event status values is defined by the ZCL spec and is listed in the Application Framework's generated enums located in enums.h. For example, an event status may be: AMI\_EVENT\_STATUS\_LOAD\_CONTROL\_EVENT\_COMMAND\_RX indicating that a properly formatted event was received; AMI\_EVENT\_STATUS\_EVENT\_STARTED indicating that an event has started; AMI\_EVENT\_STATUS\_THE\_EVENT\_HAS\_BEEN\_CANCELED, indicating that the event was canceled. This callback is intended to give the device an opportunity to take action on the event in question. For instance if an event starts, the device should take the appropriate event action on the hardware. This callback returns a bool, if returned value is true, then a notification will be send over the air automatically to the originator of the event. If it is false, then nothing will be sent back to the originator of the event. Please note that in order for your application to be ZigBee compliant, a notification must be sent over the air to the originator of the event, so a value of false should only be returned if your application code takes care of sending this message or there is some other reason a message does not need to be sent by the framework.

**Parameters**

<i>loadControl-Event</i>	Actual event Ver.: always
<i>eventStatus</i>	Status of event Ver.: always
<i>sequence-Number</i>	Sequence number Ver.: always

**6.4.2.1709 void emberAfPluginEndDeviceSupportPollCompletedCallback ( EmberStatus *status* )**

Poll Completed.

This function is called by the End Device Support plugin after a poll is completed.

**Parameters**

<i>status</i>	Return status of a completed poll operation Ver.: always
---------------	--

**6.4.2.1710 bool emberAfPluginEventsServerOkToClearLogCallback ( EmberAfEventLogId *logId* )**

Ok To Clear Log.

This function is called by the Events server plugin whenever a Clear Event Log Request command is received. The application should return true if it is Ok to clear the given log and false otherwise. If the request is to clear all logs (i.e. *logId* == EMBER\_ZCL\_EVENT\_LOG\_ID\_ALL\_LOGS) and the application allows all logs to be cleared then the application should return true. If the application does not allow all logs to be cleared it should return false in which case the plugin will subsequently call this callback for each event log allowing the application to selectively choose which event logs are Ok to be cleared.

**Parameters**

<i>logId</i>	The identifier of the log requested to be cleared. Ver.: always
--------------	---

**6.4.2.1711 void emberAfPluginEventsServerLogDataUpdatedCallback ( const EmberAfClusterCommand \* *cmd* )**

Log Data Updated.

This function is called by the Events server plugin when any modification to the plugin's event logs has been made. The argument will hint the ZCL command that might be used to triggered the data change. If null, it means the logging data have been updated through other means, e.g. CLI.

**Parameters**

<i>cmd</i>	ZCL command Ver.: always
------------	--------------------------

**6.4.2.1712 void emberAfPluginEzmodeCommissioningClientCompleteCallback ( uint8\_t *bindingIndex* )**

Client Complete.

This function is called by the EZ-Mode Commissioning plugin when client commissioning completes.

**Parameters**

<i>bindingIndex</i>	The binding index that was created or <a href="#">EMBER_NULL_BINDING</a> if an error occurred. Ver.: always
---------------------	--

**6.4.2.1713 bool emberAfPluginFindAndBindInitiatorBindTargetCallback ( EmberNodeId *nodeId*, EmberBindingTableEntry \* *bindingEntry*, uint8\_t \* *groupName* )**

Bind Target.

This callback will enable the user to programmatically decide if they want to bind with a potential target. The plugin will try to bind with this target if and only if the function returns true. By default, the callback tells the plugin to try to bind with the target. If the binding type is changed to [EMBER\\_MULTICAST\\_BINDING](#), a multicast binding will be created.

**Parameters**

<i>nodeId</i>	short ID of the potential target Ver.: always
<i>bindingEntry</i>	The binding entry for that target. Ver.: always
<i>groupName</i>	The name of the group if a multicast binding is created. Ver.: always

**6.4.2.1714 void emberAfPluginFindAndBindInitiatorCompleteCallback ( EmberStatus *status* )**

Complete.

This callback is fired by the initiator when the Find and Bind process is complete.

**Parameters**

<i>status</i>	Status code describing the completion of the find and bind process Ver.: always
---------------	--

**6.4.2.1715 void emberAfPluginFormAndJoinNetworkFoundCallback ( EmberZigbeeNetwork \* *networkFound*, uint8\_t *lqi*, int8\_t *rssi* )**

Network Found.

This is called by the form-and-join library to notify the application of the network found after a call to ::emberScanForJoinableNetwork() or ::emberScanForNextJoinableNetwork(). See form-and-join documentation for more information.

**Parameters**

<i>networkFound</i>	Ver.: always
<i>lqi</i>	Ver.: always
<i>rssi</i>	Ver.: always

**6.4.2.1716 void emberAfPluginFormAndJoinUnusedPanIdFoundCallback ( EmberPanId *panId*, uint8\_t *channel* )**

Unused Pan Id Found.

This function is called when the form-and-join library finds an unused PAN ID that can be used to form a new network on.

#### Parameters

<i>panId</i>	A randomly generated PAN ID without other devices on it. Ver.: always
<i>channel</i>	The channel where the PAN ID can be used to form a new network. Ver.: always

#### 6.4.2.1717 void emberAfPluginGasProxyFunctionNonTapOffMessageHandlerCompletedCallback ( uint8\_t \* *gbzCommandsResponse*, uint16\_t *gbzCommandsResponseLength* )

Non Tap Off Message Handler Completed.

Notify the application that the Non Tap Off Message (Non-TOM) have been handled by the mirror endpoint. This callback is invoked when the Non Tap Off Message have been processed. The first argument is a pointer to the gbz commands response buffer. The application is responsible for freeing this buffer.

#### Parameters

<i>gbzCommands-Response</i>	Ver.: always
<i>gbzCommands-Response-Length</i>	Ver.: always

#### 6.4.2.1718 void emberAfPluginGasProxyFunctionAlertWANCallback ( uint16\_t *alertCode*, uint8\_t \* *gbzAlert*, uint16\_t *gbzAlertLength* )

Alert WAN.

Notify the application of an Alert that should be sent to the WAN. The second argument is a pointer to the gbz alert buffer. The application is responsible for freeing this buffer.

#### Parameters

<i>alertCode</i>	The 16 bit alert code as defined by GBCS Ver.: always
<i>gbzAlert</i>	Buffer containing the GBZ formatted Alert Ver.: always
<i>gbzAlertLength</i>	The length in octets of the GBZ formatted Alert Ver.: always

#### 6.4.2.1719 void emberAfPluginGasProxyFunctionTapOffMessageFutureCommandIgnoredCallback ( const EmberAfGpfMessage \* *gpfMessage*, const EmberAfClusterCommand \* *zclClusterCommand* )

Tap Off Message Future Command Ignored.

Notify the application that an elemental ZCL command, embedded within the Tap Off Message (TOM), has been ignored by the GPF as it is a future dated command. The application can utilize the callback to store the discarded command for later retrieval. When the future dated command becomes active on the GSME, it will inform the CommsHub about the activation via an Alert message. The CommsHub should be able to correlate the matching messages and pass the previously stored ZCL commands to the TOM message handler for processing.

**Parameters**

<i>gpfMessage</i>	Ver.: always
<i>zclCluster-Command</i>	Ver.: always

**6.4.2.1720** `bool emberAfPluginGasProxyFunctionDataLogAccessRequestCallback ( const EmberAfGpfMessage * gpfMessage, const EmberAfClusterCommand * zclClusterCommand )`

Data Log Access Request.

Query the application regarding the processing of the current GBCS specific command. Depending on the vendor specific information, such as the Tenancy attribute in the Device Management Cluster, the callback's return value determines whether the current command gets processed or not. With a return value of true, the plugin will process the message. Otherwise, the plugin will reject the message.

**Parameters**

<i>gpfMessage</i>	Ver.: always
<i>zclCluster-Command</i>	Ver.: always

**6.4.2.1721** `EmberAfGpfZclCommandPermission emberAfPluginGasProxyFunctionValidateIncomingZclCommandCallback ( const EmberAfClusterCommand * cmd, uint16_t messageCode )`

Validate Incoming Zcl Command.

Query the application to check if a specific ZCL command should be processed given the UseCase # and ZCL command payload information. This function should capture the behavior detailed by the GBCS Use Case documentation. Please refer to EmberAfGpfZclCommandPermission enum for specific return data types.

**Parameters**

<i>cmd</i>	Ver.: always
<i>messageCode</i>	Ver.: always

**6.4.2.1722** `void emberAfPluginGasProxyFunctionUnknownSeasonWeekIdCallback ( uint32_t issuerCalendarId, uint8_t * seasonEntries, uint8_t seasonEntriesLength, uint8_t unknownWeekIdSeasonsMask )`

Unknown Season Week Id.

This callback is called when the GPF receives a PublishSeasons command with an unknown week ID in one of the seasons. The callback contains a mask, unknownWeekIdSeasonsMask, with bits set corresponding to season entries that were not published because of an unknown week ID reference.

**Parameters**

<i>issuer- CalendarId</i>	The calendar ID associated with these seasons. Ver.: always
-------------------------------	---

<i>seasonEntries</i>	The season entries for this publish command. Ver.: always
<i>seasonEntries- Length</i>	The length of the season entries. Ver.: always
<i>unknownWeek- IdSeasonsMask</i>	A mask where bit N indicates that the Nth season entry contains an unknown week ID reference. Ver.: always

**6.4.2.1723 void emberAfPluginGasProxyFunctionUnknownSpecialDaysDayIdCallback ( uint32\_t issuerCalendarId, uint8\_t \* specialDayEntries, uint8\_t specialDayEntriesLength, uint8\_t unknownDayIdMask )**

Unknown Special Days Day Id.

This callback is called when the GPF receives a PublishSpecialDays command with an unknown day ID for one of the special days. The callback contains a mask, unknownDayIdMask, with bits set corresponding to special day entries that were not published because of an unknown day ID reference.

#### Parameters

<i>issuer- CalendarId</i>	The calendar ID associated with these special days. Ver.: always
<i>specialDay- Entries</i>	The special day entries for this publish command. Ver.: always
<i>specialDay- EntriesLength</i>	The length of the special day entries. Ver.: always
<i>unknownDay- IdMask</i>	A mask where bit N indicates that the Nth special day entry contains an unknown day ID reference. Ver.: always

**6.4.2.1724 void emberAfPluginGbcsDeviceLogDeviceRemovedCallback ( EmberEUI64 deviceId )**

Device Removed.

This callback is called by the plugin when a device is removed from the device log.

#### Parameters

<i>deviceId</i>	Identifier of the device removed Ver.: always
-----------------	---

**6.4.2.1725 void emberAfPluginGbzMessControllerDecryptDataCallback ( EmberAfGbzMessaData \* data )**

Decrypt Data.

This function is called by the Gbz Message Controller plugin to decrypt a ZCL payload. If the decryption is successful, the application is responsible for allocating the memory for the new decrypted data and passing the pointer via the "plainPayload" field as well as the plainPayloadLength field for the length. The framework will be responsible for free-ing the allocated memory. If the decryption fails, the callback return false and should not modify any data.

**Parameters**

<i>data</i>	Ver.: always
-------------	--------------

**6.4.2.1726 void emberAfPluginGbzMessagControllerEncryptDataCallback ( EmberAfGbzMessaData \* *data* )**

Encrypt Data.

This function is called by the Gbz Message Controller plugin to encrypt a ZCL payload. If the encryption is successful, the application is responsible for allocating the memory for the new encrypted data and passing the pointer via the "encryptedPayload" field as well as the encryptedPayloadLength field for the length. The framework will be responsible for free-ing the allocated memory. If the encryption fails, the callback return false and should not modify any data.

**Parameters**

<i>data</i>	Ver.: always
-------------	--------------

**6.4.2.1727 bool emberAfPluginGreenPowerServerGpdCommissioningCallback ( EmberGpApplicationInfo \* *appInfo* )**

Gpd Commissioning.

This function is called by the Green Power Sink Plugin to notify the application of a Green Power Device that has requested commissioning with this sink. Return true to accept, false to reject.

**Parameters**

<i>appInfo</i>	Ver.: always
----------------	--------------

**6.4.2.1728 void emberAfPluginGroupsServerGetGroupNameCallback ( uint8\_t *endpoint*, uint16\_t *groupId*, uint8\_t \* *groupName* )**

Get Group Name.

This function returns the name of a group with the provided group ID, should it exist.

**Parameters**

<i>endpoint</i>	Endpoint Ver.: always
<i>groupId</i>	Group ID Ver.: always
<i>groupName</i>	Group Name Ver.: always

**6.4.2.1729 void emberAfPluginGroupsServerSetGroupNameCallback ( uint8\_t *endpoint*, uint16\_t *groupId*, uint8\_t \* *groupName* )**

Set Group Name.

This function sets the name of a group with the provided group ID.

**Parameters**

<i>endpoint</i>	Endpoint Ver.: always
<i>groupId</i>	Group ID Ver.: always
<i>groupName</i>	Group Name Ver.: always

**6.4.2.1730 bool emberAfPluginGroupsServerGroupNamesSupportedCallback ( uint8\_t endpoint )**

Group Names Supported.

This function returns whether or not group names are supported.

**Parameters**

<i>endpoint</i>	Endpoint Ver.: always
-----------------	-----------------------

**6.4.2.1731 void emberAfPluginIdentifyStartFeedbackCallback ( uint8\_t endpoint, uint16\_t identifyTime )**

Start Feedback.

This function is called by the Identify plugin when identification begins. It informs the Identify Feedback plugin that it should begin providing its implemented feedback functionality (e.g. LED blinking, buzzer sounding, etc.) until the Identify plugin tells it to stop. The identify time is purely a matter of informational convenience; this plugin does not need to know how long it will identify (the Identify plugin will perform the necessary timekeeping.)

**Parameters**

<i>endpoint</i>	The identifying endpoint Ver.: always
<i>identifyTime</i>	The identify time Ver.: always

**6.4.2.1732 void emberAfPluginIdentifyStopFeedbackCallback ( uint8\_t endpoint )**

Stop Feedback.

This function is called by the Identify plugin when identification is finished. It tells the Identify Feedback plugin to stop providing its implemented feedback functionality.

**Parameters**

<i>endpoint</i>	The identifying endpoint Ver.: always
-----------------	---------------------------------------

**6.4.2.1733 bool emberAfPluginInterpanPreMessageReceivedCallback ( const EmberAfInterpanHeader \* header, uint8\_t msgLen, uint8\_t \* message )**

Pre Message Received.

This function is called by the Interpan plugin when an interpan message is received but has not yet been handled by the plugin or the framework. The application should return true if the message was handled.

**Parameters**

<i>header</i>	The inter-PAN header Ver.: always
<i>msgLen</i>	The message payload length Ver.: always
<i>message</i>	The message payload Ver.: always

**6.4.2.1734 void emberAfPluginInterpanMessageReceivedOverFragmentsCallback ( const EmberAfInterpanHeader \* *header*, uint8\_t *msgLen*, uint8\_t \* *message* )**

Message Received Over Fragments.

This function is called by the Interpan plugin when a fully reconstructed message has been received over inter-PAN fragments, or IPMFs.

**Parameters**

<i>header</i>	The inter-PAN header Ver.: always
<i>msgLen</i>	The message payload length Ver.: always
<i>message</i>	The message payload Ver.: always

**6.4.2.1735 void emberAfPluginInterpanFragmentTransmissionFailedCallback ( uint8\_t *interpanFragmentationStatus*, uint8\_t *fragmentNum* )**

Fragment Transmission Failed.

This function is called by the Interpan plugin when a fragmented transmission has failed.

**Parameters**

<i>interpan-Fragmentation-Status</i>	The status describing why transmission failed Ver.: always
<i>fragmentNum</i>	The fragment number that encountered the failure Ver.: always

**6.4.2.1736 bool emberAfPluginMessagingClientPreDisplayMessageCallback ( uint32\_t *messageId*, uint8\_t *messageControl*, uint32\_t *startTime*, uint16\_t *durationInMinutes*, uint8\_t \* *message*, uint8\_t *optionalExtendedMessageControl* )**

Pre Display Message.

This function is called by the Messaging client plugin when a DisplayMessage command is received. If callback returns true, the plugin assumes the message have been handled and will not do anything with the message. Otherwise, the plugin will go through with its own implementation.

**Parameters**

<i>messageId</i>	Ver.: always
<i>message-Control</i>	Ver.: always
<i>startTime</i>	Ver.: always
<i>durationIn-Minutes</i>	Ver.: always

<i>message</i>	Ver.: always
<i>optional-Extended-Message-Control</i>	Ver.: always

#### 6.4.2.1737 void emberAfPluginMessagingClientDisplayMessageCallback ( EmberAfPluginMessagingClientMessage \* *message* )

Display Message.

This function is called by the Messaging client plugin whenever the application should display a message.

##### Parameters

<i>message</i>	The message that should be displayed. Ver.: always
----------------	--

#### 6.4.2.1738 void emberAfPluginMessagingClientCancelMessageCallback ( EmberAfPluginMessagingClientMessage \* *message* )

Cancel Message.

This function is called by the Messaging client plugin whenever the application should stop displaying a message.

##### Parameters

<i>message</i>	The message that should no longer be displayed. Ver.: always
----------------	--

#### 6.4.2.1739 void emberAfPluginMeterMirrorMirrorAddedCallback ( const EmberEUI64 *requestingDeviceIeeeAddress*, uint8\_t *endpoint* )

Mirror Added.

This function is called by the Meter Mirror plugin whenever a RequestMirror command is successfully processed.

##### Parameters

<i>requesting-DeviceIeee-Address</i>	Ver.: always
<i>endpoint</i>	Ver.: always

#### 6.4.2.1740 void emberAfPluginMeterMirrorMirrorRemovedCallback ( const EmberEUI64 *requestingDeviceIeeeAddress*, uint8\_t *endpoint* )

Mirror Removed.

This function is called by the Meter Mirror plugin whenever a RemoveMirror command is successfully processed.

#### Parameters

<i>requesting-DeviceIeee-Address</i>	Ver.: always
<i>endpoint</i>	Ver.: always

#### 6.4.2.1741 void emberAfPluginMeterMirrorReportingCompleteCallback ( uint8\_t *endpoint* )

Reporting Complete.

This function is called by the Meter Mirror plugin after processing an AttributeReportingStatus attribute set to ReportingComplete. If the application needs to do any post attribute reporting processing it can do it from within this callback.

#### Parameters

<i>endpoint</i>	Ver.: always
-----------------	--------------

#### 6.4.2.1742 void emberAfPluginMeterSnapshotServerScheduleSnapshotCallback ( uint8\_t *srcEndpoint*, uint8\_t *dstEndpoint*, EmberNodeId *dest*, uint8\_t \* *snapshotPayload*, uint8\_t \* *responsePayload* )

Schedule Snapshot.

This function is called by the Meter Snapshot server plugin whenever a ScheduleSnapshot command is received. A plugin implementing backhaul functionality for the snapshot mechanism should proceed to schedule the snapshot as required.

#### Parameters

<i>srcEndpoint</i>	Ver.: always
<i>dstEndpoint</i>	Ver.: always
<i>dest</i>	Ver.: always
<i>snapshot-Payload</i>	Ver.: always
<i>response-Payload</i>	Ver.: always

#### 6.4.2.1743 uint32\_t emberAfPluginMeterSnapshotServerTakeSnapshotCallback ( uint8\_t *endpoint*, uint32\_t *snapshotCause*, uint8\_t \* *snapshotConfirmation* )

Take Snapshot.

This function is called by the Meter Snapshot server plugin whenever a TakeSnapshot command is received. A plugin implementing backhaul functionality for the snapshot mechanism should proceed to manually take a snapshot as required. If for some reason the snapshot could not be taken, this should be reflected in the *snapshotConfirmation* argument.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>snapshotCause</i>	Ver.: always
<i>snapshotConfirmation</i>	Ver.: always

**6.4.2.1744 void emberAfPluginMeterSnapshotServerGetSnapshotCallback ( uint8\_t *srcEndpoint*, uint8\_t *dstEndpoint*, EmberNodeId *dest*, uint8\_t \* *snapshotCriteria* )**

Get Snapshot.

This function is called by the Meter Snapshot server plugin whenever a GetSnapshot command is received. A plugin implementing backhaul functionality for the snapshot mechanism should proceed to retrieve the snapshot and send a PublishSnapshot command to the requesting client.

**Parameters**

<i>srcEndpoint</i>	Ver.: always
<i>dstEndpoint</i>	Ver.: always
<i>dest</i>	Ver.: always
<i>snapshotCriteria</i>	Ver.: always

**6.4.2.1745 void emberAfPluginNetworkCreatorCompleteCallback ( const EmberNetworkParameters \* *network*, bool *usedSecondaryChannels* )**

Complete.

This callback notifies the user that the network creation process has completed successfully.

**Parameters**

<i>network</i>	The network that the network creator plugin successfully formed. Ver.: always
<i>used-Secondary-Channels</i>	Whether or not the network creator wants to form a network on the secondary channels Ver.: always

**6.4.2.1746 EmberPanId emberAfPluginNetworkCreatorGetPanIdCallback ( void )**

Get Pan Id.

This callback is called when the Network Creator plugin needs the PAN ID for the network it is about to create. By default, the callback will return a random 16-bit value.

**6.4.2.1747 void emberAfPluginNetworkFindFinishedCallback ( EmberStatus *status* )**

Finished.

This callback is fired when the network-find plugin is finished with the forming or joining process. The result of the operation will be returned in the status parameter.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.1748 int8\_t emberAfPluginNetworkFindGetRadioPowerForChannelCallback ( uint8\_t channel )**

Get Radio Power For Channel.

This callback is called by the framework when it is setting the radio power during the discovery process. The framework will set the radio power depending on what is returned by this callback.

**Parameters**

<i>channel</i>	Ver.: always
----------------	--------------

**6.4.2.1749 bool emberAfPluginNetworkFindJoinCallback ( EmberZigbeeNetwork \* networkFound, uint8\_t lqi, int8\_t rssi )**

Join.

This callback is called by the plugin when a joinable network has been found. If the application returns true, the plugin will attempt to join the network. Otherwise, the plugin will ignore the network and continue searching. Applications can use this callback to implement a network blacklist.

**Parameters**

<i>networkFound</i>	Ver.: always
<i>lqi</i>	Ver.: always
<i>rssi</i>	Ver.: always

**6.4.2.1750 void emberAfPluginNetworkSteeringCompleteCallback ( EmberStatus status, uint8\_t totalBeacons, uint8\_t joinAttempts, uint8\_t finalState )**

Complete.

This callback is fired when the Network Steering plugin is complete.

**Parameters**

<i>status</i>	On success this will be set to EMBER_SUCCESS to indicate a network was joined successfully. On failure this will be the status code of the last join or scan attempt. Ver.: always
<i>totalBeacons</i>	The total number of 802.15.4 beacons that were heard, including beacons from different devices with the same PAN ID. Ver.: always
<i>joinAttempts</i>	The number of join attempts that were made to get onto an open Zigbee network. Ver.: always
<i>finalState</i>	The finishing state of the network steering process. From this, one is able to tell on which channel mask and with which key the process was complete. Ver.: always

#### 6.4.2.1751 int8\_t emberAfPluginNetworkSteeringGetPowerForRadioChannelCallback ( uint8\_t channel )

Get Power For Radio Channel.

This callback is fired when the Network Steering plugin needs to set the power level. The application has the ability to change the max power level used for this particular channel.

##### Parameters

<i>channel</i>	The channel that the plugin is inquiring about the power level. Ver.: always
----------------	--

#### 6.4.2.1752 EmberNodeType emberAfPluginNetworkSteeringGetNodeTypeCallback ( EmberAfPluginNetworkSteeringJoiningState state )

Get Node Type.

This callback allows the application to set the node type that the network steering process will use in joining a network.

##### Parameters

<i>state</i>	The current <a href="#">EmberAfPluginNetworkSteeringJoiningState</a> .
--------------	--

##### Returns

An [EmberNodeType](#) value that the network steering process will try to join a network as.

#### 6.4.2.1753 void emberAfPluginOtaStorageSimpleEepromEraseCompleteCallback ( bool success )

Erase Complete.

This is called when an EEPROM erase operation has completed.

##### Parameters

<i>success</i>	The result of the erase operation. Ver.: always
----------------	---

#### 6.4.2.1754 bool emberAfPluginPrepaymentServerConsumerTopUpCallback ( uint8\_t originatingDevice, uint8\_t \* topUpCode )

Consumer Top Up.

This function is called when a Consumer Top Up command is received. This callback must evaluate the command data and determine if it is a valid Top Up command.

##### Parameters

<i>originating-Device</i>	Ver.: always
<i>topUpCode</i>	Ver.: always

**6.4.2.1755 void emberAfPluginPriceClientPriceStartedCallback ( EmberAfPluginPriceClientPrice \* *price* )**

Price Started.

This function is called by the Price client plugin whenever a price starts.

**Parameters**

<i>price</i>	The price that has started. Ver.: always
--------------	--

**6.4.2.1756 void emberAfPluginPriceClientPriceExpiredCallback ( EmberAfPluginPriceClientPrice \* *price* )**

Price Expired.

This function is called by the Price client plugin whenever a price expires.

**Parameters**

<i>price</i>	The price that has expired. Ver.: always
--------------	--

**6.4.2.1757 uint8\_t emberAfPluginPriceClientPendingCppEventCallback ( uint8\_t *cppAuth* )**

Pending Cpp Event.

This function is called by the Price client plugin when a CPP event is received with pending status.

**Parameters**

<i>cppAuth</i>	The CPP Auth status. Ver.: always
----------------	-----------------------------------

**6.4.2.1758 void emberAfPluginPriceServerNewActivePriceMatrixCallback ( const EmberAfPriceCommonInfo \* *priceCommonInfo*, const EmberAfScheduledPriceMatrix \* *priceMatrix* )**

New Active Price Matrix.

This callback is used to notify the application that a new PriceMatrix has become active. The application is responsible for updating proper ZCL attributes to reflect the necessary vendor specific behaviors. Argument, *priceCommonInfo*, would contain common informations such as startTime and etc. Argument, *priceMatrix*, would contain the PriceMatrix information itself.

**Parameters**

<i>priceCommon- Info</i>	Ver.: always
<i>priceMatrix</i>	Ver.: always

**6.4.2.1759 void emberAfPluginPriceServerNewActiveTariffInformationCallback ( const EmberAfPriceCommonInfo \* *priceCommonInfo*, const EmberAfScheduledTariff \* *priceTariffInfo* )**

New Active Tariff Information.

This callback is used to notify the application that a new Tariff Information has become active. The application is responsible for updating proper ZCL attributes to reflect the necessary vendor specific behaviors. Argument, *priceCommonInfo*, would contain common informations such as startTime and etc. Argument, *priceTariffInfo*, would contain the PriceMatrix information itself.

#### Parameters

<i>priceCommon- Info</i>	Ver.: always
<i>priceTariffInfo</i>	Ver.: always

**6.4.2.1760 void emberAfPluginPriceServerNewActiveBlockThresholdsInformationCallback ( const EmberAfPriceCommonInfo \* *priceCommonInfo*, const EmberAfScheduledBlockThresholds \* *priceBlockThresholds* )**

New Active Block Thresholds Information.

This callback is used to notify the application that a new Block Thresholds Information has become active. The application is responsible for updating proper ZCL attributes to reflect the necessary vendor specific behaviors. Argument, *priceCommonInfo*, would contain common informations such as startTime and etc. Argument, *priceTariffInfo*, would contain the BlockThresholds information itself.

#### Parameters

<i>priceCommon- Info</i>	Ver.: always
<i>priceBlock- Thresholds</i>	Ver.: always

**6.4.2.1761 void emberAfPluginPriceServerNewActiveBlockPeriodInformationCallback ( const EmberAfPriceCommonInfo \* *priceCommonInfo*, const EmberAfPriceBlockPeriod \* *priceBlockPeriods* )**

New Active Block Period Information.

This callback is used to notify the application that a new Block Period Information has become active. The application is responsible for updating proper ZCL attributes to reflect the necessary vendor specific behaviors. Argument, *priceCommonInfo*, would contain common informations such as startTime and etc. Argument, *priceBlockPeriod*, would contain the BlockPeriod information itself.

#### Parameters

<i>priceCommon- Info</i>	Ver.: always
<i>priceBlock- Periods</i>	Ver.: always

**6.4.2.1762 EmberAfStatus emberAfPluginReportingConfiguredCallback ( const EmberAfPluginReportingEntry \* entry )**

Configured.

This callback is called by the Reporting plugin whenever a reporting entry is configured, including when entries are deleted or updated. The application can use this callback for scheduling readings or measurements based on the minimum and maximum reporting interval for the entry. The application should return EMBER\_ZCL\_STATUS\_SUCCESS if it can support the configuration or an error status otherwise. Note: attribute reporting is required for many clusters and attributes, so rejecting a reporting configuration may violate ZigBee specifications.

**Parameters**

<i>entry</i>	Ver.: always
--------------	--------------

**6.4.2.1763 bool emberAfPluginRf4ceGdpZrc20StartConfigurationCallback ( bool *isOriginator*, uint8\_t *pairingIndex* )**

Zrc 2 0 Start Configuration.

This function is called by the RF4CE GDP plugin when ZRC 2.0 configuration should begin.

**Parameters**

<i>isOriginator</i>	true if is originator, false if is recipient. Ver.: always
<i>pairingIndex</i>	The index of the pairing entry. Ver.: always

**6.4.2.1764 void emberAfPluginRf4ceGdpZrc20BindingCompleteCallback ( EmberAfRf4ceGdpBindingStatus *status*, uint8\_t *pairingIndex* )**

Zrc 2 0 Binding Complete.

This function is called by the RF4CE GDP plugin when a ZRC 2.0 binding procedure completed.

**Parameters**

<i>status</i>	An <a href="#">EmberAfRf4ceGdpBindingStatus</a> value indicating whether the the binding succeeded or the reason of failure. Ver.: always
<i>pairingIndex</i>	The index of the pairing entry. Ver.: always

**6.4.2.1765 void emberAfPluginRf4ceGdpStartValidationCallback ( uint8\_t *pairingIndex* )**

Start Validation.

This function is called by the RF4CE GDP plugin when the application should begin the validation procedure. The application must complete the validation within the validation wait time to avoid the validation automatically failing due to a timeout.

**Parameters**

<i>pairingIndex</i>	The index of the pairing entry. Ver.: always
---------------------	--

**6.4.2.1766 void emberAfPluginRf4ceGdpBindingCompleteCallback ( EmberAfRf4ceGdpBindingStatus *status*, uint8\_t *pairingIndex* )**

Binding Complete.

This function is called by the RF4CE GDP plugin when the binding operation completes. If status is [EMBER\\_SUCCESS](#), binding was successful and pairingIndex indicates the index in the pairing table for the remote node.

#### Parameters

<i>status</i>	The status of the binding operation. Ver.: always
<i>pairingIndex</i>	The index of the pairing entry. Ver.: always

**6.4.2.1767 bool emberAfPluginRf4ceGdpIncomingBindProxyCallback ( const EmberEUI64 *ieeeAddr* )**

Incoming Bind Proxy.

This function is called by the RF4CE GDP plugin when the binding recipient receives a pair request with the Binding Proxy Supported bit set. If this callback returns true, the recipient will respond to the pair request, otherwise it will ignore it.

#### Parameters

<i>ieeeAddr</i>	The IEEE address of the originator node sending the pair request. Ver.: always
-----------------	--

**6.4.2.1768 void emberAfPluginRf4ceGdpHeartbeatPollingEstablishedCallback ( uint8\_t *pairingIndex*, EmberAfRf4ceGdpPollingTrigger *triggers* )**

Heartbeat Polling Established.

This function is called by the RF4CE GDP plugin when heartbeat polling is established between a client and this server. The application should wait until the heartbeat callback is called to send messages to the client. A module can subscribe to incoming heartbeats by using the [emberAfRf4ceGdpSubscribeToHeartbeat\(\)](#) API.

#### Parameters

<i>pairingIndex</i>	The polling method. Ver.: always
<i>triggers</i>	The polling triggers. Ver.: always

**6.4.2.1769 void emberAfPluginRf4ceGdpIdentifyCallback ( EmberAfRf4ceGdpClientNotification-IdentifyFlags *flags*, uint16\_t *timeS* )**

Identify.

This function is called by the RF4CE GDP plugin when the client should take an action to identify itself.

#### Parameters

<i>flags</i>	The actions the client should take to identify itself. Ver.: always
<i>timeS</i>	The time in seconds that the client should perform the identify action or zero if the client should stop the action. Ver.: always

**6.4.2.1770 void emberAfPluginRf4ceGdpIdentifyClientFoundCallback ( EmberAfRf4ceGdpClient-NotificationIdentifyFlags *flags* )**

Identify Client Found.

This function is called by the RF4CE GDP plugin when the an identify server discovers an identify client.

**Parameters**

<i>flags</i>	The actions supported by the discovered identify client. Ver.: always
--------------	---

**6.4.2.1771 void emberAfPluginRf4ceGdpKeyExchangeCompleteCallback ( EmberStatus *status* )**

Key Exchange Complete.

This function is called by the RF4CE GDP plugin when a Key Exchange procedure that was initiated by the application has completed.

**Parameters**

<i>status</i>	The status success/failed of the Key Exchange procedure. Ver.: always
---------------	---

**6.4.2.1772 bool emberAfPluginRf4ceGdpVendorSpecificKeyExchangeCallback ( uint8\_t *initiatorVendorSpecificParam*, uint8\_t \* *responderVendorSpecificParam*, uint8\_t \* *sharedSecret* )**

Vendor Specific Key Exchange.

This function is called by the RF4CE GDP plugin when a Key Exchange Challenge with the vendor-specific bit set is received. If this callback returns true, the node will respond with a Key Exchange Challenge Response command with the vendor-specific bit set.

**Parameters**

<i>initiator-VendorSpecific-Param</i>	The additional parameter included in the Key Exchange Flags of the incoming Key Exchange Challenge command. Ver.: always
<i>responder-VendorSpecific-Param</i>	The additional parameter to be included in the Key Exchange Flags of the Key Exchange Challenge Response command the node will send out. Ver.: always
<i>sharedSecret</i>	A pointer to an 8-byte area memory to be filled with the vendor-specific shared secret. Ver.: always

**6.4.2.1773 void emberAfPluginRf4ceMsoStartValidationCallback ( uint8\_t *pairingIndex* )**

Start Validation.

This function is called by the RF4CE MSO plugin when a temporary pairing has been successfully created and the application should begin the validation procedure. The application must complete the validation within the validation wait time (if set) and also kick the watchdog within the initial watchdog timeout (if set) to avoid the validation automatically failing due to a timeout.

**Parameters**

<i>pairingIndex</i>	The index of the pairing entry. Ver.: always
---------------------	--

**6.4.2.1774 void emberAfPluginRf4ceMsoBindingCompleteCallback ( EmberAfRf4ceMsoBindingStatus *status*, uint8\_t *pairingIndex* )**

Binding Complete.

This function is called by the RF4CE MSO plugin when the binding operation completes. If status is [EMBER\\_SUCCESS](#), binding was successful and pairingIndex indicates the index in the pairing table for the remote node.

**Parameters**

<i>status</i>	The status of the binding operation. Ver.: always
<i>pairingIndex</i>	The index of the pairing entry. Ver.: always

**6.4.2.1775 void emberAfPluginRf4ceMsoUserControlCallback ( const EmberAfRf4ceMsoUserControlRecord \* *record* )**

User Control.

This function is called by the RF4CE MSO plugin when a user control starts or stops. If the type of the record is [EMBER\\_AF\\_RF4CE\\_MSO\\_COMMAND\\_USER\\_CONTROL\\_PRESSED](#), the application should execute the requested operation repeatedly at some application-specific rate. When the repetition should stop, the plugin will call the callback again with the type set to [EMBER\\_AF\\_RF4CE\\_MSO\\_COMMAND\\_USER\\_CONTROL\\_RELEASED](#). [EMBER\\_AF\\_RF4CE\\_MSO\\_COMMAND\\_USER\\_CONTROL\\_REPEAT](#) is a special case of [EMBER\\_AF\\_RF4CE\\_MSO\\_COMMAND\\_USER\\_CONTROL\\_PRESSED](#) and means that the pressed command from the originator was not received and that the originator is still triggering the action. The application should process a repeat type the same as a pressed type, but may wish to perform additional operations to compensate for missed commands.

**Parameters**

<i>record</i>	The user control record. Ver.: always
---------------	---------------------------------------

**6.4.2.1776 EmberAfRf4ceStatus emberAfPluginRf4ceMsoGetIrRfDatabaseAttributeCallback ( uint8\_t *pairingIndex*, uint8\_t *entryIndex*, uint8\_t \* *valueLength*, uint8\_t \* *value* )**

Get Ir Rf Database Attribute.

This function is called by the RF4CE MSO plugin when a target is queried by a controller for one of the IR\_RF\_DATABASE attributes. The application is responsible for storing these attributes. If the application currently stores an entry for the corresponding passed pairing index and entry index, it should copy the content of such attribute at the passed 'value' pointer and return [EMBER\\_AF\\_RF4CE\\_STATUS\\_SUCCESS](#), otherwise it should return an [EmberAfRf4ceStatus](#) indicating the reason of failure. valueLength is a pointer to an integer that indicates the length of the buffer pointed to by value. The application must not write more than \*valueLength bytes to value. If the application returns [EMBER\\_AF\\_RF4CE\\_STATUS\\_SUCCESS](#), it must also update \*valueLength to indicate the number of bytes actually written to value.

**Parameters**

<i>pairingIndex</i>	The pairing index of the requested attribute. Ver.: always
<i>entryIndex</i>	The entry index of the requested attribute. Ver.: always
<i>valueLength</i>	A pointer to the size of the buffer pointed to by value that must be updated with the length written to value. Ver.: always
<i>value</i>	A pointer where the application should copy the content of the requested attribute. Ver.: always

**6.4.2.1777 bool emberAfPluginRf4ceMsoHaveIrRfDatabaseAttributeCallback ( uint8\_t *pairingIndex*, uint8\_t *entryIndex* )**

Have Ir Rf Database Attribute.

This function is called by the RF4CE MSO plugin when a target is queried by a controller for one of the I-R\_RF\_DATABASE attributes. The application is responsible for storing these attributes. If the application currently stores an entry for the corresponding passed pairing index and entry index, it should return true, otherwise it should return false.

**Parameters**

<i>pairingIndex</i>	The pairing index of the requested attribute. Ver.: always
<i>entryIndex</i>	The entry index of the requested attribute. Ver.: always

**6.4.2.1778 void emberAfPluginRf4ceMsolIncomingIrRfDatabaseAttributeCallback ( uint8\_t *pairingIndex*, uint8\_t *entryIndex*, uint8\_t *valueLength*, const uint8\_t \* *value* )**

Incoming Ir Rf Database Attribute.

This function is called by the RF4CE MSO plugin when controller receives a get attribute response for one of the IR\_RF\_DATABASE attributes. The application is responsible for storing these attributes.

**Parameters**

<i>pairingIndex</i>	The pairing index of the requested attribute. Ver.: always
<i>entryIndex</i>	The entry index of the requested attribute. Ver.: always
<i>valueLength</i>	The length of the requested attribute. Ver.: always
<i>value</i>	A pointer to the content of the requested attribute. Ver.: always

**6.4.2.1779 EmberStatus emberAfPluginRf4ceMsoGetIrRfDatabaseEntryCallback ( EmberAfRf4ceMsoKeyCode *keyCode*, EmberAfRf4ceMsoIrRfDatabaseEntry \* *entry* )**

Get Ir Rf Database Entry.

This function is called by the RF4CE MSO plugin to retrieve the IR-RF database entry for a key code when the controller is sending user control commands. The application should return EMBER\_SUCCESS and populate the entry if the IR-RF database entry is available for the RC command code. Otherwise, the application should return an error code.

**Parameters**

<i>keyCode</i>	The RC command code of the user control. Ver.: always
<i>entry</i>	A pointer to the <a href="#">EmberAfRf4ceMsoIrRfDatabaseEntry</a> to be populated. Ver.: always

**6.4.2.1780** `bool emberAfPluginRf4ceProfileGdpMessageSentCallback ( uint8_t pairingIndex, uint8_t profileId, uint16_t vendorId, uint8_t messageTag, const uint8_t * message, uint8_t messageLength, EmberStatus status )`

Gdp Message Sent.

This function is called by the RF4CE Profile plugin when a GDP message is sent. It is expected to return true if the sent message was processed by the GDP plugin, false otherwise.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table used to transmit the message. Ver.: always
<i>profileId</i>	The profile ID included in the message. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>messageTag</i>	The tag of the message. Ver.: always
<i>message</i>	A pointer to the payload of the message that was sent. Ver.: always
<i>messageLength</i>	The length in bytes of the message. Ver.: always
<i>status</i>	An <a href="#">EmberStatus</a> value. Ver.: always

**6.4.2.1781** `void emberAfPluginRf4ceProfileRemoteControl11MessageSentCallback ( uint8_t pairingIndex, uint16_t vendorId, uint8_t messageTag, const uint8_t * message, uint8_t messageLength, EmberStatus status )`

Remote Control 1 1 Message Sent.

This function is called by the RF4CE Profile plugin when a Remote Control 1.0 or 1.1 message is sent.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table used to transmit the message. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>messageTag</i>	The tag of the message. Ver.: always
<i>message</i>	A pointer to the payload of the message that was sent. Ver.: always
<i>messageLength</i>	The length in bytes of the message. Ver.: always
<i>status</i>	An <a href="#">EmberStatus</a> value. Ver.: always

**6.4.2.1782** `void emberAfPluginRf4ceProfileZrc20MessageSentCallback ( uint8_t pairingIndex, uint16_t vendorId, uint8_t messageTag, const uint8_t * message, uint8_t messageLength, EmberStatus status )`

Zrc 2 0 Message Sent.

This function is called by the RF4CE Profile plugin when a ZRC 2.0 message is sent.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table used to transmit the message. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>messageTag</i>	The tag of the message. Ver.: always
<i>message</i>	A pointer to the payload of the message that was sent. Ver.: always
<i>messageLength</i>	The length in bytes of the message. Ver.: always
<i>status</i>	An <a href="#">EmberStatus</a> value. Ver.: always

**6.4.2.1783 void emberAfPluginRf4ceProfileMsoMessageSentCallback ( uint8\_t pairingIndex, uint16\_t vendorId, uint8\_t messageTag, const uint8\_t \* message, uint8\_t messageLength, EmberStatus status )**

Mso Message Sent.

This function is called by the RF4CE Profile plugin when an MSO message is sent.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table used to transmit the message. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>messageTag</i>	The tag of the message. Ver.: always
<i>message</i>	A pointer to the payload of the message that was sent. Ver.: always
<i>messageLength</i>	The length in bytes of the message. Ver.: always
<i>status</i>	An <a href="#">EmberStatus</a> value. Ver.: always

**6.4.2.1784 void emberAfPluginRf4ceProfileMessageSentCallback ( uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, uint8\_t messageTag, const uint8\_t \* message, uint8\_t messageLength, EmberStatus status )**

Message Sent.

This function is called by the RF4CE Profile plugin when a message is sent. It is called after any profile-specific callbacks.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table used to transmit the message. Ver.: always
<i>profileId</i>	The profile ID included in the message. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>messageTag</i>	The tag of the message. Ver.: always
<i>message</i>	A pointer to the payload of the message that was sent. Ver.: always
<i>messageLength</i>	The length in bytes of the message. Ver.: always
<i>status</i>	An <a href="#">EmberStatus</a> value. Ver.: always

**6.4.2.1785 bool emberAfPluginRf4ceProfileGdpIncomingMessageCallback ( uint8\_t pairingIndex, uint8\_t profileId, uint16\_t vendorId, EmberRf4ceTxOption txOptions, const uint8\_t \* message, uint8\_t messageLength )**

Gdp Incoming Message.

This function is called by the RF4CE Profile plugin when any message is received. This callback is expected to return true if the passed message was processed by the GDP plugin, false otherwise.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table corresponding to the PAN on which the message was received. Ver.: always
<i>profileId</i>	The profile ID included in the message. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>txOptions</i>	The TX options used by the source node to transmit the received message. Ver.: always
<i>message</i>	A pointer to the payload of the received message. Ver.: always
<i>messageLength</i>	The length in bytes of the received message. Ver.: always

**6.4.2.1786 void emberAfPluginRf4ceProfileRemoteControl11IncomingMessageCallback ( uint8\_t pairingIndex, uint16\_t vendorId, EmberRf4ceTxOption txOptions, const uint8\_t \* message, uint8\_t messageLength )**

Remote Control 1 1 Incoming Message.

This function is called by the RF4CE Profile plugin when a Remote Control 1.0 or 1.1 message is received.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table corresponding to the PAN on which the message was received. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>txOptions</i>	The TX options used by the source node to transmit the received message. Ver.: always
<i>message</i>	A pointer to the payload of the received message. Ver.: always
<i>messageLength</i>	The length in bytes of the received message. Ver.: always

**6.4.2.1787 void emberAfPluginRf4ceProfileZrc20IncomingMessageCallback ( uint8\_t pairingIndex, uint16\_t vendorId, EmberRf4ceTxOption txOptions, const uint8\_t \* message, uint8\_t messageLength )**

Zrc 2 0 Incoming Message.

This function is called by the RF4CE Profile plugin when a ZRC 2.0 message is received.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table corresponding to the PAN on which the message was received. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>txOptions</i>	The TX options used by the source node to transmit the received message. Ver.: always
<i>message</i>	A pointer to the payload of the received message. Ver.: always
<i>messageLength</i>	The length in bytes of the received message. Ver.: always

**6.4.2.1788 void emberAfPluginRf4ceProfileMsolIncomingMessageCallback ( uint8\_t pairingIndex, uint16\_t vendorId, EmberRf4ceTxOption txOptions, const uint8\_t \* message, uint8\_t messageLength )**

Mso Incoming Message.

This function is called by the RF4CE Profile plugin when an MSO message is received.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table corresponding to the PAN on which the message was received. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>txOptions</i>	The TX options used by the source node to transmit the received message. Ver.: always
<i>message</i>	A pointer to the payload of the received message. Ver.: always
<i>messageLength</i>	The length in bytes of the received message. Ver.: always

**6.4.2.1789 void emberAfPluginRf4ceProfileIncomingMessageCallback ( uint8\_t *pairingIndex*, uint8\_t *profileId*, uint16\_t *vendorId*, EmberRf4ceTxOption *txOptions*, const uint8\_t \* *message*, uint8\_t *messageLength* )**

Incoming Message.

This function is called by the RF4CE Profile plugin when a message is received. It is called after any profile-specific callbacks.

#### Parameters

<i>pairingIndex</i>	The index of the entry in the pairing table corresponding to the PAN on which the message was received. Ver.: always
<i>profileId</i>	The profile ID included in the message. Ver.: always
<i>vendorId</i>	The vendor ID included in the message. Ver.: always
<i>txOptions</i>	The TX options used by the source node to transmit the received message. Ver.: always
<i>message</i>	A pointer to the payload of the received message. Ver.: always
<i>messageLength</i>	The length in bytes of the received message. Ver.: always

**6.4.2.1790 bool emberAfPluginRf4ceProfileGdpDiscoveryRequestCallback ( const EmberEUI64 *ieeeAddr*, uint8\_t *nodeCapabilities*, const EmberRf4ceVendorInfo \* *vendorInfo*, const EmberRf4ceApplicationInfo \* *appInfo*, uint8\_t *searchDevType*, uint8\_t *rxLinkQuality* )**

Gdp Discovery Request.

This function is called by the RF4CE Profile plugin when a discovery request for the GDP profile is received.

#### Parameters

<i>ieeeAddr</i>	The IEEE address of the requesting device. Ver.: always
<i>node- Capabilities</i>	The capabilities of the requesting device. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always
<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>searchDevType</i>	The device type requested. Ver.: always
<i>rxLinkQuality</i>	The LQI of the request. Ver.: always

**6.4.2.1791 bool emberAfPluginRf4ceProfileRemoteControl11DiscoveryRequestCallback ( const EmberEUI64 *ieeeAddr*, uint8\_t *nodeCapabilities*, const EmberRf4ceVendorInfo \* *vendorInfo*, const EmberRf4ceApplicationInfo \* *appInfo*, uint8\_t *searchDevType*, uint8\_t *rxLinkQuality* )**

Remote Control 1 1 Discovery Request.

This function is called by the RF4CE Profile plugin when a discovery request for the Remote Control 1.0 or 1.1 profile is received.

#### Parameters

<i>ieeeAddr</i>	The IEEE address of the requesting device. Ver.: always
<i>node- Capabilities</i>	The capabilities of the requesting device. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always

<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>searchDevType</i>	The device type requested. Ver.: always
<i>rxLinkQuality</i>	The LQI of the request. Ver.: always

**6.4.2.1792 bool emberAfPluginRf4ceProfileZrc20DiscoveryRequestCallback ( const EmberEUI64 *ieeeAddr*, uint8\_t *nodeCapabilities*, const EmberRf4ceVendorInfo \* *vendorInfo*, const EmberRf4ceApplicationInfo \* *appInfo*, uint8\_t *searchDevType*, uint8\_t *rxLinkQuality* )**

Zrc 2.0 Discovery Request.

This function is called by the RF4CE Profile plugin when a discovery request for the ZRC 2.0 profile is received.

#### Parameters

<i>ieeeAddr</i>	The IEEE address of the requesting device. Ver.: always
<i>nodeCapabilities</i>	The capabilities of the requesting device. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always
<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>searchDevType</i>	The device type requested. Ver.: always
<i>rxLinkQuality</i>	The LQI of the request. Ver.: always

**6.4.2.1793 bool emberAfPluginRf4ceProfileMsoDiscoveryRequestCallback ( const EmberEUI64 *ieeeAddr*, uint8\_t *nodeCapabilities*, const EmberRf4ceVendorInfo \* *vendorInfo*, const EmberRf4ceApplicationInfo \* *appInfo*, uint8\_t *searchDevType*, uint8\_t *rxLinkQuality* )**

Mso Discovery Request.

This function is called by the RF4CE Profile plugin when a discovery request for the MSO profile is received.

#### Parameters

<i>ieeeAddr</i>	The IEEE address of the requesting device. Ver.: always
<i>nodeCapabilities</i>	The capabilities of the requesting device. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always
<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>searchDevType</i>	The device type requested. Ver.: always
<i>rxLinkQuality</i>	The LQI of the request. Ver.: always

**6.4.2.1794 bool emberAfPluginRf4ceProfileGdpDiscoveryResponseCallback ( bool *atCapacity*, uint8\_t *channel*, EmberPanId *panId*, const EmberEUI64 *ieeeAddr*, uint8\_t *nodeCapabilities*, const EmberRf4ceVendorInfo \* *vendorInfo*, const EmberRf4ceApplicationInfo \* *appInfo*, uint8\_t *rxLinkQuality*, uint8\_t *discRequestLqi* )**

Gdp Discovery Response.

This function is called by the RF4CE Profile plugin when a discovery response for the GDP profile is received.

#### Parameters

<i>atCapacity</i>	true if the node sending the discovery response has no free entry in its pairing table, false otherwise. Ver.: always
<i>channel</i>	The channel on which the discovery response was received. Ver.: always
<i>panId</i>	The PAN identifier of the responding device. Ver.: always
<i>ieeeAddr</i>	The IEEE address of the responding device. Ver.: always
<i>node-Capabilities</i>	The capabilities of the responding device. Ver.: always
<i>vendorInfo</i>	The vendor information of the responding device. Ver.: always
<i>appInfo</i>	The application information of the responding device. Ver.: always
<i>rxLinkQuality</i>	The LQI of the discovery response. Ver.: always
<i>discRequestLqi</i>	The LQI of the discovery request command frame reported by the responding device. Ver.: always

**6.4.2.1795** `bool emberAfPluginRf4ceProfileRemoteControl11DiscoveryResponseCallback ( bool atCapacity, uint8_t channel, EmberPanId panId, const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t rxLinkQuality, uint8_t discRequestLqi )`

Remote Control 1 1 Discovery Response.

This function is called by the RF4CE Profile plugin when a discovery response for the Remote Control 1.0 or 1.1 profile is received.

#### Parameters

<i>atCapacity</i>	true if the node sending the discovery response has no free entry in its pairing table, false otherwise. Ver.: always
<i>channel</i>	The channel on which the discovery response was received. Ver.: always
<i>panId</i>	The PAN identifier of the responding device. Ver.: always
<i>ieeeAddr</i>	The IEEE address of the responding device. Ver.: always
<i>node-Capabilities</i>	The capabilities of the responding device. Ver.: always
<i>vendorInfo</i>	The vendor information of the responding device. Ver.: always
<i>appInfo</i>	The application information of the responding device. Ver.: always
<i>rxLinkQuality</i>	The LQI of the discovery response. Ver.: always
<i>discRequestLqi</i>	The LQI of the discovery request command frame reported by the responding device. Ver.: always

**6.4.2.1796** `bool emberAfPluginRf4ceProfileZrc20DiscoveryResponseCallback ( bool atCapacity, uint8_t channel, EmberPanId panId, const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t rxLinkQuality, uint8_t discRequestLqi )`

Zrc 2 0 Discovery Response.

This function is called by the RF4CE Profile plugin when a discovery response for the ZRC 2.0 profile is received.

**Parameters**

<i>atCapacity</i>	true if the node sending the discovery response has no free entry in its pairing table, false otherwise. Ver.: always
<i>channel</i>	The channel on which the discovery response was received. Ver.: always
<i>panId</i>	The PAN identifier of the responding device. Ver.: always
<i>ieeeAddr</i>	The IEEE address of the responding device. Ver.: always
<i>node-Capabilities</i>	The capabilities of the responding device. Ver.: always
<i>vendorInfo</i>	The vendor information of the responding device. Ver.: always
<i>appInfo</i>	The application information of the responding device. Ver.: always
<i>rxLinkQuality</i>	The LQI of the discovery response. Ver.: always
<i>discRequestLqi</i>	The LQI of the discovery request command frame reported by the responding device. Ver.: always

**6.4.2.1797** `bool emberAfPluginRf4ceProfileMsoDiscoveryResponseCallback ( bool atCapacity, uint8_t channel, EmberPanId panId, const EmberEUI64 ieeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t rxLinkQuality, uint8_t discRequestLqi )`

Mso Discovery Response.

This function is called by the RF4CE Profile plugin when a discovery response for the MSO profile is received.

**Parameters**

<i>atCapacity</i>	true if the node sending the discovery response has no free entry in its pairing table, false otherwise. Ver.: always
<i>channel</i>	The channel on which the discovery response was received. Ver.: always
<i>panId</i>	The PAN identifier of the responding device. Ver.: always
<i>ieeeAddr</i>	The IEEE address of the responding device. Ver.: always
<i>node-Capabilities</i>	The capabilities of the responding device. Ver.: always
<i>vendorInfo</i>	The vendor information of the responding device. Ver.: always
<i>appInfo</i>	The application information of the responding device. Ver.: always
<i>rxLinkQuality</i>	The LQI of the discovery response. Ver.: always
<i>discRequestLqi</i>	The LQI of the discovery request command frame reported by the responding device. Ver.: always

**6.4.2.1798** `void emberAfPluginRf4ceProfileGdpDiscoveryCompleteCallback ( EmberStatus status )`

Gdp Discovery Complete.

This function is called by the RF4CE Profile plugin when the discovery process for the GDP profile has completed.

**Parameters**

<i>status</i>	An <code>EmberStatus</code> value indicating whether the discovery succeeded or the failure reason. Ver.: always
---------------	--

#### 6.4.2.1799 void emberAfPluginRf4ceProfileRemoteControl11DiscoveryCompleteCallback ( EmberStatus status )

Remote Control 1 1 Discovery Complete.

This function is called by the RF4CE Profile plugin when the discovery process for the Remote Control 1.0 or 1.1 profile has completed.

##### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the discovery succeeded or the failure reason. Ver.: always
---------------	--

#### 6.4.2.1800 void emberAfPluginRf4ceProfileZrc20DiscoveryCompleteCallback ( EmberStatus status )

Zrc 2 0 Discovery Complete.

This function is called by the RF4CE Profile plugin when the discovery process for the ZRC 2.0 profile has completed.

##### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the discovery succeeded or the failure reason. Ver.: always
---------------	--

#### 6.4.2.1801 void emberAfPluginRf4ceProfileMsoDiscoveryCompleteCallback ( EmberStatus status )

Mso Discovery Complete.

This function is called by the RF4CE Profile plugin when the discovery process for the MSO profile has completed.

##### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the discovery succeeded or the failure reason. Ver.: always
---------------	--

#### 6.4.2.1802 void emberAfPluginRf4ceProfileGdpAutoDiscoveryResponseCompleteCallback ( EmberStatus status, const EmberEUI64 \*srcIEEEAddr, uint8\_t nodeCapabilities, const EmberRf4ceVendorInfo \*vendorInfo, const EmberRf4ceApplicationInfo \*applInfo, uint8\_t searchDevType )

Gdp Auto Discovery Response Complete.

This function is called by the RF4CE Profile plugin when the auto discovery response process for the GDP profile has completed.

**Parameters**

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the discovery succeeded or the failure reason. Ver.: always
<i>srcIEEEAddr</i>	The IEEE address of the node from which the discovery request command frame was received. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>nodeCapabilities</i>	The node capabilities of the node that issued the discovery request. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>vendorInfo</i>	A pointer to an ::EmberRf4ceVendorInfo struct containing the vendor information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>appInfo</i>	A pointer to an ::EmberRf4ceApplicationInfo struct containing the application information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>searchDevType</i>	The device type being discovered. If this is 0xFF, any type is being requested. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always

```
6.4.2.1803 void emberAfPluginRf4ceProfileRemoteControl11AutoDiscoveryResponseCompleteCallback (
    EmberStatus status, const EmberEUI64 srcIEEEAddr, uint8_t nodeCapabilities, const
    EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t
    searchDevType )
```

Remote Control 1 1 Auto Discovery Response Complete.

This function is called by the RF4CE Profile plugin when the auto discovery response process for the Remote Control 1.0 or 1.1 profile has completed.

**Parameters**

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the discovery succeeded or the failure reason. Ver.: always
<i>srcIEEEAddr</i>	The IEEE address of the node from which the discovery request command frame was received. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>nodeCapabilities</i>	The node capabilities of the node that issued the discovery request. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>vendorInfo</i>	A pointer to an ::EmberRf4ceVendorInfo struct containing the vendor information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>appInfo</i>	A pointer to an ::EmberRf4ceApplicationInfo struct containing the application information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>searchDevType</i>	The device type being discovered. If this is 0xFF, any type is being requested. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always

```
6.4.2.1804 void emberAfPluginRf4ceProfileZrc20AutoDiscoveryResponseCompleteCallback (
    EmberStatus status, const EmberEUI64 srcIEEEAddr, uint8_t nodeCapabilities, const
    EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t
    searchDevType )
```

Zrc 2 0 Auto Discovery Response Complete.

This function is called by the RF4CE Profile plugin when the auto discovery response process for the ZRC 2.0 profile has completed.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the discovery succeeded or the failure reason. Ver.: always
<i>srcIEEEAddr</i>	The IEEE address of the node from which the discovery request command frame was received. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>nodeCapabilities</i>	The node capabilities of the node that issued the discovery request. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>vendorInfo</i>	A pointer to an ::EmberRf4ceVendorInfo struct containing the vendor information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>appInfo</i>	A pointer to an ::EmberRf4ceApplicationInfo struct containing the application information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>searchDevType</i>	The device type being discovered. If this is 0xFF, any type is being requested. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always

```
6.4.2.1805 void emberAfPluginRf4ceProfileMsoAutoDiscoveryResponseCompleteCallback (
    EmberStatus status, const EmberEUI64 srcIEEEAddr, uint8_t nodeCapabilities, const
    EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t
    searchDevType )
```

Mso Auto Discovery Response Complete.

This function is called by the RF4CE Profile plugin when the auto discovery response process for the MSO profile has completed.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the discovery succeeded or the failure reason. Ver.: always
<i>srcIEEEAddr</i>	The IEEE address of the node from which the discovery request command frame was received. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>nodeCapabilities</i>	The node capabilities of the node that issued the discovery request. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>vendorInfo</i>	A pointer to an ::EmberRf4ceVendorInfo struct containing the vendor information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>appInfo</i>	A pointer to an ::EmberRf4ceApplicationInfo struct containing the application information of the node that issued the discovery request. This parameter is non-NULL only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always
<i>searchDevType</i>	The device type being discovered. If this is 0xFF, any type is being requested. This parameter is meaningful only if the status parameter is <a href="#">EMBER_SUCCESS</a> . Ver.: always

**6.4.2.1806** `bool emberAfPluginRf4ceProfileGdpPairRequestCallback ( EmberStatus status, uint8_t pairingIndex, const EmberEUI64 sourceeeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t keyExchangeTransferCount )`

Gdp Pair Request.

This function is called by the RF4CE Profile plugin when a pair request for the GDP profile is received.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing is a new pairing, a duplicate or if the pairing table is full. Ver.: always
<i>pairingIndex</i>	The index of the entry that will be used by the stack for the pairing link. Ver.: always
<i>sourceeeeAddr</i>	The source IEEE address of the incoming pair request. Ver.: always
<i>nodeCapabilities</i>	The node capabilities of the node that issued the pair request. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always
<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>keyExchangeTransferCount</i>	The number of transfers to be used to exchange the link key with the pairing originator. Ver.: always

**6.4.2.1807** `bool emberAfPluginRf4ceProfileRemoteControl11PairRequestCallback ( EmberStatus status, uint8_t pairingIndex, const EmberEUI64 sourceeeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t keyExchangeTransferCount )`

Remote Control 1 1 Pair Request.

This function is called by the RF4CE Profile plugin when a pair request for the Remote Control 1.0 or 1.1 profile is received.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing is a new pairing, a duplicate or if the pairing table is full. Ver.: always
<i>pairingIndex</i>	The index of the entry that will be used by the stack for the pairing link. Ver.: always
<i>sourceeeeAddr</i>	The source IEEE address of the incoming pair request. Ver.: always
<i>nodeCapabilities</i>	The node capabilities of the node that issued the pair request. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always
<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>keyExchangeTransferCount</i>	The number of transfers to be used to exchange the link key with the pairing originator. Ver.: always

**6.4.2.1808** `bool emberAfPluginRf4ceProfileZrc20PairRequestCallback ( EmberStatus status, uint8_t pairingIndex, const EmberEUI64 sourceeeeAddr, uint8_t nodeCapabilities, const EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t keyExchangeTransferCount )`

Zrc 2 0 Pair Request.

This function is called by the RF4CE Profile plugin when a pair request for the ZRC 2.0 profile is received.

**Parameters**

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing is a new pairing, a duplicate or if the pairing table is full. Ver.: always
<i>pairingIndex</i>	The index of the entry that will be used by the stack for the pairing link. Ver.: always
<i>sourceIeeeAddr</i>	The source IEEE address of the incoming pair request. Ver.: always
<i>node-Capabilities</i>	The node capabilities of the node that issued the pair request. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always
<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>keyExchange-TransferCount</i>	The number of transfers to be used to exchange the link key with the pairing originator. Ver.: always

```
6.4.2.1809 bool emberAfPluginRf4ceProfileMsoPairRequestCallback ( EmberStatus status, uint8_t
                                                               pairingIndex, const EmberEUI64 sourceIeeeAddr, uint8_t nodeCapabilities, const
                                                               EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo * appInfo, uint8_t
                                                               keyExchangeTransferCount )
```

Mso Pair Request.

This function is called by the RF4CE Profile plugin when a pair request for the MSO profile is received.

**Parameters**

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing is a new pairing, a duplicate or if the pairing table is full. Ver.: always
<i>pairingIndex</i>	The index of the entry that will be used by the stack for the pairing link. Ver.: always
<i>sourceIeeeAddr</i>	The source IEEE address of the incoming pair request. Ver.: always
<i>node-Capabilities</i>	The node capabilities of the node that issued the pair request. Ver.: always
<i>vendorInfo</i>	The vendor information of the requesting device. Ver.: always
<i>appInfo</i>	The application information of the requesting device. Ver.: always
<i>keyExchange-TransferCount</i>	The number of transfers to be used to exchange the link key with the pairing originator. Ver.: always

```
6.4.2.1810 void emberAfPluginRf4ceProfileGdpPairCompleteCallback ( EmberStatus status, uint8_t
                                                               pairingIndex, const EmberRf4ceVendorInfo * vendorInfo, const EmberRf4ceApplicationInfo *
                                                               appInfo )
```

Gdp Pair Complete.

This function is called by the RF4CE Profile plugin when the pairing process for the GDP profile has completed.

**Parameters**

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing succeeded or the failure reason. Ver.: always
<i>pairingIndex</i>	The index of the pairing table entry corresponding to the pairing link that was established during the pairing process. Ver.: always
<i>vendorInfo</i>	The vendor information of the peer device. Ver.: always
<i>appInfo</i>	The application information of the peer device. Ver.: always

**6.4.2.1811 void emberAfPluginRf4ceProfileRemoteControl11PairCompleteCallback ( EmberStatus status, uint8\_t pairingIndex, const EmberRf4ceVendorInfo \* vendorInfo, const EmberRf4ceApplicationInfo \* appInfo )**

Remote Control 1 1 Pair Complete.

This function is called by the RF4CE Profile plugin when the pairing process for the Remote Control 1.0 or 1.1 profile has completed.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing succeeded or the failure reason. Ver.: always
<i>pairingIndex</i>	The index of the pairing table entry corresponding to the pairing link that was established during the pairing process. Ver.: always
<i>vendorInfo</i>	The vendor information of the peer device. Ver.: always
<i>appInfo</i>	The application information of the peer device. Ver.: always

**6.4.2.1812 void emberAfPluginRf4ceProfileZrc20PairCompleteCallback ( EmberStatus status, uint8\_t pairingIndex, const EmberRf4ceVendorInfo \* vendorInfo, const EmberRf4ceApplicationInfo \* appInfo )**

Zrc 2 0 Pair Complete.

This function is called by the RF4CE Profile plugin when the pairing process for the ZRC 2.0 profile has completed.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing succeeded or the failure reason. Ver.: always
<i>pairingIndex</i>	The index of the pairing table entry corresponding to the pairing link that was established during the pairing process. Ver.: always
<i>vendorInfo</i>	The vendor information of the peer device. Ver.: always
<i>appInfo</i>	The application information of the peer device. Ver.: always

**6.4.2.1813 void emberAfPluginRf4ceProfileMsoPairCompleteCallback ( EmberStatus status, uint8\_t pairingIndex, const EmberRf4ceVendorInfo \* vendorInfo, const EmberRf4ceApplicationInfo \* appInfo )**

Mso Pair Complete.

This function is called by the RF4CE Profile plugin when the pairing process for the MSO profile has completed.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating whether the pairing succeeded or the failure reason. Ver.: always
<i>pairingIndex</i>	The index of the pairing table entry corresponding to the pairing link that was established during the pairing process. Ver.: always
<i>vendorInfo</i>	The vendor information of the peer device. Ver.: always
<i>appInfo</i>	The application information of the peer device. Ver.: always

**6.4.2.1814 void emberAfPluginRf4ceZrc11PairingCompleteCallback ( EmberStatus *status*, uint8\_t *pairingIndex*, const EmberEUI64 *eui64*, const EmberRf4ceVendorInfo \* *vendorInfo*, const EmberRf4ceApplicationInfo \* *applicationInfo* )**

Pairing Complete.

This function is called by the RF4CE ZRC plugin when the push-button pairing operation completes. If status is [EMBER\\_SUCCESS](#), pairing was successful and pairingIndex indicates the index in the pairing table for the remote node while eui64, vendorInfo, and applicationInfo contain information about the remote node itself. Otherwise, status indicates the reason for failure and the other arguments are meaningless.

#### Parameters

<i>status</i>	The status of the push-button pairing operation. Ver.: always
<i>pairingIndex</i>	The index of the pairing entry. Ver.: always
<i>eui64</i>	The <a href="#">EmberEUI64</a> of the remote node. Ver.: always
<i>vendorInfo</i>	The vendor information of the remote node. Ver.: always
<i>applicationInfo</i>	The application information of the remote node. Ver.: always

**6.4.2.1815 void emberAfPluginRf4ceZrc11UserControlCallback ( const EmberAfRf4ceZrcUserControlRecord \* *record* )**

User Control.

This function is called by the RF4CE ZRC plugin when a user control starts or stops. If the type of the record is [EMBER\\_AF\\_RF4CE\\_ZRC\\_COMMAND\\_USER\\_CONTROL\\_PRESSED](#), the application should execute the requested operation repeatedly at some application-specific rate. When the repetition should stop, the plugin will call the callback again with the type set to [EMBER\\_AF\\_RF4CE\\_ZRC\\_COMMAND\\_USER\\_CONTROL\\_RELEASED](#). [EMBER\\_AF\\_RF4CE\\_ZRC\\_COMMAND\\_USER\\_CONTROL\\_REPEAT](#) is a special case of [EMBER\\_AF\\_RF4CE\\_ZRC\\_COMMAND\\_USER\\_CONTROL\\_PRESSED](#) and means that the pressed command from the originator was not received and that the originator is still triggering the action. The application should process a repeat type the same as a pressed type, but may wish to perform additional operations to compensate for missed commands.

#### Parameters

<i>record</i>	The user control record. Ver.: always
---------------	---------------------------------------

**6.4.2.1816 void emberAfPluginRf4ceZrc11CommandDiscoveryResponseCallback ( EmberStatus *status*, const EmberAfRf4ceZrcCommandsSupported \* *commandsSupported* )**

Command Discovery Response.

This function is called by the RF4CE ZRC plugin when a Command Discovery Response message is received by the device.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating that the command discovery process succeeded or the failure reason. Ver.: always
<i>commands-Supported</i>	The 256-bit field indicating which user control commands are supported. Ver.: always

**6.4.2.1817 void emberAfPluginRf4ceZrc20ActionCallback ( const EmberAfRf4ceZrcActionRecord \* record )**

Action.

This function is called by the RF4CE ZRC 2.0 plugin when an action starts or stops. If the action type of the action record is **EMBER\_AF\_RF4CE\_ZRC\_ACTION\_TYPE\_START**, the application should execute the requested operation repeatedly at some application-specific rate. When the repetition should stop, the plugin will call the callback again with the action type set to **EMBER\_AF\_RF4CE\_ZRC\_ACTION\_TYPE\_STOP**. **EMBER\_AF\_RF4CE\_ZRC\_ACTION\_TYPE\_REPEAT** is a special case of **EMBER\_AF\_RF4CE\_ZRC\_ACTION\_TYPE\_START** and means that the start action from the originator was not received and that the originator is still triggering the action. The application should process a repeat type the same as a start type, but may wish to perform additional operations to compensate for missed actions. If the action type is **EMBER\_AF\_RF4CE\_ZRC\_ACTION\_TYPE\_ATOMIC**, the application should execute the operation once. The plugin will not call the callback again for an atomic action.

#### Parameters

<i>record</i>	The action record. Ver.: always
---------------	---------------------------------

**6.4.2.1818 void emberAfPluginRf4ceZrc20HaActionCallback ( const EmberAfRf4ceZrcActionRecord \* record )**

Ha Action.

This function is called by the RF4CE ZRC 2.0 plugin when an HA action starts or stops. TODO

#### Parameters

<i>record</i>	The action record. Ver.: always
---------------	---------------------------------

**6.4.2.1819 void emberAfPluginRf4ceZrc20LegacyCommandDiscoveryCompleteCallback ( EmberStatus status, const EmberAfRf4ceZrcCommandsSupported \* commandsSupported )**

Legacy Command Discovery Complete.

This function is called by the RF4CE ZRC plugin upon completion of the legacy ZRC 1.1 command discovery process.

#### Parameters

<i>status</i>	An <b>EmberStatus</b> value indicating that the command discovery process succeeded or the failure reason. Ver.: always
<i>commands-Supported</i>	The 256-bit field indicating which user control commands are supported. Ver.: always

**6.4.2.1820 void emberAfPluginRf4ceZrc20ActionMappingsNegotiationCompleteCallback ( EmberStatus status )**

Action Mappings Negotiation Complete.

This function is called by the RF4CE ZRC plugin upon completion of the action mapping negotiation procedure.

#### Parameters

<i>status</i>	An <a href="#">EmberStatus</a> value indicating that the action mappings negotiation succeeded or the failure reason. Ver.: always
---------------	--

**6.4.2.1821 void emberAfPluginRf4ceZrc20IncomingMappableActionCallback ( uint8\_t pairingIndex, uint16\_t entryIndex, EmberAfRf4ceZrcMappableAction \* mappableAction )**

Incoming Mappable Action.

This function is called by an RF4CE ZRC action mapping server upon receiving a mappable action from an already bound action mapping client.

#### Parameters

<i>pairingIndex</i>	The index of the pairing the mappable action was received from. Ver.: always
<i>entryIndex</i>	The index of the mappable action entry. Ver.: always
<i>mappableAction</i>	A pointer to the mappable action struct that was received. Ver.: always

**6.4.2.1822 EmberStatus emberAfPluginRf4ceZrc20GetMappableActionCallback ( uint8\_t pairingIndex, uint16\_t entryIndex, EmberAfRf4ceZrcMappableAction \* mappableAction )**

Get Mappable Action.

This function is called by an RF4CE ZRC action mapping client or server to retrieve the mappable action corresponding to the passed entry index.

#### Parameters

<i>pairingIndex</i>	The index of the pairing the mappable action was received from. Ver.: always
<i>entryIndex</i>	The index of the mappable action entry. Ver.: always
<i>mappableAction</i>	A pointer to the mappable action struct to be populated. Ver.: always

**6.4.2.1823 uint16\_t emberAfPluginRf4ceZrc20GetMappableActionCountCallback ( uint8\_t pairingIndex )**

Get Mappable Action Count.

This function is called by an RF4CE ZRC action mapping server or client to retrieve the number of entries currently stored in the mappable action table for a certain pairing.

#### Parameters

<i>pairingIndex</i>	The index of the pairing entry. Ver.: always
---------------------	--

**6.4.2.1824 void emberAfPluginRf4ceZrc20IncomingActionMappingCallback ( uint8\_t pairingIndex, uint16\_t entryIndex, EmberAfRf4ceZrcActionMapping \* actionMapping )**

Incoming Action Mapping.

This function is called by an RF4CE ZRC action mapping client upon receiving an action mapping pulled from an already bound action mapping server.

#### Parameters

<i>pairingIndex</i>	The index of the pairing the action mapping was received from. Ver.: always
<i>entryIndex</i>	The index of the action mapping entry. Ver.: always
<i>actionMapping</i>	A pointer to the action mapping struct that was received. Ver.: always

**6.4.2.1825 EmberStatus emberAfPluginRf4ceZrc20GetActionMappingCallback ( uint8\_t pairingIndex, uint16\_t entryIndex, EmberAfRf4ceZrcActionMapping \* actionMapping )**

Get Action Mapping.

This function is called by an RF4CE ZRC action mapping server to retrieve the action mapping corresponding to the mappable action indicated by the passed entry index.

#### Parameters

<i>pairingIndex</i>	The index of the pairing the mappable action was received from. Ver.: always
<i>entryIndex</i>	The index of the mappable action entry. Ver.: always
<i>actionMapping</i>	A pointer to the action mapping struct to be populated. Ver.: always

**6.4.2.1826 EmberStatus emberAfPluginRf4ceZrc20SetActionMappingCallback ( uint8\_t pairingIndex, uint16\_t entryIndex, EmberAfRf4ceZrcActionMapping \* actionMapping )**

Set Action Mapping.

This function is called by an RF4CE ZRC action mapping server to retrieve the action mapping corresponding to the mappable action indicated by the passed entry index.

#### Parameters

<i>pairingIndex</i>	The index of the pairing the mappable action was received from. Ver.: always
<i>entryIndex</i>	The index of the mappable action entry. Ver.: always
<i>actionMapping</i>	A pointer to the action mapping struct to be populated. Ver.: always

**6.4.2.1827 void emberAfPluginRf4ceZrc20HomeAutomationSupportedAnnouncementCompleteCallback ( EmberStatus status )**

Home Automation Supported Announcement Complete.

This function is called by the RF4CE ZRC plugin upon completion of the Home Automation supported announcement procedure.

**Parameters**

<i>status</i>	An <a href="#">EmberStatus</a> value indicating that the Home Automation supported announcement procedure succeeded or the failure reason. Ver.: always
---------------	---

**6.4.2.1828** void **emberAfPluginRf4ceZrc20IncomingHomeAutomationSupportedCallback** ( uint8\_t *pairingIndex*, uint8\_t *haInstanceId*, EmberAfRf4ceZrcHomeAutomationSupported \* *haSupported* )

Incoming Home Automation Supported.

This function is called by an RF4CE ZRC Home Automation actions recipient upon receiving a Home Automation supported attribute from an already bound Home Automation originator.

**Parameters**

<i>pairingIndex</i>	The index of the pairing the Home Automation supported attribute was received from. Ver.: always
<i>haInstanceId</i>	The instance ID the Home Automation supported attribute refers to. Ver.: always
<i>haSupported</i>	A pointer to the Home Automation supported struct that was received. Ver.: always

**6.4.2.1829** EmberStatus **emberAfPluginRf4ceZrc20GetHomeAutomationSupportedCallback** ( uint8\_t *pairingIndex*, uint8\_t *haInstanceId*, EmberAfRf4ceZrcHomeAutomationSupported \* *haSupported* )

Get Home Automation Supported.

This function is called by an RF4CE ZRC Home Automation actions originator to retrieve the Home Automation supported attribute corresponding to the passed entry index.

**Parameters**

<i>pairingIndex</i>	The index of the pairing the Home Automation supported attribute was received from. Ver.: always
<i>haInstanceId</i>	The instance ID the Home Automation supported attribute refers to. Ver.: always
<i>haSupported</i>	A pointer to the Home Automation supported struct to be populated. Ver.: always

**6.4.2.1830** EmberAfRf4ceGdpAttributeStatus **emberAfPluginRf4ceZrc20GetHomeAutomationAttributeCallback** ( uint8\_t *pairingIndex*, uint8\_t *haInstanceId*, uint8\_t *haAttributelId*, EmberAfRf4ceZrcHomeAutomationAttribute \* *haAttribute* )

Get Home Automation Attribute.

This function is called by an RF4CE ZRC Home Automation actions recipient upon receiving a Pull attribute command from a Home Automation actions originator to retrieve the contents of a Home Automation attribute. The contents in the haAttribute struct will be included in the response only if this callback returned an [EmberAfRf4ceGdpAttributeStatus](#) value of [EMBER\\_AF\\_RF4CE\\_GDP\\_ATTRIBUTE\\_STATUS\\_SUCCESS](#).

**Parameters**

<i>pairingIndex</i>	The index of the pairing entry corresponding to the Home Automation actions originator. Ver.: always
---------------------	--

<i>haInstanceId</i>	The Home Automation instance ID. Ver.: always
<i>haAttributeId</i>	The Home Automation attribute ID. Ver.: always
<i>haAttribute</i>	A pointer to an <a href="#">EmberAfRf4ceZrcHomeAutomationAttribute</a> struct to be populated. Ver.: always

**6.4.2.1831 void emberAfPluginRf4ceZrc20PullHomeAutomationAttributeCompleteCallback ( EmberAfRf4ceGdpAttributeStatus *responseStatus*, EmberAfRf4ceZrcHomeAutomationAttribute \* *haAttribute* )**

Pull Home Automation Attribute Complete.

This function is called by an RF4CE ZRC Home Automation actions originator as asynchronous response to a successful call to the [emberAfRf4ceZrc20PullHomeAutomationAttribute\(\)](#) API. This callback is also invoked upon receiving pull attributes responses as result of an initial client notification request for Home Automation attribute pull from the Home Automation actions server.

#### Parameters

<i>responseStatus</i>	An <a href="#">EmberAfRf4ceGdpAttributeStatus</a> value indication whether the attribute was successfully retrieved or the reason of failure. Ver.: always
<i>haAttribute</i>	A pointer to an <a href="#">EmberAfRf4ceZrcHomeAutomationAttribute</a> struct carrying the contents of the retrieved attribute. This parameter is meaningful only if <i>responseStatus</i> is <a href="#">EMBER_AF_RF4CE_GDP_ATTRIBUTE_STATUS_SUCCESS</a> . Ver.: always

**6.4.2.1832 void emberAfPluginRf4ceZrc20HaServerHaActionSentCallback ( EmberOutgoingMessage-Type *type*, uint16\_t *indexOrDestination*, EmberApsFrame \* *apsFrame*, uint16\_t *msgLen*, uint8\_t \* *message*, EmberStatus *status* )**

Ha Action Sent.

This function is called by the HA server plugin once the HA action is sent to the ZCL network.

#### Parameters

<i>type</i>	Outgoing message type. Ver.: always
<i>indexOrDestination</i>	Binding index. Ver.: always
<i>apsFrame</i>	APS frame pointer. Ver.: always
<i>msgLen</i>	Message length. Ver.: always
<i>message</i>	Message pointer. Ver.: always
<i>status</i>	Status. Ver.: always

**6.4.2.1833 uint16\_t emberAfPluginSimpleMeteringClientRequestMirrorCallback ( EmberEUI64 *requestingDeviceeeeAddress* )**

Request Mirror.

This function is called by the Simple Metering client plugin whenever a Request Mirror command is received. The application should return the endpoint to which the mirror has been assigned. If no mirror could be assigned, the application should return 0xFFFF.

**Parameters**

<i>requesting-DeviceIeee-Address</i>	Ver.: always
--------------------------------------	--------------

**6.4.2.1834 uint16\_t emberAfPluginSimpleMeteringClientRemoveMirrorCallback ( EmberEUI64 requestingDeviceIeeeAddress )**

Remove Mirror.

This function is called by the Simple Metering client plugin whenever a Remove Mirror command is received. The application should return the endpoint on which the mirror has been removed. If the mirror could not be removed, the application should return 0xFFFF.

**Parameters**

<i>requesting-DeviceIeee-Address</i>	Ver.: always
--------------------------------------	--------------

**6.4.2.1835 void emberAfPluginSimpleMeteringServerProcessNotificationFlagsCallback ( uint16\_t attributeId, uint32\_t attributeValue )**

Process Notification Flags.

This function is called by the metering server plugin when any of the Notification Attribute Set attributes are read or reported by the metering client.

**Parameters**

<i>attributeId</i>	Ver.: always
<i>attributeValue</i>	Ver.: always

**6.4.2.1836 void emberAfPluginSleepyMessageQueueMessageTimedOutCallback ( uint8\_t sleepyMsgId )**

Message Timed Out.

This function is called by the sleepy message queue when a message times out. The plugin will invalidate the entry in the queue after giving the application a chance to perform any actions on the timed-out message.

**Parameters**

<i>sleepyMsgId</i>	Ver.: always
--------------------	--------------

**6.4.2.1837 bool emberAfPluginStandaloneBootloaderClientAllowIncomingMessageCallback ( EmberEUI64 sourceEui64, uint8\_t command )**

Allow Incoming Message.

Allows the application to control whether the plugin can respond to incoming bootload messages.

**Parameters**

<i>sourceEui64</i>	The EUI64 of the sending node. Ver.: always
<i>command</i>	The incoming command ID Ver.: always

**6.4.2.1838 bool emberAfPluginStandaloneBootloaderClientAllowBootloadLaunchCallback ( EmberEUI64 *sourceEui64* )**

Allow Bootload Launch.

This function is a callback when the client is being told to launch the standalone bootloader. This is done after authentication has completed successfully.

**Parameters**

<i>sourceEui64</i>	The EUI64 of the node requesting the bootload. Ver.: always
--------------------	---

**6.4.2.1839 bool emberAfPluginStandaloneBootloaderCommonIncomingMessageCallback ( EmberEUI64 *longId*, uint8\_t *length*, uint8\_t \* *message* )**

Incoming Message.

Indicates an Ember Bootload message has been received by the Standalone Bootloader Common plugin.

**Parameters**

<i>longId</i>	The sender's EUI64 address Ver.: always
<i>length</i>	The length of the incoming message. Ver.: always
<i>message</i>	The array of bytes for the message. Ver.: always

**6.4.2.1840 void emberAfPluginStandaloneBootloaderServerQueryResponseCallback ( bool *queryWasBroadcast*, const EmberAfStandaloneBootloaderQueryresponseData \* *queryData* )**

Query Response.

Allows the application to control whether the plugin can respond to incoming bootload messages.

**Parameters**

<i>queryWasBroadcast</i>	Boolean indicating whether the query was broadcast or unicast Ver.: always
<i>queryData</i>	A data structure providing the details about the local device's bootloader. Ver.: always

**6.4.2.1841 void emberAfPluginStandaloneBootloaderServerFinishedCallback ( bool *success* )**

Finished.

Notifies the application when the standalone bootload has completed, successfully or otherwise.

**Parameters**

<i>success</i>	Boolean indicating the success or failure of the bootload. Ver.: always
----------------	---

**6.4.2.1842 void emberAfPluginTunnelingClientTunnelOpenedCallback ( uint8\_t *tunnelIndex*, EmberAfPluginTunnelingClientStatus *tunnelStatus*, uint16\_t *maximumIncomingTransferSize* )**

Tunnel Opened.

This function is called by the Tunneling client plugin whenever a tunnel is opened. Clients may open tunnels by sending a Request Tunnel command.

**Parameters**

<i>tunnelIndex</i>	The index of the tunnel that has been opened. Ver.: always
<i>tunnelStatus</i>	The status of the request. Ver.: always
<i>maximum-Incoming-TransferSize</i>	The maximum incoming transfer size of the server. Ver.: always

**6.4.2.1843 void emberAfPluginTunnelingClientDataReceivedCallback ( uint8\_t *tunnelIndex*, uint8\_t \* *data*, uint16\_t *dataLen* )**

Data Received.

This function is called by the Tunneling client plugin whenever data is received from a server through a tunnel.

**Parameters**

<i>tunnelIndex</i>	The index of the tunnel through which the data was received. Ver.: always
<i>data</i>	Buffer containing the raw octets of the data. Ver.: always
<i>dataLen</i>	The length in octets of the data. Ver.: always

**6.4.2.1844 void emberAfPluginTunnelingClientDataErrorCallback ( uint8\_t *tunnelIndex*, EmberAfTunnelingTransferDataStatus *transferDataStatus* )**

Data Error.

This function is called by the Tunneling client plugin whenever a data error occurs on a tunnel. Errors occur if a device attempts to send data on tunnel that is no longer active or if the tunneling does not belong to the device.

**Parameters**

<i>tunnelIndex</i>	The index of the tunnel on which this data error occurred. Ver.: always
<i>transferData-Status</i>	The error that occurred. Ver.: always

#### 6.4.2.1845 void emberAfPluginTunnelingClientTunnelClosedCallback ( uint8\_t tunnelIndex )

Tunnel Closed.

This function is called by the Tunneling client plugin whenever a server sends a notification that it preemptively closed an inactive tunnel. Servers are not required to notify clients of tunnel closures, so applications cannot rely on this callback being called for all tunnels.

##### Parameters

<i>tunnelIndex</i>	The index of the tunnel that has been closed. Ver.: always
--------------------	--

#### 6.4.2.1846 void emberAfPluginTunnelingClientTransferDataFailureCallback ( uint16\_t indexOfDestination, EmberApsFrame \* apsFrame, uint16\_t msgLen, uint8\_t \* message, EmberStatus status )

Transfer Data Failure.

This function is called when a TransferData command fails to be sent to the intended destination.

##### Parameters

<i>indexOf-Destination</i>	The index or destination address of the TransferData command. Ver.: always
<i>apsFrame</i>	The <a href="#">EmberApsFrame</a> of the command. Ver.: always
<i>msgLen</i>	The length of the payload sent in the command. Ver.: always
<i>message</i>	The payload that was sent in the command. Ver.: always
<i>status</i>	The non-success status code from the transmission of the command. Ver.: always

#### 6.4.2.1847 bool emberAfPluginTunnelingServerIsProtocolSupportedCallback ( uint8\_t protocolId, uint16\_t manufacturerCode )

Is Protocol Supported.

This function is called by the Tunneling server plugin whenever a Request Tunnel command is received. The application should return true if the protocol is supported and false otherwise.

##### Parameters

<i>protocolId</i>	The identifier of the metering communication protocol for which the tunnel is requested. Ver.: always
<i>manufacturer-Code</i>	The manufacturer code for manufacturer-defined protocols or 0xFFFF in unused. Ver.: always

#### 6.4.2.1848 void emberAfPluginTunnelingServerTunnelOpenedCallback ( uint16\_t tunnelIndex, uint8\_t protocolId, uint16\_t manufacturerCode, bool flowControlSupport, uint16\_t maximumIncomingTransferSize )

Tunnel Opened.

This function is called by the Tunneling server plugin whenever a tunnel is opened. Clients may open tunnels by sending a Request Tunnel command.

**Parameters**

<i>tunnelIndex</i>	The index to the tunnel table entry that has been opened. Ver.: always
<i>protocolId</i>	The identifier of the metering communication protocol for the tunnel. Ver.: always
<i>manufacturer-Code</i>	The manufacturer code for manufacturer-defined protocols or 0xFFFF in unused. Ver.: always
<i>flowControl-Support</i>	true if flow control support is requested or false if it is not. Ver.: always
<i>maximum-Incoming-TransferSize</i>	The maximum incoming transfer size of the client. Ver.: always

**6.4.2.1849 void emberAfPluginTunnelingServerDataReceivedCallback ( uint16\_t *tunnelIndex*, uint8\_t \* *data*, uint16\_t *dataLen* )**

Data Received.

This function is called by the Tunneling server plugin whenever data is received from a client through a tunnel.

**Parameters**

<i>tunnelIndex</i>	The identifier of the tunnel through which the data was received. Ver.: always
<i>data</i>	Buffer containing the raw octets of the data. Ver.: always
<i>dataLen</i>	The length in octets of the data. Ver.: always

**6.4.2.1850 void emberAfPluginTunnelingServerErrorCallback ( uint16\_t *tunnelIndex*, EmberAfTunnelingTransferDataStatus *transferDataStatus* )**

Data Error.

This function is called by the Tunneling server plugin whenever a data error occurs on a tunnel. Errors occur if a device attempts to send data on tunnel that is no longer active or if the tunneling does not belong to the device.

**Parameters**

<i>tunnelIndex</i>	The identifier of the tunnel on which this data error occurred. Ver.: always
<i>transferData-Status</i>	The error that occurred. Ver.: always

**6.4.2.1851 void emberAfPluginTunnelingServerTunnelClosedCallback ( uint16\_t *tunnelIndex*, bool *clientInitiated* )**

Tunnel Closed.

This function is called by the Tunneling server plugin whenever a tunnel is closed. Clients may close tunnels by sending a Close Tunnel command. The server can preemptively close inactive tunnels after a timeout.

**Parameters**

<i>tunnelIndex</i>	The identifier of the tunnel that has been closed. Ver.: always
<i>clientInitiated</i>	true if the client initiated the closing of the tunnel or false if the server closed the tunnel due to inactivity. Ver.: always

**6.4.2.1852 bool emberAfPluginUpdateTcLinkKeyStatusCallback ( EmberKeyStatus *keyStatus* )**

Status.

This callback is fired when the Update Link Key exchange process is updated with a status from the stack. Implementations should return true if they are done receiving updates from the stack.

**Parameters**

<i>keyStatus</i>	An <a href="#">EmberKeyStatus</a> value describing the success or failure of the key exchange process. Ver.: always
------------------	---

**6.4.2.1853 void emberAfPluginZllCommissioningInitialSecurityStateCallback ( EmberZllInitialSecurityState \* *securityState* )**

Initial Security State.

This function is called by the ZLL Commissioning plugin to determine the initial security state to be used by the device. The application must populate the ::EmberZllInitialSecurityState structure with a configuration appropriate for the network being formed, joined, or started. Once the device forms, joins, or starts a network, the same security configuration will remain in place until the device leaves the network.

**Parameters**

<i>securityState</i>	The security configuration to be populated by the application and ultimately set in the stack. Ver.: always
----------------------	---

**6.4.2.1854 void emberAfPluginZllCommissioningTouchLinkCompleteCallback ( const EmberZllNetwork \* *networkInfo*, uint8\_t *deviceInformationRecordCount*, const EmberZllDeviceInfoRecord \* *deviceInformationRecordList* )**

Touch Link Complete.

This function is called by the ZLL Commissioning plugin when touch linking completes.

**Parameters**

<i>networkInfo</i>	The ZigBee and ZLL-specific information about the network and target. Ver.: always
<i>deviceInformationRecordCount</i>	The number of sub-device information records for the target. Ver.: always
<i>deviceInformationRecordList</i>	The list of sub-device information records for the target. Ver.: always

**6.4.2.1855 void emberAfPluginZllCommissioningTouchLinkFailedCallback ( EmberAfZllCommissioningStatus *status* )**

Touch Link Failed.

This function is called by the ZLL Commissioning plugin if touch linking fails.

#### Parameters

<i>status</i>	The reason the touch link failed. Ver.: always
---------------	--

**6.4.2.1856 uint8\_t emberAfPluginZllCommissioningGroupIdentifierCountCallback ( uint8\_t *endpoint* )**

Group Identifier Count.

This function is called by the ZLL Commissioning plugin to determine the number of group identifiers in use by a specific endpoint on the device. The total number of group identifiers on the device, which are shared by all endpoints, is defined by ::EMBER\_ZLL\_GROUP\_ADDRESSES.

#### Parameters

<i>endpoint</i>	The endpoint for which the group identifier count is requested. Ver.: always
-----------------	--

**6.4.2.1857 bool emberAfPluginZllCommissioningGroupIdentifierCallback ( uint8\_t *endpoint*, uint8\_t *index*, EmberAfPluginZllCommissioningGroupInformationRecord \* *record* )**

Group Identifier.

This function is called by the ZLL Commissioning plugin to obtain information about the group identifiers in use by a specific endpoint on the device. The application should populate the record with information about the group identifier and return true. If no information is available for the given endpoint and index, the application should return false.

#### Parameters

<i>endpoint</i>	The endpoint for which the group identifier is requested. Ver.: always
<i>index</i>	The index of the group on the endpoint. Ver.: always
<i>record</i>	The group information record. Ver.: always

**6.4.2.1858 uint8\_t emberAfPluginZllCommissioningEndpointInformationCountCallback ( uint8\_t *endpoint* )**

Endpoint Information Count.

This function is called by the ZLL Commissioning plugin to determine the number of remote endpoints controlled by a specific endpoint on the local device.

#### Parameters

<i>endpoint</i>	The local endpoint for which the remote endpoint information count is requested. Ver.: always
-----------------	---

**6.4.2.1859 bool emberAfPluginZllCommissioningEndpointInformationCallback ( uint8\_t *endpoint*, uint8\_t *index*, EmberAfPluginZllCommissioningEndpointInformationRecord \* *record* )**

Endpoint Information.

This function is called by the ZLL Commissioning plugin to obtain information about the remote endpoints controlled by a specific endpoint on the local device. The application should populate the record with information about the remote endpoint and return true. If no information is available for the given endpoint and index, the application should return false.

**Parameters**

<i>endpoint</i>	The local endpoint for which the remote endpoint information is requested. Ver.: always
<i>index</i>	The index of the remote endpoint information on the local endpoint. Ver.: always
<i>record</i>	The endpoint information record. Ver.: always

**6.4.2.1860 void emberAfPluginZllCommissioningIdentifyCallback ( uint16\_t *durationS* )**

Identify.

This function is called by the ZLL Commissioning plugin to notify the application that it should take an action to identify itself. This typically occurs when an Identify Request is received via inter-PAN messaging.

**Parameters**

<i>durationS</i>	If the duration is zero, the device should exit identify mode. If the duration is 0xFFFF, the device should remain in identify mode for the default time. Otherwise, the duration specifies the length of time in seconds that the device should remain in identify mode. Ver.: always
------------------	--

**6.4.2.1861 void emberAfPluginZllCommissioningResetToFactoryNewCallback ( void )**

Reset To Factory New.

This function is called by the ZLL Commissioning plugin when a request to reset to factory new is received. The plugin will leave the network, reset attributes managed by the framework to their default values, and clear the group and scene tables. The application should perform any other necessary reset-related operations in this callback, including resetting any externally-stored attributes.

**6.4.2.1862 bool emberAfPluginZllCommissioningJoinCallback ( EmberZigbeeNetwork \* *networkFound*, uint8\_t *lqi*, int8\_t *rssi* )**

Join.

This callback is called by the ZLL Commissioning plugin when a joinable network has been found. If the application returns true, the plugin will attempt to join the network. Otherwise, the plugin will ignore the network and continue searching. Applications can use this callback to implement a network blacklist. Note that this callback is not called during touch linking.

**Parameters**

<i>networkFound</i>	Ver.: always
<i>lqi</i>	Ver.: always
<i>rssi</i>	Ver.: always

**6.4.2.1863 EmberAfStatus emberAfPluginZllOnOffServerOffWithEffectCallback ( uint8\_t *endpoint*, uint8\_t *effectId*, uint8\_t *effectVariant* )**

Off With Effect.

This callback is called by the ZLL On/Off Server plugin whenever an OffWithEffect command is received. The application should implement the effect and variant requested in the command and return [EMBER\\_Z-CL\\_STATUS\\_SUCCESS](#) if successful or an appropriate error status otherwise.

**Parameters**

<i>endpoint</i>	Ver.: always
<i>effectId</i>	Ver.: always
<i>effectVariant</i>	Ver.: always

**6.4.2.1864 void emberAfPluginConnectionManagerFinishedCallback ( EmberStatus *status* )**

Network join finished.

This callback is fired when the Connection Manager plugin is finished with the forming or joining process. The result of the operation will be returned in the status parameter.

**Parameters**

<i>status</i>	Ver.: always
---------------	--------------

**6.4.2.1865 void emberAfPluginConnectionManagerStartNetworkSearchCallback ( void )**

Begin searching for network to join.

This function is called by the Connection Manager Plugin when it starts to search a new network. It is normally used to trigger a UI event to notify the user that the device is currently searching for a network.

**6.4.2.1866 void emberAfPluginConnectionManagerLeaveNetworkCallback ( void )**

Leave the currently joined network.

This function is called by the Connection Manager Plugin when the device is about to leave the network. It is normally used to trigger a UI event to notify the user of a network leave.

**6.4.2.1867 bool emberAfPluginIdleSleepOkToSleepCallback ( uint32\_t *durationMs* )**

Ok To Sleep.

This function is called by the Idle/Sleep plugin before sleeping. It is called with interrupts disabled. The application should return true if the device may sleep or false otherwise.

**Parameters**

<i>durationMs</i>	The maximum duration in milliseconds that the device will sleep. Ver.: always
-------------------	---

**6.4.2.1868 void emberAfPluginIdleSleepWakeUpCallback ( uint32\_t *durationMs* )**

Wake Up.

This function is called by the Idle/Sleep plugin after sleeping.

**Parameters**

<i>durationMs</i>	The duration in milliseconds that the device slept. Ver.: always
-------------------	--

**6.4.2.1869 bool emberAfPluginIdleSleepOkToIdleCallback ( void )**

Ok To Idle.

This function is called by the Idle/Sleep plugin before idling. It is called with interrupts disabled. The application should return true if the device may idle or false otherwise.

**6.4.2.1870 void emberAfPluginIdleSleepActiveCallback ( void )**

Active.

This function is called by the Idle/Sleep plugin after idling.

**6.4.2.1871 bool emberAfPluginLowVoltageShutdownOkToShutdownCallback ( uint16\_t *shutdownVoltage* )**

Ok To Shutdown.

This function is called by the Low Voltage Shutdown plugin after the low voltage threshold has been detected but before shutting down the chip (until a full power-on reset is triggered). The application should return true if the device may shutdown or false otherwise. Note that this callback is not the proper place to put logic to be performed just prior to shutdown; that would be the Pre Shutdown Callback. If callback returns false, shutdown check will be performed again in EMBER\_AF\_PLUGIN\_LOW\_VOLTAGE\_SHUTDOWN\_POSTPONE\_DURATION\_MS milliseconds.

**Parameters**

<i>shutdown-Voltage</i>	The voltage (in mV) read from VDD at shutdown time, which can be used to determine the risk in doing any further activities prior to shutdown. Ver.: always
-------------------------	---

**6.4.2.1872 void emberAfPluginLowVoltageShutdownPreShutdownCallback ( uint16\_t *shutdownVoltage* )**

Pre Shutdown.

This function is called by the Low Voltage Shutdown plugin just prior to shutting down, allowing the application to do any last-minute clean-up before the chip goes offline until next reset. (Can't prevent shutdown from this context; use Ok To Shutdown callback for that instead.)

**Parameters**

<i>shutdown-Voltage</i>	The voltage (in mV) read from VDD at shutdown time, which can be used to determine the risk in doing any further activities prior to shutdown. Ver.: always
-------------------------	---

**6.4.2.1873 void emberAfPluginBatteryMonitorDataReadyCallback ( uint16\_t batteryVoltageMilliV )**

Data Ready.

This function is called whenever the battery monitor has generated a new valid battery level

**Parameters**

<i>batteryVoltage-MilliV</i>	The battery voltage, in milli Volts Ver.: always
------------------------------	--

**6.4.2.1874 void emberAfPluginButtonInterfaceButton0PressedShortCallback ( uint16\_t timePressedMs )**

Button0 Pressed Short.

This function returns the number of times a button was short pressed.

**Parameters**

<i>timePressedMs</i>	Time (in ms) button 0 was pressed Ver.: always
----------------------	--

**6.4.2.1875 void emberAfPluginButtonInterfaceButton1PressedShortCallback ( uint16\_t timePressedMs )**

Button1 Pressed Short.

This function returns the number of times a button was short pressed.

**Parameters**

<i>timePressedMs</i>	Time (in ms) button 1 was pressed Ver.: always
----------------------	--

**6.4.2.1876 void emberAfPluginButtonInterfaceButton0PressedLongCallback ( uint16\_t timePressedMs, bool pressedAtReset )**

Button0 Pressed Long.

This function returns the number of times a button was short pressed.

**Parameters**

<i>timePressedMs</i>	Amount of time button 0 was pressed. Ver.: always
<i>pressedAtReset</i>	Was the button pressed at startup. Ver.: always

**6.4.2.1877 void emberAfPluginButtonInterfaceButton1PressedLongCallback ( uint16\_t *timePressedMs*, bool *pressedAtReset* )**

Button1 Pressed Long.

This function returns the number of times a button was short pressed.

#### Parameters

<i>timePressedMs</i>	Amount of time button 1 was pressed. Ver.: always
<i>pressedAtReset</i>	Was the button pressed at startup. Ver.: always

**6.4.2.1878 void emberAfPluginButtonInterfaceButton0PressingCallback ( void )**

Button0 Pressing.

This function is periodically called when button 0 is being pressed.

**6.4.2.1879 void emberAfPluginButtonInterfaceButton1PressingCallback ( void )**

Button1 Pressing.

This function is periodically called when button 1 is being pressed.

**6.4.2.1880 void emberAfPluginButtonInterfaceButton0LowCallback ( void )**

Button0 Low.

This function is called when the GPIO tied to button zero goes low

**6.4.2.1881 void emberAfPluginButtonInterfaceButton0HighCallback ( void )**

Button0 High.

This function is called when the GPIO tied to button zero goes high

**6.4.2.1882 void emberAfPluginButtonInterfaceButton1LowCallback ( void )**

Button1 Low.

This function is called when the GPIO tied to button one goes low

**6.4.2.1883 void emberAfPluginButtonInterfaceButton1HighCallback ( void )**

Button1 High.

This function is called when the GPIO tied to button one goes high

**6.4.2.1884 void emberAfPluginGpioSensorStateChangedCallback ( uint8\_t *newSensorState* )**

State Changed.

This function is called whenever the gpio sensor detects a change in state

**Parameters**

<i>newSensorState</i>	The new state of the sensor based alarm (EMBER_AF_PLUGIN_GPIO_SENSOR_ACTIVE or EMBER_AF_PLUGIN_GPIO_SENSOR_NOT_ACTIVE) Ver.: always
-----------------------	---

**6.4.2.1885 void emberAfPluginSb1GestureSensorGestureReceivedCallback ( uint8\_t *gestureReceived*, uint8\_t *switchNumber* )**

Gesture Received.

This function is called whenever the sb1 receives a gesture

**Parameters**

<i>gesture-Received</i>	The (enumerated) gesture received Ver.: always
<i>switchNumber</i>	The switch that received the gesture Ver.: always

**6.4.2.1886 void emberAfPluginTamperSwitchTamperActiveCallback ( void )**

Tamper Active.

This function is called whenever the tamper switch detects that it has entered the enclosure, thus activating tamper monitoring.

**6.4.2.1887 void emberAfPluginTamperSwitchTamperAlarmCallback ( void )**

Tamper Alarm.

This function is called when the plugin detects that the enclosure has been opened.

## 6.5 Application Framework Command Buffer Loading Interface

### Global Commands

- #define `emberAfFillCommandGlobalServerToClientReadAttributes(attributeIds, attributeIdsLen)`

## Basic Commands

- #define `emberAfFillCommandBasicClusterResetToFactoryDefaults()`

## Identify Commands

- #define `emberAfFillCommandIdentifyClusterIdentify`(identifyTime)
- #define `emberAfFillCommandIdentifyClusterIdentifyQuery()`
- #define `emberAfFillCommandIdentifyClusterEZModeInvoke`(action)
- #define `emberAfFillCommandIdentifyClusterUpdateCommissionState`(action, commissionStateMask)
- #define `emberAfFillCommandIdentifyClusterIdentifyQueryResponse`(timeout)
- #define `emberAfFillCommandIdentifyClusterTriggerEffect`(effectId, effectVariant)

## Groups Commands

- #define `emberAfFillCommandGroupsClusterAddGroup(groupId, groupName)`
- #define `emberAfFillCommandGroupsClusterViewGroup(groupId)`
- #define `emberAfFillCommandGroupsClusterGetGroupMembership(groupCount, groupList, groupListLen)`
- #define `emberAfFillCommandGroupsClusterRemoveGroup(groupId)`
- #define `emberAfFillCommandGroupsClusterRemoveAllGroups()`
- #define `emberAfFillCommandGroupsClusterAddGroupIfIdentifying(groupId, groupName)`
- #define `emberAfFillCommandGroupsClusterAddGroupResponse(status, groupId)`
- #define `emberAfFillCommandGroupsClusterViewGroupResponse(status, groupId, groupName)`
- #define `emberAfFillCommandGroupsClusterGetGroupMembershipResponse(capacity, groupCount, groupList, groupListLen)`
- #define `emberAfFillCommandGroupsClusterRemoveGroupResponse(status, groupId)`

## Scenes Commands

- #define `emberAfFillCommandScenesClusterAddScene(groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen)`
- #define `emberAfFillCommandScenesClusterViewScene(groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterRemoveScene(groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterRemoveAllScenes(groupId)`
- #define `emberAfFillCommandScenesClusterStoreScene(groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterRecallScene(groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterGetSceneMembership(groupId)`
- #define `emberAfFillCommandScenesClusterAddSceneResponse(status, groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterViewSceneResponse(status, groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen)`
- #define `emberAfFillCommandScenesClusterRemoveSceneResponse(status, groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterRemoveAllScenesResponse(status, groupId)`
- #define `emberAfFillCommandScenesClusterStoreSceneResponse(status, groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterGetSceneMembershipResponse(status, capacity, groupId, sceneCount, sceneList, sceneListLen)`
- #define `emberAfFillCommandScenesClusterEnhancedAddScene(groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen)`
- #define `emberAfFillCommandScenesClusterEnhancedViewScene(groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterCopyScene(mode, groupIdFrom, sceneIdFrom, groupIdTo, sceneIdTo)`
- #define `emberAfFillCommandScenesClusterEnhancedAddSceneResponse(status, groupId, sceneId)`
- #define `emberAfFillCommandScenesClusterEnhancedViewSceneResponse(status, groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen)`
- #define `emberAfFillCommandScenesClusterCopySceneResponse(status, groupIdFrom, sceneIdFrom)`

## On/off Commands

- #define `emberAfFillCommandOnOffClusterOff()`
- #define `emberAfFillCommandOnOffClusterOn()`
- #define `emberAfFillCommandOnOffClusterToggle()`
- #define `emberAfFillCommandOnOffClusterOffWithEffect(effectId, effectVariant)`
- #define `emberAfFillCommandOnOffClusterOnWithRecallGlobalScene()`

- #define `emberAfFillCommandOnOffClusterOnWithTimedOff`(onOffControl, onTime, offWaitTime)
- #define `emberAfFillCommandOnOffClusterSampleMfgSpecificOffWithTransition()`
- #define `emberAfFillCommandOnOffClusterSampleMfgSpecificOnWithTransition()`
- #define `emberAfFillCommandOnOffClusterSampleMfgSpecificToggleWithTransition()`

## Level Control Commands

- #define `emberAfFillCommandLevelControlClusterMoveToLevel`(level, transitionTime)
- #define `emberAfFillCommandLevelControlClusterMove`(moveMode, rate)
- #define `emberAfFillCommandLevelControlClusterStep`(stepMode, stepSize, transitionTime)
- #define `emberAfFillCommandLevelControlClusterStop()`
- #define `emberAfFillCommandLevelControlClusterMoveToLevelWithOnOff`(level, transitionTime)
- #define `emberAfFillCommandLevelControlClusterMoveWithOnOff`(moveMode, rate)
- #define `emberAfFillCommandLevelControlClusterStepWithOnOff`(stepMode, stepSize, transitionTime)
- #define `emberAfFillCommandLevelControlClusterStopWithOnOff()`

## Alarms Commands

- #define `emberAfFillCommandAlarmClusterResetAlarm`(alarmCode, clusterId)
- #define `emberAfFillCommandAlarmClusterResetAllAlarms()`
- #define `emberAfFillCommandAlarmClusterGetAlarm()`
- #define `emberAfFillCommandAlarmClusterResetAlarmLog()`
- #define `emberAfFillCommandAlarmClusterAlarm`(alarmCode, clusterId)
- #define `emberAfFillCommandAlarmClusterGetAlarmResponse`(status, alarmCode, clusterId, time-Stamp)

## RSSI Location Commands

- #define `emberAfFillCommandRssiLocationClusterSetAbsoluteLocation`(coordinate1, coordinate2, coordinate3, power, pathLossExponent)
- #define `emberAfFillCommandRssiLocationClusterSetDeviceConfiguration`(power, pathLossExponent, calculationPeriod, numberRssiMeasurements, reportingPeriod)
- #define `emberAfFillCommandRssiLocationClusterGetDeviceConfiguration`(targetAddress)
- #define `emberAfFillCommandRssiLocationClusterGetLocationData`(flags, numberResponses, targetAddress)
- #define `emberAfFillCommandRssiLocationClusterRssiResponse`(replyingDevice, coordinate1, coordinate2, coordinate3, rssi, numberRssiMeasurements)
- #define `emberAfFillCommandRssiLocationClusterSendPings`(targetAddress, numberRssiMeasurements, calculationPeriod)
- #define `emberAfFillCommandRssiLocationClusterAnchorNodeAnnounce`(anchorNodeIeeeAddress, coordinate1, coordinate2, coordinate3)
- #define `emberAfFillCommandRssiLocationClusterDeviceConfigurationResponse`(status, power, pathLossExponent, calculationPeriod, numberRssiMeasurements, reportingPeriod)
- #define `emberAfFillCommandRssiLocationClusterLocationDataResponse`(status, locationType, coordinate1, coordinate2, coordinate3, power, pathLossExponent, locationMethod, qualityMeasure, locationAge)
- #define `emberAfFillCommandRssiLocationClusterLocationDataNotification`(locationType, coordinate1, coordinate2, coordinate3, power, pathLossExponent, locationMethod, qualityMeasure, locationAge)

- #define `emberAfFillCommandRssiLocationClusterCompactLocationDataNotification`(locationType, coordinate1, coordinate2, coordinate3, qualityMeasure, locationAge)
- #define `emberAfFillCommandRssiLocationClusterRssiPing`(locationType)
- #define `emberAfFillCommandRssiLocationClusterRssiRequest`()
- #define `emberAfFillCommandRssiLocationClusterReportRssiMeasurements`(measuringDevice, neighbors, neighborsInfo, neighborsInfoLen)
- #define `emberAfFillCommandRssiLocationClusterRequestOwnLocation`(blindNode)

## Commissioning Commands

- #define `emberAfFillCommandCommissioningClusterRestartDevice`(options, delay, jitter)
- #define `emberAfFillCommandCommissioningClusterSaveStartupParameters`(options, index)
- #define `emberAfFillCommandCommissioningClusterRestoreStartupParameters`(options, index)
- #define `emberAfFillCommandCommissioningClusterResetStartupParameters`(options, index)
- #define `emberAfFillCommandCommissioningClusterRestartDeviceResponse`(status)
- #define `emberAfFillCommandCommissioningClusterSaveStartupParametersResponse`(status)
- #define `emberAfFillCommandCommissioningClusterRestoreStartupParametersResponse`(status)
- #define `emberAfFillCommandCommissioningClusterResetStartupParametersResponse`(status)

## Partition Commands

- #define `emberAfFillCommandPartitionClusterTransferPartitionedFrame`(fragmentationOptions, partitionedIndicatorAndFrame, partitionedIndicatorAndFrameLen)
- #define `emberAfFillCommandPartitionClusterReadHandshakeParam`(partitionedClusterId, attributeList, attributeListLen)
- #define `emberAfFillCommandPartitionClusterWriteHandshakeParam`(partitionedClusterId, writeAttributeRecords, writeAttributeRecordsLen)
- #define `emberAfFillCommandPartitionClusterMultipleAck`(ackOptions, firstFrameIdAndNackList, firstFrameIdAndNackListLen)
- #define `emberAfFillCommandPartitionClusterReadHandshakeParamResponse`(partitionedClusterId, readAttributeStatusRecords, readAttributeStatusRecordsLen)

## Over the Air Bootloading Commands

- #define `emberAfFillCommandOtaBootloadClusterImageNotify`(payloadType, queryJitter, manufacturerId, imageType, newFileVersion)
- #define `emberAfFillCommandOtaBootloadClusterQueryNextImageRequest`(fieldControl, manufacturerId, imageType, currentFileVersion, hardwareVersion)
- #define `emberAfFillCommandOtaBootloadClusterQueryNextImageResponse`(status, manufacturerId, imageType, fileVersion, imageSize)
- #define `emberAfFillCommandOtaBootloadClusterImageBlockRequest`(fieldControl, manufacturerId, imageType, fileVersion, fileOffset, maxDataSize, requestNodeAddress)
- #define `emberAfFillCommandOtaBootloadClusterImagePageRequest`(fieldControl, manufacturerId, imageType, fileVersion, fileOffset, maxDataSize, pageSize, responseSpacing, requestNodeAddress)
- #define `emberAfFillCommandOtaBootloadClusterImageBlockResponse`(status, manufacturerId, imageType, fileVersion, fileOffset, dataSize, imageData, imageDataLen)
- #define `emberAfFillCommandOtaBootloadClusterUpgradeEndRequest`(status, manufacturerId, imageType, fileVersion)
- #define `emberAfFillCommandOtaBootloadClusterUpgradeEndResponse`(manufacturerId, imageType, fileVersion, currentTime, upgradeTime)

- #define `emberAfFillCommandOtaBootloadClusterQuerySpecificFileRequest`(requestNodeAddress, manufacturerId, imageType, fileVersion, currentZigbeeStackVersion)
- #define `emberAfFillCommandOtaBootloadClusterQuerySpecificFileResponse`(status, manufacturerId, imageType, fileVersion, imageSize)

## Power Profile Commands

- #define `emberAfFillCommandPowerProfileClusterPowerProfileRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileStateRequest()`
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePriceResponse`(powerProfileId, currency, price, priceTrailingDigit)
- #define `emberAfFillCommandPowerProfileClusterGetOverallSchedulePriceResponse`(currency, price, priceTrailingDigit)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleNotification`(powerProfileId, numScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleResponse`(powerProfileId, numScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePriceExtendedResponse`(powerProfileId, currency, price, priceTrailingDigit)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileNotification`(totalProfileNum, powerProfileId, numTransferredPhases, transferredPhases, transferredPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileResponse`(totalProfileNum, powerProfileId, numTransferredPhases, transferredPhases, transferredPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileStateResponse`(powerProfileCount, powerProfileRecords, powerProfileRecordsLen)
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePrice`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterPowerProfilesStateNotification`(powerProfileCount, powerProfileRecords, powerProfileRecordsLen)
- #define `emberAfFillCommandPowerProfileClusterGetOverallSchedulePrice()`
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleRequest`(powerProfileId)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateResponse`(powerProfileId, numScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateNotification`(powerProfileId, numScheduledPhases, scheduledPhases, scheduledPhasesLen)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsNotification`(powerProfileId, startAfter, stopBefore)
- #define `emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsResponse`(powerProfileId, startAfter, stopBefore)
- #define `emberAfFillCommandPowerProfileClusterGetPowerProfilePriceExtended`(options, powerProfileId, powerProfileStartTime)

## Appliance Control Commands

- #define `emberAfFillCommandApplianceControlClusterExecutionOfACommand`(commandId)
- #define `emberAfFillCommandApplianceControlClusterSignalState()`
- #define `emberAfFillCommandApplianceControlClusterWriteFunctions`(functionId, functionDataType, functionData, functionDataLen)

- #define `emberAfFillCommandApplianceControlClusterOverloadPauseResume()`
- #define `emberAfFillCommandApplianceControlClusterOverloadPause()`
- #define `emberAfFillCommandApplianceControlClusterOverloadWarning(warningEvent)`
- #define `emberAfFillCommandApplianceControlClusterSignalStateResponse(applianceStatus, remoteEnableFlagsAndDeviceStatus2, applianceStatus2)`
- #define `emberAfFillCommandApplianceControlClusterSignalStateNotification(applianceStatus, remoteEnableFlagsAndDeviceStatus2, applianceStatus2)`

## Poll Control Commands

- #define `emberAfFillCommandPollControlClusterCheckIn()`
- #define `emberAfFillCommandPollControlClusterCheckInResponse(startFastPolling, fastPollTimeout)`
- #define `emberAfFillCommandPollControlClusterFastPollStop()`
- #define `emberAfFillCommandPollControlClusterSetLongPollInterval(newLongPollInterval)`
- #define `emberAfFillCommandPollControlClusterSetShortPollInterval(newShortPollInterval)`

## Green Power Commands

- #define `emberAfFillCommandGreenPowerClusterGpNotification(options, gpdSrcId, gpdIeee, gpdEndpoint, gpdSecurityFrameCounter, gpdCommandId, gpdCommandPayload, gppShortAddress, gppDistance)`
- #define `emberAfFillCommandGreenPowerClusterGpPairingSearch(options, gpdSrcId, gpdIeee, endpoint)`
- #define `emberAfFillCommandGreenPowerClusterGpTunnelingStop(options, gpdSrcId, gpdIeee, endpoint, gpdSecurityFrameCounter, gppShortAddress, gppDistance)`
- #define `emberAfFillCommandGreenPowerClusterGpCommissioningNotification(options, gpdSrcId, gpdIeee, endpoint, gpdSecurityFrameCounter, gpdCommandId, gpdCommandPayload, gppShortAddress, gppLink, mic)`
- #define `emberAfFillCommandGreenPowerClusterGpSinkCommissioningMode(options, gpmAddrForSecurity, gpmAddrForPairing, sinkEndpoint)`
- #define `emberAfFillCommandGreenPowerClusterGpTranslationTableUpdate(options, gpdSrcId, gpdIeee, endpoint, translations, translationsLen)`
- #define `emberAfFillCommandGreenPowerClusterGpTranslationTableRequest(startIndex)`
- #define `emberAfFillCommandGreenPowerClusterGpPairingConfiguration(actions, options, gpdSrcId, gpdIeee, endpoint, deviceId, groupListCount, groupList, groupListLen, gpdAssignedAlias, forwardingRadius, securityOptions, gpdSecurityFrameCounter, gpdSecurityKey, numberOfPairedEndpoints, pairedEndpoints, pairedEndpointsLen, applicationInformation, manufacturerId, modeId, numberOfGpdCommands, gpdCommandIdList, gpdCommandIdListLen, clusterIdListCount, clusterListServer, clusterListServerLen, clusterListClient, clusterListClientLen)`
- #define `emberAfFillCommandGreenPowerClusterGpSinkTableRequest(options, gpdSrcId, gpdIeee, endpoint, index)`
- #define `emberAfFillCommandGreenPowerClusterGpProxyTableResponse(status, totalNumberOfNonEmptyProxyTableEntries, startIndex, entriesCount, proxyTableEntries, proxyTableEntriesLen)`
- #define `emberAfFillCommandGreenPowerClusterGpNotificationResponse(options, gpdSrcId, gpdIeee, gpdSecurityFrameCounter)`
- #define `emberAfFillCommandGreenPowerClusterGpPairing(options, gpdSrcId, gpdIeee, endpoint, sinkIeeeAddress, sinkNwkAddress, sinkGroupId, deviceId, gpdSecurityFrameCounter, gpdKey, assignedAlias, forwardingRadius)`
- #define `emberAfFillCommandGreenPowerClusterGpProxyCommissioningMode(options, commissioningWindow, channel)`

- #define `emberAfFillCommandGreenPowerClusterGpResponse`(options, tempMasterShortAddress, tempMasterTxChannel, gpdSrcId, gpdIeee, endpoint, gpdCommandId, gpdCommandPayload, gpdCommandPayloadLen)
- #define `emberAfFillCommandGreenPowerClusterGpSinkTableResponse`(status, totalNumberOfNonEmptySinkTableEntries, startIndex, sinkTableEntriesCount, sinkTableEntries, sinkTableEntriesLen)
- #define `emberAfFillCommandGreenPowerClusterGpProxyTableRequest`(options, gpdSrcId, gpdIeee, endpoint, index)

## Door Lock Commands

- #define `emberAfFillCommandDoorLockClusterLockDoor`(PIN)
- #define `emberAfFillCommandDoorLockClusterUnlockDoor`(PIN)
- #define `emberAfFillCommandDoorLockClusterToggle`(pin)
- #define `emberAfFillCommandDoorLockClusterUnlockWithTimeout`(timeoutInSeconds, pin)
- #define `emberAfFillCommandDoorLockClusterGetLogRecord`(logIndex)
- #define `emberAfFillCommandDoorLockClusterSetPin`(userId, userStatus, userType, pin)
- #define `emberAfFillCommandDoorLockClusterGetPin`(userId)
- #define `emberAfFillCommandDoorLockClusterClearPin`(userId)
- #define `emberAfFillCommandDoorLockClusterClearAllPins`()
- #define `emberAfFillCommandDoorLockClusterSetUserStatus`(userId, userStatus)
- #define `emberAfFillCommandDoorLockCluster GetUserStatus`(userId)
- #define `emberAfFillCommandDoorLockClusterSetWeekdaySchedule`(scheduleId, userId, daysMask, startHour, startMinute, endHour, endMinute)
- #define `emberAfFillCommandDoorLockClusterGetWeekdaySchedule`(scheduleId, userId)
- #define `emberAfFillCommandDoorLockClusterClearWeekdaySchedule`(scheduleId, userId)
- #define `emberAfFillCommandDoorLockClusterSetYearDaySchedule`(scheduleId, userId, localStartTime, localEndTime)
- #define `emberAfFillCommandDoorLockClusterGetYearDaySchedule`(scheduleId, userId)
- #define `emberAfFillCommandDoorLockClusterClearYearDaySchedule`(scheduleId, userId)
- #define `emberAfFillCommandDoorLockClusterSetHolidaySchedule`(scheduleId, localStartTime, localEndTime, operatingModeDuringHoliday)
- #define `emberAfFillCommandDoorLockClusterGetHolidaySchedule`(scheduleId)
- #define `emberAfFillCommandDoorLockClusterClearHolidaySchedule`(scheduleId)
- #define `emberAfFillCommandDoorLockClusterSetUserType`(userId, userType)
- #define `emberAfFillCommandDoorLockCluster GetUserType`(userId)
- #define `emberAfFillCommandDoorLockClusterSetRfid`(userId, userStatus, userType, id)
- #define `emberAfFillCommandDoorLockClusterGetRfid`(userId)
- #define `emberAfFillCommandDoorLockClusterClearRfid`(userId)
- #define `emberAfFillCommandDoorLockClusterClearAllRfids`()
- #define `emberAfFillCommandDoorLockClusterLockDoorResponse`(status)
- #define `emberAfFillCommandDoorLockClusterUnlockDoorResponse`(status)
- #define `emberAfFillCommandDoorLockClusterToggleResponse`(status)
- #define `emberAfFillCommandDoorLockClusterUnlockWithTimeoutResponse`(status)
- #define `emberAfFillCommandDoorLockClusterGetLogRecordResponse`(logEntryId, timestamp, event-Type, source, eventIdOrAlarmCode, userId, pin)
- #define `emberAfFillCommandDoorLockClusterSetPinResponse`(status)
- #define `emberAfFillCommandDoorLockClusterGetPinResponse`(userId, userStatus, userType, pin)
- #define `emberAfFillCommandDoorLockClusterClearPinResponse`(status)
- #define `emberAfFillCommandDoorLockClusterClearAllPinsResponse`(status)
- #define `emberAfFillCommandDoorLockClusterSetUserStatusResponse`(status)

- #define `emberAfFillCommandDoorLockCluster GetUserStatusResponse`(userId, status)
- #define `emberAfFillCommandDoorLockCluster SetWeekdayScheduleResponse`(status)
- #define `emberAfFillCommandDoorLockCluster GetWeekdayScheduleResponse`(scheduleId, userId, status, daysMask, startHour, startMinute, endHour, endMinute)
- #define `emberAfFillCommandDoorLockCluster ClearWeekdayScheduleResponse`(status)
- #define `emberAfFillCommandDoorLockCluster SetYeardayScheduleResponse`(status)
- #define `emberAfFillCommandDoorLockCluster GetYeardayScheduleResponse`(scheduleId, userId, status, localStartTime, localEndTime)
- #define `emberAfFillCommandDoorLockCluster ClearYeardayScheduleResponse`(status)
- #define `emberAfFillCommandDoorLockCluster SetHolidayScheduleResponse`(status)
- #define `emberAfFillCommandDoorLockCluster GetHolidayScheduleResponse`(scheduleId, status, localStartTime, localEndTime, operatingModeDuringHoliday)
- #define `emberAfFillCommandDoorLockCluster ClearHolidayScheduleResponse`(status)
- #define `emberAfFillCommandDoorLockCluster SetUserTypeResponse`(status)
- #define `emberAfFillCommandDoorLockCluster GetUserTypeResponse`(userId, userType)
- #define `emberAfFillCommandDoorLockCluster SetRfidResponse`(status)
- #define `emberAfFillCommandDoorLockCluster GetRfidResponse`(userId, userStatus, userType, rfid)
- #define `emberAfFillCommandDoorLockCluster ClearRfidResponse`(status)
- #define `emberAfFillCommandDoorLockCluster ClearAllRfidsResponse`(status)
- #define `emberAfFillCommandDoorLockCluster OperationEventNotification`(source, eventCode, userId, pin, timeStamp, data)
- #define `emberAfFillCommandDoorLockCluster ProgrammingEventNotification`(source, eventCode, userId, pin, userType, userStatus, timeStamp, data)

## Window Covering Commands

- #define `emberAfFillCommandWindowCoveringCluster WindowCoveringUpOpen()`
- #define `emberAfFillCommandWindowCoveringCluster WindowCoveringDownClose()`
- #define `emberAfFillCommandWindowCoveringCluster WindowCoveringStop()`
- #define `emberAfFillCommandWindowCoveringCluster WindowCoveringGoToLiftValue`(liftValue)
- #define `emberAfFillCommandWindowCoveringCluster WindowCoveringGoToLiftPercentage`(percentageLiftValue)
- #define `emberAfFillCommandWindowCoveringCluster WindowCoveringGoToTiltValue`(tiltValue)
- #define `emberAfFillCommandWindowCoveringCluster WindowCoveringGoToTiltPercentage`(percentageTiltValue)

## Thermostat Commands

- #define `emberAfFillCommandThermostatCluster SetpointRaiseLower`(mode, amount)
- #define `emberAfFillCommandThermostatCluster SetWeeklySchedule`(numberOfTransitionsForSequence, dayOfWeekForSequence, modeForSequence, payload, payloadLen)
- #define `emberAfFillCommandThermostatCluster GetWeeklySchedule`(daysToReturn, modeToReturn)
- #define `emberAfFillCommandThermostatCluster ClearWeeklySchedule()`
- #define `emberAfFillCommandThermostatCluster GetRelayStatusLog()`
- #define `emberAfFillCommandThermostatCluster CurrentWeeklySchedule`(numberOfTransitionsForSequence, dayOfWeekForSequence, modeForSequence, payload, payloadLen)
- #define `emberAfFillCommandThermostatCluster RelayStatusLog`(timeOfDay, relayStatus, localTemperature, humidityInPercentage, setpoint, unreadEntries)

## Color Control Commands

- #define `emberAfFillCommandColorControlClusterMoveToHue`(hue, direction, transitionTime)
- #define `emberAfFillCommandColorControlClusterMoveHue`(moveMode, rate)
- #define `emberAfFillCommandColorControlClusterStepHue`(stepMode, stepSize, transitionTime)
- #define `emberAfFillCommandColorControlClusterMoveToSaturation`(saturation, transitionTime)
- #define `emberAfFillCommandColorControlClusterMoveSaturation`(moveMode, rate)
- #define `emberAfFillCommandColorControlClusterStepSaturation`(stepMode, stepSize, transitionTime)
- #define `emberAfFillCommandColorControlClusterMoveToHueAndSaturation`(hue, saturation, transitionTime)
- #define `emberAfFillCommandColorControlClusterMoveToColor`(colorX, colorY, transitionTime)
- #define `emberAfFillCommandColorControlClusterMoveColor`(rateX, rateY)
- #define `emberAfFillCommandColorControlClusterStepColor`(stepX, stepY, transitionTime)
- #define `emberAfFillCommandColorControlClusterMoveToColorTemperature`(colorTemperature, transitionTime)
- #define `emberAfFillCommandColorControlClusterEnhancedMoveToHue`(enhancedHue, direction, transitionTime)
- #define `emberAfFillCommandColorControlClusterEnhancedMoveHue`(moveMode, rate)
- #define `emberAfFillCommandColorControlClusterEnhancedStepHue`(stepMode, stepSize, transitionTime)
- #define `emberAfFillCommandColorControlClusterEnhancedMoveToHueAndSaturation`(enhancedHue, saturation, transitionTime)
- #define `emberAfFillCommandColorControlClusterColorLoopSet`(updateFlags, action, direction, time, startHue)
- #define `emberAfFillCommandColorControlClusterStopMoveStep`()
- #define `emberAfFillCommandColorControlClusterMoveColorTemperature`(moveMode, rate, colorTemperatureMinimum, colorTemperatureMaximum)
- #define `emberAfFillCommandColorControlClusterStepColorTemperature`(stepMode, stepSize, transitionTime, colorTemperatureMinimum, colorTemperatureMaximum)

## IAS Zone Commands

- #define `emberAfFillCommandIasZoneClusterZoneEnrollResponse`(enrollResponseCode, zoneId)
- #define `emberAfFillCommandIasZoneClusterInitiateNormalOperationMode`()
- #define `emberAfFillCommandIasZoneClusterInitiateTestMode`(testModeDuration, currentZoneSensitivityLevel)
- #define `emberAfFillCommandIasZoneClusterZoneStatusChangeNotification`(zoneStatus, extendedStatus, zoneId, delay)
- #define `emberAfFillCommandIasZoneClusterZoneEnrollRequest`(zoneType, manufacturerCode)
- #define `emberAfFillCommandIasZoneClusterInitiateNormalOperationModeResponse`()
- #define `emberAfFillCommandIasZoneClusterInitiateTestModeResponse`()

## IAS ACE Commands

- #define `emberAfFillCommandIasAceClusterArm`(armMode, armDisarmCode, zoneId)
- #define `emberAfFillCommandIasAceClusterBypass`(numberOfZones, zoneIds, zoneIdsLen, armDisarmCode)
- #define `emberAfFillCommandIasAceClusterEmergency`()
- #define `emberAfFillCommandIasAceClusterFire`()
- #define `emberAfFillCommandIasAceClusterPanic`()

- #define `emberAfFillCommandIasAceClusterGetZoneIdMap()`
- #define `emberAfFillCommandIasAceClusterGetZoneInformation(zoneId)`
- #define `emberAfFillCommandIasAceClusterGetPanelStatus()`
- #define `emberAfFillCommandIasAceClusterGetBypassedZoneList()`
- #define `emberAfFillCommandIasAceClusterGetZoneStatus(startingZoneId, maxNumberOfZoneIds, zoneStatusMaskFlag, zoneStatusMask)`
- #define `emberAfFillCommandIasAceClusterArmResponse(armNotification)`
- #define `emberAfFillCommandIasAceClusterGetZoneIdMapResponse(section0, section1, section2, section3, section4, section5, section6, section7, section8, section9, section10, section11, section12, section13, section14, section15)`
- #define `emberAfFillCommandIasAceClusterGetZoneInformationResponse(zoneId, zoneType, ieeeAddress, zoneLabel)`
- #define `emberAfFillCommandIasAceClusterZoneStatusChanged(zoneId, zoneStatus, audibleNotification, zoneLabel)`
- #define `emberAfFillCommandIasAceClusterPanelStatusChanged(panelStatus, secondsRemaining, audibleNotification, alarmStatus)`
- #define `emberAfFillCommandIasAceClusterGetPanelStatusResponse(panelStatus, secondsRemaining, audibleNotification, alarmStatus)`
- #define `emberAfFillCommandIasAceClusterSetBypassedZoneList(numberOfZones, zoneIds, zoneIdsLen)`
- #define `emberAfFillCommandIasAceClusterBypassResponse(numberOfZones, bypassResult, bypassResultLen)`
- #define `emberAfFillCommandIasAceClusterGetZoneStatusResponse(zoneStatusComplete, numberOfZones, zoneStatusResult, zoneStatusResultLen)`

## IAS WD Commands

- #define `emberAfFillCommandIasWdClusterStartWarning(warningInfo, warningDuration, strobeDutyCycle, strobeLevel)`
- #define `emberAfFillCommandIasWdClusterSquawk(squawkInfo)`

## Generic Tunnel Commands

- #define `emberAfFillCommandGenericTunnelClusterMatchProtocolAddress(protocolAddress)`
- #define `emberAfFillCommandGenericTunnelClusterMatchProtocolAddressResponse(deviceIeeeAddress, protocolAddress)`
- #define `emberAfFillCommandGenericTunnelClusterAdvertiseProtocolAddress(protocolAddress)`

## BACnet Protocol Tunnel Commands

- #define `emberAfFillCommandBacnetProtocolTunnelClusterTransferNpdu(npdu, npduLen)`

## 11073 Protocol Tunnel Commands

- #define `emberAfFillCommand11073ProtocolTunnelClusterTransferAPDU(apdu)`
- #define `emberAfFillCommand11073ProtocolTunnelClusterConnectRequest(connectControl, idleTimeout, managerTarget, managerEndpoint)`
- #define `emberAfFillCommand11073ProtocolTunnelClusterDisconnectRequest(managerIEEEAddress)`
- #define `emberAfFillCommand11073ProtocolTunnelClusterConnectStatusNotification(connectStatus)`

## ISO 7816 Protocol Tunnel Commands

- #define `emberAfFillCommandIso7816ProtocolTunnelClusterServerToClientTransferApdu`(apdu)
- #define `emberAfFillCommandIso7816ProtocolTunnelClusterClientToServerTransferApdu`(apdu)
- #define `emberAfFillCommandIso7816ProtocolTunnelClusterInsertSmartCard()`
- #define `emberAfFillCommandIso7816ProtocolTunnelClusterExtractSmartCard()`

## Price Commands

- #define `emberAfFillCommandPriceClusterPublishPrice`(providerId, rateLabel, issuerEventId, currentTime, unitOfMeasure, currency, priceTrailingDigitAndPriceTier, numberOfPriceTiersAndRegisterTier, startTime, durationInMinutes, price, priceRatio, generationPrice, generationPriceRatio, alternateCostDelivered, alternateCostUnit, alternateCostTrailingDigit, numberOfBlockThresholds, priceControl, numberOfGenerationTiers, generationTier, extendedNumberOfPriceTiers, extendedPriceTier, extendedRegisterTier)
- #define `emberAfFillCommandPriceClusterPublishBlockPeriod`(providerId, issuerEventId, blockPeriodStartTime, blockPeriodDuration, blockPeriodControl, blockPeriodDurationType, tariffType, tariffResolutionPeriod)
- #define `emberAfFillCommandPriceClusterPublishConversionFactor`(issuerEventId, startTime, conversionFactor, conversionFactorTrailingDigit)
- #define `emberAfFillCommandPriceClusterPublishCalorificValue`(issuerEventId, startTime, calorificValue, calorificValueUnit, calorificValueTrailingDigit)
- #define `emberAfFillCommandPriceClusterPublishTariffInformation`(providerId, issuerEventId, issuerTariffId, startTime, tariffTypeChargingScheme, tariffLabel, numberOfPriceTiersInUse, numberOfBlockThresholdsInUse, unitOfMeasure, currency, priceTrailingDigit, standingCharge, tierBlockMode, blockThresholdMultiplier, blockThresholdDivisor)
- #define `emberAfFillCommandPriceClusterPublishPriceMatrix`(providerId, issuerEventId, startTime, issuerTariffId, commandIndex, numberOfCommands, subPayloadControl, payload, payloadLen)
- #define `emberAfFillCommandPriceClusterPublishBlockThresholds`(providerId, issuerEventId, startTime, issuerTariffId, commandIndex, numberOfCommands, subPayloadControl, payload, payloadLen)
- #define `emberAfFillCommandPriceClusterPublishCO2Value`(providerId, issuerEventId, startTime, tariffType, cO2Value, cO2ValueUnit, cO2ValueTrailingDigit)
- #define `emberAfFillCommandPriceClusterPublishTierLabels`(providerId, issuerEventId, issuerTariffId, commandIndex, numberOfCommands, numberOfLabels, tierLabelsPayload, tierLabelsPayloadLen)
- #define `emberAfFillCommandPriceClusterPublishBillingPeriod`(providerId, issuerEventId, billingPeriodStartTime, billingPeriodDuration, billingPeriodDurationType, tariffType)
- #define `emberAfFillCommandPriceClusterPublishConsolidatedBill`(providerId, issuerEventId, billingPeriodStartTime, billingPeriodDuration, billingPeriodDurationType, tariffType, consolidatedBill, currency, billTrailingDigit)
- #define `emberAfFillCommandPriceClusterPublishCppEvent`(providerId, issuerEventId, startTime, durationInMinutes, tariffType, cppPriceTier, cppAuth)
- #define `emberAfFillCommandPriceClusterPublishCreditPayment`(providerId, issuerEventId, creditPaymentDueDate, creditPaymentOverDueAmount, creditPaymentStatus, creditPayment, creditPaymentDate, creditPaymentRef)
- #define `emberAfFillCommandPriceClusterPublishCurrencyConversion`(providerId, issuerEventId, startTime, oldCurrency, newCurrency, conversionFactor, conversionFactorTrailingDigit, currencyChangeControlFlags)
- #define `emberAfFillCommandPriceClusterCancelTariff`(providerId, issuerTariffId, tariffType)
- #define `emberAfFillCommandPriceClusterGetCurrentPrice`(commandOptions)
- #define `emberAfFillCommandPriceClusterGetScheduledPrices`(startTime, numberOfEvents)

- #define `emberAfFillCommandPriceClusterPriceAcknowledgement`(providerId, issuerEventId, priceAckTime, control)
- #define `emberAfFillCommandPriceClusterGetBlockPeriods`(startTime, numberOfEvents, tariffType)
- #define `emberAfFillCommandPriceClusterGetConversionFactor`(earliestStartTime, minIssuerEventId, numberOfCommands)
- #define `emberAfFillCommandPriceClusterGetCalorificValue`(earliestStartTime, minIssuerEventId, numberOfCommands)
- #define `emberAfFillCommandPriceClusterGetTariffInformation`(earliestStartTime, minIssuerEventId, numberOfCommands, tariffType)
- #define `emberAfFillCommandPriceClusterGetPriceMatrix`(issuerTariffId)
- #define `emberAfFillCommandPriceClusterGetBlockThresholds`(issuerTariffId)
- #define `emberAfFillCommandPriceClusterGetCO2Value`(earliestStartTime, minIssuerEventId, numberOfCommands, tariffType)
- #define `emberAfFillCommandPriceClusterGetTierLabels`(issuerTariffId)
- #define `emberAfFillCommandPriceClusterGetBillingPeriod`(earliestStartTime, minIssuerEventId, numberOfCommands, tariffType)
- #define `emberAfFillCommandPriceClusterGetConsolidatedBill`(earliestStartTime, minIssuerEventId, numberOfCommands, tariffType)
- #define `emberAfFillCommandPriceClusterCppEventResponse`(issuerEventId, cppAuth)
- #define `emberAfFillCommandPriceClusterGetCreditPayment`(latestEndTime, numberOfRecords)
- #define `emberAfFillCommandPriceClusterGetCurrencyConversionCommand`()
- #define `emberAfFillCommandPriceClusterGetTariffCancellation`()

## Demand Response and Load Control Commands

- #define `emberAfFillCommandDemandResponseLoadControlClusterLoadControlEvent`(issuerEventId, deviceClass, utilityEnrollmentGroup, startTime, durationInMinutes, criticalityLevel, coolingTemperatureOffset, heatingTemperatureOffset, coolingTemperatureSetPoint, heatingTemperatureSetPoint, averageLoadAdjustmentPercentage, dutyCycle, eventControl)
- #define `emberAfFillCommandDemandResponseLoadControlClusterCancelLoadControlEvent`(issuerEventId, deviceClass, utilityEnrollmentGroup, cancelControl, effectiveTime)
- #define `emberAfFillCommandDemandResponseLoadControlClusterCancelAllLoadControlEvents`(cancelControl)
- #define `emberAfFillCommandDemandResponseLoadControlClusterReportEventStatus`(issuerEventId, eventStatus, eventStatusTime, criticalityLevelApplied, coolingTemperatureSetPointApplied, heatingTemperatureSetPointApplied, averageLoadAdjustmentPercentageApplied, dutyCycleApplied, eventControl, signatureType, signature)
- #define `emberAfFillCommandDemandResponseLoadControlClusterGetScheduledEvents`(startTime, numberOfEvents, issuerEventId)

## Simple Metering Commands

- #define `emberAfFillCommandSimpleMeteringClusterGetProfileResponse`(endTime, status, profileIntervalPeriod, numberOfPeriodsDelivered, intervals, intervalsLen)
- #define `emberAfFillCommandSimpleMeteringClusterRequestMirror`()
- #define `emberAfFillCommandSimpleMeteringClusterRemoveMirror`()
- #define `emberAfFillCommandSimpleMeteringClusterRequestFastPollModeResponse`(appliedUpdatePeriod, fastPollModeEndtime)
- #define `emberAfFillCommandSimpleMeteringClusterScheduleSnapshotResponse`(issuerEventId, snapshotResponsePayload, snapshotResponsePayloadLen)

- #define `emberAfFillCommandSimpleMeteringClusterTakeSnapshotResponse(snapshotId, snapshotConfirmation)`
- #define `emberAfFillCommandSimpleMeteringClusterPublishSnapshot(snapshotId, snapshotTime, totalSnapshotsFound, commandIndex, totalCommands, snapshotCause, snapshotPayloadType, snapshotPayload, snapshotPayloadLen)`
- #define `emberAfFillCommandSimpleMeteringClusterGetSampledDataResponse(sampleId, sampleStartTime, sampleType, sampleRequestInterval, numberOfSamples, samples, samplesLen)`
- #define `emberAfFillCommandSimpleMeteringClusterConfigureMirror(issuerEventId, reportingInterval, mirrorNotificationReporting, notificationScheme)`
- #define `emberAfFillCommandSimpleMeteringClusterConfigureNotificationScheme(issuerEventId, notificationScheme, notificationFlagOrder)`
- #define `emberAfFillCommandSimpleMeteringClusterConfigureNotificationFlags(issuerEventId, notificationScheme, notificationFlagAttributeId, clusterId, manufacturerCode, numberOfCommands, commandIds, commandIdsLen)`
- #define `emberAfFillCommandSimpleMeteringClusterGetNotifiedMessage(notificationScheme, notificationFlagAttributeId, notificationFlagsN)`
- #define `emberAfFillCommandSimpleMeteringClusterSupplyStatusResponse(providerId, issuerEventId, implementationDateTime, supplyStatus)`
- #define `emberAfFillCommandSimpleMeteringClusterStartSamplingResponse(sampleId)`
- #define `emberAfFillCommandSimpleMeteringClusterGetProfile(intervalChannel, endTime, numberOfPeriods)`
- #define `emberAfFillCommandSimpleMeteringClusterRequestMirrorResponse(endpointId)`
- #define `emberAfFillCommandSimpleMeteringClusterMirrorRemoved(endpointId)`
- #define `emberAfFillCommandSimpleMeteringClusterRequestFastPollMode(fastPollUpdatePeriod, duration)`
- #define `emberAfFillCommandSimpleMeteringClusterScheduleSnapshot(issuerEventId, commandIndex, commandCount, snapshotSchedulePayload, snapshotSchedulePayloadLen)`
- #define `emberAfFillCommandSimpleMeteringClusterTakeSnapshot(snapshotCause)`
- #define `emberAfFillCommandSimpleMeteringClusterGetSnapshot(earliestStartTime, latestEndTime, snapshotOffset, snapshotCause)`
- #define `emberAfFillCommandSimpleMeteringClusterStartSampling(issuerEventId, startSamplingTime, sampleType, sampleRequestInterval, maxNumberOfSamples)`
- #define `emberAfFillCommandSimpleMeteringClusterGetSampledData(sampleId, earliestSampleTime, sampleType, numberOfSamples)`
- #define `emberAfFillCommandSimpleMeteringClusterMirrorReportAttributeResponse(notificationScheme, notificationFlags, notificationFlagsLen)`
- #define `emberAfFillCommandSimpleMeteringClusterResetLoadLimitCounter(providerId, issuerEventId)`
- #define `emberAfFillCommandSimpleMeteringClusterChangeSupply(providerId, issuerEventId, requestDateTime, implementationDateTime, proposedSupplyStatus, supplyControlBits)`
- #define `emberAfFillCommandSimpleMeteringClusterLocalChangeSupply(proposedSupplyStatus)`
- #define `emberAfFillCommandSimpleMeteringClusterSetSupplyStatus(issuerEventId, supplyTamperState, supplyDepletionState, supplyUncontrolledFlowState, loadLimitSupplyState)`
- #define `emberAfFillCommandSimpleMeteringClusterSetUncontrolledFlowThreshold(providerId, issuerEventId, uncontrolledFlowThreshold, unitOfMeasure, multiplier, divisor, stabilisationPeriod, measurementPeriod)`

## Messaging Commands

- #define `emberAfFillCommandMessagingClusterDisplayMessage(messageId, messageControl, startTime, durationInMinutes, message, optionalExtendedMessageControl)`

- #define `emberAfFillCommandMessagingClusterCancelMessage`(messageId, messageControl)
- #define `emberAfFillCommandMessagingClusterDisplayProtectedMessage`(messageId, messageControl, startTime, durationInMinutes, message, optionalExtendedMessageControl)
- #define `emberAfFillCommandMessagingClusterCancelAllMessages`(implementationDateTime)
- #define `emberAfFillCommandMessagingClusterGetLastMessage`()
- #define `emberAfFillCommandMessagingClusterMessageConfirmation`(messageId, confirmationTime, messageConfirmationControl, messageResponse)
- #define `emberAfFillCommandMessagingClusterGetMessageCancellation`(earliestImplementationTime)

## Tunneling Commands

- #define `emberAfFillCommandTunnelingClusterRequestTunnel`(protocolId, manufacturerCode, flowControlSupport, maximumIncomingTransferSize)
- #define `emberAfFillCommandTunnelingClusterCloseTunnel`(tunnelId)
- #define `emberAfFillCommandTunnelingClusterTransferDataClientToServer`(tunnelId, data, dataLen)
- #define `emberAfFillCommandTunnelingClusterTransferDataErrorClientToServer`(tunnelId, transferDataStatus)
- #define `emberAfFillCommandTunnelingClusterAckTransferDataClientToServer`(tunnelId, number\_ofBytesLeft)
- #define `emberAfFillCommandTunnelingClusterReadyDataClientToServer`(tunnelId, number\_ofOctetsLeft)
- #define `emberAfFillCommandTunnelingClusterGetSupportedTunnelProtocols`(protocolOffset)
- #define `emberAfFillCommandTunnelingClusterRequestTunnelResponse`(tunnelId, tunnelStatus, maximumIncomingTransferSize)
- #define `emberAfFillCommandTunnelingClusterTransferDataServerToClient`(tunnelId, data, dataLen)
- #define `emberAfFillCommandTunnelingClusterTransferDataErrorServerToClient`(tunnelId, transferDataStatus)
- #define `emberAfFillCommandTunnelingClusterAckTransferDataServerToClient`(tunnelId, number\_ofBytesLeft)
- #define `emberAfFillCommandTunnelingClusterReadyDataServerToClient`(tunnelId, number\_ofOctetsLeft)
- #define `emberAfFillCommandTunnelingClusterSupportedTunnelProtocolsResponse`(protocolListComplete, protocolCount, protocolList, protocolListLen)
- #define `emberAfFillCommandTunnelingClusterTunnelClosureNotification`(tunnelId)

## Prepayment Commands

- #define `emberAfFillCommandPrepaymentClusterSelectAvailableEmergencyCredit`(commandIssueDate, originatingDevice)
- #define `emberAfFillCommandPrepaymentClusterChangeDebt`(issuerEventId, debtLabel, debtAmount, debtRecoveryMethod, debtAmountType, debtRecoveryStartTime, debtRecoveryCollectionTime, debtRecoveryFrequency, debtRecoveryAmount, debtRecoveryBalancePercentage)
- #define `emberAfFillCommandPrepaymentClusterEmergencyCreditSetup`(issuerEventId, startTime, emergencyCreditLimit, emergencyCreditThreshold)
- #define `emberAfFillCommandPrepaymentClusterConsumerTopUp`(originatingDevice, topUpCode)
- #define `emberAfFillCommandPrepaymentClusterCreditAdjustment`(issuerEventId, startTime, creditAdjustmentType, creditAdjustmentValue)
- #define `emberAfFillCommandPrepaymentClusterChangePaymentMode`(providerId, issuerEventId, implementationDateTime, proposedPaymentControlConfiguration, cutOffValue)
- #define `emberAfFillCommandPrepaymentClusterGetPrepaySnapshot`(earliestStartTime, latestEndTime, snapshotOffset, snapshotCause)

- #define `emberAfFillCommandPrepaymentClusterGetTopUpLog`(latestEndTime, numberOfRecords)
- #define `emberAfFillCommandPrepaymentClusterSetLowCreditWarningLevel`(lowCreditWarningLevel)
- #define `emberAfFillCommandPrepaymentClusterGetDebtRepaymentLog`(latestEndTime, number-OfDebts, debtType)
- #define `emberAfFillCommandPrepaymentClusterSetMaximumCreditLimit`(providerId, issuerEvent-Id, implementationDateTime, maximumCreditLevel, maximumCreditPerTopUp)
- #define `emberAfFillCommandPrepaymentClusterSetOverallDebtCap`(providerId, issuerEventId, implementation-DateTime, overallDebtCap)
- #define `emberAfFillCommandPrepaymentClusterPublishPrepaySnapshot`(snapshotId, snapshotTime, totalSnapshotsFound, commandIndex, totalNumberOfCommands, snapshotCause, snapshotPayload-Type, snapshotPayload, snapshotPayloadLen)
- #define `emberAfFillCommandPrepaymentClusterChangePaymentModeResponse`(friendlyCredit, friendly-CreditCalendarId, emergencyCreditLimit, emergencyCreditThreshold)
- #define `emberAfFillCommandPrepaymentClusterConsumerTopUpResponse`(resultType, topUpValue, sourceOfTopUp, creditRemaining)
- #define `emberAfFillCommandPrepaymentClusterPublishTopUpLog`(commandIndex, totalNumber-OfCommands, topUpPayload, topUpPayloadLen)
- #define `emberAfFillCommandPrepaymentClusterPublishDebtLog`(commandIndex, totalNumberOf-Commands, debtPayload, debtPayloadLen)

## Energy Management Commands

- #define `emberAfFillCommandEnergyManagementClusterReportEventStatus`(issuerEventId, event-Status, eventStatusTime, criticalityLevelApplied, coolingTemperatureSetPointApplied, heatingTemperature-SetPointApplied, averageLoadAdjustmentPercentageApplied, dutyCycleApplied, eventControl)
- #define `emberAfFillCommandEnergyManagementClusterManageEvent`(issuerEventId, deviceClass, utilityEnrollmentGroup, actionRequired)

## Calendar Commands

- #define `emberAfFillCommandCalendarClusterPublishCalendar`(providerId, issuerEventId, issuerCalendar-Id, startTime, calendarType, calendarTimeReference, calendarName, numberOfSeasons, numberOf-WeekProfiles, numberOfDayProfiles)
- #define `emberAfFillCommandCalendarClusterPublishDayProfile`(providerId, issuerEventId, issuer-CalendarId, dayId, totalNumberOfScheduleEntries, commandIndex, totalNumberOfCommands, calendar-Type, dayScheduleEntries, dayScheduleEntriesLen)
- #define `emberAfFillCommandCalendarClusterPublishWeekProfile`(providerId, issuerEventId, issuer-CalendarId, weekId, dayIdRefMonday, dayIdRefTuesday, dayIdRefWednesday, dayIdRefThursday, dayIdRefFriday, dayIdRefSaturday, dayIdRefSunday)
- #define `emberAfFillCommandCalendarClusterPublishSeasons`(providerId, issuerEventId, issuerCalendar-Id, commandIndex, totalNumberOfCommands, seasonEntries, seasonEntriesLen)
- #define `emberAfFillCommandCalendarClusterPublishSpecialDays`(providerId, issuerEventId, issuer-CalendarId, startTime, calendarType, totalNumberOfSpecialDays, commandIndex, totalNumberOf-Commands, specialDayEntries, specialDayEntriesLen)
- #define `emberAfFillCommandCalendarClusterCancelCalendar`(providerId, issuerCalendarId, calendar-Type)
- #define `emberAfFillCommandCalendarClusterGetCalendar`(earliestStartTime, minIssuerEventId, number-OfCalendars, calendarType, providerId)
- #define `emberAfFillCommandCalendarClusterGetDayProfiles`(providerId, issuerCalendarId, start-DayId, numberOfDay)

- #define `emberAfFillCommandCalendarClusterGetWeekProfiles`(providerId, issuerCalendarId, start-WeekId, numberOfWeeks)
- #define `emberAfFillCommandCalendarClusterGetSeasons`(providerId, issuerCalendarId)
- #define `emberAfFillCommandCalendarClusterGetSpecialDays`(startTime, numberOfEvents, calendar-Type, providerId, issuerCalendarId)
- #define `emberAfFillCommandCalendarClusterGetCalendarCancellation`()

## Device Management Commands

- #define `emberAfFillCommandDeviceManagementClusterGetChangeOfTenancy`()
- #define `emberAfFillCommandDeviceManagementClusterGetChangeOfSupplier`()
- #define `emberAfFillCommandDeviceManagementClusterRequestNewPassword`(passwordType)
- #define `emberAfFillCommandDeviceManagementClusterGetSiteId`()
- #define `emberAfFillCommandDeviceManagementClusterReportEventConfiguration`(commandIndex, totalCommands, eventConfigurationPayload, eventConfigurationPayloadLen)
- #define `emberAfFillCommandDeviceManagementClusterGetCIN`()
- #define `emberAfFillCommandDeviceManagementClusterPublishChangeOfTenancy`(providerId, issuer-EventId, tariffType, implementationDateTime, proposedTenancyChangeControl)
- #define `emberAfFillCommandDeviceManagementClusterPublishChangeOfSupplier`(currentProvider-Id, issuerEventId, tariffType, proposedProviderId, providerChangeImplementationTime, provider-ChangeControl, proposedProviderName, proposedProviderContactDetails)
- #define `emberAfFillCommandDeviceManagementClusterRequestNewPasswordResponse`(issuerEvent-Id, implementationDateTime, durationInMinutes, passwordType, password)
- #define `emberAfFillCommandDeviceManagementClusterUpdateSiteId`(issuerEventId, siteIdTime, provider-Id, siteId)
- #define `emberAfFillCommandDeviceManagementClusterSetEventConfiguration`(issuerEventId, start-DateTime, eventConfiguration, configurationControl, eventConfigurationPayload, eventConfiguration-PayloadLen)
- #define `emberAfFillCommandDeviceManagementClusterGetEventConfiguration`(eventId)
- #define `emberAfFillCommandDeviceManagementClusterUpdateCIN`(issuerEventId, implementation-Time, providerId, customerIdNumber)

## Events Commands

- #define `emberAfFillCommandEventsClusterGetEventLog`(eventControlLogId, eventId, startTime, end-Time, numberOfEvents, eventOffset)
- #define `emberAfFillCommandEventsClusterClearEventLogRequest`(logId)
- #define `emberAfFillCommandEventsClusterPublishEvent`(logId, eventId, eventTime, eventControl, eventData)
- #define `emberAfFillCommandEventsClusterPublishEventLog`(totalNumberOfEvents, commandIndex, totalCommands, logPayloadControl, logPayload, logPayloadLen)
- #define `emberAfFillCommandEventsClusterClearEventLogResponse`(clearedEventsLogs)

## MDU Pairing Commands

- #define `emberAfFillCommandMduPairingClusterPairingResponse`(pairingInformationVersion, total-NumberOfDevices, commandIndex, totalNumberOfCommands, eui64s, eui64sLen)
- #define `emberAfFillCommandMduPairingClusterPairingRequest`(localPairingInformationVersion, eui64-OfRequestingDevice)

## Key Establishment Commands

- #define `emberAfFillCommandKeyEstablishmentClusterInitiateKeyEstablishmentRequest`(keyEstablishmentSuite, ephemeralDataGenerateTime, confirmKeyGenerateTime, identity)
- #define `emberAfFillCommandKeyEstablishmentClusterEphemeralDataRequest`(ephemeralData)
- #define `emberAfFillCommandKeyEstablishmentClusterConfirmKeyDataRequest`(secureMessageAuthenticationCode)
- #define `emberAfFillCommandKeyEstablishmentClusterServerToClientTerminateKeyEstablishment`(statusCode, waitTime, keyEstablishmentSuite)
- #define `emberAfFillCommandKeyEstablishmentClusterClientToServerTerminateKeyEstablishment`(statusCode, waitTime, keyEstablishmentSuite)
- #define `emberAfFillCommandKeyEstablishmentClusterInitiateKeyEstablishmentResponse`(requestedKeyEstablishmentSuite, ephemeralDataGenerateTime, confirmKeyGenerateTime, identity)
- #define `emberAfFillCommandKeyEstablishmentClusterEphemeralDataResponse`(ephemeralData)
- #define `emberAfFillCommandKeyEstablishmentClusterConfirmKeyDataResponse`(secureMessageAuthenticationCode)

## Information Commands

- #define `emberAfFillCommandInformationClusterRequestInformation`(inquiryId, dataTypeId, requestInformationPayload, requestInformationPayloadLen)
- #define `emberAfFillCommandInformationClusterPushInformationResponse`(notificationList, notificationListLen)
- #define `emberAfFillCommandInformationClusterSendPreference`(preferenceType, preferencePayload, preferencePayloadLen)
- #define `emberAfFillCommandInformationClusterRequestPreferenceResponse`(statusFeedback, preferenceType, preferencePayload, preferencePayloadLen)
- #define `emberAfFillCommandInformationClusterUpdate`(accessControl, option, contents, contentsLen)
- #define `emberAfFillCommandInformationClusterDelete`(deletionOptions, contentIds, contentIdsLen)
- #define `emberAfFillCommandInformationClusterConfigureNodeDescription`(description)
- #define `emberAfFillCommandInformationClusterConfigureDeliveryEnable`(enable)
- #define `emberAfFillCommandInformationClusterConfigurePushInformationTimer`(timer)
- #define `emberAfFillCommandInformationClusterConfigureSetRootId`(rootId)
- #define `emberAfFillCommandInformationClusterRequestInformationResponse`(number, buffer, bufferLen)
- #define `emberAfFillCommandInformationClusterPushInformation`(contents, contentsLen)
- #define `emberAfFillCommandInformationClusterSendPreferenceResponse`(statusFeedbackList, statusFeedbackListLen)
- #define `emberAfFillCommandInformationClusterServerRequestPreference`()
- #define `emberAfFillCommandInformationClusterRequestPreferenceConfirmation`(statusFeedbackList, statusFeedbackListLen)
- #define `emberAfFillCommandInformationClusterUpdateResponse`(notificationList, notificationListLen)
- #define `emberAfFillCommandInformationClusterDeleteResponse`(notificationList, notificationListLen)

## Data Sharing Commands

- #define `emberAfFillCommandDataSharingClusterReadFileRequest`(fileIndex, fileStartPositionAndRequestedOctetCount, fileStartPositionAndRequestedOctetCountLen)
- #define `emberAfFillCommandDataSharingClusterReadRecordRequest`(fileIndex, fileStartPositionAndRequestedRecordCount, fileStartPositionAndRequestedRecordCountLen)
- #define `emberAfFillCommandDataSharingClusterWriteFileResponse`(status, fileIndex, fileIndexLen)
- #define `emberAfFillCommandDataSharingClusterWriteFileRequest`(writeOptions, fileSize, fileSizeLen)
- #define `emberAfFillCommandDataSharingClusterModifyFileRequest`(fileIndex, fileStartPosition, octetCount)
- #define `emberAfFillCommandDataSharingClusterModifyRecordRequest`(fileIndex, fileStartPosition, recordCount)
- #define `emberAfFillCommandDataSharingClusterFileTransmission`(transmitOptions, buffer, bufferLen)
- #define `emberAfFillCommandDataSharingClusterRecordTransmission`(transmitOptions, buffer, bufferLen)

## Gaming Commands

- #define `emberAfFillCommandGamingClusterSearchGame`(specificGame, gameId)
- #define `emberAfFillCommandGamingClusterJoinGame`(gameId, joinAsMaster, nameOfGame)
- #define `emberAfFillCommandGamingClusterStartGame`()
- #define `emberAfFillCommandGamingClusterPauseGame`()
- #define `emberAfFillCommandGamingClusterResumeGame`()
- #define `emberAfFillCommandGamingClusterQuitGame`()
- #define `emberAfFillCommandGamingClusterEndGame`()
- #define `emberAfFillCommandGamingClusterStartOver`()
- #define `emberAfFillCommandGamingClusterActionControl`(actions)
- #define `emberAfFillCommandGamingClusterDownloadGame`()
- #define `emberAfFillCommandGamingClusterGameAnnouncement`(gameId, gameMaster, listOfGame)
- #define `emberAfFillCommandGamingClusterGeneralResponse`(commandId, status, message)

## Data Rate Control Commands

- #define `emberAfFillCommandDataRateControlClusterPathCreation`(originatorAddress, destinationAddress, dataRate)
- #define `emberAfFillCommandDataRateControlClusterDataRateNotification`(originatorAddress, destinationAddress, dataRate)
- #define `emberAfFillCommandDataRateControlClusterPathDeletion`(originatorAddress, destinationAddress)
- #define `emberAfFillCommandDataRateControlClusterDataRateControl`(originatorAddress, destinationAddress, dataRate)

## Voice over ZigBee Commands

- #define `emberAfFillCommandVoiceOverZigbeeClusterEstablishmentRequest`(flag, codecType, sampleFreq, codecRate, serviceType, buffer, bufferLen)
- #define `emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmission`(voiceData, voiceDataLen)
- #define `emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmissionCompletion`()

- #define `emberAfFillCommandVoiceOverZigbeeClusterControlResponse(ackNack)`
- #define `emberAfFillCommandVoiceOverZigbeeClusterEstablishmentResponse(ackNack, codecType)`
- #define `emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmissionResponse(sequenceNumber, errorFlag)`
- #define `emberAfFillCommandVoiceOverZigbeeClusterControl(controlType)`

## Chatting Commands

- #define `emberAfFillCommandChattingClusterJoinChatRequest(uid, nickname, cid)`
- #define `emberAfFillCommandChattingClusterLeaveChatRequest(cid, uid)`
- #define `emberAfFillCommandChattingClusterSearchChatRequest()`
- #define `emberAfFillCommandChattingClusterSwitchChairmanResponse(cid, uid)`
- #define `emberAfFillCommandChattingClusterStartChatRequest(name, uid, nickname)`
- #define `emberAfFillCommandChattingClusterChatMessage(destinationUid, sourceUid, cid, nickname, message)`
- #define `emberAfFillCommandChattingClusterGetNodeInformationRequest(cid, uid)`
- #define `emberAfFillCommandChattingClusterStartChatResponse(status, cid)`
- #define `emberAfFillCommandChattingClusterJoinChatResponse(status, cid, chatParticipantList, chatParticipantListLen)`
- #define `emberAfFillCommandChattingClusterUserLeft(cid, uid, nickname)`
- #define `emberAfFillCommandChattingClusterUserJoined(cid, uid, nickname)`
- #define `emberAfFillCommandChattingClusterSearchChatResponse(options, chatRoomList, chatRoomListLen)`
- #define `emberAfFillCommandChattingClusterSwitchChairmanRequest(cid)`
- #define `emberAfFillCommandChattingClusterSwitchChairmanConfirm(cid, nodeInformationList, nodeInformationListLen)`
- #define `emberAfFillCommandChattingClusterSwitchChairmanNotification(cid, uid, address, endpoint)`
- #define `emberAfFillCommandChattingClusterGetNodeInformationResponse(status, cid, uid, addressEndpointAndNickname, addressEndpointAndNicknameLen)`

## Payment Commands

- #define `emberAfFillCommandPaymentClusterBuyRequest(userId, userType, serviceId, goodId)`
- #define `emberAfFillCommandPaymentClusterAcceptPayment(userId, userType, serviceId, goodId)`
- #define `emberAfFillCommandPaymentClusterPaymentConfirm(serialNumber, transId, transStatus)`
- #define `emberAfFillCommandPaymentClusterBuyConfirm(serialNumber, currency, priceTrailingDigit, price, timestamp, transId, transStatus)`
- #define `emberAfFillCommandPaymentClusterReceiptDelivery(serialNumber, currency, priceTrailingDigit, price, timestamp)`
- #define `emberAfFillCommandPaymentClusterTransactionEnd(serialNumber, status)`

## Billing Commands

- #define `emberAfFillCommandBillingClusterSubscribe(userId, serviceId, serviceProviderId)`
- #define `emberAfFillCommandBillingClusterUnsubscribe(userId, serviceId, serviceProviderId)`
- #define `emberAfFillCommandBillingClusterStartBillingSession(userId, serviceId, serviceProviderId)`
- #define `emberAfFillCommandBillingClusterStopBillingSession(userId, serviceId, serviceProviderId)`

- #define `emberAfFillCommandBillingClusterBillStatusNotification`(userId, status)
- #define `emberAfFillCommandBillingClusterSessionKeepAlive`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterCheckBillStatus`(userId, serviceId, serviceProviderId)
- #define `emberAfFillCommandBillingClusterSendBillRecord`(userId, serviceId, serviceProviderId, timestamp, duration)

## Appliance Events and Alert Commands

- #define `emberAfFillCommandApplianceEventsAndAlertClusterGetAlerts()`
- #define `emberAfFillCommandApplianceEventsAndAlertClusterGetAlertsResponse`(alertsCount, alertStructures, alertStructuresLen)
- #define `emberAfFillCommandApplianceEventsAndAlertClusterAlertsNotification`(alertsCount, alertStructures, alertStructuresLen)
- #define `emberAfFillCommandApplianceEventsAndAlertClusterEventsNotification`(eventHeader, eventId)

## Appliance Statistics Commands

- #define `emberAfFillCommandApplianceStatisticsClusterLogNotification`(timeStamp, logId, logLength, logPayload, logPayloadLen)
- #define `emberAfFillCommandApplianceStatisticsClusterLogResponse`(timeStamp, logId, logLength, logPayload, logPayloadLen)
- #define `emberAfFillCommandApplianceStatisticsClusterLogQueueResponse`(logQueueSize, logIds, logIdsLen)
- #define `emberAfFillCommandApplianceStatisticsClusterStatisticsAvailable`(logQueueSize, logIds, logIdsLen)
- #define `emberAfFillCommandApplianceStatisticsClusterLogRequest`(logId)
- #define `emberAfFillCommandApplianceStatisticsClusterLogQueueRequest()`

## Electrical Measurement Commands

- #define `emberAfFillCommandElectricalMeasurementClusterGetProfileInfoResponseCommand`(profileCount, profileIntervalPeriod, maxNumberOfIntervals, listOfAttributes, listOfAttributesLen)
- #define `emberAfFillCommandElectricalMeasurementClusterGetMeasurementProfileResponseCommand`(startTime, status, profileIntervalPeriod, numberOfIntervalsDelivered, attributeId, intervals, intervalsLen)
- #define `emberAfFillCommandElectricalMeasurementClusterGetProfileInfoCommand()`
- #define `emberAfFillCommandElectricalMeasurementClusterGetMeasurementProfileCommand`(attributeId, startTime, numberOfIntervals)

## ZLL Commissioning Commands

- #define `emberAfFillCommandZllCommissioningClusterScanRequest`(transaction, zigbeeInformation, zllInformation)
- #define `emberAfFillCommandZllCommissioningClusterDeviceInformationRequest`(transaction, startIndex)
- #define `emberAfFillCommandZllCommissioningClusterIdentifyRequest`(transaction, identifyDuration)
- #define `emberAfFillCommandZllCommissioningClusterResetToFactoryNewRequest`(transaction)

- #define `emberAfFillCommandZllCommissioningClusterNetworkStartRequest`(transaction, extendedPanId, keyIndex, encryptedNetworkKey, logicalChannel, panId, networkAddress, groupIdentifiersBegin, groupIdentifiersEnd, freeNetworkAddressRangeBegin, freeNetworkAddressRangeEnd, freeGroupIdentifierRangeBegin, freeGroupIdentifierRangeEnd, initiatorIeeeAddress, initiatorNetworkAddress)
- #define `emberAfFillCommandZllCommissioningClusterNetworkJoinRouterRequest`(transaction, extendedPanId, keyIndex, encryptedNetworkKey, networkUpdateId, logicalChannel, panId, networkAddress, groupIdentifiersBegin, groupIdentifiersEnd, freeNetworkAddressRangeBegin, freeNetworkAddressRangeEnd, freeGroupIdentifierRangeBegin, freeGroupIdentifierRangeEnd)
- #define `emberAfFillCommandZllCommissioningClusterNetworkJoinEndDeviceRequest`(transaction, extendedPanId, keyIndex, encryptedNetworkKey, networkUpdateId, logicalChannel, panId, networkAddress, groupIdentifiersBegin, groupIdentifiersEnd, freeNetworkAddressRangeBegin, freeNetworkAddressRangeEnd, freeGroupIdentifierRangeBegin, freeGroupIdentifierRangeEnd)
- #define `emberAfFillCommandZllCommissioningClusterNetworkUpdateRequest`(transaction, extendedPanId, networkUpdateId, logicalChannel, panId, networkAddress)
- #define `emberAfFillCommandZllCommissioningClusterGetGroupIdentifiersRequest`(startIndex)
- #define `emberAfFillCommandZllCommissioningClusterGetEndpointListRequest`(startIndex)
- #define `emberAfFillCommandZllCommissioningClusterScanResponse`(transaction, rssiCorrection, zigbeeInformation, zllInformation, keyBitmask, responseId, extendedPanId, networkUpdateId, logicalChannel, panId, networkAddress, numberOfSubDevices, totalGroupIds, endpointId, profileId, deviceId, version, groupIdCount)
- #define `emberAfFillCommandZllCommissioningClusterDeviceInformationResponse`(transaction, number\_of\_subDevices, startIndex, deviceInformationRecordCount, deviceInformationRecordList, deviceInformationRecordListLen)
- #define `emberAfFillCommandZllCommissioningClusterNetworkStartResponse`(transaction, status, extendedPanId, networkUpdateId, logicalChannel, panId)
- #define `emberAfFillCommandZllCommissioningClusterNetworkJoinRouterResponse`(transaction, status)
- #define `emberAfFillCommandZllCommissioningClusterNetworkJoinEndDeviceResponse`(transaction, status)
- #define `emberAfFillCommandZllCommissioningClusterEndpointInformation`(ieeeAddress, networkAddress, endpointId, profileId, deviceId, version)
- #define `emberAfFillCommandZllCommissioningClusterGetGroupIdentifiersResponse`(total, startIndex, count, groupInformationRecordList, groupInformationRecordListLen)
- #define `emberAfFillCommandZllCommissioningClusterGetEndpointListResponse`(total, startIndex, count, endpointInformationRecordList, endpointInformationRecordListLen)

## Sample Mfg Specific Cluster Commands

- #define `emberAfFillCommandSampleMfgSpecificClusterCommandOne`(argOne)

### 6.5.1 Detailed Description

This document describes the ZCL command interface used by the Ember Application Framework for filling ZCL command buffers.

### 6.5.2 Macro Definition Documentation

#### 6.5.2.1 #define `emberAfFillCommandGlobalServerToClientReadAttributes( attributelds, attributeldsLen )`

Command description for ReadAttributes.

Command: ReadAttributes

**Parameters**

<i>attributeIds</i>	uint8_t*
<i>attributeIdsLen</i>	uint8_t

Definition at line 28 of file [client-command-macro.doc](#).

**6.5.2.2 #define emberAfFillCommandGlobalClientToServerReadAttributes( *attributeIds*, *attributeIdsLen* )**

Command description for ReadAttributes.

Command: ReadAttributes

**Parameters**

<i>attributeIds</i>	uint8_t*
<i>attributeIdsLen</i>	uint8_t

Definition at line 45 of file [client-command-macro.doc](#).

**6.5.2.3 #define emberAfFillCommandGlobalServerToClientReadAttributesResponse( *readAttributeStatusRecords*, *readAttributeStatusRecordsLen* )**

Command description for ReadAttributesResponse.

Command: ReadAttributesResponse

**Parameters**

<i>readAttribute-StatusRecords</i>	uint8_t*
<i>readAttribute-StatusRecords- Len</i>	uint8_t

Definition at line 62 of file [client-command-macro.doc](#).

**6.5.2.4 #define emberAfFillCommandGlobalClientToServerReadAttributesResponse( *readAttributeStatusRecords*, *readAttributeStatusRecordsLen* )**

Command description for ReadAttributesResponse.

Command: ReadAttributesResponse

**Parameters**

<i>readAttribute-StatusRecords</i>	uint8_t*
<i>readAttribute-StatusRecords- Len</i>	uint8_t

Definition at line 79 of file [client-command-macro.doc](#).

**6.5.2.5 #define emberAfFillCommandGlobalServerToClientWriteAttributes( writeAttributeRecords, writeAttributeRecordsLen )**

Command description for WriteAttributes.

Command: WriteAttributes

#### Parameters

<i>writeAttribute-Records</i>	uint8_t*
<i>writeAttribute-RecordsLen</i>	uint8_t

Definition at line 96 of file [client-command-macro.doc](#).

**6.5.2.6 #define emberAfFillCommandGlobalClientToServerWriteAttributes( writeAttributeRecords, writeAttributeRecordsLen )**

Command description for WriteAttributes.

Command: WriteAttributes

#### Parameters

<i>writeAttribute-Records</i>	uint8_t*
<i>writeAttribute-RecordsLen</i>	uint8_t

Definition at line 113 of file [client-command-macro.doc](#).

**6.5.2.7 #define emberAfFillCommandGlobalServerToClientWriteAttributesUndivided( writeAttributeRecords, writeAttributeRecordsLen )**

Command description for WriteAttributesUndivided.

Command: WriteAttributesUndivided

#### Parameters

<i>writeAttribute-Records</i>	uint8_t*
<i>writeAttribute-RecordsLen</i>	uint8_t

Definition at line 130 of file [client-command-macro.doc](#).

**6.5.2.8 #define emberAfFillCommandGlobalClientToServerWriteAttributesUndivided( writeAttributeRecords, writeAttributeRecordsLen )**

Command description for WriteAttributesUndivided.

Command: WriteAttributesUndivided

**Parameters**

<i>writeAttribute- Records</i>	uint8_t*
<i>writeAttribute- RecordsLen</i>	uint8_t

Definition at line 147 of file [client-command-macro.doc](#).

**6.5.2.9 #define emberAfFillCommandGlobalServerToClientWriteAttributesResponse( writeAttributeStatusRecords, writeAttributeStatusRecordsLen )**

Command description for WriteAttributesResponse.

Command: WriteAttributesResponse

**Parameters**

<i>writeAttribute- StatusRecords</i>	uint8_t*
<i>writeAttribute- StatusRecords- Len</i>	uint8_t

Definition at line 164 of file [client-command-macro.doc](#).

**6.5.2.10 #define emberAfFillCommandGlobalClientToServerWriteAttributesResponse( writeAttributeStatusRecords, writeAttributeStatusRecordsLen )**

Command description for WriteAttributesResponse.

Command: WriteAttributesResponse

**Parameters**

<i>writeAttribute- StatusRecords</i>	uint8_t*
<i>writeAttribute- StatusRecords- Len</i>	uint8_t

Definition at line 181 of file [client-command-macro.doc](#).

**6.5.2.11 #define emberAfFillCommandGlobalServerToClientWriteAttributesNoResponse( writeAttributeRecords, writeAttributeRecordsLen )**

Command description for WriteAttributesNoResponse.

Command: WriteAttributesNoResponse

**Parameters**

<i>writeAttribute-Records</i>	uint8_t*
<i>writeAttribute-RecordsLen</i>	uint8_t

Definition at line 198 of file [client-command-macro.doc](#).

**6.5.2.12 #define emberAfFillCommandGlobalClientToServerWriteAttributesNoResponse(  
*writeAttributeRecords, writeAttributeRecordsLen* )**

Command description for WriteAttributesNoResponse.

Command: WriteAttributesNoResponse

**Parameters**

<i>writeAttribute-Records</i>	uint8_t*
<i>writeAttribute-RecordsLen</i>	uint8_t

Definition at line 215 of file [client-command-macro.doc](#).

**6.5.2.13 #define emberAfFillCommandGlobalServerToClientConfigureReporting(  
*configureReportingRecords, configureReportingRecordsLen* )**

Command description for ConfigureReporting.

Command: ConfigureReporting

**Parameters**

<i>configure-Reporting-Records</i>	uint8_t*
<i>configure-Reporting-RecordsLen</i>	uint8_t

Definition at line 232 of file [client-command-macro.doc](#).

**6.5.2.14 #define emberAfFillCommandGlobalClientToServerConfigureReporting(  
*configureReportingRecords, configureReportingRecordsLen* )**

Command description for ConfigureReporting.

Command: ConfigureReporting

**Parameters**

<i>configure-Reporting-Records</i>	uint8_t*
<i>configure-Reporting-RecordsLen</i>	uint8_t

Definition at line 249 of file [client-command-macro.doc](#).

**6.5.2.15 #define emberAfFillCommandGlobalServerToClientConfigureReportingResponse(  
  *configureReportingStatusRecords*, *configureReportingStatusRecordsLen* )**

Command description for ConfigureReportingResponse.

Command: ConfigureReportingResponse

**Parameters**

<i>configure-Reporting-StatusRecords</i>	uint8_t*
<i>configure-Reporting-StatusRecordsLen</i>	uint8_t

Definition at line 266 of file [client-command-macro.doc](#).

**6.5.2.16 #define emberAfFillCommandGlobalClientToServerConfigureReportingResponse(  
  *configureReportingStatusRecords*, *configureReportingStatusRecordsLen* )**

Command description for ConfigureReportingResponse.

Command: ConfigureReportingResponse

**Parameters**

<i>configure-Reporting-StatusRecords</i>	uint8_t*
<i>configure-Reporting-StatusRecordsLen</i>	uint8_t

Definition at line 283 of file [client-command-macro.doc](#).

**6.5.2.17 #define emberAfFillCommandGlobalServerToClientReadReportingConfiguration(  
  *readReportingConfigurationAttributeRecords*, *readReportingConfigurationAttributeRecordsLen* )**

Command description for ReadReportingConfiguration.

Command: ReadReportingConfiguration

**Parameters**

<i>readReporting-Configuration-Attribute-Records</i>	uint8_t*
<i>readReporting-Configuration-Attribute-RecordsLen</i>	uint8_t

Definition at line 300 of file [client-command-macro.doc](#).

**6.5.2.18 #define emberAfFillCommandGlobalClientToServerReadReportingConfiguration(  
*readReportingConfigurationAttributeRecords, readReportingConfigurationAttributeRecordsLen* )**

Command description for ReadReportingConfiguration.

Command: ReadReportingConfiguration

**Parameters**

<i>readReporting-Configuration-Attribute-Records</i>	uint8_t*
<i>readReporting-Configuration-Attribute-RecordsLen</i>	uint8_t

Definition at line 317 of file [client-command-macro.doc](#).

**6.5.2.19 #define emberAfFillCommandGlobalServerToClientReadReportingConfigurationResponse(  
*readReportingConfigurationRecords, readReportingConfigurationRecordsLen* )**

Command description for ReadReportingConfigurationResponse.

Command: ReadReportingConfigurationResponse

**Parameters**

<i>readReporting-Configuration-Records</i>	uint8_t*
<i>readReporting-Configuration-RecordsLen</i>	uint8_t

Definition at line 334 of file [client-command-macro.doc](#).

**6.5.2.20 #define emberAfFillCommandGlobalClientToServerReadReportingConfigurationResponse( *readReportingConfigurationRecords*, *readReportingConfigurationRecordsLen* )**

Command description for ReadReportingConfigurationResponse.

Command: ReadReportingConfigurationResponse

**Parameters**

<i>readReporting- Configuration- Records</i>	uint8_t*
<i>readReporting- Configuration- RecordsLen</i>	uint8_t

Definition at line 351 of file [client-command-macro.doc](#).

**6.5.2.21 #define emberAfFillCommandGlobalServerToClientReportAttributes( *reportAttributeRecords*, *reportAttributeRecordsLen* )**

Command description for ReportAttributes.

Command: ReportAttributes

**Parameters**

<i>reportAttribute- Records</i>	uint8_t*
<i>reportAttribute- RecordsLen</i>	uint8_t

Definition at line 368 of file [client-command-macro.doc](#).

**6.5.2.22 #define emberAfFillCommandGlobalClientToServerReportAttributes( *reportAttributeRecords*, *reportAttributeRecordsLen* )**

Command description for ReportAttributes.

Command: ReportAttributes

**Parameters**

<i>reportAttribute- Records</i>	uint8_t*
<i>reportAttribute- RecordsLen</i>	uint8_t

Definition at line 385 of file [client-command-macro.doc](#).

**6.5.2.23 #define emberAfFillCommandGlobalServerToClientDefaultResponse( *commandId*, *status* )**

Command description for DefaultResponse.

Command: DefaultResponse

**Parameters**

<i>commandId</i>	uint8_t
<i>status</i>	uint8_t

Definition at line 402 of file [client-command-macro.doc](#).

**6.5.2.24 #define emberAfFillCommandGlobalClientToServerDefaultResponse( commandId, status )**

Command description for DefaultResponse.

Command: DefaultResponse

**Parameters**

<i>commandId</i>	uint8_t
<i>status</i>	uint8_t

Definition at line 419 of file [client-command-macro.doc](#).

**6.5.2.25 #define emberAfFillCommandGlobalServerToClientDiscoverAttributes( startId, maxAttributeIds )**

Command description for DiscoverAttributes.

Command: DiscoverAttributes

**Parameters**

<i>startId</i>	uint16_t
<i>maxAttribute- Ids</i>	uint8_t

Definition at line 436 of file [client-command-macro.doc](#).

**6.5.2.26 #define emberAfFillCommandGlobalClientToServerDiscoverAttributes( startId, maxAttributeIds )**

Command description for DiscoverAttributes.

Command: DiscoverAttributes

**Parameters**

<i>startId</i>	uint16_t
<i>maxAttribute- Ids</i>	uint8_t

Definition at line 453 of file [client-command-macro.doc](#).

**6.5.2.27 #define emberAfFillCommandGlobalServerToClientDiscoverAttributesResponse(  
*discoveryComplete*, *discoverAttributesInfoRecords*, *discoverAttributesInfoRecordsLen* )**

Command description for DiscoverAttributesResponse.

Command: DiscoverAttributesResponse

#### Parameters

<i>discovery- Complete</i>	uint8_t
<i>discover- AttributesInfo- Records</i>	uint8_t*
<i>discover- AttributesInfo- RecordsLen</i>	uint8_t

Definition at line 471 of file [client-command-macro.doc](#).

**6.5.2.28 #define emberAfFillCommandGlobalClientToServerDiscoverAttributesResponse(  
*discoveryComplete*, *discoverAttributesInfoRecords*, *discoverAttributesInfoRecordsLen* )**

Command description for DiscoverAttributesResponse.

Command: DiscoverAttributesResponse

#### Parameters

<i>discovery- Complete</i>	uint8_t
<i>discover- AttributesInfo- Records</i>	uint8_t*
<i>discover- AttributesInfo- RecordsLen</i>	uint8_t

Definition at line 491 of file [client-command-macro.doc](#).

**6.5.2.29 #define emberAfFillCommandGlobalServerToClientReadAttributesStructured(  
*readStructuredAttributeRecords*, *readStructuredAttributeRecordsLen* )**

Command description for ReadAttributesStructured.

Command: ReadAttributesStructured

#### Parameters

<i>readStructured- Attribute- Records</i>	uint8_t*
<i>readStructured- Attribute- RecordsLen</i>	uint8_t

Definition at line 510 of file [client-command-macro.doc](#).

**6.5.2.30 #define emberAfFillCommandGlobalClientToServerReadAttributesStructured(**  
*readStructuredAttributeRecords, readStructuredAttributeRecordsLen )*

Command description for ReadAttributesStructured.

Command: ReadAttributesStructured

#### Parameters

<i>readStructured-Attribute-Records</i>	uint8_t*
<i>readStructured-Attribute-RecordsLen</i>	uint8_t

Definition at line 527 of file [client-command-macro.doc](#).

**6.5.2.31 #define emberAfFillCommandGlobalServerToClientWriteAttributesStructured(**  
*writeStructuredAttributeRecords, writeStructuredAttributeRecordsLen )*

Command description for WriteAttributesStructured.

Command: WriteAttributesStructured

#### Parameters

<i>write-Structured-Attribute-Records</i>	uint8_t*
<i>write-Structured-Attribute-RecordsLen</i>	uint8_t

Definition at line 544 of file [client-command-macro.doc](#).

**6.5.2.32 #define emberAfFillCommandGlobalClientToServerWriteAttributesStructured(**  
*writeStructuredAttributeRecords, writeStructuredAttributeRecordsLen )*

Command description for WriteAttributesStructured.

Command: WriteAttributesStructured

#### Parameters

<i>write-Structured-Attribute-Records</i>	uint8_t*
---	----------

<i>write- Structured- Attribute- RecordsLen</i>	uint8_t
---	---------

Definition at line 561 of file [client-command-macro.doc](#).

**6.5.2.33 #define emberAfFillCommandGlobalServerToClientWriteAttributesStructuredResponse(  
writeStructuredAttributeStatusRecords, writeStructuredAttributeStatusRecordsLen )**

Command description for WriteAttributesStructuredResponse.

Command: WriteAttributesStructuredResponse

#### Parameters

<i>write- Structured- AttributeStatus- Records</i>	uint8_t*
<i>write- Structured- AttributeStatus- RecordsLen</i>	uint8_t

Definition at line 578 of file [client-command-macro.doc](#).

**6.5.2.34 #define emberAfFillCommandGlobalClientToServerWriteAttributesStructuredResponse(  
writeStructuredAttributeStatusRecords, writeStructuredAttributeStatusRecordsLen )**

Command description for WriteAttributesStructuredResponse.

Command: WriteAttributesStructuredResponse

#### Parameters

<i>write- Structured- AttributeStatus- Records</i>	uint8_t*
<i>write- Structured- AttributeStatus- RecordsLen</i>	uint8_t

Definition at line 595 of file [client-command-macro.doc](#).

**6.5.2.35 #define emberAfFillCommandGlobalServerToClientDiscoverCommandsReceived(  
startCommandId, maxCommandIds )**

This command may be used to discover all commands processed (received) by this cluster, including optional or manufacturer specific commands.

Command: DiscoverCommandsReceived

**Parameters**

<i>startCommand- Id</i>	uint8_t
<i>maxCommand- Ids</i>	uint8_t

Definition at line 612 of file [client-command-macro.doc](#).

**6.5.2.36 #define emberAfFillCommandGlobalClientToServerDiscoverCommandsReceived(  
                  *startCommandId, maxCommandIds* )**

This command may be used to discover all commands processed (received) by this cluster, including optional or manufacturer specific commands.

Command: DiscoverCommandsReceived

**Parameters**

<i>startCommand- Id</i>	uint8_t
<i>maxCommand- Ids</i>	uint8_t

Definition at line 629 of file [client-command-macro.doc](#).

**6.5.2.37 #define emberAfFillCommandGlobalServerToClientDiscoverCommandsReceivedResponse(  
                  *discoveryComplete, commandIds, commandIdsLen* )**

The discover commands received response command is sent in response to a discover commands received command, and is used to discover which commands a particular cluster can process.

Command: DiscoverCommandsReceivedResponse

**Parameters**

<i>discovery- Complete</i>	uint8_t
<i>commandIds</i>	uint8_t*
<i>commandIds- Len</i>	uint8_t

Definition at line 647 of file [client-command-macro.doc](#).

**6.5.2.38 #define emberAfFillCommandGlobalClientToServerDiscoverCommandsReceivedResponse(  
                  *discoveryComplete, commandIds, commandIdsLen* )**

The discover commands received response command is sent in response to a discover commands received command, and is used to discover which commands a particular cluster can process.

Command: DiscoverCommandsReceivedResponse

**Parameters**

<i>discovery-Complete</i>	uint8_t
<i>commandIds</i>	uint8_t*
<i>commandIdsLen</i>	uint8_t

Definition at line 667 of file [client-command-macro.doc](#).

**6.5.2.39 #define emberAfFillCommandGlobalServerToClientDiscoverCommandsGenerated(  
startCommandId, maxCommandIds )**

This command may be used to discover all commands which may be generated (sent) by the cluster, including optional or manufacturer specific commands.

Command: DiscoverCommandsGenerated

**Parameters**

<i>startCommand-Id</i>	uint8_t
<i>maxCommand-Ids</i>	uint8_t

Definition at line 686 of file [client-command-macro.doc](#).

**6.5.2.40 #define emberAfFillCommandGlobalClientToServerDiscoverCommandsGenerated(  
startCommandId, maxCommandIds )**

This command may be used to discover all commands which may be generated (sent) by the cluster, including optional or manufacturer specific commands.

Command: DiscoverCommandsGenerated

**Parameters**

<i>startCommand-Id</i>	uint8_t
<i>maxCommand-Ids</i>	uint8_t

Definition at line 703 of file [client-command-macro.doc](#).

**6.5.2.41 #define emberAfFillCommandGlobalServerToClientDiscoverCommandsGeneratedResponse(  
discoveryComplete, commandIds, commandIdsLen )**

The discover client commands response command is sent in response to a discover client commands command, and is used to discover which commands a particular cluster supports.

Command: DiscoverCommandsGeneratedResponse

**Parameters**

<i>discovery-Complete</i>	uint8_t
<i>commandIds</i>	uint8_t*
<i>commandIdsLen</i>	uint8_t

Definition at line 721 of file [client-command-macro.doc](#).

**6.5.2.42 #define emberAfFillCommandGlobalClientToServerDiscoverCommandsGeneratedResponse( discoveryComplete, commandIds, commandIdsLen )**

The discover client commands response command is sent in response to a discover client commands command, and is used to discover which commands a particular cluster supports.

Command: DiscoverCommandsGeneratedResponse

**Parameters**

<i>discovery-Complete</i>	uint8_t
<i>commandIds</i>	uint8_t*
<i>commandIdsLen</i>	uint8_t

Definition at line 741 of file [client-command-macro.doc](#).

**6.5.2.43 #define emberAfFillCommandGlobalServerToClientDiscoverAttributesExtended( startId, maxAttributeIds )**

This command is similar to the discover attributes command, but also includes a field to indicate whether the attribute is readable, writeable or reportable.

Command: DiscoverAttributesExtended

**Parameters**

<i>startId</i>	uint16_t
<i>maxAttribute-Ids</i>	uint8_t

Definition at line 760 of file [client-command-macro.doc](#).

**6.5.2.44 #define emberAfFillCommandGlobalClientToServerDiscoverAttributesExtended( startId, maxAttributeIds )**

This command is similar to the discover attributes command, but also includes a field to indicate whether the attribute is readable, writeable or reportable.

Command: DiscoverAttributesExtended

**Parameters**

<i>startId</i>	uint16_t
<i>maxAttribute- Ids</i>	uint8_t

Definition at line 777 of file [client-command-macro.doc](#).

```
6.5.2.45 #define emberAfFillCommandGlobalServerToClientDiscoverAttributesExtended-
           Response( discoveryComplete, extendedDiscoverAttributesInfoRecords,
           extendedDiscoverAttributesInfoRecordsLen )
```

This command is sent in response to a discover attribute extended command and is used to determine if attributes are readable, writable or reportable.

Command: DiscoverAttributesExtendedResponse

**Parameters**

<i>discovery- Complete</i>	uint8_t
<i>extended- Discover- AttributesInfo- Records</i>	uint8_t*
<i>extended- Discover- AttributesInfo- RecordsLen</i>	uint8_t

Definition at line 795 of file [client-command-macro.doc](#).

```
6.5.2.46 #define emberAfFillCommandGlobalClientToServerDiscoverAttributesExtended-
           Response( discoveryComplete, extendedDiscoverAttributesInfoRecords,
           extendedDiscoverAttributesInfoRecordsLen )
```

This command is sent in response to a discover attribute extended command and is used to determine if attributes are readable, writable or reportable.

Command: DiscoverAttributesExtendedResponse

**Parameters**

<i>discovery- Complete</i>	uint8_t
<i>extended- Discover- AttributesInfo- Records</i>	uint8_t*
<i>extended- Discover- AttributesInfo- RecordsLen</i>	uint8_t

Definition at line 815 of file [client-command-macro.doc](#).

#### **6.5.2.47 #define emberAfFillCommandBasicClusterResetToFactoryDefaults( )**

Command that resets all attribute values to factory default.

Cluster: Basic, Attributes for determining basic information about a device, setting user device information such as location, and enabling a device. Command: ResetToFactoryDefaults

Definition at line 839 of file [client-command-macro.doc](#).

#### **6.5.2.48 #define emberAfFillCommandIdentifyClusterIdentify( *identifyTime* )**

Command description for Identify.

Cluster: Identify, Attributes and commands for putting a device into Identification mode (e.g. flashing a light). Command: Identify

##### **Parameters**

<i>identifyTime</i>	uint16_t
---------------------	----------

Definition at line 868 of file [client-command-macro.doc](#).

#### **6.5.2.49 #define emberAfFillCommandIdentifyClusterIdentifyQuery( )**

Command description for IdentifyQuery.

Cluster: Identify, Attributes and commands for putting a device into Identification mode (e.g. flashing a light). Command: IdentifyQuery

Definition at line 882 of file [client-command-macro.doc](#).

#### **6.5.2.50 #define emberAfFillCommandIdentifyClusterEZModeInvoke( *action* )**

Invoke EZMode on an Identify Server.

Cluster: Identify, Attributes and commands for putting a device into Identification mode (e.g. flashing a light). Command: EZModeInvoke

##### **Parameters**

<i>action</i>	uint8_t
---------------	---------

Definition at line 896 of file [client-command-macro.doc](#).

#### **6.5.2.51 #define emberAfFillCommandIdentifyClusterUpdateCommissionState( *action*, *commissionStateMask* )**

Update Commission State on the server device.

Cluster: Identify, Attributes and commands for putting a device into Identification mode (e.g. flashing a light). Command: UpdateCommissionState

**Parameters**

<i>action</i>	uint8_t
<i>commission-StateMask</i>	uint8_t

Definition at line 912 of file [client-command-macro.doc](#).

**6.5.2.52 #define emberAfFillCommandIdentifyClusterIdentifyQueryResponse( *timeout* )**

Command description for IdentifyQueryResponse.

Cluster: Identify, Attributes and commands for putting a device into Identification mode (e.g. flashing a light). Command: IdentifyQueryResponse

**Parameters**

<i>timeout</i>	uint16_t
----------------	----------

Definition at line 929 of file [client-command-macro.doc](#).

**6.5.2.53 #define emberAfFillCommandIdentifyClusterTriggerEffect( *effectId*, *effectVariant* )**

Command description for TriggerEffect.

Cluster: Identify, Attributes and commands for putting a device into Identification mode (e.g. flashing a light). Command: TriggerEffect

**Parameters**

<i>effectId</i>	uint8_t
<i>effectVariant</i>	uint8_t

Definition at line 945 of file [client-command-macro.doc](#).

**6.5.2.54 #define emberAfFillCommandGroupsClusterAddGroup( *groupId*, *groupName* )**

Command description for AddGroup.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: AddGroup

**Parameters**

<i>groupId</i>	uint16_t
<i>groupName</i>	uint8_t*

Definition at line 968 of file [client-command-macro.doc](#).

**6.5.2.55 #define emberAfFillCommandGroupsClusterViewGroup( *groupId* )**

Command description for ViewGroup.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: View-Group

#### Parameters

<i>groupId</i>	uint16_t
----------------	----------

Definition at line 985 of file [client-command-macro.doc](#).

**6.5.2.56 #define emberAfFillCommandGroupsClusterGetGroupMembership( *groupCount*, *groupList*, *groupListLen* )**

Command description for GetGroupMembership.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: Get-GroupMembership

#### Parameters

<i>groupCount</i>	uint8_t
<i>groupList</i>	uint8_t*
<i>groupListLen</i>	uint8_t

Definition at line 1002 of file [client-command-macro.doc](#).

**6.5.2.57 #define emberAfFillCommandGroupsClusterRemoveGroup( *groupId* )**

Command description for RemoveGroup.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: Remove-Group

#### Parameters

<i>groupId</i>	uint16_t
----------------	----------

Definition at line 1021 of file [client-command-macro.doc](#).

**6.5.2.58 #define emberAfFillCommandGroupsClusterRemoveAllGroups( )**

Command description for RemoveAllGroups.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: Remove-AllGroups

Definition at line 1035 of file [client-command-macro.doc](#).

**6.5.2.59 #define emberAfFillCommandGroupsClusterAddGroupIfIdentifying( *groupId*, *groupName* )**

Command description for AddGroupIfIdentifying.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: Add-GroupIfIdentifying

**Parameters**

<i>groupId</i>	uint16_t
<i>groupName</i>	uint8_t*

Definition at line 1050 of file [client-command-macro.doc](#).

**6.5.2.60 #define emberAfFillCommandGroupsClusterAddGroupResponse( *status, groupId* )**

Command description for AddGroupResponse.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: AddGroupResponse

**Parameters**

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t

Definition at line 1068 of file [client-command-macro.doc](#).

**6.5.2.61 #define emberAfFillCommandGroupsClusterViewGroupResponse( *status, groupId, groupName* )**

Command description for ViewGroupResponse.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: ViewGroupResponse

**Parameters**

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t
<i>groupName</i>	uint8_t*

Definition at line 1087 of file [client-command-macro.doc](#).

**6.5.2.62 #define emberAfFillCommandGroupsClusterGetGroupMembershipResponse( *capacity, groupCount, groupList, groupListLen* )**

Command description for GetGroupMembershipResponse.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: GetGroupMembershipResponse

**Parameters**

<i>capacity</i>	uint8_t
<i>groupCount</i>	uint8_t
<i>groupList</i>	uint8_t*
<i>groupListLen</i>	uint8_t

Definition at line 1109 of file [client-command-macro.doc](#).

### **6.5.2.63 #define emberAfFillCommandGroupsClusterRemoveGroupResponse( status, groupId )**

Command description for RemoveGroupResponse.

Cluster: Groups, Attributes and commands for group configuration and manipulation. Command: RemoveGroupResponse

#### **Parameters**

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t

Definition at line 1131 of file [client-command-macro.doc](#).

### **6.5.2.64 #define emberAfFillCommandScenesClusterAddScene( groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen )**

Add a scene to the scene table. Extension field sets are supported, and are inputed as arrays of the form [[cluster ID] [length] [value0...n] ...].

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: AddScene

#### **Parameters**

<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t
<i>transitionTime</i>	uint16_t
<i>sceneName</i>	uint8_t*
<i>extensionField-</i> <i>Sets</i>	uint8_t*
<i>extensionField-</i> <i>SetsLen</i>	uint8_t

Definition at line 1158 of file [client-command-macro.doc](#).

### **6.5.2.65 #define emberAfFillCommandScenesClusterViewScene( groupId, sceneId )**

Command description for ViewScene.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: ViewScene

#### **Parameters**

<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1184 of file [client-command-macro.doc](#).

### **6.5.2.66 #define emberAfFillCommandScenesClusterRemoveScene( groupId, sceneId )**

Command description for RemoveScene.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Remove-Scene

#### Parameters

<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1202 of file [client-command-macro.doc](#).

#### 6.5.2.67 #define emberAfFillCommandScenesClusterRemoveAllScenes( *groupId* )

Command description for RemoveAllScenes.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Remove-AllScenes

#### Parameters

<i>groupId</i>	uint16_t
----------------	----------

Definition at line 1219 of file [client-command-macro.doc](#).

#### 6.5.2.68 #define emberAfFillCommandScenesClusterStoreScene( *groupId*, *sceneId* )

Command description for StoreScene.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Store-Scene

#### Parameters

<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1235 of file [client-command-macro.doc](#).

#### 6.5.2.69 #define emberAfFillCommandScenesClusterRecallScene( *groupId*, *sceneId* )

Command description for RecallScene.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Recall-Scene

#### Parameters

<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1253 of file [client-command-macro.doc](#).

### 6.5.2.70 #define emberAfFillCommandScenesClusterGetSceneMembership( groupId )

Command description for GetSceneMembership.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: GetSceneMembership

#### Parameters

<i>groupId</i>	uint16_t
----------------	----------

Definition at line 1270 of file [client-command-macro.doc](#).

### 6.5.2.71 #define emberAfFillCommandScenesClusterAddSceneResponse( status, groupId, sceneId )

Command description for AddSceneResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: AddSceneResponse

#### Parameters

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1287 of file [client-command-macro.doc](#).

### 6.5.2.72 #define emberAfFillCommandScenesClusterViewSceneResponse( status, groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen )

Command description for ViewSceneResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: ViewSceneResponse

#### Parameters

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t
<i>transitionTime</i>	uint16_t
<i>sceneName</i>	uint8_t*
<i>extensionFieldSets</i>	uint8_t*
<i>extensionFieldSetsLen</i>	uint8_t

Definition at line 1312 of file [client-command-macro.doc](#).

```
6.5.2.73 #define emberAfFillCommandScenesClusterRemoveSceneResponse( status, groupId, sceneId
    )
```

Command description for RemoveSceneResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: RemoveSceneResponse

#### Parameters

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1341 of file [client-command-macro.doc](#).

```
6.5.2.74 #define emberAfFillCommandScenesClusterRemoveAllScenesResponse( status, groupId )
```

Command description for RemoveAllScenesResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: RemoveAllScenesResponse

#### Parameters

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t

Definition at line 1361 of file [client-command-macro.doc](#).

```
6.5.2.75 #define emberAfFillCommandScenesClusterStoreSceneResponse( status, groupId, sceneId )
```

Command description for StoreSceneResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: StoreSceneResponse

#### Parameters

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1380 of file [client-command-macro.doc](#).

```
6.5.2.76 #define emberAfFillCommandScenesClusterGetSceneMembershipResponse( status, capacity,
    groupId, sceneCount, sceneList, sceneListLen )
```

Command description for GetSceneMembershipResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: GetSceneMembershipResponse

**Parameters**

<i>status</i>	uint8_t
<i>capacity</i>	uint8_t
<i>groupId</i>	uint16_t
<i>sceneCount</i>	uint8_t
<i>sceneList</i>	uint8_t*
<i>sceneListLen</i>	uint8_t

Definition at line 1404 of file [client-command-macro.doc](#).

**6.5.2.77 #define emberAfFillCommandScenesClusterEnhancedAddScene( groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen )**

Command description for EnhancedAddScene.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Enhanced-AddScene

**Parameters**

<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t
<i>transitionTime</i>	uint16_t
<i>sceneName</i>	uint8_t*
<i>extensionField- Sets</i>	uint8_t*
<i>extensionField- SetsLen</i>	uint8_t

Definition at line 1434 of file [client-command-macro.doc](#).

**6.5.2.78 #define emberAfFillCommandScenesClusterEnhancedViewScene( groupId, sceneId )**

Command description for EnhancedViewScene.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Enhanced-ViewScene

**Parameters**

<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1460 of file [client-command-macro.doc](#).

**6.5.2.79 #define emberAfFillCommandScenesClusterCopyScene( mode, groupIdFrom, sceneIdFrom, groupIdTo, sceneIdTo )**

Command description for CopyScene.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Copy-Scene

**Parameters**

<i>mode</i>	uint8_t
<i>groupIdFrom</i>	uint16_t
<i>sceneIdFrom</i>	uint8_t
<i>groupIdTo</i>	uint16_t
<i>sceneIdTo</i>	uint8_t

Definition at line 1481 of file [client-command-macro.doc](#).

**6.5.2.80 #define emberAfFillCommandScenesClusterEnhancedAddSceneResponse( status, groupId, sceneId )**

Command description for EnhancedAddSceneResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Enhanced-AddSceneResponse

**Parameters**

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t

Definition at line 1506 of file [client-command-macro.doc](#).

**6.5.2.81 #define emberAfFillCommandScenesClusterEnhancedViewSceneResponse( status, groupId, sceneId, transitionTime, sceneName, extensionFieldSets, extensionFieldSetsLen )**

Command description for EnhancedViewSceneResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Enhanced-ViewSceneResponse

**Parameters**

<i>status</i>	uint8_t
<i>groupId</i>	uint16_t
<i>sceneId</i>	uint8_t
<i>transitionTime</i>	uint16_t
<i>sceneName</i>	uint8_t*
<i>extensionField- Sets</i>	uint8_t*
<i>extensionField- SetsLen</i>	uint8_t

Definition at line 1531 of file [client-command-macro.doc](#).

**6.5.2.82 #define emberAfFillCommandScenesClusterCopySceneResponse( status, groupIdFrom, sceneIdFrom )**

Command description for CopySceneResponse.

Cluster: Scenes, Attributes and commands for scene configuration and manipulation. Command: Copy-SceneResponse

#### Parameters

<i>status</i>	uint8_t
<i>groupIdFrom</i>	uint16_t
<i>sceneIdFrom</i>	uint8_t

Definition at line 1560 of file [client-command-macro.doc](#).

#### 6.5.2.83 #define emberAfFillCommandOnOffClusterOff( )

Command description for Off.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: Off

Definition at line 1583 of file [client-command-macro.doc](#).

#### 6.5.2.84 #define emberAfFillCommandOnOffClusterOn( )

Command description for On.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: On

Definition at line 1596 of file [client-command-macro.doc](#).

#### 6.5.2.85 #define emberAfFillCommandOnOffClusterToggle( )

Command description for Toggle.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: Toggle

Definition at line 1609 of file [client-command-macro.doc](#).

#### 6.5.2.86 #define emberAfFillCommandOnOffClusterOffWithEffect( effectId, effectVariant )

Command description for OffWithEffect.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: OffWithEffect

#### Parameters

<i>effectId</i>	uint8_t
<i>effectVariant</i>	uint8_t

Definition at line 1624 of file [client-command-macro.doc](#).

**6.5.2.87 #define emberAfFillCommandOnOffClusterOnWithRecallGlobalScene( )**

Command description for OnWithRecallGlobalScene.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: OnWithRecallGlobalScene

Definition at line 1640 of file [client-command-macro.doc](#).

**6.5.2.88 #define emberAfFillCommandOnOffClusterOnWithTimedOff( *onOffControl*, *onTime*, *offWaitTime* )**

Command description for OnWithTimedOff.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: OnWithTimedOff

**Parameters**

<i>onOffControl</i>	uint8_t
<i>onTime</i>	uint16_t
<i>offWaitTime</i>	uint16_t

Definition at line 1656 of file [client-command-macro.doc](#).

**6.5.2.89 #define emberAfFillCommandOnOffClusterSampleMfgSpecificOffWithTransition( )**

Client command that turns the device off with a transition given by the transition time in the Ember Sample transition time attribute.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: SampleMfgSpecificOffWithTransition

Definition at line 1675 of file [client-command-macro.doc](#).

**6.5.2.90 #define emberAfFillCommandOnOffClusterSampleMfgSpecificOnWithTransition( )**

Client command that turns the device on with a transition given by the transition time in the Ember Sample transition time attribute.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: SampleMfgSpecificOnWithTransition

Definition at line 1691 of file [client-command-macro.doc](#).

**6.5.2.91 #define emberAfFillCommandOnOffClusterSampleMfgSpecificToggleWithTransition( )**

Client command that toggles the device with a transition given by the transition time in the Ember Sample transition time attribute.

Cluster: On/off, Attributes and commands for switching devices between 'On' and 'Off' states. Command: SampleMfgSpecificToggleWithTransition

Definition at line 1707 of file [client-command-macro.doc](#).

**6.5.2.92 #define emberAfFillCommandLevelControlClusterMoveToLevel( *level*, *transitionTime* )**

Command description for MoveToLevel.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: MoveToLevel

**Parameters**

<i>level</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 1734 of file [client-command-macro.doc](#).

**6.5.2.93 #define emberAfFillCommandLevelControlClusterMove( *moveMode*, *rate* )**

Command description for Move.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Move

**Parameters**

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line 1752 of file [client-command-macro.doc](#).

**6.5.2.94 #define emberAfFillCommandLevelControlClusterStep( *stepMode*, *stepSize*, *transitionTime* )**

Command description for Step.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Step

**Parameters**

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 1771 of file [client-command-macro.doc](#).

**6.5.2.95 #define emberAfFillCommandLevelControlClusterStop( )**

Command description for Stop.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: Stop

Definition at line 1789 of file [client-command-macro.doc](#).

```
6.5.2.96 #define emberAfFillCommandLevelControlClusterMoveToLevelWithOnOff( level, transitionTime )
```

Command description for MoveToLevelWithOnOff.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: MoveToLevelWithOnOff

#### Parameters

<i>level</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 1804 of file [client-command-macro.doc](#).

```
6.5.2.97 #define emberAfFillCommandLevelControlClusterMoveWithOnOff( moveMode, rate )
```

Command description for MoveWithOnOff.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: MoveWithOnOff

#### Parameters

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line 1822 of file [client-command-macro.doc](#).

```
6.5.2.98 #define emberAfFillCommandLevelControlClusterStepWithOnOff( stepMode, stepSize, transitionTime )
```

Command description for StepWithOnOff.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: StepWithOnOff

#### Parameters

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 1841 of file [client-command-macro.doc](#).

```
6.5.2.99 #define emberAfFillCommandLevelControlClusterStopWithOnOff( )
```

Command description for StopWithOnOff.

Cluster: Level Control, Attributes and commands for controlling devices that can be set to a level between fully 'On' and fully 'Off.' Command: StopWithOnOff

Definition at line 1859 of file [client-command-macro.doc](#).

**6.5.2.100 #define emberAfFillCommandAlarmClusterResetAlarm( *alarmCode*, *clusterId* )**

Command description for ResetAlarm.

Cluster: Alarms, Attributes and commands for sending notifications and configuring alarm functionality.

Command: ResetAlarm

**Parameters**

<i>alarmCode</i>	uint8_t
<i>clusterId</i>	uint16_t

Definition at line 1879 of file [client-command-macro.doc](#).

**6.5.2.101 #define emberAfFillCommandAlarmClusterResetAllAlarms( )**

Command description for ResetAllAlarms.

Cluster: Alarms, Attributes and commands for sending notifications and configuring alarm functionality.

Command: ResetAllAlarms

Definition at line 1895 of file [client-command-macro.doc](#).

**6.5.2.102 #define emberAfFillCommandAlarmClusterGetAlarm( )**

Command description for GetAlarm.

Cluster: Alarms, Attributes and commands for sending notifications and configuring alarm functionality.

Command: GetAlarm

Definition at line 1908 of file [client-command-macro.doc](#).

**6.5.2.103 #define emberAfFillCommandAlarmClusterResetAlarmLog( )**

Command description for ResetAlarmLog.

Cluster: Alarms, Attributes and commands for sending notifications and configuring alarm functionality.

Command: ResetAlarmLog

Definition at line 1921 of file [client-command-macro.doc](#).

**6.5.2.104 #define emberAfFillCommandAlarmClusterAlarm( *alarmCode*, *clusterId* )**

Command description for Alarm.

Cluster: Alarms, Attributes and commands for sending notifications and configuring alarm functionality.

Command: Alarm

**Parameters**

<i>alarmCode</i>	uint8_t
<i>clusterId</i>	uint16_t

Definition at line 1936 of file [client-command-macro.doc](#).

**6.5.2.105 #define emberAfFillCommandAlarmClusterGetAlarmResponse( *status*, *alarmCode*, *clusterId*, *timeStamp* )**

Command description for GetAlarmResponse.

Cluster: Alarms, Attributes and commands for sending notifications and configuring alarm functionality.  
Command: GetAlarmResponse

#### Parameters

<i>status</i>	uint8_t
<i>alarmCode</i>	uint8_t
<i>clusterId</i>	uint16_t
<i>timeStamp</i>	uint32_t

Definition at line 1956 of file [client-command-macro.doc](#).

**6.5.2.106 #define emberAfFillCommandRssiLocationClusterSetAbsoluteLocation( *coordinate1*, *coordinate2*, *coordinate3*, *power*, *pathLossExponent* )**

Command description for SetAbsoluteLocation.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: SetAbsoluteLocation

#### Parameters

<i>coordinate1</i>	int16_t
<i>coordinate2</i>	int16_t
<i>coordinate3</i>	int16_t
<i>power</i>	int16_t
<i>pathLoss-Exponent</i>	uint16_t

Definition at line 1991 of file [client-command-macro.doc](#).

**6.5.2.107 #define emberAfFillCommandRssiLocationClusterSetDeviceConfiguration( *power*, *pathLossExponent*, *calculationPeriod*, *numberRssiMeasurements*, *reportingPeriod* )**

Command description for SetDeviceConfiguration.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: SetDeviceConfiguration

#### Parameters

<i>power</i>	int16_t
<i>pathLoss-Exponent</i>	uint16_t
<i>calculation-Period</i>	uint16_t
<i>numberRssi-Measurements</i>	uint8_t
<i>reporting-Period</i>	uint16_t

Definition at line 2018 of file [client-command-macro.doc](#).

#### **6.5.2.108 #define emberAfFillCommandRssiLocationClusterGetDeviceConfiguration( targetAddress )**

Command description for GetDeviceConfiguration.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: GetDeviceConfiguration

##### **Parameters**

<i>targetAddress</i>	uint8_t*
----------------------	----------

Definition at line 2041 of file [client-command-macro.doc](#).

#### **6.5.2.109 #define emberAfFillCommandRssiLocationClusterGetLocationData( flags, numberResponses, targetAddress )**

Command description for GetLocationData.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: GetLocationData

##### **Parameters**

<i>flags</i>	uint8_t
<i>number-</i> <i>Responses</i>	uint8_t
<i>targetAddress</i>	uint8_t*

Definition at line 2058 of file [client-command-macro.doc](#).

#### **6.5.2.110 #define emberAfFillCommandRssiLocationClusterRssiResponse( replyingDevice, coordinate1, coordinate2, coordinate3, rssi, numberRssiMeasurements )**

Command description for RssiResponse.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: RssiResponse

##### **Parameters**

<i>replyingDevice</i>	uint8_t*
<i>coordinate1</i>	int16_t
<i>coordinate2</i>	int16_t
<i>coordinate3</i>	int16_t
<i>rssi</i>	int8_t
<i>numberRssi-</i> <i>Measurements</i>	uint8_t

Definition at line 2082 of file [client-command-macro.doc](#).

**6.5.2.111 #define emberAfFillCommandRssiLocationClusterSendPings( targetAddress, numberRssiMeasurements, calculationPeriod )**

Command description for SendPings.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: SendPings

#### Parameters

<i>targetAddress</i>	uint8_t*
<i>numberRssiMeasurements</i>	uint8_t
<i>calculationPeriod</i>	uint16_t

Definition at line 2109 of file [client-command-macro.doc](#).

**6.5.2.112 #define emberAfFillCommandRssiLocationClusterAnchorNodeAnnounce( anchorNodeIeeeAddress, coordinate1, coordinate2, coordinate3 )**

Command description for AnchorNodeAnnounce.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: AnchorNodeAnnounce

#### Parameters

<i>anchorNodeIeeeAddress</i>	uint8_t*
<i>coordinate1</i>	int16_t
<i>coordinate2</i>	int16_t
<i>coordinate3</i>	int16_t

Definition at line 2131 of file [client-command-macro.doc](#).

**6.5.2.113 #define emberAfFillCommandRssiLocationClusterDeviceConfigurationResponse( status, power, pathLossExponent, calculationPeriod, numberRssiMeasurements, reportingPeriod )**

Command description for DeviceConfigurationResponse.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: DeviceConfigurationResponse

#### Parameters

<i>status</i>	uint8_t
<i>power</i>	int16_t
<i>pathLossExponent</i>	uint16_t
<i>calculationPeriod</i>	uint16_t
<i>numberRssiMeasurements</i>	uint8_t

<i>reporting-Period</i>	uint16_t
-------------------------	----------

locationType, coordinate1, coordinate2, coordinate3, power, pathLossExponent,  

locationMethod, qualityMeasure, locationAge )
```

Command description for LocationDataResponse.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: LocationDataResponse

#### Parameters

<i>status</i>	uint8_t
<i>locationType</i>	uint8_t
<i>coordinate1</i>	int16_t
<i>coordinate2</i>	int16_t
<i>coordinate3</i>	int16_t
<i>power</i>	int16_t
<i>pathLoss-Exponent</i>	uint16_t
<i>locationMethod</i>	uint8_t
<i>qualityMeasure</i>	uint8_t
<i>locationAge</i>	uint16_t

Definition at line 2191 of file [client-command-macro.doc](#).

```
6.5.2.115 #define emberAfFillCommandRssiLocationClusterLocationDataNotification( locationType,  

coordinate1, coordinate2, coordinate3, power, pathLossExponent, locationMethod,  

qualityMeasure, locationAge )
```

Command description for LocationDataNotification.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: LocationDataNotification

#### Parameters

<i>locationType</i>	uint8_t
<i>coordinate1</i>	int16_t
<i>coordinate2</i>	int16_t
<i>coordinate3</i>	int16_t
<i>power</i>	int16_t
<i>pathLoss-Exponent</i>	uint16_t
<i>locationMethod</i>	uint8_t
<i>qualityMeasure</i>	uint8_t
<i>locationAge</i>	uint16_t

Definition at line 2232 of file [client-command-macro.doc](#).

**6.5.2.116 #define emberAfFillCommandRssiLocationClusterCompactLocationDataNotification(  
locationType, coordinate1, coordinate2, coordinate3, qualityMeasure, locationAge )**

Command description for CompactLocationDataNotification.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: CompactLocationDataNotification

#### Parameters

<i>locationType</i>	uint8_t
<i>coordinate1</i>	int16_t
<i>coordinate2</i>	int16_t
<i>coordinate3</i>	int16_t
<i>qualityMeasure</i>	uint8_t

Definition at line 2268 of file [client-command-macro.doc](#).

**6.5.2.117 #define emberAfFillCommandRssiLocationClusterRssiPing( *locationType* )**

Command description for RssiPing.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: RssiPing

#### Parameters

<i>locationType</i>	uint8_t
---------------------	---------

Definition at line 2293 of file [client-command-macro.doc](#).

**6.5.2.118 #define emberAfFillCommandRssiLocationClusterRssiRequest( )**

Command description for RssiRequest.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: RssiRequest

Definition at line 2307 of file [client-command-macro.doc](#).

**6.5.2.119 #define emberAfFillCommandRssiLocationClusterReportRssiMeasurements( *measuringDevice*,  
*neighbors*, *neighborsInfo*, *neighborsInfoLen* )**

Command description for ReportRssiMeasurements.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: ReportRssiMeasurements

**Parameters**

<i>measuring-Device</i>	uint8_t*
<i>neighbors</i>	uint8_t
<i>neighborsInfo</i>	uint8_t*
<i>neighborsInfo-Len</i>	uint8_t

Definition at line 2324 of file [client-command-macro.doc](#).

**6.5.2.120 #define emberAfFillCommandRssiLocationClusterRequestOwnLocation( *blindNode* )**

Command description for RequestOwnLocation.

Cluster: RSSI Location, Attributes and commands that provide a means for exchanging location information and channel parameters among devices. Command: RequestOwnLocation

**Parameters**

<i>blindNode</i>	uint8_t*
------------------	----------

**6.5.2.129 #define emberAfFillCommandPartitionClusterTransferPartitionedFrame( *fragmentationOptions*,  
*partitionedIndicatorAndFrame*, *partitionedIndicatorAndFrameLen* )**

The TransferPartitionedFrame command is used to send a partitioned frame to another Partition cluster.

Cluster: Partition, Commands and attributes for enabling partitioning of large frame to be carried from other clusters of ZigBee devices. Command: TransferPartitionedFrame

**Parameters**

<i>fragmentation- Options</i>	uint8_t
<i>partitioned- IndicatorAnd- Frame</i>	uint8_t*
<i>partitioned- IndicatorAnd- FrameLen</i>	uint8_t

Definition at line [2512](#) of file [client-command-macro.doc](#).

**6.5.2.130 #define emberAfFillCommandPartitionClusterReadHandshakeParam( *partitionedClusterId*, *attributeList*, *attributeListLen* )**

The ReadHandshakeParam command is used in order to read the appropriate set of parameters for each transaction to be performed by the Partition Cluster.

Cluster: Partition, Commands and attributes for enabling partitioning of large frame to be carried from other clusters of ZigBee devices. Command: ReadHandshakeParam

#### Parameters

<i>partitioned-ClusterId</i>	uint16_t
<i>attributeList</i>	uint8_t*
<i>attributeListLen</i>	uint8_t

Definition at line 2533 of file [client-command-macro.doc](#).

**6.5.2.131 #define emberAfFillCommandPartitionClusterWriteHandshakeParam( *partitionedClusterId*, *writeAttributeRecords*, *writeAttributeRecordsLen* )**

The WriteHandshakeParam command is used during the handshake phase in order to write the appropriate parameters for each transaction to be performed by the Partition Cluster.

Cluster: Partition, Commands and attributes for enabling partitioning of large frame to be carried from other clusters of ZigBee devices. Command: WriteHandshakeParam

#### Parameters

<i>partitioned-ClusterId</i>	uint16_t
<i>writeAttribute-Records</i>	uint8_t*
<i>writeAttribute-RecordsLen</i>	uint8_t

Definition at line 2554 of file [client-command-macro.doc](#).

**6.5.2.132 #define emberAfFillCommandPartitionClusterMultipleAck( *ackOptions*, *firstFrameIdAndNackList*, *firstFrameIdAndNackListLen* )**

MultipleACK command.

Cluster: Partition, Commands and attributes for enabling partitioning of large frame to be carried from other clusters of ZigBee devices. Command: MultipleAck

#### Parameters

<i>ackOptions</i>	uint8_t
<i>firstFrameId-AndNackList</i>	uint8_t*
<i>firstFrameId-AndNackListLen</i>	uint8_t

Definition at line [2575](#) of file [client-command-macro.doc](#).

**6.5.2.133 #define emberAfFillCommandPartitionClusterReadHandshakeParamResponse( partitionedClusterId, readAttributeStatusRecords, readAttributeStatusRecordsLen )**

The ReadHandshakeParamResponse command is used in order to response to the corresponding ReadHandshakeParam command in order to communicate the appropriate set of parameters configured for each transaction to be performed by the Partition Cluster.

Cluster: Partition, Commands and attributes for enabling partitioning of large frame to be carried from other clusters of ZigBee devices. Command: ReadHandshakeParamResponse

#### Parameters

<i>partitioned-ClusterId</i>	uint16_t
<i>readAttribute-StatusRecords</i>	uint8_t*
<i>readAttribute-StatusRecords-Len</i>	uint8_t

Definition at line [2596](#) of file [client-command-macro.doc](#).

**6.5.2.134 #define emberAfFillCommandOtaBootloadClusterImageNotify( payloadType, queryJitter, manufacturerId, imageType, newFileVersion )**

This command is generated when the upgrade server wishes to notify the clients of the available OTA upgrade image. The command can be sent as unicast which provides a way for the server to force the upgrade on the client. The command can also be sent as broadcast or multicast to certain class of clients (for example, the ones that have matching manufacturing and device ids).

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: ImageNotify

#### Parameters

<i>payloadType</i>	uint8_t
<i>queryJitter</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>newFileVersion</i>	uint32_t

Definition at line [2624](#) of file [client-command-macro.doc](#).

**6.5.2.135 #define emberAfFillCommandOtaBootloadClusterQueryNextImageRequest( fieldControl, manufacturerId, imageType, currentFileVersion, hardwareVersion )**

This command is generated upon receipt of an Image Notify command to indicate that the client is looking for the next firmware image to upgrade to. The client may also choose to send the command periodically to the server.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: QueryNextImageRequest

#### Parameters

<i>fieldControl</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>currentFile- Version</i>	uint32_t
<i>hardware- Version</i>	uint16_t

Definition at line [2651](#) of file [client-command-macro.doc](#).

**6.5.2.136 #define emberAfFillCommandOtaBootloadClusterQueryNextImageResponse( *status,*  
*manufacturerId, imageType, fileVersion, imageSize* )**

This command is generated upon receipt of an QueryNextImageRequest command to response whether the server has a valid OTA upgrade image for the client or not. If the server has the file, information regarding the file and OTA upgrade process will be included in the command.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: QueryNextImageResponse

#### Parameters

<i>status</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t
<i>imageSize</i>	uint32_t

Definition at line [2678](#) of file [client-command-macro.doc](#).

**6.5.2.137 #define emberAfFillCommandOtaBootloadClusterImageBlockRequest( *fieldControl,*  
*manufacturerId, imageType, fileVersion, fileOffset, maxDataSize, requestNodeAddress* )**

This command is generated by the client to request blocks of OTA upgrade file data.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: ImageBlockRequest

#### Parameters

<i>fieldControl</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t
<i>fileOffset</i>	uint32_t
<i>maxDataSize</i>	uint8_t
<i>requestNode- Address</i>	uint8_t*

Definition at line 2707 of file [client-command-macro.doc](#).

```
6.5.2.138 #define emberAfFillCommandOtaBootloadClusterImagePageRequest( fieldControl,
manufacturerId, imageType, fileVersion, fileOffset, maxDataSize, pageSize,
responseSpacing, requestNodeAddress )
```

This command is generated by the client to request pages of OTA upgrade file data. A page would contain multiple blocks of data.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: ImagePageRequest

#### Parameters

<i>fieldControl</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t
<i>fileOffset</i>	uint32_t
<i>maxDataSize</i>	uint8_t
<i>pageSize</i>	uint16_t
<i>response- Spacing</i>	uint16_t
<i>requestNode- Address</i>	uint8_t*

Definition at line 2742 of file [client-command-macro.doc](#).

```
6.5.2.139 #define emberAfFillCommandOtaBootloadClusterImageBlockResponse( status,
manufacturerId, imageType, fileVersion, fileOffset, dataSize, imageData, imageDataLen )
```

This command is generated by the server in response to the block or page request command. If the server has the data available, it will reply back with a SUCCESS status. For other error cases, it may reply with status WAIT\_FOR\_DATA (server does not have the data available yet) or ABORT (invalid requested parameters or other failure cases).

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: ImageBlockResponse

#### Parameters

<i>status</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t
<i>fileOffset</i>	uint32_t
<i>dataSize</i>	uint8_t
<i>imageData</i>	uint8_t*
<i>imageDataLen</i>	uint8_t

Definition at line 2780 of file [client-command-macro.doc](#).

**6.5.2.140 #define emberAfFillCommandOtaBootloadClusterUpgradeEndRequest( *status, manufacturerId, imageType, fileVersion* )**

This command is generated by the client to notify the server of the end of the upgrade process. The process may end with success or error status.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: UpgradeEndRequest

#### Parameters

<i>status</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t

Definition at line 2812 of file [client-command-macro.doc](#).

**6.5.2.141 #define emberAfFillCommandOtaBootloadClusterUpgradeEndResponse( *manufacturerId, imageType, fileVersion, currentTime, upgradeTime* )**

This command is generated by the server in response to the upgrade request in order to let the client know when to upgrade to running new firmware image.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: UpgradeEndResponse

#### Parameters

<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t
<i>currentTime</i>	uint32_t
<i>upgradeTime</i>	uint32_t

Definition at line 2837 of file [client-command-macro.doc](#).

**6.5.2.142 #define emberAfFillCommandOtaBootloadClusterQuerySpecificFileRequest( *requestNodeAddress, manufacturerId, imageType, fileVersion, currentZigbeeStackVersion* )**

This command is generated by the client to request a file that is specific to itself. The intention is to provide a way for the client to request non-OTA upgrade file.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: QuerySpecificFileRequest

#### Parameters

<i>requestNode-Address</i>	uint8_t*
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t
<i>currentZigbee-StackVersion</i>	uint16_t

Definition at line 2864 of file [client-command-macro.doc](#).

**6.5.2.143 #define emberAfFillCommandOtaBootloadClusterQuerySpecificFileResponse( *status*, *manufacturerId*, *imageType*, *fileVersion*, *imageSize* )**

This command is generated upon receipt of an QuerySpecificFileRequest command to response whether the server has a valid file for the client or not. If the server has the file, information regarding the file and OTA process will be included in the command.

Cluster: Over the Air Bootloading, This cluster contains commands and attributes that act as an interface for ZigBee Over-the-air bootloading. Command: QuerySpecificFileResponse

#### Parameters

<i>status</i>	uint8_t
<i>manufacturerId</i>	uint16_t
<i>imageType</i>	uint16_t
<i>fileVersion</i>	uint32_t
<i>imageSize</i>	uint32_t

Definition at line 2891 of file [client-command-macro.doc](#).

**6.5.2.144 #define emberAfFillCommandPowerProfileClusterPowerProfileRequest( *powerProfileId* )**

The PowerProfileRequest Command is generated by a device supporting the client side of the Power Profile cluster in order to request the Power Profile of a server device.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: PowerProfileRequest

#### Parameters

<i>powerProfileId</i>	uint8_t
-----------------------	---------

Definition at line 2919 of file [client-command-macro.doc](#).

**6.5.2.145 #define emberAfFillCommandPowerProfileClusterPowerProfileStateRequest( )**

The PowerProfileStateRequest Command is generated in order to retrieve the identifiers of current Power Profiles.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: PowerProfileStateRequest

Definition at line 2933 of file [client-command-macro.doc](#).

**6.5.2.146 #define emberAfFillCommandPowerProfileClusterGetPowerProfilePriceResponse( powerProfileId, currency, price, priceTrailingDigit )**

The GetPowerProfilePriceResponse command allows a device (client) to communicate the cost associated to the selected Power Profile to another device (server) requesting it.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: GetPowerProfilePriceResponse

#### Parameters

<i>powerProfileId</i>	uint8_t
<i>currency</i>	uint16_t
<i>price</i>	uint32_t
<i>priceTrailing-Digit</i>	uint8_t

Definition at line [2950](#) of file [client-command-macro.doc](#).

**6.5.2.147 #define emberAfFillCommandPowerProfileClusterGetOverallSchedulePriceResponse( currency, price, priceTrailingDigit )**

The GetOverallSchedulePriceResponse command allows a device (client) to communicate the overall cost associated to all Power Profiles scheduled to another device (server) requesting it.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: GetOverallSchedulePriceResponse

#### Parameters

<i>currency</i>	uint16_t
<i>price</i>	uint32_t
<i>priceTrailing-Digit</i>	uint8_t

Definition at line [2973](#) of file [client-command-macro.doc](#).

**6.5.2.148 #define emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleNotification( powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen )**

The EnergyPhasesScheduleNotification Command is generated by a device supporting the client side of the Power Profile cluster in order to schedule the start of the selected Power Profile and its phases.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: EnergyPhasesScheduleNotification

**Parameters**

<i>powerProfileId</i>	uint8_t
<i>numOfScheduledPhases</i>	uint8_t
<i>scheduledPhases</i>	uint8_t*
<i>scheduledPhasesLen</i>	uint8_t

Definition at line 2995 of file [client-command-macro.doc](#).

**6.5.2.149 #define emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleResponse( powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen )**

This command is generated by the client side of Power Profile cluster as a reply to the EnergyPhasesScheduleRequest command.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: EnergyPhasesScheduleResponse

**Parameters**

<i>powerProfileId</i>	uint8_t
<i>numOfScheduledPhases</i>	uint8_t
<i>scheduledPhases</i>	uint8_t*
<i>scheduledPhasesLen</i>	uint8_t

Definition at line 3019 of file [client-command-macro.doc](#).

**6.5.2.150 #define emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsRequest( powerProfileId )**

The PowerProfileScheduleConstraintsRequest Command is generated by a device supporting the client side of the Power Profile cluster in order to request the constraints -if set- of Power Profile of a client device, in order to set the proper boundaries for the scheduling when calculating the schedules.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: PowerProfileScheduleConstraintsRequest

**Parameters**

<i>powerProfileId</i>	uint8_t
-----------------------	---------

Definition at line 3040 of file [client-command-macro.doc](#).

**6.5.2.151 #define emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateRequest(  
powerProfileId )**

The EnergyPhasesScheduleStateRequest Command is generated by a device supporting the client side of the Power Profile cluster to check the states of the scheduling of a power profile, which is supported in the device implementing the server side of Power Profile cluster.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
Command: EnergyPhasesScheduleStateRequest

**Parameters**

<i>powerProfileId</i>	uint8_t
-----------------------	---------

Definition at line 3055 of file [client-command-macro.doc](#).

**6.5.2.152 #define emberAfFillCommandPowerProfileClusterGetPowerProfilePriceExtendedResponse(  
powerProfileId, currency, price, priceTrailingDigit )**

The Get Power Profile Price Extended Response command allows a device (client) to communicate the cost associated to all Power Profiles scheduled to another device (server) requesting it according to the specific options contained in the Get Power Profile Price Extended Response.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
Command: GetPowerProfilePriceExtendedResponse

**Parameters**

<i>powerProfileId</i>	uint8_t
<i>currency</i>	uint16_t
<i>price</i>	uint32_t
<i>priceTrailing-Digit</i>	uint8_t

Definition at line 3073 of file [client-command-macro.doc](#).

**6.5.2.153 #define emberAfFillCommandPowerProfileClusterPowerProfileNotification( totalProfileNum,  
powerProfileId, numOfTransferredPhases, transferredPhases, transferredPhasesLen )**

The PowerProfileNotification Command is generated by a device supporting the server side of the Power Profile cluster in order to send the information of the specific parameters (such as Peak power and others) belonging to each phase.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
Command: PowerProfileNotification

**Parameters**

<i>totalProfile-Num</i>	uint8_t
<i>powerProfileId</i>	uint8_t
<i>numOf-Transferred-Phases</i>	uint8_t
<i>transferred-Phases</i>	uint8_t*
<i>transferred-PhasesLen</i>	uint8_t

Definition at line 3098 of file [client-command-macro.doc](#).

**6.5.2.154 #define emberAfFillCommandPowerProfileClusterPowerProfileResponse( *totalProfileNum,*  
*powerProfileId, numOfTransferredPhases, transferredPhases, transferredPhasesLen*  )**

This command is generated by the server side of Power Profile cluster as a reply to the PowerProfileRequest command.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: PowerProfileResponse

**Parameters**

<i>totalProfile-Num</i>	uint8_t
<i>powerProfileId</i>	uint8_t
<i>numOf-Transferred-Phases</i>	uint8_t
<i>transferred-Phases</i>	uint8_t*
<i>transferred-PhasesLen</i>	uint8_t

Definition at line 3125 of file [client-command-macro.doc](#).

**6.5.2.155 #define emberAfFillCommandPowerProfileClusterPowerProfileStateResponse( *powerProfileCount, powerProfileRecords, powerProfileRecordsLen*  )**

The PowerProfileStateResponse command allows a device (server) to communicate its current Power Profile(s) to another device (client) that previously requested them.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: PowerProfileStateResponse

**Parameters**

<i>powerProfile-Count</i>	uint8_t
<i>powerProfile-Records</i>	uint8_t*
<i>powerProfile-RecordsLen</i>	uint8_t

Definition at line 3150 of file [client-command-macro.doc](#).

**6.5.2.156 #define emberAfFillCommandPowerProfileClusterGetPowerProfilePrice( *powerProfileId* )**

The GetPowerProfilePrice Command is generated by the server (e.g. White goods) in order to retrieve the cost associated to a specific Power profile.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
Command: GetPowerProfilePrice

**Parameters**

<i>powerProfileId</i>	uint8_t
-----------------------	---------

Definition at line 3169 of file [client-command-macro.doc](#).

**6.5.2.157 #define emberAfFillCommandPowerProfileClusterPowerProfilesStateNotification( *powerProfileCount*, *powerProfileRecords*, *powerProfileRecordsLen* )**

The PowerProfileStateNotification Command is generated by the server (e.g. White goods) in order to update the state of the power profile and the current energy phase.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
Command: PowerProfilesStateNotification

**Parameters**

<i>powerProfile-Count</i>	uint8_t
<i>powerProfile-Records</i>	uint8_t*
<i>powerProfile-RecordsLen</i>	uint8_t

Definition at line 3186 of file [client-command-macro.doc](#).

**6.5.2.158 #define emberAfFillCommandPowerProfileClusterGetOverallSchedulePrice( )**

The GetOverallSchedulePrice Command is generated by the server (e.g. White goods) in order to retrieve the overall cost associated to all the Power Profiles scheduled by the scheduler (the device supporting the Power Profile cluster client side) for the next 24 hours.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
 Command: GetOverallSchedulePrice

Definition at line 3204 of file [client-command-macro.doc](#).

**6.5.2.159 #define emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleRequest( powerProfileId )**

The EnergyPhasesScheduleRequest Command is generated by the server (e.g. White goods) in order to retrieve from the scheduler (e.g. Home Gateway) the schedule (if available) associated to the specific Power Profile carried in the payload.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
 Command: EnergyPhasesScheduleRequest

#### Parameters

<i>powerProfileId</i>	uint8_t
-----------------------	---------

Definition at line 3218 of file [client-command-macro.doc](#).

**6.5.2.160 #define emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateResponse( powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen )**

The EnergyPhasesScheduleStateResponse Command is generated by the server (e.g. White goods) in order to reply to a EnergyPhasesScheduleStateRequest command about the scheduling states that are set in the server side.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
 Command: EnergyPhasesScheduleStateResponse

#### Parameters

<i>powerProfileId</i>	uint8_t
<i>numOfScheduled- Phases</i>	uint8_t
<i>scheduled- Phases</i>	uint8_t*
<i>scheduled- PhasesLen</i>	uint8_t

Definition at line 3236 of file [client-command-macro.doc](#).

**6.5.2.161 #define emberAfFillCommandPowerProfileClusterEnergyPhasesScheduleStateNotification( powerProfileId, numOfScheduledPhases, scheduledPhases, scheduledPhasesLen )**

The EnergyPhasesScheduleStateNotification Command is generated by the server (e.g. White goods) in order to notify (un-solicited command) a client side about the scheduling states that are set in the server side.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
Command: EnergyPhasesScheduleStateNotification

#### Parameters

<i>powerProfileId</i>	uint8_t
<i>numOfScheduledPhases</i>	uint8_t
<i>scheduledPhases</i>	uint8_t*
<i>scheduledPhasesLen</i>	uint8_t

Definition at line 3260 of file [client-command-macro.doc](#).

**6.5.2.162 #define emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsNotification( powerProfileId, startAfter, stopBefore )**

The PowerProfileScheduleConstraintsNotification Command is generated by a device supporting the server side of the Power Profile cluster to notify the client side of this cluster about the imposed constraints and let the scheduler (i.e. the entity supporting the Power Profile cluster client side) to set the proper boundaries for the scheduling.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side).  
Command: PowerProfileScheduleConstraintsNotification

#### Parameters

<i>powerProfileId</i>	uint8_t
<i>startAfter</i>	uint16_t
<i>stopBefore</i>	uint16_t

Definition at line 3283 of file [client-command-macro.doc](#).

**6.5.2.163 #define emberAfFillCommandPowerProfileClusterPowerProfileScheduleConstraintsResponse( powerProfileId, startAfter, stopBefore )**

The PowerProfileScheduleConstraintsResponse Command is generated by a device supporting the server side of the Power Profile cluster to reply to a client side of this cluster which sent a PowerProfileScheduleConstraintsRequest.

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: PowerProfileScheduleConstraintsResponse

#### Parameters

<i>powerProfileId</i>	uint8_t
<i>startAfter</i>	uint16_t
<i>stopBefore</i>	uint16_t

Definition at line 3304 of file [client-command-macro.doc](#).

**6.5.2.164 #define emberAfFillCommandPowerProfileClusterGetPowerProfilePriceExtended( *options*, *powerProfileId*, *powerProfileStartTime* )**

The Get Power Profile Price Extended command is generated by the server (e.g., White Goods) in order to retrieve the cost associated to a specific Power profile considering specific conditions described in the option field (e.g., a specific time).

Cluster: Power Profile, This cluster provides an interface for transferring power profile information from a device (e.g. Whitegood) to a controller (e.g. the Home Gateway). The Power Profile transferred can be solicited by client side (request command) or can be notified directly from the device (server side). Command: GetPowerProfilePriceExtended

#### Parameters

<i>options</i>	uint8_t
<i>powerProfileId</i>	uint8_t
<i>powerProfile-StartTime</i>	uint16_t

Definition at line 3325 of file [client-command-macro.doc](#).

**6.5.2.165 #define emberAfFillCommandApplianceControlClusterExecutionOfACommand( *commandId* )**

This basic message is used to remotely control and to program household appliances.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: ExecutionOfACommand

#### Parameters

<i>commandId</i>	uint8_t
------------------	---------

Definition at line 3349 of file [client-command-macro.doc](#).

**6.5.2.166 #define emberAfFillCommandApplianceControlClusterSignalState( )**

This basic message is used to retrieve Household Appliances status.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: SignalState

Definition at line 3363 of file [client-command-macro.doc](#).

**6.5.2.167 #define emberAfFillCommandApplianceControlClusterWriteFunctions( *functionId*, *functionDataType*, *functionData*, *functionDataLen* )**

This basic message is used to set appliance functions, i.e. information regarding the execution of an appliance cycle. Condition parameters such as start time or finish time information could be provided through this command.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: WriteFunctions

#### Parameters

<i>functionId</i>	uint16_t
<i>functionData-</i> <i>Type</i>	uint8_t
<i>functionData</i>	uint8_t*
<i>functionData-</i> <i>Len</i>	uint8_t

Definition at line 3380 of file [client-command-macro.doc](#).

**6.5.2.168 #define emberAfFillCommandApplianceControlClusterOverloadPauseResume( )**

This command shall be used to resume the normal behavior of a household appliance being in pause mode after receiving a Overload Pause command.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: OverloadPauseResume

Definition at line 3400 of file [client-command-macro.doc](#).

**6.5.2.169 #define emberAfFillCommandApplianceControlClusterOverloadPause( )**

This command shall be used to pause the household appliance as a consequence of an imminent overload event.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: OverloadPause

Definition at line 3413 of file [client-command-macro.doc](#).

**6.5.2.170 #define emberAfFillCommandApplianceControlClusterOverloadWarning( *warningEvent* )**

This basic message is used to send warnings the household appliance as a consequence of a possible overload event, or the notification of the end of the warning state.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: OverloadWarning

#### Parameters

<i>warningEvent</i>	uint8_t
---------------------	---------

Definition at line [3427](#) of file [client-command-macro.doc](#).

**6.5.2.171 #define emberAfFillCommandApplianceControlClusterSignalStateResponse( *applianceStatus*, *remoteEnableFlagsAndDeviceStatus2*, *applianceStatus2* )**

This command shall be used to return household appliance status, according to Appliance Status Values and Remote Enable Flags Values.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: SignalStateResponse

#### Parameters

<i>appliance-Status</i>	uint8_t
<i>remoteEnable-FlagsAnd-DeviceStatus2</i>	uint8_t
<i>appliance-Status2</i>	uint32_t

Definition at line [3444](#) of file [client-command-macro.doc](#).

**6.5.2.172 #define emberAfFillCommandApplianceControlClusterSignalStateNotification( *applianceStatus*, *remoteEnableFlagsAndDeviceStatus2*, *applianceStatus2* )**

This command shall be used to return household appliance status, automatically when appliance status changes.

Cluster: Appliance Control, This cluster provides an interface to remotely control and to program household appliances. Command: SignalStateNotification

#### Parameters

<i>appliance-Status</i>	uint8_t
<i>remoteEnable-FlagsAnd-DeviceStatus2</i>	uint8_t
<i>appliance-Status2</i>	uint32_t

Definition at line [3465](#) of file [client-command-macro.doc](#).

**6.5.2.173 #define emberAfFillCommandPollControlClusterCheckIn( )**

The Poll Control Cluster server sends out a Check-in command to the devices to which it is paired based on the server's Check-in Interval attribute.

Cluster: Poll Control, This cluster provides a mechanism for the management of an end device's MAC Data Poll rate. For the purposes of this cluster, the term "poll" always refers to the sending of a MAC Data Poll from the end device to the end device's parent. Command: CheckIn

Definition at line [3488](#) of file [client-command-macro.doc](#).

**6.5.2.174 #define emberAfFillCommandPollControlClusterCheckInResponse( *startFastPolling*, *fastPollTimeout* )**

The Check-in Response is sent in response to the receipt of a Check-in command.

Cluster: Poll Control, This cluster provides a mechanism for the management of an end device's MAC Data Poll rate. For the purposes of this cluster, the term "poll" always refers to the sending of a MAC Data Poll from the end device to the end device's parent. Command: CheckInResponse

#### Parameters

<i>startFast-Polling</i>	uint8_t
<i>fastPollTimeout</i>	uint16_t

Definition at line 3503 of file [client-command-macro.doc](#).

**6.5.2.175 #define emberAfFillCommandPollControlClusterFastPollStop( )**

The Fast Poll Stop command is used to stop the fast poll mode initiated by the Check-in response.

Cluster: Poll Control, This cluster provides a mechanism for the management of an end device's MAC Data Poll rate. For the purposes of this cluster, the term "poll" always refers to the sending of a MAC Data Poll from the end device to the end device's parent. Command: FastPollStop

Definition at line 3519 of file [client-command-macro.doc](#).

**6.5.2.176 #define emberAfFillCommandPollControlClusterSetLongPollInterval( *newLongPollInterval* )**

The Set Long Poll Interval command is used to set the read only Long Poll Interval Attribute.

Cluster: Poll Control, This cluster provides a mechanism for the management of an end device's MAC Data Poll rate. For the purposes of this cluster, the term "poll" always refers to the sending of a MAC Data Poll from the end device to the end device's parent. Command: SetLongPollInterval

#### Parameters

<i>newLongPoll-Interval</i>	uint32_t
-----------------------------	----------

Definition at line 3533 of file [client-command-macro.doc](#).

**6.5.2.177 #define emberAfFillCommandPollControlClusterSetShortPollInterval( *newShortPollInterval* )**

The Set Short Poll Interval command is used to set the read only Short Poll Interval Attribute.

Cluster: Poll Control, This cluster provides a mechanism for the management of an end device's MAC Data Poll rate. For the purposes of this cluster, the term "poll" always refers to the sending of a MAC Data Poll from the end device to the end device's parent. Command: SetShortPollInterval

#### Parameters

<i>newShortPoll-Interval</i>	uint16_t
------------------------------	----------

Definition at line 3548 of file [client-command-macro.doc](#).

**6.5.2.178 #define emberAfFillCommandGreenPowerClusterGpNotification( options, gpdSrcId, gpdIeee, gpdEndpoint, gpdSecurityFrameCounter, gpdCommandId, gpdCommandPayload, gppShortAddress, gppDistance )**

From GPP to GPS to tunnel GP frame.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpNotification

#### Parameters

<i>options</i>	uint16_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>gpdEndpoint</i>	uint8_t
<i>gpdSecurityFrameCounter</i>	uint32_t
<i>gpdCommandId</i>	uint8_t
<i>gpdCommandPayload</i>	uint8_t*
<i>gppShortAddress</i>	uint16_t
<i>gppDistance</i>	uint8_t

Definition at line 3576 of file [client-command-macro.doc](#).

**6.5.2.179 #define emberAfFillCommandGreenPowerClusterGpPairingSearch( options, gpdSrcId, gpdIeee, endpoint )**

From GPP to GPSs in entire network to get pairing indication related to GPD for Proxy Table update.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpPairingSearch

#### Parameters

<i>options</i>	uint16_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t

Definition at line 3610 of file [client-command-macro.doc](#).

**6.5.2.180 #define emberAfFillCommandGreenPowerClusterGpTunnelingStop( options, gpdSrcId, gpdIeee, endpoint, gpdSecurityFrameCounter, gppShortAddress, gppDistance )**

From GPP to neighbor GPPs to indicate GP Notification sent in unicast mode.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpTunnelingStop

**Parameters**

<i>options</i>	uint8_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>gpdSecurityFrameCounter</i>	uint32_t
<i>gppShortAddress</i>	uint16_t
<i>gppDistance</i>	int8_t

Definition at line 3637 of file [client-command-macro.doc](#).

**6.5.2.181 #define emberAfFillCommandGreenPowerClusterGpCommissioningNotification( *options*,  
*gpdSrcId*, *gpdIeee*, *endpoint*, *gpdSecurityFrameCounter*, *gpdCommandId*,  
*gpdCommandPayload*, *gppShortAddress*, *gppLink*, *mic* )**

From GPP to GPS to tunnel GPD commissioning data.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpCommissioningNotification

**Parameters**

<i>options</i>	uint16_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>gpdSecurityFrameCounter</i>	uint32_t
<i>gpdCommandId</i>	uint8_t
<i>gpdCommandPayload</i>	uint8_t*
<i>gppShortAddress</i>	uint16_t
<i>gppLink</i>	uint8_t
<i>mic</i>	uint32_t

Definition at line 3673 of file [client-command-macro.doc](#).

**6.5.2.182 #define emberAfFillCommandGreenPowerClusterGpSinkCommissioningMode( *options*,  
*gpmAddrForSecurity*, *gpmAddrForPairing*, *sinkEndpoint* )**

To enable commissioning mode of the sink, over the air.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpSinkCommissioningMode

**Parameters**

<i>options</i>	uint8_t
<i>gpmAddrFor-Security</i>	uint16_t
<i>gpmAddrFor-Pairing</i>	uint16_t
<i>sinkEndpoint</i>	uint8_t

Definition at line 3709 of file [client-command-macro.doc](#).

**6.5.2.183 #define emberAfFillCommandGreenPowerClusterGpTranslationTableUpdate( *options*, *gpdSrcId*, *gpdIeee*, *endpoint*, *translations*, *translationsLen* )**

To configure GPD Command Translation Table.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpTranslationTableUpdate

**Parameters**

<i>options</i>	uint16_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>translations</i>	uint8_t*
<i>translationsLen</i>	uint8_t

Definition at line 3735 of file [client-command-macro.doc](#).

**6.5.2.184 #define emberAfFillCommandGreenPowerClusterGpTranslationTableRequest( *startIndex* )**

To provide GPD Command Translation Table content.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpTranslationTableRequest

**Parameters**

<i>startIndex</i>	uint8_t
-------------------	---------

Definition at line 3760 of file [client-command-macro.doc](#).

**6.5.2.185 #define emberAfFillCommandGreenPowerClusterGpPairingConfiguration( *actions*, *options*, *gpdSrcId*, *gpdIeee*, *endpoint*, *deviceId*, *groupListCount*, *groupList*, *groupListLen*, *gpdAssignedAlias*, *forwardingRadius*, *securityOptions*, *gpdSecurityFrameCounter*, *gpdSecurityKey*, *numberOfPairedEndpoints*, *pairedEndpoints*, *pairedEndpointsLen*, *applicationInformation*, *manufacturerId*, *modelId*, *numberOfGpdCommands*, *gpdCommandIdList*, *gpdCommandIdListLen*, *clusterIdListCount*, *clusterListServer*, *clusterListServerLen*, *clusterListClient*, *clusterListClientLen* )**

To configure Sink Table.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpPairingConfiguration

#### Parameters

<i>actions</i>	uint8_t
<i>options</i>	uint16_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>deviceId</i>	uint8_t
<i>groupListCount</i>	uint8_t
<i>groupList</i>	uint8_t*
<i>groupListLen</i>	uint8_t
<i>gpdAssigned-</i> <i>Alias</i>	uint16_t
<i>forwarding-</i> <i>Radius</i>	uint8_t
<i>securityOptions</i>	uint8_t
<i>gpdSecurity-</i> <i>FrameCounter</i>	uint32_t
<i>gpdSecurityKey</i>	uint8_t*

**6.5.2.186 #define emberAfFillCommandGreenPowerClusterGpSinkTableRequest( *options*, *gpdSrcId*, *gpdIeee*, *endpoint*, *index* )**

To read out selected Sink Table Entries, by index or by GPD ID.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpSinkTableRequest

#### Parameters

<i>options</i>	uint8_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>index</i>	uint8_t

Definition at line 3875 of file [client-command-macro.doc](#).

**6.5.2.187 #define emberAfFillCommandGreenPowerClusterGpProxyTableResponse( *status*, *totalNumberOfNonEmptyProxyTableEntries*, *startIndex*, *entriesCount*, *proxyTableEntries*, *proxyTableEntriesLen* )**

To reply with read-out Proxy Table entries, by index or by GPD ID.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpProxyTableResponse

#### Parameters

<i>status</i>	uint8_t
<i>totalNumberOfNonEmptyProxyTableEntries</i>	uint8_t
<i>startIndex</i>	uint8_t
<i>entriesCount</i>	uint8_t
<i>proxyTableEntries</i>	uint8_t*
<i>proxyTableEntriesLen</i>	uint8_t

Definition at line 3903 of file [client-command-macro.doc](#).

**6.5.2.188 #define emberAfFillCommandGreenPowerClusterGpNotificationResponse( *options*, *gpdSrcId*, *gpdIeee*, *gpdSecurityFrameCounter* )**

From GPS to GPP to acknowledge GP Notification received in unicast mode.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpNotificationResponse

**Parameters**

<i>options</i>	uint8_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>gpdSecurityFrameCounter</i>	uint32_t

Definition at line 3931 of file [client-command-macro.doc](#).

**6.5.2.189 #define emberAfFillCommandGreenPowerClusterGpPairing( *options*, *gpdSrcId*,  
*gpdIeee*, *endpoint*, *sinkIeeeAddress*, *sinkNwkAddress*, *sinkGroupId*, *deviceId*,  
*gpdSecurityFrameCounter*, *gpdKey*, *assignedAlias*, *forwardingRadius* )**

From GPS to the entire network to (de)register for tunneling service, or for removing GPD from the network.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpPairing

**Parameters**

<i>options</i>	uint32_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>sinkIeeeAddress</i>	uint8_t*
<i>sinkNwkAddress</i>	uint16_t
<i>sinkGroupId</i>	uint16_t
<i>deviceId</i>	uint8_t
<i>gpdSecurityFrameCounter</i>	uint32_t
<i>gpdKey</i>	uint8_t*
<i>assignedAlias</i>	uint16_t
<i>forwardingRadius</i>	uint8_t

Definition at line 3963 of file [client-command-macro.doc](#).

**6.5.2.190 #define emberAfFillCommandGreenPowerClusterGpProxyCommissioningMode( *options*,  
*commissioningWindow*, *channel* )**

From GPS to GPPs in the whole network to indicate commissioning mode.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpProxyCommissioningMode

**Parameters**

<i>options</i>	uint8_t
<i>commissioningWindow</i>	uint16_t
<i>channel</i>	uint8_t

Definition at line 4002 of file [client-command-macro.doc](#).

```
6.5.2.191 #define emberAfFillCommandGreenPowerClusterGpResponse( options,
tempMasterShortAddress, tempMasterTxChannel, gpdSrcId, gpdIeee, endpoint,
gpdCommandId, gpdCommandPayload, gpdCommandPayloadLen )
```

From GPS to selected GPP, to provide data to be transmitted to Rx-capable GPD.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpResponse

#### Parameters

<i>options</i>	uint8_t
<i>tempMaster-ShortAddress</i>	uint16_t
<i>tempMasterTx-Channel</i>	uint8_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>gpdCommand-Id</i>	uint8_t
<i>gpdCommand-Payload</i>	uint8_t*
<i>gpdCommand-PayloadLen</i>	uint8_t

Definition at line 4029 of file [client-command-macro.doc](#).

```
6.5.2.192 #define emberAfFillCommandGreenPowerClusterGpSinkTableResponse( status,
totalNumberOfNonEmptySinkTableEntries, startIndex, sinkTableEntriesCount,
sinkTableEntries, sinkTableEntriesLen )
```

To selected Proxy Table entries, by index or by GPD ID.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpSinkTableResponse

#### Parameters

<i>status</i>	uint8_t
<i>totalNumberOfNonEmptySink-TableEntries</i>	uint8_t
<i>startIndex</i>	uint8_t
<i>sinkTable-EntriesCount</i>	uint8_t
<i>sinkTable-Entries</i>	uint8_t*
<i>sinkTable-EntriesLen</i>	uint8_t

Definition at line 4065 of file [client-command-macro.doc](#).

**6.5.2.193 #define emberAfFillCommandGreenPowerClusterGpProxyTableRequest( *options*, *gpdSrcId*, *gpdIeee*, *endpoint*, *index* )**

To request selected Proxy Table entries, by index or by GPD ID.

Cluster: Green Power, The Green Power cluster defines the format of the commands exchanged when handling GPDs. Command: GpProxyTableRequest

#### Parameters

<i>options</i>	uint8_t
<i>gpdSrcId</i>	uint32_t
<i>gpdIeee</i>	uint8_t*
<i>endpoint</i>	uint8_t
<i>index</i>	uint8_t

Definition at line 4094 of file [client-command-macro.doc](#).

**6.5.2.194 #define emberAfFillCommandDoorLockClusterLockDoor( *PIN* )**

Locks the door.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: LockDoor

#### Parameters

<i>PIN</i>	uint8_t*
------------	----------

Definition at line 4132 of file [client-command-macro.doc](#).

**6.5.2.195 #define emberAfFillCommandDoorLockClusterUnlockDoor( *PIN* )**

Unlocks the door.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: UnlockDoor

#### Parameters

<i>PIN</i>	uint8_t*
------------	----------

Definition at line 4147 of file [client-command-macro.doc](#).

**6.5.2.196 #define emberAfFillCommandDoorLockClusterToggle( *pin* )**

Toggles the door lock from its current state to the opposite state locked or unlocked.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: Toggle

#### Parameters

<i>pin</i>	uint8_t*
------------	----------

Definition at line 4162 of file [client-command-macro.doc](#).

#### **6.5.2.197 #define emberAfFillCommandDoorLockClusterUnlockWithTimeout( timeoutInSeconds, pin )**

Unlock the door with a timeout. When the timeout expires, the door will automatically re-lock.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: UnlockWithTimeout

##### **Parameters**

<i>timeoutIn-Seconds</i>	uint16_t
<i>pin</i>	uint8_t*

Definition at line 4178 of file [client-command-macro.doc](#).

#### **6.5.2.198 #define emberAfFillCommandDoorLockClusterGetLogRecord( logIndex )**

Retrieve a log record at a specified index.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetLogRecord

##### **Parameters**

<i>logIndex</i>	uint16_t
-----------------	----------

Definition at line 4195 of file [client-command-macro.doc](#).

#### **6.5.2.199 #define emberAfFillCommandDoorLockClusterSetPin( userId, userStatus, userType, pin )**

Set the PIN for a specified user id.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetPin

##### **Parameters**

<i>userId</i>	uint16_t
<i>userStatus</i>	uint8_t
<i>userType</i>	uint8_t
<i>pin</i>	uint8_t*

Definition at line 4213 of file [client-command-macro.doc](#).

#### **6.5.2.200 #define emberAfFillCommandDoorLockClusterGetPin( userId )**

Retrieve PIN information for a user with a specific user ID.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetPin

##### **Parameters**

<i>userId</i>	uint16_t
---------------	----------

Definition at line [4234](#) of file [client-command-macro.doc](#).

#### **6.5.2.201 #define emberAfFillCommandDoorLockClusterClearPin( userId )**

Clear the PIN for a user with a specific user ID.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearPin

##### **Parameters**

<i>userId</i>	uint16_t
---------------	----------

Definition at line [4249](#) of file [client-command-macro.doc](#).

#### **6.5.2.202 #define emberAfFillCommandDoorLockClusterClearAllPins( )**

Clear all PIN codes on the lock for all users.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearAllPins

Definition at line [4263](#) of file [client-command-macro.doc](#).

#### **6.5.2.203 #define emberAfFillCommandDoorLockClusterSetUserStatus( userId, userStatus )**

Set the status value for a specified user ID.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetUserStatus

##### **Parameters**

<i>userId</i>	uint16_t
<i>userStatus</i>	uint8_t

Definition at line [4278](#) of file [client-command-macro.doc](#).

#### **6.5.2.204 #define emberAfFillCommandDoorLockCluster GetUserStatus( userId )**

Retrieve the status byte for a specific user.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetUserStatus

##### **Parameters**

<i>userId</i>	uint16_t
---------------	----------

Definition at line [4295](#) of file [client-command-macro.doc](#).

#### **6.5.2.205 #define emberAfFillCommandDoorLockClusterSetWeekdaySchedule( scheduleId, userId, daysMask, startHour, startMinute, endHour, endMinute )**

Set the schedule of days during the week that the associated user based on the user ID will have access to the lock and will be able to operate it.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetWeekday-Schedule

#### Parameters

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t
<i>daysMask</i>	uint8_t
<i>startHour</i>	uint8_t
<i>startMinute</i>	uint8_t
<i>endHour</i>	uint8_t
<i>endMinute</i>	uint8_t

Definition at line 4316 of file [client-command-macro.doc](#).

#### 6.5.2.206 #define emberAfFillCommandDoorLockClusterGetWeekdaySchedule( *scheduleId*, *userId* )

Retrieve a weekday schedule for doorlock user activation for a specific schedule id and user id.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetWeekday-Schedule

#### Parameters

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t

Definition at line 4344 of file [client-command-macro.doc](#).

#### 6.5.2.207 #define emberAfFillCommandDoorLockClusterClearWeekdaySchedule( *scheduleId*, *userId* )

Clear a weekday schedule for doorlock user activation for a specific schedule id and user id.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearWeekday-Schedule

#### Parameters

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t

Definition at line 4362 of file [client-command-macro.doc](#).

#### 6.5.2.208 #define emberAfFillCommandDoorLockClusterSetYeadaySchedule( *scheduleId*, *userId*, *localStartTime*, *localEndTime* )

Set a door lock user id activation schedule according to a specific absolute local start and end time.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetYeaday-Schedule

#### Parameters

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t
<i>localStartTime</i>	uint32_t
<i>localEndTime</i>	uint32_t

Definition at line 4382 of file [client-command-macro.doc](#).

#### 6.5.2.209 #define emberAfFillCommandDoorLockClusterGetYeardaySchedule( *scheduleId*, *userId* )

Retrieve a yearday schedule for a specific scheduleId and userId.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetYearday-Schedule

##### Parameters

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t

Definition at line 4404 of file [client-command-macro.doc](#).

#### 6.5.2.210 #define emberAfFillCommandDoorLockClusterClearYeardaySchedule( *scheduleId*, *userId* )

Clear a yearday schedule for a specific scheduleId and userId.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearYearday-Schedule

##### Parameters

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t

Definition at line 4422 of file [client-command-macro.doc](#).

#### 6.5.2.211 #define emberAfFillCommandDoorLockClusterSetHolidaySchedule( *scheduleId*, *localStartTime*, *localEndTime*, *operatingModeDuringHoliday* )

Set the holiday schedule for a specific user.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetHoliday-Schedule

##### Parameters

<i>scheduleId</i>	uint8_t
<i>localStartTime</i>	uint32_t
<i>localEndTime</i>	uint32_t
<i>operating- ModeDuring- Holiday</i>	uint8_t

Definition at line 4442 of file [client-command-macro.doc](#).

**6.5.2.212 #define emberAfFillCommandDoorLockClusterGetHolidaySchedule( scheduleId )**

Retrieve a holiday schedule for a specific scheduleId.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetHoliday-Schedule

**Parameters**

<i>scheduleId</i>	uint8_t
-------------------	---------

Definition at line 4463 of file [client-command-macro.doc](#).

**6.5.2.213 #define emberAfFillCommandDoorLockClusterClearHolidaySchedule( scheduleId )**

Clear a holiday schedule for a specific scheduleId.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearHoliday-Schedule

**Parameters**

<i>scheduleId</i>	uint8_t
-------------------	---------

Definition at line 4478 of file [client-command-macro.doc](#).

**6.5.2.214 #define emberAfFillCommandDoorLockClusterSetUserType( userId, userType )**

Set the type value for a user based on user ID.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetUserType

**Parameters**

<i>userId</i>	uint16_t
<i>userType</i>	uint8_t

Definition at line 4494 of file [client-command-macro.doc](#).

**6.5.2.215 #define emberAfFillCommandDoorLockCluster GetUserType( userId )**

Retrieve the type for a specific user based on the user ID.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetUserType

**Parameters**

<i>userId</i>	uint16_t
---------------	----------

Definition at line 4511 of file [client-command-macro.doc](#).

**6.5.2.216 #define emberAfFillCommandDoorLockClusterSetRfid( userId, userStatus, userType, id )**

Set the PIN for a specified user id.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetRfid

#### Parameters

<i>userId</i>	uint16_t
<i>userStatus</i>	uint8_t
<i>userType</i>	uint8_t
<i>id</i>	uint8_t*

Definition at line [4529](#) of file [client-command-macro.doc](#).

#### 6.5.2.217 #define emberAfFillCommandDoorLockClusterGetRfid( *userId* )

Retrieve RFID ID information for a user with a specific user ID.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetRfid

#### Parameters

<i>userId</i>	uint16_t
---------------	----------

Definition at line [4550](#) of file [client-command-macro.doc](#).

#### 6.5.2.218 #define emberAfFillCommandDoorLockClusterClearRfid( *userId* )

Clear the RFID ID for a user with a specific user ID.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearRfid

#### Parameters

<i>userId</i>	uint16_t
---------------	----------

Definition at line [4565](#) of file [client-command-macro.doc](#).

#### 6.5.2.219 #define emberAfFillCommandDoorLockClusterClearAllRfids( )

Clear all RFID ID codes on the lock for all users.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearAllRfids

Definition at line [4579](#) of file [client-command-macro.doc](#).

#### 6.5.2.220 #define emberAfFillCommandDoorLockClusterLockDoorResponse( *status* )

Indicates lock success or failure.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: LockDoorResponse

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4593 of file [client-command-macro.doc](#).

#### **6.5.2.221 #define emberAfFillCommandDoorLockClusterUnlockDoorResponse( status )**

Indicates unlock success or failure.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: UnlockDoor-Response

##### **Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 4608 of file [client-command-macro.doc](#).

#### **6.5.2.222 #define emberAfFillCommandDoorLockClusterToggleResponse( status )**

Response provided to the toggle command, indicates whether the toggle was successful or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ToggleResponse

##### **Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 4623 of file [client-command-macro.doc](#).

#### **6.5.2.223 #define emberAfFillCommandDoorLockClusterUnlockWithTimeoutResponse( status )**

Response provided to unlock with specific timeout. This command indicates whether the unlock command was successful or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: UnlockWith-TimeoutResponse

##### **Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 4638 of file [client-command-macro.doc](#).

#### **6.5.2.224 #define emberAfFillCommandDoorLockClusterGetLogRecordResponse( logEntryId, timestamp, eventType, source, eventIdOrAlarmCode, userId, pin )**

Returns the specific log record requested.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetLogRecord-Response

##### **Parameters**

<i>logEntryId</i>	uint16_t
<i>timestamp</i>	uint32_t
<i>eventType</i>	uint8_t

<i>source</i>	uint8_t
<i>eventIdOr-AlarmCode</i>	uint8_t
<i>userId</i>	uint16_t
<i>pin</i>	uint8_t*

Definition at line 4659 of file [client-command-macro.doc](#).

#### 6.5.2.225 #define emberAfFillCommandDoorLockClusterSetPinResponse( *status* )

Indicates whether the setting of the PIN was successful or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetPinResponse

##### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4686 of file [client-command-macro.doc](#).

#### 6.5.2.226 #define emberAfFillCommandDoorLockClusterGetPinResponse( *userId*, *userStatus*, *userType*, *pin* )

Returns the PIN requested according to the user ID passed.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetPinResponse

##### Parameters

<i>userId</i>	uint16_t
<i>userStatus</i>	uint8_t
<i>userType</i>	uint8_t
<i>pin</i>	uint8_t*

Definition at line 4704 of file [client-command-macro.doc](#).

#### 6.5.2.227 #define emberAfFillCommandDoorLockClusterClearPinResponse( *status* )

Returns success or failure depending on whether the PIN was cleared or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearPinResponse

##### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4725 of file [client-command-macro.doc](#).

### 6.5.2.228 #define emberAfFillCommandDoorLockClusterClearAllPinsResponse( *status* )

Returns success or failure depending on whether the PINs were cleared or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearAllPins-Response

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4740 of file [client-command-macro.doc](#).

### 6.5.2.229 #define emberAfFillCommandDoorLockClusterSetUserStatusResponse( *status* )

Returns success or failure depending on whether the user status was set or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetUserStatus-Response

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4755 of file [client-command-macro.doc](#).

### 6.5.2.230 #define emberAfFillCommandDoorLockCluster GetUserStatusResponse( *userId*, *status* )

Returns the user status.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetUserStatus-Response

#### Parameters

<i>userId</i>	uint16_t
<i>status</i>	uint8_t

Definition at line 4771 of file [client-command-macro.doc](#).

### 6.5.2.231 #define emberAfFillCommandDoorLockClusterSetWeekdayScheduleResponse( *status* )

Returns the status of setting the weekday schedule.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetWeekday-ScheduleResponse

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4788 of file [client-command-macro.doc](#).

**6.5.2.232 #define emberAfFillCommandDoorLockClusterGetWeekdayScheduleResponse( scheduleId, userId, status, daysMask, startHour, startMinute, endHour, endMinute )**

Returns the weekday schedule requested.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetWeekday-ScheduleResponse

#### Parameters

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t
<i>status</i>	uint8_t
<i>daysMask</i>	uint8_t
<i>startHour</i>	uint8_t
<i>startMinute</i>	uint8_t
<i>endHour</i>	uint8_t
<i>endMinute</i>	uint8_t

Definition at line 4810 of file [client-command-macro.doc](#).

**6.5.2.233 #define emberAfFillCommandDoorLockClusterClearWeekdayScheduleResponse( status )**

Returns the status of clearing the weekday schedule.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearWeekday-ScheduleResponse

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4839 of file [client-command-macro.doc](#).

**6.5.2.234 #define emberAfFillCommandDoorLockClusterSetYearDayScheduleResponse( status )**

Returns success or failure depending on whether the yearday schedule was set or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetYearday-ScheduleResponse

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 4854 of file [client-command-macro.doc](#).

**6.5.2.235 #define emberAfFillCommandDoorLockClusterGetYearDayScheduleResponse( scheduleId, userId, status, localStartTime, localEndTime )**

Returns the yearday schedule requested.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetYearday-ScheduleResponse

**Parameters**

<i>scheduleId</i>	uint8_t
<i>userId</i>	uint16_t
<i>status</i>	uint8_t
<i>localStartTime</i>	uint32_t
<i>localEndTime</i>	uint32_t

Definition at line 4873 of file [client-command-macro.doc](#).

**6.5.2.236 #define emberAfFillCommandDoorLockClusterClearYeardayScheduleResponse( *status* )**

Returns success or failure depending on whether the yearday schedule was removed or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearYearday-ScheduleResponse

**Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 4896 of file [client-command-macro.doc](#).

**6.5.2.237 #define emberAfFillCommandDoorLockClusterSetHolidayScheduleResponse( *status* )**

Returns success or failure depending on whether the holiday schedule was set or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetHoliday-ScheduleResponse

**Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 4911 of file [client-command-macro.doc](#).

**6.5.2.238 #define emberAfFillCommandDoorLockClusterGetHolidayScheduleResponse( *scheduleId*, *status*, *localStartTime*, *localEndTime*, *operatingModeDuringHoliday* )**

Returns the holiday schedule requested.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetHoliday-ScheduleResponse

**Parameters**

<i>scheduleId</i>	uint8_t
<i>status</i>	uint8_t
<i>localStartTime</i>	uint32_t
<i>localEndTime</i>	uint32_t
<i>operating- ModeDuring- Holiday</i>	uint8_t

Definition at line 4930 of file [client-command-macro.doc](#).

#### **6.5.2.239 #define emberAfFillCommandDoorLockClusterClearHolidayScheduleResponse( status )**

Returns success or failure depending on whether the holiday schedule was removed or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearHoliday-ScheduleResponse

##### **Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 4953 of file [client-command-macro.doc](#).

#### **6.5.2.240 #define emberAfFillCommandDoorLockClusterSetUserTypeResponse( status )**

returns success or failure depending on whether the user type was set or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetUserType-Response

##### **Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 4968 of file [client-command-macro.doc](#).

#### **6.5.2.241 #define emberAfFillCommandDoorLockClusterGetUserTypeResponse( userId, userType )**

Returns the user type for the user ID requested.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetUserType-Response

##### **Parameters**

<i>userId</i>	uint16_t
<i>userType</i>	uint8_t

Definition at line 4984 of file [client-command-macro.doc](#).

#### **6.5.2.242 #define emberAfFillCommandDoorLockClusterSetRfidResponse( status )**

Indicates whether the setting of the RFID ID was successful or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: SetRfidResponse

##### **Parameters**

<i>status</i>	uint8_t
---------------	---------

Definition at line 5001 of file [client-command-macro.doc](#).

**6.5.2.243 #define emberAfFillCommandDoorLockClusterGetRfidResponse( *userId*, *userStatus*, *userType*, *rfid* )**

Returns the RFID ID requested according to the user ID passed.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: GetRfidResponse

#### Parameters

<i>userId</i>	uint16_t
<i>userStatus</i>	uint8_t
<i>userType</i>	uint8_t
<i>rfid</i>	uint8_t*

Definition at line 5019 of file [client-command-macro.doc](#).

**6.5.2.244 #define emberAfFillCommandDoorLockClusterClearRfidResponse( *status* )**

Returns success or failure depending on whether the RFID ID was cleared or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearRfidResponse

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 5040 of file [client-command-macro.doc](#).

**6.5.2.245 #define emberAfFillCommandDoorLockClusterClearAllRfidsResponse( *status* )**

Returns success or failure depending on whether the RFID IDs were cleared or not.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: ClearAllRfidsResponse

#### Parameters

<i>status</i>	uint8_t
---------------	---------

Definition at line 5055 of file [client-command-macro.doc](#).

**6.5.2.246 #define emberAfFillCommandDoorLockClusterOperationEventNotification( *source*, *eventCode*, *userId*, *pin*, *timeStamp*, *data* )**

Indicates that an operation event has taken place. Includes the associated event information.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: OperationEventNotification

#### Parameters

<i>source</i>	uint8_t
<i>eventCode</i>	uint8_t

<i>userId</i>	uint16_t
<i>pin</i>	uint8_t*
<i>timeStamp</i>	uint32_t
<i>data</i>	uint8_t*

Definition at line 5075 of file [client-command-macro.doc](#).

**6.5.2.247 #define emberAfFillCommandDoorLockClusterProgrammingEventNotification( source, eventCode, userId, pin, userType, userStatus, timeStamp, data )**

Indicates that a programming event has taken place. Includes the associated programming event information.

Cluster: Door Lock, Provides an interface into a generic way to secure a door. Command: Programming-EventNotification

#### Parameters

<i>source</i>	uint8_t
<i>eventCode</i>	uint8_t
<i>userId</i>	uint16_t
<i>pin</i>	uint8_t*
<i>userType</i>	uint8_t
<i>userStatus</i>	uint8_t
<i>timeStamp</i>	uint32_t
<i>data</i>	uint8_t*

Definition at line 5107 of file [client-command-macro.doc](#).

**6.5.2.248 #define emberAfFillCommandWindowCoveringClusterWindowCoveringUpOpen( )**

Moves window covering to InstalledOpenLimit - Lift and InstalledOpenLimit - Tilt.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringUpOpen

Definition at line 5140 of file [client-command-macro.doc](#).

**6.5.2.249 #define emberAfFillCommandWindowCoveringClusterWindowCoveringDownClose( )**

Moves window covering to InstalledClosedLimit - Lift and InstalledCloseLimit - Tilt.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringDownClose

Definition at line 5153 of file [client-command-macro.doc](#).

**6.5.2.250 #define emberAfFillCommandWindowCoveringClusterWindowCoveringStop( )**

Stop any adjusting of window covering.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringStop

Definition at line 5166 of file [client-command-macro.doc](#).

#### **6.5.2.251 #define emberAfFillCommandWindowCoveringClusterWindowCoveringGoToLiftValue( liftValue )**

Goto lift value specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToLiftValue

##### **Parameters**

<i>liftValue</i>	uint16_t
------------------	----------

Definition at line 5180 of file [client-command-macro.doc](#).

#### **6.5.2.252 #define emberAfFillCommandWindowCoveringClusterWindowCoveringGoToLiftPercentage( percentageLiftValue )**

Goto lift percentage specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToLiftPercentage

##### **Parameters**

<i>percentageLiftValue</i>	uint8_t
----------------------------	---------

Definition at line 5195 of file [client-command-macro.doc](#).

#### **6.5.2.253 #define emberAfFillCommandWindowCoveringClusterWindowCoveringGoToTiltValue( tiltValue )**

Goto tilt value specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToTiltValue

##### **Parameters**

<i>tiltValue</i>	uint16_t
------------------	----------

Definition at line 5210 of file [client-command-macro.doc](#).

#### **6.5.2.254 #define emberAfFillCommandWindowCoveringClusterWindowCoveringGoToTiltPercentage( percentageTiltValue )**

Goto tilt percentage specified.

Cluster: Window Covering, Provides an interface for controlling and adjusting automatic window coverings. Command: WindowCoveringGoToTiltPercentage

**Parameters**

<i>percentageTilt-Value</i>	uint8_t
-----------------------------	---------

Definition at line 5225 of file [client-command-macro.doc](#).

**6.5.2.255 #define emberAfFillCommandThermostatClusterSetpointRaiseLower( mode, amount )**

Command description for SetpointRaiseLower.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: SetpointRaiseLower

**Parameters**

<i>mode</i>	uint8_t
<i>amount</i>	int8_t

Definition at line 5251 of file [client-command-macro.doc](#).

**6.5.2.256 #define emberAfFillCommandThermostatClusterSetWeeklySchedule( numberOfTransitionsForSequence, dayOfWeekForSequence, modeForSequence, payload, payloadLen )**

Command description for SetWeeklySchedule.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: SetWeeklySchedule

**Parameters**

<i>numberOfTransitionsForSequence</i>	uint8_t
<i>dayOfWeekForSequence</i>	uint8_t
<i>modeForSequence</i>	uint8_t
<i>payload</i>	uint8_t*
<i>payloadLen</i>	uint8_t

Definition at line 5272 of file [client-command-macro.doc](#).

**6.5.2.257 #define emberAfFillCommandThermostatClusterGetWeeklySchedule( daysToReturn, modeToReturn )**

Command description for GetWeeklySchedule.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: GetWeeklySchedule

**Parameters**

<i>daysToReturn</i>	uint8_t
<i>modeToReturn</i>	uint8_t

Definition at line 5296 of file [client-command-macro.doc](#).

**6.5.2.258 #define emberAfFillCommandThermostatClusterClearWeeklySchedule( )**

The Clear Weekly Schedule command is used to clear the weekly schedule.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: ClearWeeklySchedule

Definition at line 5312 of file [client-command-macro.doc](#).

**6.5.2.259 #define emberAfFillCommandThermostatClusterGetRelayStatusLog( )**

The Get Relay Status Log command is used to query the thermostat internal relay status log.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: GetRelayStatusLog

Definition at line 5325 of file [client-command-macro.doc](#).

**6.5.2.260 #define emberAfFillCommandThermostatClusterCurrentWeeklySchedule(  
    *numberOfTransitionsForSequence*, *dayOfWeekForSequence*, *modeForSequence*, *payload*,  
    *payloadLen* )**

The Current Weekly Schedule Command is sent from the server in response to the Get Weekly Schedule Command.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: CurrentWeeklySchedule

**Parameters**

<i>numberOfTransitionsForSequence</i>	uint8_t
<i>dayOfWeekForSequence</i>	uint8_t
<i>modeForSequence</i>	uint8_t
<i>payload</i>	uint8_t*
<i>payloadLen</i>	uint8_t

Definition at line 5343 of file [client-command-macro.doc](#).

**6.5.2.261 #define emberAfFillCommandThermostatClusterRelayStatusLog( *timeOfDay*, *relayStatus*,  
    *localTemperature*, *humidityInPercentage*, *setpoint*, *unreadEntries* )**

This command is sent from the thermostat cluster server in response to the Get Relay Status Log.

Cluster: Thermostat, An interface for configuring and controlling the functionality of a thermostat. Command: RelayStatusLog

#### Parameters

<i>timeOfDay</i>	uint16_t
<i>relayStatus</i>	uint16_t
<i>localTemperature</i>	int16_t
<i>humidityInPercentage</i>	uint8_t
<i>setpoint</i>	int16_t
<i>unreadEntries</i>	uint16_t

Definition at line 5371 of file [client-command-macro.doc](#).

#### 6.5.2.262 #define emberAfFillCommandColorControlClusterMoveToHue( *hue*, *direction*, *transitionTime* )

Move to specified hue.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToHue

#### Parameters

<i>hue</i>	uint8_t
<i>direction</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 5418 of file [client-command-macro.doc](#).

#### 6.5.2.263 #define emberAfFillCommandColorControlClusterMoveHue( *moveMode*, *rate* )

Move hue up or down at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveHue

#### Parameters

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line 5438 of file [client-command-macro.doc](#).

#### 6.5.2.264 #define emberAfFillCommandColorControlClusterStepHue( *stepMode*, *stepSize*, *transitionTime* )

Step hue up or down by specified size at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StepHue

**Parameters**

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint8_t

Definition at line [5457](#) of file [client-command-macro.doc](#).

**6.5.2.265 #define emberAfFillCommandColorControlClusterMoveToSaturation( *saturation*, *transitionTime* )**

Move to specified saturation.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToSaturation

**Parameters**

<i>saturation</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line [5477](#) of file [client-command-macro.doc](#).

**6.5.2.266 #define emberAfFillCommandColorControlClusterMoveSaturation( *moveMode*, *rate* )**

Move saturation up or down at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveSaturation

**Parameters**

<i>moveMode</i>	uint8_t
<i>rate</i>	uint8_t

Definition at line [5495](#) of file [client-command-macro.doc](#).

**6.5.2.267 #define emberAfFillCommandColorControlClusterStepSaturation( *stepMode*, *stepSize*, *transitionTime* )**

Step saturation up or down by specified size at specified rate.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StepSaturation

**Parameters**

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint8_t
<i>transitionTime</i>	uint8_t

Definition at line [5514](#) of file [client-command-macro.doc](#).

**6.5.2.268 #define emberAfFillCommandColorControlClusterMoveToHueAndSaturation( *hue*, *saturation*, *transitionTime* )**

Move to hue and saturation.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToHueAndSaturation

#### Parameters

<i>hue</i>	uint8_t
<i>saturation</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 5535 of file [client-command-macro.doc](#).

**6.5.2.269 #define emberAfFillCommandColorControlClusterMoveToColor( *colorX*, *colorY*, *transitionTime* )**

Move to specified color.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToColor

#### Parameters

<i>colorX</i>	uint16_t
<i>colorY</i>	uint16_t
<i>transitionTime</i>	uint16_t

Definition at line 5556 of file [client-command-macro.doc](#).

**6.5.2.270 #define emberAfFillCommandColorControlClusterMoveColor( *rateX*, *rateY* )**

Moves the color.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveColor

#### Parameters

<i>rateX</i>	int16_t
<i>rateY</i>	int16_t

Definition at line 5576 of file [client-command-macro.doc](#).

**6.5.2.271 #define emberAfFillCommandColorControlClusterStepColor( *stepX*, *stepY*, *transitionTime* )**

Steps the lighting to a specific color.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StepColor

**Parameters**

<i>stepX</i>	int16_t
<i>stepY</i>	int16_t
<i>transitionTime</i>	uint16_t

Definition at line 5595 of file [client-command-macro.doc](#).

**6.5.2.272 #define emberAfFillCommandColorControlClusterMoveToColorTemperature( colorTemperature, transitionTime )**

Moves the lighting to a specific color temperature.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveToColorTemperature

**Parameters**

<i>color-Temperature</i>	uint16_t
<i>transitionTime</i>	uint16_t

Definition at line 5615 of file [client-command-macro.doc](#).

**6.5.2.273 #define emberAfFillCommandColorControlClusterEnhancedMoveToHue( enhancedHue, direction, transitionTime )**

Command description for EnhancedMoveToHue.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: EnhancedMoveToHue

**Parameters**

<i>enhancedHue</i>	uint16_t
<i>direction</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 5634 of file [client-command-macro.doc](#).

**6.5.2.274 #define emberAfFillCommandColorControlClusterEnhancedMoveHue( moveMode, rate )**

Command description for EnhancedMoveHue.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: EnhancedMoveHue

**Parameters**

<i>moveMode</i>	uint8_t
<i>rate</i>	uint16_t

Definition at line 5654 of file [client-command-macro.doc](#).

**6.5.2.275 #define emberAfFillCommandColorControlClusterEnhancedStepHue( *stepMode*, *stepSize*, *transitionTime* )**

Command description for EnhancedStepHue.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: EnhancedStepHue

#### Parameters

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint16_t
<i>transitionTime</i>	uint16_t

Definition at line 5673 of file [client-command-macro.doc](#).

**6.5.2.276 #define emberAfFillCommandColorControlClusterEnhancedMoveToHueAndSaturation( *enhancedHue*, *saturation*, *transitionTime* )**

Command description for EnhancedMoveToHueAndSaturation.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: EnhancedMoveToHueAndSaturation

#### Parameters

<i>enhancedHue</i>	uint16_t
<i>saturation</i>	uint8_t
<i>transitionTime</i>	uint16_t

Definition at line 5694 of file [client-command-macro.doc](#).

**6.5.2.277 #define emberAfFillCommandColorControlClusterColorLoopSet( *updateFlags*, *action*, *direction*, *time*, *startHue* )**

Command description for ColorLoopSet.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: ColorLoopSet

#### Parameters

<i>updateFlags</i>	uint8_t
<i>action</i>	uint8_t
<i>direction</i>	uint8_t
<i>time</i>	uint16_t
<i>startHue</i>	uint16_t

Definition at line 5717 of file [client-command-macro.doc](#).

**6.5.2.278 #define emberAfFillCommandColorControlClusterStopMoveStep( )**

Command description for StopMoveStep.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StopMoveStep

Definition at line [5739](#) of file [client-command-macro.doc](#).

**6.5.2.279 #define emberAfFillCommandColorControlClusterMoveColorTemperature( moveMode, rate, colorTemperatureMinimum, colorTemperatureMaximum )**

Command description for MoveColorTemperature.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: MoveColorTemperature

#### Parameters

<i>moveMode</i>	uint8_t
<i>rate</i>	uint16_t
<i>color-Temperature-Minimum</i>	uint16_t
<i>color-Temperature-Maximum</i>	uint16_t

Definition at line [5756](#) of file [client-command-macro.doc](#).

**6.5.2.280 #define emberAfFillCommandColorControlClusterStepColorTemperature( stepMode, stepSize, transitionTime, colorTemperatureMinimum, colorTemperatureMaximum )**

Command description for StepColorTemperature.

Cluster: Color Control, Attributes and commands for controlling the color properties of a color-capable light. Command: StepColorTemperature

#### Parameters

<i>stepMode</i>	uint8_t
<i>stepSize</i>	uint16_t
<i>transitionTime</i>	uint16_t
<i>color-Temperature-Minimum</i>	uint16_t
<i>color-Temperature-Maximum</i>	uint16_t

Definition at line [5781](#) of file [client-command-macro.doc](#).

**6.5.2.281 #define emberAfFillCommandlasZoneClusterZoneEnrollResponse( enrollResponseCode, zoneId )**

Command description for zoneEnrollResponse.

Cluster: IAS Zone, Attributes and commands for IAS security zone devices. Command: ZoneEnroll-Response

#### Parameters

<i>enroll-ResponseCode</i>	uint8_t
<i>zoneId</i>	uint8_t

Definition at line 5850 of file [client-command-macro.doc](#).

#### 6.5.2.282 #define emberAfFillCommandAsZoneClusterInitiateNormalOperationMode( )

Used to tell the IAS Zone server to commence normal operation mode.

Cluster: IAS Zone, Attributes and commands for IAS security zone devices. Command: InitiateNormal-OperationMode

Definition at line 5866 of file [client-command-macro.doc](#).

#### 6.5.2.283 #define emberAfFillCommandAsZoneClusterInitiateTestMode( *testModeDuration*, *currentZoneSensitivityLevel* )

Certain IAS Zone servers may have operational configurations that could be configured OTA or locally on the device. This command enables them to be remotely placed into a test mode so that the user or installer may configure their field of view, sensitivity, and other operational parameters.

Cluster: IAS Zone, Attributes and commands for IAS security zone devices. Command: InitiateTestMode

#### Parameters

<i>testMode-Duration</i>	uint8_t
<i>currentZone-SensitivityLevel</i>	uint8_t

Definition at line 5881 of file [client-command-macro.doc](#).

#### 6.5.2.284 #define emberAfFillCommandAsZoneClusterZoneStatusChangeNotification( *zoneStatus*, *extendedStatus*, *zoneId*, *delay* )

Command description for zoneStatusChangeNotification.

Cluster: IAS Zone, Attributes and commands for IAS security zone devices. Command: ZoneStatus-ChangeNotification

#### Parameters

<i>zoneStatus</i>	uint16_t
<i>extendedStatus</i>	uint8_t
<i>zoneId</i>	uint8_t
<i>delay</i>	uint16_t

Definition at line 5901 of file [client-command-macro.doc](#).

```
6.5.2.285 #define emberAfFillCommandAsZoneClusterZoneEnrollRequest( zoneType, manufacturerCode
)
```

Command description for zoneEnrollRequest.

Cluster: IAS Zone, Attributes and commands for IAS security zone devices. Command: ZoneEnrollRequest

#### Parameters

<i>zoneType</i>	uint16_t
<i>manufacturerCode</i>	uint16_t

Definition at line 5923 of file [client-command-macro.doc](#).

```
6.5.2.286 #define emberAfFillCommandAsZoneClusterInitiateNormalOperationModeResponse( )
```

Confirms that the IAS Zone server has commenced normal operation mode.

Cluster: IAS Zone, Attributes and commands for IAS security zone devices. Command: InitiateNormalOperationModeResponse

Definition at line 5939 of file [client-command-macro.doc](#).

```
6.5.2.287 #define emberAfFillCommandAsZoneClusterInitiateTestModeResponse( )
```

Confirms that the IAS Zone server has commenced test mode and that the IAS Zone client should treat any Zone Status Change Notification commands received from the sending IAS Zone server as being in response to test events.

Cluster: IAS Zone, Attributes and commands for IAS security zone devices. Command: InitiateTestModeResponse

Definition at line 5952 of file [client-command-macro.doc](#).

```
6.5.2.288 #define emberAfFillCommandAsAceClusterArm( armMode, armDisarmCode, zoneId )
```

Command description for Arm.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Arm

#### Parameters

<i>armMode</i>	uint8_t
<i>armDisarmCode</i>	uint8_t*
<i>zoneId</i>	uint8_t

Definition at line 5973 of file [client-command-macro.doc](#).

**6.5.2.289 #define emberAfFillCommandAsAceClusterBypass( *numberOfZones*, *zoneIds*, *zoneIdsLen*, *armDisarmCode* )**

Command description for Bypass.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Bypass

#### Parameters

<i>numberOfZones</i>	uint8_t
<i>zoneIds</i>	uint8_t*
<i>zoneIdsLen</i>	uint8_t
<i>armDisarmCode</i>	uint8_t*

Definition at line [5995](#) of file [client-command-macro.doc](#).

**6.5.2.290 #define emberAfFillCommandAsAceClusterEmergency( )**

Command description for Emergency.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Emergency

Definition at line [6015](#) of file [client-command-macro.doc](#).

**6.5.2.291 #define emberAfFillCommandAsAceClusterFire( )**

Command description for Fire.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Fire

Definition at line [6028](#) of file [client-command-macro.doc](#).

**6.5.2.292 #define emberAfFillCommandAsAceClusterPanic( )**

Command description for Panic.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Panic

Definition at line [6041](#) of file [client-command-macro.doc](#).

**6.5.2.293 #define emberAfFillCommandAsAceClusterGetZoneIdMap( )**

Command description for GetZoneIdMap.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetZoneIdMap

Definition at line [6054](#) of file [client-command-macro.doc](#).

**6.5.2.294 #define emberAfFillCommandAsAceClusterGetZoneInformation( *zoneId* )**

Command description for GetZoneInformation.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetZoneInformation

**Parameters**

<i>zoneId</i>	uint8_t
---------------	---------

Definition at line 6068 of file [client-command-macro.doc](#).

**6.5.2.295 #define emberAfFillCommandAsAceClusterGetPanelStatus( )**

Used by the ACE client to request an update to the status of the ACE server.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetPanelStatus

Definition at line 6082 of file [client-command-macro.doc](#).

**6.5.2.296 #define emberAfFillCommandAsAceClusterGetBypassedZoneList( )**

Used by the ACE client to retrieve the bypassed zones.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetBypassedZoneList

Definition at line 6095 of file [client-command-macro.doc](#).

**6.5.2.297 #define emberAfFillCommandAsAceClusterGetZoneStatus( *startingZoneId*,  
                          *maxNumberOfZoneIds*, *zoneStatusMaskFlag*, *zoneStatusMask* )**

Used by the ACE client to request an update to the zone status of the ACE server.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetZoneStatus

**Parameters**

<i>startingZoneId</i>	uint8_t
<i>maxNumberOfZoneIds</i>	uint8_t
<i>zoneStatusMaskFlag</i>	uint8_t
<i>zoneStatusMask</i>	uint16_t

Definition at line 6112 of file [client-command-macro.doc](#).

**6.5.2.298 #define emberAfFillCommandAsAceClusterArmResponse( *armNotification* )**

Command description for ArmResponse.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: ArmResponse

**Parameters**

<i>armNotification</i>	uint8_t
------------------------	---------

Definition at line 6133 of file [client-command-macro.doc](#).

**6.5.2.299 #define emberAfFillCommandAsAceClusterGetZoneIdMapResponse( section0, section1, section2, section3, section4, section5, section6, section7, section8, section9, section10, section11, section12, section13, section14, section15 )**

Command description for GetZoneIdMapResponse.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetZone-IdMapResponse

**Parameters**

<i>section0</i>	uint16_t
<i>section1</i>	uint16_t
<i>section2</i>	uint16_t
<i>section3</i>	uint16_t
<i>section4</i>	uint16_t
<i>section5</i>	uint16_t
<i>section6</i>	uint16_t
<i>section7</i>	uint16_t
<i>section8</i>	uint16_t
<i>section9</i>	uint16_t
<i>section10</i>	uint16_t
<i>section11</i>	uint16_t
<i>section12</i>	uint16_t
<i>section13</i>	uint16_t
<i>section14</i>	uint16_t
<i>section15</i>	uint16_t

Definition at line 6163 of file [client-command-macro.doc](#).

**6.5.2.300 #define emberAfFillCommandAsAceClusterGetZoneInformationResponse( zoneId, zoneType, ieeeAddress, zoneLabel )**

Command description for GetZoneInformationResponse.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetZone-InformationResponse

**Parameters**

<i>zoneId</i>	uint8_t
<i>zoneType</i>	uint16_t
<i>ieeeAddress</i>	uint8_t*
<i>zoneLabel</i>	uint8_t*

Definition at line 6211 of file [client-command-macro.doc](#).

**6.5.2.301 #define emberAfFillCommandAsAceClusterZoneStatusChanged( zoneId, zoneStatus, audibleNotification, zoneLabel )**

This command updates ACE clients in the system of changes to zone status recorded by the ACE server (e.g., IAS CIE device).

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Zone-StatusChanged

#### Parameters

<i>zoneId</i>	uint8_t
<i>zoneStatus</i>	uint16_t
<i>audible-Notification</i>	uint8_t
<i>zoneLabel</i>	uint8_t*

Definition at line [6235](#) of file [client-command-macro.doc](#).

**6.5.2.302 #define emberAfFillCommandAsAceClusterPanelStatusChanged( panelStatus, secondsRemaining, audibleNotification, alarmStatus )**

This command updates ACE clients in the system of changes to panel status recorded by the ACE server (e.g., IAS CIE device).

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Panel-StatusChanged

#### Parameters

<i>panelStatus</i>	uint8_t
<i>seconds-Remaining</i>	uint8_t
<i>audible-Notification</i>	uint8_t
<i>alarmStatus</i>	uint8_t

Definition at line [6259](#) of file [client-command-macro.doc](#).

**6.5.2.303 #define emberAfFillCommandAsAceClusterGetPanelStatusResponse( panelStatus, secondsRemaining, audibleNotification, alarmStatus )**

Command updates requesting IAS ACE clients in the system of changes to the security panel status recorded by the ACE server.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetPanel-StatusResponse

#### Parameters

<i>panelStatus</i>	uint8_t
<i>seconds-Remaining</i>	uint8_t
<i>audible-Notification</i>	uint8_t

<i>alarmStatus</i>	uint8_t
--------------------	---------

Definition at line 6283 of file [client-command-macro.doc](#).

**6.5.2.304 #define emberAfFillCommandAsAceClusterSetBypassedZoneList( *numberOfZones*, *zoneIds*, *zoneIdsLen* )**

Sets the list of bypassed zones on the IAS ACE client.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Set-BypassedZoneList

#### Parameters

<i>numberOfZones</i>	uint8_t
<i>zoneIds</i>	uint8_t*
<i>zoneIdsLen</i>	uint8_t

Definition at line 6306 of file [client-command-macro.doc](#).

**6.5.2.305 #define emberAfFillCommandAsAceClusterBypassResponse( *numberOfZones*, *bypassResult*, *bypassResultLen* )**

Provides the response of the security panel to the request from the IAS ACE client to bypass zones via a Bypass command.

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: Bypass-Response

#### Parameters

<i>numberOfZones</i>	uint8_t
<i>bypassResult</i>	uint8_t*
<i>bypassResultLen</i>	uint8_t

Definition at line 6327 of file [client-command-macro.doc](#).

**6.5.2.306 #define emberAfFillCommandAsAceClusterGetZoneStatusResponse( *zoneStatusComplete*, *numberOfZones*, *zoneStatusResult*, *zoneStatusResultLen* )**

This command updates requesting IAS ACE clients in the system of changes to the IAS Zone server statuses recorded by the ACE server (e.g., IAS CIE device).

Cluster: IAS ACE, Attributes and commands for IAS Ancillary Control Equipment. Command: GetZone-StatusResponse

#### Parameters

<i>zoneStatus-Complete</i>	uint8_t
<i>numberOfZones</i>	uint8_t
<i>zoneStatus-Result</i>	uint8_t*
<i>zoneStatus-ResultLen</i>	uint8_t

Definition at line [6349](#) of file [client-command-macro.doc](#).

**6.5.2.307 #define emberAfFillCommandAsWdClusterStartWarning( warningInfo, warningDuration, strobeDutyCycle, strobeLevel )**

Command description for StartWarning.

Cluster: IAS WD, Attributes and commands for IAS Warning Devices. Command: StartWarning

#### Parameters

<i>warningInfo</i>	uint8_t
<i>warningDuration</i>	uint16_t
<i>strobeDutyCycle</i>	uint8_t
<i>strobeLevel</i>	uint8_t

Definition at line [6378](#) of file [client-command-macro.doc](#).

**6.5.2.308 #define emberAfFillCommandAsWdClusterSquawk( squawkInfo )**

Command description for Squawk.

Cluster: IAS WD, Attributes and commands for IAS Warning Devices. Command: Squawk

#### Parameters

<i>squawkInfo</i>	uint8_t
-------------------	---------

Definition at line [6399](#) of file [client-command-macro.doc](#).

**6.5.2.309 #define emberAfFillCommandGenericTunnelClusterMatchProtocolAddress( protocolAddress )**

This command is generated when an application wishes to find the ZigBee address (node, endpoint) of the Generic Tunnel server cluster with a given ProtocolAddress attribute. The command is typically multicast to a group of inter-communicating Generic Tunnel clusters.

Cluster: Generic Tunnel, The minimum common commands and attributes required to tunnel any protocol.  
Command: MatchProtocolAddress

#### Parameters

<i>protocolAddress</i>	uint8_t*
------------------------	----------

Definition at line [6419](#) of file [client-command-macro.doc](#).

**6.5.2.310 #define emberAfFillCommandGenericTunnelClusterMatchProtocolAddressResponse( deviceIeeeAddress, protocolAddress )**

This command is generated upon receipt of a Match Protocol Address command to indicate that the Protocol Address was successfully matched.

Cluster: Generic Tunnel, The minimum common commands and attributes required to tunnel any protocol.  
Command: MatchProtocolAddressResponse

#### Parameters

<i>deviceIeee-Address</i>	uint8_t*
<i>protocol-Address</i>	uint8_t*

Definition at line [6435](#) of file [client-command-macro.doc](#).

**6.5.2.311 #define emberAfFillCommandGenericTunnelClusterAdvertiseProtocolAddress( protocolAddress )**

This command is typically sent upon startup, and whenever the ProtocolAddress attribute changes. It is typically multicast to a group of inter-communicating Generic Tunnel clusters.

Cluster: Generic Tunnel, The minimum common commands and attributes required to tunnel any protocol.  
Command: AdvertiseProtocolAddress

#### Parameters

<i>protocol-Address</i>	uint8_t*
-------------------------	----------

Definition at line [6452](#) of file [client-command-macro.doc](#).

**6.5.2.312 #define emberAfFillCommandBacnetProtocolTunnelClusterTransferNpdu( npdu, npduLen )**

This command is generated when a BACnet network layer wishes to transfer a BACnet NPDU across a ZigBee tunnel to another BACnet network layer.

Cluster: BACnet Protocol Tunnel, Commands and attributes required to tunnel the BACnet protocol.  
Command: TransferNpdu

#### Parameters

<i>npdu</i>	uint8_t*
<i>npduLen</i>	uint8_t

Definition at line [6473](#) of file [client-command-macro.doc](#).

### 6.5.2.313 #define emberAfFillCommand11073ProtocolTunnelClusterTransferAPDU( *apdu* )

This command is generated when an 11073 network layer wishes to transfer an 11073 APDU across a ZigBee tunnel to another 11073 network layer.

Cluster: 11073 Protocol Tunnel, Attributes and commands for the 11073 protocol tunnel used for ZigBee Health Care. Command: TransferAPDU

#### Parameters

<i>apdu</i>	uint8_t*
-------------	----------

Definition at line [6495](#) of file [client-command-macro.doc](#).

### 6.5.2.314 #define emberAfFillCommand11073ProtocolTunnelClusterConnectRequest( *connectControl*, *idleTimeout*, *managerTarget*, *managerEndpoint* )

This command is generated when an Health Care client wishes to connect to a Health Care server for the purposes of transmitting 11073 APDUs across the 11073 tunnel.

Cluster: 11073 Protocol Tunnel, Attributes and commands for the 11073 protocol tunnel used for ZigBee Health Care. Command: ConnectRequest

#### Parameters

<i>connectControl</i>	uint8_t
<i>idleTimeout</i>	uint16_t
<i>managerTarget</i>	uint8_t*
<i>managerEndpoint</i>	uint8_t

Definition at line [6513](#) of file [client-command-macro.doc](#).

### 6.5.2.315 #define emberAfFillCommand11073ProtocolTunnelClusterDisconnectRequest( *managerIEEEAddress* )

This command is generated when an Health Care client wishes to disconnect from a Health Care server.

Cluster: 11073 Protocol Tunnel, Attributes and commands for the 11073 protocol tunnel used for ZigBee Health Care. Command: DisconnectRequest

#### Parameters

<i>managerIEEEAddress</i>	uint8_t*
---------------------------	----------

Definition at line [6534](#) of file [client-command-macro.doc](#).

### 6.5.2.316 #define emberAfFillCommand11073ProtocolTunnelClusterConnectStatusNotification( *connectStatus* )

Generated in response to requests related to connection or any event that causes the tunnel to become disconnected.

Cluster: 11073 Protocol Tunnel, Attributes and commands for the 11073 protocol tunnel used for ZigBee Health Care. Command: ConnectStatusNotification

**Parameters**

<i>connectStatus</i>	uint8_t
----------------------	---------

Definition at line [6549](#) of file [client-command-macro.doc](#).

**6.5.2.317 #define emberAfFillCommandIso7816ProtocolTunnelClusterServerToClientTransferApdu( apdu )**

Command description for TransferApdu.

Cluster: ISO 7816 Protocol Tunnel, Commands and attributes for mobile office solutions including ZigBee devices. Command: TransferApdu

**Parameters**

<i>apdu</i>	uint8_t*
-------------	----------

Definition at line [6569](#) of file [client-command-macro.doc](#).

**6.5.2.318 #define emberAfFillCommandIso7816ProtocolTunnelClusterClientToServerTransferApdu( apdu )**

Command description for TransferApdu.

Cluster: ISO 7816 Protocol Tunnel, Commands and attributes for mobile office solutions including ZigBee devices. Command: TransferApdu

**Parameters**

<i>apdu</i>	uint8_t*
-------------	----------

Definition at line [6584](#) of file [client-command-macro.doc](#).

**6.5.2.319 #define emberAfFillCommandIso7816ProtocolTunnelClusterInsertSmartCard( )**

Command description for InsertSmartCard.

Cluster: ISO 7816 Protocol Tunnel, Commands and attributes for mobile office solutions including ZigBee devices. Command: InsertSmartCard

Definition at line [6598](#) of file [client-command-macro.doc](#).

**6.5.2.320 #define emberAfFillCommandIso7816ProtocolTunnelClusterExtractSmartCard( )**

Command description for ExtractSmartCard.

Cluster: ISO 7816 Protocol Tunnel, Commands and attributes for mobile office solutions including ZigBee devices. Command: ExtractSmartCard

Definition at line [6611](#) of file [client-command-macro.doc](#).

```
6.5.2.321 #define emberAfFillCommandPriceClusterPublishPrice( providerId, rateLabel,
    issuerEventId, currentTime, unitOfMeasure, currency, priceTrailingDigitAndPriceTier,
    numberOfTypeTiersAndRegisterTier, startTime, durationInMinutes, price,
    priceRatio, generationPrice, generationPriceRatio, alternateCostDelivered,
    alternateCostUnit, alternateCostTrailingDigit, numberOfTypeBlockThresholds, priceControl,
    numberOfTypeGenerationTiers, generationTier, extendedNumberOfPriceTiers, extendedPriceTier,
    extendedRegisterTier )
```

The PublishPrice command is generated in response to receiving a Get Current Price command, in response to a Get Scheduled Prices command, and when an update to the pricing information is available from the commodity provider, either before or when a TOU price becomes active.

**Cluster:** Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. **Command:** PublishPrice

#### Parameters

<i>providerId</i>	uint32_t
<i>rateLabel</i>	uint8_t*
<i>issuerEventId</i>	uint32_t
<i>currentTime</i>	uint32_t
<i>unitOfMeasure</i>	uint8_t
<i>currency</i>	uint16_t
<i>priceTrailing-DigitAndPrice-Tier</i>	uint8_t
<i>numberOfTypeTiersAndRegisterTier</i>	uint8_t
<i>startTime</i>	uint32_t
<i>durationIn-Minutes</i>	uint16_t
<i>price</i>	uint32_t
<i>priceRatio</i>	uint8_t
<i>generation-Price</i>	uint32_t
<i>generation-PriceRatio</i>	uint8_t
<i>alternateCost-Delivered</i>	uint32_t
<i>alternateCost-Unit</i>	uint8_t
<i>alternateCost-TrailingDigit</i>	uint8_t
<i>numberOfTypeBlockThresholds</i>	uint8_t
<i>priceControl</i>	uint8_t
<i>numberOfTypeGenerationTiers</i>	uint8_t
<i>generationTier</i>	uint8_t

<i>extended-NumberOf-PriceTiers</i>	uint8_t
<i>extendedPrice-Tier</i>	uint8_t
<i>extended-RegisterTier</i>	uint8_t

Definition at line 6653 of file [client-command-macro.doc](#).

**6.5.2.322 #define emberAfFillCommandPriceClusterPublishBlockPeriod( providerId, issuerEventId, blockPeriodStartTime, blockPeriodDuration, blockPeriodControl, blockPeriodDurationType, tariffType, tariffResolutionPeriod )**

The PublishBlockPeriod command is generated in response to receiving a GetBlockPeriod(s) command or when an update to the block tariff schedule is available from the commodity provider.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishBlockPeriod

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>blockPeriod-StartTime</i>	uint32_t
<i>blockPeriod-Duration</i>	uint32_t
<i>blockPeriod-Control</i>	uint8_t
<i>blockPeriod-DurationType</i>	uint8_t
<i>tariffType</i>	uint8_t
<i>tariff-Resolution-Period</i>	uint8_t

Definition at line 6721 of file [client-command-macro.doc](#).

**6.5.2.323 #define emberAfFillCommandPriceClusterPublishConversionFactor( issuerEventId, startTime, conversionFactor, conversionFactorTrailingDigit )**

The PublishConversionFactor command is sent in response to a GetConversionFactor command or if a new Conversion factor is available.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishConversionFactor

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t

<i>conversionFactor</i>	uint32_t
<i>conversionFactorTrailingDigit</i>	uint8_t

Definition at line 6753 of file [client-command-macro.doc](#).

```
6.5.2.324 #define emberAfFillCommandPriceClusterPublishCalorificValue( issuerEventId, startTime,  
                                calorificValue, calorificValueUnit, calorificValueTrailingDigit )
```

The PublishCalorificValue command is sent in response to a GetCalorificValue command or if a new calorific value is available.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishCalorificValue

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>calorificValue</i>	uint32_t
<i>calorificValueUnit</i>	uint8_t
<i>calorificValueTrailingDigit</i>	uint8_t

Definition at line 6778 of file [client-command-macro.doc](#).

```
6.5.2.325 #define emberAfFillCommandPriceClusterPublishTariffInformation( providerId, issuerEventId,  
                                issuerTariffId, startTime, tariffTypeChargingScheme, tariffLabel, numberOfPriceTiersInUse,  
                                numberOfBlockThresholdsInUse, unitOfMeasure, currency, priceTrailingDigit,  
                                standingCharge, tierBlockMode, blockThresholdMultiplier, blockThresholdDivisor )
```

The PublishTariffInformation command is sent in response to a GetTariffInformation command or if new tariff information is available (including price matrix and block thresholds).

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishTariffInformation

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>issuerTariffId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>tariffTypeChargingScheme</i>	uint8_t
<i>tariffLabel</i>	uint8_t*
<i>numberOfPriceTiersInUse</i>	uint8_t

<i>numberOfBlockThresholdsInUse</i>	uint8_t
<i>unitOfMeasure</i>	uint8_t
<i>currency</i>	uint16_t
<i>priceTrailingDigit</i>	uint8_t
<i>standingCharge</i>	uint32_t
<i>tierBlockMode</i>	uint8_t
<i>blockThresholdMultiplier</i>	uint32_t
<i>blockThresholdDivisor</i>	uint32_t

Definition at line 6815 of file [client-command-macro.doc](#).

```
6.5.2.326 #define emberAfFillCommandPriceClusterPublishPriceMatrix( providerId, issuerEventId,
                                                               startTime, issuerTariffId, commandIndex, numberOfCommands, subPayloadControl,
                                                               payload, payloadLen )
```

PublishPriceMatrix command is used to publish the Block Price Information Set (up to 15 tiers x 15 blocks) and the Extended Price Information Set (up to 48 tiers). The PublishPriceMatrix command is sent in response to a GetPriceMatrix command.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishPriceMatrix

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>issuerTariffId</i>	uint32_t
<i>commandIndex</i>	uint8_t
<i>numberOfCommands</i>	uint8_t
<i>subPayloadControl</i>	uint8_t
<i>payload</i>	uint8_t*
<i>payloadLen</i>	uint8_t

Definition at line 6866 of file [client-command-macro.doc](#).

**6.5.2.327 #define emberAfFillCommandPriceClusterPublishBlockThresholds( providerId, issuerEventId, startTime, issuerTariffId, commandIndex, numberOfCommands, subPayloadControl, payload, payloadLen )**

The PublishBlockThreshold command is sent in response to a GetBlockThreshold command.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishBlockThresholds

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>issuerTariffId</i>	uint32_t
<i>commandIndex</i>	uint8_t
<i>numberOfCommands</i>	uint8_t
<i>subPayloadControl</i>	uint8_t
<i>payload</i>	uint8_t*
<i>payloadLen</i>	uint8_t

Definition at line 6905 of file [client-command-macro.doc](#).

**6.5.2.328 #define emberAfFillCommandPriceClusterPublishCO2Value( providerId, issuerEventId, startTime, tariffType, cO2Value, cO2ValueUnit, cO2ValueTrailingDigit )**

The PublishCO2Value command is sent in response to a GetCO2Value command or if a new CO2 conversion factor is available.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishCO2Value

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>tariffType</i>	uint8_t
<i>cO2Value</i>	uint32_t
<i>cO2ValueUnit</i>	uint8_t
<i>cO2ValueTrailingDigit</i>	uint8_t

Definition at line 6942 of file [client-command-macro.doc](#).

**6.5.2.329 #define emberAfFillCommandPriceClusterPublishTierLabels( providerId, issuerEventId, issuerTariffId, commandIndex, numberOfCommands, numberOfLabels, tierLabelsPayload, tierLabelsPayloadLen )**

The PublishTierLabels command is generated in response to receiving a GetTierLabels command or when there is a tier label change.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishTierLabels

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>issuerTariffId</i>	uint32_t
<i>commandIndex</i>	uint8_t
<i>numberOfCommands</i>	uint8_t
<i>numberOfLabels</i>	uint8_t
<i>tierLabels-Payload</i>	uint8_t*
<i>tierLabels-PayloadLen</i>	uint8_t

Definition at line 6976 of file [client-command-macro.doc](#).

**6.5.2.330 #define emberAfFillCommandPriceClusterPublishBillingPeriod( providerId, issuerEventId, billingPeriodStartTime, billingPeriodDuration, billingPeriodDurationType, tariffType )**

The PublishBillingPeriod command is generated in response to receiving a GetBillingPeriod(s) command or when an update to the Billing schedule is available from the commodity Supplier.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishBillingPeriod

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>billingPeriod-StartTime</i>	uint32_t
<i>billingPeriod-Duration</i>	uint32_t
<i>billingPeriod-DurationType</i>	uint8_t
<i>tariffType</i>	uint8_t

Definition at line 7010 of file [client-command-macro.doc](#).

**6.5.2.331 #define emberAfFillCommandPriceClusterPublishConsolidatedBill( providerId, issuerEventId, billingPeriodStartTime, billingPeriodDuration, billingPeriodDurationType, tariffType, consolidatedBill, currency, billTrailingDigit )**

The PublishConsolidatedBill command is used to make consolidated billing information of previous billing periods available to other end devices. This command is issued in response to a GetConsolidatedBill command or if new billing information is available.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishConsolidatedBill

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>billingPeriod-StartTime</i>	uint32_t
<i>billingPeriod-Duration</i>	uint32_t
<i>billingPeriod-DurationType</i>	uint8_t
<i>tariffType</i>	uint8_t
<i>consolidated-Bill</i>	uint32_t
<i>currency</i>	uint16_t
<i>billTrailing-Digit</i>	uint8_t

Definition at line 7043 of file [client-command-macro.doc](#).

**6.5.2.332 #define emberAfFillCommandPriceClusterPublishCppEvent( providerId, issuerEventId, startTime, durationInMinutes, tariffType, cppPriceTier, cppAuth )**

The PublishCPPEvent command is sent from an ESI to its price clients to notify them of a Critical Peak Pricing event.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishCppEvent

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>durationIn-Minutes</i>	uint16_t
<i>tariffType</i>	uint8_t
<i>cppPriceTier</i>	uint8_t
<i>cppAuth</i>	uint8_t

Definition at line 7080 of file [client-command-macro.doc](#).

**6.5.2.333 #define emberAfFillCommandPriceClusterPublishCreditPayment( providerId, issuerEventId, creditPaymentDueDate, creditPaymentOverDueAmount, creditPaymentStatus, creditPayment, creditPaymentDate, creditPaymentRef )**

The PublishCreditPayment command is used to update the credit payment information is available.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishCreditPayment

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t

<i>creditPayment-DueDate</i>	uint32_t
<i>creditPayment-OverDue-Amount</i>	uint32_t
<i>creditPayment-Status</i>	uint8_t
<i>creditPayment</i>	uint32_t
<i>creditPayment-Date</i>	uint32_t
<i>creditPayment-Ref</i>	uint8_t*

Definition at line 7114 of file [client-command-macro.doc](#).

**6.5.2.334 #define emberAfFillCommandPriceClusterPublishCurrencyConversion( providerId, issuerEventId, startTime, oldCurrency, newCurrency, conversionFactor, conversionFactorTrailingDigit, currencyChangeControlFlags )**

The PublishCurrencyConversion command is sent in response to a GetCurrencyConversion command or when a new currency becomes available.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PublishCurrencyConversion

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>oldCurrency</i>	uint16_t
<i>newCurrency</i>	uint16_t
<i>conversion-Factor</i>	uint32_t
<i>conversion-FactorTrailing-Digit</i>	uint8_t
<i>currency-Change-ControlFlags</i>	uint32_t

Definition at line 7150 of file [client-command-macro.doc](#).

**6.5.2.335 #define emberAfFillCommandPriceClusterCancelTariff( providerId, issuerTariffId, tariffType )**

The CancelTariff command indicates that all data associated with a particular tariff instance should be discarded.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: CancelTariff

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerTariffId</i>	uint32_t
<i>tariffType</i>	uint8_t

Definition at line 7181 of file [client-command-macro.doc](#).

**6.5.2.336 #define emberAfFillCommandPriceClusterGetCurrentPrice( commandOptions )**

The GetCurrentPrice command initiates a PublishPrice command for the current time.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetCurrentPrice

**Parameters**

<i>command-</i> <i>Options</i>	uint8_t
-----------------------------------	---------

Definition at line 7200 of file [client-command-macro.doc](#).

**6.5.2.337 #define emberAfFillCommandPriceClusterGetScheduledPrices( startTime, numberOfEvents )**

The GetScheduledPrices command initiates a PublishPrice command for available price events.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetScheduledPrices

**Parameters**

<i>startTime</i>	uint32_t
<i>numberOf-</i> <i>Events</i>	uint8_t

Definition at line 7216 of file [client-command-macro.doc](#).

**6.5.2.338 #define emberAfFillCommandPriceClusterPriceAcknowledgement( providerId, issuerEventId, priceAckTime, control )**

The PriceAcknowledgement command described provides the ability to acknowledge a previously sent PublishPrice command.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: PriceAcknowledgement

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>priceAckTime</i>	uint32_t
<i>control</i>	uint8_t

Definition at line 7236 of file [client-command-macro.doc](#).

**6.5.2.339 #define emberAfFillCommandPriceClusterGetBlockPeriods( startTime, numberEvents, tariffType )**

The GetBlockPeriods command initiates a PublishBlockPeriod command for the currently scheduled block periods.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetBlockPeriods

#### Parameters

<i>startTime</i>	uint32_t
<i>numberEvents</i>	uint8_t
<i>tariffType</i>	uint8_t

Definition at line [7259](#) of file [client-command-macro.doc](#).

**6.5.2.340 #define emberAfFillCommandPriceClusterGetConversionFactor( earliestStartTime, minIssuerEventId, numberOfCommands )**

The GetConversionFactor command initiates a PublishConversionFactor command for the scheduled conversion factor updates.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetConversionFactor

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>minIssuerEventId</i>	uint32_t
<i>numberOfCommands</i>	uint8_t

Definition at line [7280](#) of file [client-command-macro.doc](#).

**6.5.2.341 #define emberAfFillCommandPriceClusterGetCalorificValue( earliestStartTime, minIssuerEventId, numberOfCommands )**

The GetCalorificValue command initiates a PublishCalorificValue command for the scheduled conversion factor updates.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetCalorificValue

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>minIssuerEventId</i>	uint32_t
<i>numberOfCommands</i>	uint8_t

Definition at line 7301 of file [client-command-macro.doc](#).

**6.5.2.342 #define emberAfFillCommandPriceClusterGetTariffInformation( earliestStartTime, minIssuerEventId, numberOfCommands, tariffType )**

The GetTariffInformation command initiates a PublishTariffInformation command for the scheduled tariff updates.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetTariffInformation

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>minIssuerEventId</i>	uint32_t
<i>numberOfCommands</i>	uint8_t
<i>tariffType</i>	uint8_t

Definition at line 7323 of file [client-command-macro.doc](#).

**6.5.2.343 #define emberAfFillCommandPriceClusterGetPriceMatrix( issuerTariffId )**

The GetPriceMatrix command initiates a PublishPriceMatrix command for the scheduled Price Matrix updates.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetPriceMatrix

#### Parameters

<i>issuerTariffId</i>	uint32_t
-----------------------	----------

Definition at line 7344 of file [client-command-macro.doc](#).

**6.5.2.344 #define emberAfFillCommandPriceClusterGetBlockThresholds( issuerTariffId )**

The GetBlockThresholds command initiates a PublishBlockThreshold command for the scheduled Block Threshold updates.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetBlockThresholds

#### Parameters

<i>issuerTariffId</i>	uint32_t
-----------------------	----------

Definition at line 7359 of file [client-command-macro.doc](#).

**6.5.2.345 #define emberAfFillCommandPriceClusterGetCO2Value( earliestStartTime, minIssuerEventId, numberOfCommands, tariffType )**

The GetCO2Value command initiates a PublishCO2Value command for the scheduled CO2 conversion factor updates.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetCO2Value

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>minIssuerEventId</i>	uint32_t
<i>numberOfCommands</i>	uint8_t
<i>tariffType</i>	uint8_t

Definition at line [7377](#) of file [client-command-macro.doc](#).

**6.5.2.346 #define emberAfFillCommandPriceClusterGetTierLabels( issuerTariffId )**

The GetTierLabels command allows a client to retrieve the tier labels associated with a given tariff; this command initiates a PublishTierLabels command from the server.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetTierLabels

#### Parameters

<i>issuerTariffId</i>	uint32_t
-----------------------	----------

Definition at line [7398](#) of file [client-command-macro.doc](#).

**6.5.2.347 #define emberAfFillCommandPriceClusterGetBillingPeriod( earliestStartTime, minIssuerEventId, numberOfCommands, tariffType )**

The GetBillingPeriod command initiates one or more PublishBillingPeriod commands for the currently scheduled billing periods.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetBillingPeriod

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>minIssuerEventId</i>	uint32_t
<i>numberOfCommands</i>	uint8_t
<i>tariffType</i>	uint8_t

Definition at line 7416 of file [client-command-macro.doc](#).

**6.5.2.348 #define emberAfFillCommandPriceClusterGetConsolidatedBill( earliestStartTime, minIssuerEventId, numberOfCommands, tariffType )**

The GetConsolidatedBill command initiates one or more PublishConsolidatedBill commands with the requested billing information.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetConsolidatedBill

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>minIssuerEventId</i>	uint32_t
<i>numberOfCommands</i>	uint8_t
<i>tariffType</i>	uint8_t

Definition at line 7440 of file [client-command-macro.doc](#).

**6.5.2.349 #define emberAfFillCommandPriceClusterCppEventResponse( issuerEventId, cppAuth )**

The CPPEventResponse command is sent from a Client (IHD) to the ESI to notify it of a Critical Peak Pricing event authorization.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: CppEventResponse

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>cppAuth</i>	uint8_t

Definition at line 7462 of file [client-command-macro.doc](#).

**6.5.2.350 #define emberAfFillCommandPriceClusterGetCreditPayment( latestEndTime, numberOfRecords )**

The GetCreditPayment command initiates PublishCreditPayment commands for the requested credit payment information.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetCreditPayment

#### Parameters

<i>latestEndTime</i>	uint32_t
<i>numberOfRecords</i>	uint8_t

Definition at line 7480 of file [client-command-macro.doc](#).

#### 6.5.2.351 #define emberAfFillCommandPriceClusterGetCurrencyConversionCommand( )

The GetCurrencyConversionCommand command initiates a PublishCurrencyConversion command for the currency conversion factor updates. A server shall be capable of storing both the old and the new currencies.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetCurrencyConversionCommand

Definition at line 7496 of file [client-command-macro.doc](#).

#### 6.5.2.352 #define emberAfFillCommandPriceClusterGetTariffCancellation( )

The GetTariffCancellation command initiates the return of the last CancelTariff command held on the associated server.

Cluster: Price, The Price Cluster provides the mechanism for communicating Gas, Energy, or Water pricing information within the premises. Command: GetTariffCancellation

Definition at line 7509 of file [client-command-macro.doc](#).

#### 6.5.2.353 #define emberAfFillCommandDemandResponseLoadControlClusterLoadControlEvent( issuerEventId, deviceClass, utilityEnrollmentGroup, startTime, durationInMinutes, criticalityLevel, coolingTemperatureOffset, heatingTemperatureOffset, coolingTemperatureSetPoint, heatingTemperatureSetPoint, averageLoadAdjustmentPercentage, dutyCycle, eventControl )

Command description for LoadControlEvent.

Cluster: Demand Response and Load Control, This cluster provides an interface to the functionality of Smart Energy Demand Response and Load Control. Devices targeted by this cluster include thermostats and devices that support load control. Command: LoadControlEvent

##### Parameters

<i>issuerEventId</i>	uint32_t
<i>deviceClass</i>	uint16_t
<i>utility-Enrollment-Group</i>	uint8_t
<i>startTime</i>	uint32_t
<i>durationIn-Minutes</i>	uint16_t
<i>criticalityLevel</i>	uint8_t
<i>cooling-Temperature-Offset</i>	uint8_t
<i>heating-Temperature-Offset</i>	uint8_t
<i>cooling-Temperature-SetPoint</i>	int16_t

<i>heating-Temperature-SetPoint</i>	int16_t
<i>averageLoad-Adjustment-Percentage</i>	int8_t
<i>dutyCycle</i>	uint8_t
<i>eventControl</i>	uint8_t

Definition at line 7540 of file [client-command-macro.doc](#).

**6.5.2.354 #define emberAfFillCommandDemandResponseLoadControlClusterCancelLoadControlEvent( issuerEventId, deviceClass, utilityEnrollmentGroup, cancelControl, effectiveTime )**

Command description for CancelLoadControlEvent.

Cluster: Demand Response and Load Control, This cluster provides an interface to the functionality of Smart Energy Demand Response and Load Control. Devices targeted by this cluster include thermostats and devices that support load control. Command: CancelLoadControlEvent

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>deviceClass</i>	uint16_t
<i>utility-Enrollment-Group</i>	uint8_t
<i>cancelControl</i>	uint8_t
<i>effectiveTime</i>	uint32_t

Definition at line 7583 of file [client-command-macro.doc](#).

**6.5.2.355 #define emberAfFillCommandDemandResponseLoadControlClusterCancelAllLoadControlEvents( cancelControl )**

Command description for CancelAllLoadControlEvents.

Cluster: Demand Response and Load Control, This cluster provides an interface to the functionality of Smart Energy Demand Response and Load Control. Devices targeted by this cluster include thermostats and devices that support load control. Command: CancelAllLoadControlEvents

#### Parameters

<i>cancelControl</i>	uint8_t
----------------------	---------

Definition at line 7606 of file [client-command-macro.doc](#).

```
6.5.2.356 #define emberAfFillCommandDemandResponseLoadControlClusterReportEventStatus(
    issuerEventId, eventStatus, eventStatusTime, criticalityLevelApplied,
    coolingTemperatureSetPointApplied, heatingTemperatureSetPointApplied,
    averageLoadAdjustmentPercentageApplied, dutyCycleApplied, eventControl, signatureType,
    signature )
```

Command description for ReportEventStatus.

Cluster: Demand Response and Load Control, This cluster provides an interface to the functionality of Smart Energy Demand Response and Load Control. Devices targeted by this cluster include thermostats and devices that support load control. Command: ReportEventStatus

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>eventStatus</i>	uint8_t
<i>eventStatus-</i> <i>Time</i>	uint32_t
<i>criticality-</i> <i>LevelApplied</i>	uint8_t
<i>cooling-</i> <i>Temperature-</i> <i>SetPoint-</i> <i>Applied</i>	uint16_t
<i>heating-</i> <i>Temperature-</i> <i>SetPoint-</i> <i>Applied</i>	uint16_t
<i>averageLoad-</i> <i>Adjustment-</i> <i>Percentage-</i> <i>Applied</i>	int8_t
<i>dutyCycle-</i> <i>Applied</i>	uint8_t
<i>eventControl</i>	uint8_t
<i>signatureType</i>	uint8_t
<i>signature</i>	uint8_t*

Definition at line 7631 of file [client-command-macro.doc](#).

```
6.5.2.357 #define emberAfFillCommandDemandResponseLoadControlClusterGetScheduledEvents(
    startTime, numberOfEvents, issuerEventId )
```

Command description for GetScheduledEvents.

Cluster: Demand Response and Load Control, This cluster provides an interface to the functionality of Smart Energy Demand Response and Load Control. Devices targeted by this cluster include thermostats and devices that support load control. Command: GetScheduledEvents

#### Parameters

<i>startTime</i>	uint32_t
<i>numberOf-</i> <i>Events</i>	uint8_t
<i>issuerEventId</i>	uint32_t

Definition at line [7669](#) of file [client-command-macro.doc](#).

**6.5.2.358 #define emberAfFillCommandSimpleMeteringClusterGetProfileResponse( endTime, status, profileIntervalPeriod, numberOfPeriodsDelivered, intervals, intervalsLen )**

This command is generated when the Client command GetProfile is received.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: GetProfileResponse

#### Parameters

<i>endTime</i>	uint32_t
<i>status</i>	uint8_t
<i>profileInterval- Period</i>	uint8_t
<i>numberO- Periods- Delivered</i>	uint8_t
<i>intervals</i>	uint8_t*
<i>intervalsLen</i>	uint8_t

Definition at line [7698](#) of file [client-command-macro.doc](#).

**6.5.2.359 #define emberAfFillCommandSimpleMeteringClusterRequestMirror( )**

This command is used to request the ESI to mirror Metering Device data.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: RequestMirror

Definition at line [7722](#) of file [client-command-macro.doc](#).

**6.5.2.360 #define emberAfFillCommandSimpleMeteringClusterRemoveMirror( )**

This command is used to request the ESI to remove its mirror of Metering Device data.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: RemoveMirror

Definition at line [7735](#) of file [client-command-macro.doc](#).

**6.5.2.361 #define emberAfFillCommandSimpleMeteringClusterRequestFastPollModeResponse( appliedUpdatePeriod, fastPollModeEndtime )**

This command is generated when the client command Request Fast Poll Mode is received.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: RequestFastPollMode-Response

**Parameters**

<i>appliedUpdate-Period</i>	uint8_t
<i>fastPollMode-Endtime</i>	uint32_t

Definition at line 7750 of file [client-command-macro.doc](#).

**6.5.2.362 #define emberAfFillCommandSimpleMeteringClusterScheduleSnapshotResponse( issuerEventId, snapshotResponsePayload, snapshotResponsePayloadLen )**

This command is generated in response to a ScheduleSnapshot command, and is sent to confirm whether the requested snapshot schedule has been set up.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: ScheduleSnapshotResponse

**Parameters**

<i>issuerEventId</i>	uint32_t
<i>snapshot-Response-Payload</i>	uint8_t*
<i>snapshot-Response-PayloadLen</i>	uint8_t

Definition at line 7769 of file [client-command-macro.doc](#).

**6.5.2.363 #define emberAfFillCommandSimpleMeteringClusterTakeSnapshotResponse( snapshotId, snapshotConfirmation )**

This command is generated in response to a TakeSnapshot command, and is sent to confirm whether the requested snapshot has been accepted and successfully taken.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: TakeSnapshotResponse

**Parameters**

<i>snapshotId</i>	uint32_t
<i>snapshot-Confirmation</i>	uint8_t

Definition at line 7789 of file [client-command-macro.doc](#).

**6.5.2.364 #define emberAfFillCommandSimpleMeteringClusterPublishSnapshot( snapshotId, snapshotTime, totalSnapshotsFound, commandIndex, totalCommands, snapshotCause, snapshotPayloadType, snapshotPayload, snapshotPayloadLen )**

This command is generated in response to a GetSnapshot command. It is used to return a single snapshot to the client.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: PublishSnapshot

#### Parameters

<i>snapshotId</i>	uint32_t
<i>snapshotTime</i>	uint32_t
<i>totalSnapshots-Found</i>	uint8_t
<i>commandIndex</i>	uint8_t
<i>totalCommands</i>	uint8_t
<i>snapshotCause</i>	uint32_t
<i>snapshot-PayloadType</i>	uint8_t
<i>snapshot-Payload</i>	uint8_t*
<i>snapshot-PayloadLen</i>	uint8_t

Definition at line 7814 of file [client-command-macro.doc](#).

```
6.5.2.365 #define emberAfFillCommandSimpleMeteringClusterGetSampledDataResponse( sampleId,  
                                sampleStartTime, sampleType, sampleRequestInterval, numberOfSamples, samples,  
                                samplesLen )
```

This command is used to send the requested sample data to the client. It is generated in response to a GetSampledData command.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: GetSampledDataResponse

#### Parameters

<i>sampleId</i>	uint16_t
<i>sampleStart-Time</i>	uint32_t
<i>sampleType</i>	uint8_t
<i>sampleRequest-Interval</i>	uint16_t
<i>numberOf-Samples</i>	uint16_t
<i>samples</i>	uint8_t*
<i>samplesLen</i>	uint8_t

Definition at line 7851 of file [client-command-macro.doc](#).

```
6.5.2.366 #define emberAfFillCommandSimpleMeteringClusterConfigureMirror( issuerEventId,  
                                reportingInterval, mirrorNotificationReporting, notificationScheme )
```

ConfigureMirror is sent to the mirror once the mirror has been created. The command deals with the operational configuration of the Mirror.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: ConfigureMirror

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>reporting-Interval</i>	uint32_t
<i>mirror-Notification-Reporting</i>	uint8_t
<i>notification-Scheme</i>	uint8_t

Definition at line 7881 of file [client-command-macro.doc](#).

**6.5.2.367 #define emberAfFillCommandSimpleMeteringClusterConfigureNotificationScheme( issuerEventId, notificationScheme, notificationFlagOrder )**

The ConfigureNotificationScheme is sent to the mirror once the mirror has been created. The command deals with the operational configuration of the Mirror and the device that reports to the mirror. No default schemes are allowed to be overwritten.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: ConfigureNotificationScheme

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>notification-Scheme</i>	uint8_t
<i>notification-FlagOrder</i>	uint32_t

Definition at line 7904 of file [client-command-macro.doc](#).

**6.5.2.368 #define emberAfFillCommandSimpleMeteringClusterConfigureNotificationFlags( issuerEventId, notificationScheme, notificationFlagAttributedId, clusterId, manufacturerCode, numberOfCommands, commandIds, commandIdsLen )**

The ConfigureNotificationFlags command is used to set the commands relating to the bit value for each NotificationFlags attribute that the scheme is proposing to use.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: ConfigureNotificationFlags

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>notification-Scheme</i>	uint8_t
<i>notification-FlagAttributeId</i>	uint16_t
<i>clusterId</i>	uint16_t

<i>manufacturer-Code</i>	uint16_t
<i>numberOfCommands</i>	uint8_t
<i>commandIds</i>	uint8_t*
<i>commandIdsLen</i>	uint8_t

Definition at line 7930 of file [client-command-macro.doc](#).

**6.5.2.369 #define emberAfFillCommandSimpleMeteringClusterGetNotifiedMessage( notificationScheme, notificationFlagAttributeId, notificationFlagsN )**

The GetNotifiedMessage command is used only when a BOMD is being mirrored. This command provides a method for the BOMD to notify the Mirror message queue that it wants to receive commands that the Mirror has queued. The Notification flags set within the command shall inform the mirror of the commands that the BOMD is requesting.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: GetNotifiedMessage

#### Parameters

<i>notification-Scheme</i>	uint8_t
<i>notification-FlagAttributeId</i>	uint16_t
<i>notification-FlagsN</i>	uint32_t

Definition at line 7961 of file [client-command-macro.doc](#).

**6.5.2.370 #define emberAfFillCommandSimpleMeteringClusterSupplyStatusResponse( providerId, issuerEventId, implementationDateTime, supplyStatus )**

This command is transmitted by a Metering Device in response to a ChangeSupply command.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: SupplyStatusResponse

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>implementation-DateTime</i>	uint32_t
<i>supplyStatus</i>	uint8_t

Definition at line 7983 of file [client-command-macro.doc](#).

### 6.5.2.371 #define emberAfFillCommandSimpleMeteringClusterStartSamplingResponse( *sampleId* )

This command is transmitted by a Metering Device in response to a StartSampling command.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: StartSamplingResponse

#### Parameters

<i>sampleId</i>	uint16_t
-----------------	----------

Definition at line 8004 of file [client-command-macro.doc](#).

### 6.5.2.372 #define emberAfFillCommandSimpleMeteringClusterGetProfile( *intervalChannel*, *endTime*, *numberOfPeriods* )

The GetProfile command is generated when a client device wishes to retrieve a list of captured Energy, Gas or water consumption for profiling purposes.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: GetProfile

#### Parameters

<i>interval-Channel</i>	uint8_t
<i>endTime</i>	uint32_t
<i>numberOfPeriods</i>	uint8_t

Definition at line 8021 of file [client-command-macro.doc](#).

### 6.5.2.373 #define emberAfFillCommandSimpleMeteringClusterRequestMirrorResponse( *endpointId* )

The Request Mirror Response Command allows the ESI to inform a sleepy Metering Device it has the ability to store and mirror its data.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: RequestMirrorResponse

#### Parameters

<i>endpointId</i>	uint16_t
-------------------	----------

Definition at line 8040 of file [client-command-macro.doc](#).

### 6.5.2.374 #define emberAfFillCommandSimpleMeteringClusterMirrorRemoved( *endpointId* )

The Mirror Removed Command allows the ESI to inform a sleepy Metering Device mirroring support has been removed or halted.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: MirrorRemoved

**Parameters**

<i>endpointId</i>	uint16_t
-------------------	----------

Definition at line 8055 of file [client-command-macro.doc](#).

**6.5.2.375 #define emberAfFillCommandSimpleMeteringClusterRequestFastPollMode( fastPollUpdatePeriod, duration )**

The Request Fast Poll Mode command is generated when the metering client wishes to receive near real-time updates of InstantaneousDemand.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: RequestFastPollMode

**Parameters**

<i>fastPollUpdate-Period</i>	uint8_t
<i>duration</i>	uint8_t

Definition at line 8071 of file [client-command-macro.doc](#).

**6.5.2.376 #define emberAfFillCommandSimpleMeteringClusterScheduleSnapshot( issuerEventId, commandIndex, commandCount, snapshotSchedulePayload, snapshotSchedulePayloadLen )**

This command is used to set up a schedule of when the device shall create snapshot data.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: ScheduleSnapshot

**Parameters**

<i>issuerEventId</i>	uint32_t
<i>commandIndex</i>	uint8_t
<i>commandCount</i>	uint8_t
<i>snapshot-Schedule-Payload</i>	uint8_t*
<i>snapshot-Schedule-PayloadLen</i>	uint8_t

Definition at line 8092 of file [client-command-macro.doc](#).

**6.5.2.377 #define emberAfFillCommandSimpleMeteringClusterTakeSnapshot( snapshotCause )**

This command is used to instruct the cluster server to take a single snapshot.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: TakeSnapshot

**Parameters**

<i>snapshotCause</i>	uint32_t
----------------------	----------

Definition at line 8115 of file [client-command-macro.doc](#).

**6.5.2.378 #define emberAfFillCommandSimpleMeteringClusterGetSnapshot( earliestStartTime,  
latestEndTime, snapshotOffset, snapshotCause )**

This command is used to request snapshot data from the cluster server.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: GetSnapshot

**Parameters**

<i>earliestStartTime</i>	uint32_t
<i>latestEndTime</i>	uint32_t
<i>snapshotOffset</i>	uint8_t
<i>snapshotCause</i>	uint32_t

Definition at line 8133 of file [client-command-macro.doc](#).

**6.5.2.379 #define emberAfFillCommandSimpleMeteringClusterStartSampling( issuerEventId,  
startSamplingTime, sampleType, sampleRequestInterval, maxNumberOfSamples )**

The sampling mechanism allows a set of samples of the specified type of data to be taken, commencing at the stipulated start time. This mechanism may run concurrently with the capturing of profile data, and may refer the same parameters, albeit possibly at a different sampling rate.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: StartSampling

**Parameters**

<i>issuerEventId</i>	uint32_t
<i>startSamplingTime</i>	uint32_t
<i>sampleType</i>	uint8_t
<i>sampleRequestInterval</i>	uint16_t
<i>maxNumberOfSamples</i>	uint16_t

Definition at line 8158 of file [client-command-macro.doc](#).

**6.5.2.380 #define emberAfFillCommandSimpleMeteringClusterGetSampledData( sampleId,  
earliestSampleTime, sampleType, numberOfSamples )**

This command is used to request sampled data from the server. Note that it is the responsibility of the client to ensure that it does not request more samples than can be held in a single command payload.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: GetSampledData

#### Parameters

<i>sampleId</i>	uint16_t
<i>earliestSampleTime</i>	uint32_t
<i>sampleType</i>	uint8_t
<i>numberOfSamples</i>	uint16_t

Definition at line 8184 of file [client-command-macro.doc](#).

**6.5.2.381 #define emberAfFillCommandSimpleMeteringClusterMirrorReportAttributeResponse( notificationScheme, notificationFlags, notificationFlagsLen )**

This command is sent in response to the ReportAttribute command when the MirrorReporting attribute is set.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: MirrorReportAttribute-Response

#### Parameters

<i>notification-Scheme</i>	uint8_t
<i>notification-Flags</i>	uint8_t*
<i>notification-FlagsLen</i>	uint8_t

Definition at line 8207 of file [client-command-macro.doc](#).

**6.5.2.382 #define emberAfFillCommandSimpleMeteringClusterResetLoadLimitCounter( providerId, issuerEventId )**

The ResetLoadLimitCounter command shall cause the LoadLimitCounter attribute to be reset.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: ResetLoadLimitCounter

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t

Definition at line 8227 of file [client-command-macro.doc](#).

**6.5.2.383 #define emberAfFillCommandSimpleMeteringClusterChangeSupply( *providerId*, *issuerEventId*, *requestDateTime*, *implementationDateTime*, *proposedSupplyStatus*, *supplyControlBits* )**

This command is sent from the Head-end or ESI to the Metering Device to instruct it to change the status of the valve or load switch, i.e. the supply.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: ChangeSupply

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>requestDate-Time</i>	uint32_t
<i>implementation-DateTime</i>	uint32_t
<i>proposed-SupplyStatus</i>	uint8_t
<i>supplyControl-Bits</i>	uint8_t

Definition at line [8249](#) of file [client-command-macro.doc](#).

**6.5.2.384 #define emberAfFillCommandSimpleMeteringClusterLocalChangeSupply( *proposedSupplyStatus* )**

This command is a simplified version of the ChangeSupply command, intended to be sent from an IHD to a meter as the consequence of a user action on the IHD. Its purpose is to provide a local disconnection/re-connection button on the IHD in addition to the one on the meter.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: LocalChangeSupply

#### Parameters

<i>proposed-SupplyStatus</i>	uint8_t
------------------------------	---------

Definition at line [8274](#) of file [client-command-macro.doc](#).

**6.5.2.385 #define emberAfFillCommandSimpleMeteringClusterSetSupplyStatus( *issuerEventId*, *supplyTamperState*, *supplyDepletionState*, *supplyUncontrolledFlowState*, *loadLimitSupplyState* )**

This command is used to specify the required status of the supply following the occurrence of certain events on the meter.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: SetSupplyStatus

**Parameters**

<i>issuerEventId</i>	uint32_t
<i>supplyTamper-State</i>	uint8_t
<i>supply-DepletionState</i>	uint8_t
<i>supply-Uncontrolled-FlowState</i>	uint8_t
<i>loadLimit-SupplyState</i>	uint8_t

Definition at line 8293 of file [client-command-macro.doc](#).

```
6.5.2.386 #define emberAfFillCommandSimpleMeteringClusterSetUncontrolledFlowThreshold(  
    providerId, issuerEventId, uncontrolledFlowThreshold, unitOfMeasure, multiplier, divisor,  
    stabilisationPeriod, measurementPeriod )
```

This command is used to update the 'Uncontrolled Flow Rate' configuration data used by flow meters.

Cluster: Simple Metering, The Metering Cluster provides a mechanism to retrieve usage information from Electric, Gas, Water, and potentially Thermal metering devices. Command: SetUncontrolledFlowThreshold

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>uncontrolled-FlowThreshold</i>	uint16_t
<i>unitOfMeasure</i>	uint8_t
<i>multiplier</i>	uint16_t
<i>divisor</i>	uint16_t
<i>stabilisation-Period</i>	uint8_t
<i>measurement-Period</i>	uint16_t

Definition at line 8323 of file [client-command-macro.doc](#).

```
6.5.2.387 #define emberAfFillCommandMessagingClusterDisplayMessage( messageId, messageControl,  
    startTime, durationInMinutes, message, optionalExtendedMessageControl )
```

Command description for DisplayMessage.

Cluster: Messaging, This cluster provides an interface for passing text messages between SE devices. Command: DisplayMessage

**Parameters**

<i>messageId</i>	uint32_t
<i>message-Control</i>	uint8_t

<i>startTime</i>	uint32_t
<i>durationInMinutes</i>	uint16_t
<i>message</i>	uint8_t*
<i>optionalExtendedMessageControl</i>	uint8_t

Definition at line 8362 of file [client-command-macro.doc](#).

#### 6.5.2.388 #define emberAfFillCommandMessagingClusterCancelMessage( messageId, messageControl )

The CancelMessage command provides the ability to cancel the sending or acceptance of previously sent messages.

Cluster: Messaging, This cluster provides an interface for passing text messages between SE devices.  
Command: CancelMessage

##### Parameters

<i>messageId</i>	uint32_t
<i>messageControl</i>	uint8_t

Definition at line 8388 of file [client-command-macro.doc](#).

#### 6.5.2.389 #define emberAfFillCommandMessagingClusterDisplayProtectedMessage( messageId, messageControl, startTime, durationInMinutes, message, optionalExtendedMessageControl )

The DisplayProtected Message command is for use with messages that are protected by a password or PIN.

Cluster: Messaging, This cluster provides an interface for passing text messages between SE devices.  
Command: DisplayProtectedMessage

##### Parameters

<i>messageId</i>	uint32_t
<i>messageControl</i>	uint8_t
<i>startTime</i>	uint32_t
<i>durationInMinutes</i>	uint16_t
<i>message</i>	uint8_t*
<i>optionalExtendedMessageControl</i>	uint8_t

Definition at line 8410 of file [client-command-macro.doc](#).

### 6.5.2.390 #define emberAfFillCommandMessagingClusterCancelAllMessages( *implementationDateTime* )

The CancelAllMessages command indicates to a client device that it should cancel all display messages currently held by it.

Cluster: Messaging, This cluster provides an interface for passing text messages between SE devices.  
Command: CancelAllMessages

#### Parameters

<i>implementation- DateTime</i>	uint32_t
-------------------------------------	----------

Definition at line 8435 of file [client-command-macro.doc](#).

### 6.5.2.391 #define emberAfFillCommandMessagingClusterGetLastMessage( )

Command description for GetLastMessage.

Cluster: Messaging, This cluster provides an interface for passing text messages between SE devices.  
Command: GetLastMessage

Definition at line 8449 of file [client-command-macro.doc](#).

### 6.5.2.392 #define emberAfFillCommandMessagingClusterMessageConfirmation( *messageId*, *confirmationTime*, *messageConfirmationControl*, *messageResponse* )

The Message Confirmation command provides an indication that a Utility Customer has acknowledged and/or accepted the contents of a previously sent message. Enhanced Message Confirmation commands shall contain an answer of 'NO', 'YES' and/or a message confirmation string.

Cluster: Messaging, This cluster provides an interface for passing text messages between SE devices.  
Command: MessageConfirmation

#### Parameters

<i>messageId</i>	uint32_t
<i>confirmation- Time</i>	uint32_t
<i>message- Confirmation- Control</i>	uint8_t
<i>message- Response</i>	uint8_t*

Definition at line 8466 of file [client-command-macro.doc](#).

### 6.5.2.393 #define emberAfFillCommandMessagingClusterGetMessageCancellation( *earliestImplementationTime* )

This command initiates the return of the first (and maybe only) Cancel All Messages command held on the associated server, and which has an implementation time equal to or later than the value indicated in the payload.

Cluster: Messaging, This cluster provides an interface for passing text messages between SE devices.  
 Command: GetMessageCancellation

#### Parameters

<i>earliest- Implementation- Time</i>	uint32_t
---	----------

Definition at line 8487 of file [client-command-macro.doc](#).

**6.5.2.394 #define emberAfFillCommandTunnelingClusterRequestTunnel( protocolId, manufacturerCode, flowControlSupport, maximumIncomingTransferSize )**

RequestTunnel is the client command used to setup a tunnel association with the server. The request payload specifies the protocol identifier for the requested tunnel, a manufacturer code in case of proprietary protocols and the use of flow control for streaming protocols.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: RequestTunnel

#### Parameters

<i>protocolId</i>	uint8_t
<i>manufacturer- Code</i>	uint16_t
<i>flowControl- Support</i>	uint8_t
<i>maximum- Incoming- TransferSize</i>	uint16_t

Definition at line 8510 of file [client-command-macro.doc](#).

**6.5.2.395 #define emberAfFillCommandTunnelingClusterCloseTunnel( tunnelId )**

Client command used to close the tunnel with the server. The parameter in the payload specifies the tunnel identifier of the tunnel that has to be closed. The server leaves the tunnel open and the assigned resources allocated until the client sends the CloseTunnel command or the CloseTunnelTimeout fires.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: CloseTunnel

#### Parameters

<i>tunnelId</i>	uint16_t
-----------------	----------

Definition at line 8531 of file [client-command-macro.doc](#).

```
6.5.2.396 #define emberAfFillCommandTunnelingClusterTransferDataClientToServer( tunnelId, data,
dataLen )
```

Command that indicates (if received) that the client has sent data to the server. The data itself is contained within the payload.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: TransferDataClientToServer

#### Parameters

<i>tunnelId</i>	uint16_t
<i>data</i>	uint8_t*
<i>dataLen</i>	uint8_t

Definition at line 8548 of file [client-command-macro.doc](#).

```
6.5.2.397 #define emberAfFillCommandTunnelingClusterTransferDataErrorClientToServer( tunnelId,
transferDataStatus )
```

This command is generated by the receiver of a TransferData command if the tunnel status indicates that something is wrong. There are two three cases in which TransferDataError is sent: (1) The TransferData received contains a TunnelID that does not match to any of the active tunnels of the receiving device. This could happen if a (sleeping) device sends a TransferData command to a tunnel that has been closed by the server after the CloseTunnelTimeout. (2) The TransferData received contains a proper TunnelID of an active tunnel, but the device sending the data does not match to it. (3) The TransferData received contains more data than indicated by the MaximumIncomingTransferSize of the receiving device.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: TransferDataErrorClientToServer

#### Parameters

<i>tunnelId</i>	uint16_t
<i>transferData-Status</i>	uint8_t

Definition at line 8568 of file [client-command-macro.doc](#).

```
6.5.2.398 #define emberAfFillCommandTunnelingClusterAckTransferDataClientToServer( tunnelId,
numberOfBytesLeft )
```

Command sent in response to each TransferData command in case - and only in case - flow control has been requested by the client in the TunnelRequest command and is supported by both tunnel endpoints. The response payload indicates the number of octets that may still be received by the receiver.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: AckTransferDataClientToServer

#### Parameters

<i>tunnelId</i>	uint16_t
<i>numberOfBytesLeft</i>	uint16_t

Definition at line 8586 of file [client-command-macro.doc](#).

**6.5.2.399 #define emberAfFillCommandTunnelingClusterReadyDataClientToServer( tunnelId, numberOfOctetsLeft )**

The ReadyData command is generated - after a receiver had to stop the dataflow using the AckTransferData(0) command - to indicate that the device is now ready to continue receiving data. The parameter NumberOfOctetsLeft gives a hint on how much space is left for the next data transfer. The ReadyData command is only issued if flow control is enabled.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: ReadyDataClientToServer

#### Parameters

<i>tunnelId</i>	uint16_t
<i>numberOfOctetsLeft</i>	uint16_t

Definition at line 8604 of file [client-command-macro.doc](#).

**6.5.2.400 #define emberAfFillCommandTunnelingClusterGetSupportedTunnelProtocols( protocolOffset )**

Get Supported Tunnel Protocols is the client command used to determine the Tunnel protocols supported on another device.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: GetSupportedTunnelProtocols

#### Parameters

<i>protocolOffset</i>	uint8_t
-----------------------	---------

Definition at line 8621 of file [client-command-macro.doc](#).

**6.5.2.401 #define emberAfFillCommandTunnelingClusterRequestTunnelResponse( tunnelId, tunnelStatus, maximumIncomingTransferSize )**

RequestTunnelResponse is sent by the server in response to a RequestTunnel command previously received from the client. The response contains the status of the RequestTunnel command and a tunnel identifier corresponding to the tunnel that has been set-up in the server in case of success.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: RequestTunnelResponse

#### Parameters

<i>tunnelId</i>	uint16_t
<i>tunnelStatus</i>	uint8_t
<i>maximumIncomingTransferSize</i>	uint16_t

Definition at line 8638 of file [client-command-macro.doc](#).

**6.5.2.402 #define emberAfFillCommandTunnelingClusterTransferDataServerToClient( tunnelId, data, dataLen )**

Command that transfers data from server to the client. The data itself has to be placed within the payload.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: TransferDataServerToClient

#### Parameters

<i>tunnelId</i>	uint16_t
<i>data</i>	uint8_t*
<i>dataLen</i>	uint8_t

Definition at line 8659 of file [client-command-macro.doc](#).

**6.5.2.403 #define emberAfFillCommandTunnelingClusterTransferDataErrorServerToClient( tunnelId, transferDataStatus )**

This command is generated by the receiver of a TransferData command if the tunnel status indicates that something is wrong. There are two three cases in which TransferDataError is sent: (1) The TransferData received contains a TunnelID that does not match to any of the active tunnels of the receiving device. This could happen if a (sleeping) device sends a TransferData command to a tunnel that has been closed by the server after the CloseTunnelTimeout. (2) The TransferData received contains a proper TunnelID of an active tunnel, but the device sending the data does not match to it. (3) The TransferData received contains more data than indicated by the MaximumIncomingTransferSize of the receiving device.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: TransferDataErrorServerToClient

#### Parameters

<i>tunnelId</i>	uint16_t
<i>transferDataStatus</i>	uint8_t

Definition at line 8679 of file [client-command-macro.doc](#).

**6.5.2.404 #define emberAfFillCommandTunnelingClusterAckTransferDataServerToClient( tunnelId, numberOfBytesLeft )**

Command sent in response to each TransferData command in case - and only in case - flow control has been requested by the client in the TunnelRequest command and is supported by both tunnel endpoints. The response payload indicates the number of octets that may still be received by the receiver.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: AckTransferDataServerToClient

#### Parameters

<i>tunnelId</i>	uint16_t
<i>numberOfBytesLeft</i>	uint16_t

Definition at line 8697 of file [client-command-macro.doc](#).

**6.5.2.405 #define emberAfFillCommandTunnelingClusterReadyDataServerToClient( tunnelId, numberOfOctetsLeft )**

The ReadyData command is generated - after a receiver had to stop the dataflow using the AckTransferData(0) command - to indicate that the device is now ready to continue receiving data. The parameter NumberOfOctetsLeft gives a hint on how much space is left for the next data transfer. The ReadyData command is only issued if flow control is enabled.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: ReadyDataServerToClient

#### Parameters

<i>tunnelId</i>	uint16_t
<i>numberOfOctetsLeft</i>	uint16_t

Definition at line 8715 of file [client-command-macro.doc](#).

**6.5.2.406 #define emberAfFillCommandTunnelingClusterSupportedTunnelProtocolsResponse( protocolListComplete, protocolCount, protocolList, protocolListLen )**

Supported Tunnel Protocol Response is sent in response to a Get Supported Tunnel Protocols command previously received. The response contains a list of Tunnel protocols supported by the device; the payload of the response should be capable of holding up to 16 protocols.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: SupportedTunnelProtocolsResponse

#### Parameters

<i>protocolListComplete</i>	uint8_t
<i>protocolCount</i>	uint8_t
<i>protocolList</i>	uint8_t*
<i>protocolListLen</i>	uint8_t

Definition at line 8735 of file [client-command-macro.doc](#).

**6.5.2.407 #define emberAfFillCommandTunnelingClusterTunnelClosureNotification( tunnelId )**

TunnelClosureNotification is sent by the server to indicate that a tunnel has been closed due to expiration of a CloseTunnelTimeout.

Cluster: Tunneling, The tunneling cluster provides an interface for tunneling protocols. Command: TunnelClosureNotification

#### Parameters

<i>tunnelId</i>	uint16_t
-----------------	----------

Definition at line 8756 of file [client-command-macro.doc](#).

```
6.5.2.408 #define emberAfFillCommandPrepaymentClusterSelectAvailableEmergencyCredit(
    commandIssueDateTime, originatingDevice )
```

This command is sent to the Metering Device to activate the use of any Emergency Credit available on the Metering Device.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: SelectAvailableEmergencyCredit

#### Parameters

<i>commandIssue- DateTime</i>	uint32_t
<i>originating- Device</i>	uint8_t

Definition at line [8777](#) of file [client-command-macro.doc](#).

```
6.5.2.409 #define emberAfFillCommandPrepaymentClusterChangeDebt( issuerEventId, debtLabel,
    debtAmount, debtRecoveryMethod, debtAmountType, debtRecoveryStartTime,
    debtRecoveryCollectionTime, debtRecoveryFrequency, debtRecoveryAmount,
    debtRecoveryBalancePercentage )
```

The ChangeDebt command is send to the Metering Device to change the fuel or Non fuel debt values.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: ChangeDebt

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>debtLabel</i>	uint8_t*
<i>debtAmount</i>	uint32_t
<i>debtRecovery- Method</i>	uint8_t
<i>debtAmount- Type</i>	uint8_t
<i>debtRecovery- StartTime</i>	uint32_t
<i>debtRecovery- CollectionTime</i>	uint16_t
<i>debtRecovery- Frequency</i>	uint8_t
<i>debtRecovery- Amount</i>	uint32_t
<i>debtRecovery- Balance- Percentage</i>	uint16_t

Definition at line [8803](#) of file [client-command-macro.doc](#).

**6.5.2.410 #define emberAfFillCommandPrepaymentClusterEmergencyCreditSetup( *issuerEventId*, *startTime*, *emergencyCreditLimit*, *emergencyCreditThreshold* )**

This command is a method to set up the parameters for the emergency credit.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: EmergencyCreditSetup

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>emergency-CreditLimit</i>	uint32_t
<i>emergency-Credit-Threshold</i>	uint32_t

Definition at line 8839 of file [client-command-macro.doc](#).

**6.5.2.411 #define emberAfFillCommandPrepaymentClusterConsumerTopUp( *originatingDevice*, *topUpCode* )**

The ConsumerTopUp command is used by the IPD and the ESI as a method of applying credit top up values to the prepayment meter.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: ConsumerTopUp

#### Parameters

<i>originating-Device</i>	uint8_t
<i>topUpCode</i>	uint8_t*

Definition at line 8861 of file [client-command-macro.doc](#).

**6.5.2.412 #define emberAfFillCommandPrepaymentClusterCreditAdjustment( *issuerEventId*, *startTime*, *creditAdjustmentType*, *creditAdjustmentValue* )**

The CreditAdjustment command is sent to update the accounting base for the Prepayment meter.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: CreditAdjustment

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>credit-Adjustment-Type</i>	uint8_t
<i>credit-Adjustment-Value</i>	uint32_t

Definition at line 8881 of file [client-command-macro.doc](#).

```
6.5.2.413 #define emberAfFillCommandPrepaymentClusterChangePaymentMode( providerId,
    issuerEventId, implementationDateTime, proposedPaymentControlConfiguration, cutOffValue
)
```

This command is sent to a Metering Device to instruct it to change its mode of operation. i.e. from Credit to Prepayment.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: ChangePaymentMode

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>implementation- DateTime</i>	uint32_t
<i>proposed- Payment- Control- Configuration</i>	uint16_t
<i>cutOffValue</i>	uint32_t

Definition at line 8906 of file [client-command-macro.doc](#).

```
6.5.2.414 #define emberAfFillCommandPrepaymentClusterGetPrepaySnapshot( earliestStartTime,
    latestEndTime, snapshotOffset, snapshotCause )
```

This command is used to request the cluster server for snapshot data.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: GetPrepaySnapshot

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>latestEndTime</i>	uint32_t
<i>snapshotOffset</i>	uint8_t
<i>snapshotCause</i>	uint32_t

Definition at line 8932 of file [client-command-macro.doc](#).

```
6.5.2.415 #define emberAfFillCommandPrepaymentClusterGetTopUpLog( latestEndTime,
    numberOfRecords )
```

This command is sent to the Metering Device to retrieve the log of Top Up codes received by the meter.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: GetTopUpLog

**Parameters**

<i>latestEndTime</i>	uint32_t
<i>numberOfRecords</i>	uint8_t

Definition at line 8954 of file [client-command-macro.doc](#).

**6.5.2.416 #define emberAfFillCommandPrepaymentClusterSetLowCreditWarningLevel(  
lowCreditWarningLevel )**

This command is sent from client to a Prepayment server to set the warning level for low credit.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: SetLowCreditWarningLevel

**Parameters**

<i>lowCreditWarningLevel</i>	uint32_t
------------------------------	----------

Definition at line 8971 of file [client-command-macro.doc](#).

**6.5.2.417 #define emberAfFillCommandPrepaymentClusterGetDebtRepaymentLog( *latestEndTime*,  
*numberOfDebts*, *debtType* )**

This command is used to request the contents of the repayment log.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: GetDebtRepaymentLog

**Parameters**

<i>latestEndTime</i>	uint32_t
<i>numberOfDebts</i>	uint8_t
<i>debtType</i>	uint8_t

Definition at line 8988 of file [client-command-macro.doc](#).

**6.5.2.418 #define emberAfFillCommandPrepaymentClusterSetMaximumCreditLimit( *providerId*,  
*issuerEventId*, *implementationDateTime*, *maximumCreditLevel*, *maximumCreditPerTopUp* )**

This command is sent from a client to the Prepayment server to set the maximum credit level allowed in the meter.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: SetMaximumCreditLimit

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t

<i>implementation-DateTime</i>	uint32_t
<i>maximum-CreditLevel</i>	uint32_t
<i>maximum-CreditPerTop-Up</i>	uint32_t

Definition at line 9011 of file [client-command-macro.doc](#).

**6.5.2.419 #define emberAfFillCommandPrepaymentClusterSetOverallDebtCap( providerId, issuerEventId, implementationDateTime, overallDebtCap )**

This command is sent from a client to the Prepayment server to set the overall debt cap allowed in the meter.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: SetOverallDebtCap

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>implementation-DateTime</i>	uint32_t
<i>overallDebt-Cap</i>	uint32_t

Definition at line 9037 of file [client-command-macro.doc](#).

**6.5.2.420 #define emberAfFillCommandPrepaymentClusterPublishPrepaySnapshot( snapshotId, snapshotTime, totalSnapshotsFound, commandIndex, totalNumberOfCommands, snapshotCause, snapshotPayloadType, snapshotPayload, snapshotPayloadLen )**

This command is generated in response to a GetPrepaySnapshot command. It is used to return a single snapshot to the client.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: PublishPrepaySnapshot

#### Parameters

<i>snapshotId</i>	uint32_t
<i>snapshotTime</i>	uint32_t
<i>totalSnapshots-Found</i>	uint8_t
<i>commandIndex</i>	uint8_t
<i>totalNumber-OfCommands</i>	uint8_t
<i>snapshotCause</i>	uint32_t

<i>snapshot-PayloadType</i>	uint8_t
<i>snapshot-Payload</i>	uint8_t*
<i>snapshot-PayloadLen</i>	uint8_t

Definition at line 9066 of file [client-command-macro.doc](#).

**6.5.2.421 #define emberAfFillCommandPrepaymentClusterChangePaymentModeResponse( friendlyCredit, friendlyCreditCalendarId, emergencyCreditLimit, emergencyCreditThreshold )**

This command is send in response to the ChangePaymentMode Command.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: ChangePaymentModeResponse

#### Parameters

<i>friendlyCredit</i>	uint8_t
<i>friendlyCredit-CalendarId</i>	uint32_t
<i>emergency-CreditLimit</i>	uint32_t
<i>emergency-Credit-Threshold</i>	uint32_t

Definition at line 9100 of file [client-command-macro.doc](#).

**6.5.2.422 #define emberAfFillCommandPrepaymentClusterConsumerTopUpResponse( resultType, topUpValue, sourceOfTopUp, creditRemaining )**

This command is send in response to the ConsumerTopUp Command.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: ConsumerTopUpResponse

#### Parameters

<i>resultType</i>	uint8_t
<i>topUpValue</i>	uint32_t
<i>sourceOfTopUp</i>	uint8_t
<i>credit-Remaining</i>	uint32_t

Definition at line 9124 of file [client-command-macro.doc](#).

**6.5.2.423 #define emberAfFillCommandPrepaymentClusterPublishTopUpLog( commandIndex, totalNumberOfCommands, topUpPayload, topUpPayloadLen )**

This command is used to send the Top Up Code Log entries to the client.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: PublishTopUpLog

#### Parameters

<i>commandIndex</i>	uint8_t
<i>totalNumberOfCommands</i>	uint8_t
<i>topUpPayload</i>	uint8_t*
<i>topUpPayloadLen</i>	uint8_t

Definition at line [9148](#) of file [client-command-macro.doc](#).

**6.5.2.424 #define emberAfFillCommandPrepaymentClusterPublishDebtLog( commandIndex, totalNumberOfCommands, debtPayload, debtPayloadLen )**

This command is used to send the contents of the Repayment Log.

Cluster: Prepayment, The Prepayment Cluster provides the facility to pass messages relating to prepayment between devices on the HAN. Command: PublishDebtLog

#### Parameters

<i>commandIndex</i>	uint8_t
<i>totalNumberOfCommands</i>	uint8_t
<i>debtPayload</i>	uint8_t*
<i>debtPayloadLen</i>	uint8_t

Definition at line [9172](#) of file [client-command-macro.doc](#).

**6.5.2.425 #define emberAfFillCommandEnergyManagementClusterReportEventStatus( issuerEventId, eventStatus, eventStatusTime, criticalityLevelApplied, coolingTemperatureSetPointApplied, heatingTemperatureSetPointApplied, averageLoadAdjustmentPercentageApplied, dutyCycleApplied, eventControl )**

This command is reused from the DRLC cluster. This command is generated in response to the Manage Event command.

Cluster: Energy Management, This cluster provides attributes and commands to assist applications in creating resource monitoring protocols. Command: ReportEventStatus

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>eventStatus</i>	uint8_t
<i>eventStatusTime</i>	uint32_t

<i>criticality-LevelApplied</i>	uint8_t
<i>cooling-Temperature-SetPoint-Applied</i>	uint16_t
<i>heating-Temperature-SetPoint-Applied</i>	uint16_t
<i>averageLoad-Adjustment-Percentage-Applied</i>	int8_t
<i>dutyCycle-Applied</i>	uint8_t
<i>eventControl</i>	uint8_t

Definition at line 9206 of file [client-command-macro.doc](#).

**6.5.2.426 #define emberAfFillCommandEnergyManagementClusterManageEvent( *issuerEventId*, *deviceClass*, *utilityEnrollmentGroup*, *actionRequired* )**

The Manage Event command allows a remote device (such as an IHD or web portal) to change the behavior of a DRLC cluster client when responding to a DRLC Load Control Event.

Cluster: Energy Management, This cluster provides attributes and commands to assist applications in creating resource monitoring protocols. Command: ManageEvent

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>deviceClass</i>	uint16_t
<i>utility-Enrollment-Group</i>	uint8_t
<i>actionRequired</i>	uint8_t

Definition at line 9240 of file [client-command-macro.doc](#).

**6.5.2.427 #define emberAfFillCommandCalendarClusterPublishCalendar( *providerId*, *issuerEventId*, *issuerCalendarId*, *startTime*, *calendarType*, *calendarTimeReference*, *calendarName*, *numberOfSeasons*, *numberOfWeekProfiles*, *numberOfDayProfiles* )**

The PublishCalendar command is published in response to a GetCalendar command or if new calendar information is available.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: PublishCalendar

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>issuerCalendarId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>calendarType</i>	uint8_t
<i>calendarTimeReference</i>	uint8_t
<i>calendarName</i>	uint8_t*
<i>numberOfSeasons</i>	uint8_t
<i>numberOfWeekProfiles</i>	uint8_t
<i>numberOfDayProfiles</i>	uint8_t

Definition at line [9275](#) of file [client-command-macro.doc](#).

```
6.5.2.428 #define emberAfFillCommandCalendarClusterPublishDayProfile( providerId, issuerEventId,  

issuerCalendarId, dayId, totalNumberOfScheduleEntries, commandIndex,  

totalNumberOfCommands, calendarType, dayScheduleEntries, dayScheduleEntriesLen )
```

The PublishDayProfile command is published in response to a GetDayProfile command.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: PublishDayProfile

**Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>issuerCalendarId</i>	uint32_t
<i>dayId</i>	uint8_t
<i>totalNumberOfScheduleEntries</i>	uint8_t
<i>commandIndex</i>	uint8_t
<i>totalNumberOfCommands</i>	uint8_t
<i>calendarType</i>	uint8_t
<i>dayScheduleEntries</i>	uint8_t*
<i>dayScheduleEntriesLen</i>	uint8_t

Definition at line [9317](#) of file [client-command-macro.doc](#).

```
6.5.2.429 #define emberAfFillCommandCalendarClusterPublishWeekProfile( providerId, issuerEventId,  

issuerCalendarId, weekId, dayIdRefMonday, dayIdRefTuesday, dayIdRefWednesday,  

dayIdRefThursday, dayIdRefFriday, dayIdRefSaturday, dayIdRefSunday )
```

The PublishWeekProfile command is published in response to a GetWeekProfile command.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: PublishWeekProfile

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>issuer-</i> <i>CalendarId</i>	uint32_t
<i>weekId</i>	uint8_t
<i>dayIdRef-</i> <i>Monday</i>	uint8_t
<i>dayIdRef-</i> <i>Tuesday</i>	uint8_t
<i>dayIdRef-</i> <i>Wednesday</i>	uint8_t
<i>dayIdRef-</i> <i>Thursday</i>	uint8_t
<i>dayIdRefFriday</i>	uint8_t
<i>dayIdRef-</i> <i>Saturday</i>	uint8_t
<i>dayIdRef-</i> <i>Sunday</i>	uint8_t

Definition at line 9360 of file [client-command-macro.doc](#).

```
6.5.2.430 #define emberAfFillCommandCalendarClusterPublishSeasons( providerId, issuerEventId,  

issuerCalendarId, commandIndex, totalNumberOfCommands, seasonEntries,  

seasonEntriesLen )
```

The PublishSeasons command is published in response to a GetSeason command.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: PublishSeasons

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>issuer-</i> <i>CalendarId</i>	uint32_t
<i>commandIndex</i>	uint8_t
<i>totalNumber-</i> <i>OfCommands</i>	uint8_t
<i>seasonEntries</i>	uint8_t*
<i>seasonEntries-</i> <i>Len</i>	uint8_t

Definition at line 9401 of file [client-command-macro.doc](#).

```
6.5.2.431 #define emberAfFillCommandCalendarClusterPublishSpecialDays( providerId, issuerEventId,
issuerCalendarId, startTime, calendarType, totalNumberOfSpecialDays, commandIndex,
totalNumberOfCommands, specialDayEntries, specialDayEntriesLen )
```

The PublishSpecialDays command is published in response to a GetSpecialDays command or if a calendar update is available.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: PublishSpecialDays

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>issuer-</i> <i>CalendarId</i>	uint32_t
<i>startTime</i>	uint32_t
<i>calendarType</i>	uint8_t
<i>totalNumber-</i> <i>OfSpecialDays</i>	uint8_t
<i>commandIndex</i>	uint8_t
<i>totalNumber-</i> <i>OfCommands</i>	uint8_t
<i>specialDay-</i> <i>Entries</i>	uint8_t*
<i>specialDay-</i> <i>EntriesLen</i>	uint8_t

Definition at line 9437 of file [client-command-macro.doc](#).

```
6.5.2.432 #define emberAfFillCommandCalendarClusterCancelCalendar( providerId, issuerCalendarId,
calendarType )
```

The CancelCalendar command indicates that all data associated with a particular calendar instance should be discarded.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: CancelCalendar

#### Parameters

<i>providerId</i>	uint32_t
<i>issuer-</i> <i>CalendarId</i>	uint32_t
<i>calendarType</i>	uint8_t

Definition at line 9472 of file [client-command-macro.doc](#).

**6.5.2.433 #define emberAfFillCommandCalendarClusterGetCalendar( earliestStartTime, minIssuerEventId, numberOfCalendars, calendarType, providerId )**

This command initiates PublishCalendar command(s) for scheduled Calendar updates.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: GetCalendar

#### Parameters

<i>earliestStartTime</i>	uint32_t
<i>minIssuerEventId</i>	uint32_t
<i>numberOfCalendars</i>	uint8_t
<i>calendarType</i>	uint8_t
<i>providerId</i>	uint32_t

Definition at line 9495 of file [client-command-macro.doc](#).

**6.5.2.434 #define emberAfFillCommandCalendarClusterGetDayProfiles( providerId, issuerCalendarId, startDayId, numberOfDays )**

This command initiates one or more PublishDayProfile commands for the referenced Calendar.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: GetDayProfiles

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerCalendarId</i>	uint32_t
<i>startDayId</i>	uint8_t
<i>numberOfDays</i>	uint8_t

Definition at line 9521 of file [client-command-macro.doc](#).

**6.5.2.435 #define emberAfFillCommandCalendarClusterGetWeekProfiles( providerId, issuerCalendarId, startWeekId, numberOfWeeks )**

This command initiates one or more PublishWeekProfile commands for the referenced Calendar.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: GetWeekProfiles

#### Parameters

<i>providerId</i>	uint32_t
<i>issuerCalendarId</i>	uint32_t
<i>startWeekId</i>	uint8_t
<i>numberOfWeeks</i>	uint8_t

Definition at line 9545 of file [client-command-macro.doc](#).

#### **6.5.2.436 #define emberAfFillCommandCalendarClusterGetSeasons( providerId, issuerCalendarId )**

This command initiates one or more PublishSeasons commands for the referenced Calendar.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: GetSeasons

##### **Parameters**

<i>providerId</i>	uint32_t
<i>issuer- CalendarId</i>	uint32_t

Definition at line 9567 of file [client-command-macro.doc](#).

#### **6.5.2.437 #define emberAfFillCommandCalendarClusterGetSpecialDays( startTime, numberOfEvents, calendarType, providerId, issuerCalendarId )**

This command initiates one or more PublishSpecialDays commands for the scheduled Special Day Table updates.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: GetSpecialDays

##### **Parameters**

<i>startTime</i>	uint32_t
<i>numberOf- Events</i>	uint8_t
<i>calendarType</i>	uint8_t
<i>providerId</i>	uint32_t
<i>issuer- CalendarId</i>	uint32_t

Definition at line 9588 of file [client-command-macro.doc](#).

#### **6.5.2.438 #define emberAfFillCommandCalendarClusterGetCalendarCancellation( )**

This command initiates the return of the last CancelCalendar command held on the associated server.

Cluster: Calendar, This cluster provides attributes and commands to assist applications in developing time and date based protocol. Command: GetCalendarCancellation

Definition at line 9610 of file [client-command-macro.doc](#).

#### **6.5.2.439 #define emberAfFillCommandDeviceManagementClusterGetChangeOfTenancy( )**

This command is used to request the ESI to respond with information regarding any available change of tenancy.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: GetChangeOfTenancy

Definition at line 9628 of file [client-command-macro.doc](#).

#### **6.5.2.440 #define emberAfFillCommandDeviceManagementClusterGetChangeOfSupplier( )**

This command is used to request the ESI to respond with information regarding any available change of supplier.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: GetChangeOfSupplier

Definition at line 9641 of file [client-command-macro.doc](#).

#### **6.5.2.441 #define emberAfFillCommandDeviceManagementClusterRequestNewPassword( passwordType )**

This command is used to request the current password from the server.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: RequestNewPassword

##### **Parameters**

<i>passwordType</i>	uint8_t
---------------------	---------

Definition at line 9655 of file [client-command-macro.doc](#).

#### **6.5.2.442 #define emberAfFillCommandDeviceManagementClusterGetSiteId( )**

This command is used to request the ESI to respond with information regarding any pending change of Site ID.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: GetSiteId

Definition at line 9669 of file [client-command-macro.doc](#).

#### **6.5.2.443 #define emberAfFillCommandDeviceManagementClusterReportEventConfiguration( commandIndex, totalCommands, eventConfigurationPayload, eventConfigurationPayloadLen )**

This command is sent in response to a GetEventConfiguration command.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: ReportEventConfiguration

##### **Parameters**

<i>commandIndex</i>	uint8_t
<i>totalCommands</i>	uint8_t
<i>event-Configuration-Payload</i>	uint8_t*
<i>event-Configuration-PayloadLen</i>	uint8_t

Definition at line [9686](#) of file `client-command-macro.doc`.

#### **6.5.2.444 #define emberAfFillCommandDeviceManagementClusterGetCIN( )**

This command is used to request the ESI to respond with information regarding any pending change of Customer ID Number.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: GetCIN

Definition at line [9706](#) of file `client-command-macro.doc`.

#### **6.5.2.445 #define emberAfFillCommandDeviceManagementClusterPublishChangeOfTenancy( providerId, issuerEventId, tariffType, implementationDateTime, proposedTenancyChangeControl )**

This command is used to change the tenancy of a meter.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: PublishChangeOfTenancy

##### **Parameters**

<i>providerId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>tariffType</i>	uint8_t
<i>implementation- DateTime</i>	uint32_t
<i>proposed- Tenancy- ChangeControl</i>	uint32_t

Definition at line [9724](#) of file `client-command-macro.doc`.

#### **6.5.2.446 #define emberAfFillCommandDeviceManagementClusterPublishChangeOfSupplier( currentProviderId, issuerEventId, tariffType, proposedProviderId, providerChangeImplementationTime, providerChangeControl, proposedProviderName, proposedProviderContactDetails )**

This command is used to change the Supplier (energy supplier) that is supplying the meter (s).

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: PublishChangeOfSupplier

##### **Parameters**

<i>current- ProviderId</i>	uint32_t
<i>issuerEventId</i>	uint32_t
<i>tariffType</i>	uint8_t
<i>proposed- ProviderId</i>	uint32_t

<i>provider-Change-Implementation-Time</i>	uint32_t
<i>provider-ChangeControl</i>	uint32_t
<i>proposed-ProviderName</i>	uint8_t*
<i>proposed-Provider-ContactDetails</i>	uint8_t*

Definition at line 9754 of file [client-command-macro.doc](#).

**6.5.2.447 #define emberAfFillCommandDeviceManagementClusterRequestNewPasswordResponse( issuerEventId, implementationDateTime, durationInMinutes, passwordType, password )**

This command is used to send the current password to the client.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: RequestNewPasswordResponse

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>implementation-DateTime</i>	uint32_t
<i>durationIn-Minutes</i>	uint16_t
<i>passwordType</i>	uint8_t
<i>password</i>	uint8_t*

Definition at line 9787 of file [client-command-macro.doc](#).

**6.5.2.448 #define emberAfFillCommandDeviceManagementClusterUpdateSiteId( issuerEventId, siteIdTime, providerId, siteId )**

This command is used to set the siteID.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: UpdateSiteId

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>siteIdTime</i>	uint32_t
<i>providerId</i>	uint32_t
<i>siteId</i>	uint8_t*

Definition at line 9813 of file [client-command-macro.doc](#).

```
6.5.2.449 #define emberAfFillCommandDeviceManagementClusterSetEventConfiguration( issuerEventId,
startDateTime, eventConfiguration, configurationControl, eventConfigurationPayload,
eventConfigurationPayloadLen )
```

This command provides a method to set the event configuration attributes, held in a client device.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: SetEventConfiguration

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>startDateTime</i>	uint32_t
<i>event-Configuration</i>	uint8_t
<i>configuration-Control</i>	uint8_t
<i>event-Configuration-Payload</i>	uint8_t*
<i>event-Configuration-PayloadLen</i>	uint8_t

Definition at line 9839 of file [client-command-macro.doc](#).

```
6.5.2.450 #define emberAfFillCommandDeviceManagementClusterGetEventConfiguration( eventId )
```

This command allows the server to request details of event configurations.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: GetEventConfiguration

#### Parameters

<i>eventId</i>	uint16_t
----------------	----------

Definition at line 9864 of file [client-command-macro.doc](#).

```
6.5.2.451 #define emberAfFillCommandDeviceManagementClusterUpdateCIN( issuerEventId,
implementationTime, providerId, customerIdNumber )
```

This command is used to set the CustomerIDNumber attribute held in the Metering cluster.

Cluster: Device Management, This cluster provides attributes and commands to support device-cognisant application layer protocols. Command: UpdateCIN

#### Parameters

<i>issuerEventId</i>	uint32_t
<i>implementation-Time</i>	uint32_t
<i>providerId</i>	uint32_t

<i>customerId- Number</i>	uint8_t*
-------------------------------	----------

Definition at line 9882 of file [client-command-macro.doc](#).

**6.5.2.452 #define emberAfFillCommandEventsClusterGetEventLog( eventControlLogId, eventId,  
startTime, endTime, numberOfEvents, eventOffset )**

The GetEventLog command allows a client to request events from a server's event logs. One or more PublishEventLog commands are returned on receipt of this command.

Cluster: Events, This cluster provides an interface on which applications can use event-based protocols.  
Command: GetEventLog

#### Parameters

<i>eventControl- LogId</i>	uint8_t
<i>eventId</i>	uint16_t
<i>startTime</i>	uint32_t
<i>endTime</i>	uint32_t
<i>numberOf- Events</i>	uint8_t
<i>eventOffset</i>	uint16_t

Definition at line 9913 of file [client-command-macro.doc](#).

**6.5.2.453 #define emberAfFillCommandEventsClusterClearEventLogRequest( logId )**

The ClearEventLogRequest command requests that an Events server device clear the specified event log(s).

Cluster: Events, This cluster provides an interface on which applications can use event-based protocols.  
Command: ClearEventLogRequest

#### Parameters

<i>logId</i>	uint8_t
--------------	---------

Definition at line 9938 of file [client-command-macro.doc](#).

**6.5.2.454 #define emberAfFillCommandEventsClusterPublishEvent( logId, eventId, eventTime,  
eventControl, eventData )**

The PublishEvent command is generated upon an event trigger from within the reporting device and, if supported, the associated Event Configuration attribute in the Device Management cluster.

Cluster: Events, This cluster provides an interface on which applications can use event-based protocols.  
Command: PublishEvent

#### Parameters

<i>logId</i>	uint8_t
--------------	---------

<i>eventId</i>	uint16_t
<i>eventTime</i>	uint32_t
<i>eventControl</i>	uint8_t
<i>EventData</i>	uint8_t*

Definition at line 9957 of file [client-command-macro.doc](#).

**6.5.2.455 #define emberAfFillCommandEventsClusterPublishEventLog( *totalNumberOfEvents*, *commandIndex*, *totalCommands*, *logPayloadControl*, *logPayload*, *logPayloadLen* )**

This command is generated on receipt of a GetEventLog command. The command returns the most recent event first and up to the number of events requested.

Cluster: Events, This cluster provides an interface on which applications can use event-based protocols.  
Command: PublishEventLog

#### Parameters

<i>totalNumberOfEvents</i>	uint16_t
<i>commandIndex</i>	uint8_t
<i>totalCommands</i>	uint8_t
<i>logPayloadControl</i>	uint8_t
<i>logPayload</i>	uint8_t*
<i>logPayloadLen</i>	uint8_t

Definition at line 9985 of file [client-command-macro.doc](#).

**6.5.2.456 #define emberAfFillCommandEventsClusterClearEventLogResponse( *clearedEventsLogs* )**

This command is generated on receipt of a Clear Event Log Request command.

Cluster: Events, This cluster provides an interface on which applications can use event-based protocols.  
Command: ClearEventLogResponse

#### Parameters

<i>clearedEventsLogs</i>	uint8_t
--------------------------	---------

Definition at line 10010 of file [client-command-macro.doc](#).

**6.5.2.457 #define emberAfFillCommandMdusPairingClusterPairingResponse( *pairingInformationVersion*, *totalNumberOfDevices*, *commandIndex*, *totalNumberOfCommands*, *eui64s*, *eui64sLen* )**

The Pairing Response command provides a device joining a MDU network with a list of the devices that will constitute the 'virtual HAN' for the household in which the joining device is to operate.

Cluster: MDU Pairing, This cluster seeks to assist in the commissioning of networks that include multi-dwelling units (MDUs). Command: PairingResponse

**Parameters**

<i>pairing-Information-Version</i>	uint32_t
<i>totalNumberOfDevices</i>	uint8_t
<i>commandIndex</i>	uint8_t
<i>totalNumberOfCommands</i>	uint8_t
<i>eui64s</i>	uint8_t*
<i>eui64sLen</i>	uint8_t

Definition at line 10035 of file [client-command-macro.doc](#).

**6.5.2.458 #define emberAfFillCommandMduPairingClusterPairingRequest( localPairingInformationVersion, eui64OfRequestingDevice )**

The Pairing Request command allows a device joining a MDU network to determine the devices that will constitute the 'virtual HAN' for the household in which it is to operate.

Cluster: MDU Pairing, This cluster seeks to assist in the commissioning of networks that include multi-dwelling units (MDUs). Command: PairingRequest

**Parameters**

<i>localPairing-Information-Version</i>	uint32_t
<i>eui64Of-Requesting-Device</i>	uint8_t*

Definition at line 10061 of file [client-command-macro.doc](#).

**6.5.2.459 #define emberAfFillCommandKeyEstablishmentClusterInitiateKeyEstablishmentRequest( keyEstablishmentSuite, ephemeralDataGenerateTime, confirmKeyGenerateTime, identity )**

Command description for InitiateKeyEstablishmentRequest.

Cluster: Key Establishment, Key Establishment cluster Command: InitiateKeyEstablishmentRequest

**Parameters**

<i>key-Establishment-Suite</i>	uint16_t
<i>ephemeral-DataGenerate-Time</i>	uint8_t
<i>confirmKey-GenerateTime</i>	uint8_t
<i>identity</i>	uint8_t*

Definition at line 10086 of file [client-command-macro.doc](#).

```
6.5.2.460 #define emberAfFillCommandKeyEstablishmentClusterEphemeralDataRequest( ephemeralData
) 
```

Command description for EphemeralDataRequest.

Cluster: Key Establishment, Key Establishment cluster Command: EphemeralDataRequest

#### Parameters

<i>ephemeralData</i>	uint8_t*
----------------------	----------

Definition at line 10108 of file [client-command-macro.doc](#).

```
6.5.2.461 #define emberAfFillCommandKeyEstablishmentClusterConfirmKeyDataRequest(
secureMessageAuthenticationCode ) 
```

Command description for ConfirmKeyDataRequest.

Cluster: Key Establishment, Key Establishment cluster Command: ConfirmKeyDataRequest

#### Parameters

<i>secure-</i> <i>Message-</i> <i>Authenticatio-</i> <i>Code</i>	uint8_t*
---	----------

Definition at line 10124 of file [client-command-macro.doc](#).

```
6.5.2.462 #define emberAfFillCommandKeyEstablishmentClusterServerToClientTerminate-
KeyEstablishment( statusCode, waitTime, keyEstablishmentSuite
) 
```

Command description for TerminateKeyEstablishment.

Cluster: Key Establishment, Key Establishment cluster Command: TerminateKeyEstablishment

#### Parameters

<i>statusCode</i>	uint8_t
<i>waitTime</i>	uint8_t
<i>key-</i> <i>Establishment-</i> <i>Suite</i>	uint16_t

Definition at line 10141 of file [client-command-macro.doc](#).

```
6.5.2.463 #define emberAfFillCommandKeyEstablishmentClusterClientToServerTerminate-
KeyEstablishment( statusCode, waitTime, keyEstablishmentSuite
)
```

Command description for TerminateKeyEstablishment.

Cluster: Key Establishment, Key Establishment cluster Command: TerminateKeyEstablishment

#### Parameters

<i>statusCode</i>	uint8_t
<i>waitTime</i>	uint8_t
<i>key-Establishment-Suite</i>	uint16_t

Definition at line 10162 of file [client-command-macro.doc](#).

```
6.5.2.464 #define emberAfFillCommandKeyEstablishmentClusterInitiateKeyEstablishmentResponse(
requestedKeyEstablishmentSuite, ephemeralDataGenerateTime, confirmKeyGenerateTime,
identity )
```

Command description for InitiateKeyEstablishmentResponse.

Cluster: Key Establishment, Key Establishment cluster Command: InitiateKeyEstablishmentResponse

#### Parameters

<i>requestedKey-Establishment-Suite</i>	uint16_t
<i>ephemeral-DataGenerate-Time</i>	uint8_t
<i>confirmKey-GenerateTime</i>	uint8_t
<i>identity</i>	uint8_t*

Definition at line 10184 of file [client-command-macro.doc](#).

```
6.5.2.465 #define emberAfFillCommandKeyEstablishmentClusterEphemeralDataResponse(
ephemeralData )
```

Command description for EphemeralDataResponse.

Cluster: Key Establishment, Key Establishment cluster Command: EphemeralDataResponse

#### Parameters

<i>ephemeralData</i>	uint8_t*
----------------------	----------

Definition at line 10206 of file [client-command-macro.doc](#).

```
6.5.2.466 #define emberAfFillCommandKeyEstablishmentClusterConfirmKeyDataResponse(  
    secureMessageAuthenticationCode )
```

Command description for ConfirmKeyDataResponse.

Cluster: Key Establishment, Key Establishment cluster Command: ConfirmKeyDataResponse

#### Parameters

<i>secure- Message- Authentication- Code</i>	uint8_t*
--	----------

Definition at line [10222](#) of file [client-command-macro.doc](#).

```
6.5.2.467 #define emberAfFillCommandInformationClusterRequestInformation( inquiryId, dataTypeId,  
    requestInformationPayload, requestInformationPayloadLen )
```

Command description for RequestInformation.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: RequestInformation

#### Parameters

<i>inquiryId</i>	uint8_t
<i>dataTypeId</i>	uint8_t
<i>request- Information- Payload</i>	uint8_t*
<i>request- Information- PayloadLen</i>	uint8_t

Definition at line [10245](#) of file [client-command-macro.doc](#).

```
6.5.2.468 #define emberAfFillCommandInformationClusterPushInformationResponse( notificationList,  
    notificationListLen )
```

Command description for PushInformationResponse.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: PushInformationResponse

#### Parameters

<i>notificationList</i>	uint8_t*
<i>notification- ListLen</i>	uint8_t

Definition at line [10267](#) of file [client-command-macro.doc](#).

**6.5.2.469 #define emberAfFillCommandInformationClusterSendPreference( *preferenceType*, *preferencePayload*, *preferencePayloadLen* )**

Command description for SendPreference.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: SendPreference

#### Parameters

<i>preferenceType</i>	uint16_t
<i>preference- Payload</i>	uint8_t*
<i>preference- PayloadLen</i>	uint8_t

Definition at line 10286 of file [client-command-macro.doc](#).

**6.5.2.470 #define emberAfFillCommandInformationClusterRequestPreferenceResponse( *statusFeedback*, *preferenceType*, *preferencePayload*, *preferencePayloadLen* )**

Command description for RequestPreferenceResponse.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: RequestPreferenceResponse

#### Parameters

<i>statusFeedback</i>	uint8_t
<i>preferenceType</i>	uint16_t
<i>preference- Payload</i>	uint8_t*
<i>preference- PayloadLen</i>	uint8_t

Definition at line 10308 of file [client-command-macro.doc](#).

**6.5.2.471 #define emberAfFillCommandInformationClusterUpdate( *accessControl*, *option*, *contents*, *contentsLen* )**

Command description for Update.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: Update

#### Parameters

<i>accessControl</i>	uint8_t
<i>option</i>	uint8_t
<i>contents</i>	uint8_t*
<i>contentsLen</i>	uint8_t

Definition at line 10332 of file [client-command-macro.doc](#).

**6.5.2.472 #define emberAfFillCommandInformationClusterDelete( *deletionOptions*, *contentIds*, *contentIdsLen* )**

Command description for Delete.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: Delete

**Parameters**

<i>deletion- Options</i>	uint8_t
<i>contentIds</i>	uint8_t*
<i>contentIdsLen</i>	uint8_t

Definition at line 10355 of file [client-command-macro.doc](#).

**6.5.2.473 #define emberAfFillCommandInformationClusterConfigureNodeDescription( *description* )**

Command description for ConfigureNodeDescription.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: ConfigureNodeDescription

**Parameters**

<i>description</i>	uint8_t*
--------------------	----------

Definition at line 10374 of file [client-command-macro.doc](#).

**6.5.2.474 #define emberAfFillCommandInformationClusterConfigureDeliveryEnable( *enable* )**

Command description for ConfigureDeliveryEnable.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: ConfigureDeliveryEnable

**Parameters**

<i>enable</i>	uint8_t
---------------	---------

Definition at line 10389 of file [client-command-macro.doc](#).

**6.5.2.475 #define emberAfFillCommandInformationClusterConfigurePushInformationTimer( *timer* )**

Command description for ConfigurePushInformationTimer.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: ConfigurePushInformationTimer

**Parameters**

<i>timer</i>	uint32_t
--------------	----------

Definition at line 10404 of file [client-command-macro.doc](#).

#### **6.5.2.476 #define emberAfFillCommandInformationClusterConfigureSetRootId( rootId )**

Command description for ConfigureSetRootId.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: ConfigureSetRootId

##### **Parameters**

<i>rootId</i>	uint16_t
---------------	----------

Definition at line 10419 of file [client-command-macro.doc](#).

#### **6.5.2.477 #define emberAfFillCommandInformationClusterRequestInformationResponse( number, buffer, bufferLen )**

Command description for RequestInformationResponse.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: RequestInformationResponse

##### **Parameters**

<i>number</i>	uint8_t
<i>buffer</i>	uint8_t*
<i>bufferLen</i>	uint8_t

Definition at line 10436 of file [client-command-macro.doc](#).

#### **6.5.2.478 #define emberAfFillCommandInformationClusterPushInformation( contents, contentsLen )**

Command description for PushInformation.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: PushInformation

##### **Parameters**

<i>contents</i>	uint8_t*
<i>contentsLen</i>	uint8_t

Definition at line 10456 of file [client-command-macro.doc](#).

#### **6.5.2.479 #define emberAfFillCommandInformationClusterSendPreferenceResponse( statusFeedbackList, statusFeedbackListLen )**

Command description for SendPreferenceResponse.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: SendPreferenceResponse

**Parameters**

<i>status-FeedbackList</i>	uint8_t*
<i>status-FeedbackList-Len</i>	uint8_t

Definition at line 10474 of file [client-command-macro.doc](#).

**6.5.2.480 #define emberAfFillCommandInformationClusterServerRequestPreference( )**

Command description for ServerRequestPreference.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: ServerRequestPreference

Definition at line 10490 of file [client-command-macro.doc](#).

**6.5.2.481 #define emberAfFillCommandInformationClusterRequestPreferenceConfirmation( statusFeedbackList, statusFeedbackListLen )**

Command description for RequestPreferenceConfirmation.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: RequestPreferenceConfirmation

**Parameters**

<i>status-FeedbackList</i>	uint8_t*
<i>status-FeedbackList-Len</i>	uint8_t

Definition at line 10505 of file [client-command-macro.doc](#).

**6.5.2.482 #define emberAfFillCommandInformationClusterUpdateResponse( notificationList, notificationListLen )**

Command description for UpdateResponse.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: UpdateResponse

**Parameters**

<i>notificationList</i>	uint8_t*
<i>notification-ListLen</i>	uint8_t

Definition at line 10523 of file [client-command-macro.doc](#).

**6.5.2.483 #define emberAfFillCommandInformationClusterDeleteResponse( notificationList, notificationListLen )**

Command description for DeleteResponse.

Cluster: Information, Provides commands and attributes for information delivery service on ZigBee networks. Command: DeleteResponse

#### Parameters

<i>notificationList</i>	uint8_t*
<i>notificationListLen</i>	uint8_t

Definition at line 10541 of file [client-command-macro.doc](#).

**6.5.2.484 #define emberAfFillCommandDataSharingClusterReadFileRequest( fileIndex, fileStartPositionAndRequestedOctetCount, fileStartPositionAndRequestedOctetCountLen )**

Command description for ReadFileRequest.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: ReadFileRequest

#### Parameters

<i>fileIndex</i>	uint16_t
<i>fileStartPositionAndRequestedOctetCount</i>	uint8_t*
<i>fileStartPositionAndRequestedOctetCountLen</i>	uint8_t

Definition at line 10565 of file [client-command-macro.doc](#).

**6.5.2.485 #define emberAfFillCommandDataSharingClusterReadRecordRequest( fileIndex, fileStartRecordAndRequestedRecordCount, fileStartRecordAndRequestedRecordCountLen )**

Command description for ReadRecordRequest.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: ReadRecordRequest

#### Parameters

<i>fileIndex</i>	uint16_t
<i>fileStartRecordAndRequestedRecordCount</i>	uint8_t*

<i>fileStartRecord-AndRequested-RecordCount-Len</i>	uint8_t
---	---------

Definition at line 10586 of file [client-command-macro.doc](#).

**6.5.2.486 #define emberAfFillCommandDataSharingClusterWriteFileResponse( *status*, *fileIndex*, *fileIndexLen* )**

Command description for WriteFileResponse.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: WriteFileResponse

#### Parameters

<i>status</i>	uint8_t
<i>fileIndex</i>	uint8_t*
<i>fileIndexLen</i>	uint8_t

Definition at line 10607 of file [client-command-macro.doc](#).

**6.5.2.487 #define emberAfFillCommandDataSharingClusterWriteFileRequest( *writeOptions*, *fileSize*, *fileSizeLen* )**

Command description for WriteFileRequest.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: WriteFileRequest

#### Parameters

<i>writeOptions</i>	uint8_t
<i>fileSize</i>	uint8_t*
<i>fileSizeLen</i>	uint8_t

Definition at line 10628 of file [client-command-macro.doc](#).

**6.5.2.488 #define emberAfFillCommandDataSharingClusterModifyFileRequest( *fileIndex*, *fileStartPosition*, *octetCount* )**

Command description for ModifyFileRequest.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: ModifyFileRequest

#### Parameters

<i>fileIndex</i>	uint16_t
<i>fileStartPosition</i>	uint32_t
<i>octetCount</i>	uint32_t

Definition at line 10649 of file [client-command-macro.doc](#).

**6.5.2.489 #define emberAfFillCommandDataSharingClusterModifyRecordRequest( *fileIndex*,  
*fileStartRecord*, *recordCount* )**

Command description for ModifyRecordRequest.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: ModifyRecordRequest

#### Parameters

<i>fileIndex</i>	uint16_t
<i>fileStartRecord</i>	uint16_t
<i>recordCount</i>	uint16_t

Definition at line 10670 of file [client-command-macro.doc](#).

**6.5.2.490 #define emberAfFillCommandDataSharingClusterFileTransmission( *transmitOptions*, *buffer*,  
*bufferLen* )**

Command description for FileTransmission.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: FileTransmission

#### Parameters

<i>transmit- Options</i>	uint8_t
<i>buffer</i>	uint8_t*
<i>bufferLen</i>	uint8_t

Definition at line 10691 of file [client-command-macro.doc](#).

**6.5.2.491 #define emberAfFillCommandDataSharingClusterRecordTransmission( *transmitOptions*, *buffer*,  
*bufferLen* )**

Command description for RecordTransmission.

Cluster: Data Sharing, Commands and attributes for small data sharing among ZigBee devices. Command: RecordTransmission

#### Parameters

<i>transmit- Options</i>	uint8_t
<i>buffer</i>	uint8_t*
<i>bufferLen</i>	uint8_t

Definition at line 10712 of file [client-command-macro.doc](#).

**6.5.2.492 #define emberAfFillCommandGamingClusterSearchGame( *specificGame*, *gameId* )**

Command description for SearchGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: SearchGame

**Parameters**

<i>specificGame</i>	uint8_t
<i>gameId</i>	uint16_t

Definition at line 10737 of file [client-command-macro.doc](#).

**6.5.2.493 #define emberAfFillCommandGamingClusterJoinGame( *gameId*, *joinAsMaster*, *nameOfGame* )**

Command description for JoinGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: JoinGame

**Parameters**

<i>gameId</i>	uint16_t
<i>joinAsMaster</i>	uint8_t
<i>nameOfGame</i>	uint8_t*

Definition at line 10756 of file [client-command-macro.doc](#).

**6.5.2.494 #define emberAfFillCommandGamingClusterStartGame( )**

Command description for StartGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: StartGame

Definition at line 10774 of file [client-command-macro.doc](#).

**6.5.2.495 #define emberAfFillCommandGamingClusterPauseGame( )**

Command description for PauseGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: PauseGame

Definition at line 10787 of file [client-command-macro.doc](#).

**6.5.2.496 #define emberAfFillCommandGamingClusterResumeGame( )**

Command description for ResumeGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: ResumeGame

Definition at line 10800 of file [client-command-macro.doc](#).

**6.5.2.497 #define emberAfFillCommandGamingClusterQuitGame( )**

Command description for QuitGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: QuitGame

Definition at line 10813 of file [client-command-macro.doc](#).

**6.5.2.498 #define emberAfFillCommandGamingClusterEndGame( )**

Command description for EndGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: EndGame

Definition at line 10826 of file [client-command-macro.doc](#).

**6.5.2.499 #define emberAfFillCommandGamingClusterStartOver( )**

Command description for StartOver.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: StartOver

Definition at line 10839 of file [client-command-macro.doc](#).

**6.5.2.500 #define emberAfFillCommandGamingClusterActionControl( *actions* )**

Command description for ActionControl.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: ActionControl

**Parameters**

<i>actions</i>	uint32_t
----------------	----------

Definition at line 10853 of file [client-command-macro.doc](#).

**6.5.2.501 #define emberAfFillCommandGamingClusterDownloadGame( )**

Command description for DownloadGame.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: DownloadGame

Definition at line 10867 of file [client-command-macro.doc](#).

**6.5.2.502 #define emberAfFillCommandGamingClusterGameAnnouncement( *gameId*, *gameMaster*, *listOfGame* )**

Command description for GameAnnouncement.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: GameAnnouncement

**Parameters**

<i>gameId</i>	uint16_t
<i>gameMaster</i>	uint8_t
<i>listOfGame</i>	uint8_t*

Definition at line 10883 of file [client-command-macro.doc](#).

**6.5.2.503 #define emberAfFillCommandGamingClusterGeneralResponse( *commandId*, *status*, *message* )**

Command description for GeneralResponse.

Cluster: Gaming, Attributes and commands to support gaming functions of ZigBee-enabled mobile terminals. Command: GeneralResponse

**Parameters**

<i>commandId</i>	uint8_t
<i>status</i>	uint8_t
<i>message</i>	uint8_t*

Definition at line 10904 of file [client-command-macro.doc](#).

**6.5.2.504 #define emberAfFillCommandDataRateControlClusterPathCreation( *originatorAddress*, *destinationAddress*, *dataRate* )**

Command description for PathCreation.

Cluster: Data Rate Control, This cluster seeks to give applications a means to managing data rate. It provides commands and attributes which form this interface. Command: PathCreation

**Parameters**

<i>originator-Address</i>	uint16_t
<i>destination-Address</i>	uint16_t
<i>dataRate</i>	uint8_t

Definition at line 10930 of file [client-command-macro.doc](#).

**6.5.2.505 #define emberAfFillCommandDataRateControlClusterDataRateNotification( *originatorAddress*, *destinationAddress*, *dataRate* )**

Command description for DataRateNotification.

Cluster: Data Rate Control, This cluster seeks to give applications a means to managing data rate. It provides commands and attributes which form this interface. Command: DataRateNotification

**Parameters**

<i>originator-Address</i>	uint16_t
---------------------------	----------

<i>destination-Address</i>	uint16_t
<i>dataRate</i>	uint8_t

Definition at line 10951 of file [client-command-macro.doc](#).

**6.5.2.506 #define emberAfFillCommandDataRateControlClusterPathDeletion( *originatorAddress*, *destinationAddress* )**

Command description for PathDeletion.

Cluster: Data Rate Control, This cluster seeks to give applications a means to managing data rate. It provides commands and attributes which form this interface. Command: PathDeletion

#### Parameters

<i>originator-Address</i>	uint16_t
<i>destination-Address</i>	uint16_t

Definition at line 10971 of file [client-command-macro.doc](#).

**6.5.2.507 #define emberAfFillCommandDataRateControlClusterDataRateControl( *originatorAddress*, *destinationAddress*, *dataRate* )**

Command description for DataRateControl.

Cluster: Data Rate Control, This cluster seeks to give applications a means to managing data rate. It provides commands and attributes which form this interface. Command: DataRateControl

#### Parameters

<i>originator-Address</i>	uint16_t
<i>destination-Address</i>	uint16_t
<i>dataRate</i>	uint8_t

Definition at line 10990 of file [client-command-macro.doc](#).

**6.5.2.508 #define emberAfFillCommandVoiceOverZigbeeClusterEstablishmentRequest( *flag*, *codecType*, *sampFreq*, *codecRate*, *serviceType*, *buffer*, *bufferLen* )**

Command description for EstablishmentRequest.

Cluster: Voice over ZigBee, This cluster seeks to provide an interface to a voice over ZigBee protocol. Command: EstablishmentRequest

#### Parameters

<i>flag</i>	uint8_t
<i>codecType</i>	uint8_t
<i>sampFreq</i>	uint8_t
<i>codecRate</i>	uint8_t
<i>serviceType</i>	uint8_t
<i>buffer</i>	uint8_t*
<i>bufferLen</i>	uint8_t

Definition at line 11020 of file [client-command-macro.doc](#).

**6.5.2.509 #define emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmission( voiceData, voiceDataLen )**

Command description for VoiceTransmission.

Cluster: Voice over ZigBee, This cluster seeks to provide an interface to a voice over ZigBee protocol.  
Command: VoiceTransmission

#### Parameters

<i>voiceData</i>	uint8_t*
<i>voiceDataLen</i>	uint8_t

Definition at line 11048 of file [client-command-macro.doc](#).

**6.5.2.510 #define emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmissionCompletion( )**

Command description for VoiceTransmissionCompletion.

Cluster: Voice over ZigBee, This cluster seeks to provide an interface to a voice over ZigBee protocol.  
Command: VoiceTransmissionCompletion

Definition at line 11064 of file [client-command-macro.doc](#).

**6.5.2.511 #define emberAfFillCommandVoiceOverZigbeeClusterControlResponse( ackNack )**

Command description for ControlResponse.

Cluster: Voice over ZigBee, This cluster seeks to provide an interface to a voice over ZigBee protocol.  
Command: ControlResponse

#### Parameters

<i>ackNack</i>	uint8_t
----------------	---------

Definition at line 11078 of file [client-command-macro.doc](#).

**6.5.2.512 #define emberAfFillCommandVoiceOverZigbeeClusterEstablishmentResponse( ackNack, codecType )**

Command description for EstablishmentResponse.

Cluster: Voice over ZigBee, This cluster seeks to provide an interface to a voice over ZigBee protocol.  
Command: EstablishmentResponse

**Parameters**

<i>ackNack</i>	uint8_t
<i>codecType</i>	uint8_t

Definition at line 11094 of file [client-command-macro.doc](#).

**6.5.2.513 #define emberAfFillCommandVoiceOverZigbeeClusterVoiceTransmissionResponse( sequenceNumber, errorFlag )**

Command description for VoiceTransmissionResponse.

Cluster: Voice over ZigBee, This cluster seeks to provide an interface to a voice over ZigBee protocol.  
Command: VoiceTransmissionResponse

**Parameters**

<i>sequence-Number</i>	uint8_t
<i>errorFlag</i>	uint8_t

Definition at line 11112 of file [client-command-macro.doc](#).

**6.5.2.514 #define emberAfFillCommandVoiceOverZigbeeClusterControl( controlType )**

Command description for Control.

Cluster: Voice over ZigBee, This cluster seeks to provide an interface to a voice over ZigBee protocol.  
Command: Control

**Parameters**

<i>controlType</i>	uint8_t
--------------------	---------

Definition at line 11129 of file [client-command-macro.doc](#).

**6.5.2.515 #define emberAfFillCommandChattingClusterJoinChatRequest( uid, nickname, cid )**

Command description for JoinChatRequest.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: JoinChatRequest

**Parameters**

<i>uid</i>	uint16_t
<i>nickname</i>	uint8_t*
<i>cid</i>	uint16_t

Definition at line 11151 of file [client-command-macro.doc](#).

**6.5.2.516 #define emberAfFillCommandChattingClusterLeaveChatRequest( *cid*, *uid* )**

Command description for LeaveChatRequest.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: LeaveChatRequest

**Parameters**

<i>cid</i>	uint16_t
<i>uid</i>	uint16_t

Definition at line 11171 of file [client-command-macro.doc](#).

**6.5.2.517 #define emberAfFillCommandChattingClusterSearchChatRequest( )**

Command description for SearchChatRequest.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: SearchChatRequest

Definition at line 11187 of file [client-command-macro.doc](#).

**6.5.2.518 #define emberAfFillCommandChattingClusterSwitchChairmanResponse( *cid*, *uid* )**

Command description for SwitchChairmanResponse.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: SwitchChairmanResponse

**Parameters**

<i>cid</i>	uint16_t
<i>uid</i>	uint16_t

Definition at line 11202 of file [client-command-macro.doc](#).

**6.5.2.519 #define emberAfFillCommandChattingClusterStartChatRequest( *name*, *uid*, *nickname* )**

Command description for StartChatRequest.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: StartChatRequest

**Parameters**

<i>name</i>	uint8_t*
<i>uid</i>	uint16_t
<i>nickname</i>	uint8_t*

Definition at line 11221 of file [client-command-macro.doc](#).

**6.5.2.520 #define emberAfFillCommandChattingClusterChatMessage( destinationUid, sourceUid, cid, nickname, message )**

Command description for ChatMessage.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: ChatMessage

#### Parameters

<i>destinationUid</i>	uint16_t
<i>sourceUid</i>	uint16_t
<i>cid</i>	uint16_t
<i>nickname</i>	uint8_t*
<i>message</i>	uint8_t*

Definition at line 11244 of file [client-command-macro.doc](#).

**6.5.2.521 #define emberAfFillCommandChattingClusterGetNodeInformationRequest( cid, uid )**

Command description for GetNodeInformationRequest.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: GetNodeInformationRequest

#### Parameters

<i>cid</i>	uint16_t
<i>uid</i>	uint16_t

Definition at line 11268 of file [client-command-macro.doc](#).

**6.5.2.522 #define emberAfFillCommandChattingClusterStartChatResponse( status, cid )**

Command description for StartChatResponse.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: StartChatResponse

#### Parameters

<i>status</i>	uint8_t
<i>cid</i>	uint16_t

Definition at line 11286 of file [client-command-macro.doc](#).

**6.5.2.523 #define emberAfFillCommandChattingClusterJoinChatResponse( status, cid, chatParticipantList, chatParticipantListLen )**

Command description for JoinChatResponse.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: JoinChatResponse

**Parameters**

<i>status</i>	uint8_t
<i>cid</i>	uint16_t
<i>chat- ParticipantList</i>	uint8_t*
<i>chat- ParticipantList- Len</i>	uint8_t

Definition at line 11306 of file [client-command-macro.doc](#).

**6.5.2.524 #define emberAfFillCommandChattingClusterUserLeft( *cid, uid, nickname* )**

Command description for UserLeft.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: UserLeft

**Parameters**

<i>cid</i>	uint16_t
<i>uid</i>	uint16_t
<i>nickname</i>	uint8_t*

Definition at line 11329 of file [client-command-macro.doc](#).

**6.5.2.525 #define emberAfFillCommandChattingClusterUserJoined( *cid, uid, nickname* )**

Command description for UserJoined.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: UserJoined

**Parameters**

<i>cid</i>	uint16_t
<i>uid</i>	uint16_t
<i>nickname</i>	uint8_t*

Definition at line 11350 of file [client-command-macro.doc](#).

**6.5.2.526 #define emberAfFillCommandChattingClusterSearchChatResponse( *options, chatRoomList,  
chatRoomListLen* )**

Command description for SearchChatResponse.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: SearchChatResponse

**Parameters**

<i>options</i>	uint8_t
<i>chatRoomList</i>	uint8_t*

<i>chatRoomList-</i>	uint8_t
<i>Len</i>	

Definition at line 11371 of file [client-command-macro.doc](#).

#### 6.5.2.527 #define emberAfFillCommandChattingClusterSwitchChairmanRequest( *cid* )

Command description for SwitchChairmanRequest.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: SwitchChairmanRequest

##### Parameters

<i>cid</i>	uint16_t
------------	----------

Definition at line 11390 of file [client-command-macro.doc](#).

#### 6.5.2.528 #define emberAfFillCommandChattingClusterSwitchChairmanConfirm( *cid*, *nodeInformationList*, *nodeInformationListLen* )

Command description for SwitchChairmanConfirm.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: SwitchChairmanConfirm

##### Parameters

<i>cid</i>	uint16_t
<i>node-InformationList</i>	uint8_t*
<i>node-Information-ListLen</i>	uint8_t

Definition at line 11407 of file [client-command-macro.doc](#).

#### 6.5.2.529 #define emberAfFillCommandChattingClusterSwitchChairmanNotification( *cid*, *uid*, *address*, *endpoint* )

Command description for SwitchChairmanNotification.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: SwitchChairmanNotification

##### Parameters

<i>cid</i>	uint16_t
<i>uid</i>	uint16_t
<i>address</i>	uint16_t
<i>endpoint</i>	uint8_t

Definition at line 11429 of file [client-command-macro.doc](#).

**6.5.2.530 #define emberAfFillCommandChattingClusterGetNodeInformationResponse( status, cid, uid, addressEndpointAndNickname, addressEndpointAndNicknameLen )**

Command description for GetNodeInformationResponse.

Cluster: Chatting, Commands and attributes for sending chat messages among ZigBee devices. Command: GetNodeInformationResponse

#### Parameters

<i>status</i>	uint8_t
<i>cid</i>	uint16_t
<i>uid</i>	uint16_t
<i>address-EndpointAnd-Nickname</i>	uint8_t*
<i>address-EndpointAnd-NicknameLen</i>	uint8_t

Definition at line 11454 of file [client-command-macro.doc](#).

**6.5.2.531 #define emberAfFillCommandPaymentClusterBuyRequest( userId, userType, serviceId, goodId )**

Command description for BuyRequest.

Cluster: Payment, Commands and attributes for payment scenarios including ZigBee devices. Command: BuyRequest

#### Parameters

<i>userId</i>	uint8_t*
<i>userType</i>	uint16_t
<i>serviceId</i>	uint16_t
<i>goodId</i>	uint8_t*

Definition at line 11485 of file [client-command-macro.doc](#).

**6.5.2.532 #define emberAfFillCommandPaymentClusterAcceptPayment( userId, userType, serviceId, goodId )**

Command description for AcceptPayment.

Cluster: Payment, Commands and attributes for payment scenarios including ZigBee devices. Command: AcceptPayment

#### Parameters

<i>userId</i>	uint8_t*
<i>userType</i>	uint16_t
<i>serviceId</i>	uint16_t

<i>goodId</i>	uint8_t*
---------------	----------

Definition at line 11509 of file [client-command-macro.doc](#).

**6.5.2.533 #define emberAfFillCommandPaymentClusterPaymentConfirm( *serialNumber*, *transId*, *transStatus* )**

Command description for PaymentConfirm.

Cluster: Payment, Commands and attributes for payment scenarios including ZigBee devices. Command: PaymentConfirm

#### Parameters

<i>serialNumber</i>	uint8_t*
<i>transId</i>	uint16_t
<i>transStatus</i>	uint8_t

Definition at line 11532 of file [client-command-macro.doc](#).

**6.5.2.534 #define emberAfFillCommandPaymentClusterBuyConfirm( *serialNumber*, *currency*, *priceTrailingDigit*, *price*, *timestamp*, *transId*, *transStatus* )**

Command description for BuyConfirm.

Cluster: Payment, Commands and attributes for payment scenarios including ZigBee devices. Command: BuyConfirm

#### Parameters

<i>serialNumber</i>	uint8_t*
<i>currency</i>	uint32_t
<i>priceTrailing-Digit</i>	uint8_t
<i>price</i>	uint32_t
<i>timestamp</i>	uint8_t*
<i>transId</i>	uint16_t
<i>transStatus</i>	uint8_t

Definition at line 11557 of file [client-command-macro.doc](#).

**6.5.2.535 #define emberAfFillCommandPaymentClusterReceiptDelivery( *serialNumber*, *currency*, *priceTrailingDigit*, *price*, *timestamp* )**

Command description for ReceiptDelivery.

Cluster: Payment, Commands and attributes for payment scenarios including ZigBee devices. Command: ReceiptDelivery

**Parameters**

<i>serialNumber</i>	uint8_t*
<i>currency</i>	uint32_t
<i>priceTrailing-Digit</i>	uint8_t
<i>price</i>	uint32_t
<i>timestamp</i>	uint8_t*

Definition at line 11588 of file [client-command-macro.doc](#).

**6.5.2.536 #define emberAfFillCommandPaymentClusterTransactionEnd( serialNumber, status )**

Command description for TransactionEnd.

Cluster: Payment, Commands and attributes for payment scenarios including ZigBee devices. Command: TransactionEnd

**Parameters**

<i>serialNumber</i>	uint8_t*
<i>status</i>	uint8_t

Definition at line 11612 of file [client-command-macro.doc](#).

**6.5.2.537 #define emberAfFillCommandBillingClusterSubscribe( userId, serviceId, serviceProviderId )**

Command description for Subscribe.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: Subscribe

**Parameters**

<i>userId</i>	uint8_t*
<i>serviceId</i>	uint16_t
<i>service-ProviderId</i>	uint16_t

Definition at line 11636 of file [client-command-macro.doc](#).

**6.5.2.538 #define emberAfFillCommandBillingClusterUnsubscribe( userId, serviceId, serviceProviderId )**

Command description for Unsubscribe.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: Unsubscribe

**Parameters**

<i>userId</i>	uint8_t*
<i>serviceId</i>	uint16_t
<i>service-ProviderId</i>	uint16_t

Definition at line 11657 of file [client-command-macro.doc](#).

**6.5.2.539 #define emberAfFillCommandBillingClusterStartBillingSession( *userId*, *serviceId*, *serviceProviderId* )**

Command description for StartBillingSession.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: StartBillingSession

#### Parameters

<i>userId</i>	uint8_t*
<i>serviceId</i>	uint16_t
<i>service- ProviderId</i>	uint16_t

Definition at line 11678 of file [client-command-macro.doc](#).

**6.5.2.540 #define emberAfFillCommandBillingClusterStopBillingSession( *userId*, *serviceId*, *serviceProviderId* )**

Command description for StopBillingSession.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: StopBillingSession

#### Parameters

<i>userId</i>	uint8_t*
<i>serviceId</i>	uint16_t
<i>service- ProviderId</i>	uint16_t

Definition at line 11699 of file [client-command-macro.doc](#).

**6.5.2.541 #define emberAfFillCommandBillingClusterBillStatusNotification( *userId*, *status* )**

Command description for BillStatusNotification.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: BillStatusNotification

#### Parameters

<i>userId</i>	uint8_t*
<i>status</i>	uint8_t

Definition at line 11719 of file [client-command-macro.doc](#).

**6.5.2.542 #define emberAfFillCommandBillingClusterSessionKeepAlive( *userId*, *serviceId*, *serviceProviderId* )**

Command description for SessionKeepAlive.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: SessionKeepAlive

#### Parameters

<i>userId</i>	uint8_t*
<i>serviceId</i>	uint16_t
<i>service- ProviderId</i>	uint16_t

Definition at line 11738 of file [client-command-macro.doc](#).

**6.5.2.543 #define emberAfFillCommandBillingClusterCheckBillStatus( *userId*, *serviceId*, *serviceProviderId* )**

Command description for CheckBillStatus.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: CheckBillStatus

#### Parameters

<i>userId</i>	uint8_t*
<i>serviceId</i>	uint16_t
<i>service- ProviderId</i>	uint16_t

Definition at line 11759 of file [client-command-macro.doc](#).

**6.5.2.544 #define emberAfFillCommandBillingClusterSendBillRecord( *userId*, *serviceId*, *serviceProviderId*, *timestamp*, *duration* )**

Command description for SendBillRecord.

Cluster: Billing, Attributes and commands to enable billing of users for provided services through the use of a billing platform. Command: SendBillRecord

#### Parameters

<i>userId</i>	uint8_t*
<i>serviceId</i>	uint16_t
<i>service- ProviderId</i>	uint16_t
<i>timestamp</i>	uint8_t*
<i>duration</i>	uint16_t

Definition at line 11782 of file [client-command-macro.doc](#).

### **6.5.2.545 #define emberAfFillCommandApplianceEventsAndAlertClusterGetAlerts( )**

This basic message is used to retrieve Household Appliance current alerts.

Cluster: Appliance Events and Alert, Attributes and commands for transmitting or notifying the occurrence of an event, such as "temperature reached" and of an alert such as alarm, fault or warning. Command: Get-Alerts

Definition at line 11819 of file [client-command-macro.doc](#).

### **6.5.2.546 #define emberAfFillCommandApplianceEventsAndAlertClusterGetAlertsResponse( alertsCount, alertStructures, alertStructuresLen )**

This message is used to return household appliance current alerts.

Cluster: Appliance Events and Alert, Attributes and commands for transmitting or notifying the occurrence of an event, such as "temperature reached" and of an alert such as alarm, fault or warning. Command: Get-AlertsResponse

#### **Parameters**

<i>alertsCount</i>	uint8_t
<i>alertStructures</i>	uint8_t*
<i>alertStructures-</i> <i>Len</i>	uint8_t

Definition at line 11835 of file [client-command-macro.doc](#).

### **6.5.2.547 #define emberAfFillCommandApplianceEventsAndAlertClusterAlertsNotification( alertsCount, alertStructures, alertStructuresLen )**

This message is used to notify the current modification of warning and/or fault conditions.

Cluster: Appliance Events and Alert, Attributes and commands for transmitting or notifying the occurrence of an event, such as "temperature reached" and of an alert such as alarm, fault or warning. Command: AlertsNotification

#### **Parameters**

<i>alertsCount</i>	uint8_t
<i>alertStructures</i>	uint8_t*
<i>alertStructures-</i> <i>Len</i>	uint8_t

Definition at line 11856 of file [client-command-macro.doc](#).

### **6.5.2.548 #define emberAfFillCommandApplianceEventsAndAlertClusterEventsNotification( eventHeader, eventId )**

This message is used to notify an event occurred during the normal working of the appliance.

Cluster: Appliance Events and Alert, Attributes and commands for transmitting or notifying the occurrence of an event, such as "temperature reached" and of an alert such as alarm, fault or warning. Command: EventsNotification

**Parameters**

<i>eventHeader</i>	uint8_t
<i>eventId</i>	uint8_t

Definition at line 11876 of file [client-command-macro.doc](#).

**6.5.2.549 #define emberAfFillCommandApplianceStatisticsClusterLogNotification( *timeStamp*, *logId*, *logLength*, *logPayload*, *logPayloadLen* )**

The Appliance Statistics Cluster server occasionally sends out a Log Notification command to the devices to which it needs to log information related to statistics (e.g., home gateways) which implement the client side of Appliance Statistics Cluster.

Cluster: Appliance Statistics, This cluster provides a mechanism for the transmitting appliance statistics to a collection unit (gateway). The statistics can be in format of data logs. In case of statistic information that will not fit the single ZigBee payload, the Partition cluster should be used. Command: LogNotification

**Parameters**

<i>timeStamp</i>	uint32_t
<i>logId</i>	uint32_t
<i>logLength</i>	uint32_t
<i>logPayload</i>	uint8_t*
<i>logPayloadLen</i>	uint8_t

Definition at line 11902 of file [client-command-macro.doc](#).

**6.5.2.550 #define emberAfFillCommandApplianceStatisticsClusterLogResponse( *timeStamp*, *logId*, *logLength*, *logPayload*, *logPayloadLen* )**

The Appliance Statistics Cluster server sends out a Log Response command to respond to a Log Request command generated by the client side of the Appliance Statistics cluster.

Cluster: Appliance Statistics, This cluster provides a mechanism for the transmitting appliance statistics to a collection unit (gateway). The statistics can be in format of data logs. In case of statistic information that will not fit the single ZigBee payload, the Partition cluster should be used. Command: LogResponse

**Parameters**

<i>timeStamp</i>	uint32_t
<i>logId</i>	uint32_t
<i>logLength</i>	uint32_t
<i>logPayload</i>	uint8_t*
<i>logPayloadLen</i>	uint8_t

Definition at line 11929 of file [client-command-macro.doc](#).

**6.5.2.551 #define emberAfFillCommandApplianceStatisticsClusterLogQueueResponse( *logQueueSize*,  
*logIds*, *logIdsLen* )**

The Log Queue Response command is generated as a response to a LogQueueRequest command in order to notify the client side of the Appliance statistics cluster about the logs stored in the server side (queue) that can be retrieved by the client side of this cluster through a LogRequest command.

Cluster: Appliance Statistics, This cluster provides a mechanism for the transmitting appliance statistics to a collection unit (gateway). The statistics can be in format of data logs. In case of statistic information that will not fit the single ZigBee payload, the Partition cluster should be used. Command: LogQueueResponse

#### Parameters

<i>logQueueSize</i>	uint8_t
<i>logIds</i>	uint8_t*
<i>logIdsLen</i>	uint8_t

Definition at line 11954 of file [client-command-macro.doc](#).

**6.5.2.552 #define emberAfFillCommandApplianceStatisticsClusterStatisticsAvailable( *logQueueSize*,  
*logIds*, *logIdsLen* )**

The Appliance Statistics Cluster server sends out a Statistic Available command to notify the client side of the Appliance Statistics cluster that there are statistics that can be retrieved by using the Log Request command.

Cluster: Appliance Statistics, This cluster provides a mechanism for the transmitting appliance statistics to a collection unit (gateway). The statistics can be in format of data logs. In case of statistic information that will not fit the single ZigBee payload, the Partition cluster should be used. Command: StatisticsAvailable

#### Parameters

<i>logQueueSize</i>	uint8_t
<i>logIds</i>	uint8_t*
<i>logIdsLen</i>	uint8_t

Definition at line 11975 of file [client-command-macro.doc](#).

**6.5.2.553 #define emberAfFillCommandApplianceStatisticsClusterLogRequest( *logId* )**

The Log request command is sent from a device supporting the client side of the Appliance Statistics cluster (e.g., Home Gateway) to retrieve the log from the device supporting the server side (e.g., appliance).

Cluster: Appliance Statistics, This cluster provides a mechanism for the transmitting appliance statistics to a collection unit (gateway). The statistics can be in format of data logs. In case of statistic information that will not fit the single ZigBee payload, the Partition cluster should be used. Command: LogRequest

#### Parameters

<i>logId</i>	uint32_t
--------------	----------

Definition at line 11994 of file [client-command-macro.doc](#).

### **6.5.2.554 #define emberAfFillCommandApplianceStatisticsClusterLogQueueRequest( )**

The Log Queue Request command is send from a device supporting the client side of the Appliance Statistics cluster (e.g. Home Gateway) to retrieve the information about the logs inserted in the queue, from the device supporting the server side (e.g. appliance).

Cluster: Appliance Statistics, This cluster provides a mechanism for the transmitting appliance statistics to a collection unit (gateway). The statistics can be in format of data logs. In case of statistic information that will not fit the single ZigBee payload, the Partition cluster should be used. Command: LogQueueRequest Definition at line [12008](#) of file [client-command-macro.doc](#).

### **6.5.2.555 #define emberAfFillCommandElectricalMeasurementClusterGetProfileInfoResponseCommand( profileCount, profileIntervalPeriod, maxNumberOfIntervals, listOfAttributes, listOfAttributesLen )**

A function which returns the power profiling information requested in the GetProfileInfo command. The power profiling information consists of a list of attributes which are profiled along with the period used to profile them.

Cluster: Electrical Measurement, Attributes related to the electrical properties of a device. This cluster is used by power outlets and other devices that need to provide instantaneous data as opposed to metrology data which should be retrieved from the metering cluster.. Command: GetProfileInfoResponseCommand

#### **Parameters**

<i>profileCount</i>	uint8_t
<i>profileInterval- Period</i>	uint8_t
<i>maxNumberOf- Intervals</i>	uint8_t
<i>listOfAttributes</i>	uint8_t*
<i>listOf- AttributesLen</i>	uint8_t

Definition at line [12031](#) of file [client-command-macro.doc](#).

### **6.5.2.556 #define emberAfFillCommandElectricalMeasurementClusterGetMeasurementProfileResponse- Command( startTime, status, profileIntervalPeriod, numberOfIntervalsDelivered, attributeld, intervals, intervalsLen )**

A function which returns the electricity measurement profile. The electricity measurement profile includes information regarding the amount of time used to capture data related to the flow of electricity as well as the intervals thes.

Cluster: Electrical Measurement, Attributes related to the electrical properties of a device. This cluster is used by power outlets and other devices that need to provide instantaneous data as opposed to metrology data which should be retrieved from the metering cluster.. Command: GetMeasurementProfileResponse-Command

#### **Parameters**

<i>startTime</i>	uint32_t
<i>status</i>	uint8_t

<i>profileInterval-Period</i>	uint8_t
<i>numberOfIntervals-Delivered</i>	uint8_t
<i>attributeId</i>	uint16_t
<i>intervals</i>	uint8_t*
<i>intervalsLen</i>	uint8_t

Definition at line 12060 of file [client-command-macro.doc](#).

#### 6.5.2.557 #define emberAfFillCommandElectricalMeasurementClusterGetProfileInfoCommand( )

A function which retrieves the power profiling information from the electrical measurement server.

Cluster: Electrical Measurement, Attributes related to the electrical properties of a device. This cluster is used by power outlets and other devices that need to provide instantaneous data as opposed to metrology data which should be retrieved from the metering cluster.. Command: GetProfileInfoCommand

Definition at line 12086 of file [client-command-macro.doc](#).

#### 6.5.2.558 #define emberAfFillCommandElectricalMeasurementClusterGetMeasurementProfileCommand(     *attributId, startTime, numberOfIntervals* )

A function which retrieves an electricity measurement profile from the electricity measurement server for a specific attribute Id requested.

Cluster: Electrical Measurement, Attributes related to the electrical properties of a device. This cluster is used by power outlets and other devices that need to provide instantaneous data as opposed to metrology data which should be retrieved from the metering cluster.. Command: GetMeasurementProfileCommand

##### Parameters

<i>attributId</i>	uint16_t
<i>startTime</i>	uint32_t
<i>numberOfIntervals</i>	uint8_t

Definition at line 12102 of file [client-command-macro.doc](#).

#### 6.5.2.559 #define emberAfFillCommandZLLCommissioningClusterScanRequest(     *transaction, zigbeeInformation, zllInformation* )

Command description for ScanRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: ScanRequest

##### Parameters

<i>transaction</i>	uint32_t
<i>zigbee-Information</i>	uint8_t

<i>zllInformation</i>	uint8_t
-----------------------	---------

Definition at line 12133 of file [client-command-macro.doc](#).

**6.5.2.560 #define emberAfFillCommandZllCommissioningClusterDeviceInformationRequest( *transaction*, *startIndex* )**

Command description for DeviceInformationRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: DeviceInformationRequest

#### Parameters

<i>transaction</i>	uint32_t
<i>startIndex</i>	uint8_t

Definition at line 12153 of file [client-command-macro.doc](#).

**6.5.2.561 #define emberAfFillCommandZllCommissioningClusterIdentifyRequest( *transaction*, *identifyDuration* )**

Command description for IdentifyRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: IdentifyRequest

#### Parameters

<i>transaction</i>	uint32_t
<i>identify-Duration</i>	uint16_t

Definition at line 12171 of file [client-command-macro.doc](#).

**6.5.2.562 #define emberAfFillCommandZllCommissioningClusterResetToFactoryNewRequest( *transaction* )**

Command description for ResetToFactoryNewRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: ResetToFactoryNewRequest

#### Parameters

<i>transaction</i>	uint32_t
--------------------	----------

Definition at line 12188 of file [client-command-macro.doc](#).

```
6.5.2.563 #define emberAfFillCommandZllCommissioningClusterNetworkStartRequest( transaction,
extendedPanId, keyIndex, encryptedNetworkKey, logicalChannel, panId, networkAddress,
groupIdentifiersBegin, groupIdentifiersEnd, freeNetworkAddressRangeBegin,
freeNetworkAddressRangeEnd, freeGroupIdentifierRangeBegin, freeGroupIdentifierRangeEnd,
initiatorIeeeAddress, initiatorNetworkAddress )
```

Command description for NetworkStartRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: NetworkStartRequest

#### Parameters

<i>transaction</i>	uint32_t
<i>extendedPanId</i>	uint8_t*
<i>keyIndex</i>	uint8_t
<i>encrypted-</i> <i>NetworkKey</i>	uint8_t*
<i>logicalChannel</i>	uint8_t
<i>panId</i>	uint16_t

**6.5.2.566 #define emberAfFillCommandZllCommissioningClusterNetworkUpdateRequest( *transaction*, *extendedPanId*, *networkUpdateId*, *logicalChannel*, *panId*, *networkAddress* )**

Command description for NetworkUpdateRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: NetworkUpdateRequest

#### Parameters

<i>transaction</i>	uint32_t
<i>extendedPanId</i>	uint8_t*
<i>network-UpdateId</i>	uint8_t
<i>logicalChannel</i>	uint8_t
<i>panId</i>	uint16_t
<i>network-Address</i>	uint16_t

Definition at line 12373 of file [client-command-macro.doc](#).

**6.5.2.567 #define emberAfFillCommandZllCommissioningClusterGetGroupIdentifiersRequest( *startIndex* )**

Command description for GetGroupIdentifiersRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: GetGroupIdentifiersRequest

**Parameters**

<i>startIndex</i>	uint8_t
-------------------	---------

Definition at line 12398 of file [client-command-macro.doc](#).

**6.5.2.568 #define emberAfFillCommandZllCommissioningClusterGetEndpointListRequest( startIndex )**

Command description for GetEndpointListRequest.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: GetEndpointListRequest

**Parameters**

<i>startIndex</i>	uint8_t
-------------------	---------

Definition at line 12413 of file [client-command-macro.doc](#).

**6.5.2.569 #define emberAfFillCommandZllCommissioningClusterScanResponse( transaction,  
                  rssiCorrection, zigbeeInformation, zllInformation, keyBitmask, responseId, extendedPanId,  
                  networkUpdateId, logicalChannel, panId, networkAddress, numberofSubDevices,  
                  totalGroupIds, endpointId, profileId, deviceId, version, groupIdCount )**

Command description for ScanResponse.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: ScanResponse

**Parameters**

<i>transaction</i>	uint32_t
<i>rssiCorrection</i>	uint8_t
<i>zigbee- Information</i>	uint8_t
<i>zllInformation</i>	uint8_t
<i>keyBitmask</i>	uint16_t
<i>responseId</i>	uint32_t
<i>extendedPanId</i>	uint8_t*
<i>network- UpdateId</i>	uint8_t
<i>logicalChannel</i>	uint8_t
<i>panId</i>	uint16_t
<i>network- Address</i>	uint16_t
<i>numberofSub- Devices</i>	uint8_t
<i>totalGroupIds</i>	uint8_t
<i>endpointId</i>	uint8_t
<i>profileId</i>	uint16_t
<i>deviceId</i>	uint16_t
<i>version</i>	uint8_t
<i>groupIdCount</i>	uint8_t

Definition at line 12445 of file [client-command-macro.doc](#).

**6.5.2.570 #define emberAfFillCommandZllCommissioningClusterDeviceInformationResponse( transaction, numberOfSubDevices, startIndex, deviceInformationRecordCount, deviceInformationRecordList, deviceInformationRecordListLen )**

Command description for DeviceInformationResponse.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: DeviceInformationResponse

#### Parameters

<i>transaction</i>	uint32_t
<i>numberOfSubDevices</i>	uint8_t
<i>startIndex</i>	uint8_t
<i>deviceInformationRecordCount</i>	uint8_t
<i>deviceInformationRecordList</i>	uint8_t*
<i>deviceInformationRecordListLen</i>	uint8_t

Definition at line 12499 of file [client-command-macro.doc](#).

**6.5.2.571 #define emberAfFillCommandZllCommissioningClusterNetworkStartResponse( transaction, status, extendedPanId, networkUpdateId, logicalChannel, panId )**

Command description for NetworkStartResponse.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: NetworkStartResponse

#### Parameters

<i>transaction</i>	uint32_t
<i>status</i>	uint8_t
<i>extendedPanId</i>	uint8_t*
<i>networkUpdateId</i>	uint8_t
<i>logicalChannel</i>	uint8_t
<i>panId</i>	uint16_t

Definition at line 12529 of file [client-command-macro.doc](#).

**6.5.2.572 #define emberAfFillCommandZllCommissioningClusterNetworkJoinRouterResponse( transaction, status )**

Command description for NetworkJoinRouterResponse.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: NetworkJoinRouterResponse

#### Parameters

<i>transaction</i>	uint32_t
<i>status</i>	uint8_t

Definition at line 12555 of file [client-command-macro.doc](#).

**6.5.2.573 #define emberAfFillCommandZllCommissioningClusterNetworkJoinEndDeviceResponse( transaction, status )**

Command description for NetworkJoinEndDeviceResponse.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: NetworkJoinEndDeviceResponse

#### Parameters

<i>transaction</i>	uint32_t
<i>status</i>	uint8_t

Definition at line 12573 of file [client-command-macro.doc](#).

**6.5.2.574 #define emberAfFillCommandZllCommissioningClusterEndpointInformation( ieeeAddress, networkAddress, endpointId, profileId, deviceId, version )**

Command description for EndpointInformation.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: EndpointInformation

#### Parameters

<i>ieeeAddress</i>	uint8_t*
<i>network-Address</i>	uint16_t
<i>endpointId</i>	uint8_t
<i>profileId</i>	uint16_t
<i>deviceId</i>	uint16_t
<i>version</i>	uint8_t

Definition at line 12595 of file [client-command-macro.doc](#).

**6.5.2.575 #define emberAfFillCommandZllCommissioningClusterGetGroupIdentifiersResponse( total, startIndex, count, groupInformationRecordList, groupInformationRecordListLen )**

Command description for GetGroupIdentifiersResponse.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: GetGroupIdentifiersResponse

**Parameters**

<i>total</i>	uint8_t
<i>startIndex</i>	uint8_t
<i>count</i>	uint8_t
<i>group-Information-RecordList</i>	uint8_t*
<i>group-Information-RecordListLen</i>	uint8_t

Definition at line 12624 of file [client-command-macro.doc](#).

**6.5.2.576 #define emberAfFillCommandZllCommissioningClusterGetEndpointListResponse( *total*, *startIndex*, *count*, *endpointInformationRecordList*, *endpointInformationRecordListLen* )**

Command description for GetEndpointListResponse.

Cluster: ZLL Commissioning, The ZLL commissioning cluster provides commands to support touch link commissioning. Command: GetEndpointListResponse

**Parameters**

<i>total</i>	uint8_t
<i>startIndex</i>	uint8_t
<i>count</i>	uint8_t
<i>endpoint-Information-RecordList</i>	uint8_t*
<i>endpoint-Information-RecordListLen</i>	uint8_t

Definition at line 12651 of file [client-command-macro.doc](#).

**6.5.2.577 #define emberAfFillCommandSampleMfgSpecificClusterCommandOne( *argOne* )**

A sample manufacturer specific command within the sample manufacturer specific cluster.

Cluster: Sample Mfg Specific Cluster, This cluster provides an example of how the Application Framework can be extended to include manufacturer specific clusters. Command: CommandOne

**Parameters**

<i>argOne</i>	uint8_t
---------------	---------

Definition at line 12681 of file [client-command-macro.doc](#).

### 6.6.1 Detailed Description

This header provides Application Framework enum definitions.

### 6.6.2 Macro Definition Documentation

#### 6.6.2.1 #define EMBER\_AF\_SHADE\_CLOSURE\_STATUS\_OPERATIONAL

Definition at line 2120 of file [enums.doc](#).

#### 6.6.2.2 #define EMBER\_AF\_SHADE\_CLOSURE\_STATUS\_ADJUSTING

Definition at line 2121 of file [enums.doc](#).

#### 6.6.2.3 #define EMBER\_AF\_SHADE\_CLOSURE\_STATUS\_ADJUSTING\_OFFSET

Definition at line 2122 of file [enums.doc](#).

#### 6.6.2.4 #define EMBER\_AF\_SHADE\_CLOSURE\_STATUS\_OPENING

Definition at line 2123 of file [enums.doc](#).

#### 6.6.2.5 #define EMBER\_AF\_SHADE\_CLOSURE\_STATUS\_OPENING\_OFFSET

Definition at line 2124 of file [enums.doc](#).

#### 6.6.2.6 #define EMBER\_AF\_SHADE\_CLOSURE\_STATUS\_MOTOR\_OPENING

Definition at line 2125 of file [enums.doc](#).

#### 6.6.2.7 #define EMBER\_AF\_SHADE\_CLOSURE\_STATUS\_MOTOR\_OPENING\_OFFSET

Definition at line 2126 of file [enums.doc](#).

#### 6.6.2.8 #define EMBER\_AF\_ALARM\_MASK\_GENERAL\_HW\_FAULT

Definition at line 2127 of file [enums.doc](#).

**6.6.2.9 #define EMBER\_AF\_ALARM\_MASK\_GENERAL\_SWFAULT**

Definition at line 2128 of file [enums.doc](#).

**6.6.2.10 #define EMBER\_AF\_ALARM\_MASK\_GENERAL\_SWFAULT\_OFFSET**

Definition at line 2129 of file [enums.doc](#).

**6.6.2.11 #define EMBER\_AF\_RESTART\_OPTIONS\_START\_MODE1**

Definition at line 2130 of file [enums.doc](#).

**6.6.2.12 #define EMBER\_AF\_RESTART\_OPTIONS\_STARTUP\_MODE2**

Definition at line 2131 of file [enums.doc](#).

**6.6.2.13 #define EMBER\_AF\_RESTART\_OPTIONS\_STARTUP\_MODE2\_OFFSET**

Definition at line 2132 of file [enums.doc](#).

**6.6.2.14 #define EMBER\_AF\_RESTART\_OPTIONS\_STARTUP\_MODE3**

Definition at line 2133 of file [enums.doc](#).

**6.6.2.15 #define EMBER\_AF\_RESTART\_OPTIONS\_STARTUP\_MODE3\_OFFSET**

Definition at line 2134 of file [enums.doc](#).

**6.6.2.16 #define EMBER\_AF\_RESTART\_OPTIONS\_IMMEDIATE**

Definition at line 2135 of file [enums.doc](#).

**6.6.2.17 #define EMBER\_AF\_RESTART\_OPTIONS\_IMMEDIATE\_OFFSET**

Definition at line 2136 of file [enums.doc](#).

**6.6.2.18 #define EMBER\_AF\_RESET\_OPTIONS\_RESET\_CURRENT**

Definition at line 2137 of file [enums.doc](#).

**6.6.2.19 #define EMBER\_AF\_RESET\_OPTIONS\_RESET\_ALL**

Definition at line 2138 of file [enums.doc](#).

**6.6.2.20 #define EMBER\_AF\_RESET\_OPTIONS\_RESET\_ALL\_OFFSET**

Definition at line [2139](#) of file [enums.doc](#).

**6.6.2.21 #define EMBER\_AF\_RESET\_OPTIONS\_ERASE\_INDEX**

Definition at line [2140](#) of file [enums.doc](#).

**6.6.2.22 #define EMBER\_AF\_RESET\_OPTIONS\_ERASE\_INDEX\_OFFSET**

Definition at line [2141](#) of file [enums.doc](#).

**6.6.2.23 #define EMBER\_AF\_MAINS\_ALARM\_MASK\_VOLTAGE\_TOO\_LOW**

Definition at line [2142](#) of file [enums.doc](#).

**6.6.2.24 #define EMBER\_AF\_MAINS\_ALARM\_MASK\_VOLTAGE\_TOO\_HIGH**

Definition at line [2143](#) of file [enums.doc](#).

**6.6.2.25 #define EMBER\_AF\_MAINS\_ALARM\_MASK\_VOLTAGE\_TOO\_HIGH\_OFFSET**

Definition at line [2144](#) of file [enums.doc](#).

**6.6.2.26 #define EMBER\_AF\_MAINS\_ALARM\_MASK\_MAINS\_POWER\_SUPPLY\_LOST**

Definition at line [2145](#) of file [enums.doc](#).

**6.6.2.27 #define EMBER\_AF\_MAINS\_ALARM\_MASK\_MAINS\_POWER\_SUPPLY\_LOST\_OFFSET**

Definition at line [2146](#) of file [enums.doc](#).

## 6.6.3 Enumeration Type Documentation

**6.6.3.1 enum EmberAf11073ConnectRequestConnectControl**

Enumerator:

*EMBER\_ZCL\_11073\_CONNECT\_REQUEST\_CONNECT\_CONTROL\_PREEMPTIBLE*

Definition at line [18](#) of file [enums.doc](#).

**6.6.3.2 enum EmberAf11073TunnelConnectionStatus**

Enumerator:

*EMBER\_ZCL\_11073\_TUNNEL\_CONNECTION\_STATUS\_DISCONNECTED*  
*EMBER\_ZCL\_11073\_TUNNEL\_CONNECTION\_STATUS\_CONNECTED*

***EMBER\_ZCL\_11073\_TUNNEL\_CONNECTION\_STATUS\_NOT\_AUTHORIZED***  
***EMBER\_ZCL\_11073\_TUNNEL\_CONNECTION\_STATUS\_RECONNECT\_REQUEST***  
***EMBER\_ZCL\_11073\_TUNNEL\_CONNECTION\_STATUS\_ALREADY\_CONNECTED***

Definition at line 22 of file [enums.doc](#).

#### 6.6.3.3 enum EmberAfAlertCountType

Enumerator:

***EMBER\_ZCL\_ALERT\_COUNT\_TYPE\_UNSTRUCTURED***

Definition at line 30 of file [enums.doc](#).

#### 6.6.3.4 enum EmberAfAlertStructureCategory

Enumerator:

***EMBER\_ZCL\_ALERT\_STRUCTURE\_CATEGORY\_WARNING***  
***EMBER\_ZCL\_ALERT\_STRUCTURE\_CATEGORY\_DANGER***  
***EMBER\_ZCL\_ALERT\_STRUCTURE\_CATEGORY\_FAILURE***

Definition at line 34 of file [enums.doc](#).

#### 6.6.3.5 enum EmberAfAlertStructurePresenceRecovery

Enumerator:

***EMBER\_ZCL\_ALERT\_STRUCTURE\_PRESENCE\_RECOVERY\_RECOVERY***  
***EMBER\_ZCL\_ALERT\_STRUCTURE\_PRESENCE\_RECOVERY\_PRESENCE***

Definition at line 40 of file [enums.doc](#).

#### 6.6.3.6 enum EmberAfAlternateCostUnit

Enumerator:

***EMBER\_ZCL\_ALTERNATE\_COST\_UNIT\_KG\_OF\_CO2\_PER\_UNIT\_OF\_MEASURE***

Definition at line 45 of file [enums.doc](#).

#### 6.6.3.7 enum EmberAfAmiCriticalityLevel

Enumerator:

***EMBER\_ZCL\_AMI\_CRITICALITY\_LEVEL\_RESERVED***  
***EMBER\_ZCL\_AMI\_CRITICALITY\_LEVEL\_GREEN***  
***EMBER\_ZCL\_AMI\_CRITICALITY\_LEVEL\_1***  
***EMBER\_ZCL\_AMI\_CRITICALITY\_LEVEL\_2***
